

CASE STUDY

External Refurb - High Rise

MAKERS

...makes the difference

PROJECT

Hanley GSC - Stoke-on-Trent

STRUCTURE

In situ concrete frame with precast infill panels and metal windows

CLIENT

Teleral

CONTRACT VALUE

£580,000

CONTRACT

Hanley GSC represents a major telecommunication facility for BT and is positioned within the City boundaries of Stoke-on-Trent, on a very congested site.

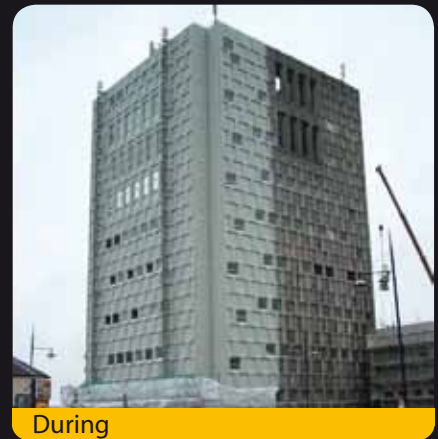

The building fabric was starting to degrade and in need of structural refurbishment. Works comprised of cleaning down the externals by high pressure water jetting, carrying out concrete repairs, applying an anti-carbonation coating, anti-corrosion treatments, painting the windows and applying sealants to windows and various joints around the structure.

All work was carried out whilst the exchange was fully manned and operational.

Works were carried out over a 26 week period, utilising mast climbers around the structure, with a limited amount of scaffolding on the low level structures.
