Internet Corporation For Assigned Names and Numbers (ICANN)

ICANN is responsible for the global coordination of the Internet's system of unique identifiers. These include domain names (like .org, .museum and country codes like .UK), as well as the addresses used in a variety of Internet protocols. Computers use these identifiers to reach each other over the Internet. Careful management of these resources is vital to the Internet's operation, so ICANN's global stakeholders meet regularly to develop policies that ensure the Internet's ongoing security and stability. ICANN Posts Draft Version of the 2007-2010 Strategic Plan for Comment
Based on community consultations and comments to the Issues Paper published in September, ICANN releases its next draft Strategic Plan. Consultations held through the time of the ICANN meeting in São Paulo will inform revisions to this plan. In this release, ICANN thanks the community for the participation and contribution to date and encourages comments concerning this draft. Comments can be made to stratplan-2007@icann.org and reviewed at http://forum.icann.org/lists/stratplan-2007.

IDN Laboratory Testing Progress
ICANN continues to make progress toward laboratory testing for strings corresponding to internationalized top level labels (IDNs). The purposes of the laboratory tests were described during the ICANN meeting in Morocco held earlier this year. The tests are being designed and conducted under the guidance of the ICANN Presidents Advisory Committee for IDNs.
