<sup>1</sup> More detailed data and a full set of historical time series are available on the BIS website under <http://www.bis.org/statistics/bankstats.htm>.

## Introduction to the BIS locational and consolidated international banking statistics

The BIS collects and disseminates two different sets of international banking data, both based on information provided by banks. The first set of data is known as the locational statistics and is presented in Annex Tables 1–8B. These statistics were originally introduced in 1964 to monitor the development of eurocurrency markets, although in practice comprehensive locational data are only available from 1977. The second set, known as the consolidated statistics, is shown in Annex Tables 9A–9E. They were launched in a comprehensive form in 1983 following the onset of the Mexican debt crisis, with the main purpose of monitoring industrial country banks' exposure to developing countries. Once differences in reporting regimes are taken into account, the two sets of data may be used to complement one another in economic analysis. The basic characteristics of the two data sets are summarised in the table below.

The locational reporting system collects quarterly data on the gross international financial claims and liabilities of banks resident in a given country. The main purpose of the statistics is to provide information on the role of banks and financial centres in the intermediation of international capital flows. The reporting system is currently comprised of 43 countries (see the table overleaf). The key organisational criteria are the country of residence of the reporting banks and their counterparties as well as the recording of all positions on a gross basis, including those vis-à-vis own affiliates. This methodology is consistent with the principles underlying the compilation of national accounts, balances of payments and external debt statistics. The currency detail supplied by the reporting countries allows the approximation of capital flows, adjusted for exchange rate fluctuations.

The consolidated banking statistics report banks' on-balance sheet financial claims (ie contractual lending) vis-à-vis the rest of the world and provide a measure of the risk exposures of lenders' national banking systems. The data cover contractual (immediate borrower) and ultimate risk lending by the head office and all its branches and subsidiaries on a worldwide consolidated basis, net of inter-office accounts. Reporting of lending in this way allows the allocation of claims to the bank entity that would bear the losses as a result of default by borrowers. The consolidated statistics also provide information on the maturity (ie liquidity) and sector risk distribution of banks' contractual lending. Furthermore, to reflect the fact that banks' country risk exposure can differ substantially from that of contractual lending due to the use of risk mitigants such as guarantees and collateral, reporting countries provide information on claims on an *ultimate risk basis* (ie

Data characteristics	Locational (Tables 1–8 B)	Consolidated (Tables 9 A–9 E)
Creditor reporting basis	Residence (host country)	Nationality (home country)
Number of reporting countries	43	30
Frequency	Quarterly since 1977	Quarterly since March 2000 <sup>1</sup>
Reported data	External claims and liabilities	Worldwide consolidated claims
Inter-office netting-out	No	Yes
Type of counterparty	Immediate borrower	Immediate (contractual) and ultimate borrower
Composition of claims by:		
Country of borrower	Yes	Yes
Currency	Yes	No
Type of instrument	Yes (loans, deposits, securities)	No
Maturity	No	Yes
Sector	Yes (bank, non-banks)	Yes (banks, non-banks, public)

<sup>1</sup> Semiannual available since 1983.

contractual claims net of guarantees and collateral) since June 1999. A finer breakdown of BIS reporting banks' foreign claims on an ultimate risk basis, and information about derivatives, credit commitments and guarantees are provided as of 2005 Q1.<sup>Ⓞ</sup> The consolidated statistics became available on a quarterly basis in March 2000; previously, the statistics were collected semiannually. There are currently 30 countries reporting these data (see the table below).

Because more countries contribute to the locational bank lending data, one would expect the measure of outstanding debt as reported by the locational data to exceed that of the consolidated data. However, the reporting of worldwide positions in the consolidated data tends to compensate for this. While the locational statistics are appropriate for measuring lending flows in a given period, the consolidated statistics are more suited to gauging the size of banks' country and liquidity risk exposures. The detailed maturity and sector breakdowns of the consolidated statistics can be used to supplement the locational data.

### Reporting countries providing locational banking data

First year of joining followed by first period of data availability in brackets

Australia (1997, Q4 1997)	France (1977, Q4 1977)	Mexico (2003, Q4 2003)

## Notes to tables

Data for the most recent period are provisional. Data on changes in stocks have been calculated by converting the relevant stocks into their original currencies using end-of-period exchange rates and subsequently converting the changes in stocks into US dollar amounts using period average rates. Flow or turnover data have been calculated by converting flows and turnover in original currencies into US dollar amounts using period average exchange rates.

Tables 1–8	The data in Tables 1–8 (the BIS international locational banking statistics) cover banks' unconsolidated gross international on-balance sheet assets and liabilities. These data are based on the residence of the reporting institution and therefore measure the activities of all banking offices residing in each reporting country. Such offices report exclusively on their own unconsolidated business, which thus includes international transactions with any of their own affiliates (for data on the BIS consolidated banking statistics, see Table 9). BIS reporting banks include banks residing in the G10 countries, Australia, Austria, the Bahamas, Bahrain, Bermuda, Brazil, the Cayman Islands, Chile, Chinese Taipei, Curacao, Cyprus, Denmark, Finland, Greece, Guernsey, Hong Kong SAR, India, Ireland, Isle of Man, Jersey, Korea, Luxembourg, Macao SAR, Malaysia, Mexico, the Netherlands Antilles (till Q3 2010), Norway, Panama, Portugal, Singapore, South Africa, Spain and Turkey. Detailed tables, including time series data in CSV files, guidelines and information on breaks in series in the locational banking statistics, are available on the BIS website under <a href="http://www.bis.org/statistics/bankstats.htm">http://www.bis.org/statistics/bankstats.htm</a> .
Table 1	Local positions in foreign currency are available from all reporting banks except those in the United States. For Hong Kong SAR and Singapore, local positions include interbank business only ("Local" refers to positions vis-à-vis residents).
Tables 3 A–B	The data on external loans and deposits are derived from reporting as such or calculated by subtracting separately reported data on positions other than loans and deposits from total external assets and liabilities. The only exceptions are Bahrain and the Netherlands Antilles, which do not provide this information separately. Their data on international loans and deposits therefore equal the data on external assets and liabilities shown in Tables 2 A–B.
Tables 5	The positions in domestic currency (item A) cover all reporting countries, except the Netherlands Antilles, Singapore and South Korea, while those in foreign currency (item B) only relate to reporting countries that provide a detailed currency breakdown. The foreign currency positions of countries (Hong Kong SAR, Macao SAR, Netherlands Antilles and Singapore) that do not supply sufficient currency detail are shown in the item "unallocated" (item C).
Tables 5 B	Claims on non-banks include the positions of banks in the United States and their offshore branches vis-à-vis official monetary authorities.
Table 5 C	Excludes, on the assets side, the positions of banks in the United States and their offshore branches, which are indistinguishably included under positions vis-à-vis non-banks.
Table 5 D	The data cover all reporting banks, except those in the United States. For Hong Kong SAR and Singapore, local positions relate to interbank business only.
Table 6 A	Positions vis-à-vis Switzerland and vis-à-vis Germany include those vis-à-vis the BIS and ECB respectively. The residual item for Africa & Middle East includes the positions of banks in the United States vis-à-vis regional OPEC countries (including Bahrain). The "Other" item for developed European countries comprises the Faeroe Islands, Greenland and San Marino, which have been merged together due to only partial reporting by reporting central banks. For reasons of confidentiality, positions vis-à-vis certain countries may be included under the residual or unallocated items.
Tables 7 A–B	See notes to Tables 3 A–B. In the case of reporting country Singapore, the breakdowns of international loans and deposits by vis-à-vis country have been partly estimated.
Tables 8 A–B	The data in principle cover reporting banks' cross-border positions in all currencies plus local positions in foreign currency. Figures for Latin America include the Caribbean area. Positions vis-à-vis "related offices" cover cross-border positions only. In the case of banks in Canada, such positions are given for Canadian banks only. Claims on official monetary authorities of banks in the United States and their offshore branches are included under positions vis-à-vis non-banks.
Tables 9	The BIS consolidated international banking statistics are based mainly on the country of incorporation of the reporting institutions and measure the international lending activities of banks' head offices in the reporting countries and all their offices at home and abroad, with positions between offices of the same bank being netted out. In addition, foreign banks in reporting countries are requested to supply information about their international lending activities on an unconsolidated basis. The reporting countries comprise the G10 countries plus Australia, Austria, Brazil, Chile, Chinese Taipei, Denmark, Finland, Greece, Hong Kong SAR, India, Ireland, Luxembourg, Mexico, Norway, Panama, Portugal, Singapore, Spain and Turkey. Consolidated international and foreign claims (Tables 9A-E) do not include any on-balance sheet derivatives exposures. Furthermore, "Other exposures" covering derivatives (on- or off-balance sheet) and two contingent exposures, credit commitments and guarantees extended, shown in Table 9C are not part of foreign claims. The data in Tables 9 A–B cover BIS reporting banks' worldwide consolidated contractual claims that are not adjusted for risk mitigants, such as guarantees and collateral. In addition, table 9A shows

in column Q, as net risk transfers, aggregates on the reallocation of claims from the country of the immediate counterparty to that of the ultimate risk (ie a third-party guarantor or the head office of a legally dependent branch).

The data in Tables 9 A cover both foreign and international claims, while 9 B -E covers foreign claims only. International claims are defined as BIS reporting banks' cross-border claims in all currencies plus the local claims of their foreign affiliates in foreign currency. Foreign claims include in addition, reporting banks' foreign affiliates local claims in local currency, as shown below.

The data on individual nationality groups of reporting banks may differ from data published in national sources because the data presented relate to consolidated claims of domestically owned banks only, while published national sources may in certain cases cover the unconsolidated claims of local subsidiaries and branches of foreign banks as well.

Item "Other" for developed European countries comprises the Faeroe Islands, Greenland and San Marino. Denmark reports its data on an unconsolidated basis, Austria and Portugal report on a partially consolidated basis.

Detailed information on breaks in series in the consolidated banking statistics are available on the BIS website under <http://www.bis.org/statistics/consstats.htm>.

Claims of Spanish banks, mainly vis-à-vis Portugal, are currently under review and are subject to revisions.

Table 9 A

This table covers the data on consolidated foreign claims of banks in 30 BIS reporting countries vis-à-vis individual countries. A breakdown of international claims by maturity and sector is also provided. The column J "Banks with head offices outside the country of residence" and column K "undisbursed credit commitments and backup facilities" have been discontinued upon introduction of claims on ultimate risk basis since Q4 2004.

Columns E and I which related to "unallocated" maturities and sectors have been removed from the table. Respective data can be calculated by difference.

Column Q on net risk transfers refers to the amounts outstanding of contractual claims which have been reallocated from the country of the immediate counterparty to that of the ultimate borrower as provided by 26 of 30 reporting countries. In principle, the country of the ultimate counterparty (or of ultimate risk) is considered to be the country where the guarantor of a financial claim resides or where the head office of a legally dependent branch is located. However, this definition is not yet consistently applied by all countries. In some cases the data exclude guarantees, while in others they also include claims on legally independent subsidiaries, without any explicit guarantee being given.

Table 9 B

This table provides the data on consolidated *foreign* claims vis-à-vis individual countries by nationality of banks in 30 BIS reporting countries. The grand total in the first column of the table also includes foreign claims of domestically owned banks in Finland, Hong Kong SAR, India, Luxembourg, Norway and Singapore, which are not shown separately in this table, as well as those of local subsidiaries and branches of foreign banks. European banks refer to domestically owned banks of European countries that report claims on an immediate borrower basis (i.e. Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and the United Kingdom).

Table 9 C

As of current quarter, this table provides a sectoral breakdown of consolidated *foreign* claims of banks in 24 BIS reporting countries vis-à-vis individual countries on an ultimate risk basis. The grand total in the first column of the table comprises foreign claims of domestically owned banks in Austria, Australia, Belgium, Canada, Chile, Chinese Taipei, Finland, France, Germany, Greece, India, Ireland, Italy, Japan, the Netherlands, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The difference between total and sector components represents unallocated amounts (I) and the difference between total and cross-border claims represents local claims of foreign affiliates in all currencies(U). Data on additional contingent exposures through derivatives (positive market value only), guarantees extended and credit commitments are also shown.

Table 9 D	This table provides (as of current quarter) a breakdown of consolidated <i>foreign</i> claims vis-à-vis individual countries on an ultimate risk basis by nationality of reporting banks (in 24 reporting countries). The grand total in the first column of the table also includes foreign claims of domestically owned banks in Chinese Taipei, Finland, Norway and Singapore. European banks refer to domestically owned banks of European countries that report claims on an ultimate risk basis (i.e. Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and the United Kingdom). German banks' foreign claims vis-à-vis developed countries are on an immediate borrower basis.
Table 9 E	As of current reporting quarter, this table provides a sectoral breakdown of consolidated foreign claims vis-à-vis individual countries by nationality of reporting banks on an ultimate risk basis. Data on other potential exposures through derivatives (positive market value only), guarantees extended and credit commitments are also shown. The grand total in the first column of the table comprises consolidated exposures of domestically owned banks in Austria, Australia, Belgium, Canada, Chile, Chinese Taipei, Finland, France, Germany, Greece, India, Ireland, Italy, Japan, the Netherlands, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. Exposures of banking groups vis-à-vis the home country are not included, as these are not foreign exposures. Up to 2010Q4, exposures of German banks on developed countries are on an immediate borrower basis.
Table 10	The data cover announcements of international syndicated credit facilities that are granted by syndicates consisting of at least two financial institutions (thus excluding bilateral deals) acting as lenders; the nationality of at least one of the syndicate banks must differ from that of the borrower. Facilities taking the form of amendments or derivative-like instruments such as currency swap facilities, interest rate swap facilities, etc. were excluded. Furthermore, only signed facilities with a maturity of at least three months are included. Finally, there are no restrictions on the purposes to which the proceeds of the facilities might be directed and the data therefore also include refinancing facilities. Sources: Dealogic Loan Analytics; BIS.
Tables 11–18	<p>The methodology used to compile the securities statistics and a description of the coverage can be found on pages 13 to 17 of the <i>Guide to the international financial statistics</i> at <a href="http://www.bis.org/publ/bispap14.htm">http://www.bis.org/publ/bispap14.htm</a>. In the sectoral breakdown, "governments" comprise central governments, other governments and central banks. "Financial institutions" comprise commercial banks and other financial institutions. The international debt securities data include "repackaged securities", for example the new global issues of Argentina, resulting from the April 2005 exchange offer. "Repackaged securities" which are exclusively domestically targeted are allocated to the domestic debt securities database, such as the Argentine "bonos de la reestructuración – DTO. 1735/04". Non-marketable securities issued by Brazil, the UK, Czech Republic, Belgium, and the US are excluded from the domestic debt securities data. For recent changes in the coverage of domestic debt securities data see <a href="http://www.bis.org/statistics/coverage.htm">http://www.bis.org/statistics/coverage.htm</a></p> <p>Tables 12 B, 12 C, 12 D, 13 A, 13 B, 16 A, 16 B and 17 B present data based on the sector of the borrower itself and not on the sector of the parent company of the borrower or any guarantor. In Tables 13 A, 14 A and 15 A the data cover commercial paper and notes with an original maturity of up to one year. Gross issuance excludes issues redeemed in the same quarter. In Tables 16 A, 16 B, 17 A and in the memorandum items of Tables 13 A and 13 B, the domestic statistics cover 74 OECD and emerging market countries. The complete list of countries can be seen at <a href="http://www.bis.org/statistics/qcsv/anx16a.csv">http://www.bis.org/statistics/qcsv/anx16a.csv</a>.</p> <p>Figures based on the World Bank Public Sector Debt Statistics (Albania, Armenia, Bangladesh, Bolivia, Costa Rica, Georgia, Guatemala, Honduras, Kenya, Lithuania, Mauritius, Moldova, Morocco, Nepal, Romania, Seychelles, Sri Lanka, Tanzania, and Tonga) relate only to central government outstanding domestic debt securities. The domestic data for Argentina, Peru and Venezuela include local issues in foreign currency. The Chilean domestic debt securities data for financial institutions include "bonos y letras hipotecarias en circulación". Indian public sector domestic securities exclude those of government-guaranteed bodies. The Brazilian private sector and the Indian corporate sector issues only cover short-term paper, while no stocks data on bonds are available. The Colombian domestic data include only the public non-financial sector. The figures for Indonesia also include government issues for restructuring purposes. For the Netherlands, the source for data on domestic medium-term notes (MTNs) is different from that for data on domestic bonds, and there may therefore be some overlaps. Furthermore, data on domestic commercial paper (CP) include foreign issues in Dutch guilders. Issues of CDs by the Netherlands Bank are included under private short-term notes. French data on short-term notes also include foreign issues. For Bulgaria, Croatia, Egypt, New Zealand, Pakistan, Poland and Russia, the data on the non-government sector are missing. The partly estimated data for the corporate sector of Singapore relate to issues in Singapore dollar only. UK data include domestically targeted issues in foreign currency by the Bank of England, commercial paper and medium-term notes issued by the private sector are missing. Data for US short-term notes include CDs plus other time deposits. The US data on domestic CP include foreign issues. The data for Malaysia's financial institutions and corporate issuers relate to end-June 2009. The data for Belgium, Bulgaria, Chile and India relate to end-September 2010. The latest available data on amounts outstanding have been carried forward for the periods thereafter.</p> <p>In Tables 17 A and 17 B, data on remaining maturities of up to one year cover money market instruments and bonds and notes which are due for repayment within one year. For a few countries, no or only partial data are available on long-term domestic debt securities which are due for final repayment within one year.</p>
Tables 19–22	The data are derived from the BIS regular OTC derivatives statistics and cover the notional amounts and gross market values outstanding of the worldwide consolidated OTC derivatives exposure of major banks and dealers in the G10 countries. Figures are adjusted for double-counting and cover foreign exchange, interest rate (single currency contracts only), equity, commodity and credit derivatives (CDS). The notional amount, which is generally used as a reference to calculate cash flows under individual contracts, provides a comparison of market size between related cash and derivatives markets. Gross market value is defined as the sum (in absolute terms) of the positive market value of all reporters' contracts and the negative market

value of their contracts with non-reporting counterparties. It also measures the replacement cost of all outstanding contracts had they been settled in the reporting period.

Table 19 As of June 2007, item “unallocated” covers estimated positions of non-regular reporters based on the most recent Triennial Central Bank Survey 2007. For previous periods, the estimation is based on the Triennial Bank Survey 2004. “Gross credit exposure” includes gross market values after taking into account legally enforceable bilateral netting agreements. This item excludes CDS for all countries except for the US.

Table 20 B Counting both currency sides of every foreign exchange transaction means that the currency breakdown sums to 200% of the aggregate.

Tables 20 C-22 C The maturity brackets refer to residual maturities.

Tables 23 A–B Notional principal is calculated as the number of contracts multiplied by the face value of the derivatives contract, converted into US dollars. In the case of equity index derivatives, the face value is calculated as the product of the contract’s multiplier and the value of the underlying index. The notional amounts and the number of contracts outstanding corresponding to the equity index and single equity options contracts traded in North America were revised due to significant corrections by the data provider.

## Working Papers

### **The bank lending channel: lessons from the crisis**

Leonardo Gambacorta and David Marques-Ibanez

<http://www.bis.org/publ/work345.htm>

The 2007-2010 financial crisis highlighted the central role of financial intermediaries' stability in buttressing a smooth transmission of credit to borrowers. While results from the years prior to the crisis often cast doubts on the strength of the bank lending channel, recent evidence shows that bank-specific characteristics can have a large impact on the provision of credit. We show that new factors, such as changes in banks' business models and market funding patterns, had modified the monetary transmission mechanism in Europe and in the US prior to the crisis, and demonstrate the existence of structural changes during the period of financial crisis. Banks with weaker core capital positions, greater dependence on market funding and on non-interest sources of income restricted the loan supply more strongly during the crisis period. These findings support the Basel III focus on banks' core capital and on funding liquidity risks. They also call for a more forward-looking approach to the statistical data coverage of the banking sector by central banks. In particular, there should be a stronger focus on monitoring those financial factors that are likely to influence the functioning of the monetary transmission mechanism particularly in a period of crisis.

### **Dislocations in the won-dollar swap markets during the crisis of 2007-09**

Naohiko Baba and Ilhyock Shim

<http://www.bis.org/publ/work344.htm>

Foreign exchange (FX) derivatives markets in the Korean won are comparatively thin and vulnerable to impaired functioning. During the crisis, Korea faced dislocations in its FX swap and cross-currency swap markets, so severe that covered interest parity (CIP) between the Korean won and the US dollar was seriously violated. Using a variation of the EGARCH model, we find that global market uncertainty – as proxied by VIX, the volatility index – was the main factor explaining the movement of deviations from CIP in the three-month FX swap market during the crisis period. The credit risk of Korean banks – as proxied by their credit default swap spread – was also a significant factor explaining deviations from CIP in the three-year cross-currency swap market before the crisis, while the credit risk of US banks was significant during the crisis period. The Bank of Korea's provision of funds using its own foreign reserves was not effective in reducing deviations from CIP, but the Bank of Korea's loans of the US dollar proceeds of swaps with the US Federal Reserve were effective. This is because the loans funded by swaps with the US Federal Reserve effectively added to Korea's foreign reserves and enhanced market confidence.

### **Market structures and systemic risks of exchange-traded funds**

Srichander Ramaswamy

<http://www.bis.org/publ/work343.htm>

Crisis experience has shown that as the financial intermediation chain lengthens, it becomes complicated to assess the risks of financial products due to a lack of transparency as to how risks are managed at different levels of the intermediation chain. Exchange-traded funds, which have become popular among investors seeking exposure to a diversified portfolio of assets, share this characteristic, especially when their returns are replicated using derivative products. As the volume of such products grows, such replication strategies can lead to a build-up of systemic risks in the financial system. This article examines the operational frameworks of exchange-traded funds and identifies potential channels through which risks to financial stability can materialise.

### **Measuring the systemic importance of interconnected banks**

Mathias Drehmann and Nikola Tarashev

<http://www.bis.org/publ/work342.htm>

We develop a measure of systemic importance that accounts for the extent to which a bank propagates shocks across the banking system and is vulnerable to propagated shocks. Based on Shapley values, this measure gauges the contribution of interconnected banks to systemic risk, in contrast to other measures proposed in the literature. An empirical implementation of our measure reveals that systemic importance depends materially on the bank's role in the interbank network, both as a borrower and as a lender. We also find substantial differences between alternative measures, which implies that prudential authorities should be careful in choosing the underlying approach.

### **Securitization is not that evil after all**

Ugo Albertazzi, Ginette Eramo, Leonardo Gambacorta and Carmelo Salleo

<http://www.bis.org/publ/work341.htm>

A growing number of studies on the US subprime market indicate that, due to asymmetric information, credit risk transfer activities have perverse effects on banks' lending standards. We investigate a large part of the market for securitized assets ("prime mortgages") in Italy, a country with a regulatory framework analogous to the one prevalent in Europe. Information on over a million mortgages consists of loan-level variables, characteristics of the originating bank and, most importantly, contractual features of the securitization deal, including the seniority structure of the ABSs issued by the Special Purpose Vehicle and the amount retained by the originator. We borrow a robust way to test for the effects of

---

<sup>1</sup> Requests for publications should be addressed to: Bank for International Settlements, Press & Communications, Centralbahnplatz 2, CH-4002 Basel. These publications are also available on the BIS website ([www.bis.org](http://www.bis.org)).

asymmetric information from the empirical contract theory literature (Chiappori and Salanié, 2000). Overall, our evidence suggests that banks can effectively counter the negative effects of asymmetric information in the securitization market by selling less opaque loans, using signaling devices (i.e. retaining a share of the equity tranche of the ABSs issued by the SPV) and building up a reputation for not undermining their own lending standards.

### **Cyclical fiscal policy, credit constraints, and industry growth** Philippe Aghion, David Hemous and Enisse Kharroubi

<http://www.bis.org/publ/work340.htm>

This paper analyzes the impact of cyclical fiscal policy on industry growth. Using Rajan and Zingales' (1998) difference-in-difference methodology on a panel data sample of manufacturing industries across 15 OECD countries over the period 1980-2005, we show that industries with relatively heavier reliance on external finance or lower asset tangibility tend to grow faster (both in terms of value added and of labor productivity growth) in countries which implement more countercyclical fiscal policies.

### **Measuring disagreement in UK consumer and central bank inflation forecasts** Richhild Moessner, Feng Zhu and Colin Ellis

<http://www.bis.org/publ/work339.htm>

We provide a new perspective on disagreement in inflation expectations by examining the full probability distributions of UK consumer inflation forecasts based on an adaptive bootstrap multimodality test. Furthermore, we compare the inflation forecasts of the Bank of England's Monetary Policy Committee (MPC) with those of UK consumers, for which we use data from the 2001-2007 February GfK NOP consumer surveys. Our analysis indicates substantial disagreement among UK consumers, and between the MPC and consumers, concerning one-year-ahead inflation forecasts. Such disagreement persisted throughout the sample, with no signs of convergence, consistent with consumers' inflation expectations not being "well-anchored" in the sense of matching the central bank's expectations. UK consumers had far more diverse views about future inflation than the MPC. It is possible that the MPC enjoyed certain information advantages which allowed it to have a narrower range of inflation forecasts.

### **BASEL III: Long-term impact on economic performance and fluctuations** Paolo Angelini, Laurent Clerc, Vasco Cúrdia, Leonardo Gambacorta, Andrea Gerali, Alberto Locarno, Roberto Motto, Werner Roeger, Skander Van den Heuvel and Jan Vīček

<http://www.bis.org/publ/work338.htm>

We assess the long-term economic impact of the new regulatory standards (the Basel III reform), answering the following questions. (1) What is the impact of the reform on long-term economic performance? (2) What is the impact of the reform on economic fluctuations? (3) What is the impact of the adoption of countercyclical capital buffers on economic fluctuations? The main results are the following. (1) Each percentage point increase in the capital ratio causes a median 0.09 percent decline in the level of steady state output, relative to the baseline. The impact of the new liquidity regulation is of a similar order of magnitude, at 0.08 percent. This paper does not estimate the benefits of the new regulation in terms of reduced frequency and severity of financial crisis, analysed in Basel Committee on Banking Supervision (BCBS, 2010b). (2) The reform should dampen output volatility; the magnitude of the effect is heterogeneous across models; the median effect is modest. (3) The adoption of countercyclical capital buffers could have a more sizeable dampening effect on output volatility. These conclusions are fully consistent with those of reports by the Long-term Economic Impact group (BCBS, 2010b) and Macro Assessment Group (MAG, 2010b).

## **Basel Committee on Banking Supervision**

### **Range of methodologies for risk and performance alignment of remuneration - final document** May 2011

<http://www.bis.org/publ/bcbs194.htm>

Ensuring that remuneration is effectively aligned with risk and performance is an essential element for reducing incentives that may arise from the design of remuneration schemes and that can lead to excessive risk taking. In practice, the idea that an employee's compensation should take account of the risks that employees take on behalf of their organisation has proven to be challenging to implement.

The Basel Committee's report on the Range of Methodologies for Risk and Performance Alignment of Remuneration analyses the methods used by banks for incorporating risk into bonus pools and individual compensation schemes. Banks use various methods to adjust remuneration to take account of risk and performance. Depending on the remuneration scheme's design and detailed features, the effectiveness of such methods in creating incentives for prudent risk taking varies significantly.

The report focuses on the practical and technical issues that might reduce the effectiveness of these methods. It also covers more general questions, including proportionality in the application of rules. The report, which contains a number of examples of banks' practices reflecting the supervisory experience to date, helps provide a representative, though perhaps still incomplete, picture of current remuneration practices in the industry. By providing clarification on the design of risk-adjusted remuneration schemes and by highlighting issues that may affect the effectiveness of the risk adjustment methodologies, the Committee expects the report will help support and facilitate the broader adoption of sound compensation practices in the banking sector.

A consultative version of this paper was released for public comment in October 2010. The Committee wishes to thank those who have taken the time and effort to express their views on the consultative document.

## Committee on the Global Financial System

### **Statistics Interactions of sovereign debt management with monetary conditions and financial stability** May 2011

<http://www.bis.org/publ/cgfs42.htm>

The financial crisis dramatically altered the environment in which sovereign debt managers and central banks had to operate. The interactions of sovereign debt management (SDM) with monetary conditions and financial stability was heightened in these historically unusual circumstances.

This report discusses the implications of these interactions for central banks. It was prepared by a Study Group chaired by Paul Fisher of the Bank of England.

The report concludes that in such circumstances, or where financial systems are still developing, there is benefit in debt managers taking a broad view of cost and risk. Central banks can likewise benefit from keeping abreast of SDM activities. Recent experience confirms that medium-term strategic outcomes for the maturity structure and risk characteristics of outstanding debt do matter, for financial stability in particular. This underscores the importance of close communication among the relevant agencies, yet with each agency maintaining independence and accountability for its respective role, consistent with internationally agreed principles for sovereign debt management.

## Committee on Payment and Settlement Systems

### **Statistics on payment and settlement systems in the CPSS countries - Figures for 2009** March 2011

<http://www.bis.org/publ/cpss95.htm>

This is an annual publication that provides data on payments and payment systems in the CPSS countries.

This version of the statistical update contains data for 2009 and earlier years. There are detailed tables for each individual country as well as a number of comparative tables.

A preliminary version was published in December 2010.

### **Principles for financial market infrastructures - consultative report** March 2011

<http://www.bis.org/publ/cpss94.htm>

The report *Principles for financial market infrastructures* contains new and more demanding international standards for payment, clearing and settlement systems. Issued for public consultation by the CPSS and the Technical Committee of the International Organization of Securities Commissions (IOSCO), the new standards (called "principles") are designed to ensure that the essential infrastructure supporting global financial markets is even more robust and thus even better placed to withstand financial shocks than at present.

The report contains a single, comprehensive set of 24 principles designed to apply to all systemically important payment systems, central securities depositories, securities settlement systems, central counterparties and trade repositories (collectively "financial market infrastructures" or "FMIs"). These FMIs collectively record, clear and settle transactions in financial markets.

When finalised, the new principles will replace the three existing sets of CPSS and CPSS-IOSCO standards, the *Core principles for systemically important payment systems* (2001); the *Recommendations for securities settlement systems* (2001); and the *Recommendations for central counterparties* (2004). The CPSS and IOSCO believe that a single set of principles will provide greater consistency in the oversight and regulation of FMIs worldwide.

Robust and efficient FMIs help to ensure that markets continue to function effectively even in times of crisis and are an essential prerequisite for financial stability. Although FMIs have generally performed well, there are nevertheless lessons to be learnt both from the recent crisis and from the years of more normal operation since the current standards were issued. Compared with the current standards, the new principles introduce more demanding requirements in many important areas including

- the financial resources and risk management procedures an FMI uses to cope with the default of participants;
- the mitigation of operational risk; and
- the links and other interdependencies between FMIs through which operational and financial risks can spread.

There are also principles covering issues that are not fully addressed by the existing standards. These include new principles on segregation and portability, tiered participation and general business risk.

Published along with the report is a cover note which sets out some specific issues on which the committees are seeking comments during the public consultation period.

Comments on the principles are invited from all interested parties and should be sent by 29 July 2011 to both the CPSS secretariat (cpss@bis.org) and the IOSCO secretariat (fmi@iosco.org). The comments will be published on the websites of the BIS and IOSCO unless commentators request otherwise.

After the consultation period, the CPSS and IOSCO will review all comments received and publish a final report in early 2012. As set out in the cover note, the proposal is that relevant authorities will then strive to include the principles in their legal and regulatory framework by the end of 2012 and to apply the principles as part of their regulatory, supervisory and oversight activities as soon as possible. FMIs will be expected to take appropriate and swift action in order to meet the principles.

## Speeches

### **Global liquidity: a view from Basel**

Speech by Mr Jaime Caruana, General Manager of the BIS, at the International Capital Markets Association Annual General Meeting and Annual Conference, Paris, 26 May 2011

<http://www.bis.org/speeches/sp110526.htm>

Policymakers have once again entered a discussion of global liquidity. Speaking to a group of capital market participants, the General Manager of the BIS suggested that bankers, bond underwriters and investors, as gatekeepers of credit, play an important role in the determination of global liquidity, defined as the growth and terms of global credit extension. The General Manager illustrated this role by contrasting the growth rates of US dollar credit within and outside the United States. He argued that international credit, including cross-currency credit involving maturity mismatches, tends to amplify domestic credit developments and poses challenges to policymakers. With new institutions and Basel III, policymakers are better equipped to moderate, or at least make the financial system less vulnerable to, swings in global liquidity. But better risk management, better analysis of liquidity risks and better funding strategies on the part of private market participants will be essential.

### **Capital flows to the emerging market economies: a perspective on policy challenges**

Speech by Mr Jaime Caruana, General Manager of the BIS, at the Forty-sixth SEACEN Governors' Conference, Colombo, Sri Lanka, 24–26 February 2011

<http://www.bis.org/speeches/sp110307.htm>

Capital flows to emerging market economies (EMEs) have displayed a dramatic pattern over the past decade. Following the collapse during 2008, capital inflows have rebounded since 2009 to pre-crisis levels. The recent increase in international capital flows is a sign of strength for the world economy, but it also poses unusual policy challenges. Global accommodative financial conditions can spur capital inflows and make it more difficult for EM policymakers to pursue their internal stabilisation objectives. Growing inflation pressures in EMEs and a multispeed global recovery put a premium on the pursuit of sound macroeconomic policy, especially monetary policy. Fiscal policy should aim at reducing debt in good times. Real exchange rate appreciation should form part of the response in rapidly growing EMEs. Macroprudential policies can usefully complement, but not substitute for, such sound macroeconomic policies. Capital controls can only temporarily respond to highly unusual circumstances. Sound national policy action can contribute to better global outcomes, but policymakers in both advanced and emerging economies should take into account the implications of their actions beyond their own borders.
