

MATILLION ETL FOR REDSHIFT

A **fast, modern, easy-to-use** and powerful ETL/ELT tool that makes it simple and productive to load and transform data on Amazon Redshift.

www.matillion.com

- Built for Amazon Redshift
- Up and running in under 5 minutes
- Prices from \$1.37 per hour
- No commitments or up-front costs.

With a few clicks you can load data directly into Redshift, fast, from Amazon S3; Amazon RDS; relational, columnar, cloud and NoSQL databases; FTP/HTTP; REST, SOAP, & JSON APIs; Amazon EMR; Amazon DynamoDB; and directly from enterprise and cloud-based systems including Salesforce.com, Netsuite, SAP, Google Analytics, Google Adwords, Facebook, Twitter and many more.

MATILLION ETL FOR REDSHIFT AT A GLANCE

- **Load data into Redshift,** join, transform, orchestrate and schedule your ETL process in a modern, lightweight, powerful and feature rich ETL/ELT tool designed specifically for Amazon Redshift
- **Unlocks Redshift's power.** Up to x100 faster than traditional ETL
- **Fast setup.** Launch the AMI on the AWS Marketplace and be developing ETL jobs within minutes
- **Easy to use and enterprise ready.** Comprehensive orchestration, integration, security, monitoring and none-functionals to suit any team size
- **Simple commercials.** Pay-as-you-go and through your existing AWS account. Prices from \$1.37 p/hour

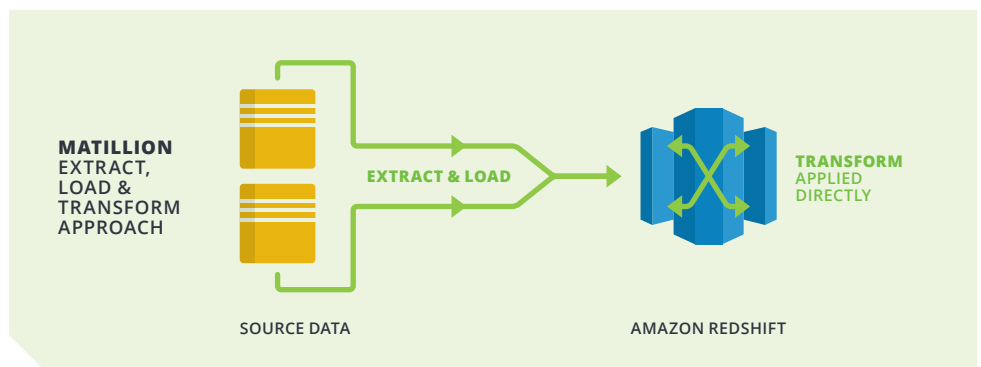

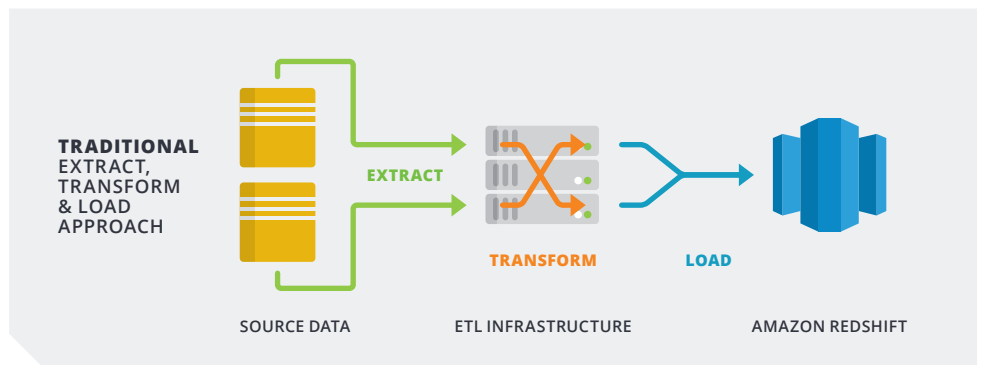

Load data

With a few clicks you can **load data directly into Redshift**, fast, from Amazon S3; Amazon RDS; relational, columnar, cloud and NoSQL databases; FTP/HTTP; REST, SOAP, & JSON APIs; Amazon EMR; Amazon DynamoDB; and directly from enterprise and cloud-based systems including Salesforce.com, Netsuite, SAP, Google Analytics, Google Adwords, Facebook, Twitter and many more.

Transform data

Matillion ETL for Redshift **transforms data at eye-popping speed** in a productivity-orientated, streamlined, browser-based graphical job development environment. Expect **50% reduction in ETL development and maintenance effort** and months off your project as a result of the streamlined UI, perfect integration to AWS & Redshift and the sheer speed.

How Matillion ETL for Redshift works

Orchestrate

Matillion ETL for Redshift **delivers a rich orchestration environment** where you can orchestrate data load and transform; control flow; integrate with other systems and AWS services via Amazon SQS, Amazon SNS and Python; iterate; manage variables; create and drop tables; vacuum and analyse tables; soft code ETL/ELTs from configuration tables; control transactions and commit/roll-back; set up alerting; and develop data quality, error-handling and conditional logic.

There is a **comprehensive scheduler built-in** to Matillion ETL for Redshift to schedule and run individual jobs or complete projects. You can also call Matillion ETL for Redshift jobs externally, from other systems, based on events, or from a 3rd party scheduling product.

Enterprise Ready

Work as a team

Matillion ETL for Redshift delivers support for teams with comprehensive version control; live collaboration; and multi-environment & multi-schema support for controlling development, test and production environments. You can also import and export Matillion jobs between instances, as JSON.

Simple to deploy and scale

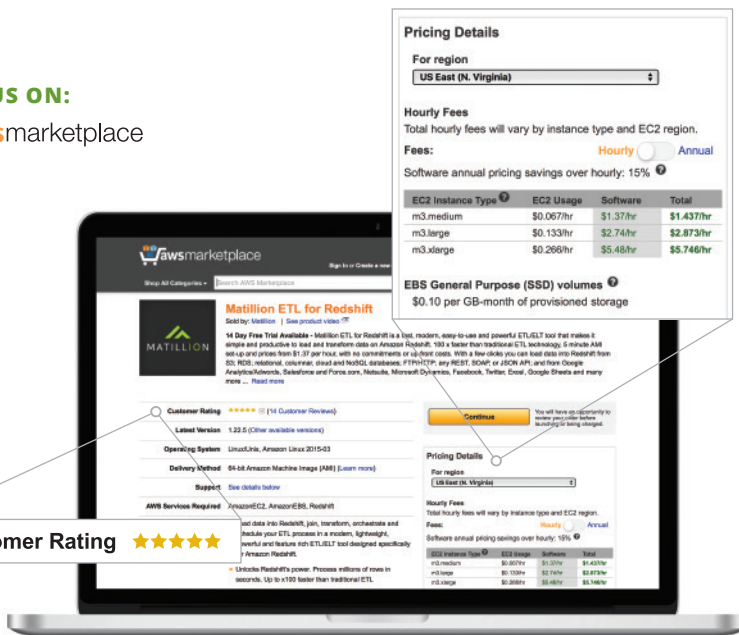

Matillion ETL for Redshift is delivered as an AMI and requires no extra servers or other infrastructure. To make Matillion ETL for Redshift scale, you scale the Amazon Redshift cluster – which makes it near linearly scalable.

Supported systems

Matillion ETL for Redshift integrates with a wide variety of data sources:

- Amazon S3
- Amazon RDS(Aurora, MySQL, MSSQL, Oracle, MariaDb, Postgres)
- Amazon DynamoDB
- Amazon EMR
- Cloud and on-premise relational databases (MySQL, MSSQL, Postgres, Oracle, Sybase, IBM DB2, IBM DB2 for i, Teradata)
- NoSQL databases (MongoDb, Google BigQuery)
- Enterprise systems (SAP, Netsuite, Microsoft Dynamics NAV and AX)
- CRM and Marketing (Salesforce.com, Microsoft Dynamics CRM, Hubspot, Google Analytics, Google Adwords)
- Social Networks (Facebook, Twitter)
- Any REST, JSON or SOAP API
- FTP and HTTP

MATILLION ETL FOR REDSHIFT KEY FEATURES

- Comprehensive data ingestion support
- Browser-based graphical job development environment
- Rich orchestration layer
- Complete scheduling, monitoring and alerting
- Version control
- Amazon Redshift best-practices baked in

Monitoring, logging and alerting

Matillion ETL for Redshift delivers a wide range of options around monitoring, logging and alerting – real time and historical. You can also set up e-mail and text message alerts, integrate with the Amazon CloudWatch and other monitoring tools.

Cheap. Billing via AWS account

Matillion ETL for Redshift starts from \$1.37 per hour with no up-front costs or long-term commitments. When you move beyond proof of concept and are running 24 x 7, you can choose to purchase an annual subscription to reduce your hourly costs.

Billing is via your existing AWS account, so no new vendor to set up or payment terms to negotiate. Matillion ETL for Redshift appears in your AWS monthly statement, like any other AWS service.

"We evaluated all tools available for Redshift and chose Matillion – it's delightful to use"
PWC

"We had evaluated other tools in the past but nothing came even close to Matillion"
AXTRIA

"I can't imagine working on Redshift without Matillion ever again."
MAKERBOT

"You guys are redefining ETL"
GE

"Our CTO couldn't believe the ETL was actually working the first time he saw it because our old custom processes took hours and the new packages run in around 2 minutes"
FIELD NATION

Matillion delivers technology that helps companies exploit their data using the Cloud.

Matillion is an AWS Advanced Technology Partner and an AWS Big Data Competency holder. Matillion ETL for Redshift is available worldwide via the AWS Marketplace.

Headquartered in Knutsford, United Kingdom.
