

## The Maurice R. Greenberg Center for Geoeconomic Studies

Founded in 2000, the Maurice R. Greenberg Center for Geoeconomic Studies at the Council on Foreign Relations works to promote a better understanding among policymakers, academic specialists, and the interested public of how economic and political forces interact to influence world affairs. The growing integration of national economies is increasingly constraining the policy options that government leaders can consider, while government decisions are shaping the pace and course of global economic interactions. It is essential that policymakers and the public have access to rigorous analysis from an independent, nonpartisan source so that they can better comprehend our interconnected world and the foreign policy choices facing the United States and other governments.

The center pursues its aims through

- Research carried out by Council fellows and adjunct fellows of outstanding merit and expertise in economics and foreign policy, disseminated through books, articles, and other mass media;
- Meetings in New York, Washington, DC, and other select American cities where the world's most important economic policymakers and scholars address critical issues in a discussion or debate format, all involving direct interaction with Council members;
- Sponsorship of roundtables and Independent Task Forces whose aims are to inform and help to set the public foreign-policy agenda in areas in which an economic component is integral; and
- Training of the next generation of policymakers, who will require fluency in the workings of markets as well as the mechanics of international relations.

### FELLOWS

*Sebastian Mallaby (DC), Director of the Maurice R. Greenberg Center for Geoeconomic Studies and Paul A. Volcker Senior Fellow for International Economics*

Geo-Graphics Blog  
[blogs.cfr.org/geographics](http://blogs.cfr.org/geographics)

Brings together CFR's wide-ranging resources to provide perspective on a diverse set of geoeconomic issues such as financial regulation, global imbalances, immigration, and climate change and energy security.

A weekly look at a topic of geoeconomic interest through easy-to-read charts. Topics include China's imports and exports, U.S. interest payments, U.S. government debt, Iranian oil export prices, and Afghanistan's dependence on foreign aid.
