
Figures

4.1	US Department of Agriculture county-level statistics on rural broadband penetration	48
9.1	Graphic representation of the mediation model specification	138
9.2	Results of the 1–1–1 mediation model with random effects on both the complete sample and the selected subsample (unstandardised direct, indirect and total effects)	140
13.1	Digital communication channels used by older adults in East York for communication with all social ties and with kin ties (N = 41)	199
13.2	Older adults typology: skill level by online activities (N = 41)	202
13.3	Whistler’s networked mother	205
15.1	Modified resources and appropriation theory	221
19.1	Privacy as a social construct	286
19.2	Privacy as a cause and a consequence	288
19.3	Health privacy as a cause and a consequence	291
19.4	Privacy as a cause and as a consequence of social inequality	291
20.1	Conceptual model to explain online privacy protection	300
20.2	Path model (empirical test of the conceptual model presented in Figure 20.1)	304
20A.1	Confirmatory factor analysis for the correlated four-factor latent measurement model	310
21.1	Proportion of US population who reported a particular level of trust in the given entity’s ability to protect their personal data	318
21.2	Proportion of US population who reported a given level of control over their personal data	322
23.1	Model: algorithmic literacy and platform trust and use	345
23.2	Distribution of algorithmic literacy	348
