

# Zoom across your school district

Presented by **zoom**

Enterprise deployment of Zoom delivers a communication and collaboration system where flawless video, integrated audio, wireless content sharing, and instant chat is available to the entire school district community. Zoom integrates with active directories, student information systems (SIS), and learning management systems (LMS) to provide a comprehensive solution.

School executives, administrators, professional development teams, and teachers have one-touch-to-start meetings from their conference rooms, classrooms, desktops, and mobile devices. Meeting invites are simple to send and meetings are easy to join.

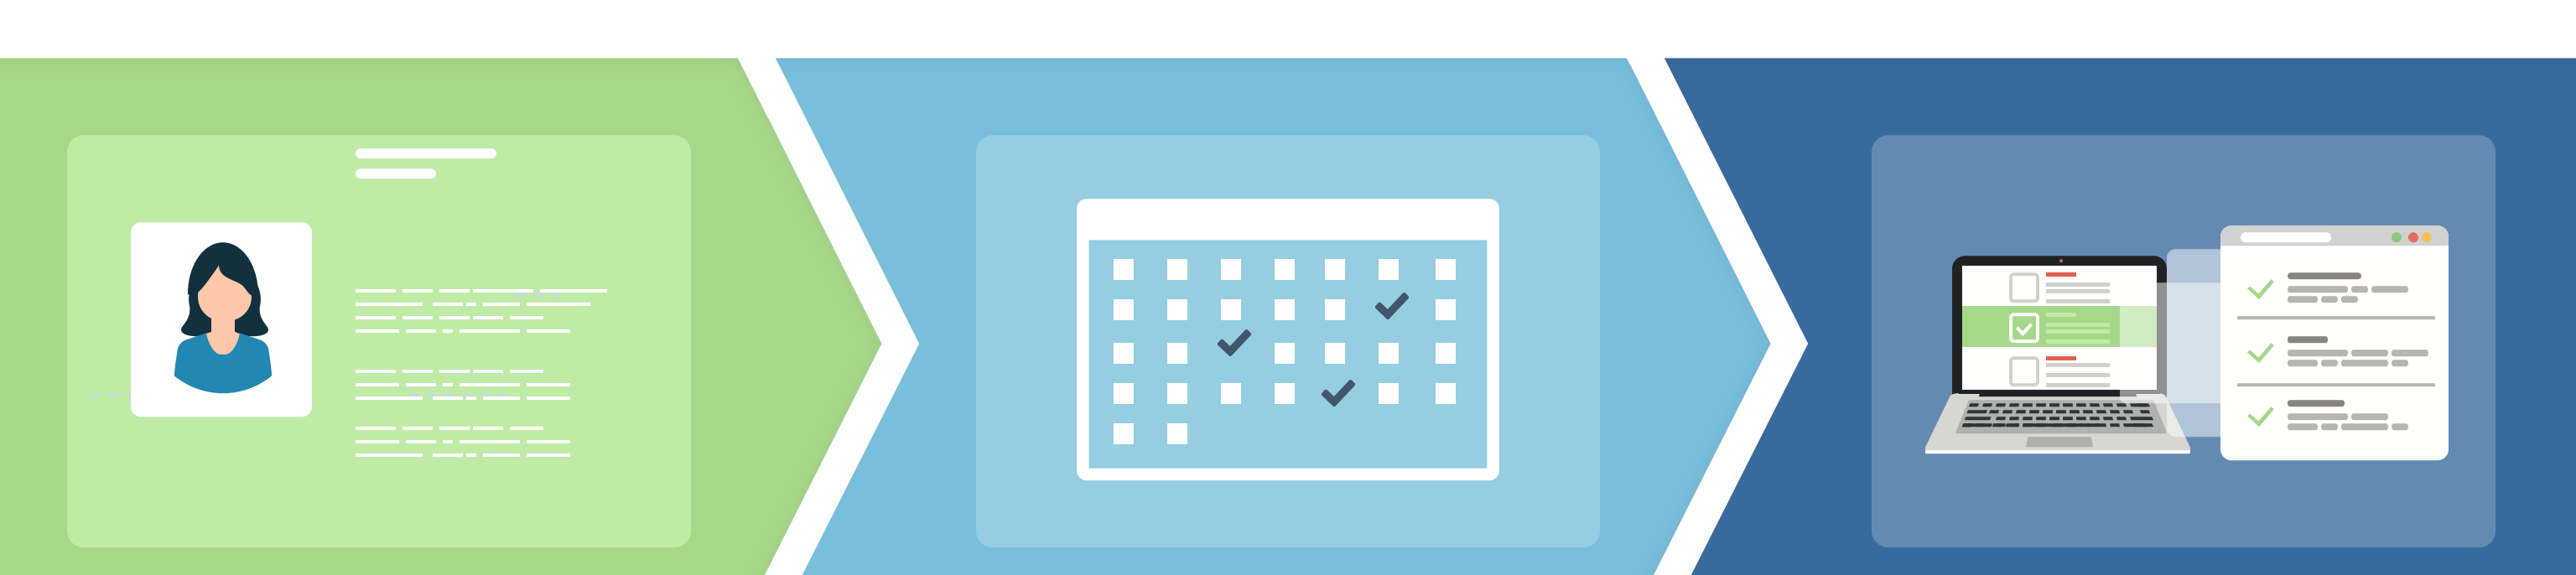

## Communicating across all classrooms

Revolutionize morning announcements. With Zoom, principals or students may communicate instantly via video into all classrooms across the school and/or district.

## Digital signage

Share weekly schedules, events, and principal's announcements using Zoom's digital signage inside and outside of every classroom.

## Wireless sharing in the classroom or boardroom

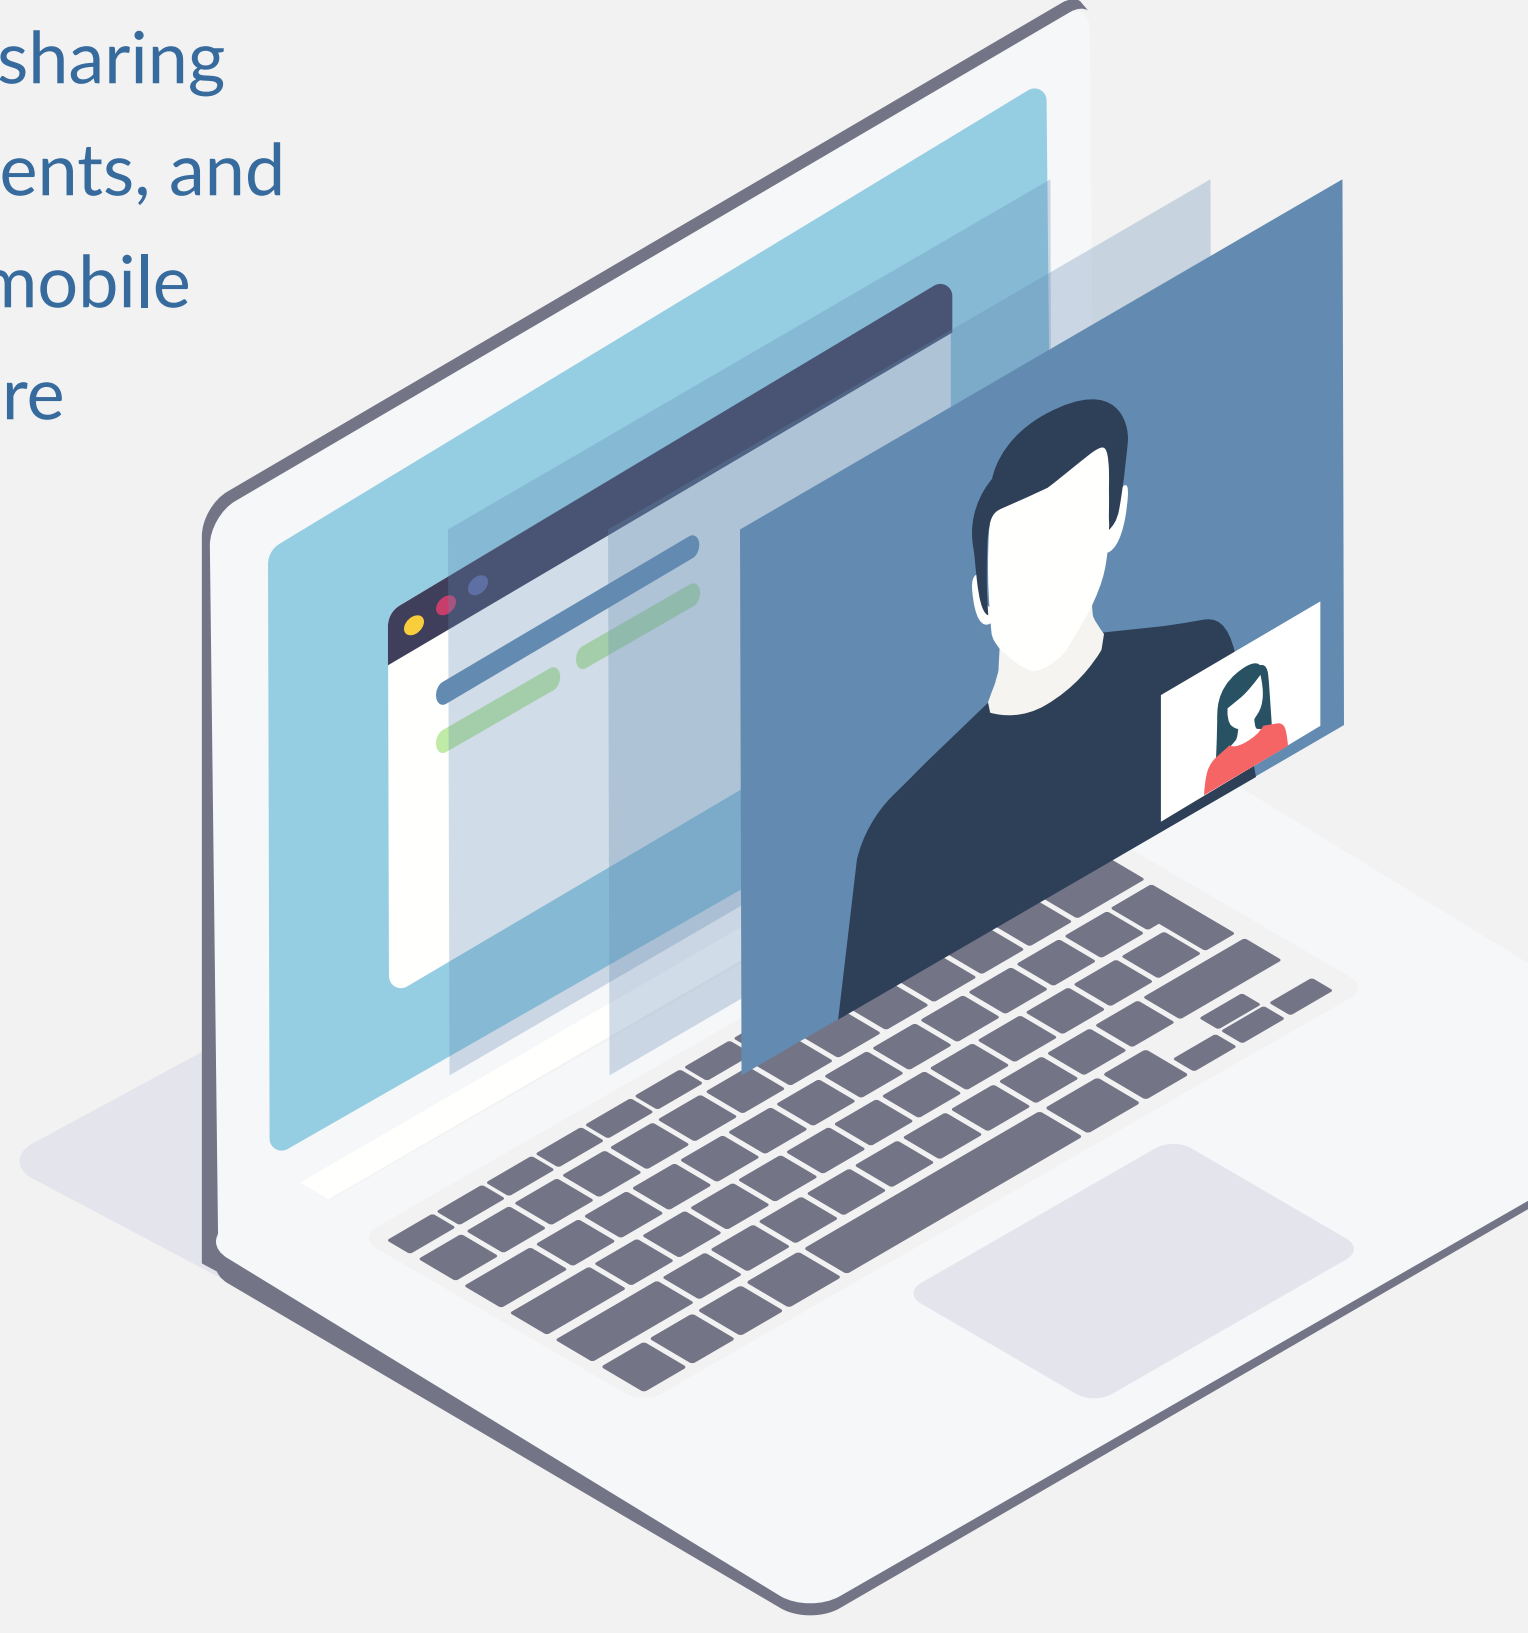

Share your screen via Zoom Rooms' wireless sharing or by joining a Zoom Meeting. Teachers, students, and administrators may use their Chromebooks, mobile phones, tablets, and laptops to show and share documents, videos, etc.

## Broadcasting live outside of the classroom or auditorium

Engage parents and others in the community by inviting them to attend special events such as graduation, school board meetings, and school plays live on video.

## Virtual tutoring

Teachers make themselves available for tutoring and study hall on Zoom. Students join remotely for interactive video sessions with whiteboarding and content sharing.

## Zoom for staff and administration meetings

Create principal, staff, and teacher workgroups across the district and join instant or scheduled video conferences. Collaboration for all participants in a Zoom meeting is paramount; screen sharing, co-annotation, chat, and video breakout groups facilitate teamwork.

## Classroom collaboration across the district or world

Invite classrooms across the district or world to work together on team projects - Model-UN, science research - or even to become virtual pen-pals.

## Interactive distance learning and recording

Simulcast classrooms to allow educators to teach from the homeroom to offsite classrooms and individual online learners. These interactive sessions may be recorded and include a searchable transcript (recordings are in standard format).

## Virtual field trips and mentors in the classroom

Bring the field into the classroom with virtual field trips - from park rangers and museum guides to guest professors teaching science. Local mentors can share a day-in-the-life of their work with multiple classrooms at one time.

## Remote teacher observation, professional development

The district's professional development teams may observe a teacher's classroom for annual critique and feedback. Teachers and other staff may participate in professional development training.

## Emergency preparedness and system-wide notifications

Everyone at a school/district may receive important safety information via audio and video at one time, with the option of live two-way communication. Zoom's group management features controls who can send and receive messages.

## Remote parent-teacher conferences

Parents and teachers may join a meeting from anywhere, anytime from a computer or mobile device.
