

What's the REAL DEAL with stem cell therapies?

In the
**OmniMax
Theatre**

“Stem cells hold tremendous promise in the fight against many forms of illness and disease.”

This statement has become somewhat of a mantra for scientists, governments and industry experts and yet, after two decades of hearing about this promise, we're still not there. In the meantime, unregulated clinics have sprouted up all over the globe, selling therapies and cures with no guarantee of success – and potentially a very real risk of harm.

So what's the holdup? Why is it taking so long to make these promised therapies a reality?

Join our moderator, Pamela Fayerman, and our expert guests as they share their insights and give you the **real deal on stem cell therapies.**
