### HOW TO ACHIEVE THEM.

For centuries women have used their strength and energies to bring happiness and comfort to those around them. The influence of women in this direction is, and always has been, acknowledged by all. Until recently the influence of women was limited to their families, they had no direct power as they had no vote. Now they have the vote and it is essential for them to realise that the vote gives them the power to play a direct part in forming the laws of the country.

Woman's point of view is not the same as man's. Her sense of values is different, she places a greater value on human life, human welfare, health and morals. The changed attitude of people to these questions which has taken place in countries where women have the vote can be attributed to the more direct influence of women. It behoves women to use their power to the fullest extent possible to bring greater security and happiness into the lives of the whole community. This can best be done by joining organisations in which they can confer with each other and through which they can bring pressure to bear to give effect to their decisions.

Women working individually are like voices crying in the wilderness. Women united will be able to use their brains, sympathy, intelligence, energy, foresight, economy and all the capacities they possess for the public good, for the good of their country as well as for the good of their families.

It does not matter to what political party you belong, you can still be a member of a body which exists to organise and make effective the power possessed by women to promote social well-being.

The United Associations is such an organisation. Will you assist us to organise women's strength by joining us?
