

UTTAR PRADESH
STATE DISASTER MANAGEMENT PLAN FOR
DAM BURSTS
(DRAFT)

TABLE OF CONTENTS

1. Chapter –I Introduction

- 1.1 Vision of the document
- 1.2 Evolution of the document
 - 1.2.1 International Precedence
 - 1.2.2 Disaster Management in India
 - 1.2.3 Nation Vision
 - 1.2.4 State Vision
- 1.3 Objective of preparing the State DM Plan for Dam Bursts

2. Chapter-II Profile of Uttar Pradesh

- 2.1 Over view of the State
- 2.2 Location
- 2.3 Area and administrative division
- 2.4 Physical regions
- 2.5 Climate and rainfall
- 2.6 Temperature
- 2.7 Demographic profile
- 2.8 Geology
- 2.9 Economy
- 2.10 Education
- 2.11 Health
- 2.12 Forests
- 2.13 Agriculture
- 2.14 Cropping Patterns
- 2.15 Land Use pattern
- 2.16 Livestock and Fisheries
- 2.17 Industry

2.18 Transport and Communication

2.19 River Systems and Dams

3. Chapter-III Dam Bursts

4. Chapter- IV Vulnerability Assessment and Risk Analysis

4.1 Introduction

4.2 Socio Economic Vulnerability

4.3 Hazard Vulnerability in UP

5. Chapter-V Preventive Measures and Preparedness

5.1 Approach for Prevention and Preparedness

5.2 Measures for Prevention and Preparedness for Dam Bursts

5.3 Resource Inventory

5.4 Roles and Responsibilities for Preparedness and Mitigation

6. Chapter-VI Response

6.1 Response Management Arrangements

6.2 Short Term Response Plans

6.3 Emergency Response Structure

6.4 Disaster Management for Post- Disaster Phase

7. Chapter-VII Recovery Management

7.1 Definition of Recovery

7.2 Recovery after a Dam Burst

7.3 Recovery Management at State level

8. Chapter-VIII Capacity Building

- 8.1 Capacity Building for Preparedness
- 8.2 Components of Capacity Building
- 8.3 Human Resource Development
- 8.4 Training and Education
- 8.5 Research and Development

9. Chapter-IX Institutional Arrangements and Roles & Responsibilities

- 9.1 Institutional Arrangement at the Centre
- 9.2 Institutional Arrangement at the State Level

10. Chapter-X Partnerships with other stakeholders

11. Chapter-XII Financial Arrangements

12 Chapter-XIII Genera Action Plan

12. Chapter-XIV Follow Up

- 12.1 Follow-up actions
- 12.2 Priority Areas for Follow up actions
- 12.3 List of Checklists and Handbooks

ANNEXURE

- I. Alphabetical listing of divisions
- II. Alphabetical listing of districts
- III. Demographic, Socio-economic and Health profile of Uttar Pradesh State as compared to India figures
- IV. Economic Infrastructure of UP

- V. Data on Food Grain Production
- VI. Important Contact Information

Executive Summary

Approach to disaster management sector has seen a paradigm shift, that is, from top-down relief and response it has gradually moved to a more technocratic approach and presently to towards a culture of prevention and preparedness. This approach has three distinct but interrelated components: *hazard assessment, vulnerability analysis* and *enhancement of management capacity*. It is now recognized that risks (physical, social and economic) unmanaged (or mismanaged) for a long time lead to occurrence of disasters. This evolution of approaches from relief and response to risk management has begun to influence the way disaster management programs are now being planned and financed.

India is vulnerable to varying degrees to a large number of natural as well as man-made disasters. High Powered Committee (HPC) on Disaster Management was constituted in August 1999 with the approval of the Prime Minister under the Chairmanship of Shri J.C. Pant, former Secretary to the Government of India. The HPC prepared comprehensive model plans for DM at the national, state and district levels. Though the original mandate of the HPC was confined to preparation of plans for natural disaster only, man-made disasters like accidents, industrial and chemical accidents, biological disasters, etc. were included to ensure a holistic approach for preparation of Disaster Management Plans. Our national approach in disaster management received a boost with coming into force of Disaster Management Act, 2005.

Uttar Pradesh State Disaster Management Plan (UPSDMP) on Dam Bursts has been prepared in consultation with various departments and agencies of the Government of Uttar Pradesh and other stakeholders expected to participate in disaster management. The Objectives are to develop plans through a consultative approach; to understand socio-economic vulnerability of people and integrate into disaster management activities in case of a Dam Burst; to

strengthen existing organisational and administrative structures; to prepare resource inventory and other mechanisms to combat the disaster; to ensure prevention, response and recovery; and to channelise involvement of various government departments, research, specialised agencies, multilaterals, bilateral, non government organisations training institutes, Community Based Organisations etc.

The **Chapter II on profile of Uttar Pradesh** helps us to understand political, social, economic and demographic concerns that have to be weaved in while preparing UPSDMP on Dam Bursts. Uttar Pradesh is the fourth largest and most populous state in India sharing international border with Nepal. U.P. is facing a difficult demographic situation. It has both high people numbers and high population growth rate. The high demographic growth rate has resulted in high density of population, tremendous Pressure on land and other infrastructure. The state is also high in unemployment rate as well as illiteracy rate.

The **Chapter III on Dam Bursts** explains about what dam bursts are. A dam burst is a sudden release of large quantities of water causing havoc in downstream areas, damaging structures & installations, disrupting socio-economic activities, loss of life & property and causing ecological and environmental damage. Dams and barrages need careful planning and analysis to ensure minimum environmental intrusion. With advancements in technology, frequency of dam bursts or breaches has reduced considerably. The structural stability of a dam can be threatened by floods, torrential rains, rockslides, landslides, earthquakes, deterioration of the heterogeneous foundation, poor quality of construction, improper management, sabotage, acts of war etc. Out of this, floods and seismic disturbances are the primary causes of dam bursts or breaches.

The **Chapter IV on Vulnerability Assessment and Risk Analysis** is about understanding the vulnerability of the state to dam bursts. It is significant to note that Uttar Pradesh has about 131 dams comprising small, medium and large structures, with some being located in seismic zones. Most of the dams are earthen structures which need regular maintenance. These dams are being managed and maintained by respective divisions of Irrigation departments. A Dam Safety Cell having its office at Yojana Nagar, Lucknow has also been established to ensure safety of dams. The vulnerability of the state increases manifold due to lack of trained human resources, financial allocations, equipments, vehicles and support functions to conduct regular inspections and do proper maintenance of dams. Due to concentration of most of the dams in the Southern and some of parts of Northern Uttar Pradesh, these are most vulnerable to the dam burst disasters. However, among these, Mirzapur, Jhansi and Sonbhadra districts are most prone.

The **Chapter V on Preventive Measures and Preparedness** deals with measures which if not help in negating the risk entirely, will help in putting in place mechanisms like dam safety, preparing evacuation plans, warning systems, medical preparedness, etc. This chapter also contains resource inventory and roles and responsibilities for preparedness and mitigation.

The **Chapter VI on Response** helps in understanding how to optimise the outputs, given the resource constraints. Response management is based on the three key management tasks of command, control and coordination. Response plan contains the short term actions to be taken immediately after a disaster including disseminating warning/alert to the potential victims; disseminate information to vertical and horizontal administrators for disaster management; evacuation plans; emergency medical response, domiciliary care etc. The chapter entails a detailed Emergency Response Structure.

The **Chapter VII on Recovery Plans** provides a structure for the management of all the inputs into the recovery process in a way that is appropriate to the needs of the community. It allows individuals, families and communities to attain a proper level of functioning through the provision of information, specialist services and resources. The Recovery process is therefore a long-term process in which everyone has a role – the Government including the self-government institutions, the NGOs, and especially the affected people, their families and the community. Disaster like dam burst leads to displacement of people, loss of livelihood and complete disruption of socio-economic systems. The survivors and affected people would require support, both in tangible and intangible form, to regain normalcy and start life afresh from where it got disrupted.

The **Chapter IX on Capacity Building** focuses on important components of preparedness include planning, capacity building; well-rehearsed hospital DM plans, training of doctors and paramedics, and upgradation of medical infrastructure at various levels to reduce morbidity and mortality. It covers human resource development, training and education, documentation and research & development.

The **Chapter X on Institutional Arrangements and Roles and Responsibilities** covers who will do what in case of a dam burst. Uttar Pradesh Disaster Management Authority (UPDMA) has been set up under the UP Disaster Management Act, 2005, and is headed by the Chief Minister as its Chair person and has a 14 member Governing Body. The Authority clearly allocates responsibilities among various stakeholders. This Plan has proposed setting up of a Crisis Management Group to deal with Dam Bursts. UP already has a GIS based mapping of the entire state and there are Emergency Operation Centres that have been set up in the state. This Chapter also defines the role of Incident Commander who will take charge in case of a biological disaster. Depending on the scale of the Disaster it can be Chief Secretary or District Magistrate.

The **Chapter XI on Partnerships with other Stakeholders** covers role of community, NGOs, International Cooperation, Public Private Partnership and Mass Media.

The **Chapter XII on Financial Arrangements** deals with budgetary allocations for carrying out preventive, preparedness and post-disaster relief work in case of a dam burst. Expenditure on relief, rescue and rehabilitation far exceeds the expenditure on prevention and management. This should therefore, be the underlying principle for allocation of adequate funds at industry and government level for prevention, mitigation and preparedness rather than concentrating on their management at the time of a disaster. The basic principle of return on investment may not be applicable in the immediate context but the long-term impact would be highly beneficial. Thus, financial strategies should be worked out such that necessary finances are in place and flow of funds is organised on a priority basis by the identification of necessary functions, both in the phases of preparedness and response, relief and rehabilitation respectively.

The **Chapter XIII** on General action plan discusses the department wise action plan pre and post disaster including preparedness. While preparedness emphasises the action in the normal times, the action plan about during and post disaster gives details activities which shall be carried out by each department of the government.

The **Chapter XIV on Follow up Actions** discusses follow up actions that have to be undertaken by various agencies/departments to operationalise the Plan.

The main vision of this document is to initiate coordinated efforts to have an effective disaster management strategy for the State, with focus on extremely quick, efficient and coordinated response and recovery to minimise impact of dam bursts, if it were to happen.

1.1 Vision of the Document

Almost in parallel with the paradigm shift in poverty reduction programs – from income poverty to human poverty -- the disaster management sector has also seen a paradigm shift. Disasters are no longer seen as extreme events created entirely by natural forces but as manifestations of unresolved problems of development. The disaster management practices have evolved from largely a top-down relief and response approach to a more inter-sectoral risk management approach. In the current paradigm of risk management approaches, there is more room than ever before for addressing the issues of risk reduction. Till a few decades ago, disasters were viewed as one-off events and responded by governments and relief agencies without taking into account the social and economic implications and causes of these events. With significant advancement in our understanding of the natural processes that underlie the hazardous events, a more technocratic approach came into existence which believed that the “only way to deal with disasters was by public policy application of geophysical and engineering knowledge”. These approaches looked at disasters as exceptional events, not related to the ongoing social and developmental processes. Gradually this attitude changed to an emphasis on preparedness measures, such as stockpiling of relief goods, preparedness plans and a growing role for relief agencies such as the Red Cross.

In recent years, a more comprehensive approach that of disaster risk management has emerged. This approach has three distinct but interrelated components: *hazard assessment*, *vulnerability analysis* and *enhancement of management capacity*. It is closely integrated with ongoing development processes. Disasters are no longer viewed as extreme events created entirely by natural forces but as unresolved problems of development. It is now recognized

that risks (physical, social and economic) unmanaged (or mismanaged) for a long time lead to occurrence of disasters.

This evolution of approaches from relief and response to risk management has begun to influence the way disaster management programs are now being planned and financed. There are initiatives aimed at reducing social and economic vulnerability and investing in long-term mitigation activities. Unfortunately such initiatives aimed at prevention and mitigation are few, poorly funded and insignificant in comparison with money spent by donors and development banks on humanitarian assistance and relief, as well as on post disaster reconstruction.

The main vision of this document is to initiate coordinated efforts to have an effective disaster management strategy for the State, with focus on extremely quick, efficient and coordinated response and recovery to minimise impact of future disasters.

1.2 Evolution of the document

1.2.1 International precedence

The initiative for disaster management globally started with the member states of the United Nations General Assembly declaring the 90s as the International Decade for Natural Disaster Reduction (IDNDR). The international initiative was conceived to motivate concerted international action and cooperation that could “reduce the loss of life, property damage, social and economic disruptions caused by natural disasters, especially in developing countries.” IDNDR is based on the understanding that there is sufficient scientific and technical knowledge that can save lives and property from natural and other disasters through more extensive application. International impact on the subject was expanded in May 1994 at the World Conference of Natural Disaster Reduction convened by the UN at Yokohama, Japan. Participating countries

including India adopted the fundamental principles of natural disaster prevention, preparedness and mitigation embodied in the Yokohama Strategy and Plan of Action for a Safer World. The Yokohama Conference underlined the economic rationale for disaster reduction, complementing the scientific foundation with an essential commitment from public policy authorities.

The goals that were established for the IDNDR are:

- To improve the capacity of each country to mitigate the effects of natural disasters, in the assessment of disaster damage potential and in the establishment of early warning systems and disaster resistant capabilities.
- To devise appropriate guidelines and strategies for applying existing scientific and technical knowledge.
- To foster scientific and engineering endeavours aimed at addressing critical gaps in knowledge.
- To disseminate existing and new technical information.
- To develop measures for the assessment, prediction, prevention and mitigation of natural disasters through programmes of technical assistance and technology transfer, education and training and to evaluate effectiveness of programmes.

In essence, the decade's activities sought to shift the emphasis from post-disaster relief to pre-disaster risk reduction.

1.2.2 Disaster Management in India¹

India is vulnerable to varying degrees to a large number of natural as well as man-made disasters, ranging from earthquakes, floods, cyclones, tsunamis, droughts, avalanches, landslides etc. Further, the vulnerability

¹ Source: NDMA Guideline

to Nuclear, Biological and Chemical (NBC) disasters and terrorism has also increased manifold.

Disaster risks in India are further compounded by increasing vulnerabilities, due to a variety of factors. These include population, poverty, rapid urbanisation, increasing industrialisation, development within high-risk zones, environmental degradation, climate change etc. This increased vulnerability has seriously threatened national security and present & future course of development.

For planning and coordination of Disaster Management Activities in India, a High Powered Committee (HPC) on Disaster Management was constituted in August 1999 with the approval of the Prime Minister under the Chairmanship of Shri J.C. Pant, former Secretary to the Government of India. The HPC prepared comprehensive model plans for DM at the national, state and district levels. Though the original mandate of the HPC was confined to preparation of plans for natural disaster only, man-made disasters like accidents, industrial and chemical accidents, biological disasters, etc. were included to ensure a holistic approach for preparation of Disaster Management Plans.

The HPC constituted 5 sub-groups to develop detailed history of each type of disaster and the type of plans of actions needed to have the most effective preparedness, response and recovery strategies for each type of disaster.

The five sub-groups were: Water & Climate related hazards, Geological hazards, Industrial, Chemical and nuclear hazards, Accidents, Biological Hazards.

Our national approach in disaster management received a boost with setting up of National Disaster Management Authority (NDMA) headed by the Prime Minister, through an Act of Parliament. This Act got the consent of the President on 23 December 2005. Its aim is to initiate a holistic and integrated approach to

Disaster Management in the country. The holistic, multi-disciplinary and integrated approach of NDMA in DM at all levels aims to mainstream DM into development effort.

The DM Act, 2005, mandates a paradigm shift from a response and relief-centric approach, to a proactive, and comprehensive mindset towards DM covering all aspects from prevention, mitigation, preparedness to rehabilitation, reconstruction and recovery.

It also provides for:

- The creation of a policy, legal and institutional framework, backed by effective statutory and financial support.
- The mainstreaming of multi-sectoral DM concerns into the developmental process and mitigation measures through projects.
- A continuous and integrated process of planning, organising, coordinating and implementing policies and plans in a holistic, community based participatory, inclusive and sustainable manner.

1.2.3 National Vision

The national vision is to build a safer and disaster resilient India by developing a holistic, proactive, multi-disaster and technology driven strategy for DM. This will be achieved through a culture of prevention, mitigation and preparedness to reduce the impact of disasters on people. The entire process will centre stage the community and will be provided momentum and sustenance through the collective efforts of all governmental agencies supported by NGOs.

1.2.4 State Vision

Uttar Pradesh Disaster Management Plan (UPSDMP) on Dam Bursts is a result of this approach of preparedness to face this man-made calamity. UPSDMP has been prepared for its operationalisation by various departments and agencies of

the Government of Uttar Pradesh and other stakeholders expected to participate in disaster management in case of dam bursts. This addresses the state's response to demands from the district administration and in extraordinary emergency situations at multi-district levels.

1.3 Objectives of UPSDMP on Dam Bursts

The Objectives of UPSDMP on Dam Bursts are as follows:

- To develop plans through a consultative approach involving all the stakeholders that will minimise the damage and disruption in case of dam burst
- To understand socio-economic vulnerability of people and integrate into disaster management activities;
- To strengthen existing organisational and administrative structures for disaster management in case of a dam burst;
- To evolve a system to assess the status of existing resources and facilities available with the various departments and agencies involved in case of a dam burst
- To ensure that the following components of disaster management are organised to facilitate planning, preparedness, operational coordination and community participation.
 - Prevention: the elimination or reduction of the incidence or severity of disasters and the mitigation of their effects.
 - Response: the combating of emergencies and the provision of immediate rescue and relief services;
 - Recovery: the assisting of people and communities affected by disasters to achieve a proper and effective level of functioning.
- To channelise involvement of various government departments, research, specialised agencies, multilaterals, bilateral, non government organisations training institutes, Community Based Organisations etc.

Chapter-II

Profile of the State

2.1 Over view

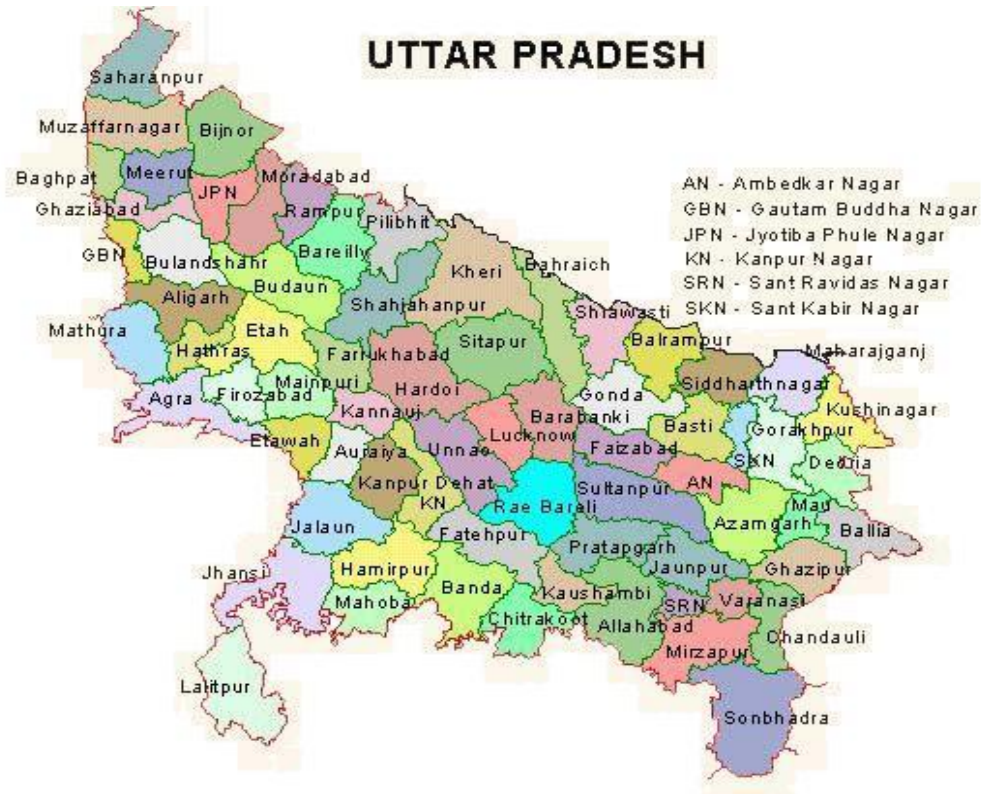

Uttar Pradesh is the land of multi-hued Indian Culture that has blossomed from times immemorial. Blessed with a variety of geographical land and many cultural diversities, Uttar Pradesh, has been the area of activity of historical heroes like - Rama, Krishna, Buddha, Mahavira, Ashoka, Harsha, Akbar and Mahatma Gandhi. Rich and tranquil expanses of meadows, perennial rivers, dense forests and fertile soil of Uttar Pradesh have contributed numerous golden chapters to the annals of Indian History. Dotted with various holy shrines and pilgrim places, full of joyous festivals, it plays an important role in the politics, education, culture, industry, agriculture and tourism of India.

Its area of 2,36,286 sq km lies between latitude 24 deg to 31 deg and longitude 77 deg to 84 deg East. Area wise it is the fourth largest State of India. In sheer magnitude it is half of the area of France, three times of Portugal, four times of Ireland, seven times of Switzerland, ten times of Belgium and a little bigger than England.

2.2 Location

Uttar Pradesh is a state located in the northern part of India covering a large part of the highly fertile and densely populated upper Gangetic plain. Situated between 23° 52'N and 31° 28' N latitudes and 77° 3' and 84° 39'E longitudes, this is the fourth largest state in the country. It shares an international border with Nepal and is bounded by the states of Uttarakhand, Himachal Pradesh, Haryana, National Capital Territory of Delhi, Rajasthan, Madhya Pradesh, Chhattisgarh, Jharkhand and Bihar.

2.3 Area and administrative division

With an area of 2,36,286 sq. km², Uttar Pradesh is divided into 71 districts under 18 divisions: Agra, Aligarh, Allahabad, Azamgarh, Bareilly, Basti, Chitrakoot, Devipatan, Faizabad, Gorakhpur, Jhansi, Kanpur, Lucknow, Meerut, Mirzapur, Moradabad, Saharanpur and Varanasi.

A district is governed by a District Collector also known as a District Magistrate. DM is an officer from either Indian Administrative Service (IAS) or Uttar Pradesh Public Service Commission (UPPSC), and is appointed by the State Government of Uttar Pradesh. Each district is divided into subdivisions. A subdivision is governed by a sub-divisional magistrate (SDM). Other than urban units such as town municipalities, a subdivision contains 'community development blocks' (also known as CD blocks or blocks). A block consists of urban units such as census towns and rural units called gram panchayats. A block is administered by a Block

² <http://upgov.nic.in/>

Development Officer (BDO). The Panchayati Raj has a three-tier structure with Zilla Parishad, Panchayat Samiti and Gram Panchayat.

A Senior Superintendent/ Superintendent of Police or SP, heads the District Police organization of Uttar Pradesh Police. For every subdivision, there is a Subdivision Police, headed by a Police officer of the rank of Assistant Superintendent of Police or Deputy Superintendent of Police. Under subdivisions, there are Police Circles, each headed by a Circle Officer. A Police Circle consists of Police Stations, each headed by an Inspector or Sub-Inspector of Police. The Allahabad High Court has the jurisdiction of the state of Uttar Pradesh.

2.4 Physical Regions

Uttar Pradesh can be divided into two distinct hypsographical regions:

1. The Gangetic plain in the centre: The most important area for the economy of the state is the Gangetic plain which stretches across the entire length of the state from east to west. The entire alluvial plain can be divide into three sub-regions. The first in the eastern tract consisting of 14 districts which are subject to periodical floods and droughts and have been classified as scarcity areas. These districts have the highest density of population which gives the lowest per capita land. The other two regions, the central and the western are comparatively better with a well-developed irrigation system. They suffer from water logging and large-scale user tracts. The Gangetic plain is watered by the Yamuna, the Ganga and its major tributaries, the Ramganga, the Gomati, the Ghaghra and Gandak. The whole plain is alluvial and very fertile.

3. The Vindya hills and Deccan plateau in the south: The Southern fringe is demarcated by the Vindhya Hills and plateau. It comprises four districts of Jhansi, Jalaun, Banda, and Hamirpur in Bundelkhand division, Meja and Karchhana tehsils of Allahabad district, the whole of Mirzapur District south of

Ganga and Chakia tehsil of Varanasi District. The Betwa and Ken rivers join the Jamuna from the south-west in this region. It has four distinct kinds of soil, two of which are agriculturally difficult to manage. They are black cotton soil. Rainfall is scanty and erratic and water-resources are scarce. Dry farming is practical on a large scale.

2.5 Climate and rainfall

Uttar Pradesh is located in the north-western part of the country. It spreads over a large area, and the plains of the state are quite distinctly different from the high mountains in the north. The climate of Uttar Pradesh can also vary widely, with temperatures as high as 47 °C in summer, and as low as -1 °C in winter.

The climate of Uttar Pradesh is predominantly subtropical, but weather conditions change significantly with location and season.

Tropical Monsoon Climate is marked by three distinct seasons:

- Summer (March-June): Hot & dry (temperatures rise to 45 °C, sometimes 47-48 °C); low relative humidity (20%); dust laden winds.
- Monsoon (June-September): 85% of average annual rainfall of 990 mm. Fall in temperature 40-45° on rainy days.
- Winter (October-February): Cold (temperatures drop to 3-4 °C, sometimes below -1 °C); clear skies; foggy conditions in some tracts.

Rainfall: Rainfall in the State ranges from 1,000–2,000 mm (40–80 inches) in the east to 600–1,000 mm (24–40 inches) in the west. About 90 percent of the rainfall occurs during the southwest monsoon, lasting from about June to September. With most of the rainfall concentrated during this four-month period, floods are a recurring problem and cause heavy damage to crops, life, and property, particularly in the eastern part of the state, where the Himalayan-origin rivers flow with a very low north-south gradient.

2.6 Temperature

Depending on the elevation, the average temperatures vary from 12.5–17.5°C (54.5–63.5°F) in January to 27.5–32.5°C (81.5–90.5°F) in May and June. The highest temperature recorded in the State was 49.9°C (121.8°F) at Gonda on May 8, 1958.

2.7 Demographic profile

U.P. is the largest State in the country in terms of people living in it. Its population, at 16.62 crores in 2001, comprised 16.2% of India's population. Population density is 689 and sex ratio adverse at 898. Only about 60% of the people are literate. Infant mortality is still high at around 80. About one third of its people live below the poverty line.

The State reflects many contrasts such as fertile lands, very considerable water resources, good rainfall and massive manpower on one hand; and poverty, unemployment, poor incomes, relatively low productivity levels and low quality of life on the other. Per capita income as estimated in 1950-51 was only 3% below the national average. In 2001-2002, it had fallen to as much as 41% below the national average.

U.P. is facing a difficult demographic situation. It has both high people numbers and high population growth rate. During 91-01 decade its population went up by over 25.8%. Literacy rate in 2001 was more than 10% below the national average, at 57.36%. Similarly, sex ration at 898 was lower than the national figure of 933. According to the Economic Survey of India (2003-04) unemployment rate was 4.08%, having gone up in the preceding seven year by about 18%.

The density of population in U.P. at 689 per sq. km is much higher than that obtaining in many other States in the country. The high demographic growth rate has resulted in:

1. Rise in density of population per sq.km from 473 in 1971 to 548 in 1991, and 689 in 2001.
2. Pressure on land has tremendously increased. Land holdings, mostly small and marginal, have been further fragmented making modernisation of agriculture and capital investments on it very difficult.
3. Available financial resources have not matched the needs of sectors like health, education, housing, roads, energy etc., quality of life has remained poor. Unemployment rate is also high in the state.

2.8 Geology

Uttar Pradesh is characterised by rock formations ranging in age from the Archean (the Bundelkhand Graniticgneisses) to the Recent (the Ganga alluvium).

The Ganga plain which dominates the landscape and nearly covers three fourth of the geographical area of the State, lies between the rocky Himalayan belt in the north and the southern hilly tract comprised of mainly Pre-Cambrian rocks. Flexing of the Indian lithosphere in response to the compressive forces due to collision, and thrust fold loading produced the Ganga Plain foreland basin. It is filled with recent alluvial sediments which is at places more than 1,000 m. thick and an amalgam of sand, silt, clay in varying proportions.

The southern hilly tract is roughly parallel to the Ganga-Yamuna lineament. The tract is underlain by granitic complex in Bundelkhand region and in Sonbhadra. It is overlain by rocks Mahakoshal (Bijawar) and Vindhyan Supergroup. The younger rock comprise of coal bearing Gondwana in south Sonbhadra and basaltic rocks in southern part of Lalitpur.

The granitic complex is considered to be potential for the search of metallic minerals like copper, lead, zinc, molybdenum, gold, nickel, Uranium and Platinum group of elements. The overlying sediments of Mahakoshal (Bijawar) and associated Iron Formation show a potential for the search of copper, uranium, and gold in Lalitpur and andalusite, sillimanite, gold, calcite, marble and clay in sonbhadra. The lower Vindhyan sediments of Sonbhadra contain deposits of cement grade limestone, flux grade dolomits, building stone and is also potential for the search of gold and other metals. The Upper Vindhyan sandstones are suitable for making decorative slab/tiles or ballast. Deposits of silica sands and bauxite are available in Allahabad and chitrakoot districts while coal deposits occur in the Gondwana rocks in southwestern corner of Sonbhadra.

2.9 Economy

Uttar Pradesh is the second largest state economy in India after Maharashtra contributing 8.17% to India's total GDP. Between 1999 and 2008, the economy grew only 4.4% per year, one of the lowest rates in India. The major economic

activity in the state is agriculture and, in 1991, 73% of the population in the state was engaged in agriculture and 46% of the state income was accounted for by agriculture. UP has retained its pre-eminent position in the country as a food-surplus state. Uttar Pradesh is home to largest number of Small Scale units in the country.

2.10 Education

Female literacy situation in Uttar Pradesh is dismal. Only one out of four in the 7+ age group was able to read and write in 1991. This figure go down to 19 per cent for rural areas, 11 per cent for the scheduled castes, 8 per cent for scheduled castes in rural areas, and 8 per cent for the entire rural population in the most educationally backward districts. The 1981 census figures suggest that in Uttar Pradesh the crude female literacy rate among scheduled castes in rural Uttar Pradesh in 1981 was below 18 per cent in 18 out of Uttar Pradesh's 56 districts and below 2.5 per cent in a majority of districts.

In terms of more demanding criteria of educational attainment on the completion of primary or secondary education, in Uttar Pradesh, in 1992-93 only 50 percent of literate males and 40 per cent of literate females could complete the cycle of eight years of schooling involved in the primary and middle stages. One other distinguishing feature of Uttar Pradesh education system is the persistence of high level of illiteracy in the younger age group. Within the younger age group, the illiteracy was endemic in rural. In the late 1980s, the incidence of illiteracy in the 10-14 age group was as high as 32 percent for rural males and 61 per cent for rural females, and more than two-thirds of all rural girls in the 12-14 age group never went to school.

The problem of education system is exacting. Due to public apathy the school are in disarray, privately run school are functional, but beyond the reach of

ordinary people. The State government has taken programmes to make the population totally literate. Steps are being taken with the help of NGOs and other organizations to raise popular participation. At the level of higher education and technical education Uttar Pradesh has 16 general universities, 3 technical universities, one Indian Institute of Technology (Kanpur), one Indian Institute of Management (Lucknow), one Indian Institute of Information Technology and large number polytechnics, engineering institutes and industrial training institutes. This provides the State with firm basis for providing opportunities for higher education to its youth.

2.11 Health

The Total Fertility Rate of the State is 3.8. The Infant Mortality Rate is 69 and Maternal Mortality Ratio is 517 (SRS 2001 - 03) which are higher than the National average. The Sex Ratio in the State is 898 (as compared to 933 for the country).

Please refer Annexure for figures of major health indicators.

2.12 Forests

Forests constitute about 12.8% of the total geographical area of the state. The Vindhyan forest consists mostly of scrub. The districts of Jaunpur, Ghazipur and Ballia have no forest land while 31 other districts have less forest area.

Near the snow line there are forests of rhododendrons and betula (bhojpatra). Below them are forests of silver fir, spruce, deodar, chir and oak. On the foothills and in the terai bhabhar area, grow the valuable sal and gigantic haldu. Along river courses the Shisham grows in abundance. The Vindhyan forests have dhak, teak, mahua, salai, chironji and tendu. The hill forests also have a large variety of medicinal herbs. Sal, chir, deodar and sain yield building timber and railway sleepers. Chir also yield resin, the chief source of resin and turpentine. Sisso is

mostly used for furniture. Semal and gutel are used as matchwood and Kanju in the plywood industry. Babul provides the principal tanning material of the state. Some of the grasses such as baib and bamboo are raw material for the paper industry. Tendu leaves are used in making bidis and cane is used in baskets and furniture.

2.13 Agriculture

The western region of the state is more advanced in terms of agriculture. Majority of the population depends upon farming as its main occupation. Wheat, rice, sugar cane, pulses, oil seeds and potatoes are its main products. Sugar cane is an important cash crop almost through out the state and sugar mills and other cane crushers who produce gur and Khandsari are common throughout the state. Uttar Pradesh is an important state so far as horticulture is concerned. Apples and mangoes are produced in the state.

2.14 Cropping Patterns

In Uttar Pradesh rice is grown on 19 percent (4.6 m ha) of its cropped area and represents about 12.4 per cent of the all-India area under this crop. Rice is concentrated in the eastern districts of Uttar Pradesh where the alternative crops are pulses, groundnut, sugarcane, bajra and jowar in the decreasing order of their importance. Tobacco is grown in some districts.

2.15 Livestock and Fishery

Uttar Pradesh supports about 15% of the country's total livestock population. Of its livestock in 1961, 15% were cattle, 21% buffaloes, 13% goats and 8% other livestock. Between 1951 and 1956 there was an overall increase of 14% in the livestock population. There are nearly eight lakh hectares of water area, including lakes, tanks, rivers, canals and streams. The fishing area is over two lakh hectares and more than 175 varieties of fish, excluding the sornamental

varieties are found. Among them are rohu, hilsa, mahseer, mangar, snow trout and mirror carp.

2.16 Land Use pattern

(Thousand Hectares)

State/ Union- Territory/ Year	Geographical Area	Reporting Area for land utilisation statistics (col.4+7+ 11+14+15)	Forest	Not available for cultivation			Other Uncultivated land excluding

2.17 Industry

There are different types of minerals and several industries have come up based on the minerals. There are cement plants in the Mirzapur area in the Vindhya region, a bauxite based aluminium plant in the Banda area. In the hills a number of minerals are to be found, mainly non-metallic minerals which are used as industrial raw materials. Coal deposits are found in the Singrauli area. The industries include a large printing establishment units engaged in manufacturing of scales, locks, letter boxes, furniture, badges and belts, leather goods, scissors

etc. Handloom, carpet, glass, electrical goods, electro plating, building material industries are also found in the city.

2.18 Transport and Communication

Uttar Pradesh has a well-defined transport system having an impressive network of roadways and railways that help commuters to move around within and outside the state. Flights also operate between major cities such as Lucknow, Varanasi, Agra, Allahabad and Kanpur.

Intercity Transportation in Uttar Pradesh

The cities of Uttar Pradesh are well linked through a network of road and railways. The best mode of transportation is trains. Almost all the major as well as minor towns in Uttar Pradesh are linked through railways. Numerous Express and Super Fast trains ply between these stations. There are Intercity and Passenger trains too that are short distance trains whose routes are generally confined to 200 km. Though cheaper than Express trains, these trains are very slow and crowded. Commuters and smalltime traders generally use these trains. They tend to stop at every other station.

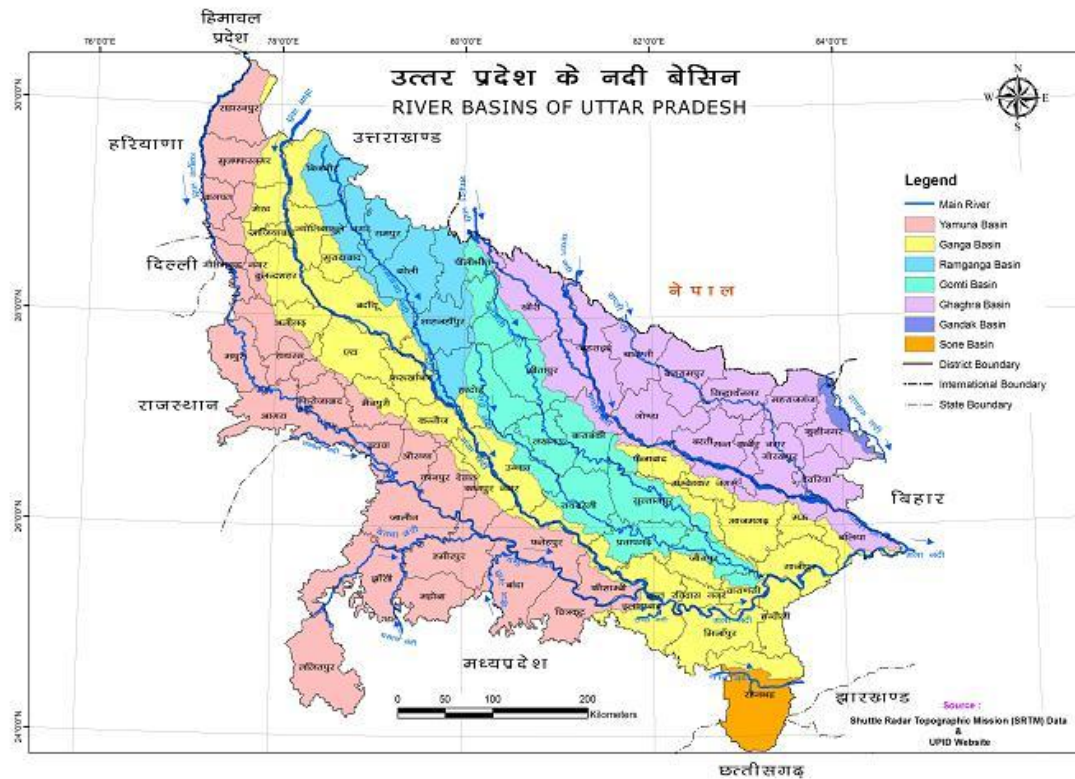

Uttar Pradesh State Transport Corporation has a fleet of buses that ply between different cities. The buses range from uncomfortable coaches for short distance to the Luxury coaches for the longer ones. Apart from that there are luxury coaches run by private operators too. Several Matadors, Mini-Buses and Diesel-run Autos are also available for relatively short distances, say between 50 to 100 km.

Intra-city Transportation in Uttar Pradesh

Auto rickshaws and taxis are easily available in bigger cities such as Kanpur, Agra, Mathura, Lucknow, Varanasi, Ghaziabad and Allahabad. In other cities,

Autos and Taxis that run on share basis are available. Rickshaws are another good mode to move around in the city. They are the chief transport option in smaller towns as well as congested alleys of large towns.

2.19 River System and Dams

Major Dams and Reservoirs

- Govind Ballabh Pant Sagar on Rihand River in Sonbhadra
- Kalagarh Dam on Ramganga River in Kalagarh
- Parichha Dam on Betwa River in Parichha (Jhansi District).
- List of Dams in Lalitpur District, Uttar Pradesh

(A) Matatila Dam constructed during 1952-1964 on Betwa River in Lalitpur District, Uttar Pradesh, Length 6.30 km, Height 33.53 Meters, Area 20,720 km², Storage 1132.68 m.c.m

(B) Jamni Dam constructed during 1962-1973 on Jamni River in Lalitpur District, Uttar Pradesh, Length 6.40 km, Height 19.18 Meters, Area 414 km², Storage 92.89 m.c.m

(C) Rohini Dam constructed during 1976-1984 on Rohini River in Lalitpur District, Uttar Pradesh, Length 1.65km, Height 15.50 Meters, Area 44 km², Storage 12.12 m.c.m

(D) Shahzad Dam constructed during 1973-1992 on Shahzad River in Lalitpur District, Uttar Pradesh, Length 4.16 km, Height 18.00 Meters, Area 514 km², Storage 130.00 m.c.m

(E) Govind Sagar Dam constructed during 1947-1953 on Shahzad River in Lalitpur District, Uttar Pradesh, Length 3.60 km, Height 18.29 Meters, Area 368 km², Storage 96.8 m.c.m

(F) Sajnam Dam constructed during 1977-1990 on Sajnam River in Lalitpur District, Uttar Pradesh, Length 5.15 km, Height 18.78 Meters, Area 290 km², Storage 83.50 m.c.m

(G) Sukma-Dukma Dam a below water construction on Betwa River near Jhansi District, Uttar Pradesh, Length 2.15 km, Height 20.78 Meters

Chapter III

Dam Bursts

A dam burst is a sudden release of large quantities of water causing havoc in downstream areas, damaging structures & installations, disrupting socio-economic activities, loss of life & property and causing ecological and environmental damage.

Dams and barrages need careful planning and analysis to ensure minimum environmental intrusion. Dams of all sizes must be submitted to careful review of environmental criteria and assessment. With advancements in technology, frequency of dam bursts or breaches has reduced considerably. The structural stability of a dam can be threatened by floods, torrential rains, rockslides, landslides, earthquakes, deterioration of the heterogeneous foundation, poor quality of construction, improper management, sabotage, acts of war etc. Out of this, floods and seismic disturbances are the primary causes of dam bursts or breaches. The Earth fill dams have been involved in the largest number of failures, followed in order by gravity dams, rock fills, and multiple and single arches.

The failure of dams causes economic losses that transcend immediate property damages and loss of life. Predicting the consequences of dam breach is the first step in ensuring dam safety.

Possible impacts of dam bursts:

- Loss of life and high number of injuries demanding immediate attention
- Separated families and missing people causing family disorganization
- Extensive damage to houses, personal belongings, livestock, crops and plantations, land etc
- Extensive damage caused to infrastructure including buildings, bridges, railway line, power supply, water supply, sewer lines, underground cables,

- communication lines etc.
- Extensive damage to environment like soil erosion, water pollution, silting, denudation of land etc.
 - Loss of livelihood
 - Loss of production
 - Migration causing social disruption and breakdown of social order
 - Law and order problem

Chapter IV Vulnerability Assessment and Risk Analysis

4.1 Introduction

Disasters impede socio-economic development. Disasters affect population where there is physical, infrastructural, environmental or socio-economic vulnerability. The higher the individual and other vulnerabilities, the higher are the risks. A comprehensive understanding of the pattern of various hazards is crucial in order to have a focus and prioritise the scarce resources for ensuring sustainable development in areas and populations at risk. Similarly, identification of various disasters and the assessment of the consequent effects of such disasters are essential to adopt preventive, preparedness, response and recovery measures to minimise losses during disasters and ensure quick recovery. For a highly populous state like UP, it is essential to ensure that vulnerability and risk reduction aspects are taken into account for all developmental plans and programmes.

Effective risk management requires information about the magnitude of the risk faced (risk assessment), and on how much importance society places on the reduction of that risk (risk evaluation). Qualification of the level of risk is an essential aspect of both preparedness planning and mitigation.

There are three essential components to the quantification or estimation of risk:

- Hazard Occurrence Probability: the probability of occurrence of a specified natural hazard at a specified severity level in a specified future time period
- Elements at risk: an inventory of those people or things which are exposed to the hazard

Population	Numbers
Human	166.2 millions as per Census 2001

Population	Numbers
Major Cattle Population in Millions as per Cattle Census 2003	
Bulls	10.18
Cows	10.86
Buffalo	17.75
Goat	12.94
Pig	2.28
Sheep	1.4

- Vulnerability: the degree of loss to each element should a hazard of given severity occurs

For measuring these parameters, historical records can be an invaluable source of information. Many aspects of vulnerability cannot be described in monetary terms, such as personal loss of family, home, income and related human suffering and psychosocial problems, but these should not be overlooked.

4.2 Socio-economic Vulnerability

The vulnerability of an area is determined by the capacity of its social, physical, environmental and economic structures to withstand and respond to hazards. An analysis of the vulnerability in a given geographic location, an understanding of the socio-economic factors and the capability of the community to cope with disasters, will give an understanding to the development and disaster managers to plan for risk reduction against future hazards.

4.3 Hazard Vulnerability in UP

It is significant to note that Uttar Pradesh has a large number of dams which have already been constructed or are in different stages of construction. Some of

these dams are located in seismic zones as well. This increases the vulnerability risk.

The following are the Weak Zones in the State may be termed as trigger points:

Ridges

Delhi-Haridwar Ridge

Delhi Muzaffarnagar Ridge

Faizabad Ridge

Faults

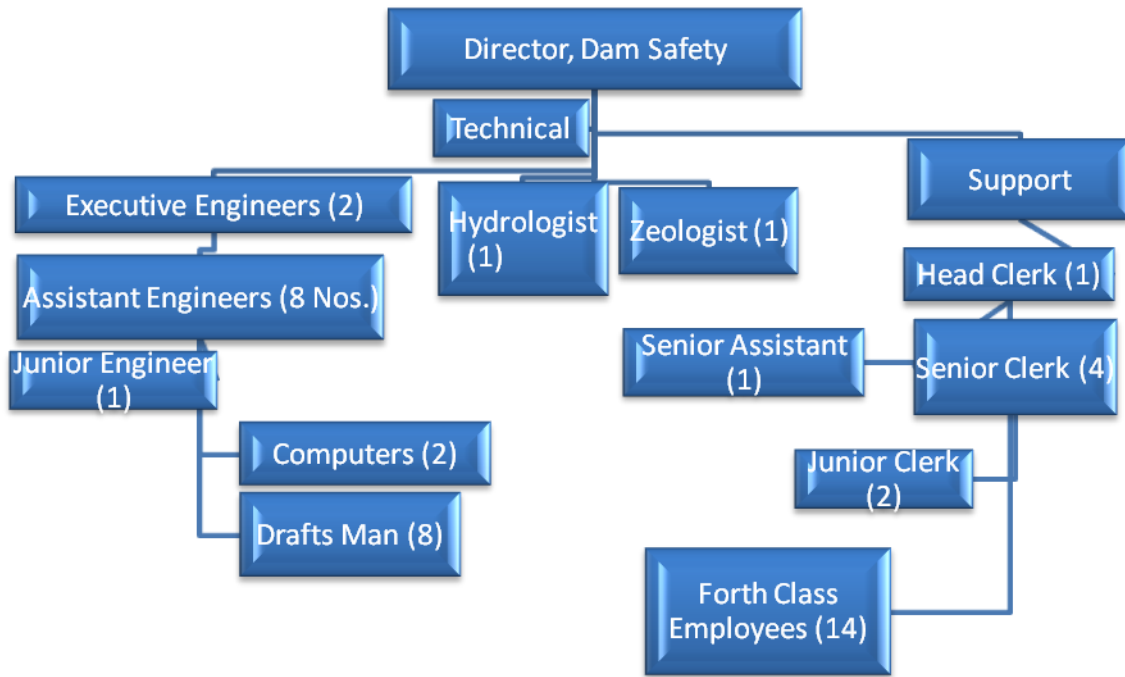

Moradabad Fault

Bhairawan Fault

East-West Running Tear Faculty

There are 131 dams comprising of small, medium and large structures. Most of the dams are earthen structures which need regular maintenance. These dams are being managed and maintained by respective divisions of Irrigation departments. A Dam Safety Cell having its office at Yojana Nagar, Lucknow has also been established to ensure safety of dams. A mandatory post and pre-monsoon inspection of each dam is done every year. The technical assessment for safety measures are also carried out with support from the Central Water Commission and Departmental Heads. The organizational structure of the Cell is as follows:

Organizational Structure of the Existing Dam Safety Cell

List of Sanctioned Posts and Vacancies

Post	Sanctioned Numbers	Vacancies
Director	1	1
Executive Engineers	2	-
Assistant Engineers	8	7
Hydrologist	1	1
Geologist	1	1
Junior Engineers	1	1
Computer	2	2
Draftsman	8	6
Head Clerk	1	1
Senior Assistant	1	1
Senior Clerk	4	1

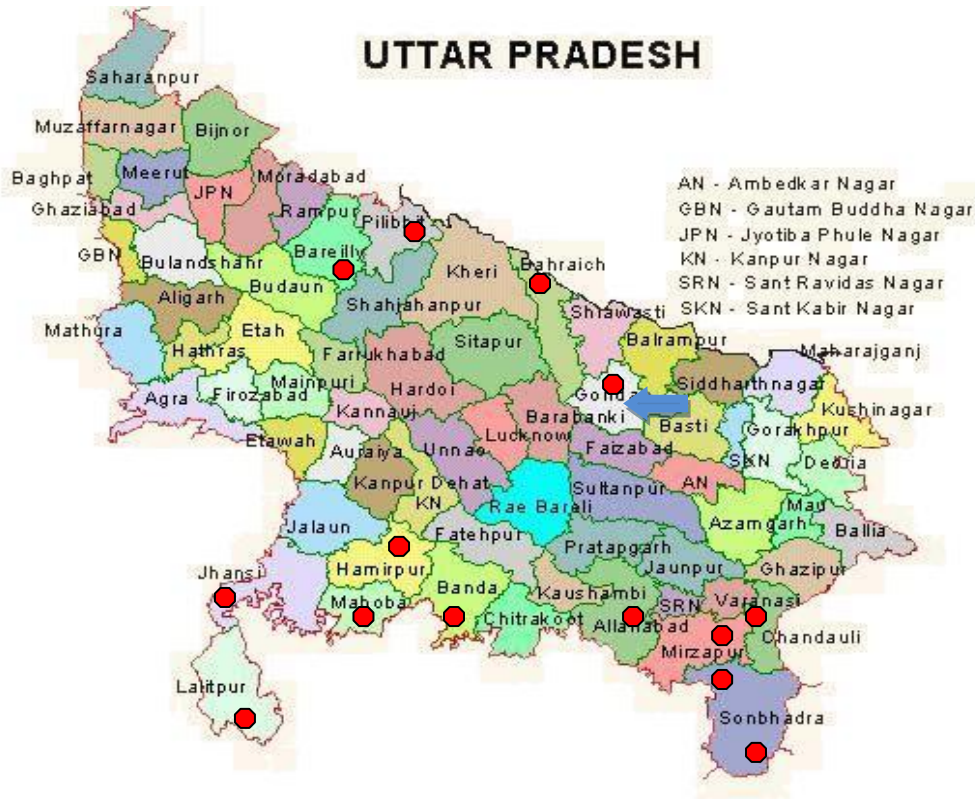

Post	Sanctioned Numbers	Vacancies
Junior Clerk	2	1
Forth Class Employees	14	4
Total Strength	46	27

There are many vacancies in the Cell. Due to vacancies and lack of resources which include funds, the Cell is not playing any active role in preventing accidents or disasters in future. There is no action plan with the Cell. The Cell has also not been provided with necessary equipments and office automation such as computers, telephone and fax machines. The vulnerability of the state increases manifold due to lack of trained human resources, financial allocations, equipments, vehicles and support functions to conduct regular inspections and do proper maintenance of dams. In the existing set-up, the despite the inspections being done periodically, the maintenance works as per the recommendations of these inspections are not being done due to insufficiency of funds. As a result, the maintenance works accumulates every year and takes the shape of project itself. This practice increases the vulnerability of the dams.

Due to concentration of most of the dams in the Southern and some of parts of Northern Uttar Pradesh, these are most vulnerable to the dam burst disasters. However, among these, Mirzapur, Jhansi and Sonbhadra districts are most prone.

Vulnerable Population

- Old and Differently Able
- Women and Children
- Sick and ailing persons
- Cattle
- Economically weaker sections

About 14 districts/cities are most vulnerable to dam bursts. These are Jhansi, Mirzapur, Hamirpur, Banda, Robertsganj, Mahoba, Varanasi, Lalitpur, Gonda, Behraich, Bareilly, Renukoot, Pilibheet and Allahabad. There is no approximation of human, cattle and economic loss done by the Dam Safety Cell and has never been given a priority.

The literacy level in the most vulnerable areas is comparatively less than the other parts of the state. The poverty level in most of the vulnerable districts is also relatively low. State also lacks awareness amongst the local population residing near the command and catchment areas of these dams. There has not been any effort to educate the vulnerable population on management of emergencies caused by dam bursts.

Chapter V

Prevention Measures and Preparedness

5.1 Approach for Prevention and Preparedness

Three major functional areas were recognised as necessary components of a comprehensive approach: prevention, response and recovery. The tragedy and the lessons learnt from the past have changed the mindset and the focus of disaster management has shifted from “Rescue, Relief and Restoration” to “Planning, Preparedness and Prevention”.

Within these areas, the key responsibilities of agencies include:

- Planning: the analysis of requirements and the development of strategies for resource utilisation.
- Preparedness: the establishment of structures, development of systems and testing and evaluation by organisations of their capacity to perform and their allotted roles.
- Co-ordination: the bringing together of organisations and resources to ensure effective disaster management.

Different aspects of Disaster Management in case of Dam Burst are: prevention, mitigation, preparedness, response, relief, rehabilitation and recovery. All important stakeholders including lead agencies like Irrigation, Fire Health, Animal Husbandry departments, NGOs along with the community, medical care and public health professionals shall prepare themselves to achieve this objective.

5.2 Measures for Prevention and Preparedness for Dam Bursts

Careful planning and consideration is very important before constructing dams and barrages in order to make water resources available for future use. Detailed study on impact assessment, topography, geology, hydrology, structural analysis,

technology, access, effect on people living downstream etc must be conducted to avert a future disaster. This is an important step towards preparedness.

Since dam bursts often happen without adequate warning, massive resource mobilisation is required to tackle it.

The important means for preparedness for dam bursts include the following:

5.2.1 Dam safety

Installation of protection against floods is paramount. It is essential that flood gates are consistently and correctly opened. While consideration for new structures is improving, the existing ones need continuous checking and vigilance for dam safety. Neglect of safety measures can cause a threat to people. Measures like flood forecasting, a comprehensive plan for dam disaster management, flood management planning will help in ensuring safety of people.

The Dam Safety cell will be strengthened and equipped with all necessary equipments and manpower to upkeep the dams and carry out necessary checks both pre and post monsoons.

5.2.2 Evacuation Plans in case a Breach happens

Disasters by their very nature will be different and may require evacuation of communities. It is important to understand the nature of threat and the procedures to be adopted. All agencies involved in evacuation must have a common understanding of their roles and responsibilities in order to avoid confusion and panic behaviour. Different situations demand different priorities and hence the responsibility for ordering evacuation is assigned to different agencies.

Evacuation is ordered when:

- The community is exposed to danger within three hours; and
- Evacuation within one kilometre distance is to be affected

Only designated government official may order evacuation on the site:

- In consultation with technical personnel
- In consultation with the local official (such as Sarpanch)
- For appropriate security and law & order, evacuation should be undertaken with assistance from community leaders
- All such evacuations should be reported to DM or SP within 6 hours.

All other evacuations, that is, threat after three hours or evacuation beyond one kilometre can be ordered only by the DM or the competent authority like Public Health official, Irrigation, official, police, fire brigade, industrial security officer.

The following steps should be taken for evacuation:

- Shelter sites should be within one hour's walk or 3 miles (5 km) of dwellings.
- The evacuation routes should be away from the flooded area.
- Evacuation routes should not include roads likely to be submerged in floods, but may include pathways.
- Ensure proper evacuation by seeking community participation
- Families should be encouraged to take along water, food, clothing and emergency supplies to last at least three days
- People should listen to a battery-powered radio and follow local instructions
- In case of inadequate transport or limited time, encourage community for emergency evacuation in the following order:
 - Seriously injured and sick
 - Children, women and handicapped
 - Old
 - Disabled persons

In case of marooned persons, evacuation must be carried out as soon as possible and the persons transferred to transit camps. If evacuation is not possible within early hours of the disaster, marooned people must be provided with water, medicines, first-aid and cooked food. Emergency transport for the seriously injured can be arranged through speed boats or helicopters. A senior medical officer should accompany the rescue team along with required medical kits and ensure priority shifting of those seriously injured or requiring immediate medical attention.

5.2.3 Warning

A warning system is essential to indicate the onset of a disaster. This may range from alarms and to public announcements through radio, television etc and other traditional modes like beating of drums, hoisting of flags, ringing bells etc. In most disaster situations, experience has shown that a loss of life and property could be significantly reduced by preparedness measures and appropriate warning systems. The importance of warning systems, therefore, hardly needs any emphasis. The district administration is the prime agency responsible for issuing disaster warnings. Additional technical agencies like Irrigation Department may be authorised to issue warnings.

Important Elements of Warning

- Communities in disaster prone areas are made aware of the warning systems
- Alternate warning systems must be kept in readiness in case of technical failures (eg, power failure).
- All available warning systems should be used.
- The warnings should, to the extent possible be clear about the severity, the duration and the areas that may be affected.
- Warnings should be conveyed in a simple, direct and non-technical language to incorporate day-to-day usage patterns.

- The do's and don'ts should be clearly communicated to the community to ensure appropriate responses.
- Warning statements should not evoke curiosity or panic behaviour. This should be in a professional language devoid of emotions.
- Spread of rumours should be controlled.
- All relevant agencies and organisations should be alerted.
- Wherever possible, assistance of community leaders and organised groups should be sought in explaining the threat.
- Once a warning is issued, it should be followed-up by subsequent warnings in order to keep the people informed of the latest situations.

The warning system will be developed with the help of Department of Science and Technology which will be based on GIS mapping and remote sensing technology. In case of any emergency the Emergency Control at the department of Irrigation will be informed which in turn assess the situation through technical teams. The Crisis Management Group will be informed if there is probability of occurrence. Simultaneously the district collectors will be informed to initiate evacuation from the areas which may be affected by the onset of disaster.

Public Address System, Radio and Television will be used to warn the vulnerable population about the emergency and will be requested to evacuate the area with the help of evacuation team sent by the district disaster management authorities.

5.2.4 Medical Preparedness

Health and Medical Care is one of the most vital elements of any preparedness as well as response plan. It extends to activities including response, quick evacuation of casualties, well-rehearsed hospital DM plans, training of doctors and paramedics, and upgradation of medical infrastructure at various levels to reduce morbidity and mortality.

Following are the key aspects of medical preparedness:

- Medical First Responders
- Medical Assistant Teams
- Mobile Hospital and Mobile Teams: These hospitals can be attached to earmarked hospitals for their in non-disaster periods.
- Proper coordination between peripheral hospitals, private hospitals, blood bank, general hospitals and health services established at transit camps, relief camps and affected areas.
- Adequate medical supplies including drugs required for water borne diseases, cuts and fractures, dressings, needles, antiseptics etc
- Hospital preparedness for mass casualties
- Search and Rescue teams
- Epidemic prevention after the disaster
- Trauma counselling
- Stockpile of Antibiotics and Vaccines.

5.3 Resource Inventory

Item Name	Qty	Item Name	Qty
Communication		Water tank	131888
GPS Handsets	27	Reservoirs treatment tank	29
Mobile Phone GSM	19982	Rescue	
Mobile Phone CDMA	776	Control Van	6
INMARSAT	1	Hydraulic Platform	4
Mini-M3	10	DCP Tender	5
V-SAT	13	Hazmat Van	1
Video Phone Set	2	Extension Ladder	339
VHF Sets Static	2669	Clothing - Chemical protective (A, B, C)	66

Item Name	Qty	Item Name	Qty
VHF Sets Mobile	1724	Suit - NBC	2
UHF Sets Static	103	Basket Stretcher	83

Mobilization Truck	74	Basket Stretcher	83
Drinking Water		Pneumatic Rope Launcher	6
Water Tanker - Medium capacity	2065	Mechanical ventilators	78
Water Tanker - Large capacity	133	Defibrillator	26
Water filter	4240		

**District wise detailed list is available at the IDNR site*

Health Infrastructure of Uttar Pradesh

Particulars	Required	In position	shortfall
Sub-centre	26344	20521	5823
Primary Health Centre	4390	3660	730
Community Health Centre	1097	386	711
Multipurpose worker (Female)/ANM at Sub Centres & PHCs	24181	21900	2281
Health Worker (Male) MPW(M) at Sub Centres	20521	5732	14789
Health Assistant (Female)/LHV at PHCs	3660	2128	1532
Health Assistant (Male) at PHCs	3660	4061	-
Doctor at PHCs	3660	NA	NA
Obstetricians & Gynaecologists at CHCs	386	123	263
Physicians at CHCs	386	123	263
Paediatricians at CHCs	386	13	373
Total specialists at CHCs	1544	413	1131
Radiographers	386	NA	NA
Pharmacist	4046	NA	NA
Laboratory Technicians	4046	NA	NA
Nurse/Midwife	6362	NA	NA

The other Health Institution in the State are detailed as under:

Health Institution	Number
--------------------	--------

Medical College	16
District Hospitals	74
Ayurvedic Hospitals	1768
Ayurvedic Dispensaries	340
Unani Hospitals	204
Unani Dispensaries	49
Homeopathic Hospitals	1
Homeopathic Dispensary	1482

(Source: RHS Bulletin, March 2007, M/O Health & F.W., GOI)

There are specialized medical institutions like Sanjay Gandhi Post Graduate Institute of Medical Sciences situated at Lucknow, which have all the testing facilities including the advanced ones as well, but this is one of its kind and is already under severe pressure. More such centres spread over Uttar Pradesh should be settled which take lead in case of disasters.

Number of rescue items such as boats, life jackets, stretchers, etc. are unevenly distributed amongst the towns without any consideration to the risk analysis of the districts where number of dams are situated.

5.4 Roles and Responsibilities for Preparedness and Mitigation

Lay down policies and plans for Dam Bursts management in the State.	U.P. Disaster Management Authority (UPDMA)
Provide policy directions and integration of	U.P. Disaster Management Authority (UPDMA)

Disaster Management programmes in the state development framework	
Maintain record of the disaster inputs for the CRF planning. Ensure that the agreed percent is allocated for the vulnerability reduction fund. Deployment of calamity relief fund	Calamity Relief Fund Committee (CRFC)
Regular maintenance of Dams and barrages	Irrigation Department
Capacity Building of Irrigation , Medical and Para-medical staff	Irrigation Department Department of Medical Health and Family Welfare Uttar Pradesh Academy of Administration and Management (UPAAM)
Implementation of State Disaster Management Plan on Dam Bursts	State Executive Committee for Disaster Management (SEC)
Community Awareness on Dam Bursts	Irrigation Department
Maintenance of Stock piles including vaccines for prevention & management of epidemics post dam bursts	Department of Medical Health and Family Welfare
Early Warning System, dissemination of education and awareness messages for preparedness actions and coordinated response. Establishment of emergency communication systems	Department of Information and Communication
Funds for Training and Capacity Building	Department of Planning Department of Revenue
Training of PRIs on Dam Bursts	Department of Panchayati Raj Institutions
Diseases Surveillance	Department of Medical and Family Welfare

5.5 GIS Mapping of the State

GIS mapping of the entire State will be done with the help of the Department of Science and Technology which has already developed village wise maps of the State for flood control and assessments. The GIS maps will carry village wise information and data including list of specialised hospitals, police posts, government offices, schools, private hospitals, sub-centre, PHC, CHC, District

hospitals, road links, highways, NGOs, veterinary hospitals, clinics, dams, water resources, canals, ponds, crops, etc. to help the planner and responders to get all the information at the one click on computer which will be available with the District Collector, Emergency Operation Centres, Disaster Management Authority, Relief Commissioner, Office of the Chief Secretary and Crisis Management Group.

Each dam with its catchment and command areas will be clearly marked on the GIS map. This will help in assessing the risk and elements at risk in each village that may be affected.

6.1 Response Management Arrangements

The response management task is to optimise the outputs, given the resource constraints. Response management is based on the three key management tasks of command, control and coordination. These roles and responsibilities are defined as follows:

Command depicts the hierarchical managerial order. It elucidates the type and amount of resources that would be handled at different levels in the performance of that organisation's roles and tasks. In case of Dam Bursts the Chief Secretary of the State will be in command and will be supported by team of high level officials that constitute Crisis Management Group.

Control provides the direction for best possible utilisation of resources and most advantageous deployment of manpower. Control system will be developed on the basis of laid down policy of the Govt.

Coordination involves the bringing together of agencies and elements to ensure effective response to emergencies. It is primarily concerned with the systematic acquisition and application of resources (agencies, personnel and equipment) in accordance with the requirements imposed by emergencies. Co-ordination aims at bringing out synergy in operation. The coordination will be done by Principal Secretary Irrigation.

Support Agency A support agency is defined as a government or non-government agency, which provides essential services, personnel, or material to support or assist a control or another support agency or persons affected by an emergency.

6.2 Short Term Response Plan

Short-term response plan contains the actions to be taken immediately after a disaster. Once an information reaches designated officers, it has to be verified soon for authenticity. Once the information is found correct, it has to be reported to the Incident Commander who will take the following actions:

1. Disseminate warning/alert to the areas which where emergency has been declared
2. Disseminate information to vertical and horizontal administrators for Disaster management
3. Declare disaster based on severity / vulnerability

Action Plan for First 24 hours

First assessment team will be constituted, which will mainly comprise of senior officers who will be required to make a first/preliminary assessment of damage.

Items required by the first assessment team are:

1. Survival kit
2. Formats for First Assessment
3. Media Release
4. Assessment Report, which will contain
 - Geographic estimate of damage area (administrative units and divisions)
 - Estimated total population affected
 - Worst affected areas
 - Areas currently inaccessible
 - Injury and fatality report,
 - Lists of damaged infrastructure, buildings, health facilities, water sanitation, crop agriculture,
 - Assessment of secondary threats
 - Resource needs for response operations

- Priority needs (search and rescue, clothing, food items with quantity and specifications, cattle feeds and fodder, Sanitation, Health, Education, Crop/agriculture, Infrastructure)

Assessment of the Situation through Remote Sensing

In case of a dam burst the affected districts, blocks and villages will be mapped with the help of Department of Science and Technology's remote sensing technology to initiate the immediate actions such as search and rescue and for assessing the loss of assets in the affected areas. It will also help in identifying suitable routes and locations for evacuating the affected population from the affected areas besides giving vital information to the search and rescue teams about the location of the stranded population and submerged habitations.

Evacuation & Rescue

In case of dam burst, evacuation would be immediately required since the area would get flooded. Those trapped would be located, rescued by search teams, at times by helicopter services.

- Expertise of fire brigade, local swimmers and defence services may be essential for rescue operations.
- In case of missing people, information counters would be set up
- Livestock assessment or damage inspection may be undertaken in order to avoid litigation or delay in relief compensation.
- Disconnecting power supply to the damaged area

All evacuations will be ordered only by the Collector. For appropriate security and law and order evacuation should be undertaken with assistance from community leaders. All evacuations will be reported to Crisis Management Group at the state level immediately.

Relief and Restoration

- Provision of basic amenities including food, shelter etc
- Providing medical care and attention
- Police may have to cordon off affected area to enable timely relief operations
- Inspection of underground cables before power is restored
- Restoration of communication and transmission lines
- Irrigation Department would have to secure the breach
- PWD would be roped in to take repairs and reconstruction

Emergency Medical Response (EMR)

EMR at the site would depend on the quick and efficient response of teams deputed from the district, reinforced by those from the state and if required centre. They would triage the patient, provide basic life support if required at the site, and transport patients to nearest identified health facility. If the incident command system is implemented, the relief teams will be integrated with the ICP and function under the overall directions of the incident commander. The emergency medical response team will be formed in each district having officials from irrigation, energy, health, transport, police, revenue, public works department, Jal Nigam, NGOs, NSS and NCC. At the district level, District Collector will be the incident commander.

In a scenario where large scale disaster strikes, the state machinery may become insufficient in handling the disaster. To overcome such obstacle, Govt. of India has developed disaster management portals which facilitate the disaster managers and administrators to track down resource stocks in the country or at least in the neighbouring areas. This website, called www.idrn.gov.nic.in is intended to gather data from the government resources. Data are collected from local units and line departments and uploaded by the District Administration after verification and scrutiny.

6.3 Emergency Response Structure

Declare emergency situation in case of State level disaster and the end of it.	Chief Secretary
Overall coordination, implementation of the EOC activities and documentation and reporting to the CMG.	Department of Revenue and Department of Irrigation
Monitoring Emergency Plans	EOC Department of Medical Health and Family Welfare
Maintenance of public infrastructure, safer places for evacuations and isolation of victims	Department of Irrigation and Public Works (PWD)
Maintenance of hygiene, cleanliness and civic facilities	Department of Urban Development
Security, evacuation, emergency assistance, search and rescue, first aid, law and order, communication, shifting of people to hospitals, traffic management and burial work of dead bodies.	Department of Home and Department of Revenue
Power supply for public facilities such as hospital, police stations, telecommunication building and meteorological stations.	Department of Power and Energy
Critical communication links with disaster sites	Department of Information and Communications
Arrangement of Ambulances, medical care, staff, medical professionals, equipments, vaccines, medicines and para-medical staff	Department of Health
Disease management and control of epidemics	Department of Health
Financial Arrangements	Department of Revenue
Fodder needs assessments, supply and management during disaster	Department of Animal Husbandry Department of Panchayati Raj District Administration
Ensure that Standard Operating Procedures are	Department of Irrigation and

adhered to	Department of Revenue
Management of the disaster at district level including mobilising resource, recovery and implementation of district disaster management plan	The District Disaster Management Authority (DDMA) International Agencies/NGOs
Assistance in response	NGOs and INGOs

6.4 Disaster Management during Post - Disaster Phase

Each disaster could be considered as an opportunity to reinforce resilience of the communities and resistance of the infrastructure, so that adversity of future disasters could be minimised.

Post-impact Disaster Management will include the following tasks:

- Assessing primary and secondary impacts in the eye of the disaster and in adjacent locations with the help of GIS mapping and manually;
- Monitoring immediate assessment of physical, environmental, social, economic, and psychological impacts on various socio- economic groups at affected locations;
- Monitoring emergency response activities at different levels including rescue and search, food relief, medical aid, emergency shelter, emergency needs of vulnerable individuals/ families /social groups;
- Monitoring quality of emergency response activities and quality of relief aid provided;
- Monitoring deployment of emergency agencies and equipment; § Monitoring role of external/non-government agencies involved in emergency management process;
- Documentation of all response activities and compilation of data/information for rehabilitation and recovery activities
- Management of necessary data and information for post-impact rehabilitation/recovery planning;

- Monitoring all recovery/rehabilitation activities carried out by different departments and agencies; and
- Documentation of response and recovery activities for learning.

Chapter VII

Recovery Plans

The State Disaster Recovery Plan places the affected community as the focus of recovery management and provides a structure for the management of all the inputs into the recovery process in a way that is appropriate to the needs of the community.

7.1 Definitions of Recovery

Recovery can be defined as “the assisting of persons and communities affected by emergencies to achieve a proper and effective level of functioning”. Recovery is an enabling and supportive process that allows individuals, families and communities to attain a proper level of functioning through the provision of information, specialist services and resources. Recovery includes all aspects of mitigation and also incorporates the continuation of the enabling process, which assists the affected persons and their families not only to overcome their losses, but also to achieve a proper and effective way to continue various functions of their lives. The Recovery process is therefore a long-term process in which everyone has a role – the Government including the self-government institutions, the NGOs, and especially the affected people, their families and the community.

7.2 Recovery after a Dam Burst

In case of a dam burst, when large tracts of land would be inundated with water, people living in the affected area would be displaced. There would be many casualties and loss of property. The displaced people would require support, both in tangible and intangible form, to regain normalcy and start life afresh from where it got disrupted.

Assistance provided will be adapted to meet the basic needs as well as over a period restoring livelihood opportunities of those affected. After disasters, special recovery measures are necessary for affected population. Assistance will require

include advance medical care, material aid, financial assistance, counselling and personal services, information and community support and can come from a range of sources.

7.3 Recovery Management at State Level

The Relief Commissioner will be in charge of recovery management at State level.

Its overall responsibility will be:

- Develop policy issues on recovery management
- Conceive and solicit programmes from Govt. departments, District administration and NGOs.
- Prioritise projects Decide on the terms and conditions of execution Mobilize resource for operations
- Liaise and co-ordinate with the implementing agencies
- Facilitate and Monitor operations
- Suggest norms for the recovery projects at GP and Block level
- Represent the Government in the affected community
- Present the interests, concerns and needs of affected communities to the State Government;
- Support the local management of recovery by ensuring State co-ordination of resources from all sources;

8.1 Capacity Building for Preparedness

The important components of preparedness include planning, capacity building, well-rehearsed hospital DM plans, training of doctors and paramedics, and up-gradation of medical infrastructure at various levels to reduce morbidity mortality. The primary objective of preparedness is to have a better response mechanism from all stakeholders, that is, participation of health officials, doctors, various private and government hospitals, and the public at the national, state and district levels.

8.2 Components of Capacity Building

8.2.1 Establishment of Command, Control and Coordination Functions

At the operational level, C&C is clearly identifiable at the district level where the district collector is vested with certain powers to requisition resources, notify diseases, seek help from the Army, state or centre, etc. The incident command system needs to be encouraged and instituted so that the overall action is brought within the ambit of an incident commander who will be supported by logistics, finance, and technical teams etc. Emergency Operation Centres will be established in the Irrigation departments with an identical nodal person as Director (Emergency) for coordinating a well orchestrated response.

- 8 All-round development of human resources and infrastructure for establishing a well-focused and functional organization and creation of a supportive socio-political environment. Development of infrastructural facilities includes trained manpower, mobility, connectivity, knowledge enhancement, and scientific up-gradation for all stakeholders concerned with the management of biological disasters.

8.3 Human Resource Development

Control rooms should be nominated/established at different levels in order to get all the relevant information and transmit it to the concerned official. The addresses and telephone numbers of the district collector, Executive/Superintending Engineer (Irrigation), local army commander, Coordinators of NSS and NCC, Civil Defence, Chief Medical Officer, hospitals, specialists from various medical disciplines etc., and a list of all stakeholders from the private sector should be available in the control room.

8.4 Training and Education

8.4.1 The necessary training/refresher training should be provided to the local staff working at the dam sites, specially those responsible for operation and maintenance.

8.4.2 There is a need to evolve standardized training modules for different medical responders/community members for capacity building in the area of disaster management and to create adequate training facilities for this.

8.4.3 Community Preparedness: Community members are usually the first responders. These people should be sensitized through public awareness and preparedness campaigns. The public should be made aware of the basic need for safe food, water and sanitation.

Areas of emphasis for Community participation

- a. Providing support to public health services, preventive measures such as chlorination of water for controlling the possibility of epidemics, sanitation of the area, disposal of the dead, and simple non-pharmacological interventions should be mediated through

various resident welfare associations, village sanitation committees, panchayats etc

- b. NGOs and Private Voluntary Organizations should be involved in educating and sensitizing the community
- c. Supporting activities like street shows, dramas, posters, distribution of reading material, school exhibitions, electronic media and publicity etc. must be undertaken

8.5 Research and Development

Innovative technologies will enhance the ability to respond quickly and effectively. This will require targeted and balanced fundamental research, as well as applied research for technology development to acquire capabilities to respond to disasters such as Dam Burst.

Communication and Networking: Information and monitoring tools for agencies during preparedness, alert or warning, activation of plan, damage assessment and relief and recovery stages are crucial for effective DM. The tools are evolved keeping in view the requirements of an effective administrative response, efficiency in decision making, evaluation and assessment of on-going disaster stages and requirements of future preparedness. These tools are also expected to help administration in identification and reaching out to the most vulnerable and devastated groups.

Emergency communication network- establishment of control rooms at the district and state level and inclusion of private practitioners in the network. The flow of information calls for accountability and the source provides the authenticity. The Information and Monitoring Tools are given in a different document.

Chapter IX Institutional Arrangements and Roles and Responsibilities

9.1 Institutional Arrangement at the Centre

In accordance with the provisions of the DM Act 2005, the central government will take all such measures, as it deems necessary or expedient, for the purpose of DM and will coordinate actions of all agencies. It will ensure that central ministries and departments integrate measures for the prevention and mitigation of disasters into their developmental plans and projects, make appropriate allocation of funds for pre-disaster requirements and take necessary measures for preparedness to effectively respond to any disaster situation or disaster.

♦ National Disaster Management Authority

The Disaster Management (DM) Act 2005 lays down institutional, legal, financial and coordination mechanisms at the national, state, district and local levels. The new institutional framework is aimed at ensuring operationalisation of the national desire for a paradigm shift in DM from a post event and relief-centric syndrome to a regime that lays greater emphasis on preparedness, prevention and mitigation, leading to a more prompt and effective response to disasters.

NDMA concentrates on prevention, preparedness, mitigation, rehabilitation, reconstruction and recovery and also formulate appropriate policies and guidelines for effective and synergised national disaster response and relief. It will also coordinate the enforcement and implementation of policies and plans.

♦ National Executive Committee

The National Executive Committee (NEC) comprises the secretary to the GoI in the ministry or department having administrative control of the subject of DM, as the chairperson and the secretaries to the GoI in the ministries/departments of Agriculture, Atomic Energy, Defence, Drinking Water Supply, Environment and

Forests, Finance (Expenditure), Health, Power, Rural Development, Science and Technology, Space, Communications, Urban Development, Water Resources and the Chief of the Integrated Defence Staff to Chairman of the Chiefs of Staff Committee as members.

It is the executive committee of the NDMA, and is statutorily mandated to assist the Authority in the discharge of its functions and ensure compliance of the directions issued by the central government, apart from preparing the National Plan and securing its approval by the NDMA and performing such other functions as required by the NDMA. Based on the policy and guidelines, the NEC will be responsible for preparing the national plan, getting it approved by the NDMA and then operationalising it. The NEC will also require any department or agency of the government to make available such men or material resources for the purposes of handling threatening disasters, emergency response, rescue and relief, as required by the NDMA. It will coordinate the response in the event of any threatening disaster situation or disaster. It will also perform such other functions as the NDMA may require it to perform.

◆ **National Disaster Response Force**

For the purpose of specialised response to a threatening disaster situation or disasters both natural and man-made, the DM Act, 2005 has mandated the creation of a National Disaster Response Force (NDRF). The general superintendence, direction and control of this force shall be vested in and exercised by the NDMA and the command and supervision of the NDRF shall vest in an officer to be appointed by the central government as the Director General of the NDRF.

◆ **National Institute of Disaster Management**

The National Institute of Disaster Management (NIDM), which functions within the framework of the broad policy and guidelines laid down by the NDMA, has

capacity development as one of its major responsibilities, along with training, research, documentation and the development of a national level information base. It networks with other knowledge-based institutions and assist in imparting training to trainers, DM officials, etc. It is also be responsible for synthesizing research activities and will be geared towards emerging as a 'centre of excellence' at the national and international levels.

9.2 Institutional Arrangement at the State-level

State Guidelines on Disaster Management Road Map

- Setting up a State Disaster Management Authority (Has already been established)
- Establishments of department of Disaster Management
- State/District/Block/village Disaster Management plans
- Setting up of Emergency Operations Centre at the State (Has already been established)
- Having Specialised Search & Rescue teams---each team consisting of one coy of State Armed Police and Civil Defence trained in Rescue & Relief operations, one mobile engineering unit with necessary equipment, one Medical assistance team, to function as a single unit under a designated officer
- Control rooms in State and Districts to coordinate both law& order as well as disaster management
- Annual Plans, Five-year plans to specifically address disaster mitigation concerns and such plans to be given priority.
- Funds available for ongoing schemes to be used for mitigation preparedness.
- State on-line inventory of resources, both private & public to be made available for easy mobilization of resources in time of emergencies.
- Development of early warning systems

- GIS based database for Disaster Management
- Both in service training as well as initial training Curriculum to include Capsules on disaster management.
- Disaster management in school curriculum, engineering courses, certification for practicing engineers, builders, architects
- Hospital Preparedness and Emergency Health Management in Medical Education
- Strengthening of Civil Defence

Keeping in view the above guidelines, the Govt. of UP has initiated major steps towards disaster preparedness.

Uttar Pradesh Disaster Management Authority (UPDMA)

The Authority set up under the UP Disaster Management Act, 2005, is headed by the Chief Minister as its Chair person and has a 14 member Governing Body, The Authority clearly allocates responsibilities among various stakeholders and is primarily responsible for the following:

- Promoting an integrated and coordinated system of disaster management and acts as a central planning, coordinating & monitoring body for disaster management and post disaster reconstruction, rehabilitation, evaluation and assessment as well as promoting general awareness /education.
- Evolving a total Disaster Management Support System by making use of Satellite Remote Sensing and imagery data, GIS. The UP Remote Sensing Agency, Lucknow has been designated as the special Advisor to the Authority.
- Allocation of responsibilities to the various stakeholders and coordination in carrying out their responsibilities.
- Acting as repository of information concerning disasters & disaster management

- Ensuring establishment of communication links and setting up of emergency communication and early warning systems in the State
- Developing guidelines for preparation of disaster management plans at all levels -state, district, block & village level.
- Dissemination of information and awareness building among the public.
- Setting up Crisis Management Group
- Supervising state of preparedness
- Laying down guidelines for subordinate plans
- Establishing disaster management information systems
- Coordinating disaster management training

Members of the UP Disaster Management Authority

- 1 The Chief Minister of Uttar Pradesh
- 2 The Minister for Revenue Department
- 3 The Minister for Agricultural Department
- 4 The Chief Secretary, Uttar Pradesh
- 5 The Principal Secretary and Agriculture Production Commissioner
- 6 The Principal Secretary, Revenue
- 7 The Principal Secretary, Finance
- 8 The Principal Secretary, Home
- 9 The Principal Secretary, Energy
- 10 The Principal Secretary, Urban Development
- 11 The Principal Secretary, Health
- 12 The Principal Secretary, Irrigation
- 13 The Director General of Police
- 14 The Relief Commissioner

Special Invitees

- 1 The Principal Secretary, Agriculture
- 2 The Principal Secretary, Panchayati Raj

- 3 The Principal Secretary, Forest
- 4 The Principal Secretary, Environment
- 5 The Principal Secretary, Science and Technology
- 5 The Director Remote Sensing Application Centre, Uttar Pradesh

Major Initiatives by Govt. of UP

- **UP Disaster Management Act, 2005, enacted**--- third State do so after Gujarat and MP. It provides legal backing to all preparatory and post disaster measures and responses & allocates major responsibilities to all the stakeholders.
- **Setting up Uttar Pradesh State Disaster Management Authority**
- **Emergency Operations Centres** has been set up at State level in Bapu Bhawan & in 13 district HQs.
- **Closed User Group Mobile Phone Network** of the Police Department has been extended to cover all Revenue Officials at the State, Commissionery, District and Tehsil level and Fire Services etc. so that there is better connectivity during relief operations.
- Natural Resources related **GIS mapping** of districts.
- **UP Academy of Administration and Management**, Lucknow, is the Nodal Institute for all Training programmes related to Disaster Management.
- **Disaster Management Module** adopted for all in-service training programmes in the State.
- **Fire Service Training Institute**, Unnao, declared as the Nodal Institute for training in specialized Search & Rescue operations.
- **Emergency Operations Centres** has been set up at State level in Bapu Bhawan & in 13 district HQs.

Emergency Operation System

The State Emergency Operation Centre (SEOC) is the hub of all disaster related activities. The primary function of the SEOC is to implement the State Disaster Management Plan which includes coordination, data collection, operation management, record keeping, public information and resource management. Emergency Operations Centres at the State (SEOC) and the District (DEOC) and Incident Command Post (ICP) at the disaster site are the designated focal points

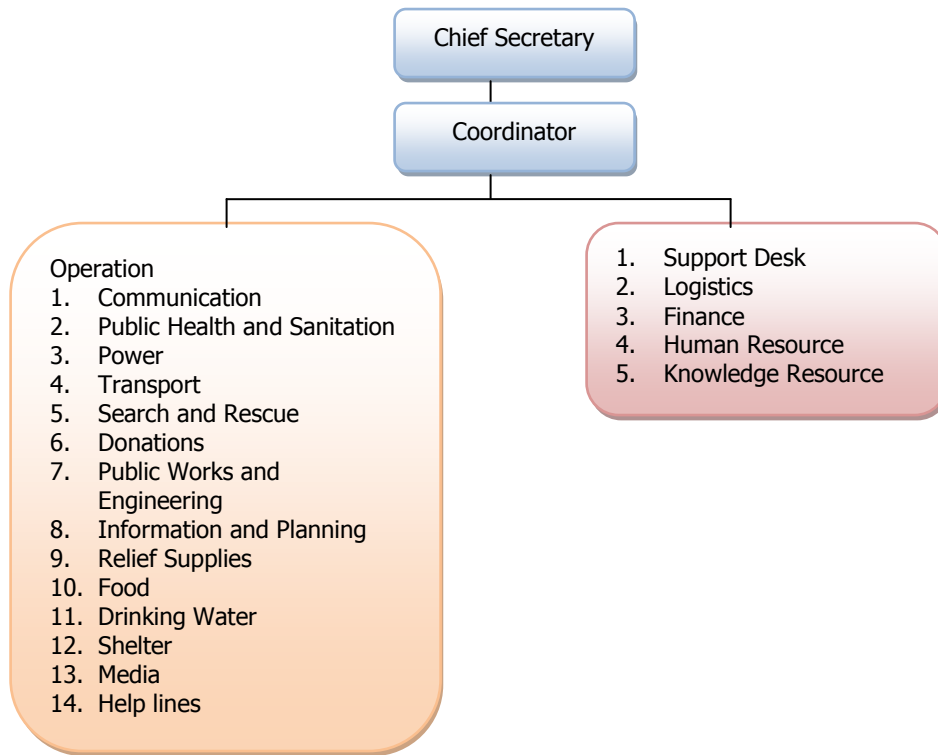

that will coordinate overall activities and the flow of relief supplies from the State.

SEOC has representatives of State Departments - Public Works, Irrigation, Energy, Home, Revenue, Health, Agriculture, Industries, Animal Husbandry and Science & Technology form SEOC. During non-disaster times, the SEOC works under the supervision of the Relief Commissioner. In a disaster situation, the SEOC will come under direct control of the Chief Secretary or the person designated by him as the Chief of Operations. He is the primary role player in the EOC, and is responsible for the overall coordination and decision-making. He will also report the status of the SEOC operations and the disaster situation to the Chief Secretary.

The layout of the SEOC is given below.

- ◆ Activation of the SEOC should immediately follow the declaration of a State Level Emergency.
- ◆ The individuals staffing the SEOC are responsible for establishing communications with their respective departments through radio, landline and telephone, mobile network and wireless.
- ◆ The SEOC Chief or designee will determine what staff he/she deems necessary to effectively operate the SEOC apart from the prescribed staff.
- ◆ The designated officers of the Police will provide security at the SEOC.
- ◆ It is recommended that an alternate SEOC must also be established. It is suggested to setup the backup SEOC within the secretariat building, as most of the departmental heads sits there.

Structure of the Emergency Operation System

Emergency Support Functions

This would help in proper coordination among different agencies involved in DM:

S. No	Function	Responsibility
1	Communications	<ul style="list-style-type: none"> Will ensure the provision of state wide telecommunication, support to the state, and district in response efforts
2	Public health and sanitation	<ul style="list-style-type: none"> Provide coordinated assistance to supplement state and local resources in response to public health and medical care needs following significance natural or man made disaster. Resources will be furnished when the state and district resource are overwhelmed and medical and public health assistance is requested from the State government.
3	Power	<ul style="list-style-type: none"> Power To facilitate restoration of energy systems after a natural disaster
4	Transport	<ul style="list-style-type: none"> Provide coordination of state transport support and local government. Coordinate the use of transportation resources to support the need of emergency support forces requiring transportation capacity to perform their emergency response, recovery and assistance missions. It will works with outside agencies for transportation, coordination and preparedness resource request for assistance when needed.

5	Search and Rescue	<ul style="list-style-type: none"> • Provide specialized life saving assistance to state and local authorities. In the event of a major disaster or emergency. Its operational activities include locating, extricating and providing on site medical treatment to victims trapped in collapsed structures.
6	Donations	<ul style="list-style-type: none"> • Donation management is necessary to control the flow of goods and services into a disaster area. If trucks, trains, and planes are allowed into the disaster area to draw their donations, they can easily interfere with other ongoing disaster response operation. Uncontrolled donations can also put undue burden on disaster response operations, as they required scarce response resources. Above all it is necessary to manage the flow of donated goods to be sure that the needs of disaster victims are being met as effectively as possible. • Expedite delivery of voluntary goods and services to support relief effort in a coordinated manner
7	Public works and Engineering	<ul style="list-style-type: none"> • Provides technical advice and evaluation engineering services, contracting for construction management and inspection, contracting for emergency repair of water, and waste water treatment facilities, potable water, emergency power, real state support to assist the states in meeting the goals related to life sustaining actions, damage mitigation and recovery activities following a major disaster. Provide PW and engineering support to assist need related to life saving or protecting prior to, during and immediately following an event. Perform immediate damage assessment of the infrastructure
8	Information and Planning	<ul style="list-style-type: none"> • To collect, process and disseminate information about an actual or potential situation. To facilitate the overall activities of all responders in providing assistance to an effected area. Should maintain a database of all related disaster related information inform of GIS that will allow easy access and retrieval of information during a disaster.
9	Relief Supplies	<ul style="list-style-type: none"> • Coordinate activities involved with emergency provisions of temporary shelters, emergency mass feeding, and bulk distribution of coordinated relief supplies for victims of disasters. In some instances services may also be provided to disaster workers and logistical and resource support to local entities involved in delivering emergency and recovery efforts, shelter, food and emergency first aid following a disaster. • Operate disaster welfare information, to collect receive and report the status of victims and assist family reunification; and coordinate bulk distribution of emergency relief supplies.
10	Food	<ul style="list-style-type: none"> • To identify the basic needs of food in the aftermath of a disaster or emergency. To obtain appropriate supplies and transporting such supplies to the disasters area and identify secure, and arrange to transport food assistance to the affected areas and authorize food stamp assistance following a major disaster or emergency requiring state response
11	Drinking water	<ul style="list-style-type: none"> • To provide a minimum quantity of clean drinking water and to reduce the spread of diseases through water during disaster times and to allow to people to perform daily task.
12	Shelter	<ul style="list-style-type: none"> • To meet the physical needs of individuals, families and communities for safe. Secure and comfortable living space. To

		meet primary social needs incorporating self-management in the process.
13	Media	<ul style="list-style-type: none"> To provide and collect reliable information on the status of disaster and disaster victims for effective coordination of relief work at state level.
14	Help lines	<ul style="list-style-type: none"> To collect, process and disseminate information about the welfare of citizens of the affected area and managing the tremendous flow of information. The speed with which information is received with which it changes requires that assistance be developed to ensure accuracy as well as easy and appropriate access. The help lines will be responsible for providing, directing, and coordinating, logistical resource operations.

- *During non-disaster times the ESF will operate in preparedness mode for their respective departments.*
- *Each ESF is headed by a primary agency, which has been selected based on its authority, resources and capabilities to support the functional area.*
- *Each ESF is headed by a lead department for coordinating the delivery of goods and services to the disaster area, and it's supported by various departments and agencies.*

Role of SEOC

During non-disaster times	During Disaster times
<p>SEOC stays operational through-out the year in preparedness mode, in order to take care of the following:</p> <ul style="list-style-type: none"> Ensure that all districts prepare and regularly update the District Disaster Management Plans. Encourage districts to prepare area-specific plans for areas prone to specific disasters. Monitor training imparted to state level officials, private sector and NGOs. Keep record of the State and district disaster management plans. Disseminate information about the State DMP to other departments. Ensure that the warning and communication systems and instruments in the SEOC are in working conditions round the clock. Keep and update state level disaster resource inventory Establish functional facility of Toll free emergency numbers Report on Status of preparedness/vulnerability 	<p>The aim of the SEOC will be to provide centralized direction and control of all the following functions</p> <ul style="list-style-type: none"> Emergency operations Communications and warning, which includes handling of 24 hrs emergency toll free numbers. Handle requests for emergency personnel, equipment, state level disaster resource database and other resources Requesting additional resources during the disaster phase from neighbouring districts of the affected Area Coordinating overseas support and aid Issuing emergency information and instructions specific to departments, consolidation, analysis, and dissemination of Damage Assessment data and preparation of consolidated reports Maintain documentation of resource inventories, allocation and availability Manage finances for SEOC operations

data of the district Training, monitoring support and budget allocation if required.	
--	--

Equipment Requirements

The SEOC will need to operate round the clock, and may itself be subjected to adverse conditions due to the impact of disaster. It needs to be equipped with the following hardware and software for its efficient functioning:

- Resource inventories and databank of maps and plans at block, district and state level on a GIS platform for quick retrieval and analysis.
- Rescue equipments such as boats, life jackets, stretchers, ropes, etc
- State-of-art communication equipment for staying linked with the Chief Secretary’s office, headquarters of line departments, district collectors, field teams, media, and national and international support agencies.
- A mobile command vehicle with communication equipment.
- Workstations and communication lines for all representatives of the line ministries.
- Radios and television sets tuned to different news channels and coverage.
- Video conferencing facility.
- Projection equipment and screens.

Incident Command System

The SEOC will therefore need to field its own field teams and through them establish an Incident Command System. The system will comprise:

- Field command
- Field information collection
- Inter agency coordination at field level
- Management of field operations, planning, logistics, finance and administration

Rapid Assessment Teams and Quick Response Teams will be fielded by the SEC through the SEOC as part of the Incident Command System.

Once the Sub-Divisional officer/SDM deems a disaster to be beyond the management capacity of local authorities, the District Disaster Management Authority (DDMA) will declare it as a District Level Disaster and activate the DEOC. Once the DDMA deems a disaster magnitude to be beyond its management capability, it will forward the report to the SEOC for deliberation at the SDMA and subsequent appropriate State intervention. On verification of the magnitude of the disaster, and the scale of response required, the State Emergency Operations Centre will get activated and after declaring a State Disaster, will take control.

Step 1: The State EOC is activated on orders from the SDMA. On receipt of a disaster warning, the Chief Minister, after verification that the situation merits declaration of a State Disaster, will convene a meeting of the Crisis Management Group and based on the ratification of the CMG, the Chief Minister, will declare a State Disaster.

Step 2: SEOC is upgraded to emergency mode. The SEOC, till then operating in the preparedness mode, will be upgraded to the emergency mode. Concerned line departments will be informed to post their representatives at the SEOC on a round the clock basis with immediate effect. SEOC will be activated and all community preparedness measures will be put into operation and the ESF to be on full alert and activate their SOPs. The activation of the SEOC should be followed after the DDMA declares a major disaster.

Step 3: Field Assessment Reports. The Chief Secretary/Relief Commissioner will assume the role of the Chief of Operations for Disaster Management. The Chief of Operations of the EOC will coordinate for setting up the ESFs and are asked to

prepare and send the Field Assessment Report to the SEOC. The Chief of Operations of the SEOC will spell out the priorities coordinate services of the ESFs, including national and aid agencies.

Quick response teams of specialized personnel will have to be sent for effective management of disaster. Depending on the magnitude of the disaster, two different types of teams will be fielded by the SEOC: (i) Rapid Assessment Teams; (ii) Quick Response Teams

Rapid Assessment Teams

The Rapid Assessment Teams will be multi-disciplinary teams comprising four or five members. They will mainly comprise senior level specialized officers from the field of health, engineering, agriculture, animal husbandry, search and rescue, communication and one who have knowledge of disaster affected area, physical characteristic of the region, language etc. These officials should share a common interest and commitment. There should be a clear allocation of responsibilities among team members. To make a first / preliminary assessment of damage, the assessment report will contain the following basic elements or activities:

- Human and material damage
- Resource availability and local response capacity
- Options for relief assistance and recovery
- Needs for national / international assistance

Quick Response Teams / Rapid Response Teams

Deployment of search and rescue teams can help in reducing the number of casualties. A quick response to urgent needs would never be delayed for the reason that a comprehensive assessment has yet to be completed. The following teams would be sent to the disaster site or disaster affected area as early as possible, even prior to First Information Report.

- First Aid Team

- Search and Rescue team
- Communication Teams
- Power Team
- Relief Teams
- Rehabilitation teams
- Transport Team

All other focal departments will keep ready their response teams, which may be deployed after receiving the first information report.

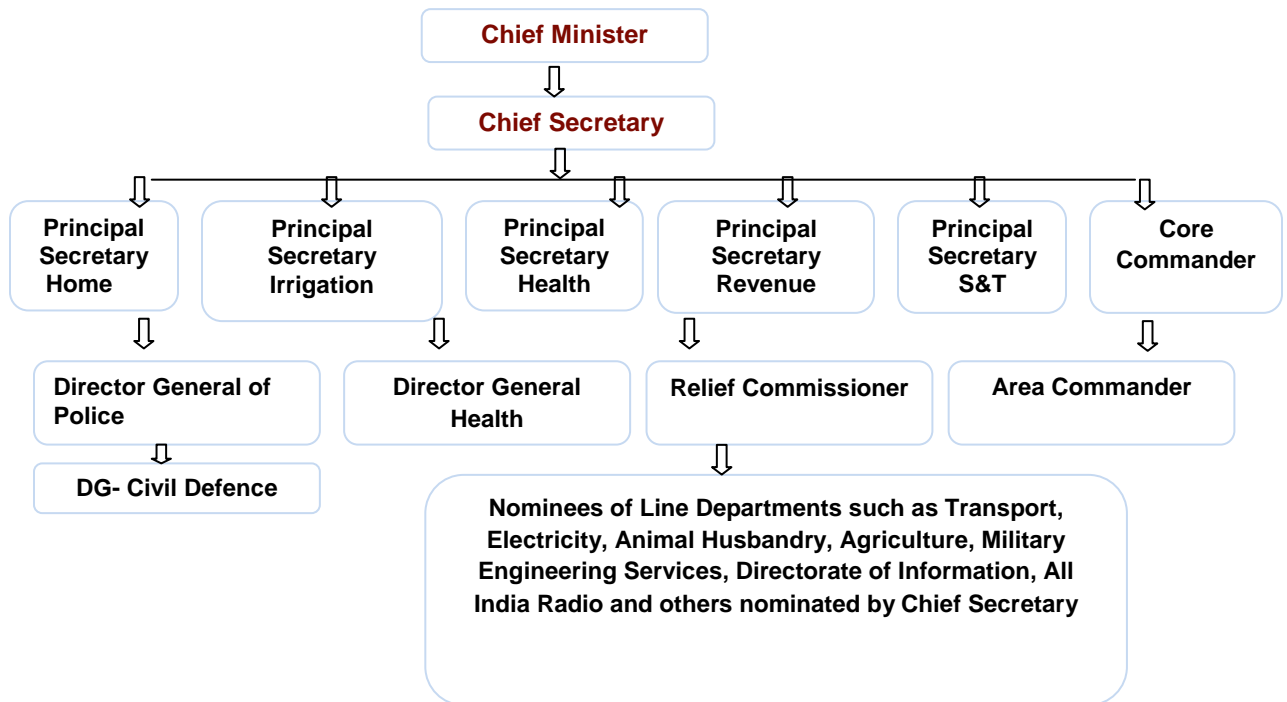

Crisis Management Group

Suggested framework for Crisis Management Group at State:

- (1) Chief Secretary, Uttar Pradesh: Chairperson
- (2) Principal Secretary, Home
- (3) Principal Secretary, Revenue: Coordinator (Dam Burst)
- (4) Principal Secretary, Medical, Health and Family Welfare
- (5) Director General Police, U.P: Member
- (6) Additional Director General Police (Information): Member
- (7) Joint Director (I.P) Lucknow: Member
- (8) Relief Commissioner: Member
- (9) Principal Secretary, Department of Science and Technology
- (10) Any alternative officer can also be nominated as a member of the Group by a member in case of his/her absence

Crisis Management Group would have a representative from Army.

Structure of Crisis Management Group at State Level

Crisis Management Group at State Level: Functions

- This group has to remain informed of all developments in case of any dam burst.
- The group has to send alerts to all districts and related persons of any activities/developments that have any impacts on the security or on normal functioning in any way.
- The group also has to provide advice and guidelines to other adjoining areas to avoid any negative impacts on them.
- This group has to co-ordinate with the central and other state governments. The group can ask for required assistance by coordinating with Central Water Commission, Central Para military forces, other Police forces, Army and Security agencies.
- The Group has to report to the Crisis Management Group at Centre informing about its progress and developments.

Crisis Management Group at District Level: Composition

- (1) District Magistrate: Chairperson
- (2) Senior Superintendent/Superintendent of Police
- (3) Local Area Commander of Army
- (4) Superintending / Executive Engineer of Irrigation Department in-charge of Dams
- (5) Chief medical Officer
- (6) Representatives of PRI Local Bodies
- (7) Additional District Magistrate (Finance & Revenue): Co-ordinator
- (8) Any other member can be co-opted to the Group depending upon the nature of the disaster

Crisis Management Group at District Level: Functions

- District Crisis Management Group is responsible for managing the situation in case of any Emergency/Crisis.
- The group will arrange for required assistance from all concerned agencies in case of any emergency.
- If some specialist team has been engaged for assistance by District/State Crisis Management Group, then the group has to consider the advice of the team. But the final decision rests with the District/State Crisis Management Group.

Crisis Management Group at Departments

Each Department would have a Crisis Management Group headed by the Secretary of the Department for managing emergencies relevant to the subject dealt with by the department, and report to the State Crisis Management Group. To meet the emergencies out of dam bursts, the Crisis Management Group will be established in the department of Irrigation comprising of Secretary (Chairman), Chief Engineer, Head of the Dam Safety Cell and other members nominated by the Secretary, Irrigation.

District Disaster Management Authority

At the cutting edge level, the District Disaster Management Authority (DDMA) headed by the District Magistrate, with the elected representative of the local authority as the co-chairperson, acts as the planning, coordinating and implementing body for DM and take all necessary measures for the purposes of DM in the district in accordance with the guidelines laid down by the NDMA and SDMA. It is responsible for preparing the district DM plan including the response plan for the district, coordinate and monitor the implementation of the national policy, the state policy, the national plan, the state plan and the district plan and ensure that the guidelines for prevention, mitigation, preparedness and response measures laid down by the NDMA and the SDMA are followed by all departments of the government at the district level and the local authorities in the district.

Local Authorities

These include Panchayati Raj Institutions (PRIs) and Urban Local Bodies (ULBs), such as municipal corporations, municipalities, district and cantonment boards and town planning authorities for control and management of civic services. PRIs and ULBs will ensure capacity building of their officers and employees in DM, carry out relief, rehabilitation and reconstruction activities in the affected areas and will prepare DM plans in consonance with the guidelines of the NDMA, SDMAs and DDMA.

Chapter X

Partnerships with other Stakeholders

Role of Community

While all the stakeholders do have some role or the other to play in all the four stages, the role of the community is most pronounced in all the stages. Particularly, the communities have to meet the challenges on their own during and immediately after a disaster. The community during a disaster has a shared responsibility of providing physical and psychological support to each individual, particularly to the vulnerable sections.

NGOs

They will be involved for community education and sensitization. They could play a role in rumour surveillance, reporting of events, implementation of non-pharma interventions, and sensitization of public through the supporting role of the media. Community-based social workers can assist in first aid, psychosocial care, distribution of food, water, and organization of community shelters under the overall supervision of elected representatives of the community.

International Cooperation

Agencies like World Health Organisation (WHO) and Red Cross play an important role in mobilizing relief work. They provide help with the following:

- Establishment of a mechanism to enhance the level of interaction between state and non-state actors, NGOs, and pharma companies
- A web-based forum for continuous interaction of experts to develop necessary strategic measures that need to be integrated with present global practices
- Stockpiling of various vaccines, antidotes and essential drugs under the guidance of global health organizations will become more cost effective by regional level planning

- Conducting joint international mock exercises, based on vulnerability assessment of different areas to enhance the level of coordination between various national and global players
- Pooling of medical logistics, trained human resource, and essential supplies

Public Private Partnership

The private sector has substantial infrastructure capabilities and can play a major role in enhancing the nation's preparedness by integrating its capacities with government organizations such as NDMA. They may also provide facilitation for:

- Collaboration with international pharma agencies and other technical laboratories for meeting the peak requirement of drugs, antidotes and vaccines during chemical disasters
- Sourcing and procurement of counter measures available with manufacturing capacities in a ready state to enable their continuous supply
- Developing a PPP system for stockpiling, distribution and cold chain system for sophisticated diagnostic kits, vaccines and antibiotics
- Private sector facilities are required to be included in district-level DM plans and collaborative strategies evolved to effectively utilize their manpower and infrastructure.

Mass Media

The role of media is vital in educating the people about disasters; warning of hazards, gathering and transmitting information about affected areas, alerting government officials, relief organisations, and the public to specific needs and facilitating discussions about disaster preparedness and response leading to greater transparency in the whole operation. A regular and effective working relationship with the media will be developed. Regular, routine interaction, before a disaster is important for effective working relationships in the aftermath

of a disaster. Media and the disaster mitigation organisations will be encouraged to take advantage of opportunities to work together, to provide relevant training for reporters and field personnel to enhance disaster preparedness, mitigation and relief efforts and the timeliness, quality, and accuracy of reporting about natural hazards.

Chapter XI

Financial Arrangements

Financial Resources for Implementation

Expenditure on relief, rescue and rehabilitation far exceeds the expenditure on prevention and management. This should therefore, be the underlying principle for allocation of adequate funds at industry and government level for prevention, mitigation and preparedness rather than concentrating on their management at the time of a disaster. The basic principle of return on investment may not be applicable in the immediate context but the long-term impact would be highly beneficial. Thus, financial strategies should be worked out such that necessary finances are in place and flow of funds is organised on a priority basis by the identification of necessary functions, both in the phases of preparedness and response, relief and rehabilitation respectively.

Finance Commissions

After Independence, the history of funding relief expenditure is intertwined with the awards of the Finance Commissions. These Commissions were appointed under Article 280 of the Constitution of India every five years. They were mandated, amongst others things, to assess the funding needs (non developmental) of the States, and to figure out grants to the States. The Finance Commissions make recommendations on the mechanisms by which the Central Government can assist States in funding expenditure on relief. Earlier, the Commission was restricted to suggesting the pattern of financial assistance by the Centre. Now, the recommendations even cover the "scheme of financing relief expenditure".

It was recognized that the primary responsibility of handling disasters vested with the States. The Central Government however, was expected to provide financial support. The First Finance Commission (1952) provided for Central assistance equivalent to 50% of the requirements for relief works. This was in

the form of loans and a grant (not exceeding \$ 0.45 million annually per State) for gratuitous relief to destitute. Further assistance could be provided to States to handle severe natural calamities through advances.

The Fourth Finance Commission introduced the system of Central Team visits to affected States. It was necessary where the Relief Expenditure on a calamity was expected to exceed \$ 200000. Emphasis was usually placed on funding relief expenditure, as far as possible, within the Plan allocations. The Central Government was expected to fund only half of the expected expenditure. Since most States in India were under fiscal stress, a need was realized to make available recurring funds to States to fund immediate relief effort in routine calamities. This was popularly known as "margin money". Each State was sanctioned a certain amount based on its past expenditure on relief. Any amounts in excess of this margin money, after severe calamities were to be assessed by Central Teams. Additional Central assistance was envisaged only, where relief requirements of a severe calamity could not be met from state resources.

The Ninth Finance Commission (1991) through the Calamity Relief Fund (CRF) extended the concept of "margin money". The CRF provided for contributions of the Central and State Governments in the ratio of 3:1. The Fund was to be kept outside the Government Account. This was to avoid cash flow difficulties in initiating relief operations. The contributions of the Central and State Governments credited twice a year. The Chief Secretary of the state operates this fund with a committee. The CRF concept was only different from margin money in that it prescribed a larger contribution by the Central Government.

The fundamental shift was in the introduction of the 'normative approach' to relief expenditure. This approach entailed expenditure from CRF on predetermined items, at predetermined rates. This system is there, despite procedural changes suggested by later Finance Commissions. For calamities of a

severe nature, where the relief expenditure could not be funded from the CRF, the Eleventh Finance Commission in 2001, constituted a National Calamity Contingency Fund (NCCF).

Although the primary responsibility of DM is of the State Governments, the Central Government plays a key role in providing financial and logistic assistance to the states in tackling both natural and man-made disasters. The administration of Biological attacks would be responsibility of Ministry of Health and Family Welfare.

Sources of Finances

Financing of will be explored from the following sources:

- From budgetary provisions for recovery plans and programmes in normal developmental activities; at State, District and village level
- Calamity Relief Fund
- National Calamity Contingency Fund
- Prime Minister's Relief Fund
- Chief Minister's Relief Fund
- Special programmes of Govt. of India
- Loans and assistance from national and international funding agencies

Immediate Financial Resources

At present the required amount for training and capacity building of the field staff and medical professionals may be allocated from the Calamity Relief Fund. However in future the National Disaster Mitigation Fund proposed by Government of India can be explored to meet the cost of maintaining inventory, establishment of labs, provision of equipments, capacity building of staff, and awareness and education.

General Action Plan for Preparedness

Actions to be taken by the various agencies during normal times are listed here.

Department of Science and Technology

- Preparation of GIS map of the entire state clearly stating location of the dams, its catchment and command areas, villages and districts under the risk, population, important structures (such as schools, official buildings etc), evacuation routes, cropping pattern, cropped areas etc.
- Organise training programmes for the concerned departments, DDMA and Crisis Management Groups for handling and understating of GIS mapping.
- Ensure all required equipments and systems are in place and operational.
- Organise disaster management trainings for staff of the public health department.

Department of Irrigation

- Strengthen the Dam Safety Cell by filling up vacancies and providing all the necessary equipment and support system to the the Cell.
- Conduct mandatory pre and post monsoon check ups of the dams.
- Develop disaster management plan for the department
- Prepare disaster management plan for each dam in the state.
- Ensure that the designs of all the new structures/dams are safe and disaster resistant.
- Carryout safety audit of all structures in the State and identify weak structures.
- Undertake structural retrofitting of weak structures.
- Organise disaster management trainings for staff.

Department of Health & Family Welfare

- Plan and implement mass health awareness programmes.
- Develop Disaster Management Plan for the Department of Health & Family Welfare.
- Develop Disaster Management Plan for each hospital in the State.
- Organise disaster management trainings for staff of the public health department.
- Organise disaster management trainings for hospital staff.
- Ensure that all new health facility structures are designed and constructed disaster-safe.
- Carryout safety audit of all health facilities in the State and identify weak structures.
- Undertake structural retrofitting of weak structures.

Department of Animal Husbandry

- Develop Disaster Management Plan for the Department of Animal Husbandry
- Develop Disaster Management Plan for each Veterinary Hospital in the State
- Organise disaster management trainings for staff of the Department of Animal Husbandry.
- Organise disaster management trainings for relevant staff.
- Identify the need and procure necessary equipment for ensuring safety of health facility structures from disasters.

Department of Home

- Develop Disaster Management Plan for the Department of Home.
- Organise disaster management training for the staff.
- Maintain a list of disaster prone areas

- Designate an area, within police station to be used as public information centre

Uttar Pradesh Fire Service

- Develop Disaster Management Plan for the Uttar Pradesh Fire Service.
- Organise disaster management training for the staff.
- Ensure that all new structures under the department are designed and constructed disaster-safe.
- Carryout safety audit of all existing structures under the department in the State and identify weak structures.
- Undertake structural retrofitting of weak structures.
- Identify the need and procure necessary equipment for fire fighting, and rescue.
- Maintain a list of disaster prone areas.

Energy Department

- Develop Disaster Management Plan for the Department.
- Organise disaster management training for the staff.
- Establish at each sub-station a disaster management tool kit comprising cable cutters, pulley blocks, jungle knives, axes, crowbars, ropes, hacksaws and spanners. Tents for crews should also be in storage.
- Designate an area, within the sub-station to be used as public information centre.

Rural Engineering Services (RES) and Public Works Department

- Train officials on disaster safe construction.
- Ensure that all new structures are designed and constructed disaster-safe.
- Carryout safety audit of all health facilities in the State and identify weak structures.
- Undertake structural retrofitting of weak structures.

- Identify or create damage proof rooms and buildings that can be used as evacuation.
- shelter during an emergency.
- Develop Disaster Management Plan for the Department.
- Organise disaster management training for the staff.
- Plan and procure necessary equipment for use in disaster management.

Department of Urban Development

- Develop Disaster Management Plan for the Department.
- Organise disaster management training for the staff.
- Ensure that all new structures under the department are designed and constructed disaster-safe.
- Review layout of cities and towns and make necessary changes to facilitate disaster management.
- In developing new settlements, give adequate considerations to disaster management.
- Organise training to staff for including disaster management in all developmental activities.
- Plan and procure necessary equipment for use in disaster management.
- Designate an area, within the office premises to be used as public information centre.

Jal Nigam

- Develop Disaster Management Plan for the Department.
- Organise disaster management training for the staff.
- Ensure that all the water supply systems are disaster resistant.
- Ensure all overhead tanks and other high rise structures are safe and disaster resistant.
- Procure all necessary equipments to be used in case of disaster

NGOs

- IEC activities on disaster management
- Community mobilization
- Ensure regular meetings of NGO coordination cell
- Disseminate all government aided programmes to the community
- Ensure regular mock drill
- Ensure regular bleaching / use of disinfectants in the drinking water sources
- Organise workshops / seminars / meetings / trainings on community based disaster management
- Long term mitigation strategies

General Action Plan for Response

Actions to be taken by the various agencies on receipt of warning about an emergency situation are listed here.

Department of Science and Technology

- Appoint one officer as "NODAL OFFICER - Police" at the State Level
- Map the affected areas with the help of GIS
- Establish communications with the Department of Irrigation, Home, Revenue and Crisis Management Group.
- Provide information to the Emergency Cell and Crisis Management groups.
- Issue warning to the areas which may be affected in due course

Department of Irrigation

- Appoint one officer as "NODAL OFFICER - Police" at the State Level
- Appoint one officer as "Officer-in-Charge - Dams" at the District Level
- Instruct district level officials to report to District Collector.
- Send the technical teams to the emergency site for assessment.

Department of Home

- Enhance surveillance and intelligence measures to ascertain the cause of mass destruction.
- Cooperate with army and other para military forces in enforcing the required precautionary measures.
- Instruct district police force to maintain law and order and prevent rumour mongers.
- Establish radio communications (and assist in precautionary evacuation activities) with
 - Emergency Operations Centre
 - Divisional Commissioner / Collector
 - District control room and
 - Departmental offices within the division.
- All district level officials of the department would be asked to report to the Collector/SP
- Appoint one officer as "NODAL OFFICER - Police" at the State Level
- Appoint one officer as "Officer-in-Charge - Police" at the District Level
- Review and update precautionary measures and procedures and, review with staff the precautions that have been taken to protect equipment and the post-disaster procedures to be followed.
- Provide guards, as needed for supply depots such as cooperative food stores and distribution centres.
- Provide convoys for relief materials.
- Identify anti-social elements and take necessary precautionary measures for confidence building.

Department of Health & Family Welfare

- Appoint one person as "NODAL OFFICER – Health Services at the State Level.

- Establish Surveillance and Early Warning Systems at the Epidemic Cell of the State.
- All district level officials of the department would be asked to report to the District Collector.
- Coordinate with the Incident Commander (Chief Secretary) with respect to the following:
 - Recruiting casual staff
 - Issuance of orders to ensure treatment by the private hospitals
 - Procuring locally required emergency tools, equipment and materials
 - Expending funds for emergency needs
- Review and update precautionary measures and procedures, and review with district staff, the precautions that have been taken to protect equipment and the post-disaster procedures to be followed.
- Stock emergency medical equipments, which may be required after a disaster.
- Determine type of injuries illnesses expected and drugs and other medical items required, and accordingly ensure that extra supplies of medical items can be obtained quickly.
- Provide information to all district hospitals about the disasters, likely damages and effects, and information about ways to protect equipment and property.
- Keep mobile medical units in preparedness.
- Check stocks of equipments and drugs, which are likely to be most needed after the disaster. These can be categorized generally as:
 - Drugs used in treatment of cuts and fractures, such as tetanus toxoid, analgesics and antibiotics
 - Drugs used for the treatment of diarrhoea, water-borne diseases and flu (including oral rehydrating supplies)
 - Drugs required to treat burns and fight infections
 - Drugs needed for detoxication including breathing equipments.

- Assess the level of medical supplies in stock, including:
 - o Fissure materials
 - o Surgical dressings
 - o Splints
 - o Plaster rolls
 - o Disposable needles and syringes
 - o Local antiseptics.
- Ensure immediate despatch of supplies likely to be needed to hospitals on an emergency priority basis.
- Ensure provision of appropriate number of hospitals for receiving large number of casualties in the affected areas.
- Develop emergency admission procedures (with adequate record keeping)
- Orient District level staff with EMRP standards of services and procedures including tagging.
- Fill-up the vacancies and appoint appropriate number of medical and para-medical professionals to ensure their availability during emergencies.
- Coordination with National and International NGOs

Department of Animal Husbandry

- Establish communications with Veterinary aid Centres and Hospitals (including private practitioners) within the state.
- Appoint one officer as "Nodal Officer - Veterinary Services" at the State Level
- Review and update precautionary measures and procedures and review with district level officers the precautions that have been taken to protect equipments and the post-disaster procedures to be followed.
- Stock emergency medical equipments, which may be required after a disaster.
- Determine what injuries illnesses may be expected, and what drugs and other medical items will be required, in addition to requirements of setting

- up cattle camps, and accordingly ensure that extra supplies of medical items and materials can be obtained quickly.
- Provide information to veterinary hospitals and centres about the disasters, likely damages and effects, and information about ways to protect life, equipment and property.
 - Identify and prepare the hospitals for receiving large number of livestock in each district
 - Organise capacity building programmes for the veterinary staff in each district with respect to the disaster management.

Uttar Pradesh Fire Service

- Appoint one officer as "NODAL OFFICER – Fire Service" at the State Level
- Review and update precautionary measures and procedures and, review with staff the precautions that have been taken to protect equipment and the post-disaster procedures to be followed.
- Ensure required number of vehicles and fire fighting equipment are there in each district.
- Fill the vacant post to ensure adequate number of trained professionals at the time of disaster.
- Ensure fire engines are in good running condition.
- Organise capacity building programmes for the district level officials and staff with regard to response in disaster situations.

Energy Department

- Appoint one officer as "NODAL OFFICER - Power Supply" at the State Level.
- Ensure all arrangements for power during emergencies.
- Assist the authorities to make arrangements for stand by generators in the following public service offices from the time of receipt of alert warning:

- o Hospitals and Laboratories
- o Water Supply and Drainage Board
- o District Court Premises
- o Police Stations
- o Telecommunications buildings
- o Meteorological stations
- Inspect and ensure proper working of :
 - o High tension lines towers
 - o Substations
 - o Transformers
 - o Insulators
 - o Poles and
 - o Other equipment.

Rural Engineering Services (RES)

- Appoint one officer as "NODAL OFFICER-RES" at the State Level.
- Develop quick recovery plans for the reconstruction and repair of roads if required after an emergency.
- Heavy equipments, such as front-end loaders, should be moved from areas likely to be damaged and secured in a safe place.
- Identify sites for dumping debris cleared from disaster sites in each district.
- Inspect all roads, road bridges including underwater inspection of foundations and piers. A full check should be made on all concrete and steelworks.
- Inspect all buildings and structures of the state government (including PHC) by a senior engineer and identify structures, which are endangered by the impending disaster.
- Emergency tool kits should be assembled for each division, and should include:

- o Crosscut saws
- o Axes
- o Power chain saw with extra fuel, oil
- o Sharpening files
- o Chains and tightening wrenches
- o Pulley block with chain and rope.
- The designation of routes strategic to evacuation and relief should be identified and marked, in close coordination with police and district control room. Establish a priority listing of roads, which will be opened first. Among the most important are the roads to hospitals and main trunk routes.
- Organise capacity building programmes for the key staff and engineers likely to be placed in service in the event of disaster.

Public Works Department

- Appoint one officer as "NODAL OFFICER-PWD" at the State Level.
- Appoint one officer as "NODAL OFFICER-RES" at the State Level.
- Develop quick recovery plans for the reconstruction and repair of roads if required after an emergency.
- Heavy equipments, such as front-end loaders, should be moved from areas likely to be damaged and secured in a safe place.
- Identify sites for dumping debris cleared from disaster sites in each district.
- Inspect all roads, road bridges including underwater inspection of foundations and piers. A full check should be made on all concrete and steelworks.
- Inspect all buildings and structures of the state government (including PHC) by a senior engineer and identify structures, which are endangered by the impending disaster.

- Emergency tool kits should be assembled for each division, and should include:
 - o Crosscut saws
 - o Axes
 - o Power chain saw with extra fuel, oil
 - o Sharpening files
 - o Chains and tightening wrenches
 - o Pulley block with chain and rope.
- The designation of routes strategic to evacuation and relief should be identified and marked, in close coordination with police and district control room. Establish a priority listing of roads, which will be opened first. Among the most important are the roads to hospitals and main trunk routes.
- Organise capacity building programmes for the key staff and engineers likely to be placed in service in the event of disaster.

Department of Urban Development

- Appoint one officer as "NODAL OFFICER-UD" at the State Level.
- Identify sites for dumping debris cleared from disaster sites in advance in each district and map the same on the district map.
- Prepare list town wise list of emergency personnel required in the case of disaster to assist the authorities in maintaining cleanliness.
- Identify site and prepare list for burial of dead bodies and dead cattle.
- Check the equipment and vehicle most crucial in the time of disasters.
- Maintain stock of necessary equipment and vehicle in operation conditions.
- Identify buildings and government properties that may be used for shelter and show them on the map of the city/town to ensure easy identification.

- Organise capacity building programmes for the officials and staff of the ULBs and other personnel that may be required to respond to the disasters.

Department of Agriculture

- Appoint one officer as "NODAL OFFICER-Agriculture" at the State Level.
- Prepare a GIS map of the state showing cropping pattern in different district of the state.
- Maintain surveillance for any unusual event damaging crops in larger areas not resulting from natural events.
- Establish a disaster management cell in the department to implement the disaster management plan in the state.
- Organise capacity building programmes for the officials and staff

Department of Food and Civil Supplies

- Appoint one officer as "NODAL OFFICER-Civil Supplies" at the State Level.
- Ensure appropriate stock of food grains, kerosene and other necessary items at the state level to meet the demands in the time of disasters.
- Inspect and review wheelhouses and godown in the entire state to ensure safe storage of food items.
- Instruct district officials to maintain certain amount of food and other materials as inventory to be used in the time of disasters and check the validity of all the items stored in the warehouses and godown.
- Establish a disaster management cell in the department to implement the disaster management plan in the state.
- Prepare and share the mobilisation (transportation) plan with the State Disaster Management Authority and Department of Transport to ensure speedy transport of food and other items to the site of disaster.
- Organise capacity building programmes for the officials and staff.

Department of Transport

- Appoint one officer as "NODAL OFFICER-Transport" at the State Level.
- Establish a disaster management cell in the department to implement the disaster management plan in the state.
- Establish appropriate wireless communication system in the control room at the state headquarters to mobilise resources and communicate with the Incident Commanders at the State and district levels.
- Prepare list of vehicles, both heavy and light, and their owners to ensure availability of vehicle for transportation of casualties, injured persons, stocks, rescue teams, etc.
- Inspect all the government vehicles for its roadworthiness every year as these may be deployed immediately in the time of disaster.
- Organise capacity building programmes for the officials and staff.

Jal Nigam

- Appoint one officer as "NODAL OFFICER-Jal Nigam" at the State Level.
- Review and update precautionary measures and procedures, and review with district level officials the precautions that have been taken to protect equipment, and the post-disaster procedures to be followed.
- Stock of vehicles such as water tankers, sintex tanks, chlorination tablets, etc should be maintained at the state level to be dispatched from headquarters and stationed at safe strategic spots along routes likely to be affected.
- Instruct all the districts to check all installations for water treatment plants, water supply systems including water tanks, pumping stations, sewage treatment plants, and drains are in working conditions. Take action to rectify any damages and repairs.
- Establish a disaster management cell in the department to implement the disaster management plan in the state.
- Organise capacity building programmes for the officials and staff.

Department of Revenue

- Appoint one officer as "NODAL OFFICER-Revenue" at the State Level.
- Ensure funds for disaster preparedness, response and recovery in the state.
- Prepare district wise list of resources such as vacant state lands, government buildings, parks, etc. that can be used for temporary shelters, assemblies and camps.
- Prepare and share with the State Disaster Management Authority list of relevant physical and physical resources available with the revenue department that can be mobilised during or after disasters.
- Organise capacity building programmes for the officials and staff.

Department of Rural Development and Panchayati Raj

- Appoint one officer as "NODAL OFFICER" at the State Level.
- Instruct all the blocks and village to develop disaster management plans.
- Ensure that all the Zila Parishads have copies of the district disaster management plans.
- Build the capacity of the PRI members and officials in disaster management.
- Establish communication system with the district and state level disaster management authorities.
- Incorporate disaster mitigation plans in all the development proposals sent to the state for funding under various schemes.

Actions During Disaster

Actions to be taken by the various agencies during a disaster are listed here.

Department of Home

Evacuation

- Request support from the Army, Territorial Army and other Para-Military Forces for the rescue and evacuation operations.
- Order police force to assist the disaster management teams in evacuation.
- For appropriate security and law and order evacuation should be undertaken with assistance from community leaders.
- Immediately after the disaster, dispatch officers to systematically oversee the evacuations.
- Ensure that the police stations are functioning immediately after the disaster at all required locations, as may be requested by the district control room, and that staff are available for the variety of needs that will be presented.
- Order assistance to the PWD and RES teams in road-cleaning operations.
- Ensure traffic flow to allow relief teams to reach the disaster hit areas immediately.
- Ensure security to transit and relief camps, affected villages, hospitals and medical centres and identify areas to be cordoned off.
- Order diversions for the traffic to avoid disaster hit areas.
- Assist district authorities to take necessary action against black marketers and those found manipulating relief material.
- In conjunction with the Crisis Management Group , activate a public information centre to:
 - o Respond to personal inquiries about the safety of relatives in the affected areas.
 - o Statistics about affected communities, deaths, complaints and needs
 - o Respond to the many specific needs that will be presented
 - o Serve as a rumour control centre
 - o Reassure the public.
- Make officers available to inquire into and record deaths, as there is likely to be neither time nor personnel available, to carry out standard post-mortem procedures.

- Monitor the needs and welfare of people sheltered in relief camps.
- Coordinate with military service personnel in the area.

Department of Health & Family Welfare

Evacuation

- Ensure that the evacuations have been done as per the operating procedures.
- Ensure appropriate arrangement of medical and para-medical professionals is in place.
- Ensure that the experts are mobilised to assist the district disaster management teams.
- Coordination with the community leaders for evacuations, vaccination etc.
- Ensure that the first aid and transportation of the injured is done.

Relief

- Transport should be arranged for the transfer of seriously injured patients from villages and peripheral hospitals to general hospitals. If roads are blocked, a method should be established to request helicopter transport.
- Establish health facility and treatment centres at disaster sites. Ensure there is sufficient medical facilities including private is available to meet the demands in the disaster struck areas.
- The provision of medical services should be coordinated by the Nodal Officer with the district control rooms.
- Procedures should be clarified between
 - o Peripheral hospitals
 - o Private hospitals
 - o Blood banks
 - o General hospitals and
 - o Health services established at transit camps, relief camps and affected villages.

- Maintain check posts and surveillance at each railway junction, bus depots and all entry and exit points from the affected area, especially during the threat or existence of an epidemic.
- An injury and disease monitoring system should be developed to ensure that a full picture of health risks is maintained. Monitoring should be carried out for epidemics, water and food quality and disposal of waste in transit and relief camps, feeding centres and affected villages.
- Plan for emergency accommodations for auxiliary staff from outside the area.
- Information formats and monitoring checklists should be used for the monitoring and reporting to Emergency Operations Centre. This is in addition to existing reporting system in the department.
- Seek security arrangements from district police authorities to keep curious persons from entering hospital area and to protect staff from hostile actions.
- Establishment of a public information centre with a means of communication to assist in providing an organized source of information.
- Ensure supply of medicines, equipment and other necessary aids to the affected areas.
- Assess the number of casualties and injured in the state.

Uttar Pradesh Fire Service

Evacuation

- Ensure that the fire service department responds to the disaster situation.
- Ensure that search and rescue operations are carried out to minimise the casualties and transport the injured to the nearest hospitals as soon as possible after the disaster.

Relief

- Ensure that the fire stations are functioning immediately after the disaster at all required locations, as may be requested by the district control room, and that staff are available for the variety of needs that will be presented.

Department of Animal Husbandry

- Ensure transfer of seriously injured livestock from villages to veterinary aid centres wherever possible.
- The provision of medical services should be coordinated with District Control Room, SOCs and cattle camps.
- Establish cattle camps and additional veterinary aid centres at disaster sites and designate an Officer-in-Charge for the camp.
- Carryout culling of birds if necessitated.
- An injury and disease monitoring system should be developed, to ensure that a full picture of risks is maintained.
- Plan for emergency accommodations for veterinary staff from outside the area.
- Information to Emergency Operations Centre about the morbidity and mortality and arrangements at the disaster site.
- Establishment of a Public Information Centre with a means of communication, to assist in providing an organized source of information.

Energy Department

- Ensure uninterrupted power to all vital installations and facilities.
- Arrange personnel on an emergency basis for clearing of damaged poles and salvage of conductors and insulators.
- Order repair/reconstruction.
- Arrange temporary electricity supplies for other key public facilities, public water systems, etc.

- Arrange temporary electricity supplies for transit camps, feeding centres, relief camps and sac, district control room and on access roads to the same.
- Compile an itemised assessment of damage, from reports made by various electrical receiving centres and sub-centres.
- Plan for emergency accommodations for staff from outside the area.
- Send cables, poles, transformers and other needed equipment
- Send vehicles and any additional tools needed.
- Provide additional support as required.

Department of Science and Technology

- Conduct the assessment of the affected areas.
- Establish communication with the Crisis Management Group and Emergency Operation Centre and provide them necessary information.
- Establish Emergency Operation Centre in the Department to track down the situation and up-date the information
- Report any untoward incident to the CMG or SEOC.

Department of Irrigation

- Assess the structure damage and carry out necessary repairs and construction of embankments to prevent and minimising the effect of disaster.
- Conduct and support search and rescue operations
- Check out vulnerable other structures to ensure they are not impacted. If there is any breach do the necessary repairs to prevent further disasters.
- Initiate damage control mechanism such as closure/opening of barrage/gates
- Establish communication with Central Water Commission for technical help and support.

Rural Engineering Services (RES) and Public Works Department

- Order quick restoration of roads to their normal condition.
- Sanction repair/reconstruction works of public utilities and buildings.
- Issue two way communication link to the vital staff such as executive engineers.
- Ensure provision of sufficient number of tools and equipment such as
 - o Towing vehicles
 - o Earth moving equipments
 - o Cranes etc.
- Order installation of adequate road signs should be installed to guide and assist the drivers.
- Sanction construction of temporary roads to serve as access to temporary transit and relief camps, and medical facilities for disaster victims.
- On the request of the district control room, sanction construction of temporary structures required, for organising relief work and construction of relief camps, feeding centres, medical facilities, cattle camps and SOCs.
- Reporting of damage to the Crisis Management Group

Department of Urban Development

- Assist District Authorities in handling emergency situation.
- Supervise the location of sites of camps and ensure provision of safe places for temporary shelters, storage of relief materials, and transit camps.
- Ensure cleanliness and hygiene in the town cities.
- Report to the CMG about the damages and assistance provided to other agencies in managing the response.
- Ensure that suitable land or buildings that can be used as temporary relief camps and feeding centres are available to the district disaster management teams.

- Supervise sites for dumping debris cleared from disaster areas, removal and disposal of carcasses of dead animal and removal and mass cremation of unclaimed dead bodies.

Department of Agriculture

- Ensure that district level agencies are activated and coordinating with the district disaster management teams.
- Order destruction of contaminated crops in the field to avoid effect on the human and cattle population.

Department of Civil Supplies

- Ensure that the stock is transported to the affected areas
- Supervise distribution of the food items, kerosene and other necessary items
- Check and maintain the standard in the distribution of relief materials.
- Ensure that the relief materials reaches to the most disadvantaged and weaker sections of the society without any discrimination.

Department of Transport

- Ensure that the required number of vehicles are arranged and deployed for the rescue and relief work by the regional transport departments.
- Order mobilisation of additional resources from the neighbouring areas to the affected districts.

Jal Nigam

- Ensure public water supply is available without much interruption.
- Order quick restoration of water supply if affected.
- Arrange and mobilise additional resources such as tankers and staff to the affected areas.
- Supervise quality of water supplied to the camps and affected areas.

- Check the quality of water supplied for the public use as it may be contaminated as result of disaster. In this case, order preventive measures to be taken and make alternate arrangements

Department of Revenue

- Ensure budgetary provisions for meeting the cost of rescue and relief works.
- Arrange additional resources required to carry out relief and rescue operations.
- Declare emergency situation for acquisition of land, vehicles and other resources if required.
- Coordination with the Armed Forces, National Disaster Management Authority, and other Central Government Agencies if required.

NGOs and CBOs

- Community mobilization
- Disseminate all government aided programmes to the community
- Help the community for taking precaution needed for water and proper health and sanitation measures
- Provide information of evacuees sheltered in different locations to the medical teams
- Ensure medicines are reached to the affected areas with the help of volunteers
- Ensure proper treatment of the victims or injured
- Facilitate charitable organisations to work hand in hand with the government medical teams
- Arrange transport – both road and water ways – to the outside medical teams and volunteers, if required
- Record keeping

12.1 Follow up Actions

The UPSDMP has evolved out of secondary sources and consultation with departments involved with DM in UP. Various mechanisms of disaster preparedness, responses, and recovery followed in different parts of the world were also taken into account while preparing the document. This chapter discusses follow up actions that have to be undertaken by various agencies/departments to operationalise the Plan.

12.2 Priority Areas for Follow Up action

Some of the priority areas which need immediate attention or updating from time to time are:

- Preparation of district, block, municipality and Gram Panchayat plans (based on village as the unit of planning)
- Preparation of Standard Operation Procedures and field manuals
- Preparation of handbooks and checklists for prevention, preparedness, response, mitigation activities
- Review existing developmental schemes/ projects and incorporate disaster management principle in all schemes and all plans
- Ensuring sensitivity and incorporation of environment, gender, ethnicity, vulnerability of socio-economically disadvantaged groups (Children, elders and the physically challenged), food and income security, disaster proofing measure in all development, response and recovery plans
- Modernisation of existing control rooms and strengthening of infrastructure in disaster prone areas keeping in mind the vulnerability to different hazards
- Preparation and updating technical and quality control aspects of all civil constructions and non civil installations based on review of past disasters
- Updating existing Laws, Rules and Codes for better administration of relief and recovery measures to the affected people during and after a disaster.

- Similarly enforcement of other relevant Laws and Rules has considerable significance in reducing the risk and impact of disasters.

The response to a disaster requires both indigenous systems as well as effective planning and preparedness strategies. Since the damage and effect of the disasters are so extreme, in case of a response situation, multiple players have to effectively coordinate and communicate with each other for a quick and efficient recovery and control over the emergency situation. However, both the response and recovery measures require detailed and unique planning and implementation strategy from all the stakeholders keeping in mind the local economic, social and cultural variables.

Primarily, all concerned departments/agencies or authorities will have to further detail out their operations in respect of Emergency Support Functions, emergency preparedness, mitigation and recovery measure as per the guidelines given in this document.

12.3 Review and Updating of the State Disaster Management Plan

The State Disaster Management Plan would be reviewed every year by the Disaster Management Authority and necessary modification will be incorporated to keep the information updated. In case of any disaster, the lessons learn from it will also be included and SDMP will be modified accordingly.

12.3 List of Checklists and Handbooks

Documents Required for Quick Assessment and Response

1. Declaration of Format of Disaster
2. Deployment of Assessment Team-Format
3. SRC Responsibilities-Handbook
4. Survival Kit-Checklist
5. Assessment Equipment – Checklist

6. Damage Assessment – Format
7. Format for Media Release
8. Handbooks for International NGOs, NGOs, Media personnel, Researchers/Students, Field/Relief Workers, Volunteers and Government Functionaries
9. Emergency Operation Centre Checklists
10. Layout and dimensions, equipment, etc.,
11. ESF Desk – Checklist
12. Do's and don'ts to be followed during disaster times
14. Regular staff – Schedule and Checklist
15. Staff on Call – Schedule and Checklist
16. Staff on Disaster Duty – Schedule and Checklist

Documents for Disaster Management Teams

1. Communication
2. Checklist of tool kits
3. Handbook on Disaster Telecommunication Assistance
4. Handbook on Team Equipment and Inventory
5. Responsibilities of Primary Agency
6. Responsibility of each Support Agency
7. Emergency tool kits
8. Equipment Damage Assessment Operational checklists
9. On-site operations
10. Planning checklist
11. Deactivation checklist
12. List of PSUs and Private Agencies

Public Health and Sanitation

1. Detailed checklist of symptoms of common diseases along with medicine dosages for each disease

2. Checklist of doctor's tool kit for specialised doctors
3. Checklist for maintaining hygienic conditions
4. Disaster Health Assistance and emergency services
5. Team Equipment and Inventory
6. Responsibilities – Primary /Support Agencies
7. Minimum standards of health facilities
8. Location of health facilities in disaster area (map)
9. Information manual for biological disaster
10. Doctor's manual for emergency relief
11. Emergency toolkits
12. Operational checklists for health officials
13. Planning checklist - Qualification of health personnel –
14. Checklist of doctor's tool kit - Symptoms of common ailments
15. Deactivation checklist × Dosages checklist for common epidemics and ailments during a disaster

Power

1. Handbook on Disaster Power Assistance (alternative power supply arrangements and quick restoration of electrical installations)
2. Handbook on Team Equipment and Inventory
3. Responsibilities of Primary Agency
4. Responsibility of each Support Agency
5. Manuals on handling of equipment which is unique to a particular disaster
6. Emergency toolkits
7. Operational checklists
8. Equipment Damage Assessment
9. On-site operations
10. Planning checklist
11. List of PSUs and private agencies

Transport

1. Inventories of available transport facilities × Responsibilities of Primary Agency
2. Responsibility of each Support Agency
3. Handbook on transport assistance
4. Handbook on Team equipment and Inventory
5. Emergency tool kits
6. Operational checklists
7. Equipment Damage Assessment
8. On-site operations
9. Formats for check of roads, bridges and other civil works
10. Planning checklist
11. List of PSUs and private Agencies

Search and Rescue

1. Training handbooks on Search & Rescue
2. Inventory of professionally trained volunteers in Search & Rescue
3. Handbook on team Equipment and Inventory
4. Responsibilities of Primary Agency
5. Responsibility of each Support Agency
6. Emergency toolkits, search & rescue kits/equipments
7. Operational checklists × Medical tool kits
8. On-site aerial surveys
9. MFR and CSSR kits
10. Deactivation checklist
11. List of PSUs and Private Agencies/NGOs working in the area

Relief Supplies

1. Handbook on Relief Supplies Assistance × Handbook on Team Equipment and Inventory

2. Responsibilities of Primary Agency and each Support Agency
3. Guidelines on specific types of items for each type of disaster
4. Guide for developing relief supplies needs list
5. Manual on disaster-specific relief operations Emergency tool kits
6. Emergency tool kits
7. Operational checklists for team leaders and team members
8. Handling/Storage of relief supplies
9. On-site operations × Planning checklist
10. Deactivation checklist
11. List of PSUs and Private Agencies

Shelter

1. Inventories of manufacturing agencies
2. Procedures of storage
3. Minimum standards for relief camps
4. Minimum requirement of space per person
5. Handbook on Team Equipment and Inventory
6. Responsibilities of Primary Agency
7. Responsibility of each Support Agency
8. Handbook on tent structure and other collapsible structures
9. Handbook on assembling of structures
10. Inventories of agencies that can be used for putting up tents

Alphabetical listing of divisions

Division	Headquarters	Districts
Agra division	Agra	Agra Firozabad Mainpuri Mathura
Aligarh division	Aligarh	Aligarh Etah Mahamaya Nagar Kanshiram Nagar

Annexure-3

Demographic, Socio-economic and Health profile of Uttar Pradesh State as compared to India figures

S. No.	Item	Uttar Pradesh	India
1	Total population (Census 2001) (in million)	166.20	1028.61

2	Decadal Growth (Census 2001) (%)	NA	21.54
3	Crude Birth Rate (SRS 2007)	29.5	23.1
4	Crude Death Rate (SRS 2007)	8.5	7.4
5	Total Fertility Rate (NFHS-III)	3.8	2.7
6	Infant Mortality Rate (SRS 2007)	69	55
7	Maternal Mortality Ratio (SRS 2001 - 2003)	517	301
8	Sex Ratio (Census 2001)	898	933
9	Population below Poverty line (%)	31.15	26.10
10	Schedule Caste population (in million)	35.15	166.64
11	Schedule Tribe population (in million)	0.11	84.33
12	Female Literacy Rate (Census 2001) (%)	42.2	53.7

Annexure-4

Economic Infrastructure of Uttar Pradesh

Power

Installed Capacity (96-97) :	5,575 MW
Production :	2,282 crore KWH
Consumption :	2,667 crore KWH
Per capita consumption :	209 KWH
No. of electrified villages :	87,891

Telecommunication

Number of phones	5,75,867
People per phone	241.4
Phone services	DOT, HFC Bezeq
Cellular services	UP(East): Airtel, Koshika; UP(West): Escotel, Koshika
Radio paging	IXL, Modi Tel

Railways

Railway track length	8,901 km
----------------------	----------

Roads

Road length	1,84,000 km
National Highway length	2,613 km

Airports

Domestic airports	5 (Agra, Kanpur, Lucknow, Varanasi and Gorakhpur)
International airports	None
