Kelly SM, Gryczynski J, Mitchelle SG, Kirk A, O'Grady KE, Schwartz RP. Validity of Brief Screening Instrument for Adolescent Tobacco, Alcohol, and Drug Use. *Pediatrics*. 2014;133(5):819–826

An error occurred in the article by Kelly et al, “Validity of Brief Screening Instrument for Adolescent Tobacco, Alcohol, and Drug Use” published in the May 2014 issue of *Pediatrics* (2014;133[5]:819–826; doi:10.1542/peds.2013-2346). On page 820, under Modified Composite International Diagnostic Interview, on lines 1–11, this reads: “Items from the CIDI-2 Substance Abuse Module (CIDI-2 SAM), an instrument used to assess substance use disorders (SUD), were used as the criterion measure for identifying SUD as defined by the *Diagnostic and Statistical Manual, Fifth Edition* (DSM-5). The CIDI-2 SAM contains an item on craving, which is included as a symptom in meeting criteria for an SUD under DSM-5.”

This should have read: “Items from the WHO World Mental Health-CIDI (WMH-CIDI; <http://www.hcp.med.harvard.edu/wmhcid/index.php>), an instrument used to assess substance use disorders (SUD), were used as the criterion measure for identifying SUD as defined by the *Diagnostic and Statistical Manual, Fifth Edition* (DSM-5). The WMH-CIDI contains an item on craving, which is included as a symptom in meeting criteria for an SUD under DSM-5. Because the WMH-CIDI does not contain all the criteria for DSM-5 Substance Use Disorder for tobacco, the WMH-CIDI's drug section items were adapted to assess tobacco use.”

Readers should note the mislabeling of the CIDI under Abbreviations on page 819, in Methods under Abstract on page 819, in Procedures in Methods section on page 822, and Discussion section on page 825.
