05 February 2008 - Apache Cayenne 3.0M3 Now Available

The Apache Cayenne team is pleased to present the third milestone of Cayenne 3. This is a development branch of Cayenne and still undergoing significant changes. A number of developers are using it in production systems, however if you want the most stable and tested version of Cayenne you should use version 1.x or 2.x which have a proven track record and are widely used in deployment.

This milestone release adds some exciting new features, including enhancements to the Cayenne modeler for lifecycle listeners and callbacks and the ability to merge changes to the model back to the database, extensive new work toward full JPA compliance, updates to cgen and the templates, and much more.

This release requires Java 5 as a minimum. The decision to change the required JDK was made after a poll of users revealed no substantial need for Java 1.4 and plenty of benefits in moving forward. Generics are only partially completed in the public API at this time and we continue to try and balance the opportunities and headaches of a clean generics interface.

More details can be found here:

11 November 2007 - Apache Cayenne 3.0M2

Apache Cayenne team is glad to announce a second milestone of Cayenne 3.0. It contains many new features, such as full EJBQL syntax (delete, update, select, aggregate queries, subqueries, etc.), much improved lifecycle callbacks (no need to wrap the DataContext or enable callbacks explicitly. Modeler callbacks support is coming in M3), to-many relationships mapped as sets and maps (with Modeler support), CayenneModeler search function, adapter for SQLite, and much more. <http://cayenne.apache.org/2007/11/11/november-11-2007-cayenne-30m2-released.html>...

17 October 2007 - Apache Cayenne 1.2.4/2.0.4

Apache Cayenne Project team is very glad to announce a new release from the stable branches. Upgrade is recommended, as the new release contains some important fixes, including some runtime race conditions. More details can be found here:

<http://cayenne.apache.org/2007/10/12/october-12-2007-cayenne-204-and-124-released.html>

1.2.4/2.0.4 can be downloaded from here:

16 May 2007 - Apache Cayenne 2.0.3 and 1.2.3 Released

[Apache Cayenne team](#) is glad to announce a new release of Cayenne 2.0 and 1.2 branches. The new release features a long list of bug fixes and is a recommended upgrade for the current users. As always there is a patch-level compatibility between 1.2.3 and 2.0.3.

22 January 2007 - Apache Cayenne 2.0.2 and 1.2.2 Released

Following the establishment of [Apache Cayenne](#) as an official [ASF \(Apache Software Foundation\)](#) project, we decided it is time to post bugfix releases for both [pre-Apache 1.2](#) and [Apache 2.0](#) stable branches. UPGRADE IS STRONGLY RECOMMENDED no matter which branch you use, as some bugs (such as CAY-724) are rather serious. As a reminder, patch-level compatibility between both branches is determined by the last digit in the release version. So 1.2.2 is analogous to 2.0.2. The only difference being package name change to "*org.apache.cayenne*" for the later. Starting from 2.0.2 release we do encourage all users to switch to 2.0 if possible.
