Powerful

Lightweight

# Powerful

# Ease of Integration

# Ease of Integration

```
Fabric.with(this, new Crashlytics());
```

# Extensible

# Extensible

```
Crashlytics.start(this);
```

# Extensible

```
Crashlytics.start(this, 5);
```

```
Crashlytics.setListener(createCrashlyticsListener());
```

```
Crashlytics.setPinningInfo(createPinningInfoProvider())
```

```
Crashlytics.getInstance().setDebugMode(true);
```

# Extensible

```
Crashlytics.setListener(createCrashlyticsListener());  
Crashlytics.setPinningInfo(createPinningInfoProvider());  
Crashlytics.getInstance().setDebugMode(true);  
  
Crashlytics.start(this, 5);
```

# Extensible

```
Crashlytics.start(this, delay, listener, pinningInfo,  
                 debugMode);
```

# Extensible

```
Crashlytics.start(this, 0, null, null, null, true);
```

# Fluent Pattern

```
Crashlytics crashlytics = new Crashlytics.Builder()  
    .delay(1)  
    .listener(createCrashlyticsListener())  
    .pinningInfo(createPinningInfoProvider())  
    .build();  
Fabric.with(this, crashlytics);
```

# Fluent Pattern

```
Fabric.with(this, new Fabric.Builder(this)
    .kits(new Crashlytics())
    .debuggable(true)
    .logger(new DefaultLogger(Log.VERBOSE))
    .looper(getCustomLooper())
    .executor(getCustomExecutorService())
    .build());
```

# Gracefully Degrade

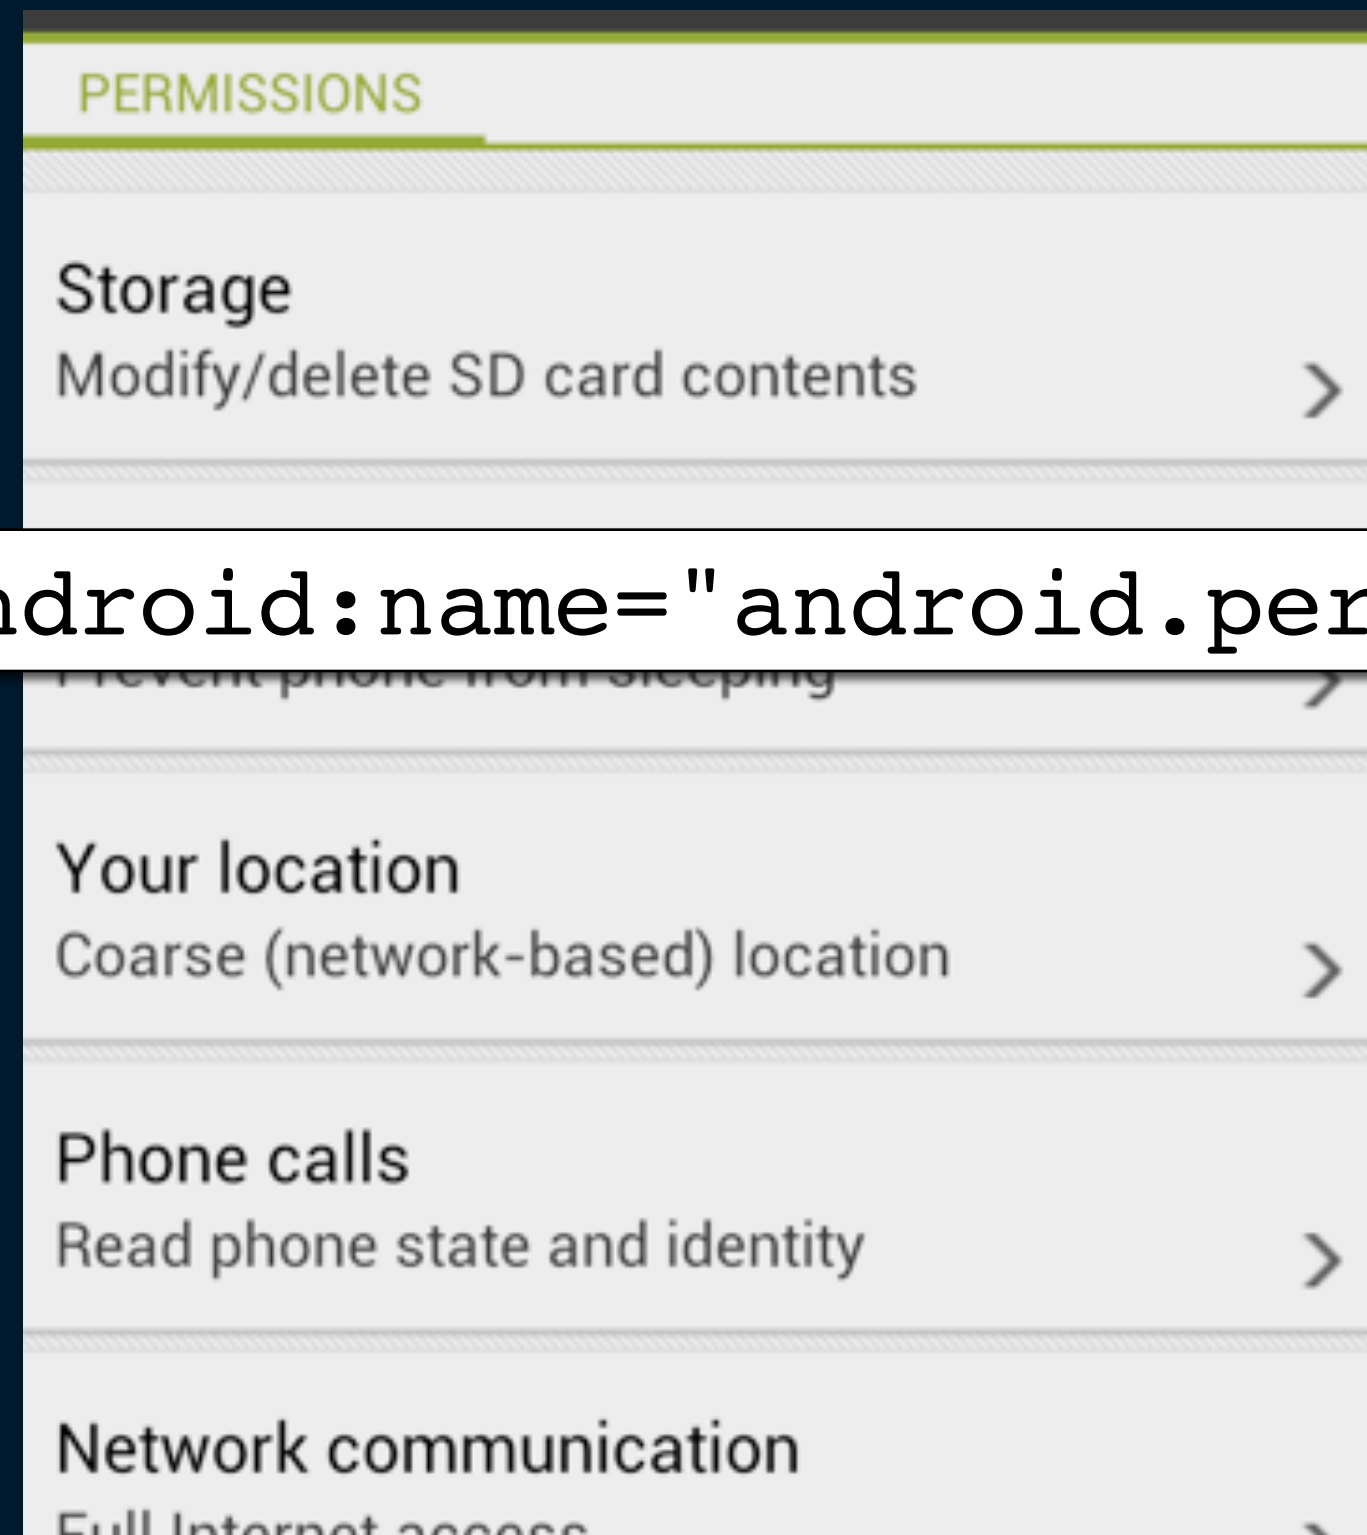

# Gracefully Degrade

```
if (TextUtils.isEmpty(apiKey)
    if (debuggable){
        throw new IllegalArgumentException(
            "apiKey is null!");
    } else {
        return null;
    }
}
```

# Minimizing Permissions

# Minimizing Permissions

```
<uses-permission android:name="android.permission.INTERNET" />
```

# Minimizing Permissions

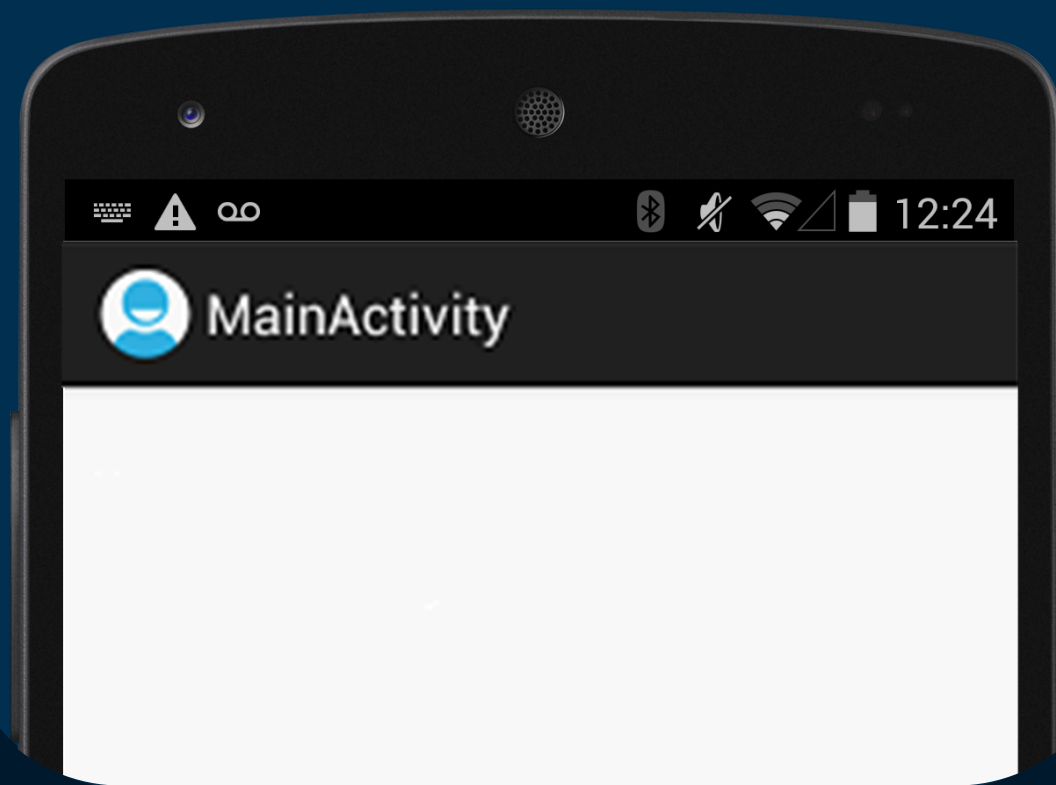

```
Crashlytics.setUserEmail("appuser@domain.com");
```

# Permissions: Runtime Detection

```
protected boolean canCheckNetworkState() {  
    String permission =  
        "android.permission.ACCESS_NETWORK_STATE";  
    int result =  
        context.checkCallingOrSelfPermission(permission);  
    return (result == PackageManager.PERMISSION_GRANTED);  
}
```

# Multiple Application Types

# Multiple Application Types

```
package com.example;  
  
import android.app.Service;  
  
public class MyService  
extends Service {  
}
```

# UI from Application Context

```
private WeakReference<Activity> currentActivity = new
WeakReference<Activity>();

@TargetApi(Build.VERSION_CODES.ICE_CREAM_SANDWICH)
private void registerLifecycleCallbacks() {
    if (Build.VERSION.SDK_INT >= Build.VERSION_CODES.FROYO) {
        final Application app = ((Application)context);
        app.registerActivityLifecycleCallbacks(
            new ActivityLifecycleCallbacks() {
                @Override
                public void onActivityResumed(Activity activity) {
                    currentActivity.set(activity);
                }
            });
    }
}
```
