Demographia World Urban Areas (World Agglomerations)

7th Annual Edition
April 2011

Demographia World Urban Areas contains a listing of population, land area and density for world urban areas that is based upon consistent definition. The population data is based upon analysis to match the geographical area of the various urban areas. *Demographia World Urban Areas* has been widely cited and has been used by respected websites, such as "[City Mayors](#)."

DEMOGRAPHIA WORLD URBAN AREAS (URBAN AGGLOMERATIONS)

This report contains population, land area and population density for all 780 identified urban areas (urban agglomerations or urbanized areas) in the world with 500,000 or more population as of the volume date. A number of additional urban areas are also listed, including all urban areas over 100,000 in France, New Zealand, Puerto Rico, the United Kingdom and the United States and all urban areas over 50,000 in Australia and Canada. Rankings are indicated only for urban areas of 500,000 and over.

More than 1,400 urban areas of all sizes are included, accounting for 53 percent of the world urban population in the fourth quarter of 2005 (the average year of the estimates).

Revisions from the last edition: Better satellite imagery has become available for a number of urban areas since the publication of the last edition. This has resulted in land area increases or decreases in various urban areas, especially in Bangladesh, China and India.

URBAN AREA POPULATION

There is a base year and current year population estimate for larger urban areas. The base year estimate uses the methodology indicated by the coding in the "Source: Population" column. The current year estimate for larger urban areas is generally based upon United Nations population change estimates for the period between the base and current years. Where there is no United Nations projection, the current year column indicates the base year population (rounded to the nearest 5,000).

Base Population Estimates: The sources of the population estimates are:

- (1) National population authorities, where representative agglomeration data is available (such as in the United States, the United Kingdom, Canada, France, Sweden, Norway and Australia).¹
- (2) Demographia population estimates developed using lower order jurisdictional data from national census authorities.
- (3) Estimates based upon the *United Nations Population Prospects, 2007 Revision* database. The UN database contains important deviations from agglomeration geography. This is evident, for example, for example in Manila, Kuala Lumpur, Jakarta, Seoul and Moscow, where the UN data is for political jurisdictions that are parts of urban areas, rather than complete urban areas. In other cases, the UN data is for metropolitan area, which are larger than urban areas (such as in Brazil). Finally, the United Nations data is incomplete, excluding some significant urban areas (such as Western Europe's third largest urban area, Essen-Dusseldorf or Pattaya, in Thailand)
- (4) Other estimates, such as estimated from local jurisdictions.

Population Densities: Population densities are calculated using the mid-point population between the base year and the current year, except where the national census authority land area urban area data is available. In such cases, the base year population data is used in the calculation.

DEFINITIONS AND ISSUES

An urban area (urbanized area² agglomeration, population centre³ or urban centre⁴) is a continuously built up land mass of urban development. It is the generally the “urban footprint” --- the lighted area that can be observed from an airplane on a clear night. National census authorities in Australia, Canada, France, the United Kingdom and the United States designate urban areas. Except in Australia, the authorities use a minimum urban density definition of 400 persons per square kilometer (or the nearly identical 1,000 per square mile in the United States).

In some cases, urban areas have virtually grown together, yet are still considered separate urban areas. This report confines urban areas to a single metropolitan area (below) or labor market area. What constitutes a particular metropolitan area is a matter of judgment. However, it is necessary to “draw a line,” especially where adjacent urban areas have “grown together,” but remain essentially distinct labor markets. For example:

¹ In China, sub-city or sub-regional districts called “shixiaqu” (市辖区) are often thought of as urban areas.

Shixiaqu, however are more akin to labor markets (metropolitan areas) and extend well beyond the urban footprint. Similarly, urban areas as defined in New Zealand are more akin to labor markets (metropolitan areas) because they extend beyond the urban footprint.

² United States, for urban areas with more than 50,000.

³ Canada, from the 2011 census.

⁴ Australia

- A plausible argument could be made for designating the south coast of Japan from Tokyo-Yokohama to Osaka-Kobe-Kyoto as a single urban area, because it has nearly “grown together.” Yet, this ribbon of urbanization is far too large to be a single metropolitan area (labor market) and thus considered to be multiple urban areas.
- The Pearl River Delta urban areas of Shenzhen, Dongguan, Guangzhou and Foshan in China’s Guangdong province have, for all intents and purposes, grown together. Yet, this huge swath of urbanization not considered a single agglomeration because there are multiple labor markets. Thus, this report continues to treat Shenzhen and Dongguan as separate urban areas, however combines Guangzhou and Foshan into a single urban area.

Further, urban areas that seem likely to grow together before the projection years of 2025 and 2030 are not combined in those years (such as Dhaka and Nayaranganj or Tehran and Karaj).

International Urban Areas: Urban areas are confined to a single nation, unless there is unfettered freedom (the lack of customs or identification checking facilities) of movement (including labor) between the adjacent nations. Currently, this condition is met only between some continental nations of the European Union. For example, the Lille urban area is in both France and Belgium yet is considered a single urban area because there is freedom of labor movement without trade, immigration or customs barriers. Treaty provisions render Geneva (Switzerland)-Annemasse (France) as a single urban area. However, Detroit-Windsor and San Diego-Tijuana are not considered single urban areas because there is not freedom of labor movement between the two nations. Moreover, Shenzhen and Hong Kong, adjacent urban areas in China, are considered to separate urban areas, principally because labor movement between the two is limited.

Metropolitan Areas: Contrast: An urban area is different from a metropolitan area. A metropolitan area is a labor market and includes substantial rural (non-urban) territory or area of discontinuous urban development (beyond the developed urban fringe). Urban areas draw employees from a much larger area than the area of continuous development. Some web based agglomeration lists incorrectly contain metropolitan area data for some areas. There is no consistent international definition for metropolitan areas and among the nations that have such designations, there is considerable variation. As a result, international metropolitan area comparisons are difficult.⁵

Municipality (City or Commune): An urban area is different from a municipality (also often called a city or a local government authority). Municipalities have political boundaries that usually include only a part of the urban area. For example, the city of Seoul represents less than one-half of the population of the Seoul-Incheon urban area, which extends well beyond the municipality. On the other hand, a municipality may be considerably larger than an urban area and therefore contain considerable non-urban (or rural) territory. Zaragoza, Spain is an example. A large part of the municipality of Mumbai is rural, composed of the Rajiv Ghandi National Park and thus not included in the urban area.

Many of what are referred to as “cities” in China are better defined as “regions.” They extend far beyond the area of continuous urbanization and (Beijing, Tianjin and Shanghai). The city of

⁵ Also see: *Urban Terms Defined* (<http://demographia.com/db-define.pdf>)

Chongqing, which has the largest population of any organism called a city (municipality) in the stretches far beyond any reasonable definition of a metropolitan area and has a land area similar to that of Austria.

Urban Population Density: This report provides average urban population density data. Because of difficulties in coordinating the dates between satellite images and population data, the density calculations are based upon the population estimate for the year (base year or current year) closest to the date of the land area estimate. Moreover, population densities are expressed in rounded numbers and should be considered approximate.

By necessity, average data masks significant variations within urban areas. For example, the population density of the Phoenix urban areas is more than half-again higher than that of the Boston urban area. Yet, the highest population densities of the Boston core are at least five times that of the highest density areas in Phoenix. Moreover, Boston has a far larger commercial core (“central business district” or “downtown”). The difference is that the Phoenix suburbs are considerably more dense than the Boston suburbs. Similarly, London and Athens have similar population densities. Yet, the core densities in Athens are considerably higher than in London. The Athens suburbs, however, are among the least dense in the world. The Essen-Dusseldorf and Milan urban areas have almost identical densities, yet core densities are considerably higher in Milan. The purpose of this presentation is to define the population and density of urban footprints, regardless of their density profiles.

Nonetheless, average density and the geographical expanse of urban areas is important, even without regard to internal population density profile differences. For example, the differences in urban density profiles make only marginal in urban transport planning. This is because with the geographical expanse of nearly all modern, high-income urban areas, automobiles provide by far the greatest coverage, with considerably shorter travel times than public transport. For example, in Phoenix, more than 99 percent of motorized travel is by car, little while automobiles account for only 96 percent of Boston, with its steeper density gradient. Automobiles account for 88 percent of travel in the Essen-Dusseldorf urban area, somewhat more than the 77 percent in Milan, with its steeper density gradient.

Combined Urban Areas: In the United States, metropolitan areas may be combined into Combined Statistical Areas, which are, in effect, larger metropolitan areas. Where the urban footprint (composing a single labor market) extends beyond the metropolitan area, the Demographia urban definition includes the entire urban footprint as a combined urban area. In Canada, where national census authorities also define metropolitan areas, the Toronto, Hamilton and Oshawa metropolitan areas are considered a single labor market and are thus combined into a single urban area.

COMBINED URBAN AREAS	
Designated only in Nations Reporting Urban Agglomeration Data	
NATION	COMBINED URBAN AREA (Population & Land Area Code "H")
Canada	Toronto: Toronto, Hamilton, Oshawa
United States	Boston: Boston, Worcester, Nashua (NH)
United States	Chicago, Kenosha (WI), Round Lake
United States	Dallas-Fort Worth: Dallas Fort Worth, Denton
United States	Houston: Houston, The Woodlands
United States	Los Angeles: Los Angeles, Riverside-San Bernardino, Mission Viejo
United States	New York: New York, Bridgeport (CT), New Haven (CT), Trenton (NJ), Danbury (CT), Hightstown (NJ)
United States	San Francisco: Concord, Livermore, San Francisco, San Rafael, San Jose, Vallejo
A combined urban area consists of adjacent urban areas that are located within the same labor market area	

BASE YEAR ESTIMATES: METHODS AND CAUTIONS

Demographia uses maps, satellite photographs to estimate continuous urbanization. Demographia also uses small area population data, where available, to match population estimates to urban land area.

National census authority land area data is presented in Australia, Canada, France,⁶ the United Kingdom and the United States. Census of India urban agglomerations are not used because the geographical size of constituent units (municipalities) often includes large rural (non-urban) areas.

Satellite photograph examination may produce higher urban densities than other methods. This is because national census authority approaches include small amounts of rural land in fringe areas (where the units comprising urban areas, such as municipalities (communes) or census tracts are not fully urban). The Demographia estimates include little or no rural area. Tests of the two methods in France and the United States indicate that in most cases the variation is less than 10 percent (with the Demographia estimate producing the smaller land area, or higher density).

As a result, caution should be used within this range in comparing census authority data and Demographia estimates.

Reliability of Population Estimates: Further, there are variations in population reliability.

- The most reliable population estimates are taken directly from national census authorities for agglomerations (Category "A"). Most nations, however, do not compile agglomeration data.
- *Demographia* "local area build up" population estimates are developed from national statistical agency data and are generally reliable (Category "C").
- Population estimates based upon United Nations agglomeration data are less reliable because it is sometimes difficult to determine whether the data is based upon metropolitan area, urban area populations or some other definition (Category "D").

⁶ Except for Marseille. See note under "Individual Urban Areas."

- Population estimates based upon national census authority metropolitan area data are also less reliable (Category “E”). Generally these estimates are derived by subtracting estimated population for the rural parts of metropolitan areas based upon estimated urban versus rural population differentials.
- Other population estimates are the least reliable (Category “F”). For example, the population estimates for Shenzhen and Dongguan are based upon unofficial local reports, since the national census data excludes millions of residents who do not have permanent resident status (Hukou status corresponding to the urban area).

Cautions: *Demographia World Urban Areas (World Agglomerations) and Population Projections* is a continuing project. Revisions are made as more accurate satellite photographs and population estimates become available. However, it is important to recognize that most of the data is estimated. Appropriate caution is therefore advised.

Substantial population revisions are likely within the next two years as complete results are obtained recent censuses in China, India, the United States, Japan and elsewhere.

INDIVIDUAL URBAN AREAS: NOTES

Amman: Includes Az-Zarqa.

Ansan: Included in Seoul-Incheon.

Bahadurgarh: Included in Delhi.

Bataysk: Included in Rostov.

Bhiwandi: Included in Mumbai.

Boston: Includes Worcester and Nashua.

Bridgeport: Included in New York.

Chicago: Includes Kenosha and Round Lake.

Chungli: Included in Taipei.

Concord: Included in San Francisco

Dallas-Fort Worth: Includes Denton.

Danbury: Included in New York.

Darwin: Includes Palmerston.

Delhi: Includes Faridabad, Ghaziabad, Noida, Gurgaon and Bahadurgarh.

Denton: Included in Dallas-Fort Worth

Dhaka: The population is lower than other estimates (such as the United Nations), which include metropolitan area population not within the continuously developed urban area. The Demographia population estimate is determined from accumulating smaller area population data from national census data within the urban footprint. Nayaranganj is no longer included in the Dhaka urban area.

Dongguan: The *Demographia* estimate is based upon press and other reports population. Dongguan has an unusually large number of unregistered residents (residents without official Hukou status).

Dubai: Includes Sharja

Faridabad: Included in Delhi.

Foshan: Included in Guangzhou-Foshan

Francisco Morato: Included in Sao Paulo

Ghaziabad: Included in Delhi.

Guangzhou-Foshan: Includes Foshan

Gurgaon: Included in Delhi.

Hamilton: Included in Toronto.

Hightstown: Included in New York.

Himeji: Included in Osaka-Kobe-Kyoto.

Houston: Includes The Woodlands.

Huiyang: Included in Huizhou.

Huizhou: Includes Huiyang.

Fukuoka: Shown as a separate urban area. Some sources combine Fukuoka with Kitakyushu (such as the United Nations), which is not a part of the continuous urbanization of Fukuoka. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Incheon: Included in Seoul-Incheon,

Jakarta: Jakarta is perhaps the only major urban area in the world that has adopted a formal new name for the urban area/metropolitan area that has spread beyond the boundaries of the central city. However, two forms of the new name are used, Jabotabek and Jabodetabek, both names being

acronyms formed from major jurisdictions in the area. Various international sources limit their population estimates to DKI Jakarta itself (the national capital district). However, the urbanization of Jakarta extends into the regencies of Tangerang, Bekasi, Bogor and Karawang and the separate cities of Bekasi, Depok and Bogor. Demographia continues to use the “Jakarta” name because of its familiarity. The Demographia estimate is based upon an analysis of limited local authority area data and urban growth rates in the suburban regencies.

Jiangmen: Includes Xinhui.

Jinjiang: Included in Quanzhou.

Kalyan: Included in Mumbai.

Karachi: The population is lower than other estimates (such as the United Nations), which include metropolitan area population not within the continuously developed urban area.

Karaj: Not included in Tehran.

Kenosha: Included in Chicago.

Kitakyushu: Shown as a separate urban area. Some sources combine Kitakyushu with Fukuoka (such as the United Nations), which is not a part of the continuous urbanization of Kitakyushu. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Kuala Lumpur: The population is higher other agglomeration estimates (such as the United Nations), which does not include all of the continuously developed urban area. Continuous urbanization extends well beyond the municipality of Kuala Lumpur, for example to Port Klang and the area represents a single labor market (metropolitan area) The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Lagos: Higher population estimates are indicated by some source. The Demographia population estimate is determined from accumulating smaller area population data from the 2006 census.

Lipanshui: Some estimates show this urban area with a population of above 1,000,000 persons. The Lipanshui metropolitan area contains a number of separate urban areas, which do not represent contiguous urbanization. The Demographia urban area estimate is lower.

Livermore: Included in San Francisco

Los Angeles: Includes Riverside-San Bernardino and Mission Viejo.

Manila: The population is higher other agglomeration estimates (such as the United Nations), tend to be limited to Metro Manila, which is a province level jurisdiction. The continuous urbanization of Manila extends outward into Bulacan, Cavite, Laguna, Rizal and Quezon provinces. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Maputo: Includes Matola.

Marseille: A Demographia land area estimate is used because the INSEE (census authority of France) urban area definition includes an unusually large rural area (a mountain range, Chaine de etoile).

Matola: Included in Maputo.

Milan: The population is higher other agglomeration estimates (such as the United Nations), which does not include all of the continuously developed urban area, which stretches well into Como, Lecco and Varese provinces.

Mission Viejo: Included in Los Angeles.

Moscow: Demographia is indebted to Richard Forstall, who has provided local authority area population data for portions of Moscow Oblast within the Moscow urban areas. Other estimates (such as the United Nations estimate) include only the municipality of Moscow, which includes only part of the urban footprint.

Mumbai: Includes Kalyan, Bhiwandi, Virar, Vasai and Panvel.

Nara: Included in Osaka-Kobe-Kyoto.

Nayaranganj: Shown as a separate urban area. No longer included in Dhaka.

Nashua: Included in Boston.

New York: Includes Bridgeport, New Haven, Trenton, Danbury and Hightstown urban areas

Noida: Included in Delhi.

Osaka-Kobe-Kyoto: Includes Nara and Himeji. United Nations estimates separate Osaka-Kobe and Kyoto and exclude both Nara and Himeji.

Oshawa: Included in Toronto.

Quanzhou: Includes Shishi and Jinjiang

Palmerston: Included in Darwin

Panvel: Included in Mumbai.

Riverside-San Bernardino: Included in Los Angeles.

Rostov: Includes Bataysk.

Round Lake: Included in Chicago.

San Francisco: Includes San Jose, Livermore, Vallejo.

San Jose (USA): Included in San Francisco.

Sao Paulo: Includes Francisco Morato.

Seoul-Incheon: Includes Suweon and Ansan.

Sharja: Included in Dubai.

Shenzhen: The *Demographia* estimate is based upon press and other reports on the actual population. Shenzhen has an unusually large number of unregistered residents (residents without official Hukou status).

Shishi: Included in Quanzhou.

Shunde: Is located in Foshan (Guangzhou-Foshan), however is a separate urban area, with a county level city at its core.

Stuttgart: The population is lower than other estimates (such as the Millennium Cities Database), which include metropolitan area population not within the continuously developed urban area. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or urban agglomeration).

Suweon: Included in Seoul-Incheon.

Taipei: The population is higher than other estimates (such as the United Nations), which do not include all population within the continuously developed urban area (especially in Taipei County). Includes Taoyuan (Chungli).

Taoyuan: Included in Taipei.

Tehran: Does not include Karaj.

Tianjin: The population is lower than other agglomeration estimates (such as the United Nations), which include metropolitan area population not within the continuously developed urban area. The Demographia population estimate is a “build-up” of sub-metropolitan districts (county level) population within the continuously developed area (urban area or agglomeration).

Tokyo-Yokohama: Includes large areas Tokyo, Kanagawa, Chiba and Saitama prefectures and small areas of Gumma, Tochigi and Ibaraki prefectures.

Trenton: Included in New York.

Toronto: Includes Hamilton and Oshawa.

Vallejo: Included in San Francisco

Vasai: Included in Mumbai.

Virar: Included in Mumbai.

The Woodlands: Included in Houston.

Worcester: Included in Boston.

Xi'an: Includes Xianyang.

Xianyang: Included in Xi'an.

Xicheng: Included in Yinchuan.

Xinhui: Included in Jiangmen.

Yinchuan: Includes Xicheng.

POPULATION PROJECTIONS

Population projections are available at <http://www.demographia.com/db-wuaproject.pdf> and are generally based upon United Nations 2007 World Urbanization Prospects growth rates from the base year. It is intended that new projections will be provided with the 8th Annual Edition of *Demographia World Urban Areas* in 2012.

SOURCES

- A: National census authority data agglomeration data (land area or population).
- B: Demographia land area estimate based upon map or satellite photograph analysis.
- C: Demographia population "build up" from third, fourth or fifth order jurisdictions (NUTS-3, NUTS-4, NUTS-5 or equivalent)
- D: Population estimate based upon United Nations agglomeration estimate.
- E: Demographia population estimate from national census authority data.
- H: Combination of land area of adjacent national census authority agglomerations.
- L: Local government population estimate

Some of the underlying national census population data from secondary sources considered reliable for such information, though "modeled" projections and estimates are excluded.

Moreover, all other widely cited urban area or agglomeration lists, including that of the United Nations (above) often substitute some metropolitan area population estimates instead of urban area population estimates.

COMMENTS AND SUGGESTIONS

Demographia wishes to produce the most accurate possible estimates. This edition incorporates changes from suggestions that were deemed to be appropriate. Comments, suggestions, criticism and data are welcomed.
