Foreword Surveillance Camera Commissioner, Tony Porter

Big Brother Watch present a timely report highlighting the competing tensions faced by local authorities when delivering public space video surveillance. The pressure on public services caused by austerity versus the future challenges of emerging technology are neatly addressed through analysis of recent spending patterns. Despite the reduction in spending highlighted in this report I am certain that new and advancing technologies will see further investment by local authorities to deliver new and exciting capabilities; from smart cities to smarter surveillance, the use of video analytics and algorithms to help protect its citizens from crime, support the night time economy and ensure free passage of traffic in our cities and towns. The sums of money involved are massive and it's important that those charged with delivering this service get it right.

My team is developing a process – a 'Passport to Compliance' – which will allow local authorities to follow an incremental and intelligent approach to considering whether a new surveillance camera system is essential. It begins with the question; “why do we want surveillance cameras and is there a legitimate and pressing need for them?”

It will provide a framework and guidance schedule to ensure that every pound of public money spent on surveillance camera systems is spent wisely. It will ensure local authorities comply with the Surveillance Camera Code of Practice. This report neatly highlights the imperative of implementing such a process.

Each recommendation in this report, if adopted, would serve to improve the quality of public surveillance; increase accountability and transparency to our citizens and help to drive up standards at every level. I support this report and the recommendations made within it and thank Big Brother Watch for shedding light on this issue.

A handwritten signature in black ink, appearing to read 'Tony Porter', with a stylized flourish at the end.

Tony Porter

Surveillance Camera Commissioner

Executive Summary

CCTV has been a mainstay of our streets and public spaces for over 20 years. 10 years ago the enthusiasm for CCTV led to the UK being classified as the most watched nation on earth¹. As ever where we lead, others follow, countless countries around the world are now installing cameras and surveilling their citizens. But what now for the UK, where are we currently at with this technology? Are we still rampantly installing CCTV or have we reached saturation point, and if not what might the future of street surveillance bring?

Public space CCTV is maintained by a number of different bodies; the police, local authorities, private businesses and increasingly by private individuals. Local authorities use CCTV for crime detection and prevention, including watching pubs, clubs and bars at night, as well as monitoring the flow of people and traffic.

Local authorities have historically been enthusiastic at installing CCTV on our streets. Between 1999 and 2012 the number of cameras installed by local authorities across the country jumped from 21,000 to over 51,000.

In response to this Big Brother Watch used Freedom of Information requests to determine how much money was being spent on these systems. The report **Price of Privacy (2012)** revealed that between 2007 and 2011 local authorities spent £515 million installing, maintaining and monitoring CCTV cameras. A staggering sum.

Five years on we present **Are They Still Watching?** an update of the figures outlining the money spent by local authorities on the CCTV systems between 2012 to 2015.

Our findings show that nationally there has been a decrease in the money spent on the installation, maintenance and monitoring of CCTV. Whilst some parts of the country have scrapped their CCTV schemes altogether, other areas, notably London have reported over a 71% increase in CCTV coverage.

Whilst we are pleased to see a reduction in spending on CCTV, we have to understand that the rationale behind the figures is not ideological. Local authorities have not suddenly woken up to privacy and acknowledged the intrusion CCTV causes.

It is vital that we consider the financial pressures on local authorities during this period. It has been noted that in the 2015/2016 financial year alone, local authorities have been instructed to find £2.6 billion of savings² we suspect therefore that our findings highlight the budgetary constraints and cuts in council coffers since 2010.

¹ BBC News, *UK 'most watched nation' by CCTV*, 21st July 2009: <http://news.bbc.co.uk/1/hi/uk/8160757.stm>

² Surveillance Camera Commissioner, *Speech to Security Twenty 15*, 9th July 2015: <https://www.gov.uk/government/speeches/speech-to-security-twenty-15>

We also acknowledge the changes to regulation since the Protection of Freedoms Act in 2012 and the subsequent codes of practice for CCTV from the Surveillance Camera Commissioner and the Information Commissioners Office.

We have long supported the use of CCTV where it is proven to be beneficial. We hope that in some areas cameras have been removed because they were not-fit-for purpose or poorly situated.

It appears that a number of cost saving initiatives have been introduced such as an end to 24 hour monitoring of CCTV and the merging of the role of CCTV operator with other roles within the authority. It is worth noting that in some areas responsibility for CCTV has been passed to local town councils which will inevitably impact on costs.

Looking to the future and the expansion of technology, it is important that we do not assume from these figures that CCTV may be on the wane. We are on the cusp of yet another breakthrough in technology, the rise of smarter technology, smarter cities, facial biometrics, 3D scanning and other more accurate forms of surveillance technology are all a blink away. Over the next three years the move away from analogue to digital will gather pace. The impact on CCTV schemes is likely to be inevitable.

Whilst we are encouraged by some of these results, we acknowledge that they may merely be a lull before the storm of new surveillance technology appears on our streets. In light of that we propose policy recommendations which should be considered by local authorities before the pressure to update their systems becomes too great to ignore.

Policy Recommendations:

- 1) Any improvement of systems to include additional capabilities such as smart technology, biometrics or linking systems must consider the increased risk to citizen's privacy. This should be clearly addressed in the business case and privacy impact assessment.
- 2) Local authorities should regularly report statistics on the number of crimes detected, investigated and solved by each camera to demonstrate the necessity.
- 3) A single point of contact should be created to oversee CCTV use and resolve complaints.
- 4) A single, enforceable Code of Practice which applies to all CCTV cameras should be released.

Key Findings

- Local authorities control at least **45,284 CCTV** cameras, a **12.5% decrease from 2012**.
- At least **£277,079,999.60** has been spent on the installation, maintenance and monitoring of these cameras, a **decrease of 46.4% from 2012**.
- **£38,235,429.13** was spent on the installation of CCTV, a **decrease of 57.3% from 2012**.
- **£139,550,589.09** was spent on the maintenance of cameras, a **decrease of 42% from 2012**.
- **£99,293,981.38** was spent on the wages and salary costs of CCTV operators, a **decrease of 47% from 2012**.
- London authorities recorded a **71.8% increase** in the number of cameras they operate **from 8,105 to 13,924**.
 - London also has **1/3rd (30.6%) of the UKs cameras and 22% of the overall spend** was in the capital.
- Wales has the **highest average CCTV spend of any UK region**, with **£9,000 per camera**
- London spends on **average £4,310 per camera, the lowest of any UK region**.
- The overall total is equivalent to spending:
 - £92,359,999.87 every year
 - £7,696,666.66 every month
 - £1,776,153.84 every week
 - £253,041.10 every day
 - £10,543.38 every hour
 - £175.72 every minute
 - £2.93 every second

Key Tables³

Table 1: Top 10 Highest Spending Local Authorities

No	Council	Total Spend	2012 Spend
1	Westminster	£7,327,747.33	£11,831,554
2	Birmingham	£5,598,168	£14,293,060
3	Runnymede	£5,281,821.74	£653,583
4	Croydon	£4,993,876	£5,329,589
5	City of Edinburgh	£4,807,383	£6,211,425.30
6	Ealing	£3,585,920.64	£3,547,000
7	Dacorum	£3,441,016	£3,134,654.48
8	Leicester	£3,187,898.93	£4,762,729.94
9	Enfield	£3,143,436.65	£4,996,900
10	Camden	£2,955,890.52	£3,709,816.73

Key Facts

- Croydon spends £14 per resident on CCTV, compared to just £4 in neighbouring Bromley⁴.
- Birmingham has cut back on spending by 60% since 2012.
- Runnymede spends £65 on CCTV per resident.

Table 2: Top 10 Highest Number of CCTV Cameras

No	Council	Number of Cameras	Number of Cameras (2012)
1	Hackney	2900	Did not respond
2	Wandsworth	2246	1150
3	Hammersmith and Fulham	1150	452
4	Camden	1015	793
5	Woking	691	529
6	Greenwich	680	173
7	Hillingdon	674	713
8	Bristol, City of	658	782
9	Ealing	615	351
10	Swindon	606	382

Key Facts

- Hackney has one camera for every 90 residents.
- There are more CCTV cameras in Hackney than in the whole of Wales.
- Wandsworth has more than double the number of CCTV cameras than Manchester, Liverpool and Birmingham combined.
- In the last three years Wandsworth has doubled the number of CCTV cameras it has, despite having the lowest crime rate in central London.

³ For additional tables please see Appendix 1.

⁴ This figure was originally stated incorrectly to be £24 per resident. On 25th February 2016 the figure was updated to show the correct amount.

Table 3: Top 10 Percentage decreases (spending)

No.	Council - Spending	Percentage Change	2009-2011	2012-2015
1	Ceredigion	-100%	£824,041.95	£0

10	Warrington	297.4%	39	155

Policy Recommendations

- 1. Any improvement of systems to include additional capabilities such as smart technology, biometrics or linking systems must consider the increased risk to citizen's privacy. This should be clearly addressed in the business case and privacy impact assessment.**

Whilst it is expected that local authorities (and indeed anyone) will carry out a Privacy Impact Assessment (PIA) before the installation or improvement of a camera, these PIA's should be made public and presented in an easy, accessible way. Local authorities should publish any associated documents including the proposed location and the business case for any new camera. If done properly this would engage the public, helping them to understand the purpose of each requested camera before it is installed. This improved transparency will enable people to decide for themselves whether or not CCTV in their area represents money well spent.

- 2. Local authorities should regularly report statistics on the number of crimes detected, investigated and solved by each camera to demonstrate its continued necessity.**

It is important that the public know if the cameras in their area are doing their job properly. If a camera is not regularly achieving its stated goals (for example crime prevention), then there is very little point to its continued presence; it is a drain on resources. Local authorities should be auditing their stock of cameras at regular intervals and publishing evidence to show that each and every CCTV camera continues to be necessary.

- 3. A single point of contact should be created to oversee CCTV use and resolve complaints.**

The current oversight system is divided between the Information Commissioner's Office (ICO) and the Surveillance Camera Commissioner (SCC). We believe this is confusing for the general public.

Neither organisation has responsibility for overseeing the use of all UK CCTV. This has led to a patchwork effect and isn't helpful to those seeking either advice or redress. That only one of these organisations has the necessary powers and resources to enforce the law in this area is something that requires further justification.

As cameras become more multifunctional and potentially increase their biometric capabilities, it may be that the Biometrics Commissioner becomes involved in their oversight as well. This would add further confusion. We suggest clarity is established now so that one Commissioner oversees all aspects of surveillance cameras with feed in from other relevant Commissioners as necessary.

- 4. A single enforceable Code of Practice which applies to all CCTV cameras should be released.**

Currently there are two Codes of Practice relating to CCTV cameras, one from the Surveillance Camera Commissioner and one from the Information Commissioner. The codes are similar but not identical. The unnecessary duplication and confusion from this process could be resolved by the production of one fully enforceable Code of Practice presented by both Commissioners in conjunction with one another.

CCTV in the UK

How effective is CCTV?

The usefulness of CCTV could, at best, be described as variable. A number of studies highlighting how it can help in certain circumstances have questioned why it has been rolled out on such a wide scale.

One of the most well-known and well regarded studies is the Campbell Collaboration (2008) which brought together research from around the world. The study found that CCTV had a “*modest but significant desirable effect on crime*”. It also noted that it was most effective when used to deter vehicle theft in car parks. Although it endorsed the continued use of CCTV it did so with the important caveat that it should be “*more narrowly targeted*”.⁵

A report by the Swedish National Council for Crime Prevention (2007) produced similar findings. The research also found a “*small (16%) but significant decrease in crime*”. Once again car park crime was singled out for attention; stating that the decrease was “*largely driven by the effectiveness of CCTV schemes in car parks, which caused a 51% decrease in crime*”. It noted that in these instances the use of CCTV also came with improved “*lighting, fencing and security personnel*” meaning that CCTV was often being used as part of a wider strategy. The study concluded that the results were only “*marginally successful*” and that any future schemes should be implemented carefully, evaluated and properly followed up.⁶

The variable effectiveness of CCTV has also been noted by the Home Office who found in fourteen case studies that “*The belief that CCTV alone can counter complex social problems is unrealistic in the extreme*”. It also noted that “*at best CCTV can work alongside other measures to generate some changes, but it is no easy panacea*”.⁷

Big Brother Watch’s Position

Big Brother Watch does not advocate the removal of all CCTV cameras. As part of a wider strategy CCTV can be beneficial, particularly when in the right place and used effectively. However, the benefits have never been fully assessed, other than the benefit to the investigation of car crime.

Without further empirical research on the use of CCTV past and present, we have no real idea of what areas of crime are reduced by the use of this technology. It should be noted that there has not been a spike in crime in the areas reporting a reduction in cameras. We understand that a number of councils are using cameras on an as needed basis, rather than installing fixed cameras.

⁵ Campbell Systematic reviews, *Effects of Closed Circuit Television Surveillance on Crime*, December 2008, p. 2

⁶ Bardon C. Welsh David P. Farrington, *Closed Circuit Television Surveillance and Crime Prevention A Systematic Review, Report prepared for The Swedish National Council for Crime Prevention*, 2007

⁷ Home Office, The impact of CCTV: fourteen case studies:

<http://webarchive.nationalarchives.gov.uk/20110218135832/http://rds.homeoffice.gov.uk/rds/pdfs05/rdsolr1505.pdf>

Re-deployable cameras can be placed in problem areas for a short space of time. They can then be retargeted once the issues have been resolved. Whilst we would oppose the use of these cameras as a “ring of steel” approach, the concept of targeted use in an area where crime has been proven to be rife could be seen to be more beneficial from a maintenance, cost and privacy perspective, than an expensive fixed camera surveilling everyone going about their day to day business.

Transparency

No register of CCTV cameras currently exists in the UK. This means we have no idea exactly how many cameras are present in the country. The most recent estimate, from the British Security Industry Association, puts the number at between 4 and 6 million. Without precise numbers it is very difficult to know where cameras are located, how intrusive they can be and indeed how effective they are.⁸

Whilst there are clear problems with transparency around CCTV we note that Mid Sussex District Council recently announced a public consultation ahead of replacing their current stock of cameras. The Council invited views on the potential expansion of the scheme. They published the location of the proposed new cameras, as well as the effectiveness of the existing ones.⁹ We welcome this approach as it allows the local residents to judge for themselves whether or not they think they will benefit from the suggested scheme or not.

This kind of transparency and debate should be standard ahead of the installation of CCTV. The publication of the business case for each camera before installation would help to further inform members of the public of any plans.

After the installation of a camera its continued use must be justified both to policymakers and members of the public. Local authorities must publish information about how often cameras under their control detect criminal activity. This will ensure the camera is producing the desired effect of cutting crime and is both beneficial and cost effective.

Oversight

Currently two bodies exist to oversee the use of CCTV:

- The Surveillance Camera Commissioner (SCC), who is tasked with overseeing the use of cameras by public bodies and
- The Information Commissioner’s Office (ICO), which is tasked with overseeing the use of cameras by private individuals and companies.

Both organisations produce very similar codes of practice on the best use of surveillance camera equipment. This can cause confusion for members of the public who may wish to lodge a complaint about a CCTV system but do not know who to complain to.

⁸Daily Telegraph, *One surveillance camera for every 11 people in Britain, says CCTV survey*, 10th July 2013: <http://www.telegraph.co.uk/technology/10172298/One-surveillance-camera-for-every-11-people-in-Britain-says-CCTV-survey.html>

⁹Mid Sussex District Council, *CCTV camera upgrades for consultation*, 18th September 2015: <http://www.midsussex.gov.uk/Press/10073.htm>

Whilst the ICO do an excellent job, for the sake of clarity it would be beneficial for oversight to be the task of one commissioner, preferably the SCC, who can then seek support from the experienced ICO on issues of data protection and regulation.

We see great benefit in the ICO continuing to be involved in a specialist and supporting role to the SCC rather than as two separate groups working in parallel towards a very similar goal.

Future capabilities

Technology is changing rapidly and CCTV is no exception. Within a few years new kinds of camera, with improved features will become commonplace; bringing with them new opportunities and new threats.

1. **HD Cameras.** As this technology becomes cheaper it will allow for better quality footage and the potential for the easier identification of suspects. At the same time it will raise a host of concerns such as the use of facial recognition. Recent examples, such as Leicestershire Police's trial of the technology have shown that when badly communicated it can provoke a backlash.¹⁰
2. **Smart Cities.** Increasingly our urban areas are becoming more connected and one of the areas this is often evident in is CCTV. Concerns have been raised about the threat that hackers pose to CCTV systems in smart cities. This raises the potential of footage (and therefore the personal information of citizens) being accessed and stolen by malicious individuals.¹¹
3. **Sound and gait recognition.** New technology will allow cameras to recognise certain sounds such as breaking glass or an argument and feed this back to an operator. Another new function is the ability of software to record and recognise the way an individual walks, something that is difficult to disguise and makes it easier to identify suspects in a crowd.¹²
4. **Enhanced Tracking.** So called tag and track systems allow individuals to be identified and then tracked across an entire system with individual cameras sending alerts to operators whenever the target appears.¹³

Taken together these advances will change how cameras are used and the threat they pose to privacy. Local authorities must begin to consider how they can minimise privacy concerns before they start trying to deploy these methods on our streets

Sunderland	Information cannot be broken down			
Tameside	£128,630	£128,630	£128,630	£385,890

¹⁹⁰ Public space CCTV also operated by South Yorkshire Police but they do not contribute to the running and maintenance of the system.

¹⁹¹ Approximate figures.

¹⁹² There are no dedicated CCTV operators, personnel undertake a range of tasks relating to the delivery of the Facilities Management Service.

¹⁹³ Excludes costs for Huyton, where staff members undertake a variety of security functions: 2012/13 - £106,401, 2013/14 - £57,633, 2014/15 - £55,562.

¹⁹⁴ CCTV monitored by South Yorkshire Police.

¹⁹⁵ The authority does not pay to have its CCTV monitored. The staff that do monitor are paid from generated income from other activities.

¹⁹⁶ Not applicable as service is contracted out.

¹⁹⁷ CCTV monitoring is combined with a number of other services such as concierges and alarms monitoring. The costs cannot therefore be broken down.

Total				£30,855,266.21

²⁴⁷ Contract held by OCS Group Ltd.

²⁴⁸ Service level agreement in place with St Alban's City Council. An annual contribution is paid.

²⁴⁹ Monitored by Surrey Police

²⁵⁰ Response notes: "Worcester City Council contracts out its CCTV service to a partner authority (Wychavon District Council). The £70k cost outlined above in response to question 2 relating to CCTV operation and maintenance for fixed cameras, is split as follows - £50k for operation/control room and £20k for maintenance. As Worcester City Council contributes £50k to a service level agreement where staff are supplied by a third party, it means we are unable to break the £50K amount down further."

²⁵¹ Monitoring carried out by another Council by way of contract.

Appendix 2: Methodology

A Freedom of Information request was sent to all local authorities beginning on the 17th July 2015.

We asked for the amount that had been spent on the installation and maintenance of both fixed and mobile public space CCTV cameras. We also asked for the salary costs of those employed to monitor cameras as well as the total number of cameras controlled by the local authority.

We received a 96% response rate. For the purposes of this report responses were included until 17th February 2016.

Appendix 3: Original Freedom of Information Request

Dear Sir or Madam

I am writing to obtain information about your local authority's use of CCTV cameras.

To outline my query as clearly as possible, I am requesting:

- 1) The amount spent by your authority on the installation of public-facing CCTV cameras and the purchase or lease of recording equipment and premises.

I request that the information be laid out in the following format:

Council	Amount spent on fixed public facing cameras			Amount spent on mobile public facing cameras			Total council spend on cameras		
	2012/13	2013/14	2014/15	2012/13	2013/14	2014/15	2012/13	2013/14	2014/15
Name	£1,000	£400	£0	£450	£250	£100	£1,450	£750	£100

- 2) The annual cost of your authority's public-facing CCTV operation and maintenance.

I would like this information broken down into fixed and mobile camera devices.

I request that the information be laid out in the following format:

Council	Annual cost of CCTV operation and maintenance for fixed cameras			Annual cost of CCTV operation and maintenance			Total council spend on CCTV operation and maintenance		
	2012/13	2013/14	2014/15	2012/13	2013/14	2014/15	2012/13	2013/14	2014/15
Name	£150	£40	£0	£500	£200	£100	£650	£240	£100

- 3) The annual wage and salary cost of CCTV operators including pension liabilities to your authority.
- 4) The total number of cameras controlled by your authority as of 1st March 2015.

I request that the time period covered for questions 1-3 is 1st March 2012-1st March 2015.

If your authority's public-facing CCTV operation is operated by either the local police or another council, or on behalf of another authority, please make this clear and provide any details of the annual cost of the lease or annual stipend paid to (or received from) these organisations for the operation of the CCTV network.

I understand under the Freedom of Information Act that I am entitled to a response within twenty working days. I would be grateful if you could confirm this request in writing as soon as possible.

About Big Brother Watch

Big Brother Watch was set up to challenge policies that threaten our privacy, our freedoms and our civil liberties, and to expose the true scale of the surveillance state.

Founded in 2009, we have produced unique research exposing the erosion of civil liberties in the UK, looking at the dramatic expansion of surveillance powers, the growth of the database state and the misuse of personal information.

We campaign to give individuals more control over their personal data, and hold to account those who fail to respect our privacy, whether private companies, government departments or local authorities.

Protecting individual privacy and defending civil liberties, Big Brother Watch is a campaign group for the digital age.

If you are a journalist and you would like to contact Big Brother Watch, including outside office hours, please call +44 (0) 7505 448925 (24hrs). You can also email press@bigbrotherwatch.org.uk for written enquiries.
