Welcome

This is the *AWS CodeCommit API Reference*. This reference provides descriptions of the operations and data types for AWS CodeCommit API along with usage examples.

You can use the AWS CodeCommit API to work with the following objects:

Repositories, by calling the following:

- [BatchGetRepositories \(p. 4\)](#), which returns information about one or more repositories associated with your AWS account
- [CreateRepository \(p. 11\)](#), which creates an AWS CodeCommit repository
- [DeleteRepository \(p. 15\)](#), which deletes an AWS CodeCommit repository
- [GetRepository \(p. 33\)](#), which returns information about a specified repository
- [ListRepositories \(p. 42\)](#), which lists all AWS CodeCommit repositories associated with your AWS account
- [UpdateRepositoryDescription \(p. 56\)](#), which sets or updates the description of the repository
- [UpdateRepositoryName \(p. 59\)](#), which changes the name of the repository. If you change the name of a repository, no other users of that repository will be able to access it until you send them the new HTTPS or SSH URL to use.

Branches, by calling the following:

- [CreateBranch \(p. 8\)](#), which creates a new branch in a specified repository
- [GetBranch \(p. 21\)](#), which returns information about a specified branch
- [ListBranches \(p. 39\)](#), which lists all branches for a specified repository
- [UpdateDefaultBranch \(p. 53\)](#), which changes the default branch for a repository

Information about committed code in a repository, by calling the following:

- [GetBlob \(p. 18\)](#), which returns the base-64 encoded content of an individual Git blob object within a repository
- [GetCommit \(p. 24\)](#), which returns information about a commit, including commit messages and author and committer information
- [GetDifferences \(p. 28\)](#), which returns information about the differences in a valid commit specifier (such as a branch, tag, HEAD, commit ID or other fully qualified reference)

Triggers, by calling the following:

- [GetRepositoryTriggers \(p. 36\)](#), which returns information about triggers configured for a repository
- [PutRepositoryTriggers \(p. 45\)](#), which replaces all triggers for a repository and can be used to create or delete triggers
- [TestRepositoryTriggers \(p. 49\)](#), which tests the functionality of a repository trigger by sending data to the trigger target

For information about how to use AWS CodeCommit, see the [AWS CodeCommit User Guide](#).

This document was last published on February 15, 2017.

Actions

The following actions are supported:

- [BatchGetRepositories \(p. 4\)](#)
- [CreateBranch \(p. 8\)](#)
- [CreateRepository \(p. 11\)](#)
- [DeleteRepository \(p. 15\)](#)
- [GetBlob \(p. 18\)](#)
- [GetBranch \(p. 21\)](#)
- [GetCommit \(p. 24\)](#)
- [GetDifferences \(p. 28\)](#)
- [GetRepository \(p. 33\)](#)
- [GetRepositoryTriggers \(p. 36\)](#)
- [ListBranches \(p. 39\)](#)
- [ListRepositories \(p. 42\)](#)
- [PutRepositoryTriggers \(p. 45\)](#)
- [TestRepositoryTriggers \(p. 49\)](#)
- [UpdateDefaultBranch \(p. 53\)](#)
- [UpdateRepositoryDescription \(p. 56\)](#)
- [UpdateRepositoryName \(p. 59\)](#)

BatchGetRepositories

Returns information about one or more repositories.

Note

The description field for a repository accepts all HTML characters and all valid Unicode characters. Applications that do not HTML-encode the description and display it in a web page could expose users to potentially malicious code. Make sure that you HTML-encode the description field in any application that uses this API to display the repository description on a web page.

Request Syntax

```
{  
    "repositoryNames": [ "string" ]  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryNames (p. 4)

The names of the repositories to get information about.

Type: array of Strings

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "repositories": [  
        {  
            "accountId": "string",  
            "Arn": "string",  
            "cloneUrlHttp": "string",  
            "cloneUrlSsh": "string",  
            "creationDate": number,  
            "defaultBranch": "string",  
            "lastModifiedDate": number,  
            "repositoryDescription": "string",  
            "repositoryId": "string",  
            "repositoryName": "string"  
        }  
    ],  
    "repositoriesNotFound": [ "string" ]  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

repositories (p. 4)

A list of repositories returned by the batch get repositories operation.

Type: array of [RepositoryMetadata \(p. 66\)](#) objects

repositoriesNotFound (p. 4)

Returns a list of repository names for which information could not be found.

Type: array of Strings

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

MaximumRepositoryNamesExceededException

The maximum number of allowed repository names was exceeded. Currently, this number is 25.

HTTP Status Code: 400

RepositoryNamesRequiredException

A repository names object is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
```

```
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 50
X-Amz-Target: CodeCommit_20150413.BatchGetRepositories
X-Amz-Date: 20151028T213222Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "repositoryNames": [
        "MyDemoRepo",
        "MyOtherDemoRepo"
    ]
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 550
Date: Wed, 28 Oct 2015 21:32:24 GMT

{
    "repositories": [
        {
            "repositoryName": "MyDemoRepo",
            "defaultBranch": "master",
            "cloneUrlSsh": "ssh://git-codecommit.us-east-1.amazonaws.com/v1/
repos/MyDemoRepo",
            "lastModifiedDate": 1441725693.583,
            "repositoryDescription": "My demonstration repository",
            "cloneUrlHttp": "https://git-codecommit.us-east-1.amazonaws.com/
v1/repos/MyDemoRepo",
            "creationDate": 1441725693.583,
            "repositoryId": "f7579e13-b83e-4027-aaef-650c0EXAMPLE",
            "Arn": "arn:aws:codecommit:us-
east-1:111111111111EXAMPLE:MyDemoRepo",
            "accountId": "111111111111"
        },
        {
            "creationDate": 1431980067.669,
            "defaultBranch": "master",
            "repositoryName": "MyOtherDemoRepo",
            "cloneUrlSsh": "ssh://git-codecommit.us-east-1.amazonaws.com/v1/
repos/MyOtherDemoRepo",
            "lastModifiedDate": 1444776815.847,
            "repositoryDescription": "My other demonstration repository",
            "cloneUrlHttp": "https://git-codecommit.us-east-1.amazonaws.com/
v1/repos/MyOtherDemoRepo",
            "repositoryId": "cfc29ac4-b0cb-44dc-9990-f6f51EXAMPLE",
            "Arn": "arn:aws:codecommit:us-
east-1:111111111111EXAMPLE:MyOtherDemoRepo",
            "accountId": "111111111111"
        }
    ]
}
```

```
        ] ,  
    "repositoriesNotFound" : [ ]  
}
```

See Also

- [AWS SDK for Python](#)
- [AWS SDK for Ruby V2](#)

CreateBranch

Creates a new branch in a repository and points the branch to a commit.

Note

Calling the create branch operation does not set a repository's default branch. To do this, call the update default branch operation.

Request Syntax

```
{  
    "branchName": "string",  
    "commitId": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

branchName (p. 8)

The name of the new branch to create.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

commitId (p. 8)

The ID of the commit to point the new branch to.

Type: String

Required: Yes

repositoryName (p. 8)

The name of the repository in which you want to create the new branch.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

BranchNameExistsException

The specified branch name already exists.

HTTP Status Code: 400

BranchNameRequiredException

A branch name is required but was not specified.

HTTP Status Code: 400

CommitDoesNotExistException

The specified commit does not exist or no commit was specified, and the specified repository has no default branch.

HTTP Status Code: 400

CommitIdRequiredException

A commit ID was not specified.

HTTP Status Code: 400

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidBranchNameException

The specified branch name is not valid.

HTTP Status Code: 400

InvalidCommitIdException

The specified commit ID is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
```

```
Content-Length: 113
X-Amz-Target: CodeCommit_20150413.CreateBranch
X-Amz-Date: 20151028T221237Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "commitId": "317f8570EXAMPLE",
    "repositoryName": "MyDemoRepo",
    "branchName": "MyNewBranch"
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 0
Date: Wed, 28 Oct 2015 22:12:40 GMT
```

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)
- [AWS SDK for C++](#)

- [AWS SDK for Python](#)
- [AWS SDK for Ruby V2](#)

CreateRepository

Creates a new, empty repository.

Request Syntax

```
{  
    "repositoryDescription": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

[repositoryDescription \(p. 11\)](#)

A comment or description about the new repository.

Note

The description field for a repository accepts all HTML characters and all valid Unicode characters. Applications that do not HTML-encode the description and display it in a web page could expose users to potentially malicious code. Make sure that you HTML-encode the description field in any application that uses this API to display the repository description on a web page.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

[repositoryName \(p. 11\)](#)

The name of the new repository to be created.

Note

The repository name must be unique across the calling AWS account. In addition, repository names are limited to 100 alphanumeric, dash, and underscore characters, and cannot include certain characters. For a full description of the limits on repository names, see [Limits](#) in the AWS CodeCommit User Guide. The suffix ".git" is prohibited.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.\-]+

Required: Yes

Response Syntax

```
{  
    "repositoryMetadata": {  
        "accountId": "string",  
        "arn": "string",  
        "cloneUrlHttp": "string",  
        "cloneUrlSsh": "string",  
        "creationDate": number,  
        "defaultBranch": "string",  
        "lastModifiedDate": number,  
    },  
}
```

```
    "repositoryDescription": "string",
    "repositoryId": "string",
    "repositoryName": "string"
}
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

repositoryMetadata (p. 11)

Information about the newly created repository.

Type: [RepositoryMetadata \(p. 66\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryDescriptionException

The specified repository description is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryLimitExceededException

A repository resource limit was exceeded.

HTTP Status Code: 400

RepositoryNameExistsException

The specified repository name already exists.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 88
X-Amz-Target: CodeCommit_20150413.CreateRepository
X-Amz-Date: 20151028T223339Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "repositoryName": "MyDemoRepo",
    "repositoryDescription": "My demonstration repository"
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 483
Date: Wed, 28 Oct 2015 22:33:42 GMT

{
    "repositoryMetadata": {
        "repositoryName": "MyDemoRepo",
        "cloneUrlSsh": "ssh://git-codecommit.us-east-1.amazonaws.com/v1/
repos/MyDemoRepo",
        "lastModifiedDate": 1446071622.494,
        "repositoryDescription": "My demonstration repository",
        "cloneUrlHttp": "https://git-codecommit.us-east-1.amazonaws.com/v1/
repos/MyDemoRepo",
        "creationDate": 1446071622.494,
        "repositoryId": "f7579e13-b83e-4027-aaef-650c0EXAMPLE",
        "Arn": "arn:aws:codecommit:us-east-1:111111111111EXAMPLE:MyDemoRepo",
        "accountId": "111111111111"
    }
}
```

See Also

DeleteRepository

Deletes a repository. If a specified repository was already deleted, a null repository ID will be returned.

Important

Deleting a repository also deletes all associated objects and metadata. After a repository is deleted, all future push calls to the deleted repository will fail.

Request Syntax

```
{  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryName (p. 15)

The name of the repository to delete.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "repositoryId": "string"  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

repositoryId (p. 15)

The ID of the repository that was deleted.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 31
X-Amz-Target: CodeCommit_20150413.DeleteRepository
X-Amz-Date: 20151028T225354Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{ "repositoryName": "MyDemoRepo" }
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 55
Date: Wed, 28 Oct 2015 22:53:56 GMT

{ "repositoryId": "f7579e13-b83e-4027-aaef-650c0EXAMPLE" }
```

}

GetBlob

Returns the base-64 encoded content of an individual blob within a repository.

Request Syntax

```
{  
    "blobId": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

blobId (p. 18)

The ID of the blob, which is its SHA-1 pointer.

Type: String

Required: Yes

repositoryName (p. 18)

The name of the repository that contains the blob.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "content": blob  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

content (p. 18)

The content of the blob, usually a file.

Type: Base64-encoded binary data object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

BlobIdDoesNotExistException

The specified blob does not exist.

HTTP Status Code: 400

BlobIdRequiredException

A blob ID is required but was not specified.

HTTP Status Code: 400

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

FileTooLargeException

The specified file exceeds the file size limit for AWS CodeCommit. For more information about limits in AWS CodeCommit, see [AWS CodeCommit User Guide](#).

HTTP Status Code: 400

InvalidBlobIdException

The specified blob is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

GetBranch

Returns information about a repository branch, including its name and the last commit ID.

Request Syntax

```
{  
    "branchName": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

branchName (p. 21)

The name of the branch for which you want to retrieve information.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

repositoryName (p. 21)

The name of the repository that contains the branch for which you want to retrieve information.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: No

Response Syntax

```
{  
    "branch": {  
        "branchName": "string",  
        "commitId": "string"  
    }  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

branch (p. 21)

The name of the branch.

Type: [BranchInfo \(p. 63\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

BranchDoesNotExistException

The specified branch does not exist.

HTTP Status Code: 400

BranchNameRequiredException

A branch name is required but was not specified.

HTTP Status Code: 400

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidBranchNameException

The specified branch name is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 57
X-Amz-Target: CodeCommit_20150413.GetBranch
X-Amz-Date: 20151028T224311Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
```

```
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "repositoryName": "MyDemoRepo",
    "branchName": "MyNewBranch"
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 88
Date: Wed, 28 Oct 2015 22:43:13 GMT

{
    "branch": {
        "commitID": "317f8570EXAMPLE",
        "branchName": "MyNewBranch"
    }
}
```

GetCommit

Returns information about a commit, including commit message and committer information.

Request Syntax

```
{  
    "commitId": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

commitId (p. 24)

The commit ID.

Type: String

Required: Yes

repositoryName (p. 24)

The name of the repository to which the commit was made.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "commit": {  
        "additionalData": "string",  
        "author": {  
            "date": "string",  
            "email": "string",  
            "name": "string"  
        },  
        "committer": {  
            "date": "string",  
            "email": "string",  
            "name": "string"  
        },  
        "message": "string",  
        "parents": [ "string" ],  
        "treeId": "string"  
    }  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

commit (p. 24)

A commit data type object that contains information about the specified commit.

Type: [Commit \(p. 64\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

CommitIdDoesNotExistException

The specified commit ID does not exist.

HTTP Status Code: 400

CommitIdRequiredException

A commit ID was not specified.

HTTP Status Code: 400

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidCommitIdException

The specified commit ID is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1

GetDifferences

Returns information about the differences in a valid commit specifier (such as a branch, tag, HEAD, commit ID or other fully qualified reference). Results can be limited to a specified path.

Request Syntax

```
{  
    "afterCommitSpecifier": "string",  
    "afterPath": "string",  
    "beforeCommitSpecifier": "string",  
    "beforePath": "string",  
    "MaxResults": number,  
    "NextToken": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

afterCommitSpecifier (p. 28)

The branch, tag, HEAD, or other fully qualified reference used to identify a commit.

Type: String

Required: Yes

afterPath (p. 28)

The file path in which to check differences. Limits the results to this path. Can also be used to specify the changed name of a directory or folder, if it has changed. If not specified, differences will be shown for all paths.

Type: String

Required: No

beforeCommitSpecifier (p. 28)

The branch, tag, HEAD, or other fully qualified reference used to identify a commit. For example, the full commit ID. Optional. If not specified, all changes prior to the `afterCommitSpecifier` value will be shown. If you do not use `beforeCommitSpecifier` in your request, consider limiting the results with `maxResults`.

Type: String

Required: No

beforePath (p. 28)

The file path in which to check for differences. Limits the results to this path. Can also be used to specify the previous name of a directory or folder. If `beforePath` and `afterPath` are not specified, differences will be shown for all paths.

Type: String

Required: No

MaxResults (p. 28)

A non-negative integer used to limit the number of returned results.

Type: Integer

Required: No

NextToken (p. 28)

An enumeration token that when provided in a request, returns the next batch of the results.

Type: String

Required: No

repositoryName (p. 28)

The name of the repository where you want to get differences.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "differences": [  
        {  
            "afterBlob": {  
                "blobId": "string",  
                "mode": "string",  
                "path": "string"  
            },  
            "beforeBlob": {  
                "blobId": "string",  
                "mode": "string",  
                "path": "string"  
            },  
            "changeType": "string"  
        }  
    ],  
    "NextToken": "string"  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

differences (p. 29)

A differences data type object that contains information about the differences, including whether the difference is added, modified, or deleted (A, D, M).

Type: array of [Difference \(p. 65\)](#) objects

NextToken (p. 29)

An enumeration token that can be used in a request to return the next batch of the results.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

CommitDoesNotExistException

The specified commit does not exist or no commit was specified, and the specified repository has no default branch.

HTTP Status Code: 400

CommitRequiredException

A commit was not specified.

HTTP Status Code: 400

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidCommitException

The specified commit is not valid.

HTTP Status Code: 400

InvalidCommitIdException

The specified commit ID is not valid.

HTTP Status Code: 400

InvalidContinuationTokenException

The specified continuation token is not valid.

HTTP Status Code: 400

InvalidMaxResultsException

The specified number of maximum results is not valid.

HTTP Status Code: 400

InvalidPathException

The specified path is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

PathDoesNotExistException

The specified path does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity

GetRepository

Returns information about a repository.

Note

The description field for a repository accepts all HTML characters and all valid Unicode characters. Applications that do not HTML-encode the description and display it in a web page could expose users to potentially malicious code. Make sure that you HTML-encode the description field in any application that uses this API to display the repository description on a web page.

Request Syntax

```
{  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryName (p. 33)

The name of the repository to get information about.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "repositoryMetadata": {  
        "accountId": "string",  
        "Arn": "string",  
        "cloneUrlHttp": "string",  
        "cloneUrlSsh": "string",  
        "creationDate": number,  
        "defaultBranch": "string",  
        "lastModifiedDate": number,  
        "repositoryDescription": "string",  
        "repositoryId": "string",  
        "repositoryName": "string"  
    }  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

repositoryMetadata (p. 33)

Information about the repository.

Type: [RepositoryMetadata \(p. 66\)](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 33
X-Amz-Target: CodeCommit_20150413.GetRepository
X-Amz-Date: 20151028T225711Z

GetRepositoryTriggers

Gets information about triggers configured for a repository.

Request Syntax

```
{  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryName (p. 36)

The name of the repository for which the trigger is configured.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "configurationId": "string",  
    "triggers": [  
        {  
            "branches": [ "string" ],  
            "customData": "string",  
            "destinationArn": "string",  
            "events": [ "string" ],  
            "name": "string"  
        }  
    ]  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

configurationId (p. 36)

The system-generated unique ID for the trigger.

Type: String

triggers (p. 36)

The JSON block of configuration information for each trigger.

Type: array of [RepositoryTrigger \(p. 69\)](#) objects

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 33
X-Amz-Target: CodeCommit_20150413.GetRepositoryTriggers
X-Amz-Date: 20151028T230050Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "repositoryName": "MyDemoRepo"
```

}

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 248
Date: Wed, 28 Oct 2015 23:00:52 GMT

{
    "configurationId": "e1599578-3a14-EXAMPLE",
    "triggers": [
        {
            "branches": [
                "master",
                "MyNewBranch"
            ],
            "customData": "",
            "destinationArn": "arn:aws:sns:us-east-1:111111111111EXAMPLE:MyCodeCommitTopic",
            "events": [
                "all"
            ],
            "name": "MyFirstTrigger"
        }
    ]
}
```

ListBranches

Gets information about one or more branches in a repository.

Request Syntax

```
{  
    "nextToken": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

nextToken (p. 39)

An enumeration token that allows the operation to batch the results.

Type: String

Required: No

repositoryName (p. 39)

The name of the repository that contains the branches.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Syntax

```
{  
    "branches": [ "string" ],  
    "nextToken": "string"  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

branches (p. 39)

The list of branch names.

Type: array of Strings

Length Constraints: Minimum length of 1. Maximum length of 100.

nextToken (p. 39)

An enumeration token that returns the batch of the results.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidContinuationTokenException

The specified continuation token is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 33
X-Amz-Target: CodeCommit_20150413.ListBranches
X-Amz-Date: 20151028T231012Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
```

```
    "repositoryName": "MyDemoRepo"  
}
```

Sample Response

```
HTTP/1.1 200 OK  
x-amzn-RequestId: 0728aaa8-EXAMPLE  
Content-Type: application/x-amz-json-1.1  
Content-Length: 55  
Date: Wed, 28 Oct 2015 23:10:15 GMT  
  
{  
    "branches": [  
        "master",  
        "MyNewBranch"  
    ]  
}
```

ListRepositories

Gets information about one or more repositories.

Request Syntax

```
{  
    "nextToken": "string",  
    "order": "string",  
    "sortBy": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

nextToken (p. 42)

An enumeration token that allows the operation to batch the results of the operation. Batch sizes are 1,000 for list repository operations. When the client sends the token back to AWS CodeCommit, another page of 1,000 records is retrieved.

Type: String

Required: No

order (p. 42)

The order in which to sort the results of a list repositories operation.

Type: String

Valid Values: ascending | descending

Required: No

sortBy (p. 42)

The criteria used to sort the results of a list repositories operation.

Type: String

Valid Values: repositoryName | lastModifiedDate

Required: No

Response Syntax

```
{  
    "nextToken": "string",  
    "repositories": [  
        {  
            "repositoryId": "string",  
            "repositoryName": "string"  
        }  
    ]  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

[nextToken \(p. 42\)](#)

An enumeration token that allows the operation to batch the results of the operation. Batch sizes are 1,000 for list repository operations. When the client sends the token back to AWS CodeCommit, another page of 1,000 records is retrieved.

Type: String

[repositories \(p. 42\)](#)

Lists the repositories called by the list repositories operation.

Type: array of [RepositoryNameIdPair \(p. 68\)](#) objects

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

InvalidContinuationTokenException

The specified continuation token is not valid.

HTTP Status Code: 400

InvalidOrderException

The specified sort order is not valid.

HTTP Status Code: 400

InvalidSortByException

The specified sort by value is not valid.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 2
X-Amz-Target: CodeCommit_20150413.ListRepositories
X-Amz-Date: 20151028T212036Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{ }
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 721
Date: Wed, 28 Oct 2015 21:20:37 GMT

{
    "repositories": [
```

```
{  
    "repositoryId": "f7579e13-b83e-4027-aaef-650c0EXAMPLE",  
    "repositoryName": "MyDemoRepo"  
},  
{  
    "repositoryId": "cfc29ac4-b0cb-44dc-9990-f6f51EXAMPLE"  
    "repositoryName": "MyOtherDemoRepo"  
}  
]
```

PutRepositoryTriggers

Replaces all triggers for a repository. This can be used to create or delete triggers.

Request Syntax

```
{  
    "repositoryName": "string",  
    "triggers": [  
        {  
            "branches": [ "string" ],  
            "customData": "string",  
            "destinationArn": "string",  
            "events": [ "string" ],  
            "name": "string"  
        }  
    ]  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryName (p. 45)

The name of the repository where you want to create or update the trigger.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

triggers (p. 45)

The JSON block of configuration information for each trigger.

Type: array of [RepositoryTrigger \(p. 69\)](#) objects

Required: Yes

Response Syntax

```
{  
    "configurationId": "string"  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

configurationId (p. 45)

The system-generated unique ID for the create or update operation.

Type: String

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

InvalidRepositoryTriggerBranchNameException

One or more branch names specified for the trigger is not valid.

HTTP Status Code: 400

InvalidRepositoryTriggerCustomDataException

The custom data provided for the trigger is not valid.

HTTP Status Code: 400

InvalidRepositoryTriggerDestinationArnException

The Amazon Resource Name (ARN) for the trigger is not valid for the specified destination. The most common reason for this error is that the ARN does not meet the requirements for the service type.

HTTP Status Code: 400

InvalidRepositoryTriggerEventsException

One or more events specified for the trigger is not valid. Check to make sure that all events specified match the requirements for allowed events.

HTTP Status Code: 400

InvalidRepositoryTriggerNameException

The name of the trigger is not valid.

HTTP Status Code: 400

InvalidRepositoryTriggerRegionException

The region for the trigger target does not match the region for the repository. Triggers must be created in the same region as the target for the trigger.

HTTP Status Code: 400

MaximumBranchesExceededException

The number of branches for the trigger was exceeded.

HTTP Status Code: 400

MaximumRepositoryTriggersExceededException

The number of triggers allowed for the repository was exceeded.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

RepositoryTriggerBranchNameListRequiredException

At least one branch name is required but was not specified in the trigger configuration.

HTTP Status Code: 400

RepositoryTriggerDestinationArnRequiredException

A destination ARN for the target service for the trigger is required but was not specified.

HTTP Status Code: 400

RepositoryTriggerEventsListRequiredException

At least one event for the trigger is required but was not specified.

HTTP Status Code: 400

RepositoryTriggerNameRequiredException

A name for the trigger is required but was not specified.

HTTP Status Code: 400

RepositoryTriggersListRequiredException

The list of triggers for the repository is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 468
X-Amz-Target: CodeCommit_20150413.PutRepositoryTriggers
X-Amz-Date: 20151028T232919Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151028/us-

TestRepositoryTriggers

Tests the functionality of repository triggers by sending information to the trigger target. If real data is available in the repository, the test will send data from the last commit. If no data is available, sample data will be generated.

Request Syntax

```
{  
    "repositoryName": "string",  
    "triggers": [  
        {  
            "branches": [ "string" ],  
            "customData": "string",  
            "destinationArn": "string",  
            "events": [ "string" ],  
            "name": "string"  
        }  
    ]  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryName (p. 49)

The name of the repository in which to test the triggers.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

triggers (p. 49)

The list of triggers to test.

Type: array of [RepositoryTrigger \(p. 69\)](#) objects

Required: Yes

Response Syntax

```
{  
    "failedExecutions": [  
        {  
            "failureMessage": "string",  
            "trigger": "string"  
        }  
    ],  
    "successfulExecutions": [ "string" ]  
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedExecutions (p. 49)

The list of triggers that were not able to be tested. This list provides the names of the triggers that could not be tested, separated by commas.

Type: array of [RepositoryTriggerExecutionFailure \(p. 70\)](#) objects

successfulExecutions (p. 49)

The list of triggers that were successfully tested. This list provides the names of the triggers that were successfully tested, separated by commas.

Type: array of Strings

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

InvalidRepositoryTriggerBranchNameException

One or more branch names specified for the trigger is not valid.

HTTP Status Code: 400

InvalidRepositoryTriggerCustomDataException

The custom data provided for the trigger is not valid.

HTTP Status Code: 400

InvalidRepositoryTriggerDestinationArnException

The Amazon Resource Name (ARN) for the trigger is not valid for the specified destination. The most common reason for this error is that the ARN does not meet the requirements for the service type.

HTTP Status Code: 400

InvalidRepositoryTriggerEventsException

One or more events specified for the trigger is not valid. Check to make sure that all events specified match the requirements for allowed events.

HTTP Status Code: 400

InvalidRepositoryTriggerNameException

The name of the trigger is not valid.

HTTP Status Code: 400

InvalidRepositoryTriggerRegionException

The region for the trigger target does not match the region for the repository. Triggers must be created in the same region as the target for the trigger.

HTTP Status Code: 400

MaximumBranchesExceededException

The number of branches for the trigger was exceeded.

HTTP Status Code: 400

MaximumRepositoryTriggersExceededException

The number of triggers allowed for the repository was exceeded.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

RepositoryTriggerBranchNameListRequiredException

At least one branch name is required but was not specified in the trigger configuration.

HTTP Status Code: 400

RepositoryTriggerDestinationArnRequiredException

A destination ARN for the target service for the trigger is required but was not specified.

HTTP Status Code: 400

RepositoryTriggerEventsListRequiredException

At least one event for the trigger is required but was not specified.

HTTP Status Code: 400

RepositoryTriggerNameRequiredException

A name for the trigger is required but was not specified.

HTTP Status Code: 400

RepositoryTriggersListRequiredException

The list of triggers for the repository is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 33
X-Amz-Target: CodeCommit_20150413.TestRepositoryTriggers
X-Amz-Date: 20151028T230050Z
```

```
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEXAMPLE/20151028/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "repositoryName": "MyDemoRepo",
    "triggers": [
        {
            "name": "MyFirstTrigger",
            "destinationArn": "arn:aws:sns:us-
east-1:111111111111:MyCodeCommitTopic",
            "branches": [
                "mainline",
                "preprod"
            ],
            "events": [
                "all"
            ]
        }
    ]
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 107
Date: Wed, 28 Oct 2015 23:00:52 GMT

{
    "successfulExecutions": [
        "MyFirstTrigger"
    ],
    "failedExecutions": []
}
```

UpdateDefaultBranch

Sets or changes the default branch name for the specified repository.

Note

If you use this operation to change the default branch name to the current default branch name, a success message is returned even though the default branch did not change.

Request Syntax

```
{  
    "defaultBranchName": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

defaultBranchName (p. 53)

The name of the branch to set as the default.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

repositoryName (p. 53)

The name of the repository to set or change the default branch for.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

BranchDoesNotExistException

The specified branch does not exist.

HTTP Status Code: 400

BranchNameRequiredException

A branch name is required but was not specified.

HTTP Status Code: 400

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidBranchNameException

The specified branch name is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 71
X-Amz-Target: CodeCommit_20150413.UpdateDefaultBranch
X-Amz-Date: 20151029T151143Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151029/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "defaultBranchName": "MyNewBranch",
    "repositoryName": "MyDemoRepo"
}
```

Sample Response

```
HTTP/1.1 200 OK
```

```
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 0
Date: Thu, 29 Oct 2015 15:11:44 GMT
```

UpdateRepositoryDescription

Sets or changes the comment or description for a repository.

Note

The description field for a repository accepts all HTML characters and all valid Unicode characters. Applications that do not HTML-encode the description and display it in a web page could expose users to potentially malicious code. Make sure that you HTML-encode the description field in any application that uses this API to display the repository description on a web page.

Request Syntax

```
{  
    "repositoryDescription": "string",  
    "repositoryName": "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

repositoryDescription (p. 56)

The new comment or description for the specified repository. Repository descriptions are limited to 1,000 characters.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

repositoryName (p. 56)

The name of the repository to set or change the comment or description for.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

EncryptionIntegrityChecksFailedException

An encryption integrity check failed.

HTTP Status Code: 500

EncryptionKeyAccessDeniedException

An encryption key could not be accessed.

HTTP Status Code: 400

EncryptionKeyDisabledException

The encryption key is disabled.

HTTP Status Code: 400

EncryptionKeyNotFoundException

No encryption key was found.

HTTP Status Code: 400

EncryptionKeyUnavailableException

The encryption key is not available.

HTTP Status Code: 400

InvalidRepositoryDescriptionException

The specified repository description is not valid.

HTTP Status Code: 400

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 90
X-Amz-Target: CodeCommit_20150413.UpdateRepositoryDescription
X-Amz-Date: 20151029T153247Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEEXAMPLE/20151029/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "repositoryName": "MyDemoRepo",
    "repositoryDescription": "This description was changed"
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 0
```

Date: Thu, 29 Oct 2015 15:32:49 GMT

UpdateRepositoryName

Renames a repository. The repository name must be unique across the calling AWS account. In addition, repository names are limited to 100 alphanumeric, dash, and underscore characters, and cannot include certain characters. The suffix ".git" is prohibited. For a full description of the limits on repository names, see [Limits](#) in the AWS CodeCommit User Guide.

Request Syntax

```
{  
    "newName" : "string",  
    "oldName" : "string"  
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters \(p. 72\)](#).

The request accepts the following data in JSON format.

newName (p. 59)

The new name for the repository.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

oldName (p. 59)

The existing name of the repository.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors \(p. 74\)](#).

InvalidRepositoryNameException

At least one specified repository name is not valid.

Note

This exception only occurs when a specified repository name is not valid. Other exceptions occur when a required repository parameter is missing, or when a specified repository does not exist.

HTTP Status Code: 400

RepositoryDoesNotExistException

The specified repository does not exist.

HTTP Status Code: 400

RepositoryNameExistsException

The specified repository name already exists.

HTTP Status Code: 400

RepositoryNameRequiredException

A repository name is required but was not specified.

HTTP Status Code: 400

Example

Sample Request

```
POST / HTTP/1.1
Host: codecommit.us-east-1.amazonaws.com
Accept-Encoding: identity
Content-Length: 62
X-Amz-Target: CodeCommit_20150413.UpdateRepositoryName
X-Amz-Date: 20151029T153512Z
User-Agent: aws-cli/1.7.38 Python/2.7.9 Windows/7
Content-Type: application/x-amz-json-1.1
Authorization: AWS4-HMAC-SHA256 Credential=AKIAI44QH8DHBEXAMPLE/20151029/us-
east-1/codecommit/aws4_request, SignedHeaders=content-type;host;user-agent;x-
amz-date;x-amz-target, Signature=8d9b5998EXAMPLE

{
    "newName": "MyRenamedDemoRepo",
    "oldName": "MyDemoRepo"
}
```

Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: 0728aaa8-EXAMPLE
Content-Type: application/x-amz-json-1.1
Content-Length: 0
Date: Thu, 29 Oct 2015 15:35:13 GMT
```

Data Types

The AWS CodeCommit API contains several data types that various actions use. This section describes each data type in detail.

Note

The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- [BlobMetadata \(p. 62\)](#)
- [BranchInfo \(p. 63\)](#)
- [Commit \(p. 64\)](#)
- [Difference \(p. 65\)](#)
- [RepositoryMetadata \(p. 66\)](#)
- [RepositoryNameIdPair \(p. 68\)](#)
- [RepositoryTrigger \(p. 69\)](#)
- [RepositoryTriggerExecutionFailure \(p. 70\)](#)
- [UserInfo \(p. 71\)](#)

BlobMetadata

Returns information about a specific Git blob object.

Contents

blobId

The full ID of the blob.

Type: String

Required: No

mode

The file mode permissions of the blob. File mode permission codes include:

- 100644 indicates read/write
- 100755 indicates read/write/execute
- 160000 indicates a submodule
- 120000 indicates a symlink

Type: String

Required: No

path

The path to the blob and any associated file name, if any.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

BranchInfo

Returns information about a branch.

Contents

branchName

The name of the branch.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

commitId

The ID of the last commit made to the branch.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

Commit

Returns information about a specific commit.

Contents

additionalData

Any additional data associated with the specified commit.

Type: String

Required: No

author

Information about the author of the specified commit. Information includes the date in timestamp format with GMT offset, the name of the author, and the email address for the author, as configured in Git.

Type: [UserInfo \(p. 71\)](#) object

Required: No

committer

Information about the person who committed the specified commit, also known as the committer. Information includes the date in timestamp format with GMT offset, the name of the committer, and the email address for the committer, as configured in Git.

For more information about the difference between an author and a committer in Git, see [Viewing the Commit History](#) in Pro Git by Scott Chacon and Ben Straub.

Type: [UserInfo \(p. 71\)](#) object

Required: No

message

The commit message associated with the specified commit.

Type: String

Required: No

parents

The parent list for the specified commit.

Type: array of Strings

Required: No

treeld

Tree information for the specified commit.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

Difference

Returns information about a set of differences for a commit specifier.

Contents

afterBlob

Information about an `afterBlob` data type object, including the ID, the file mode permission code, and the path.

Type: [BlobMetadata \(p. 62\)](#) object

Required: No

beforeBlob

Information about a `beforeBlob` data type object, including the ID, the file mode permission code, and the path.

Type: [BlobMetadata \(p. 62\)](#) object

Required: No

changeType

Whether the change type of the difference is an addition (A), deletion (D), or modification (M).

Type: String

Valid Values: A | M | D

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

RepositoryMetadata

Information about a repository.

Contents

accountId

The ID of the AWS account associated with the repository.

Type: String

Required: No

Arn

The Amazon Resource Name (ARN) of the repository.

Type: String

Required: No

cloneUrlHttp

The URL to use for cloning the repository over HTTPS.

Type: String

Required: No

cloneUrlSsh

The URL to use for cloning the repository over SSH.

Type: String

Required: No

creationDate

The date and time the repository was created, in timestamp format.

Type: Timestamp

Required: No

defaultBranch

The repository's default branch name.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

lastModifiedDate

The date and time the repository was last modified, in timestamp format.

Type: Timestamp

Required: No

repositoryDescription

A comment or description about the repository.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

repositoryId

The ID of the repository.

Type: String

Required: No

repositoryName

The repository's name.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

RepositoryNameIdPair

Information about a repository name and ID.

Contents

repositoryId

The ID associated with the repository.

Type: String

Required: No

repositoryName

The name associated with the repository.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Pattern: [\w\.-]+

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

RepositoryTrigger

Information about a trigger for a repository.

Contents

branches

The branches that will be included in the trigger configuration. If you specify an empty array, the trigger will apply to all branches.

Note

While no content is required in the array, you must include the array itself.

Type: array of Strings

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

customData

Any custom data associated with the trigger that will be included in the information sent to the target of the trigger.

Type: String

Required: No

destinationArn

The ARN of the resource that is the target for a trigger. For example, the ARN of a topic in Amazon Simple Notification Service (SNS).

Type: String

Required: Yes

events

The repository events that will cause the trigger to run actions in another service, such as sending a notification through Amazon Simple Notification Service (SNS).

Note

The valid value "all" cannot be used with any other values.

Type: array of Strings

Valid Values: all | updateReference | createReference | deleteReference

Required: Yes

name

The name of the trigger.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

RepositoryTriggerExecutionFailure

A trigger failed to run.

Contents

failureMessage

Additional message information about the trigger that did not run.

Type: String

Required: No

trigger

The name of the trigger that did not run.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

UserInfo

Information about the user who made a specified commit.

Contents

date

The date when the specified commit was pushed to the repository.

Type: String

Required: No

email

The email address associated with the user who made the commit, if any.

Type: String

Required: No

name

The name of the user who made the specified commit.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java](#)
- [AWS SDK for Ruby V2](#)

Common Parameters

The following table lists the parameters that all actions use for signing Signature Version 4 requests. Any action-specific parameters are listed in the topic for that action. To view sample requests, see [Examples of Signed Signature Version 4 Requests](#) or [Signature Version 4 Test Suite](#) in the *Amazon Web Services General Reference*.

Action

The action to be performed.

Type: string

Required: Yes

Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4_request"). The value is expressed in the following format: access_key/YYYYMMDD/region/service/aws4_request.

For more information, see [Task 2: Create a String to Sign for Signature Version 4](#) in the *Amazon Web Services General Reference*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-Date

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see [Handling Dates in Signature Version 4](#) in the *Amazon Web Services General Reference*.

Type: string

Required: Conditional

X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service. For a list of services that support AWS Security Token Service, go to [Using Temporary Security Credentials to Access AWS](#) in *Using Temporary Security Credentials*.

Condition: If you're using temporary security credentials from the AWS Security Token Service, you must include the security token.

Type: string

Required: Conditional

X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see [Task 1: Create a Canonical Request For Signature Version 4](#) in the *Amazon Web Services General Reference*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

Common Errors

This section lists the common errors that all actions return. Any action-specific errors are listed in the topic for the action.

IncompleteSignature

The request signature does not conform to AWS standards.

HTTP Status Code: 400

InternalFailure

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

InvalidAction

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

InvalidClientTokenId

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

InvalidParameterCombination

Parameters that must not be used together were used together.

HTTP Status Code: 400

InvalidParameterValue

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

InvalidQueryParameter

The AWS query string is malformed or does not adhere to AWS standards.

HTTP Status Code: 400

MalformedQueryString

The query string contains a syntax error.

HTTP Status Code: 404

MissingAction

The request is missing an action or a required parameter.

HTTP Status Code: 400

MissingAuthenticationToken

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

MissingParameter

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

OptInRequired

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

Throttling

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
