

December 2017

The Final Trump-GOP Tax Bill: National & 50-State Analysis

(State-by-State Figures in Appendix)

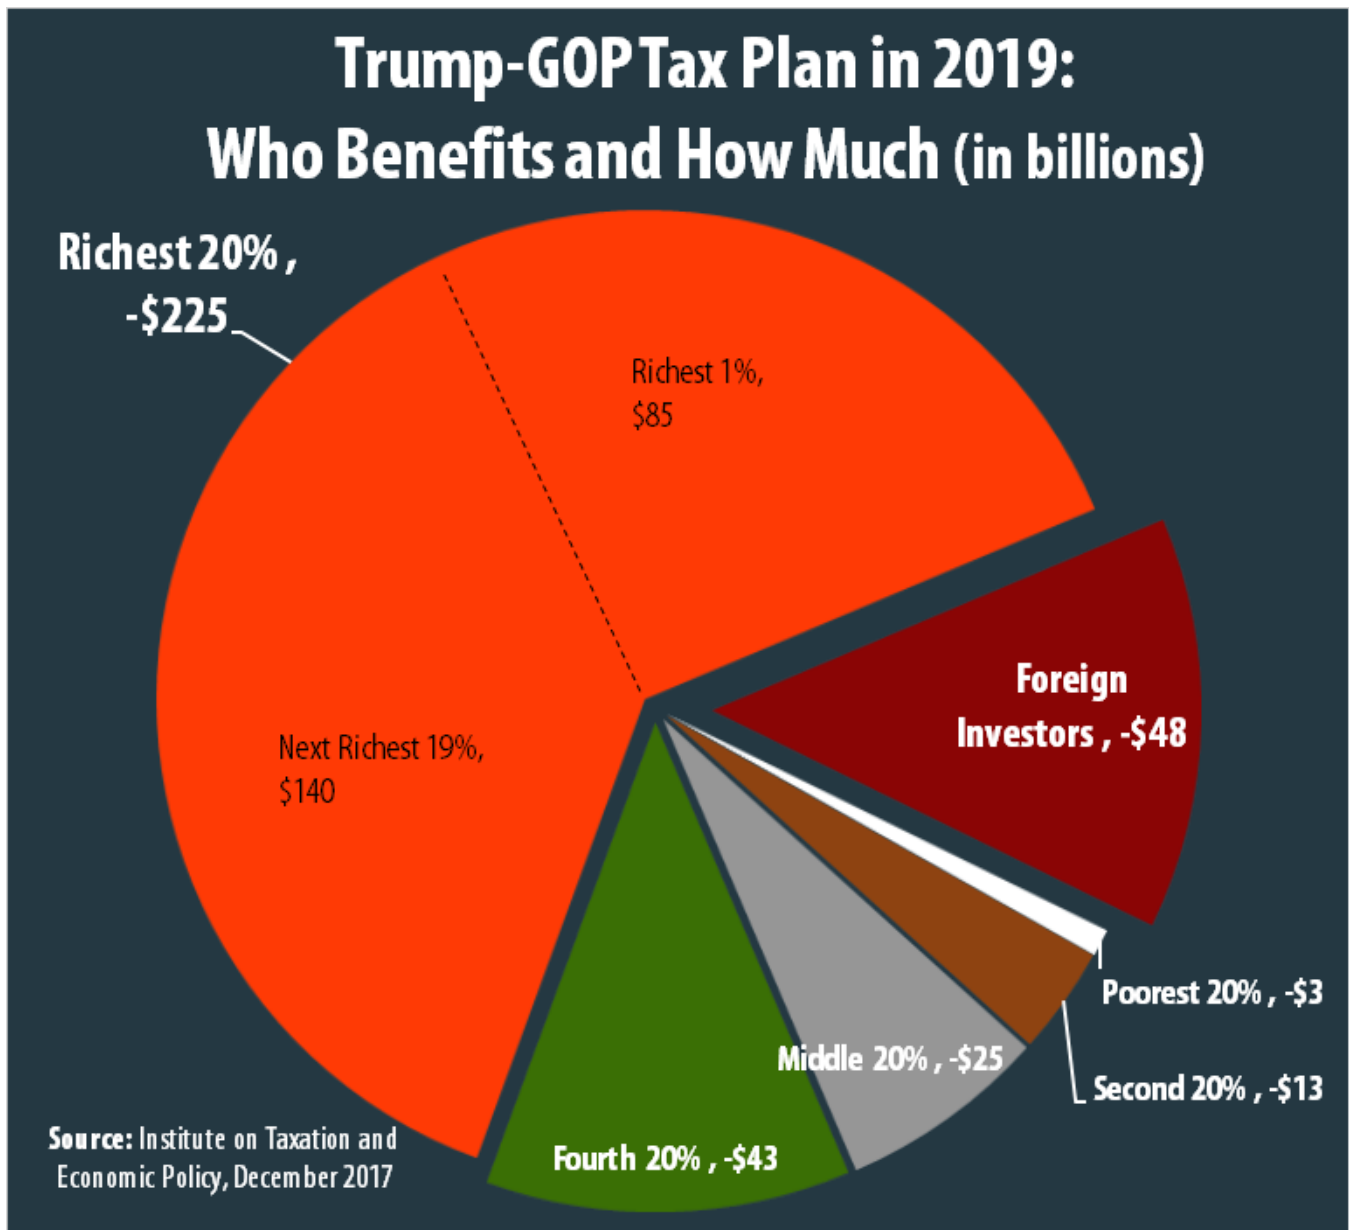

The final tax bill that Republicans in Congress are poised to approve would provide most of its benefits to high-income households and foreign investors while raising taxes on many low- and middle-income Americans. The bill would go into effect in 2018 but the provisions directly affecting families and individuals would all expire after 2025, with the exception of one provision that would raise their taxes. To get an idea of how the bill will affect Americans at different income levels in different years, this analysis focuses on the bill's impacts in 2019 and 2027.

The graph below measures the average tax change resulting from the bill as a share of income for each income group, which is a way of showing how the income of a typical family in each group would be changed. In 2019, the bottom three-fifths of Americans will receive smaller average tax cuts, as a share of income, than other groups. In 2027 the bottom three-fifths of Americans will see tax *hikes*, on average, while the typical households in one of the other groups will continue to receive tax cuts, albeit smaller ones.

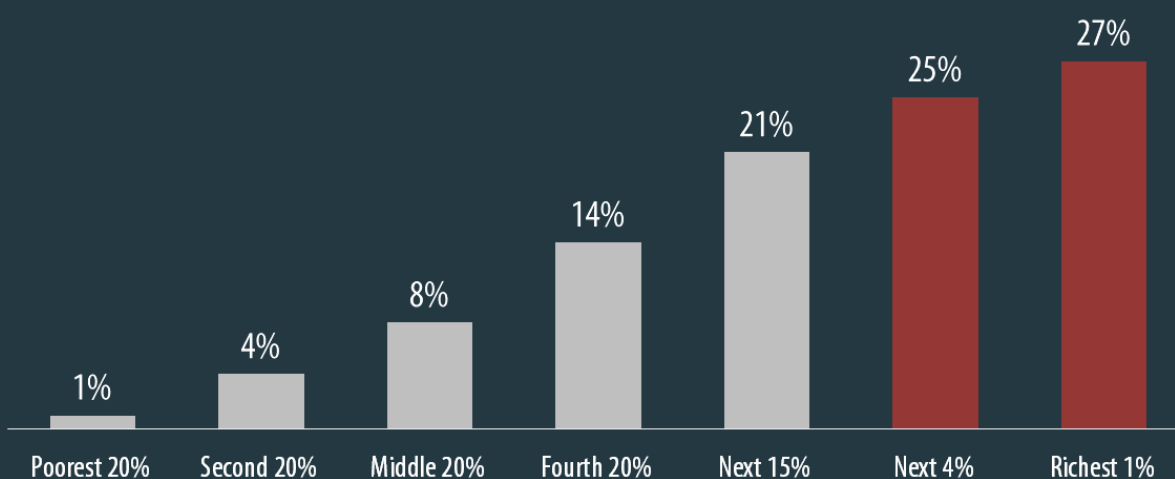

Impacts of Trump-GOP Tax Plan in 2019

The graph below divides Americans into five equal groups based on income and illustrates how only one of these groups, the richest fifth of Americans, will receive more benefits from the tax bill than foreign investors. This is because the biggest tax cut in the bill is the reduction in the corporate income tax rate from 35 percent to 21 percent. As explained later in this report, the corporate tax cut will mainly benefit those who own shares in American corporations. While some middle-income people own shares, most are owned by high-income Americans and foreign investors.

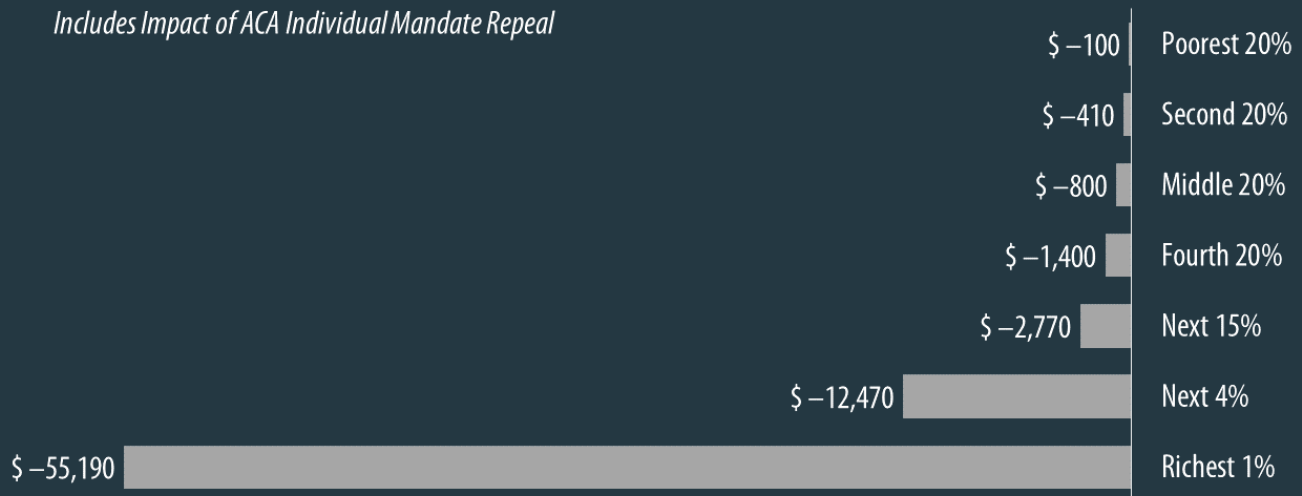

Focusing on the bill's benefits for Americans, we find that in 2019 more than half will flow to the richest 5 percent of taxpayers, and more than a quarter will flow to the richest one percent of taxpayers. In 2019, the average impact for the middle-fifth of taxpayers will be a tax cut of \$800. The richest one percent of taxpayers will receive an average tax cut of more than \$55,000. The average tax cut for richest one percent in 2019 will be larger than the average *income* for the middle-fifth of taxpayers, which will be about \$53,000 that year.

The Top 5% of Taxpayers Receive More than Half of the Final Trump-GOP Tax Bill's Benefits for American Households in 2019

Final Trump-GOP Tax Plan's Average Tax Cut for the Richest 1% in 2019 Dwarfs Benefits for Other Groups

Includes Impact of ACA Individual Mandate Repeal

INSTITUTE ON TAXATION AND ECONOMIC POLICY • ITEP.ORG

The bill produces this distribution of benefits because so many of its provisions help the well-off, including a reduction in the estate tax, a reduction in the top personal income tax rate, a reduction in the corporate tax rate benefiting corporate shareholders, and a special deduction for other business-owners. The provisions affecting low- and middle-income families are more of a mix of tax-cuts and tax hikes, as explained below.

Corporate Tax Breaks

Economists generally agree that the benefits of corporate tax cuts initially go to those who own stocks in American corporations. Recent research has [concluded](#) that foreign investors own 35 percent of stocks in American corporations and would therefore receive a significant share of the benefits from corporate tax cuts.

Many economists believe that by the end of the decade some of the benefits of a corporate tax cut would go to workers in the form of higher wages. It is [very unclear](#) when or if this would ever happen. But ITEP follows the [approach](#) of Congress's official revenue estimator in assuming that, by 2027, one-fourth of the benefits of the corporate tax cut would go to workers, which would mean the benefits are a little less concentrated on the rich. But even this assumption does not change the fact that the corporate tax cuts provide the richest taxpayers with the greatest benefits.

Tax Breaks for Other Businesses

The bill also includes a 20 percent deduction, with certain limits, for income from pass-through businesses, which are businesses with profits subject to the personal income tax instead of the corporate income tax. While some equate these

enterprises with “small businesses,” they include law firms, hedge funds and many enormous companies. Most pass-through income flows to the richest one percent of Americans.

Estate Tax Breaks

Another break that favors the wealthy is the bill’s provision to double the amount of assets that can be left to heirs without triggering the estate tax from \$11 million for a married couple to \$22 million. Under current law only 0.2 percent of estates are taxed, which means reducing the estate tax can only benefit the very wealthiest families.

Repeal of Health Insurance Mandate

The bill would repeal the existing requirement for individuals to obtain health insurance. The figures in this report incorporate the estimates of the Congressional Budget Office on how this change would affect taxes. The existing penalty tax that is imposed on those who do not obtain health insurance will be eliminated, which will reduce taxes for some. But a larger group of people will pay higher taxes because when they go without health insurance, they will no longer collect the tax credits that help them pay premiums under the Affordable Care Act.

Provisions for Families and Individuals

The tax changes that affect families and individuals most directly, the provisions that most families think of as affecting their bottom line, are a mixed bag for low- and middle-income people. Some of these provisions would cut their taxes, like the increase in the standard deduction and child tax credit. Others would raise their taxes, like the repeal of the personal exemption that taxpayers can claim for each member of their family and the new \$10,000 limit on the deduction for state and local taxes. Some high-income taxpayers would face tax hikes because of the limit on state and local tax deductions, but others would benefit more from the reduction in the top personal income tax rate from 39.6 percent to 37 percent, as well as other breaks in the bill.

The table below splits the tax changes into the components described here: provisions for families and individuals, the estate tax provisions, the repeal of the health insurance mandate, provisions for pass-through businesses and corporate provisions.

Impacts of Trump-GOP Tax Plan in 2027

In 2019, the *average* tax change for each income group would be a tax cut, but it is nonetheless the case that many taxpayers in each income group would face a tax hike that year. In 2027, the share of Americans facing a tax hike would be much higher, and the average change for the bottom three-fifths of Americans would be a tax hike.

Richest 1% of Taxpayers Receive the Largest Average Tax Cut Under the Revised Senate Plan in 2027, the Average Taxpayer in the Bottom 60% Faces a Tax Hike

Includes Impact of ACA Individual Mandate Repeal

INSTITUTE ON TAXATION AND ECONOMIC POLICY • ITEP.ORG

The impacts on low- and middle-income people are worse in 2027 because the provisions that directly affect families and individuals all expire after 2025 — except for a provision that raises taxes by adjusting the tax code to a slower measure of inflation called the “chained” consumer price index (chained CPI). This means that in years after 2025, the tax provisions relevant to families and individuals will return to what they are today, except that chained CPI will gradually push households into higher income tax brackets and will make most deductions and exemptions less generous over time.

The estate tax cut and most of the provisions reducing taxes for pass-through businesses also expire after 2025. (The estate tax reduction would have an effect even a few years after that because it is often not paid until several years after an estate is transferred to heirs.)

However, the corporate tax cuts are permanent. This means that in 2027, the main provisions in effect are a tax hike that affects low- and middle-income families (chained CPI) and the corporate tax cut that mostly benefits well-off Americans and foreign investors.

Families & Individuals	Temp. vs Perm.
New personal income tax rates and brackets (10%, 12%, 22%, 24%, 32%, 35%, 37%)	TEMPORARY
Increase standard deduction	TEMPORARY
Repeal personal exemptions	TEMPORARY
Increase child tax credit, new non-dependent credit, change in come limits	TEMPORARY
\$10,000 cap on state and local tax deductions, changes to other deductions	TEMPORARY
Expand exemptino from alternative minimum tax (AMT) for individuals	TEMPORARY
Slower rate of inflation (chained CPI) for parameters in the tax code	PERMANENT
Estate Tax	Temp. vs Perm.
Reduce estate tax by doubling exemption to \$11 million for singles, \$22 million for couples	TEMPORARY
Repeal of Health Insurance Mandate	Temp. vs Perm.
Reduction of tax credits to pay health insurance premiums	PERMANENT
Elimination of penalty for not obtaining health insurance	PERMANENT
Pass-Through Business	Temp. vs Perm.
20 percent deduction, with limits, for pass-through business income	TEMPORARY
Limit on pass-through losses	TEMPORARY

Corporations that Pay the Corporate Income Tax (C Corporations)	Temp. vs Perm.
Reduce the statutory corporate tax rate to 21%, repeal corporate AMT	PERMANENT
Territorial tax system and other international corporate changes	PERMANENT
Provisions Affecting Both Pass-Throughs and C Corporations	Temp. vs Perm.
Limits on interest deductions	PERMANENT
100 percent expensing of equipment	TEMPORARY
Change net operating loss rules	PERMANENT
Amortization of research expenses	PERMANENT
Repeal deduction for domestic production activities	PERMANENT

Source: Institute on Taxation and Economic Policy, December 2017

Notes:

* Average tax cut for those w/ a cut, share with tax cut, average tax hike for those w/ a hike, and share with tax hike figures do not include impact of ACA Mandate repeal
 Combined effects might be slightly different from the sum of the individual components due to rounding
