

10 Years at Saturn Special Edition

Cassini Scientist for a Day

An essay contest for students in grades 5-12

Be part of the Cassini science team with a spacecraft as your remote laboratory!

You have an opportunity to be a scientist for a day by telling NASA which target you think is best for the Cassini spacecraft.

Learn about Saturn, its rings, and its largest moon, Titan. Once your research is complete, choose one of the three targets and defend your choice in an essay of up to 500 words.

Your decision should be based on which image you think would yield the best scientific results. Just like real scientists do, explain what you hope to learn from the image you have selected.

The contest meets U.S. National English and Science Education Standards.

The deadline for the U.S. contest is Thursday, April 17, 2014

Other participating countries may have different deadlines. Check our website for details.
