

High-performance. High-density.  
**HIGHLY COMMITTED.**

**CyrusOne**  
Built for tomorrow. Ready today.

## BUILT FOR TOMORROW. READY TODAY.

In today's environment, the focus should be on investing time in your company and not maintaining a data center. That's why CyrusOne global data center solutions are designed to ensure uptime while remaining completely scalable to your ever-changing business needs. We can help you migrate risk and free up capital through colocation, allowing you to invest in your business instead of a data center. With 21 facilities worldwide, CyrusOne is a leader committed to helping your business succeed.

### CUT YOUR COSTS. RAISE YOUR EXPECTATIONS.

We're living in a non-stop economy. Digital demands are driving technology and it's advancing with blinding speed. As a result, the rate of growth and changes demanded of data centers can leave businesses exposed with gaps in required and available power, cooling and connectivity. Critical investments in assets and expertise must be made to ensure uptime, manage regulatory compliance, prepare for natural disasters, optimize economics and get ready for the possible globalization of operations and mergers and acquisitions.

That's why now more than ever, companies in diverse industries such as energy, healthcare, finance and technology are choosing to invest in the growth of their business while outsourcing their data center demands to the experts at CyrusOne.

#### WHAT

**Superior Facilities:** 24/7 access to floor space within facilities equipped with maximum security, lockable half-cabinets, full-sized cabinets and customized cage space.

**Global Inventory:** A selection of one or multiple data centers in our global platform, which continues to grow year-over-year.

**Guaranteed SLA:** The industry's leading service level agreement, 100 percent guaranteed through redundant power, cooling, security, back-up and bandwidth.

**Experienced Support:** Tap into skilled experts and powerful reporting features that deliver real-time information and analysis for better decisions.

#### WHY

**Infrastructure On Demand:** Adjust to your environment and your needs with an easily scalable data center solution.

**Free Up Capital:** Allocate capital to strategic business projects instead of a data center.

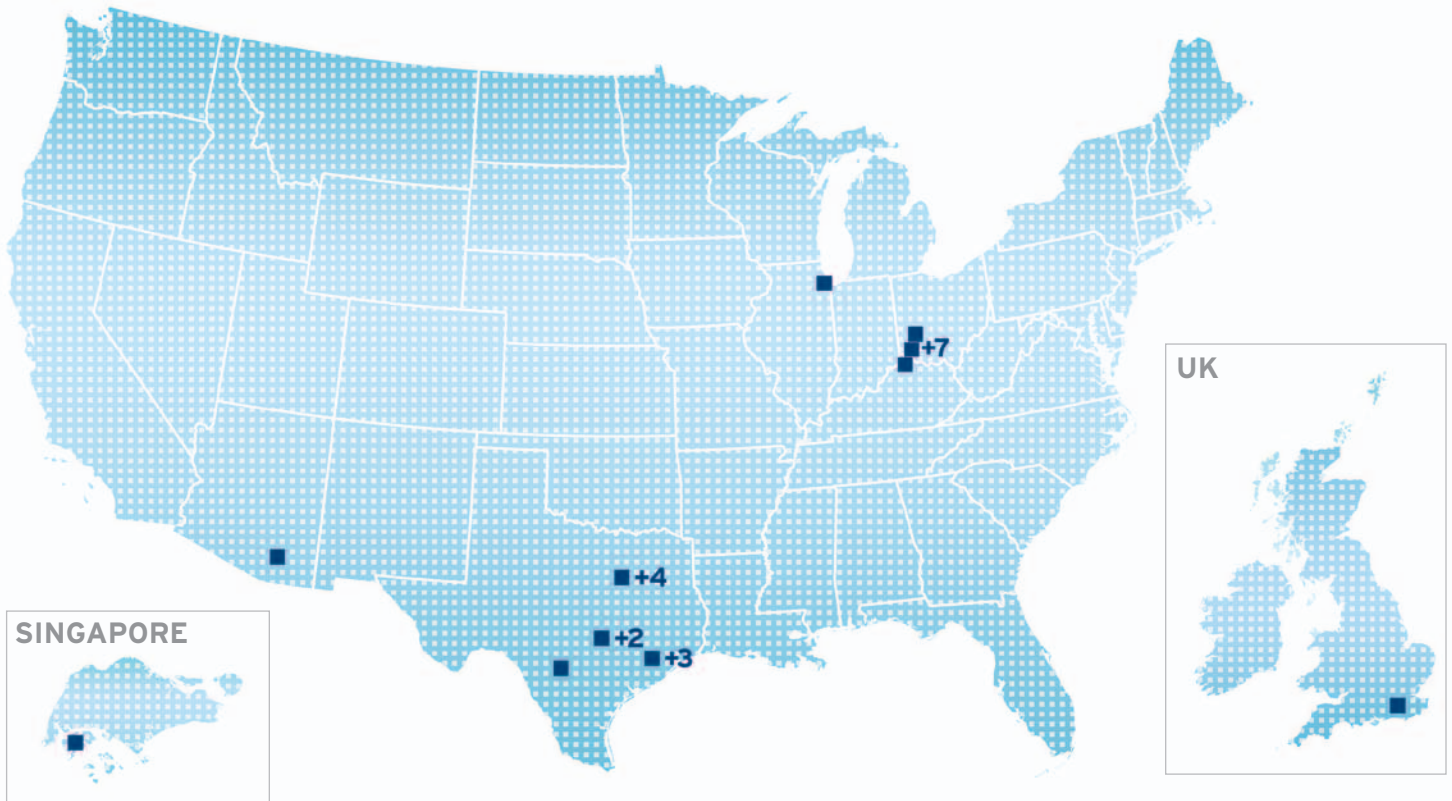

**Vendor-Neutral Facility:** Choose your own connectivity or managed service provider.

**Mitigate Risk:** Transfer the risk of downtime to CyrusOne's highly secure facilities.

## CUSTOMIZED COLOCATION SPACE

CyrusOne will tailor a customized data center to meet your specific business and operational needs. From dedicated or private suites to cage or cabinet environments, our goal is to create performance backed by user-friendly functionality. Work with our experts to determine the recommended layout for your situation and meet your business requirements.

- Dedicated or private suites
- Cage or cabinet environments
- Card key access

When the design is complete, we can help you find the cabinets, cage material and add-on devices you're looking for. CyrusOne will help install and certify everything – including the total management of all the vendors and subcontractors. Upon installation a computational fluid dynamic assessment will be performed to ensure proper airflow, humidity and temperature.

## REDUNDANT POWER AND COOLING DESIGN

CyrusOne data centers are top-tier facilities, offering best-in-class performance and reliability for high-density and high-availability enterprise requirements. Our advanced, highly flexible design architectures support power requirements exceeding 250 kilowatts per square foot. Our power and cooling architectures utilize advanced components and are designed with N+1 and 2N parallel redundancies. They provide 100 percent uptime with no interruption in service and allow for seamless expansion in the future.

- Redundant power through PDU, UPS, diesel generator
- Engineered for dense power configurations
- 110 or 280 volts; 20, 30, 50 or 60 amps
- Three-phase power

CyrusOne will also design the overall power infrastructure so that it delivers a guaranteed seamless transition.

## HARDENED SECURITY

At CyrusOne physical security of our facilities is our number one goal. Your space will be protected 24/7 by armed and highly trained, military-grade security personnel. Entry into the data center requires biometric identity authentication such as fingerprinting and other comprehensive identity and location awareness procedures. On-site camera systems and card-activated entry keep track of all personnel inside of the facility.

# BEST-IN-CLASS FACILITIES.

## 24/7 NOCC STAFF

The CyrusOne staff is always dedicated to your needs. We are on-site 24/7/365 to assume as little or as much responsibility as your corporate objectives warrant for the safeguard and optimization of your IT infrastructure. Our highly trained and certified engineering staff manages all environmental systems including power, cooling, fire, etc.

Our experienced staff is completely proficient monitoring the data center environment. They are constantly observing for hot spots, air flow and humidity to ensure optimal functionality of all equipment. But beyond mere environmental management, our on-site team also focuses on proactively monitoring and managing critical customer hardware and applications.

## ENVIRONMENTAL

In addition to power availability and security, every element of data center management is monitored and controlled from humidity to hurricane-resistance. Special attention is paid to facility cooling, with redundant HVAC systems. The floors are raised to aid in cooling, space allocation and flood prevention. Temperature is monitored. And multiple metropolitan area networks (MANs) carriers are maintained for point-to-point and dark-fiber connectivity.

And the environment is just as friendly for you as it is for your equipment. Individual secured offices are available with access to your space and systems, as are basic communications systems such as phone, fax and copy machines. And necessary spaces such as conference and break rooms are also on hand for all clients.

## REAL-TIME REPORTING

CyrusOne customers are always aware of what's going on with their systems, information and assets through a powerful selection of reporting options. From an accounting of who has accessed your space and when to environmental conditions or real-time asset inventories – your needs will be accommodated.

## BEST-IN-CLASS FACILITIES.

### INDUSTRY-LEADING SLA

CyrusOne guarantees performance through a service level agreement that is among the best in the business. The economical or data availability stumbling blocks you've run into previously are a thing of the past. Uptime is our problem now. And it's one we spend long nights thinking about so you don't have to. Whether you need only a small part of the high-availability puzzle, or a total turnkey solution, ask around about our reputation for stress-free high-availability infrastructure on demand.

### Why CyrusOne?

At CyrusOne we're committed to helping your company succeed. We're not just a data center solutions provider, we're a business enabler. We empower your success by delivering the most advanced data center solutions on the planet. Our high-performance, high-density computing environments are engineered for maximum efficiency and uptime. While our carrier-neutral facilities offer unparalleled flexibility. So as your computing needs grow, we can meet them in lockstep. But that's just the beginning.
