The Delay System

To put the system into delay:

1. **Put a 12 second cart into Cart Machine 1**

2. **Cue up the next item (eg CD/tape/cart in car machine 2)**

3. **Press the delay button at the same time as you start the next item (eg CD/tape/cart in car machine 2)**

When you press the delay button. The cart in cart machine 1 will automatically play.

In the studio you will hear the next item, but the listener will hear the delay cart then the next iem.

You won't hear the cart in the studio.

What the listener hears is now 12 seconds behind what you are doing in the studio.
