**Report on the Quantitative Fiber Analysis of Yarn**

**Material Submitted**

One ball of knitting yarn, color blue, purported to contain 55% extra fine merino wool, 33% microfiber, 12% cashmere. The sample was identified as *Cash Vero* yarn.

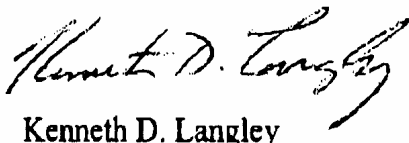

**Laboratory Procedure**

Fibers were sectioned with a fiber cutter and mounted on microscope slides. Over 1000 fibers were identified using light microscopy at a magnification of 250-400X and the diameters of the fibers were measured. The acrylic fibers were chemically separated from the wool/cashmere fibers. All testing was performed in accordance with test methods AATCC 20-2004: Qualitative and AATCC 20A-2004: Quantitative.

**Results**

The sample contains **55.5% Wool, 32.9% Acrylic, 11.6% Cashmere.**

Sincerely yours,

Kenneth D. Langley
