GENERAL NOTES

A. STRUCTURAL SYSTEMS DESCRIPTION

1. GENERAL

35 HUDSON YARDS PROJECT IS A 72 STORY MULTI-USE TOWER BUILT ENTIRELY OVER THE RAILROAD YARD BELOW LOCATED AT THE SOUTHEAST CORNER OF 33RD STREET AND 11TH AVENUE. THE BUILDING HEIGHT IS AROUND 1000 FEET ABOVE THE LOBBY LEVEL AND AN ADDITIONAL 30 FEET TO 35 FEET ABOVE THE RAILROAD TRACKS. BUILDING PROGRAM WILL CONSIST OF RETAIL AT THE BASE, FOLLOWED BY OFFICE, HOTEL AND RESIDENTIAL FLOORS. THE RETAIL AND OFFICE PODIUM DROPS OFF AT LEVEL 14, LEAVING A RELATIVELY SQUARE FLOOR PLATE AT HOTEL FLOORS UP TO LEVEL 30. STARTING AT LEVEL 32 THE SW CORNER OF THE TOWER IS CHAMFERED CREATING A TERRACE. EVERY TEN FLOORS EACH CORNER IS CHAMFERED IN SUCCESSION IN A COUNTERCLOCKWISE MANNER CREATING A SERIES OF TERRACES.

2. GRAVITY SYSTEM

THE STRUCTURAL SYSTEM OF THE TOWER USES MAINLY REINFORCED CONCRETE ELEMENTS WITH EMBEDDED STEEL MEMBERS AT THE BASE. THE STEEL MEMBERS ARE UTILIZED TO CREATE A FLUID LOAD TRANSFER FROM THE TOWER'S CONCRETE SUPERSTRUCTURE TO THE PLATFORM'S STEEL SUBSTRUCTURE. RESIDENTIAL, HOTEL, AND OFFICE FLOORS CONSIST OF REINFORCED CONCRETE TWO-WAY FLAT PLATE SLAB CONSTRUCTION. THE SLAB WILL BE SUPPORTED BY REINFORCED CONCRETE COLUMNS AND A REINFORCED CONCRETE CORE WALL SYSTEM INCLUDING BUTTRESS WALLS.
HEALTH CLUB (RETAIL) FLOORS WILL LIKELY CONSIST OF MAINLY REINFORCED CONCRETE TWO-WAY FLAT PLATE SLAB AND PARTIAL REINFORCED CONCRETE WAFFLE SLAB WHICH CAN PROVIDE A STIFFENED SLAB SYSTEM MEETING A MINIMUM 9 HZ STRUCTURAL VIBRATION FREQUENCY. THE FLOOR SLAB SYSTEM FOR THE SWIMMING POOL WILL CONSIST OF ONE-WAY REINFORCED CONCRETE SLAB SUPPORTED BY REINFORCED CONCRETE BEAMS AND GIRDERS. THESE FLOOR FRAMING SYSTEMS WILL BE SUPPORTED BY REINFORCED CONCRETE COLUMNS, COMPOSITE TOWER COLUMNS AND A REINFORCED CONCRETE CORE WALL SYSTEM INCLUDING BUTTRESS WALLS. THE RETAIL FLOORS WILL LIKELY CONSIST OF REINFORCED CONCRETE TWO-WAY FLAT PLATE SLAB WHICH WOULD BE SUPPORTED BY THE COLUMNS AND CORE WALL SYSTEM. THE GROUND FLOOR SLAB WILL LIKELY CONSIST OF 3-INCH METAL DECK WITH 6 INCH NORMAL-WEIGHT CONCRETE TOPPING WHICH WOULD BE MAINLY SUPPORTED BY STEEL BEAMS AND POSTS AND CMU KNEE WALLS WHICH BEAR ON TOP OF PLATFORM.

3. LATERAL SYSTEM

THE LATERAL-LOAD RESISTING SYSTEM FOR THE TOWER WILL CONSIST OF A REINFORCED CONCRETE CORE WALL SYSTEM SUPPLEMENTED BY BUTTRESS WALLS FROM THE CORE OUT TO THE PERIMETER. FOUR (4) REINFORCED CONCRETE BUTTRESS WALLS IN THE NORTH-SOUTH DIRECTION AND TWO (2) REINFORCED CONCRETE BUTTRESS WALLS IN THE EAST-WEST DIRECTION EXTEND FROM THE CORE WALL SYSTEM OUT TO THE PERIMETER OF THE BUILDING. AT THE END OF BUTTRESS WALLS, HAMMERHEAD COLUMNS ENGAGE THE REINFORCED CONCRETE BUTTRESS WALL TO RESIST OVERTURNING FORCES ON THE TOWER DUE TO LATERAL LOADS. IN ADDITION, A 28 FT DEEP BELT WALL AT LEVEL 7 AND AROUND 24 FT DEEP BELT WALL AT LEVEL 30 ARE UTILIZED TO RESIST LATERAL LOADS. THE BELT WALL AT LEVEL 7 IS USED TO TRANSFER SOME PERIMETER TOWER COLUMNS SO THAT THE GRAVITY COLUMN LOADS ARE TRANSFERRED TO MIDDLE/CORNER COLUMNS WHICH ARE SUPPORTED BY PLATFORM PIERS AT GROUND FLOOR.

4. PLATFORM STRUCTURE

JUST ABOVE THE RAILROAD TRACKS AT ROUGHLY THE ELEVATION OF THE SURROUNDING STREETS, A STEEL FRAMED PLATFORM STRUCTURE WILL BE INSTALLED TO COVER THE TRACKS AND TO RECEIVE THE TOWER ABOVE. THIS STRUCTURE AND ITS FOUNDATIONS ARE DESIGNED BY THORNTON TOMASETTI. THE PLATFORM SUPPORTING COLUMNS AND WALLS HAVE BEEN LOCATED BETWEEN THE RAILROAD TRACKS USING SPECIFIED CLEARANCES FROM THE RAIL CARS BASED ON AMTRAK AND MTA GUIDELINES. TYPICAL SPACING OF SUPPORTS IN THE NORTH-SOUTH DIRECTION IS APPROXIMATELY 50'. IN THE EAST-WEST DIRECTION THE COLUMNS ARE PLACED IN A TIGHTER SPACING PARTICULARLY UNDER THE TOWER CORE. SOME PERIMETER COLUMNS IN THE RETAIL ZONE WILL BE SUPPORTED BY STRUCTURAL STEEL PLATE GIRDERS AT THE PLATFORM LEVEL. THE LATERAL SYSTEM FOR THE PLATFORM CONSISTS OF MOMENT FRAMES IN THE NORTH-SOUTH DIRECTION AND STEEL BRACING UNDER THE TOWER CORE WALLS IN THE EAST-WEST DIRECTION. FOUNDATIONS FOR THE PLATFORM AND TOWER ABOVE WILL CONSIST OF CAISSONS, CONTINUOUS WALL FOOTINGS AND EMBEDDED PIERS.

B. CODE ANALYSIS AND DESIGN CRITERIA

1. BUILDING CODES, STANDARDS AND REGULATIONS
   a. NEW YORK CITY BUILDING CODE (NYCBC) 2014
   b. INTERNATIONAL BUILDING CODE (IBC) 2009
   c. AMERICAN SOCIETY OF CIVIL ENGINEERS (ASCE) 7-05, 7-10
   d. AMERICAN CONCRETE INSTITUTE (ACI) 318-08
   e. AMERICAN INSTITUTE OF STEEL CONSTRUCTION (AISC) 13TH EDITION
   f. AMERICAN INSTITUTE OF STEEL CONSTRUCTION (AISC) DESIGN GUIDES

2. STRUCTURAL DESIGN CRITERIA

a. WIND LOADS

i. THE WIND LOADS PRESENTED HERE ARE BASED ON THE NEW YORK CITY BUILDING CODE (2014)

a)	BASIC WIND SPEED	98 MPH (3-SEC GUST)
b)	IMPORTANCE FACTOR	Iw = 1.0
c)	EXPOSURE CATEGORY	B

b. SEISMIC LOADS

i. SEISMIC LOADS WERE DETERMINED IN ACCORDANCE WITH THE NEW YORK CITY BUILDING CODE (2014)

a)	STRUCTURAL OCCUPANCY/RISK CATEGORY	II
b)	SPECTRAL RESPONSE ACCELERATION AT SHORT PERIODS(Ss)	0.281 g (SECTION 1613.5.1, NYCBC 2014)
c)	SPECTRAL RESPONSE ACCELERATION AT 1-SECOND PERIOD(S1)	0.073 g (SECTION 1613.5.1, NYCBC 2014)
d)	SITE CLASS	A (GEOTECHNICAL REPORT, APR 26, 2013,
e)	DESIGN SPECTRAL RESPONSE ACCELERATIONS	Sds = 0.15 g Sd1 = 0.04 g (SECTION 1613.5.4, NYCBC 2014)
f)	SEISMIC DESIGN CATEGORY	B (SECTION 1613.5.6, NYCBC 2014)
g)	SEISMIC FORCE-RESISTING SYSTEM	ORDINARY REINFORCED CONCRETE SHEAR WALL OF BEARING WALL SYSTEMS
h)	DESIGN COEFFICIENTS AND FACTORS	R = 4, Overstrength Factor = 2.5, Cd = 4 (TABLE 1613.8, NYCBC 2014)

c. STRUCTURAL LOADING COMBINATIONS USING STRENGTH DESIGN

i. LOAD COMBINATIONS IN ACCORDANCE WITH SECTION 1605, NYCBC 2014

a) 1.4(D + F)
b) 1.2(D + F + T) + 1.6(L + H) + 0.5(Lr OR S OR R)
c) 1.2D + 1.6(Lr OR S OR R) + (F1L OR 0.8W)
d) 1.2D + 1.6W + F1L + 0.5(Lr OR S OR R)
e) 1.2D + 1.0E + F1L + 0.2S
f) 0.9D + 1.6W + 1.6H
g) 0.9D + 1.0E + 1.6H

WHERE: F1 = 1.0 (LIVE LOADS > F1 = 0.5 (OTHER LIVE LOADS)

d. STRUCTURAL LOADING

a.	RETAIL	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	50 PSF
iii.	LIVE LOADS	100 PSF
b.	OFFICE	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	45 PSF
iii.	LIVE LOADS	50 PSF
c.	HOTEL	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	30 PSF
iii.	LIVE LOADS	40 PSF
d.	RESIDENTIAL	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	35 PSF
iii.	LIVE LOADS	40 PSF
e.	LOBBY/CORRIDOR/VESTIBULE	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	50 PSF
iii.	LIVE LOADS	100 PSF
f.	MECHANICAL ROOM (HEAVY)	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	60 PSF
iii.	LIVE LOADS	250 PSF
g.	MECHANICAL ROOM (LIGHT)	
i.	DEAD LOAD	AS REQ'D
ii.	SUPERIMPOSED DEAD LOAD	60 PSF
iii.	LIVE LOADS	125 PSF

REINFORCED CONCRETE NOTES

GENERAL NOTES
1. All existing conditions shown in the drawings shall be verified by the contractor including framing layouts, member sizes, and slab or wall openings. The Architect/Structural Engineer shall be notified of any deviations prior to the commencement of construction work.

2. Contractor shall verify the results of the geometric surveys and structure conditions surveys performed.

3. Contractor shall be responsible for establishing, structural design, installation, sequencing, and removal of all temporary works.

4. Prior to fabrication and erection of all new construction, field verify all existing construction for dimensions and elevations.

5. Locate, scan and mark all existing concrete reinforcement prior to the installation of new anchors; avoid all existing reinforcement.

6. The existing concrete material properties should be noted.

Concrete
1. All cast-in-place concrete shall be of the types and minimum compressive strengths as shown in the Concrete Materials Schedule on this drawing.

2. All concrete shall contain an approved water reducing plasticizing admixture. Approved high-range water reducing admixtures may be utilized. All concrete permanently exposed to weather shall also contain an approved air-entraining admixture.

3. No calcium chloride shall be used in any concrete.

Reinforcing
1. Reinforcing bars shall be new billet steel conforming to the standards of ASTM A615, ASTM A706(WELDABLE REBAR)
Grade 60: #3 THRU #11
Grade 80: #14, #18, #20 (7)
1a. Dywidag Threadbars shall be conforming to the standards of ASTM A722
Grade 150: 3" Diameter Dywidag Threadbars, See S-422 and 501

2. All welded wire fabric (WWF) shall conform to the standards of ASTM A185.

3. All concrete reinforcement shall be detailed, fabricated, labeled, supported, spaced in forms, and secured in place in accordance with the procedures and requirements outlined in the latest editions of the "Building Code Requirements for Reinforced Concrete," ACI 318-08 as modified by Chapter 19 of 2014 New York City Building Code, the "Manual of Standard Practice for Detailing Reinforced Concrete Structures," ACI 315, IBC 2009, and 2014 New York City Building Code.

4. All reinforcing splices shall conform to the requirements of ACI 318, but in no case shall be less than 36 bar diameters, unless noted otherwise. All tension lap splices shall be Class B, unless noted otherwise.

5. All welded wire fabric splices shall be lapped two (2) full mesh panels and tied securely.

6. Where required, dowels shall match the size and number of main reinforcing, unless noted otherwise.

7. All walls and structural slabs shall be reinforced with at least #4 bars at 12 inches on center each way, unless noted otherwise. All slabs on grade shall be reinforced with at least one (1) layer of 6x6 - W2.9xW2.9 WWF, unless noted otherwise. Provide one (1) layer of 6x6 - W1.4xW1.4 WWF continuous in all concrete fills above structural slabs. All mechanical, plumbing and electrical equipment pads shall be reinforced with at least one (1) layer of 6x6 - W4.0xW4.0 WWF (See HVAC, Plumbing and Electrical drawings for additional reinforcing requirement for pads.).

8. Provide a minimum of one (1) layer of 4x4 - W2.9xW2.9 galvanized or epoxy coated WWF for all sidewalks, unless otherwise noted.

9. Provide a minimum of one (1) layer of 4x4 - W6.0xW6.0 galvanized or epoxy coated WWF for all automobile driveway areas, unless noted otherwise.

10. Provide a minimum of one (1) layer of 4x4 - W7.0xW7.0 galvanized or epoxy coated WWF for all truck traffic areas, unless noted otherwise.

11. Additional bars shall be provided around all floor and wall openings.

12. All bar supports shall be galvanized or epoxy coated. Bar supports in contact with exposed surfaces shall also be plastic tipped.

13. The following minimum concrete covers shall be provided for reinforcement, unless larger cover is noted elsewhere.

a. Concrete cast against and permanently exposed to earth: 3"
b. Concrete exposed to earth or weather:
#5 bars and smaller: 1-1/2" #6 through #18 bars: 2"
c. Concrete not exposed to weather or in contact with ground.
Slab, walls, joists:
#14 and #18 bars: 1-1/2" #11 and smaller: 3/4"
Beams, columns:
Primary reinforcement, ties, stirrups: 1-1/2"

14. The Contractor shall submit shop drawings showing reinforcing details including bar sizes, spacing, placement and support details to the Architect for review prior to fabrication.

Construction Joints
1. Construction joints in all walls, slabs and beams shall be provided. See Specification Section 033000 "Cast-In-Place Concrete" for specific spacing requirement. Vertical construction joints in walls shall be located at least 5'-0" from any pilasters(Hammerhead columns), corners, or wall openings.

2. All construction joints shall be wire brushed, cleaned and moistened immediately prior to placing new concrete.

3. Place all slabs-on-grade in strip pours of a maximum width of 30 feet with a minimum of 24 hours between adjacent pours. Strip poured slabs shall have sawcut control joints at 15'-0" centers. Sawcutting shall occur within (12) hours of completing the pour.

4. Allow a minimum of three (3) hours between placement of concrete for columns, walls or piers and placement of concrete on the adjacent floor.

Curing and Sealing
1. Provide approved curing compound and sealer for the top surface of all slab work, unless noted otherwise.
2. Provide approved curing compound, sealer, and hardener for all slabs in M.E.P. and storage areas, unless noted otherwise.

Electrical Conduit
1. Conduit shall be steel or rigid plastic only.
2. Maximum conduit diameter is 1/6 the slab depth. (7)
3. Conduit shall be located in the center 1/3 of the slab and as shown in the reinforced concrete slab details.
4. Clear distance between conduits shall be 3 times the conduit diameter.
5. Conduit shall be securely tied to reinforcing to prevent displacement during concrete placement.
6. Conduit shall be placed only in accordance with shop drawings approved by the EOR.

General
1. The Contractor shall submit shop drawings showing the locations of all construction joints, control joints, curbs, slab depressions, sleeves, openings, etc.
2. Concrete beams and slabs shall not be sleeved or boxed-out or have the reinforcing interrupted, except as shown on the Structural Drawings.
3. See Architectural drawings for type and location of all floor finishes, floor depressions and curbs.
4. See Architectural drawings for all waterproofing/dampproofing details.
5. See Architectural, HVAC, Electrical and Plumbing drawings for additional wall/slab openings. No openings, except those shown on the structural drawings, will be allowed in the Tower core walls, link beams, or outrigger/transfer walls.
6. The Contractor shall perform and submit daily instrument surveys of all finished reinforced concrete and metal deck concrete slab surfaces both before and after removal of formwork and/or shoring systems.
7. Conduit and pipe shall not be placed in structural slabs without the approval of the structural engineer. The Contractor shall submit conduit placement drawings indicating locations of cast-in-conduits and pipes. All conduits shall be placed in the middle third of the slab thickness and shall be spaced no closer than 3 diameters or widths on center. No conduit greater than 2 inches may be placed in the structural slabs.
8. The Contractor shall submit for review complete slab sleeve, pipe and conduit placement drawings for each level a minimum of 30 days prior to pouring slab for coordination of embedded items and slab reinforcing.
9. See Specification Section 033000, "Cast-in-Place Concrete" for additional requirements.

REINFORCED CONCRETE SPECIAL REQUIREMENTS

Special Concrete Material Notes
1. See Specifications Section 03300, "Cast-In-Place Concrete," for specific definitions and additional requirements.

2. All concrete shall be specifically designed for the horizontal and vertical pumping distances as required by the construction sequencing.

3. All concrete mixes shall contain approved water reducing plasticizing admixtures in the appropriate ranges for placement.

Special Tower Concrete Formwork Notes
1. See Specification Section 033000, "Cast-In-Place Concrete," for specific definitions and additional requirements.

2. Special consideration shall be given to formwork removal times and concrete moisture retention to insure proper hydration of high strength concrete. If extended primary formwork removal times are not feasible due to the construction sequence, then structural elements of high-performance concrete shall be immediately re-wrapped with moisture maintaining material systems, or other surface applied curing materials for a period of time acceptable to the Engineer-of-Record.

Special Tower Concrete Placement Notes
1. See Specifications Section 03300, "Cast-In-Place Concrete," for specific definitions and additional requirements.

2. The Contractor's program for concrete pumping for Tower structural elements shall be carefully coordinated with horizontal and vertical lift dimensions and alternative systems for staged pumping. Special considerations shall be given to the control and utilization of concrete volume remaining in vertical riser upon completion of specific pumping opertations. Vertical risers shall have capacities for intermediate access points for pumping concrete to elements below the maximum riser height and for proper cleaning of primary risers. Continuous monitoring of concrete quality at the top of the vertical riser including flowability (slump), strength, and aggregate segregation shall occur.

Pumping Test
1. Contractor shall confirm pumpability of mix design(at least of one of 10,000 psi, 12,000 psi, 14,000 psi high-strength concretes) by performing a pump test in accordance with ACI 304.2R, Chapter 4, Paragraph 4.8, unless results from a previous use of the proposed mix in a similar pumping operation are acceptable to the Structural Engineer. See Specification Section 033000, "Cast-In-Place Concrete" for additional requirements.

Special Creep/Shrinkage/Elastic Modulus Testing Program
1. The Contractor shall prepare and submit a " Pre-Construction Creep/Shrinkage and Modular Test Programs" for establishing the long term values for creep and shrinkage coefficients and elastic modulus values for each different concrete mix design noted. This program shall begin prior to Tower superstructure construction. Indicated intervals of testing and reporting of resulting values shall be continued for the full term of the Tower superstructure program.

Special Floor Slab Leveling - Tower
1. After the required power troweling of all floor slab surfaces, and in order to achieve the appropriate floor levelness, the Contractor shall install an acceptable latex based, cementitious flowable fill material system in all interior floor slab areas which will receive applied, non-cementitious, architectural floor finish interior systems (carpet, wood, thin set stone) as the final finish system. The locations, extent, and thickness of the flowable fill will be established from the review of the Contractor's unshored hardened concrete floor slab surveys. These thin flowable concrete fill materials shall be protected from deterioration prior to the placement of the final architectural floor finish systems.

2. The Contractor shall allow for providing 1/2 inch average depth of an acceptable latex based, cementitious flowable fill.

Hot/Cold Weather Concreting
1. Before hot weather(Jot-site conditions that accelerate the rate of moisture loss or rate of cement hydration of freshly mixed concrete, including an ambient temperature of 80° F or higher, and an evaporation rate that exceeds 0.2 lb/ft²/h) concreting and the preplacement conference, Contractor shall submit to Architect/Engineer for review and comment detailed procedures, including production, placement, finishing, curing and protection of concrete during hot weather concreting. Comply with ACI 305R " Hot Weather Concreting". See Specification Section 033000, "Cast-In-Place Concrete" for additional requirements.

2. Before cold weather(A period when for more than three successive days the average daily outdoor temperature drops below 40° F. The average daily temperature is the average of the highest and lowest temperature during the period from midnight to midnight. When temperatures above 50° F occur during more than half of any 24 hr duration, the period shall no longer be regarded as cold weather.) concreting and the preplacement conference, Contractor shall submit to Architect/Engineer for review and comment detailed procedures, including production, placement, finishing, curing and protection of concrete during cold weather concreting. Comply with ACI 306.1R " Standard Specification for Cold Weather Concreting". See Specification Section 033000, "Cast-In-Place Concrete" for additional requirements.

Mass Concrete
1. For area of high-strength mass concrete, including but not limited to, 8,000 psi or greater and the least dimension being equal to or greater than 36 inches, as indicated on the construction documents, a thermal control plan complying with ACI 301, Section 8.1 and acceptable to the registered design professional of record shall be submitted by the contractor.
a. The maxiumn temperature in concrete at point of deposit shall not exceed 70 deg. F; and
b. The maximum temperature in concrete after placement shall not exceed 158 deg. F; and
c. The maximum temperature difference between center and surface of placement shall not exceed 35 deg. F.

Self Consolidatiing Concrete(SCC)
1. All belt walls, outrigger walls, shear walls and hammerhead columns at Level 7 and 30 shall be pumpable Self Consolidating Concrete(SCC) with a minimum 56-day compressive strength of 14,000 PSI at Level 7 and 12,000 PSI at Level 30. Proportion SCC mix with reduced coarse aggregate size, increased paste content, and the addition of superplasticizer and SCC admixture. Provide SCC with properties that will allow flow into all spaces of the formwork, flow through tight openings under its own weight and is resistant to segregation during transport and placing.
a. Cement: Portland Cement Type II (low heat of hydration)
b. Microsilica (Silica Fume): ASTM C1240; Provide 5 - 10% of cement weight; Provide enhanced mixing program to insure complete wetting and dispersion of silica fume
c. Optional Supplementary Cementitious Materials (SCM) (not to be used in combination)
1. Fly Ash (FA): ASTM C618, Class F; maximum 25% (if used)
2. Ground Granulated Blast Furnace Slag (GGBFS): ASTM C989; maximum 45% (if used)
3. See Specification Section 033000, "Cast-In-Place Concrete" for additional requirement
d. Aggregates:
1. Coarse Aggregate: ASTM C33; acceptable washed, clean crushed rock;
2. Fine Aggregate: ASTM C33; acceptable washed, clean crushed rock; beach sand is not acceptable
e. Mixing Water: Clear, drinkable, tasteless, odorless; wash water shall not be used; substitute crushed ice of the same quality water as required to maintain the required concrete temperature; no additional water is to be added at point of concrete deposit
f. High Range Water Reducing Admixture (Superplasticizer): ASTM C494, Type F; acceptable admixture as required to achieve Self Consolidating Concrete
g. Water Reducing Retarding Admixture: ASTM C494, Type D; acceptable admixture to provide minimum retardation of 3 hours
h. SCC Plasticity Testing:
1. Slump-Flow Test: Self Consolidating Concrete mix with a flowable spread diameter of 24" - 30"
2. V-Funnel(Test measuring how quickly SCC passes through a constricted area) flow times shall be between 4 and 10 seconds
3. L-Box and U-Box(Test measuring the passing ability of concrete in congested reinforcement) values and time shall be established for correlation and field quality control.
i. Concrete Temperature: Minimum of 50 deg. F and maximum of 70 deg. F at point of deposit with a maximum heat gain of 88 deg F, resulting in a maximum Concrete Temperature of 158 deg. F at any one time. The maximum temperature difference between center and surface of concrete placement shall not exceed 35 deg. F. The addition of ice as replacement for a portion of the mix water, the refrigeration of mix water, and the cooling of aggregates and cement may be necessary to reduce concrete mix temperature and heat gain; low heat of hydration cement shall be used to control heat gain.

CONCRETE MATERIALS SCHEDULE

ELEMENT	MINIMUM COMPRESSIVE STRENGTH (PSI) (SEE NOTE 1)	DENSITY (PCF)	MINIMUM MODULUS OF ELASTICITY (KSI)	MAX. SIZE AGGREGATE	MAX. W/C RATIO	AIR CONTENT	REMARK

CONCRETE WALL/SLAB AT CON ED VAULT	5,000	145		3/4"	0.50		SEE NOTE 3.

NOTES:
1. ALL COMPRESSIVE STRENGTHS ARE 28-DAY STRENGTHS UNLESS NOTED OTHERWISE.
2. FLY ASH AND/ OR SLAG TO BE USED AS SUPPLEMENTARY MATERIALS. SILICA FUME REQUIRED FOR F'c ≥ 10,000 PSI. SEE SPECIFICATION SECTION 033000 "CAST IN PLACE CONCRETE" FOR MAXIMUM PERCENTAGE OF CEMENTITIOUS MATERIALS BY WEIGHT. (8) SSK-011-3
3.NO FLY ASH OR SLAG SHALL BE USED AS SUPPLEMENTARY MATERIALS IN CON ED VAULT WALLS AND ROOF . L3 SLAB & BEAMS SUPPORTING VAULTS AND L3 COLUMNS WITHIN VAULT FOOTPRINT SHALL BE 10KSI CONCRETE NO FLY ASH/SLAG MIXES. EPOXY COATED REBAR SHALL BE USED IN VAULT WALLS, ROOF, LEVEL 3 SLAB BENEATH VAULTS, AND COLUMNS WITHIN VAULT FOOTPRINT.
4. CONCRETE SHALL BE PUMPABLE SELF CONSOLIDATING CONCRETE(SCC).

Belt Wall/Outrigger Wall
1. All belt walls, outrigger walls, shear walls and hammerhead columns at Level 7 and 30 shall be pumpable Self Consolidating Concrete(SCC) with minimum compressive strengths and minimum modulus of elasticity as shown on Material Schedule on this sheet.
2. Acceptable locations of Belt wall/Outrigger Wall System vertical wall construction joints shall be established for Structural Engineer to review. The Contractor shall provide layout drawings indicating proposed construction joints required to construct the structure. Location of construction joints is subject to approval of the Structural Engineer.
3. Belt wall/Outrigger wall System concrete shall be placed continuously. Horizontal or vertical cold joints within the separate pour areas are unacceptable. Concrete shall be placed uniformly over the area of the pour and advanced vertically in a uniform fashion. Place concrete simultaneously from a minimum of 3 locations for each pour in order to achieve uniform pouring of concrete.
4. High-strength concrete "puddling" at floor slabs (Level 7, 8, 30 and 31) in the area of belt wall/outrigger wall shall be performed closely followed by surrounding floor concrete. Floor concrete surrounding puddles area shall be completed prior to belt wall/outrigger wall puddles achieving initial set.
5. The Owner's Concrete Testing Laboratory shall continuously inspect and test all Belt Wall/Outrigger Wall System concrete and reinforcing work.
6. The Contractor shall submit to the Structural Engineer for information a complete Methods Statement for the construction of the Belt Wall/Outrigger Wall System and transfer girders. The Methods Statement shall include detailed information outlining the formwork, reinforcement placement, and concreting operations to be utilized in the Work. All elements of the Contractor's Quality Control Program with respect to these areas shall be specifically referenced.
7. Preliminary diagrams of suggested temporary shoring for Belt wall/Outrigger wall system and transfer girders at Level 7, 14, 30 are indicated on belt wall, outrigger wall and transfer girder elevation sheets. See S-371, S-373, S-391. Temporary shoring developed by Contractor with Concrete Trade Contractor including any proposed variations from the suggested temporary shoring shall be submitted to the Architect/Structural Engineer for review prior to construction.
8. See Specification Section 033000 "Cast-In-Place Concrete" for additional requirements.

Additional Concrete Test
The following is the list of additional concrete tests. The Contractor shall prepare and submit the addtional concrete testing programs.
1. Pre-construction moduli tests
2. Pre-construction creep/shrinkage tests
3. Pre-construction heat of hydration tests for Mass Concrete
4. Pre-construction pumping tests
5. Modified slump testing for high slump concrete (not SCC concrete)
6. Concrete coring tests
7. Field dynamic concrete modulus tests conforming to the standards of ASTM C469

Erection
1. The Contractor shall be responsible for the control of all erection procedures and sequences, especially with relation to temperature differentials, erection tolerances of concrete structure.

2. Each concrete slab shall be poured to level to the slab elevations noted in Top of Slab Elevation Schedule(S-003) and not by floor-to-floor dimensions.

3. Survey the tops of all columns, walls and slabs. Record X, Y & Z coordinates measured consistently from an established benchmark. Provide a copy of the survey data to the Architect and Structural Engineer within two days of the completion of each survey.

4. All erection procedures, designs and calculations shall be performed by the Contractor's qualified professional engineer licensed in the State of New York. Any review of such calculations and/or drawings by the Architect/Engineer will be solely limited to any effects on the integrity of the permanent primary structure.

5. All additional temporary shoring required by the Contractor for erection purposes and site access of stockpiled materials shall be provided at no cost to the owner.

Steel Stud Rail for Shear Reinforcement of Concrete Slab
1. Steel Stud Rail for shear reinforcement in slab shall conform to the standards of ASTM A1044.

2. The design of shear reinforcement in slab shall be in accordance with the procedures and requirements outlined in the "Guide to Shear Reinforcement for Slabs," ACI 421-08 and "Building Code Requirements for Reinforced Concrete," ACI 318-08.

3. Tolerances for dimensions, So(spacing between first peripheral line of shear reinforcement and column face) and S(spacing between peripheral lines of shear reinforcement) shall not exceed +/- 1/2". Tolerance for the distance between column face and outermost peripheral line of studs shall not exceed +/- 1 1/2" in accordance with ACI 421. See ACI 421 for additional tolerance requirement.

STRUCTURAL STEEL NOTES

GENERAL NOTES

1. All existing conditions shown in the drawings shall be verified by the contractor including platform steel stubs, framing layouts, member sizes, and slab openings. The Architect/Structural Engineer shall be notified of any deviations prior to the commencement of shop drawings and fabrication.

2. Where interface with existing Platform construction occurs, the existing construction shall be surveyed and such survey submitted, for Structural Engineer's information, before related shop drawings are prepared.

3. In the regions where existing steel is to receive new welding, all fireproofing, rust, loose mill scale, paint, concrete encasement, and foreign materials shall be removed.

4. Locate and mark all existing concrete reinforcement prior to the installation of new anchors; Avoid all existing reinforcement.

5. Grout shall be non-metallic meeting the requirements of ASTM C1107; Compressive strength shall be a minimum of 5500 psi at 7 days, and 6500 psi at 28 days.

6. The existing steel material properties should be noted.

7. Contractor shall verify the results of the geometric surveys and structural conditions surveys performed.

8. Contractor shall be responsible for the structural design, installation, sequencing, and removal of all temporary works.

General Steel Notes

1. The structural steel fabricator shall be AISC certified.

2. All detailing, fabrication and erection shall conform to AISC (LRFD) specifications and codes, 2005 as modified by Chapter 22 Section 2205 and 2212 of 2014 New York City Building Code.

3. All welding work shall conform to the AWS D1.1 "Structural Welding Code - Steel," latest edition, and shall be performed by AWS certified welders.

4. All steel beam sizes followed by a number in parentheses, (XX), are composite beams with shear studs. See "Structural Metal Deck Notes" for additional information.

5. Composite beams are not required to be shored, unless noted otherwise.

6. There shall be no field cutting of structural steel members for the work of other trades without prior review by the Architect.

7. All structural steel shall be fireproofed to attain the applicable fire rating required by the New York City Building Code with UL approved sprayed-on cementious fireproofing materials. See the Architectural drawings for specific fireproofing requirements. All permanently exposed fireproofing to receive tamping and sealer.

8. After fabrication and just prior to site application of spray-on fireproofing, all steel shall be cleaned of all rust, loose mill scale and other foreign materials. Priming and painting of the structural steel will not be required except for steel which is permanently exposed.

9. See Specification Section 051200, "Structural Steel Framing," for additional requirements not noted herein.

Materials

1. Structural steel grades shall be as follows:

W-Shapes:	ASTM A992 Grade 50
Angles & Channels:	ASTM A36
Plates:	ASTM A572 Grade 50, ASTM A1066 Grade 65
HSS:	ASTM A500 Grade B
Pipe:	ASTM A53, Type E, Grade B

2. Connection material requirement shall be as follows:

Bolts:	ASTM A325 or ASTM A490
Nuts:	ASTM A563
Washers:	ASTM F436
Anchor Rods:	ASTM F1554 Grade 55
Shear Stud Connectors	ASTM A108, Type B, Fu = 65

3. All welding electrodes shall be E70XX for 50 ksi steel and E80XX for 65 ksi steel.

Connections

1. All connections shall be designed and detailed by the fabricator. Detailing shall be performed using rational engineering design and standard practice in accordance with the requirements of the Contract Documents. The general details shown on the drawings are conceptual only and do not indicate the required number of bolts or weld sizes, unless specifically noted. The contractor shall submit engineering calculations and connection details drawings for each connection type, member size, and reaction indicated on the drawings for review by the Architect prior to the submittal of the structural steel shop drawings. After review by the Architect, these details drawings shall be utilized as the standard for fabrication and shop drawing detailing. The design calculation shall be prepared and sealed by a qualified Structural Engineer licensed in the State of New York.

2. All connections, unless noted otherwise shall be simple shear connection utilizing short-slotted holes and high-strength bolts in bearing-type connections with threads excluded from the shear plane. The connections shall develop the beam end reactions listed in note 5 below or as listed in plan.

3. Beam-to-column and beam to girder connections shall be moment connected where shown on the drawings. All bolted moment connections shall utilize "Slip-Critical" bolts. The web shear connection for these members shall utilize single shear plate slip-critical type connections with high-strength bolts. These connections shall develop the beam end reactions listed in note 5 below or as listed in plan.

4. All bolts shall be fully torqued for both friction and bearing type connections.

5. Typical minimum beam factored end reactions: (UNO)

W44	255 kips	W18	60 kips	HSS 16	55 kips	BU 11	30 kips
W40	230 kips	W16	40 kips	HSS 14	45 kips		
W36	210 kips	W14	40 kips	HSS 12	30 kips		
W33	185 kips	W12	30 kips	HSS 10	20 kips		
W30	160 kips	W10	20 kips	HSS 8	15 kips		
W27	135 kips	W8	15 kips	HSS 6	15 kips		
W24	110 kips	W6	10 kips				
W21	80 kips	W5	10 kips				

Any end reaction exceeding the values listed above is noted on the structural framing plans in a schedule or in a box at the member end.

6. The minimum number of bolts per connection shall be two (2) - 3/4 inch diameter, A325 bolts.

7. Minimum fillet weld sizes shall comply with the AISC specification requirements, but shall not be less than 1/4 inch, unless noted otherwise.

Detailing and Fabrication

1. The Contractor shall submit detailed, engineered, coordinated and checked shop drawings for all structural steel to the Architect/Engineer for review prior to the start of fabrication.

2. All beams and trusses shall be fabricated with the natural camber up. Provide additional camber as indicted in brackets <XX> on the structural drawings.

3. All simple shear connections shall be capable of and rotation according to the requirements of AISC Specification, Chapter J1.2. "Simple Connections." and Section BC 2212 of 2014 New York City Building Code

4. All beams framing into new and/or existing concrete or masonry walls shall be detailed to suit the horizontal field tolerances.

Detailing and Fabrication of Built-Up Plate Steel Column Embedded Into Concrete Column/Wall

1. The Steel Fabricator/Erector shall provide specific welding sequences for the shop/field welding of the built-up plate steel column.

2. AWS/AISC pre-heating of heavy plate prior to, during, and after welding at each weld shall be carefully monitored.

3. Sequence of placing of shear stud and rebar couplers on the external face of the built-up plate steel column shall be carefully coordinated with plate welding sequence.

Erection

1. The Contractor shall be responsible for the control of all erection procedures and sequences, especially with regard to temperature differentials, erection tolerances, and with respect to structural steel framing into reinforced concrete walls, beams or columns.

2. All erection procedures, designs and calculations shall be performed by the Contractor's qualified Structural Engineer registered in the State of New York. Any review of such calculations and/or drawings by the Architect and the Engineer will be solely limited to any effects on the integrity of the permanent primary structure.

3. All additional steel required by the Contractor for erection purposes and site access of stockpiled materials shall be provided at no cost to the Owner. All such additional steel shall be removed by the Contractor unless approved by the Owner in writing.

4. The contractor shall submit a Method Statement for all structural steel/metal deck erection programs.

5. Non-Self-Supporting Steel Frames
The steel structure of steel cores embedded into columns, floor beams, columns is a non-self-supporting frame and is required to provide stability and strength to resisting the loads for which the frame is designed. The contractor shall provide and install temporary supports as necessary until the complete structure is erected.

Testing and Inspection

Testing and inspection of both shop and field structural steel fabrication and erection work, including welded and bolted connections, shall meet the following requirements:

1. All structural steel fabrication and erection shall be visually inspected.

2. All welders shall be AWS certified.

3. All welds shall be AWS/AISC prequalified.

4. All welds shall be visually inspected per AWS D1.1. Weld measurements shall be performed for 15% of all welds on a random basis.

5. Magnetic particle testing in accordance with ASTM E709 shall be performed for a minimum of:
   a. 10% of all fillet and partial penetration welds chosen at random, final phase only.

   b. 100% of tension member connection welds (i.e., hanger connection plates, etc.) for root and final passes.

6. Ultrasonic testing in accordance with AWS D1.1 shall be performed for a minimum of:
   a. 100% of all full penetration welds.

   b. 20% of all column splice welds, chosen at random.

7. Ultrasonic testing and visual inspection in accordance with ASTM A435, Straight Beam Ultrasonic Examination of Steel Plates, or ASTM A898, Straight Beam Ultrasonic Examination of Rolled Steel Structural Shapes, as applicable shall be performed to test base materials for laminations, inclusions, or other discontinuities as follows:

   a. All steel plates used in embedded steel column core greater than 1 1/2" thick

   b. Base metal thicker than 1 1/2", subjected to through thickness weld shrinkage, will be ultrasonically tested directly behind such welds 48 hours or more after completion of welding.

8. All bolted connections shall be visually inspected and tested with a calibrated torque wrench to verify a minimum of 25% of bolts in each connection (2 bolts per connection minimum).

9. The required contact surface conditions of all shear connections shall be visually inspected immediately prior to beam erection. The Contractor shall be responsible for all remedial work required to contact surfaces.

10. The Owner's Structural Steel Testing shall perform all field inspection and testing work outlined above and monitor the Contractor's inspection and testing program outlined above for all shop work.

11. The Structural Steel Fabricator and Erector shall schedule all work to allow the above inspection and testing requirements to be completed.

Structural Steel Painting

1. All structural steel shall be cleaned and painted as required by the technical specifications.

2. All structural steel to receive sprayed-on fireproofing and/or to be encased in concrete does not require painting unless noted otherwise. See S-512.

3. All exterior structural steel exposed to weather to receive sprayed-on fireproofing shall require cleaning and painting systems. See Specification 09 91 00 Painting for requirement.

4. All structural steel at Plenum located below ground floor shall receive intumescent paint for fireproofing.

5. The following structural steel elements require cleaning and painting systems as required by the technical specifications:

   a. Elevator divider beams
   b. Not-fireproofed, interior structural steel
   c .Intermediate horizontal box member supporting cladding

6. The following structural steel elements require hot-dip galvanizing per ASTM A123 as required by the technical specifications; All bolts, nuts, washers for connection of hot-dip galvanized steel shall be galvanized per ASTM A153; High-Strength bolts for connection of hot-dip galvanized steel shall be galvanized A325 bolts; All galvanized A325 bolts shall require lubrication prior to installing nuts; All washers, nuts, base plates, gusset plates, stiffener plates, anchor bolts for connection of hot-dip galvanized steel shall be galvanized:

   a. South, East Canopy
   b. Parapet steel structure at roof
   c. Cooling tower dunnage structural steel
   d. Water tank dunnage structural steel
   e. Perimeter cladding support steel at plenums

Composite Metal Deck

1. All composite metal deck shall be fabricated from steel type ASTM A653/A653M having a minimum yield strength of 33,000 psi. See Metal Deck Schedules for required yield strength. All roof decking shall be hot-dipped galvanized as indicated in the specification.

2. All composite metal deck and metal deck accessories shall be designed for the span and loading conditions shown on the structural drawings.

3. Composite metal deck section properties shall be computed in accordance with the AISI "specification for the design of cold formed steel structural members," latest edition.

4. The minimum gage of all composite metal decks shall be 18 gage when the concrete topping slab thickness (Tc, see schedule S-531) is less than or equal to 4 1/2" and 16 gage when concrete topping slab thickness is greater than 4 1/2".

5. The metal deck contractor shall submit, to the Architect/Structural Engineer for review, structural engineering calculations, prepared and sealed by a qualified, Professional Engineer registered in the State of New York.

6. The contractor shall provide detailed and checked shop drawings indicating location, gage, and size of each piece of decking and related decking accessory. The drawings shall clearly show welding and screwed details to structural framing elements, side lap connection details, deck opening/edge closures, and supplementary deck and/or closure reinforcing.

7. All composite decking shall be welded to structural steel by qualified welders using pre-qualified procedures. The technical specifications establish a procedure for pre-qualifications of the plug welding of the steel decking to the structural steel for the particular gages used. Prior to the start of erection of the steel deck, each welder shall be qualified using this procedure as witnessed by the owner's structural steel testing laboratory.

8. All composite metal deck shall be welded at 12 inches maximum on center to the supporting steel with a 3/4 inch diameter plug weld. Sidelaps shall be welded 24 inches maximum on center.

9. The deck shall be designed for an assumed suitable construction live load taking into consideration span and load conditions indicated by the supporting framework, openings, and actual deck piece sizes utilized. The assumed construction live load shall not be less than 20 psf. Additionally, follow all applicable city, local, and AISI requirements for temporary construction loadings, if more stringent.

10. Provide continuous deck closures at all deck ends and edges.

11. Provide, as required, column closures, cant strips, sump plates at piping penetrations, and recessed sump pans at drains. Provide supplemental framing, including reinforcing plates and steel angles at openings as required to support the metal deck. All openings shall be coordinated with the architectural and mechanical drawings. Steel and/or metal deck shop drawings shall include all supplemental deck support angles, plates and other accessories necessary to support and close the composite deck at edges, column locations etc.

12. No loads exceeding 50 lbs. shall be permitted to be hung from the deck. All hangers for ductwork, piping, etc. shall be hung directly from structural steel framing or supplementary members. All hanging load details shall be submitted for review.

13. Composite metal deck design criteria: (cellular and non-cellular decks)

A. Metal Deck: (construction loads only)

A.A. Maximum deck deflection for concrete wet weight shall be less than or equal to L/240, but not to exceed ½", computed either on a single span basis, or on loading only one (1) span for multiple span conditions.

A.B. Maximum stress in deck for concrete wet weight and construction loads shall be less than or equal to 0.6 fy (fy = yield stress) computed on a single span basis, or on loading two adjacent spans for multiple span conditions.

A.C. Allow for an average of 5 psf wet concrete weight for concrete leveling (as per specifications) in addition to the specified slab thickness, for stress and deflection calculations.

A.D. Provide deck shoring, if required, to meet the conditions of items No. A.A., A.B., and A.C. above.

A.E. All form decks, for reinforced concrete slabs, shall be designed for the same criteria stated in items No. A.A., A.B., A.C., and A.D. above.

B. Composite Metal Deck Slab: (Final Design Load)

A.A. The deck shall develop full composite action for imposed loads as shown in the deck schedule.

A.B. Maximum deflection under superimposed load shall be less than or equal to L/360.

A.C. Maximum stress in deck for total load using appropriate non-composite and composite properties shall be less than or equal to 0.75 fy.

A.D. Maximum allowable stress in concrete shall be as per ACI 318-08.

A.E. The composite deck shall be designed on the basis of obtaining a minimum factor of safety of 2 for the total superimposed load on a single span basis. Test results shall be furnished to substantiate the factor of safety.

14. Provide continuous sheet metal closures at all slab openings and slab edges and continuous deck closures at all deck ends.

15. Provide supplemental structural steel framing, including beams, angles and/or reinforcing plates, as required for support of the metal deck. All slab openings shall be coordinated with architectural and mechanical drawings.

Shear Studs

All shear stud placement diagrams shown on the structural drawings represent idealized conditions and actual framing configurations may require additional modifications and interpretations.

1. The contractor shall submit shop drawings indicating the shear stud layout including type, size, spacing, and grouping of studs for each beam.

2. The number of studs shown on the drawings includes reductions based on rib width, number of studs per cell, deck rib orientation, and slab thickness as per AISC specifications for composite construction Chapter I of LRFD (2008 edition), and as noted below. The assumed horizontal shear stud design value for a nominal 3/4" diameter x 6" long stud is 12.0 kips per stud for normal weight concrete. The metal deck contractor shall submit load test data verifying the horizontal shear capacity of the shear studs for different deck types and cell configurations, as detailed on the shop drawings. Only if any of the above assumptions are violated, the metal deck contractor shall submit structural design calculations, prepared by a qualified structural engineer, based on the detailed shop drawings. Provide all extra studs as may be required to achieve the total horizontal shear capacity.

3. Maximum spacing of studs shall be 12" on center.

4. Shear studs shall be either welded directly to structural steel elements at locations without deck or welded through the metal deck slab by prequalified methods. If through deck welding is unfeasible, the studs shall be installed in pre-punched holes in the metal deck. The contractor shall establish specific welding requirements for each thickness of framing element and/or gauge metal deck slab.

5. Installation: The contractor shall submit a complete method statement for the installation of all metal deck and related work in all locations, including the movement of metal deck/shear studs to the required locations, sequences of installation, completion and testing/inspection of all connections, cleaning of the metal deck, coordination with existing concrete element conditions, final metal deck galvanizing repair, and control of all thermal and environmental conditions including shading devices which may affect the metal deck installation.

6. The owner's testing agency shall inspect and test all metal deck and shear stud fabrication and installation work.

7. The owner's testing agency will monitor all tests and reports of the contractor's testing agency and the contractor's work.

8. All elevations are referenced to a local site datum.

9. The contractor shall meet all additional requirements of the respective local codes and regulations for all work.

10. See technical specification section "Steel Decking," for additional requirements.

11. Refer to MEP and architectural drawings for exact size and location of sleeves and openings. Shop drawings shall be submitted for approval.

NOTES : 1. TABULATED TENSION DEVELOPMENT LENGTHS ARE GIVEN IN INCHES, AND ARE CALCULATED FOR REINFORCEMENT CONFORMING TO ASTM A615 GRADE 60 AS PER THE REQUIREMENTS OF ACI 318-08.
2. CASES 1 AND 2 DEPEND UPON CONCRETE COVER AND THE CENTER-TO-CENTER SPACING OF THE BARS, DEFINED AS FOLLOWS:

CASE 1: CLEAR SPACING AT LEAST ONE (1) BAR DIAMETER
CLEAR COVER AT LEAST ONE (1) BAR DIAMETER
STIRRUPS OR TIES THROUGHOUT THE DEVELOPMENT LENGTH NOT LESS THAN THE CODE MINIMUM
OR
CLEAR SPACING AT LEAST TWO (2) BAR DIAMETERS
CLEAR COVER AT LEAST ONE (1) BAR DIAMETER

CASE 2: ALL OTHER CASES

3. TOP BARS ARE DEFINED AS HORIZONTAL BARS WITH MORE THAN 12 INCHES OF CONCRETE CAST BELOW THE BARS.
4. TABULATED TENSION DEVELOPMENT LENGTHS HAVE BEEN CALCULATED WITH RESPECT TO NORMALWEIGHT CONCRETE. FOR LIGHTWEIGHT CONCRETE, MULTIPLY THE TABULATED VALUES BY 1.3.
5. FOR EPOXY COATED BARS, MULTIPLY THE TABULATED VALUES BY ONE OF THE FOLLOWING FACTORS:
1.5 FOR EPOXY COATED BARS WITH COVER LESS THAN 3 BAR DIAMETERS, OR CLEAR SPACING LESS THAN 6 BAR DIAMETERS
1.2 FOR ALL OTHER EPOXY COATED BARS
6. FOR GRADE 75 REINFORCING BARS, LENGTHS MUST BE MULTIPLIED BY 1.25
7. FOR GRADE 80 REINFORCING BARS, LENGTHS MUST BE MULTIPLIED BY 1.34

NOTES : 1. TABULATED TENSION LAP SPLICE LENGTHS ARE GIVEN IN INCHES, AND ARE CALCULATED FOR REINFORCEMENT CONFORMING TO ASTM A615 GRADE 60 AS PER THE REQUIREMENTS OF ACI 318-08.
2. CASES 1 AND 2 DEPEND UPON CONCRETE COVER AND THE CENTER-T0-CENTER SPACING OF THE BARS, DEFINED AS FOLLOWS:

CASE 1: CLEAR SPACING AT LEAST ONE (1) BAR DIAMETER
CLEAR COVER AT LEAST ONE (1) BAR DIAMETER
STIRRUPS OR TIES THROUGHOUT THE DEVELOPMENT LENGTH NOT LESS THAN THE CODE MINIMUM
OR
CLEAR SPACING AT LEAST TWO (2) BAR DIAMETERS
CLEAR COVER AT LEAST ONE (1) BAR DIAMETER

CASE 2: ALL OTHER CASES

3. TOP BARS ARE DEFINED AS HORIZONTAL BARS WITH MORE THAN 12 INCHES OF CONCRETE CAST BELOW THE BARS.
4. TABULATED TENSION DEVELOPMENT LENGTHS HAVE BEEN CALCULATED WITH RESPECT TO NORMALWEIGHT CONCRETE. FOR LIGHTWEIGHT CONCRETE, MULTIPLY THE TABULATED VALUES BY 1.3.
5. FOR EPOXY COATED BARS, MULTIPLY THE TABULATED VALUES BY ONE OF THE FOLLOWING FACTORS:
1.5 FOR EPOXY COATED BARS WITH COVER LESS THAN 3 BAR DIAMETERS, OR CLEAR SPACING LESS THAN 6 BAR DIAMETERS
1.2 FOR ALL OTHER EPOXY COATED BARS
6. PROVIDE CLASS"B" SPLICE UNLESS NOTED OTHERWISE.
7. FOR GRADE 75 REINFORCING BARS, LENGTHS MUST BE MULTIPLIED BY 1.25
8. FOR GRADE 80 REINFORCING BARS, LENGTHS MUST BE MULTIPLIED BY 1.34
9. ACI 318 DOES NOT ALLOW TENSION LAP SPLICES OF #14, #18 OR #20 BARS.

As PROVIDED / As REQUIRED	MAXIMUM PERCENT OF As SPLICED WITHIN REQUIRED LAP LENGTH	
	50	100
EQUAL TO OR GREATER THAN 2	CLASS A	CLASS B
LESS THAN 2	CLASS B	CLASS B

WELD SIZE FOR COUPLER TO BE ARC-WELDED TO STRUCTURAL PLATES AND SHAPES								
REBAR SIZE	REBAR GRADE	ACI 318 TYPE 2 FORCE SPECIFIED TENSILE STRENGTH (LB)	COUPLER (SEE NOTE 2)	DIMENSIONS (INCH) (SEE NOTE 3)				REMARK
				A	B	C	D	
#4	60	18,000	EL12C2 OR EQUIVALENT	0.750	0.438	0.311	0.152	
#5	60	27,900	EL16C2 OR EQUIVALENT	1.000	0.563	0.374	0.165	
#6	60	39,600	EL20C3J OR EQUIVALENT	1.250	0.875	0.343	0.189	
#7	60	54,000	EL22C3J OR EQUIVALENT	1.250	0.750	0.405	0.296	
#8	60	71,100	EL25C3J OR EQUIVALENT	1.563	1.000	0.436	0.280	
#9	60	90,000	EL28C3J OR EQUIVALENT	1.563	0.938	0.468	0.415	
#10	60	114,300	EL32C3J OR EQUIVALENT	2.000	0.938	0.686	0.336

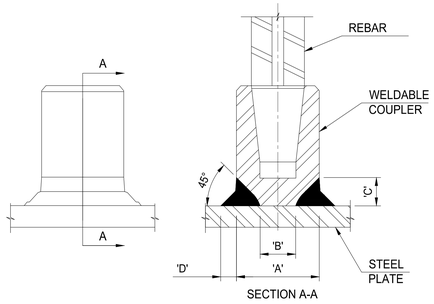
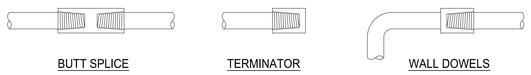
#14	80	236,250						SEE NOTE 4
#18	80	420,000						SEE NOTE 4
#20	80	515,550						SEE NOTE 4

NOTE: 1. USE E80XX ELECTRODES WITH STEEL THAT HAS A YIELD STRESS OF 65 KSI AND E70XX ELECTODES WITH STEEL THAT HAS A YIELD STRESS OF 50 KSI
2. PROVIDE LENTON WELDABLE COUPLER C3J TO BE ARC-WELDED TO STRUCTURAL PLATES AND SHAPES OR COUPLERS THAT MEET OR EXCEED STRENGTH OF EQUIVALENT LENTON WELDABLE COUPLER.
3. WHEN DIMENSIONS A, B, C OF COUPLERS TO BE INSTALLED ARE DIFFERENT FROM THOSE OF COUPLERS IN THE ABOVE TABLE, THE CONNECTION WITH WELD SIZE OF THE COUPLERS SHALL DEVELOP THE ACI 318 TYPE 2 FORCES INDICATED ON THE ABOVE TABLE.
4. WELD SIZE OF WELDABLE COUPLERS FOR #14, #18 OF WHICH THE GRADE IS SPECIFIED 80 KSI SHALL DEVELOP THE ACI 318 TYPE 2 FORCES INDICATED ON THE ABOVE TABLE.

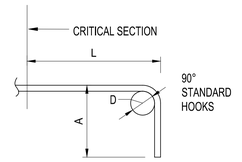


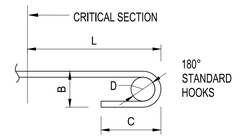
SECTION A-A

LENTON MECHANICAL SPLICES



5 NOTE: USE LENTON MECHANICAL SPLICES OR MECHANICAL SPLICES THAT MEET OR EXCEED STRENGTH OF EQUIVALENT LENTON SPLICE.





STANDARD HOOK DETAILING GEOMETRY AND TENSION DEVELOPMENT LENGTH

BAR SIZE	D	90° HOOKS	180° HOOKS		TENSION DEVELOPMENT LENGTH				
		A	B	C	f'c = 4000 psi	f'c = 5000 psi	f'c = 7000 psi	f'c = 8000 psi	f'c = 10000 psi, 12000 psi, 14000 psi
#3	2-1/4	6	3	5	7	7	6	6	6
#4	3	8	4	6	10	9	7	7	6
#5	3-3/4	10	5	7	12	11	9	9	8
#6	4-1/2	12	6	8	15	13	11	10	9
#7	5-1/4	14	7	10	17	15	13	12	11
#8	6	16	8	11	19	17	15	14	12
#9	9-1/2	19	11-3/4	15	22	19	16	15	14
#10	10-3/4	22	13-1/4	17	24	22	19	17	16
#11	12	24	14-3/4	19	27	24	21	19	17
#14	18 1/4"	31	21-3/4	27	32	29	25	23	21
#18	24	41	28-1/2	36	43	39	33	31	27

NOTE : 1. TABULATED TENSION DEVELOPMENT LENGTHS AND STANDARD HOOK DETAILING GEOMETRY DIMENSIONS ARE GIVEN IN INCH, AND ARE CALCULATED FOR ASTM A615 GRADE 60 AS PER THE REQUIREMENTS OF ACI 318 (2005).
2. 'D' REPRESENTS THE STANDARD HOOK FINISHED INSIDE BEND DIAMETER.
'A', 'B', AND 'C' REPRESENT DETAILING DIMENSIONS AS DEFINED IN THE KEY DETAILS
TABULATED TENSION DEVELOPMENT LENGTHS HAVE BEEN CALCULATED WITH RESPECT TO NORMAL WEIGHT CONCRETE.
FOR LIGHTWEIGHT CONCRETE, MULTIPLY THE TABULATED VALUES BY 1.3
FOR EPOXY-COATED BARS, MULTIPLY THE TABULATED VALUES BY 1.2

COMPRESSION DEVELOPMENT LENGTH AND COMPRESSION LAP SPLICE LENGTH

BAR SIZE	COMPRESSION DEVELOPMENT LENGTH	COMPRESSION LAP SPLICE		
		fy = 60 ksi	fy = 75 ksi	fy = 80 ksi
#3	9	12	17	18
#4	11	15	21	24
#5	14	19	28	30
#6	17	23	33	36
#7	19	27	39	42
#8	22	30	44	48
#9	25	34	50	55
#10	28	38	56	61
#11	31	43	62	68
#14	38	-	-	-
#18	50	-	-	-

NOTE:
1. TABULATED COMPRESSION DEVELOPMENT LENGTHS AND COMPRESSION LAP SPLICES ARE GIVEN IN INCHES
2. TABULATED COMPRESSION DEVELOPMENT LENGTHS ARE CALCULATED FOR fy = 60 ksi.
FOR GRADE 75 REINFORCING BARS, COMPRESSION DEVELOPMENT LENGTHS = 1.25 X TABLE VALUE.
FOR GRADE 80 REINFORCING BARS, COMPRESSION DEVELOPMENT LENGTHS = 1.34 X TABLE VALUE.
ALL CONCRETE WITH f'c GREATER THAN OR EQUAL TO 3,000 PSI

NOTES
1. PROVIDE TEMPORARY TRUSS AS REQUIRED TO INSTALL BELT WALL ABOVE. TEMPORARY TRUSS MAY BE REMOVED AFTER ACHIEVING MINIMUM 80% OF CONCRETE STRENGTH, BUT NOT LESS THAN 28 DAYS AGE OF CONCRETE. VERTICAL SHORING CLOSE TO COLUMN CAN BE UTILIZED TO TRANSFER CONSTRUCTION LOADS TO COLUMNS. VERTICAL SHORING SHOULD BE PLACED AT LEAST (4) FOUR FLOORS BELOW UNTIL TEMPORARY TRUSS IS REMOVED.

DRAWING TITLE

RC WALL DETAILS

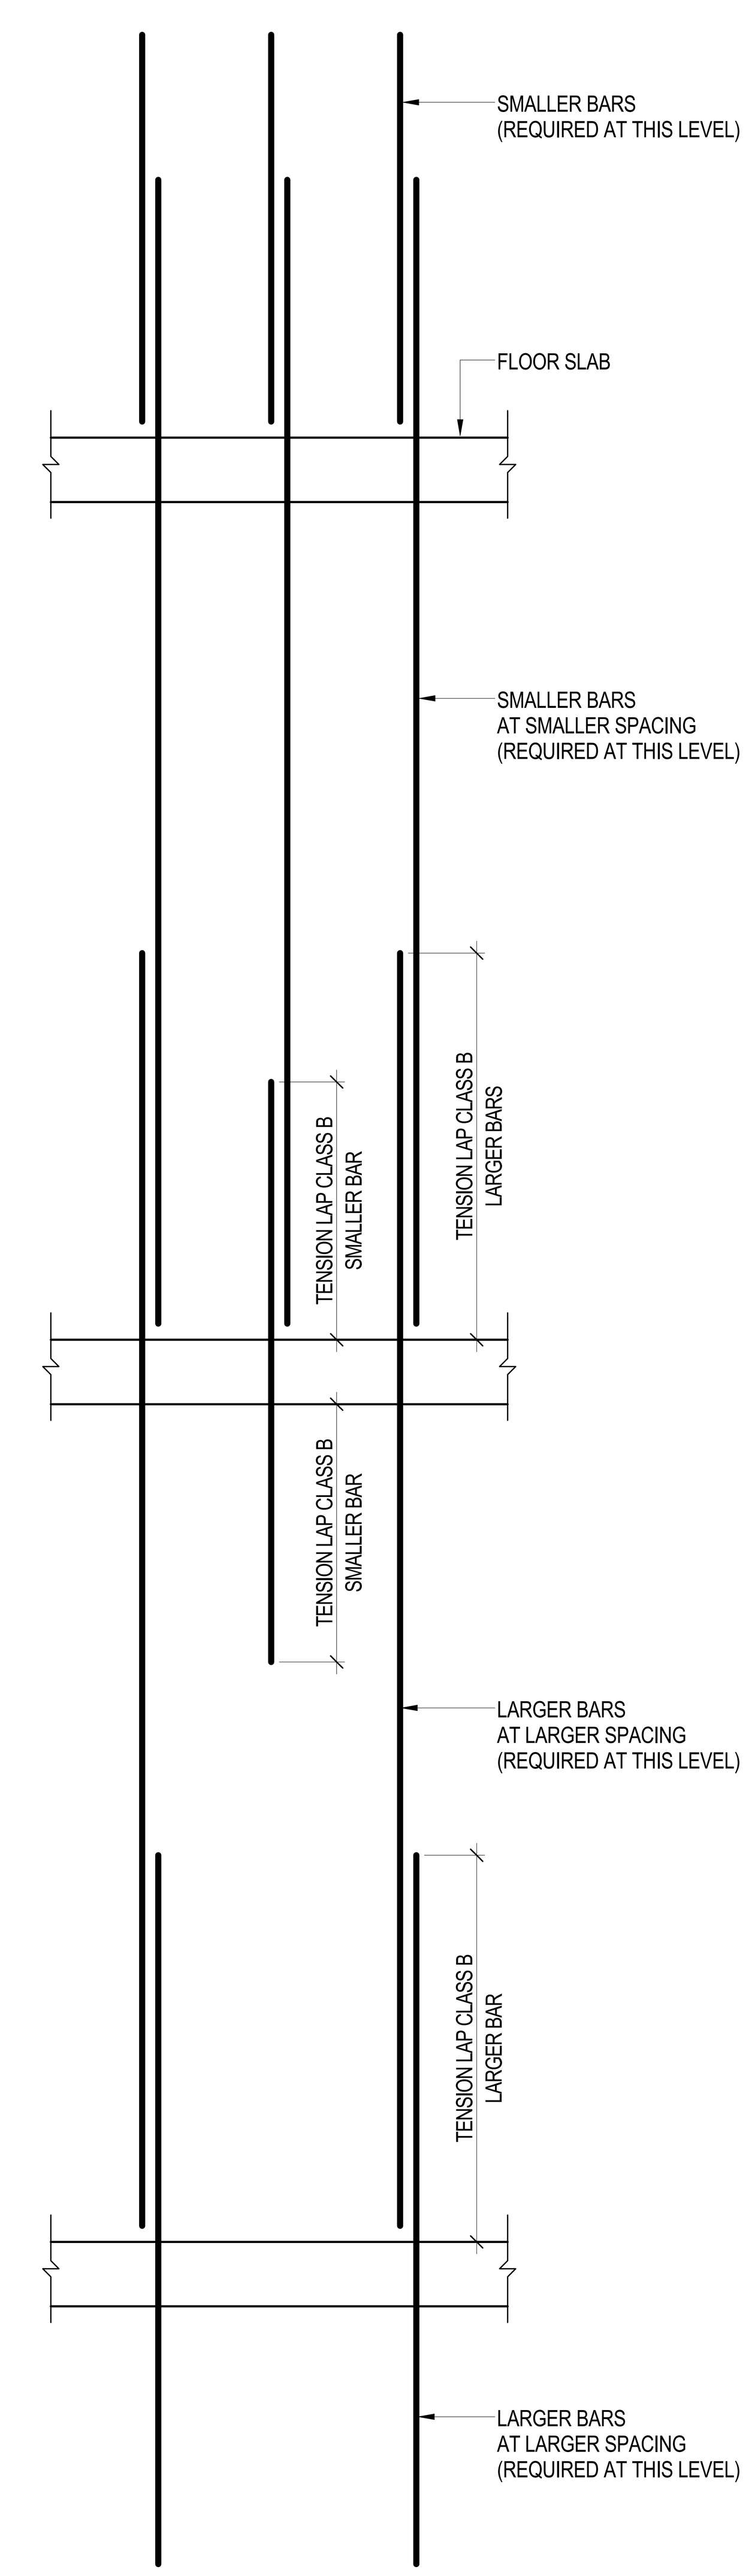
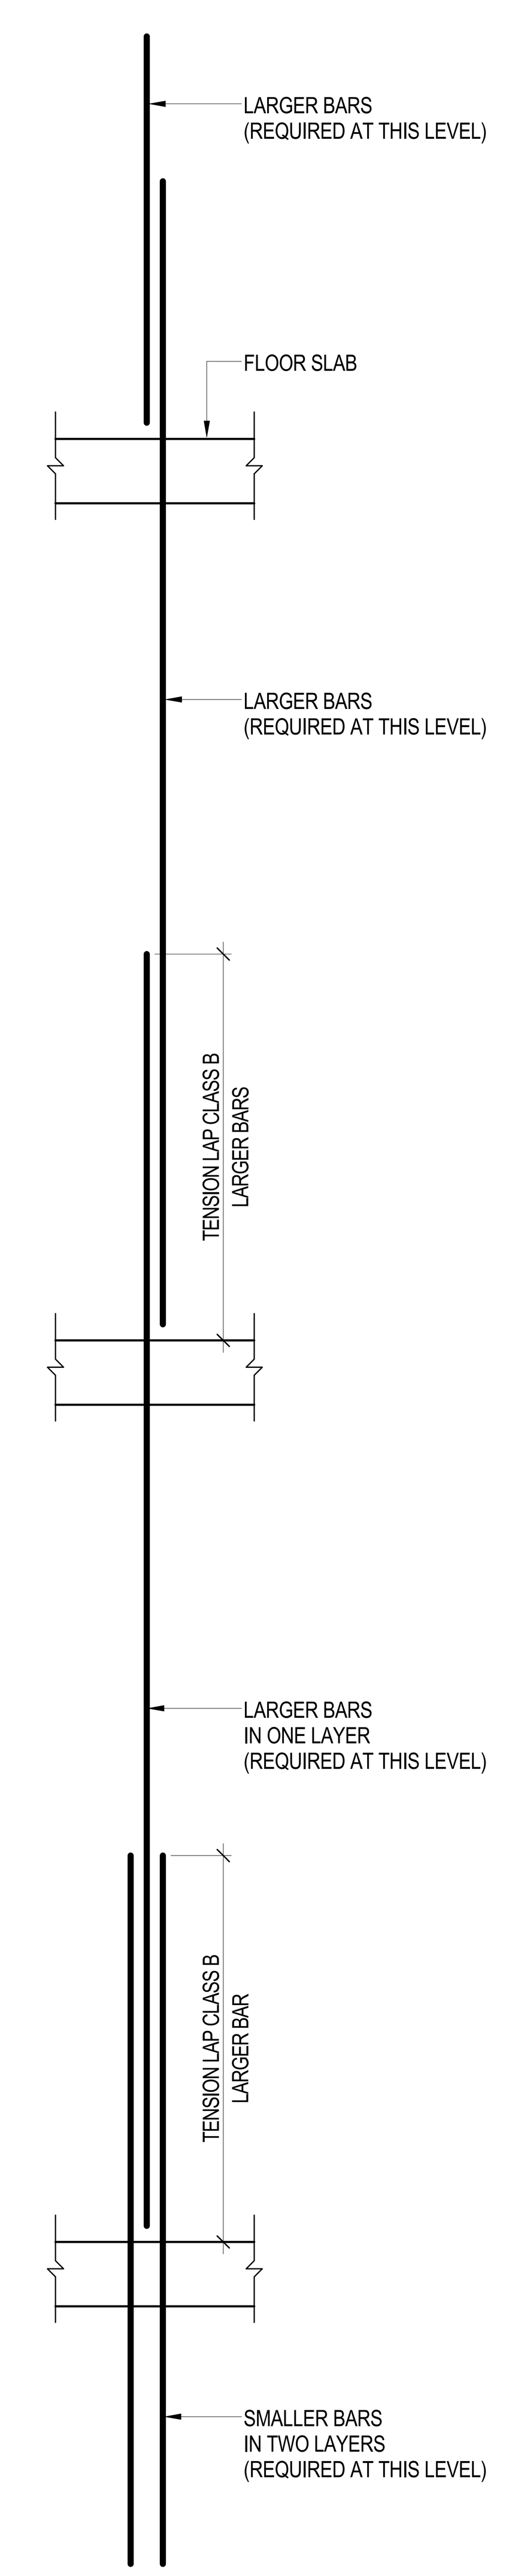
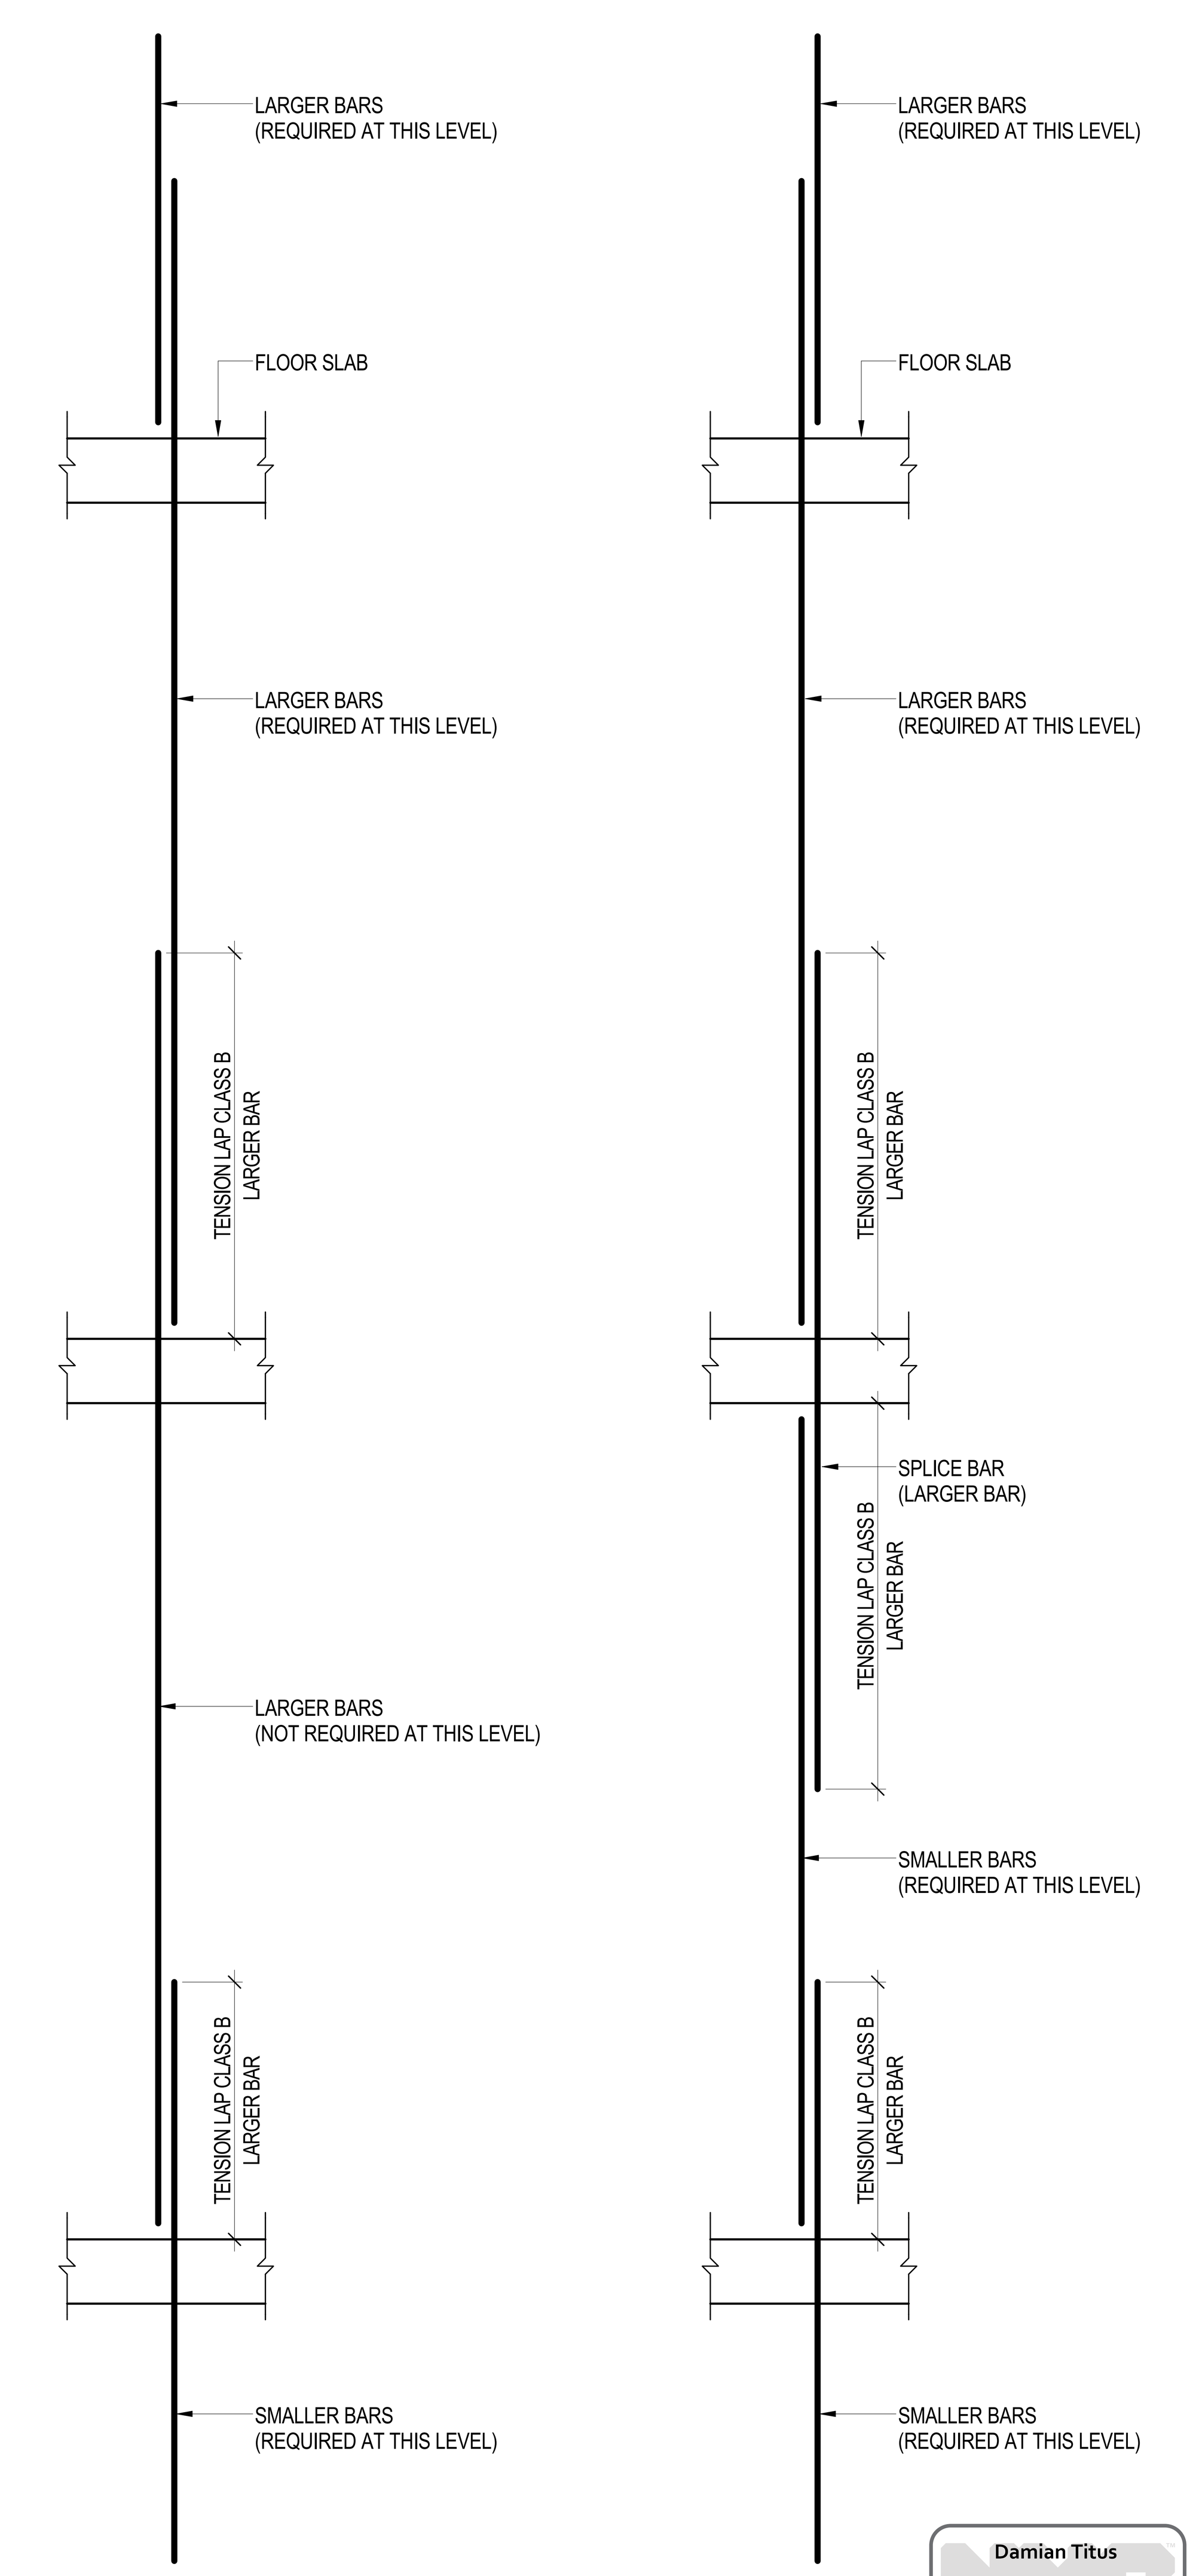
1 SMALLER BAR/SPACING TO LARGER BAR/SPACING TRANSITION
1/2" = 1'-0"



2 LARGER BAR/SPACING TO SMALLER BAR/SPACING TRANSITION
1/2" = 1'-0"



3 SMALLER BAR IN TWO LAYERS TO LARGER BAR IN ONE LAYER TRANSITION
1/2" = 1'-0"



4 SMALLER BAR TO LARGER BAR TRANSITION
1/2" = 1'-0"

Damian Titus
NYC Buildings
APPROVED
Under Directive 2 of 1975
AMENDED APPLICATION
Date: 02/17/2017

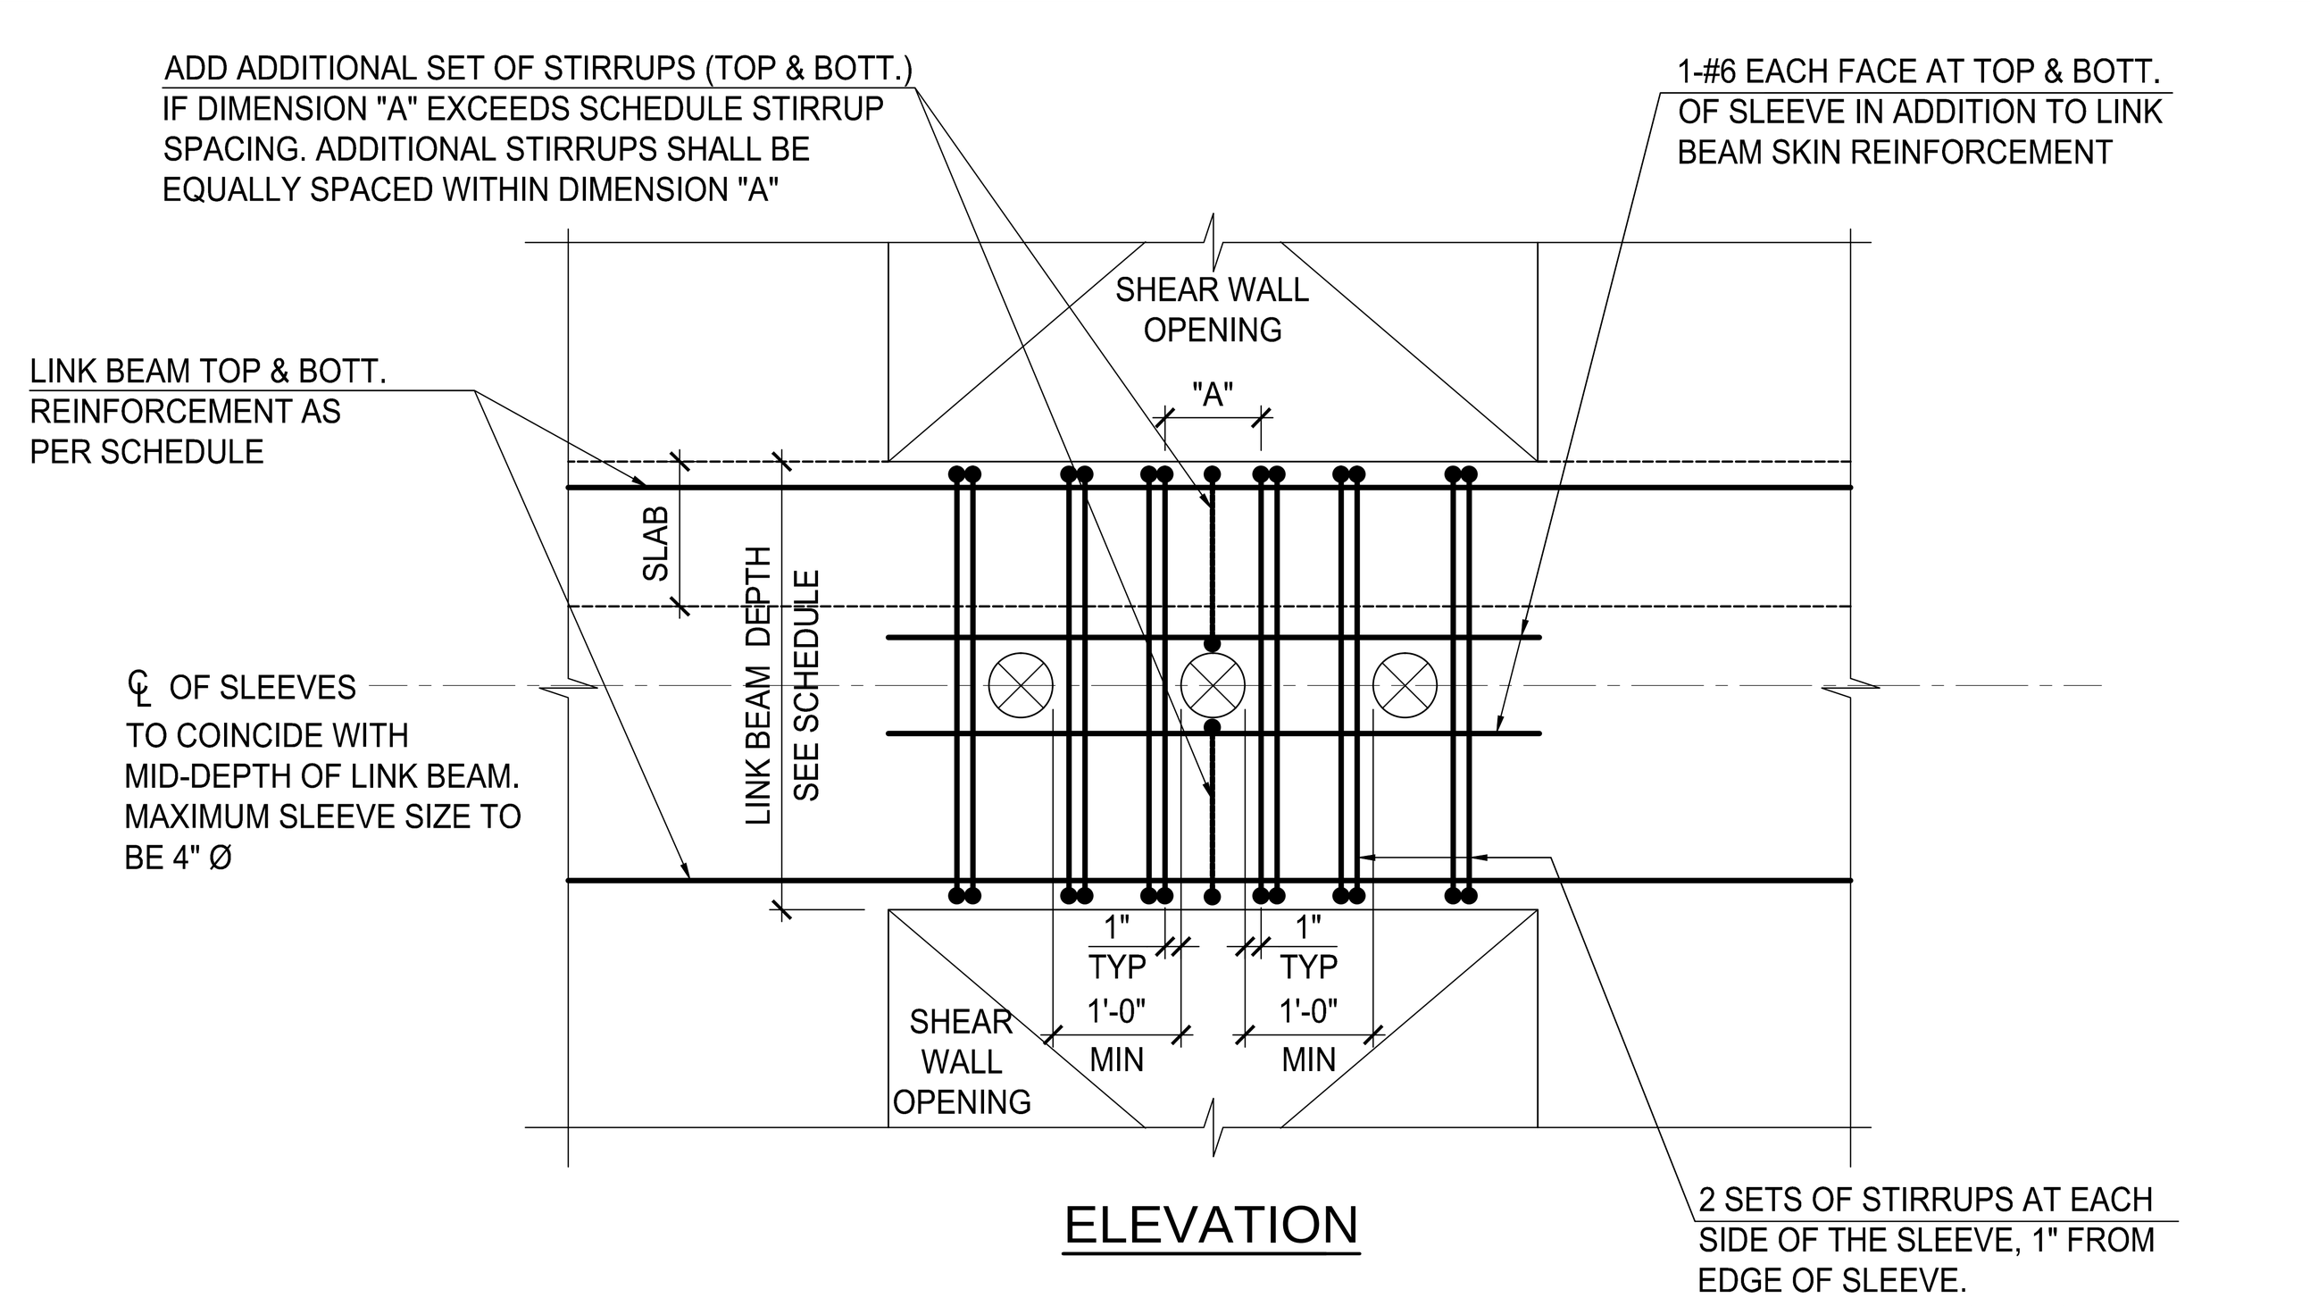
NOTE: TYPICAL WALL REINFORCEMENT AND SHEAR STUDS ON PLATE NOT SHOWN FOR CLARITY

ALTERNATE

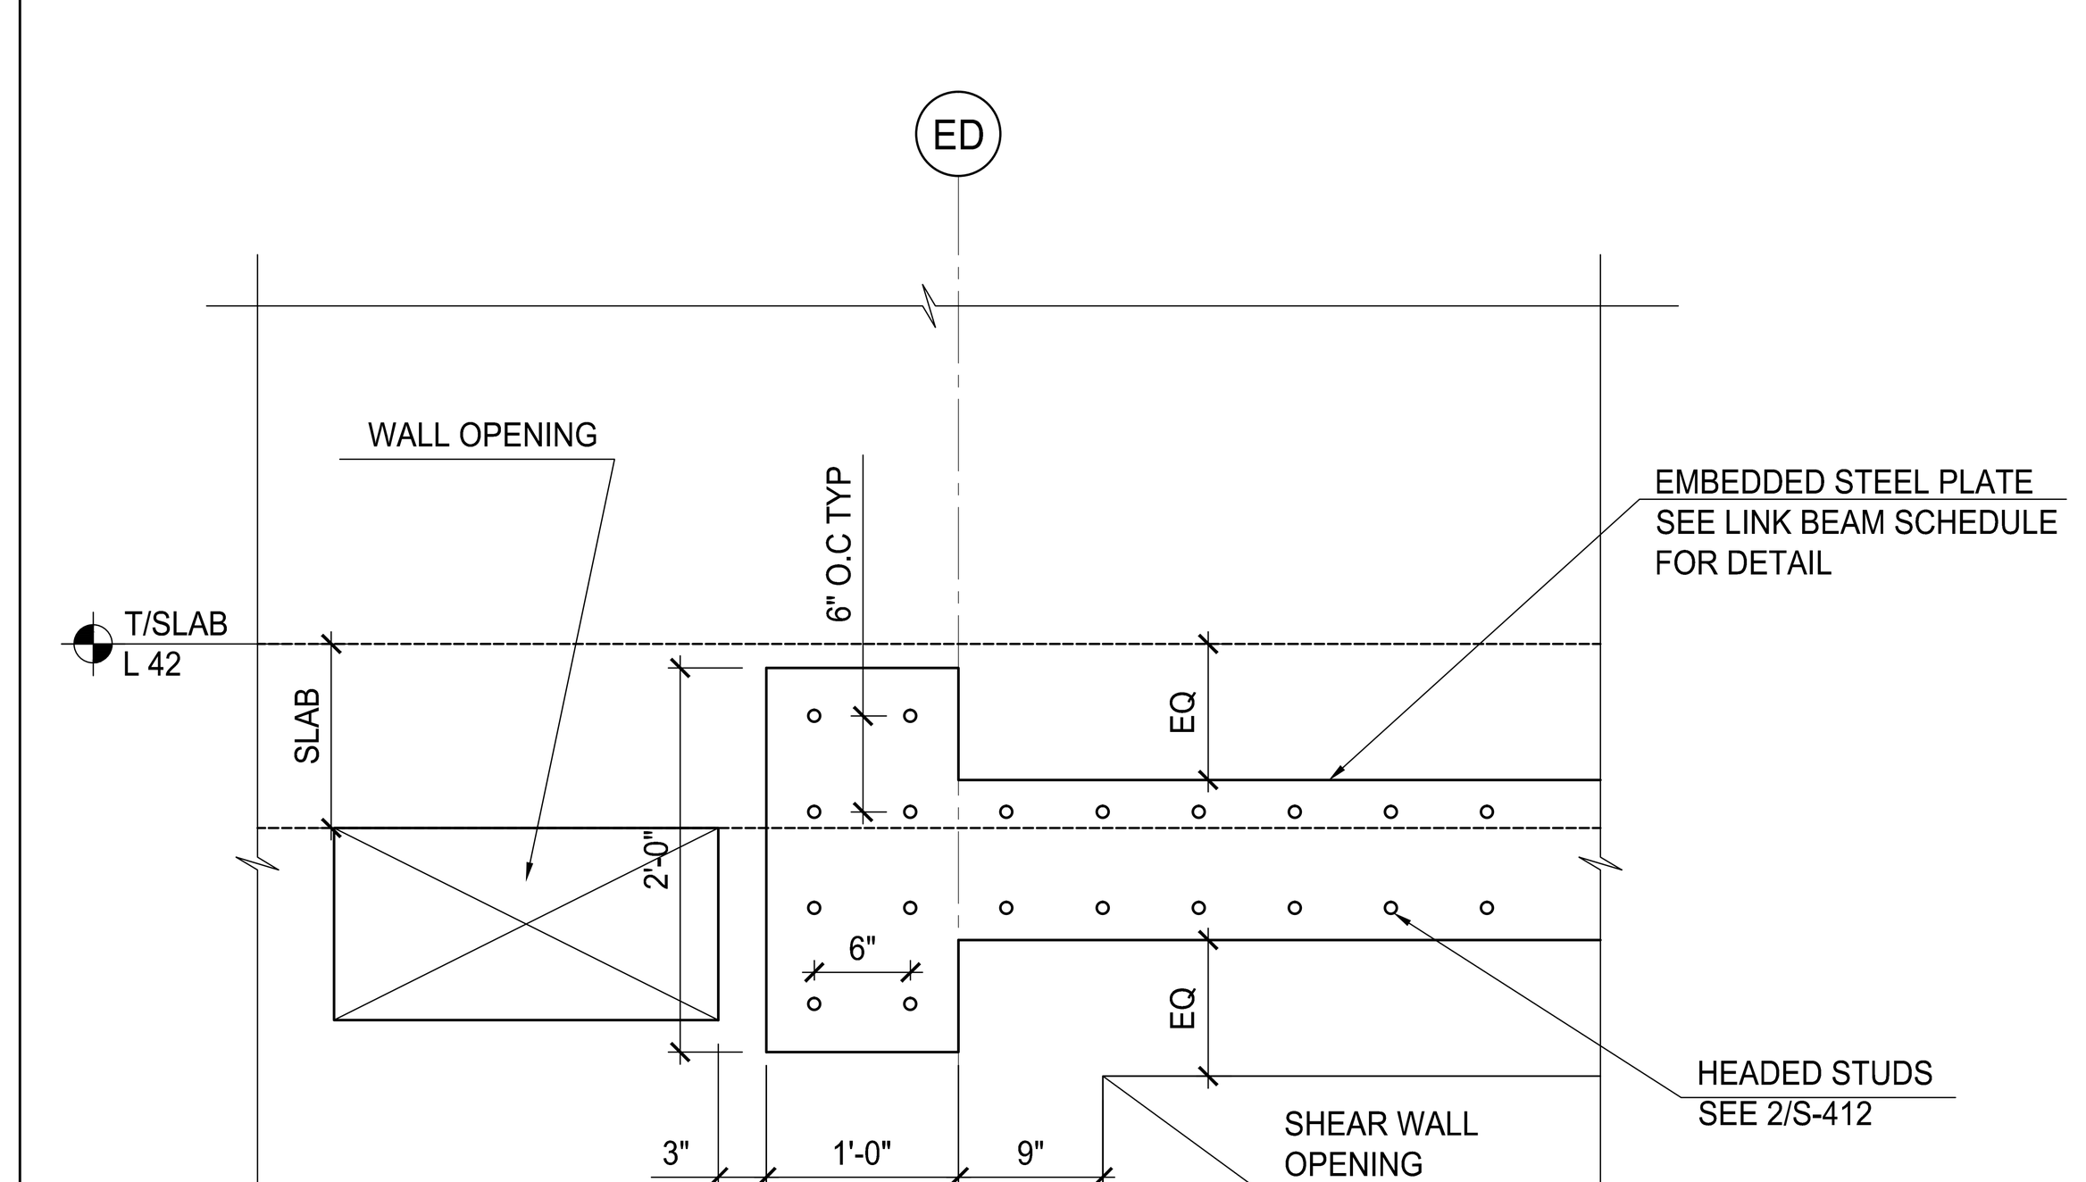
5 BOUNDARY ZONE / LINK BEAM EMBED PLATE THROUGH WALL
SCALE: 1/2" = 1'-0"



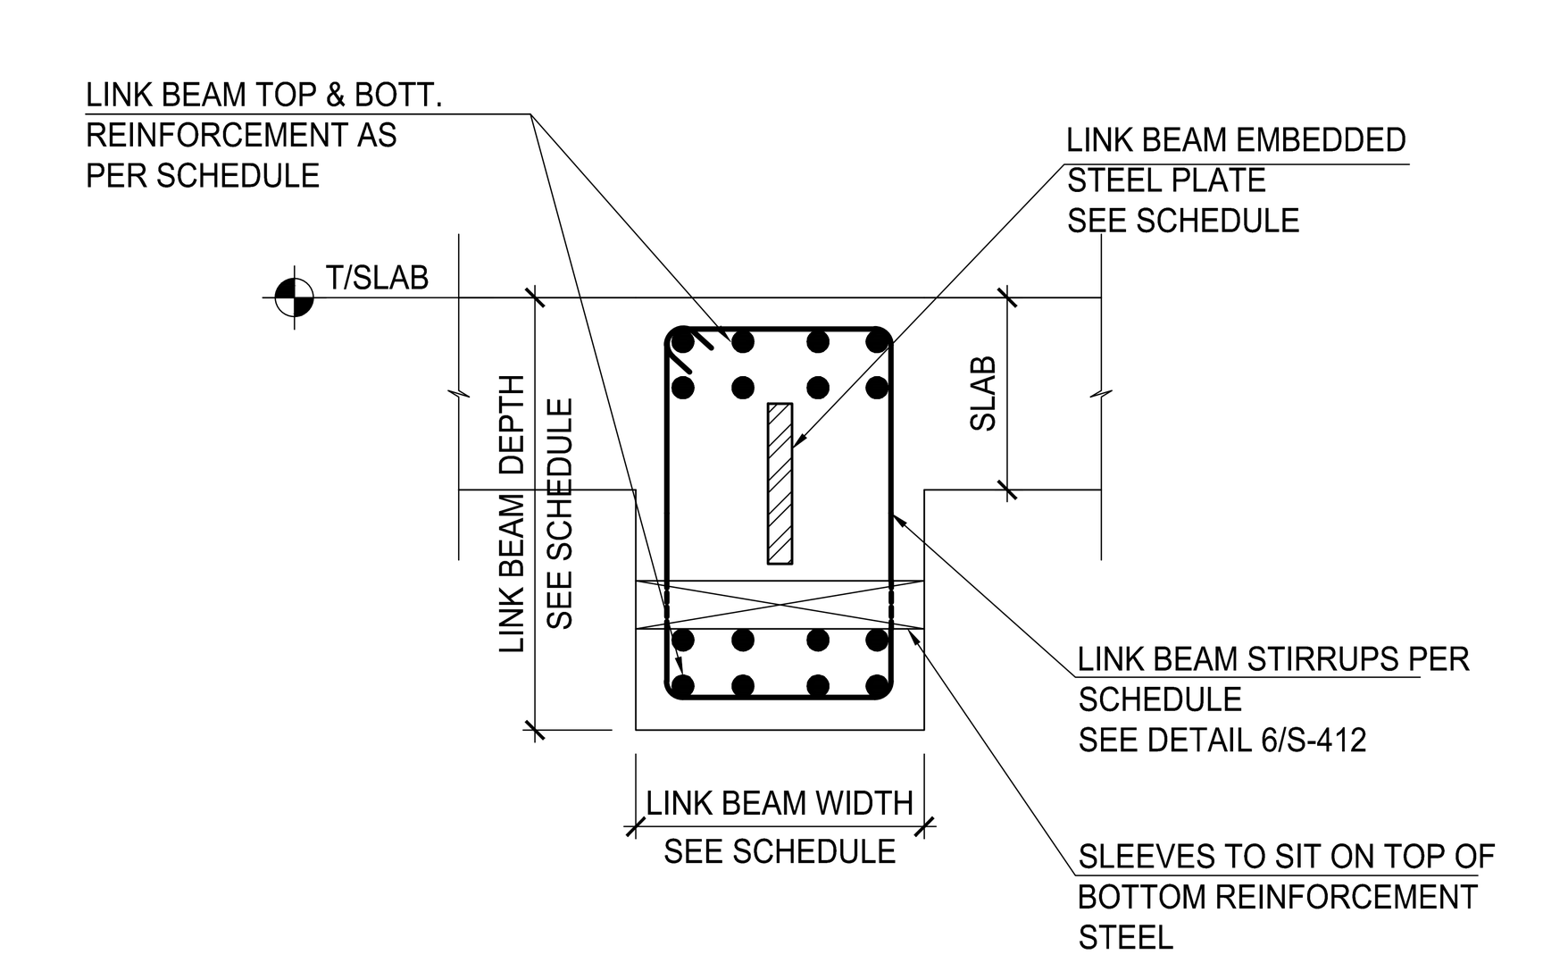
ELEVATION

NOTES:
1. ALL SCHEDULED BEAM REINFORCEMENT (NOT SHOWN) IS TO BE CONTINUOUS.
2. ALL SLEEVES SHALL BE POSITIONED & ALIGNED HORIZONTALLY AS INDICATED ON THE TYPICAL DETAIL.
3. SLEEVE PENERATIONS THAT DO NOT SATISFY THE REQUIREMENTS OF THIS DETAIL ARE NOT PERMITTED UNLESS REVIEWED AND APPROVED BY THE ENGINEER OF RECORD IN ADVANCE OF CONSTRUCTION.

6 TYPICAL SLEEVE PENETRATION DETAIL THROUGH LINK BEAMS
SCALE: N.T.S.



7 HAMMERHEAD EMBEDDED STEEL PLATE
SCALE: 1" = 1'



NOTES:
1. DETAIL APPLIES TO ALL LINK BEAM PENETRATION WHERE EMBEDDED STEEL IS PRESENT.
2. ALL SLEEVES SHALL BE POSITIONED & ALIGNED HORIZONTALLY AS INDICATED ON THE TYPICAL DETAIL.
3. SLEEVE PENERATIONS THAT DO NOT SATISFY THE REQUIREMENTS OF THIS DETAIL ARE NOT PERMITTED UNLESS REVIEWED AND APPROVED BY THE ENGINEER OF RECORD IN ADVANCE OF CONSTRUCTION.

8 TYPICAL SLEEVE PENETRATION THROUGH LINK BEAM WITH EMBED STEEL PLATE
SCALE: 1" = 1'

EMBEDDED BUILT-UP "I" BEAM AND STEEL PLATE NOTES

1. Structural material grades shall be as follows:

Plates: ASTM A572 Grade 50
Shear Stud Connectors: ASTM A108, Type B, Fu = 65

2. All welding electrodes shall be E70XX for 50 ksi steel.

3. All studs shall be 3/4" diameter x 6" long, UNO. For shop testing of studs, refer to technical specification.

4. Allowable field erection tolerance from the design centerline: 1/4" per 10'-0", 1/2" maximum (includes fabrication and material tolerances).

5. Survey field installed plate centerline at 5'-0" intervals prior to concrete wall pour. Provide survey results to the Engineer-of-Record for information at least three days prior to wall encasement pour.

6. The Contractor shall engage a structural engineer registered in the State of New York to design a temporary bracing/shoring to ensure the stability of the built up "I" beam and plate during construction, prior to the concrete pour.

7. The Contractor shall provide a methods statement to the Engineer of Record describing of erection procedures, methods of fixing the steel plate in the forms, and intended survey procedures (including the locations of survey points).

8. See Specification Section 051200, "Structural Steel Framing" for additional requirements.

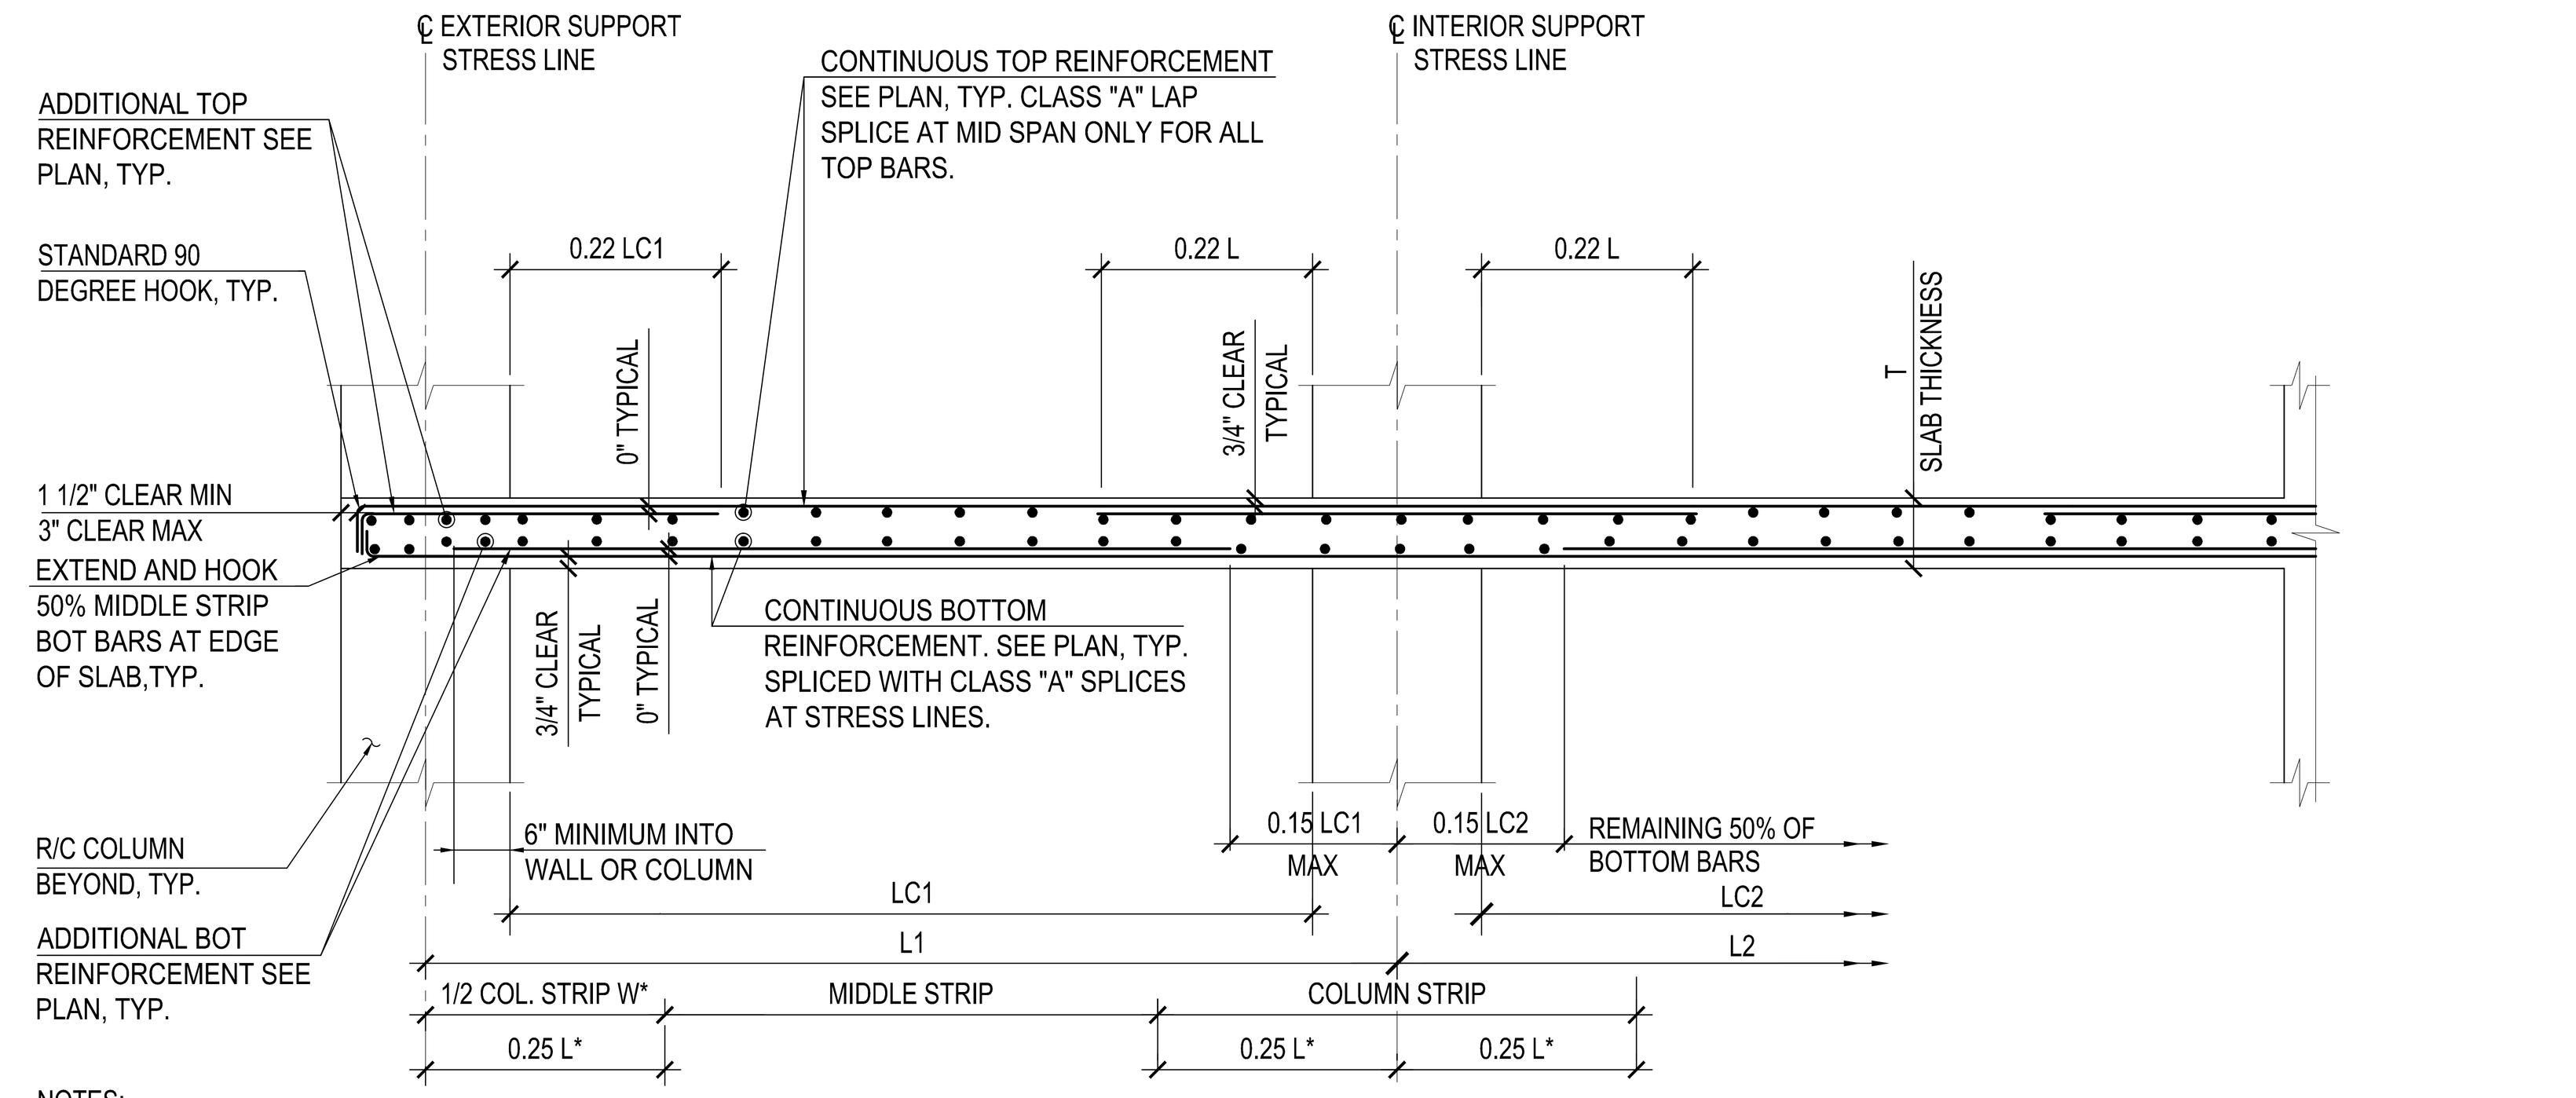
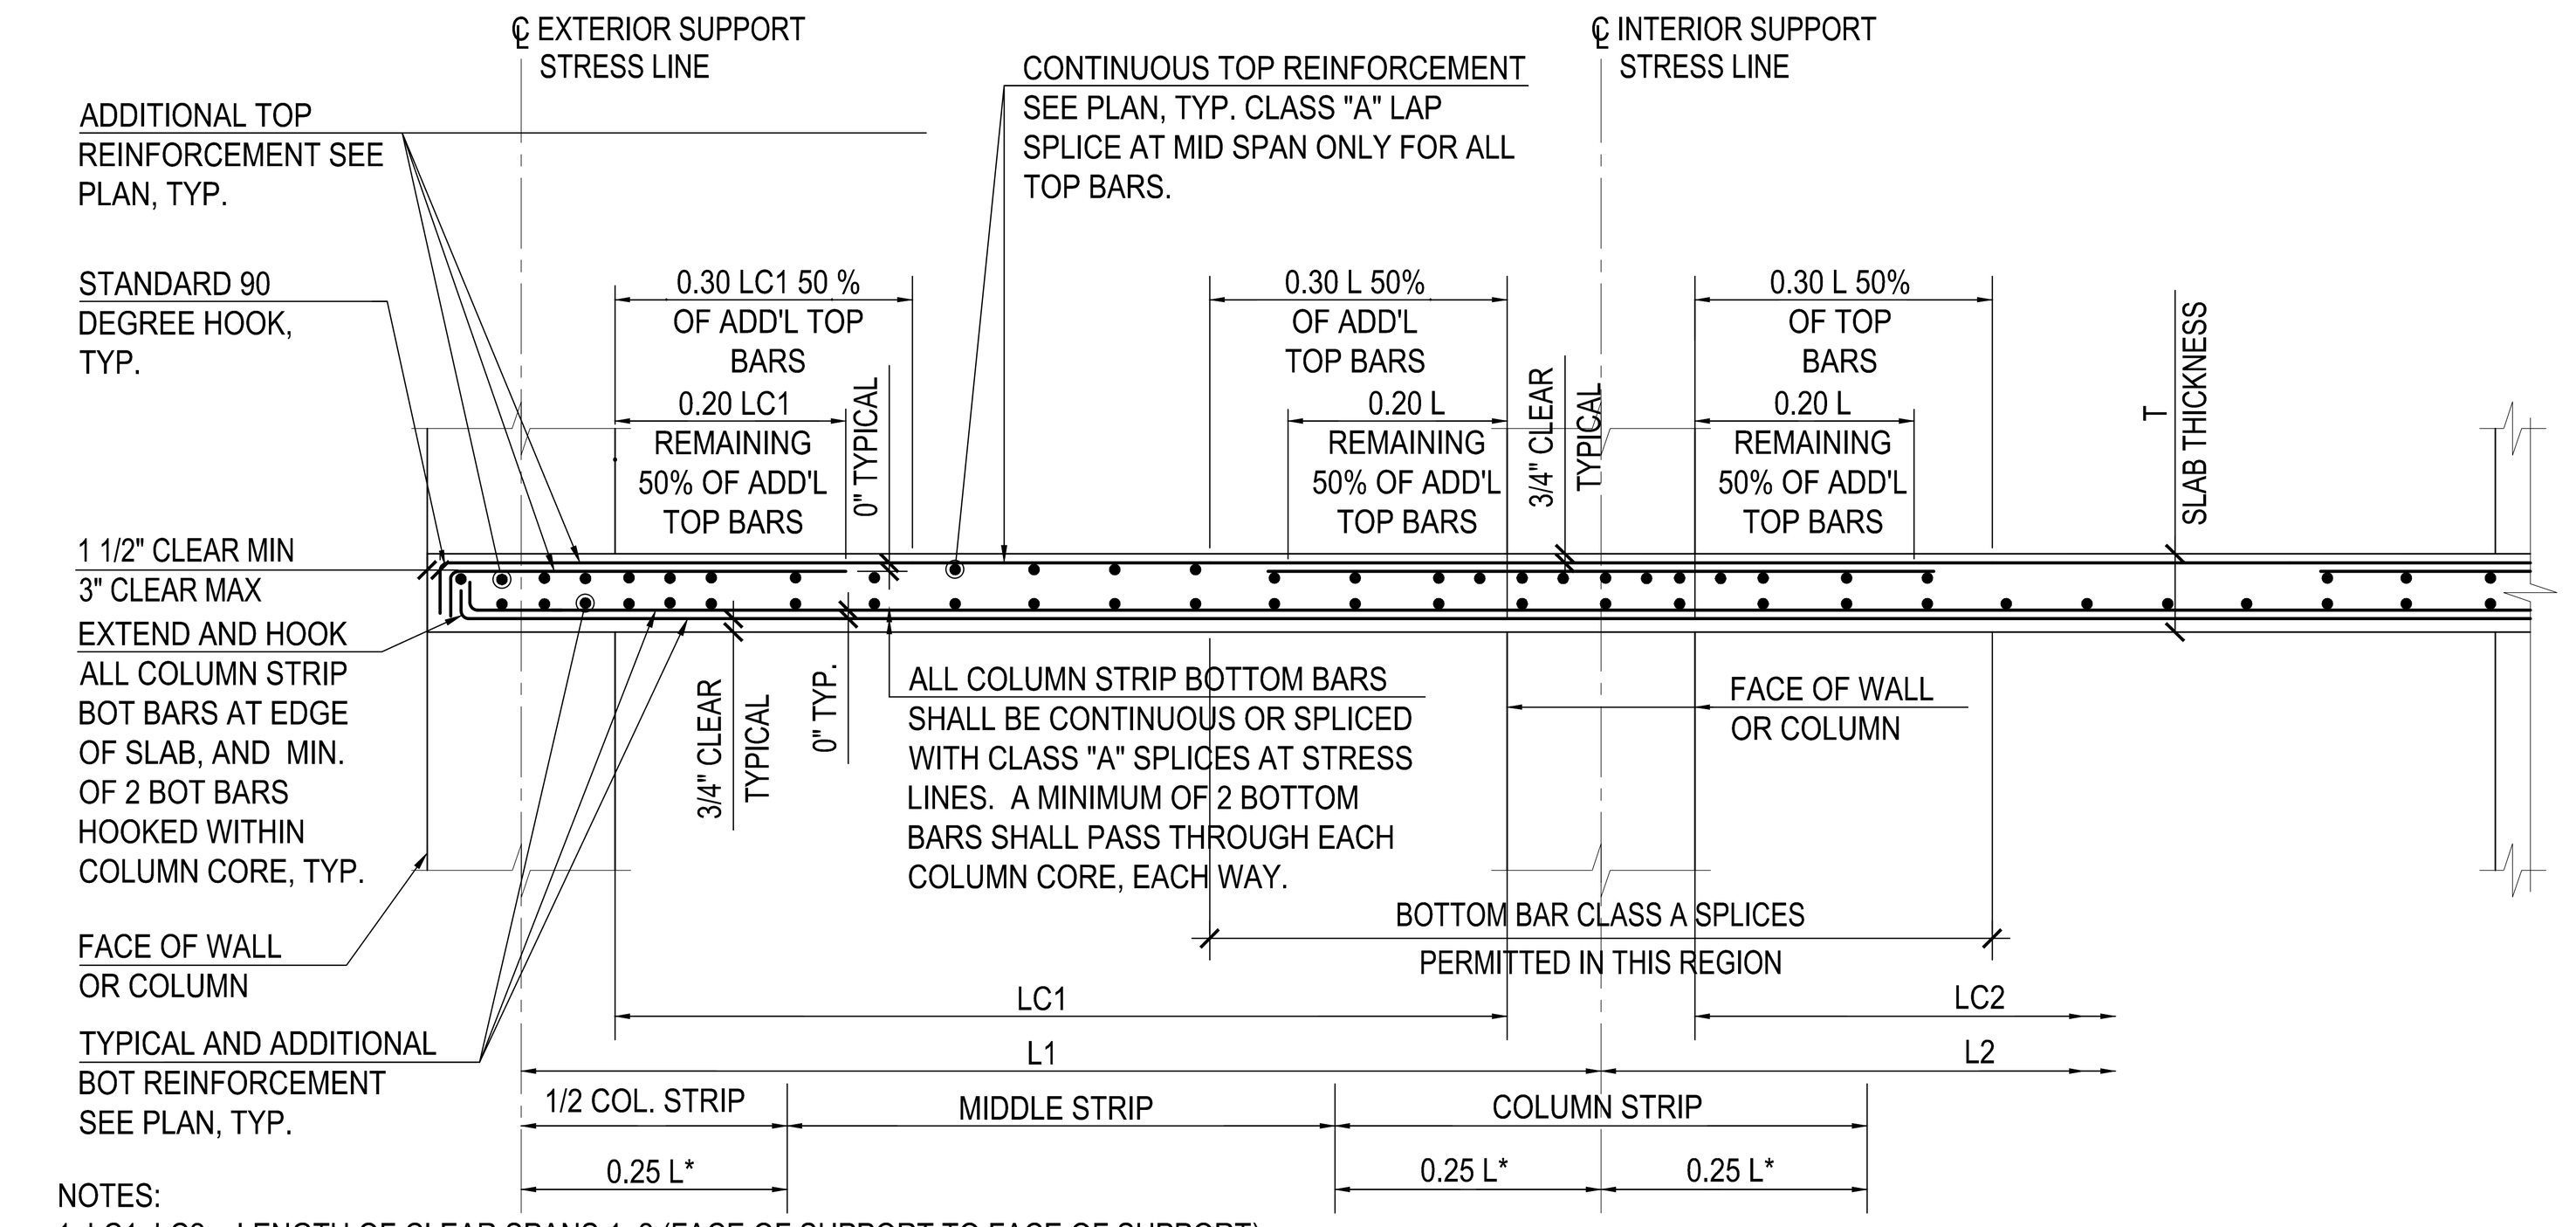
1 COLUMN AND MIDDLE STRIP DEFINITION
SCALE: NTS



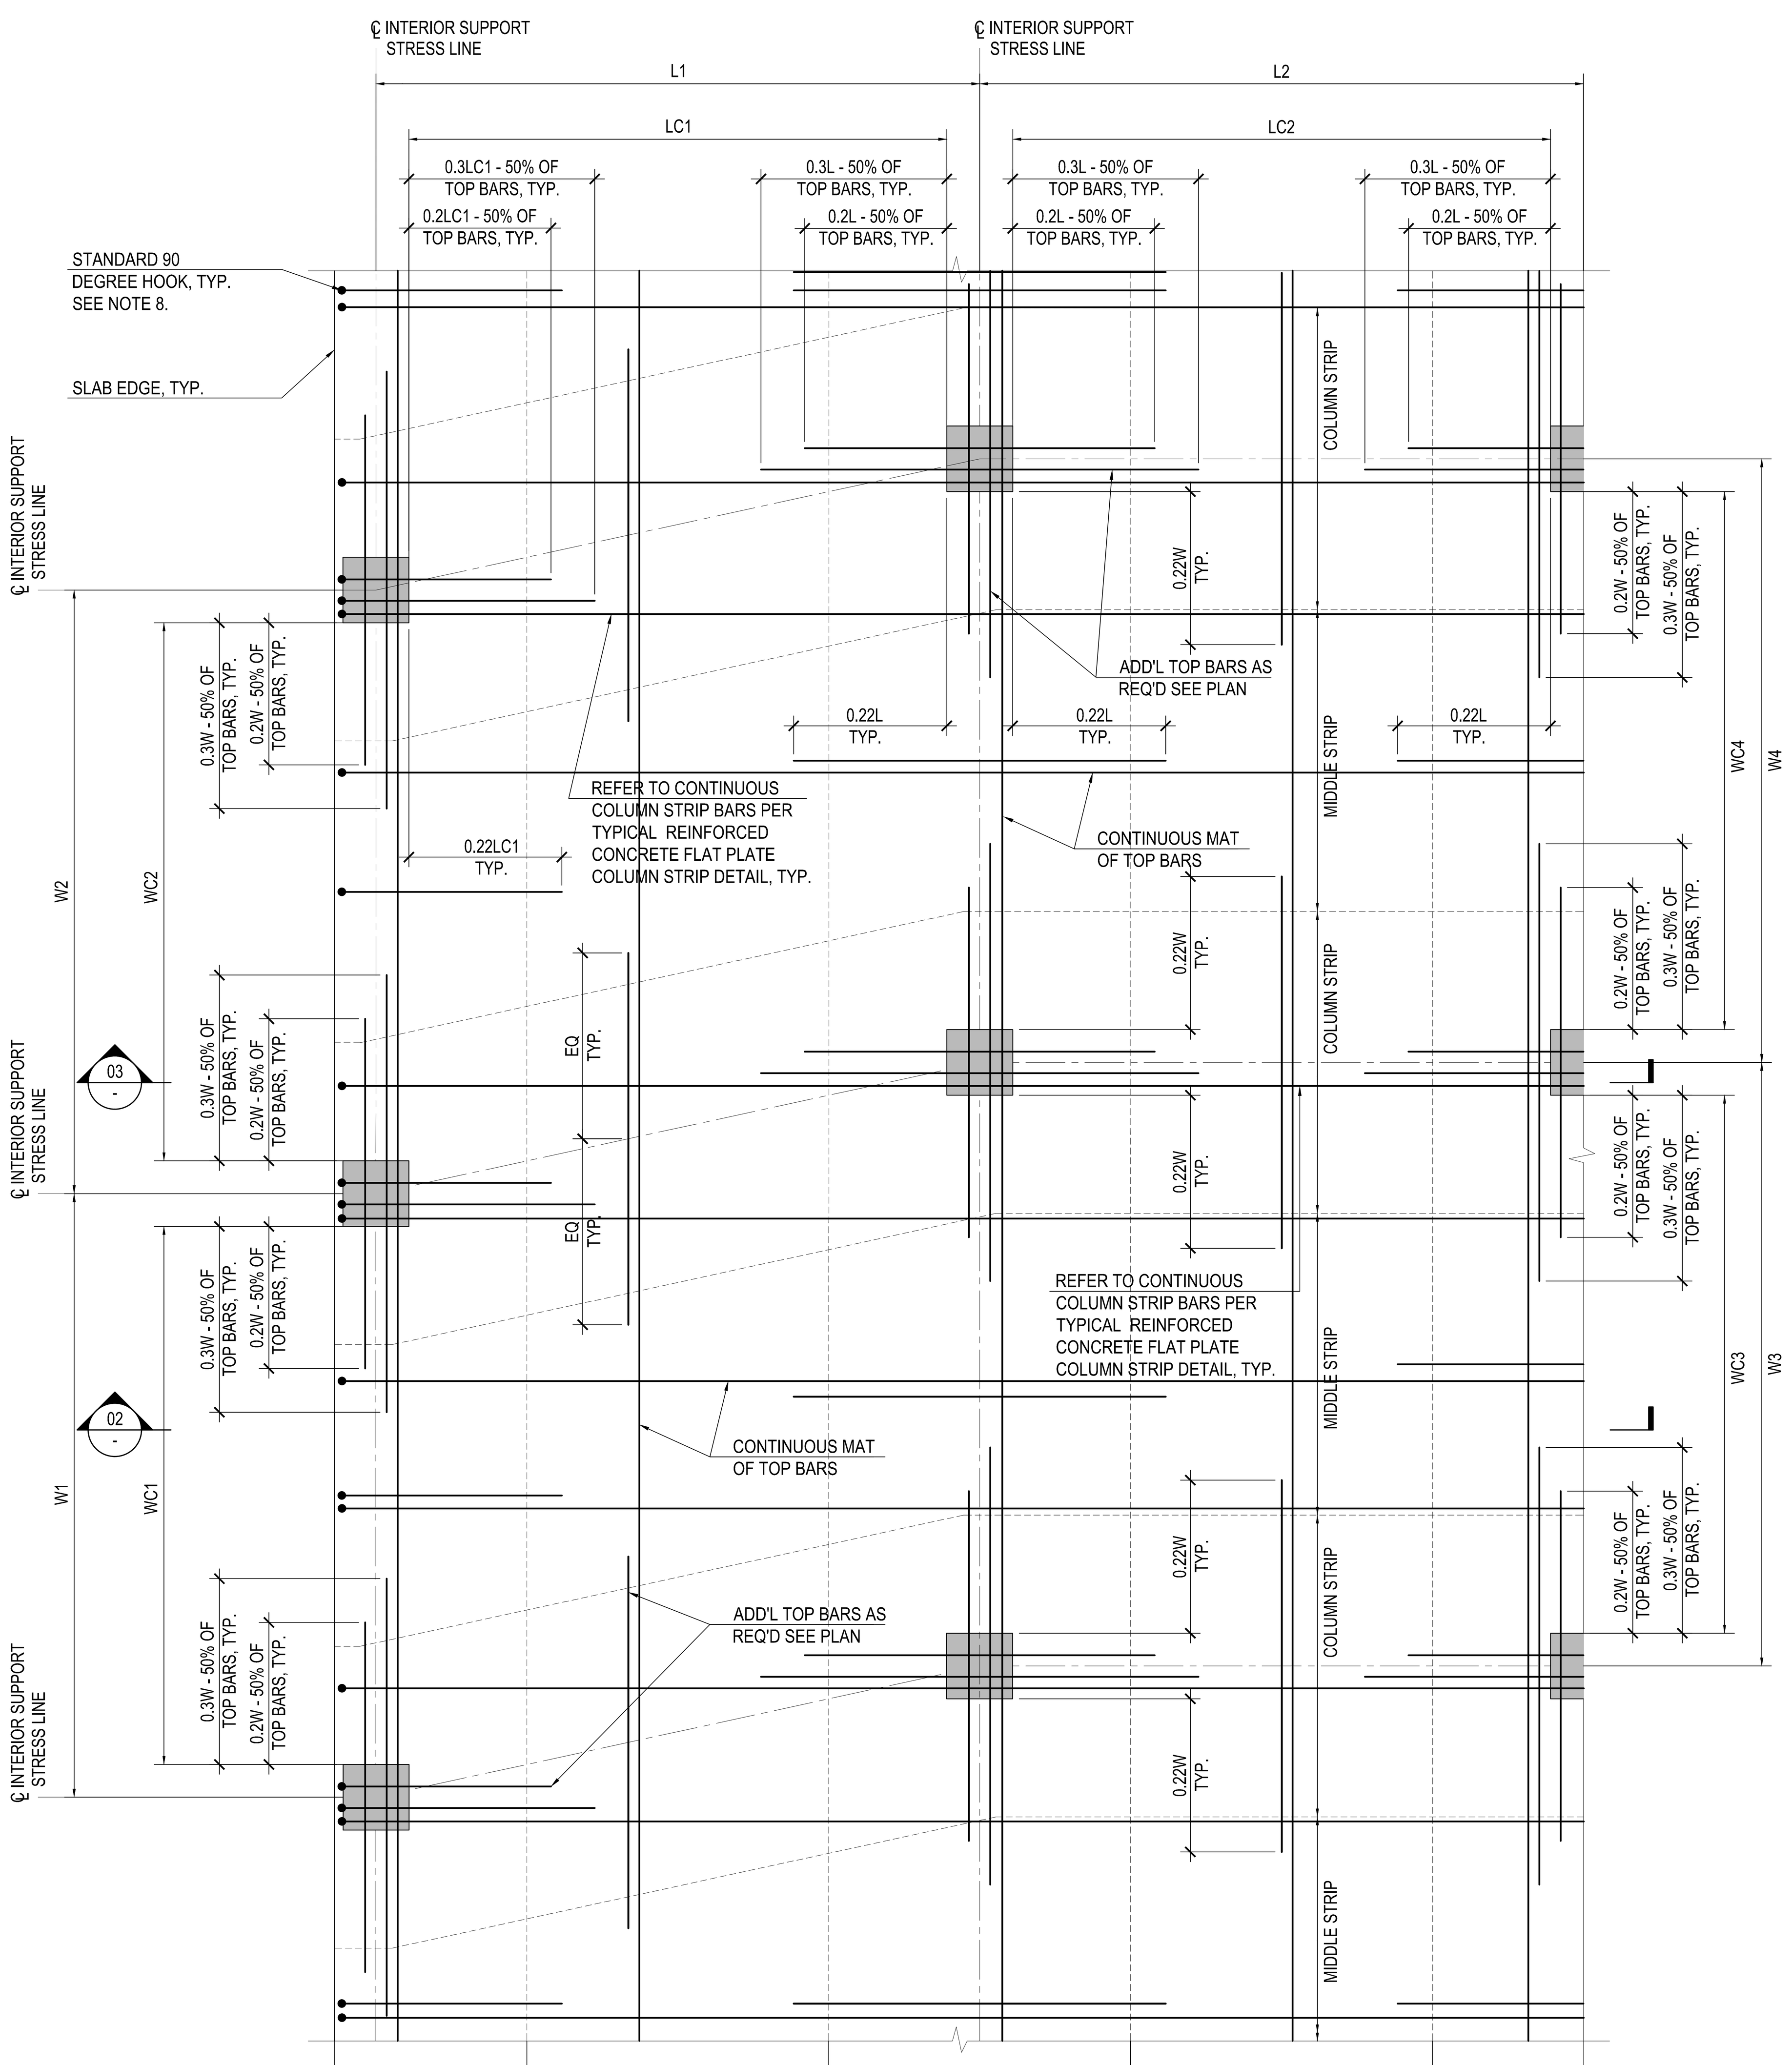
NOTES:
1. LC1, LC2 = LENGTH OF CLEAR SPANS 1, 2 (FACE OF SUPPORT TO FACE OF SUPPORT).
2. L = THE GREATER LENGTH OF CLEAR SPAN WC1 OR WC2.
3. L1, WL = LENGTH OF SPANS 1, 2 FROM CENTERLINE OF SUPPORT TO CENTERLINE OF SUPPORT.
4. L* = LEAST DIMENSION OF L1 AND LENGTH OF SPAN TRANSVERSE TO L1 (CENTER TO CENTER OF SUPPORT) OR LEAST DIMENSION OF L2 AND LENGTH OF A TRANSVERSE TO L2 (CENTER TO CENTER OF SUPPORT).
5. ALTERNATE DIFFERENT LENGTH OF BARS.
6. AT INTERIOR SUPPORT (CONTINUOUS END) PROVIDE LARGER SIZE AND NUMBER OF TOP BARS FROM ADJACENT SPANS.

2 TYPICAL REINFORCED CONCRETE FLAT PLATE MIDDLE STRIP
SCALE: NTS



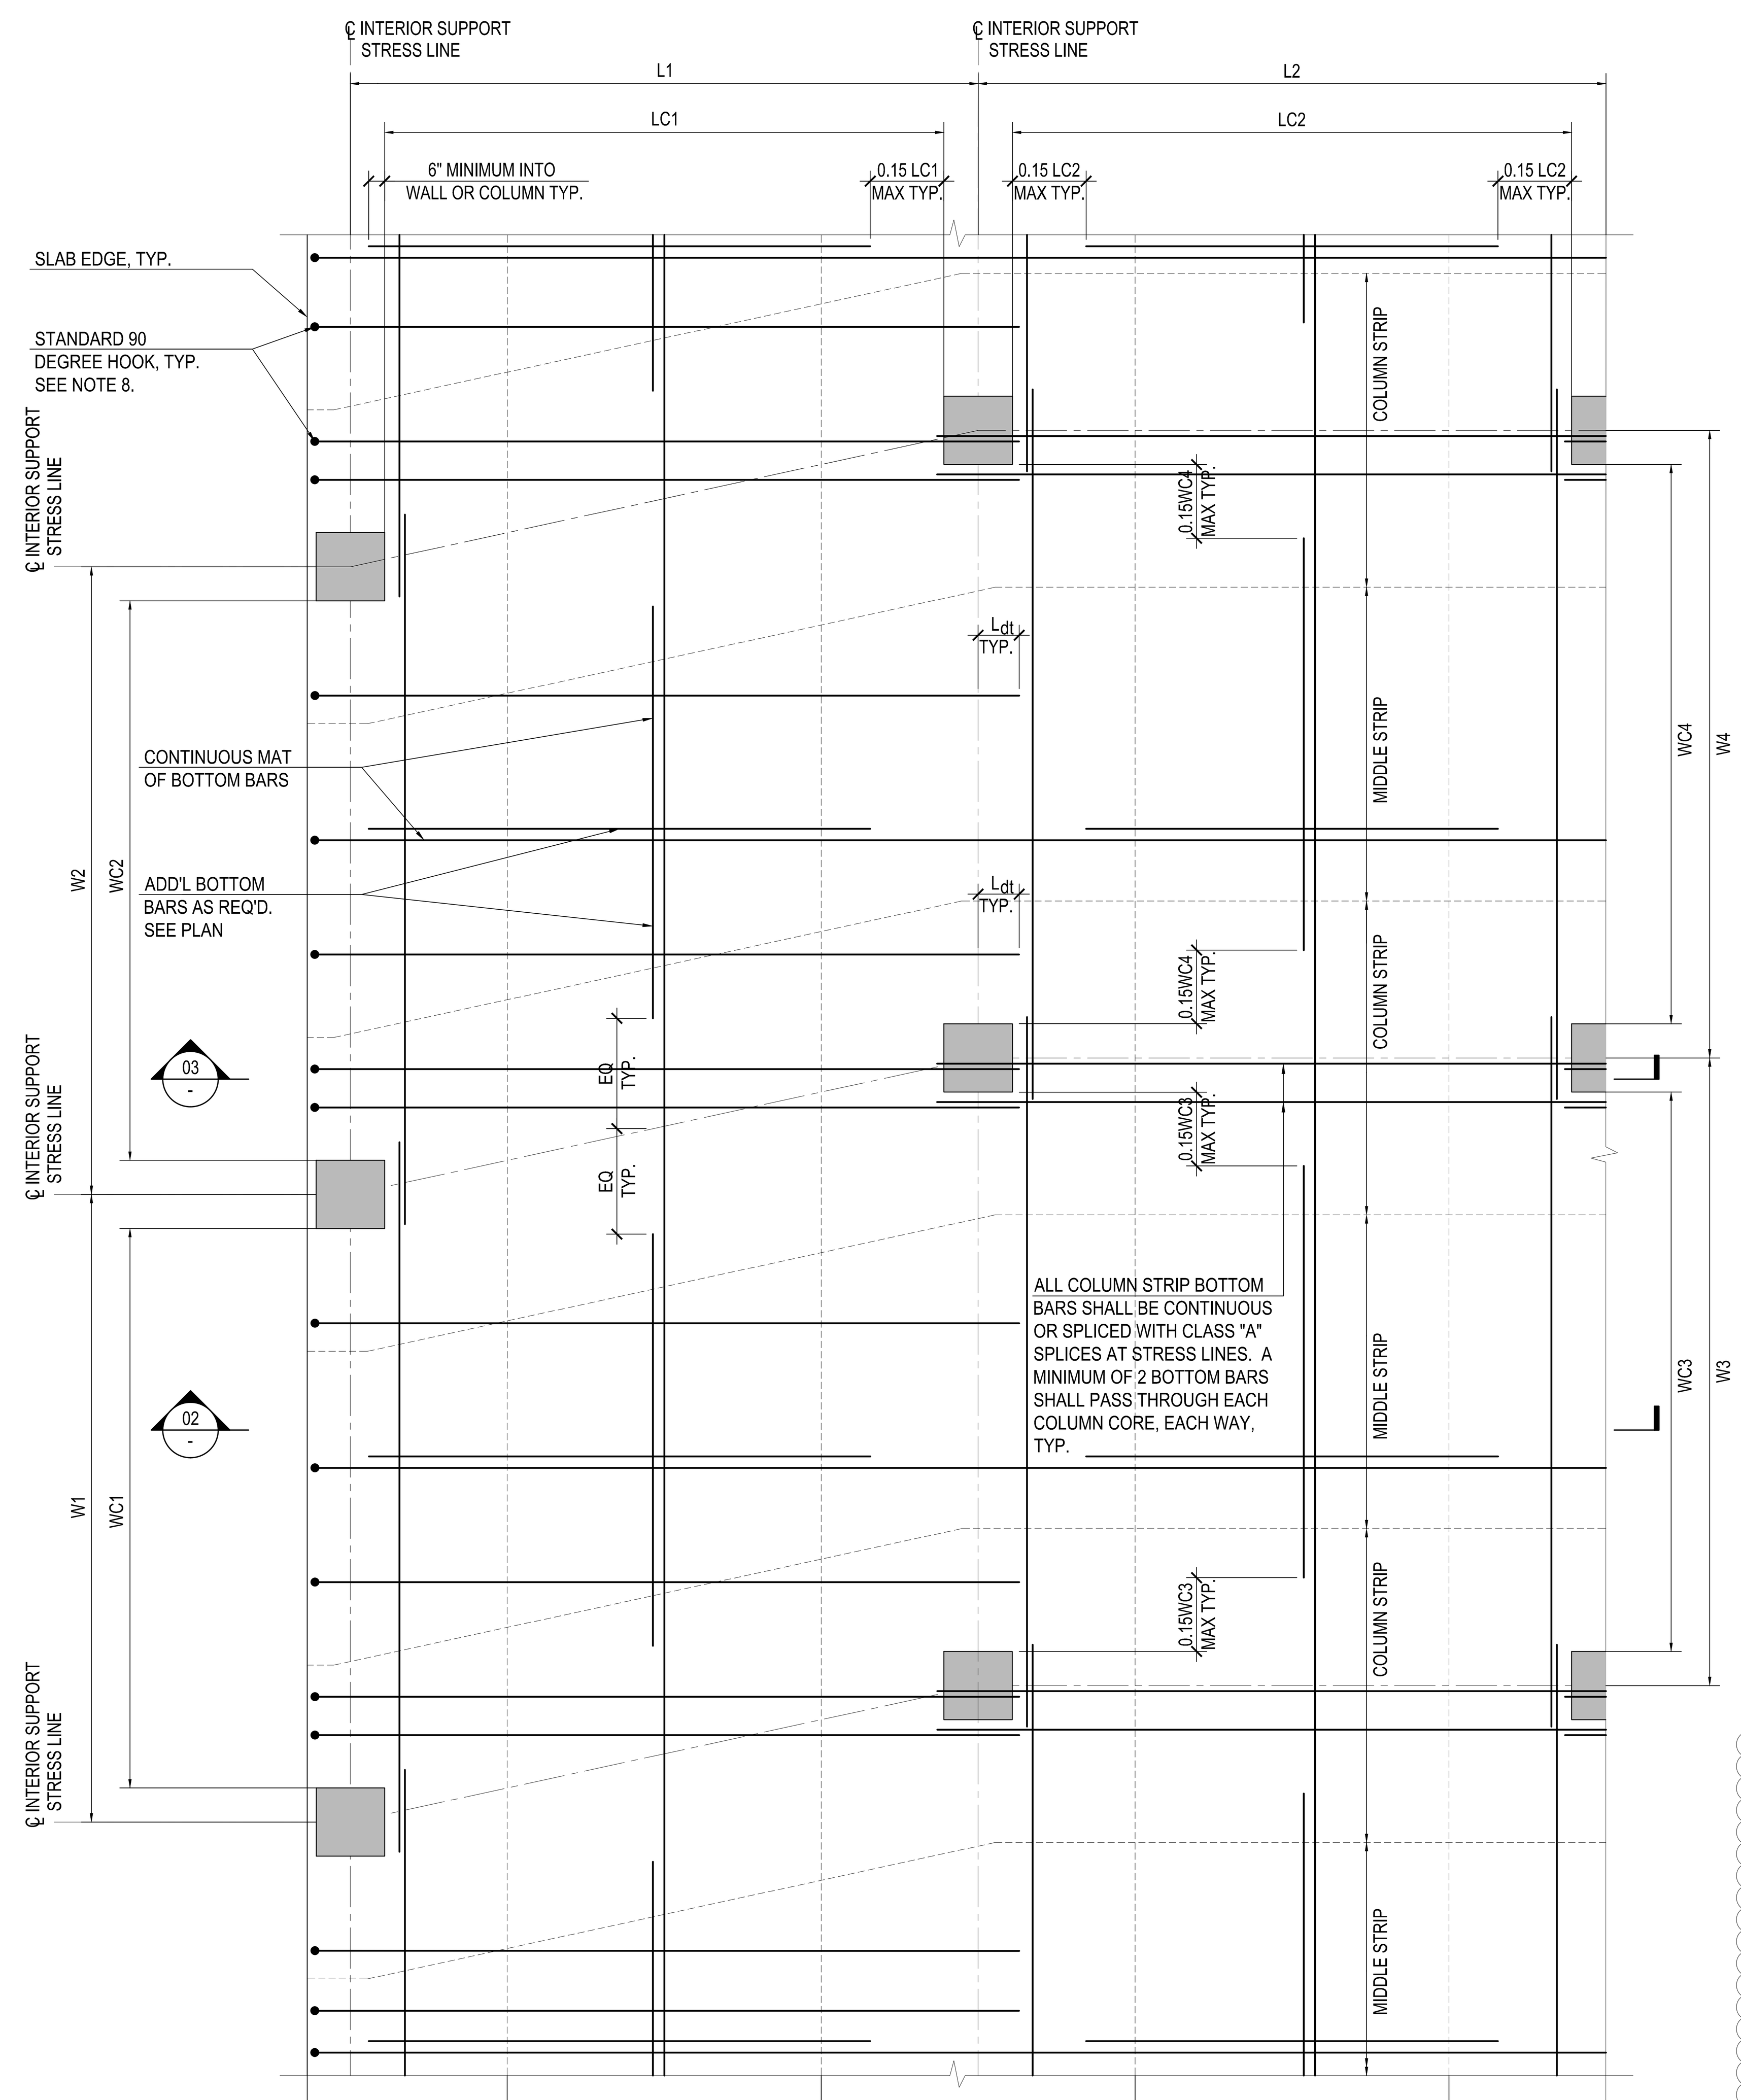
NOTES:
1. LC1, LC2 = LENGTH OF CLEAR SPANS 1, 2 (FACE OF SUPPORT TO FACE OF SUPPORT).
2. L = THE GREATER LENGTH OF CLEAR SPAN LC1 OR LC2.
3. L1, L2 = LENGTH OF SPANS 1, 2 FROM CENTERLINE OF SUPPORT TO CENTERLINE OF SUPPORT.
4. L* = LEAST DIMENSION OF L1 AND LENGTH OF SPAN TRANSVERSE TO L1 (CENTER TO CENTER OF SUPPORT) OR LEAST DIMENSION OF L2 AND LENGTH OF A TRANSVERSE TO L2 (CENTER TO CENTER OF SUPPORT).
5. ALTERNATE DIFFERENT LENGTH OF BARS.
6. AT INTERIOR SUPPORT (CONTINUOUS END) PROVIDE LARGER SIZE AND NUMBER OF TOP BARS FROM ADJACENT SPANS.
7. PROVIDE MIN. 0.0009 x Ag CONTINUOUS BARS, EACH FACE, WHERE Ag = GROSS CROSS-SECTION AREA OF CONCRETE. MAX. BAR SPACING = 18"

3 TYPICAL REINFORCED CONCRETE FLAT PLATE COLUMN STRIP
SCALE: NTS



NOTES:
1. OUTER MOST BARS SPAN IN THE NORTH-SOUTH DIRECTION.
2. FOR SIZE, SPACING, NUMBER, ETC... OF REINFORCING BARS, SEE PLAN.
3. WHERE COLUMN STRIP BAR LENGTHS ARE SHOWN ON FRAMING PLANS THEY ARE FOR LONGER BARS, WHICH ARE TO BE ALTERNATED WITH SHORTER BARS.
4. COLUMN STRIP BARS ARE TO BE CENTERED OVER COLUMNS UNLESS NOTED OTHERWISE ON PLAN.
5. MIDDLE STRIP BARS ARE TO BE CENTERED OVER STRESS LINES UNLESS NOTED OTHERWISE ON PLAN.
6. MIDDLE STRIP BARS ARE TO BE SPACED AS SHOWN ON PLANS. FIRST BAR IS TO BE LOCATED A DISTANCE FROM LAST COLUMN STRIP BAR NOT TO EXCEED MIDDLE STRIP BAR SPACING.
7. AT EXTERIOR SLAB EDGES, REFERENCE TYPICAL REINFORCEMENT AT SLAB EXTERIOR EDGE DETAIL.
8. PROVIDE 90° HOOKS AT EVERY DISCONTINUOUS TOP BAR AT SLAB EDGES FOR BOTH COLUMN AND MIDDLE STRIPS.
9. LC1, LC2 = LENGTH OF CLEAR SPANS 1, 2 (FACE OF SUPPORT TO FACE OF SUPPORT)
10. L = THE GREATER LENGTH OF ADJACENT CLEAR SPANS (LC1 OR LC2).
11. L1, L2 = LENGTH OF SPANS 1, 2 (CENTERLINE OF SUPPORT TO CENTERLINE OF SUPPORT).
12. WC1, WC2, WC3, WC4 = LENGTH OF CLEAR SPANS 1, 2, 3, 4 (FACE OF SUPPORT TO FACE OF SUPPORT).
13. W = THE GREATER LENGTH OF ADJACENT CLEAR SPANS (WC1 OR WC2) OR (WC3 OR WC4).
14. W1, W2, W3, W4 = LENGTH OF SPANS 1, 2, 3, 4 (CENTERLINE OF SUPPORT TO CENTERLINE OF SUPPORT).

4 TOP BAR REINFORCEMENT LAYOUT
SCALE: NTS



NOTES:
1. OUTER MOST BARS SPAN IN THE NORTH-SOUTH DIRECTION.
2. FOR SIZE, SPACING, NUMBER, ETC... OF REINFORCING BARS, SEE PLAN.
3. COLUMN STRIP BARS ARE TO BE CENTERED OVER COLUMNS UNLESS NOTED OTHERWISE ON PLAN.
4. MIDDLE STRIP BARS ARE TO BE CENTERED OVER STRESS LINES UNLESS NOTED OTHERWISE ON PLAN.
5. MIDDLE STRIP BARS ARE TO BE SPACED AS SHOWN ON PLANS. FIRST BAR IS TO BE LOCATED A DISTANCE FROM LAST COLUMN STRIP BAR NOT TO EXCEED MIDDLE STRIP BAR SPACING.
6. AT EXTERIOR SLAB EDGES, REFERENCE TYPICAL REINFORCEMENT AT SLAB EXTERIOR EDGE DETAIL.
7. ADDITIONAL BARS SHALL BE PLACED BETWEEN MAIN GRID BARS.
   COLUMN STRIPS - GROUP ABOUT STRESS LINES AND MAINTAIN A MINIMUM SPACING OF 3 INCHES O.C.
   MIDDLE STRIPS - DISTRIBUTE UNIFORMLY THROUGHOUT STRIP.
8. EXTEND AND HOOK ALL COLUMN STRIP AND 50% OF MIDDLE STRIP BOTTOM BARS. A MINIMUM OF 2 BOTTOM BARS SHALL BE HOOKED WITHIN COLUMN CORE, TYP.
9. LC1, LC2 = LENGTH OF CLEAR SPANS 1, 2 (FACE OF SUPPORT TO FACE OF SUPPORT)
10. L = THE GREATER LENGTH OF ADJACENT CLEAR SPANS (LC1 OR LC2).
11. L1, L2 = LENGTH OF SPANS 1, 2 (CENTERLINE OF SUPPORT TO CENTERLINE OF SUPPORT).
12. WC1, WC2, WC3, WC4 = LENGTH OF CLEAR SPANS 1, 2, 3, 4 (FACE OF SUPPORT TO FACE OF SUPPORT).
13. W = THE GREATER LENGTH OF ADJACENT CLEAR SPANS (WC1 OR WC2) OR (WC3 OR WC4).
14. W1, W2, W3, W4 = LENGTH OF SPANS 1, 2, 3, 4 (CENTERLINE OF SUPPORT TO CENTERLINE OF SUPPORT).

1. SEE S-457 THRU S-460 FOR LOCATIONS OF EACH STAIR TYPE.
   TEMPERATURE BARS ARE TOP AND BOTTOM FOR
2. INTER-STORY LANDINGS AND BOTTOM ONLY FOR STAIR RUNS.
3. FOR INTERMEDIATE LANDINGS THICKNESS WILL BE GOVERNED BY THE FLIGHT OF LONGER SPAN.
4. AT LOCATIONS WHERE STAIR SUPPORT WALLS ARE PERPENDICULAR TO STAIR LANDING, MAIN STAIR TOP AND BOTTOM REINFORCEMENT SHOULD BE USED IN BOTH DIRECTIONS AT THE LANDING.

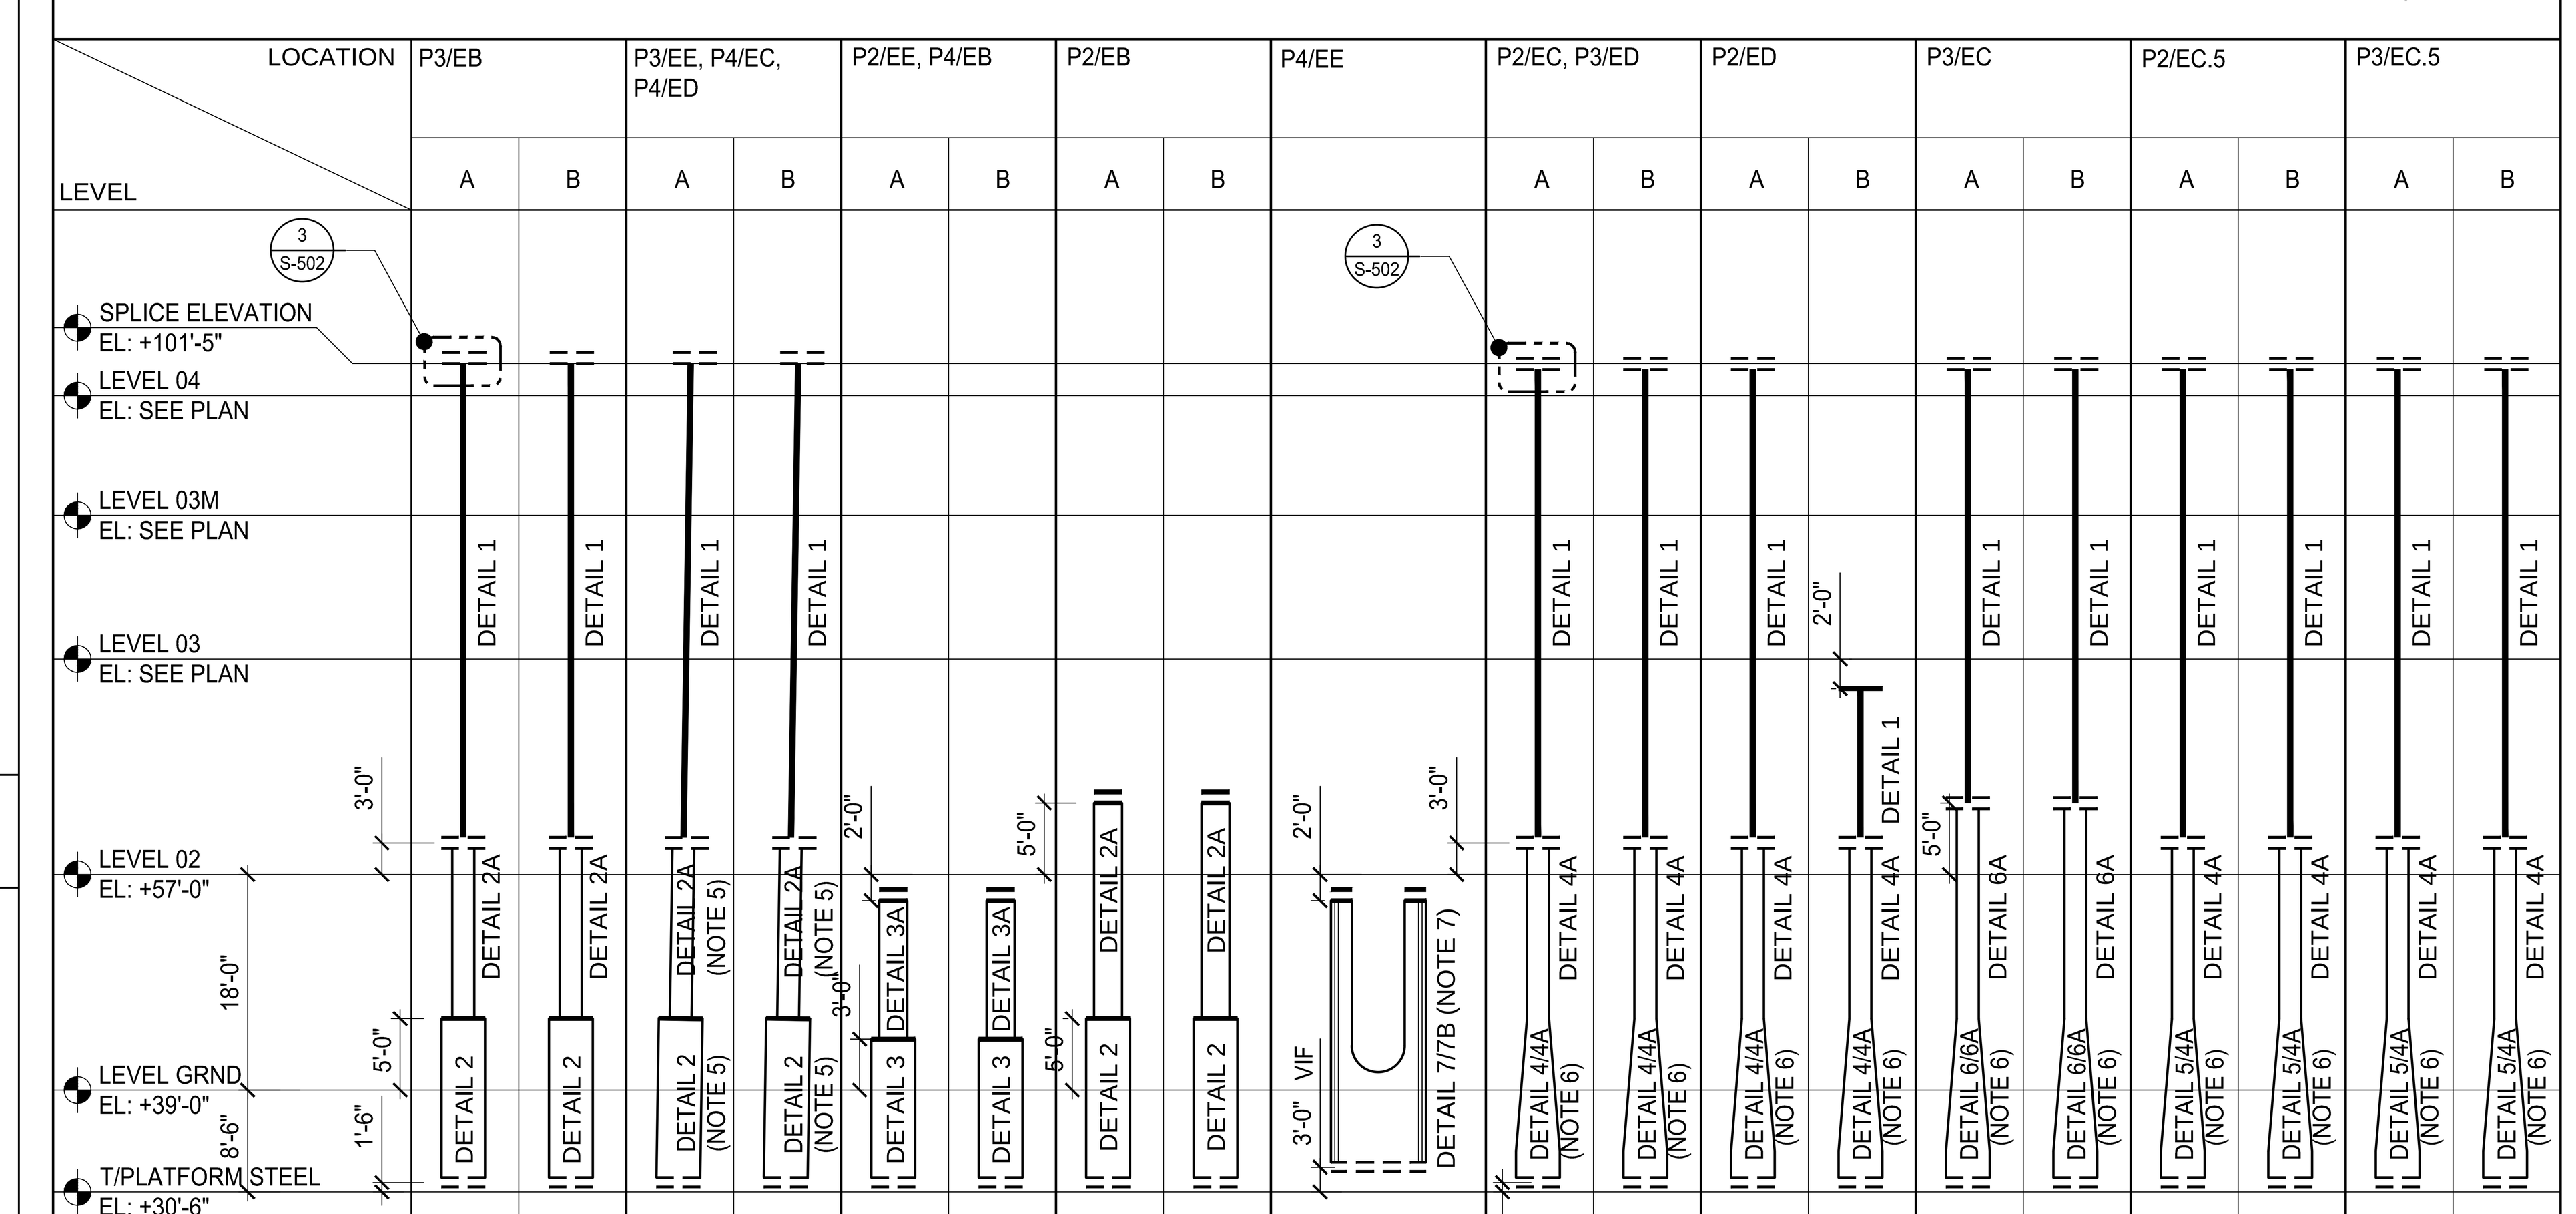
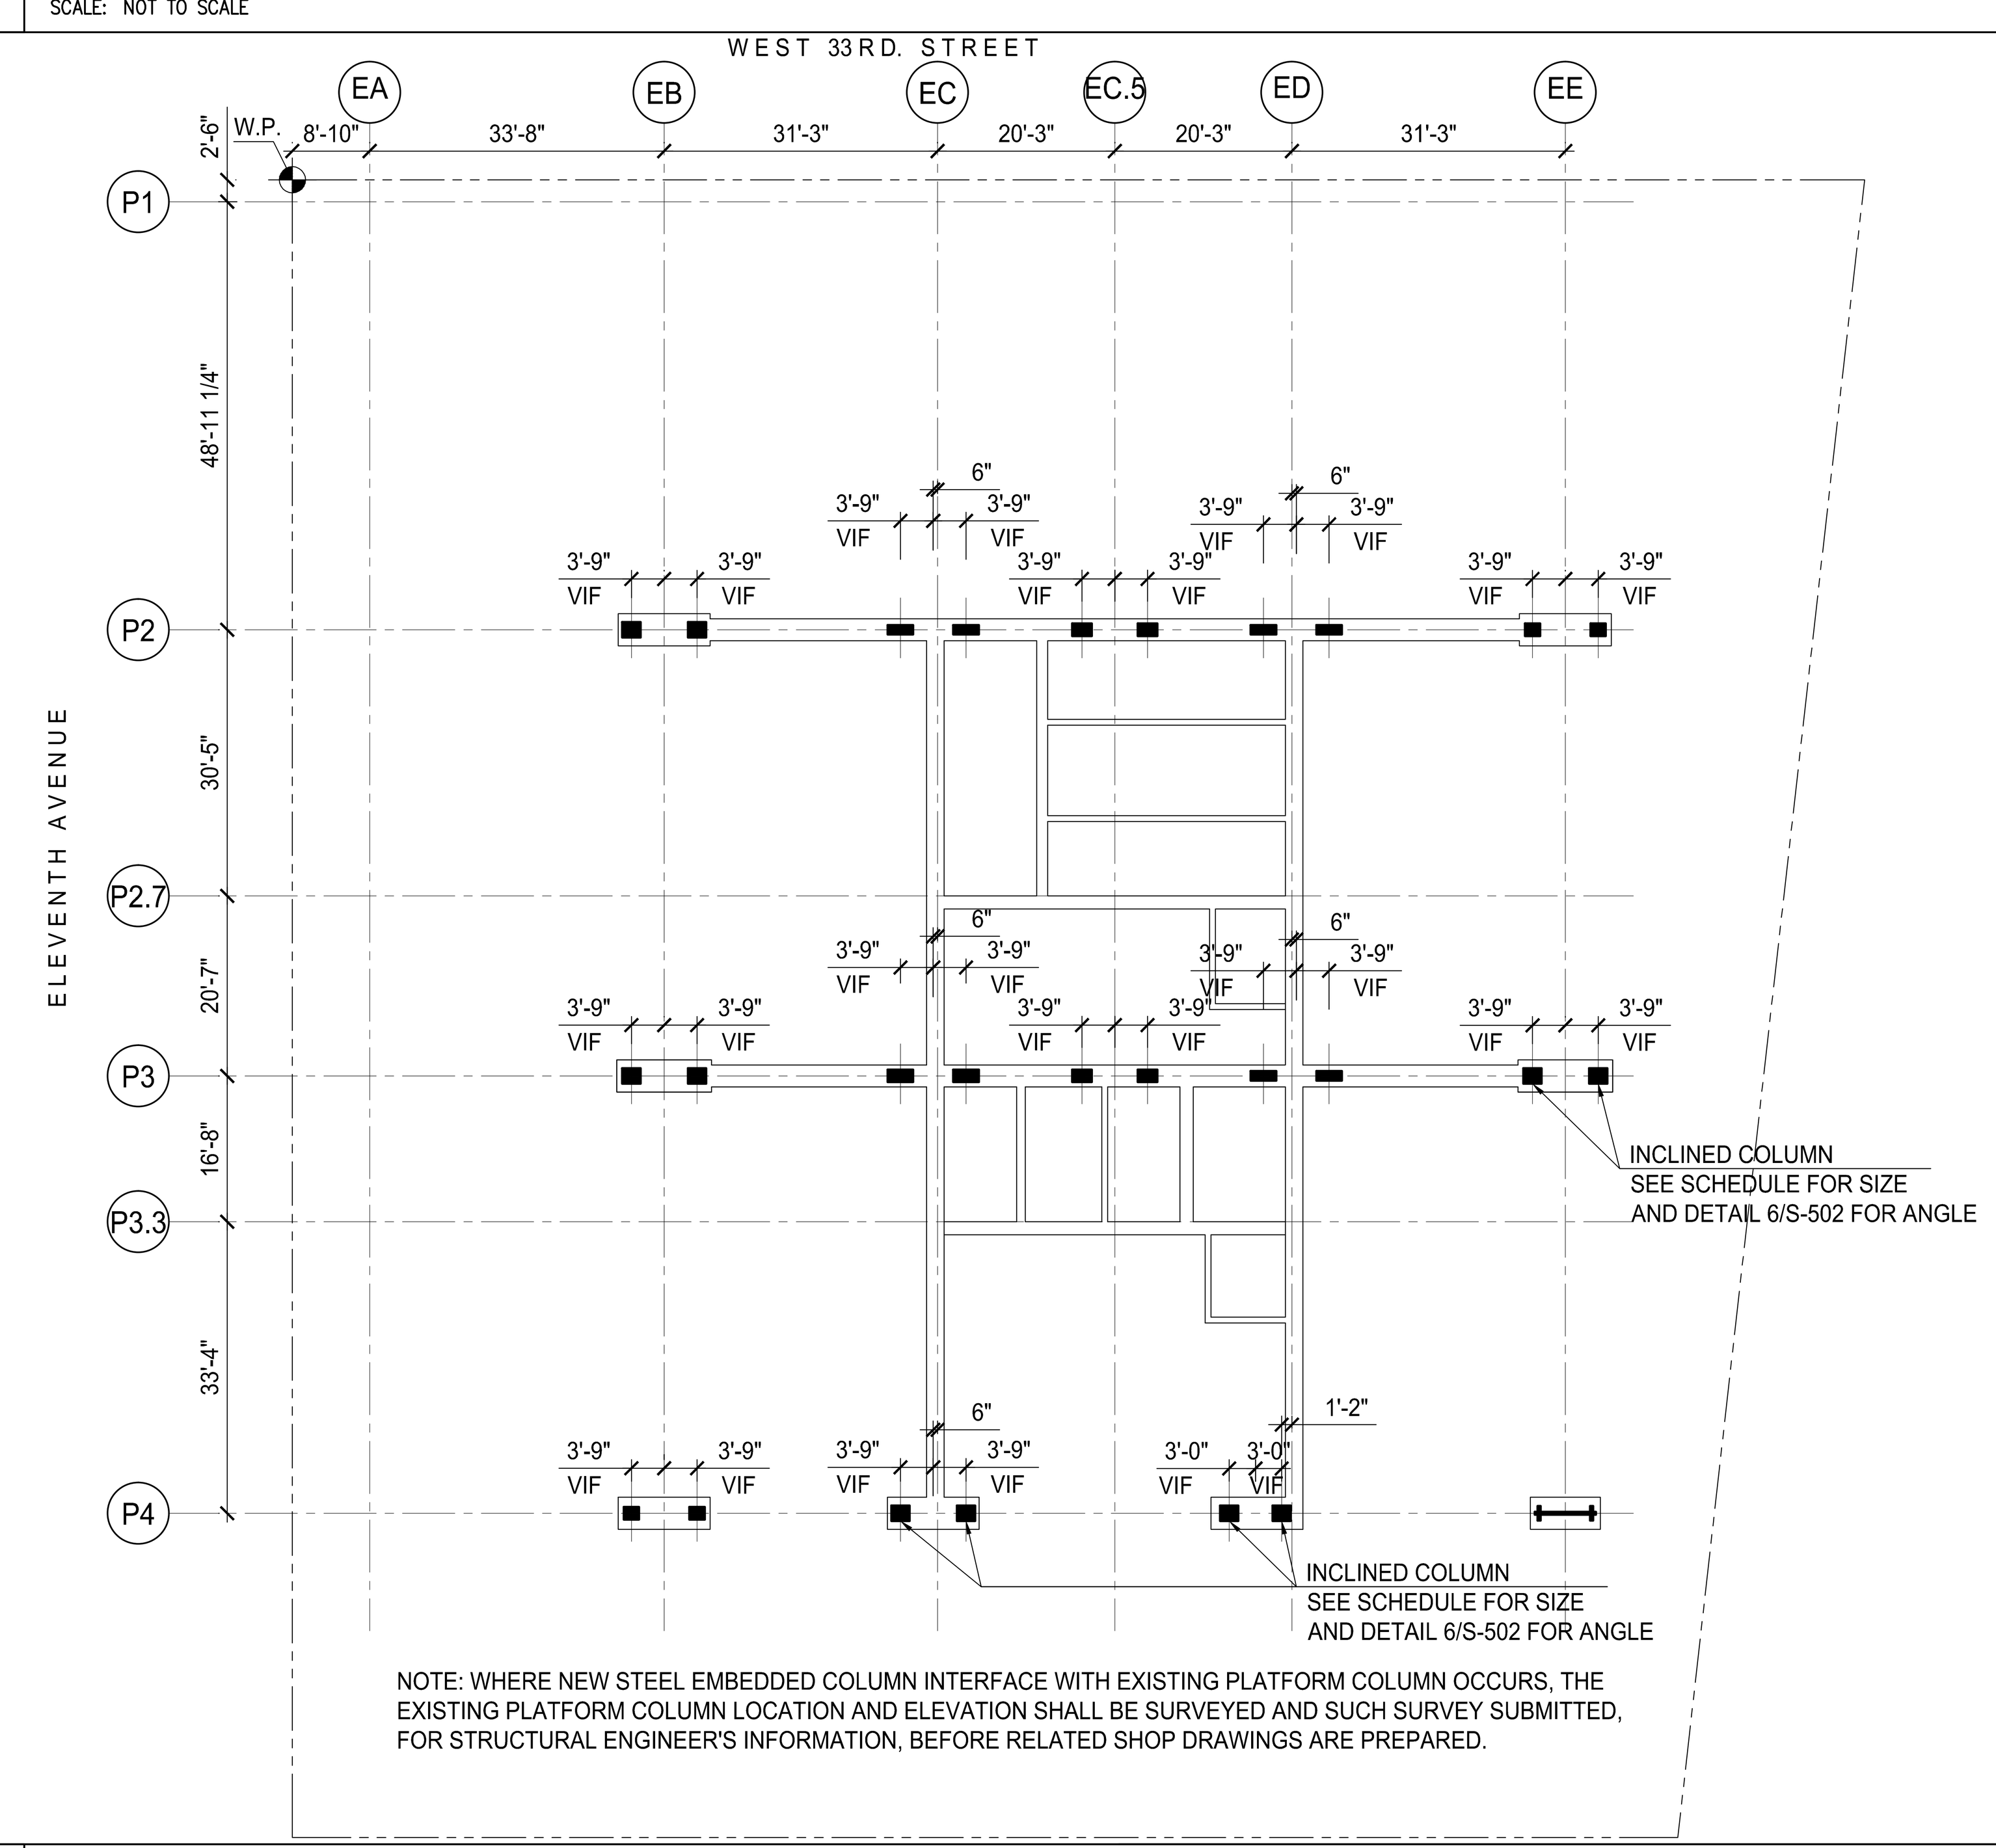
EMBEDDED STEEL COLUMN CORE SCHEDULE

DETAIL 1: fy = 50 ksi
DETAIL 2 THRU DETAIL 7: fy = 65 ksi



NOTE:
1. WHERE APPLICABLE 'A' DENOTES STEEL SHAPE AT WEST, 'B' DENOTES STEEL SHAPE AT EAST.
2. = = INDICATES RECOMMENDED COLUMN SPLICE LOCATION. FINAL SPLICE LOCATIONS TO BE DETERMINED BY CONTRACTOR AND APPROVED BY EOR.
3. ULTRASONIC TESTING AND VISUAL CONTINUOUS INSPECTION IN ACCORDANCE WITH ASTM A435 SHALL BE UTILIZED TO VERIFY BASE MATERIAL FOR LAMINATIONS, INCLUSIONS AND OTHER DISCONTINUITIES.
4. USE E80XX ELECTRODES WITH STEEL THAT HAS A YIELD STRESS OF 65 KSI AND E70XX ELECTRODES WITH STEEL THAT HAS A YIELD STRESS OF 50 KSI
5. COLUMNS ARE INCLINED. SEE DETAIL 5/S-502 FOR INLCLINED COLUMN GEOMETRY.
6. DETAIL # / #A REFERS TO COLUMN WITH TAPERING CROSS SECTION. CROSS SECTION UNIFORMLY CHANGES FROM DETAIL # AT THE BASE TO DETAIL #A ABOVE.
7. SEE DETAIL 7/S-502 FOR COLUMN PROFILE ELEVATION.
8. SEE SHEET S-502 FOR SPLICE DETAILS.



NOTE: WHERE NEW STEEL EMBEDDED COLUMN INTERFACE WITH EXISTING PLATFORM COLUMN OCCURS, THE EXISTING PLATFORM COLUMN LOCATION AND ELEVATION SHALL BE SURVEYED AND SUCH SURVEY SUBMITTED, FOR STRUCTURAL ENGINEER'S INFORMATION, BEFORE RELATED SHOP DRAWINGS ARE PREPARED.
