

## Senior ASP.NET MVC Product Developer

We're looking for a Senior .NET developer to join the team at JustGiving.com. This is a fulltime role based in our offices in Paddington, central London. Our IT Infrastructure is based on Microsoft technology.

### About Us

JustGiving is the UK's leading online fundraising platform. We currently have around 8000+ charity clients and over 17 million users of our online services. Since our launch, we have helped ordinary people raise extraordinary amounts of money, over £1 billion for the causes that they care about.

We think JustGiving is a very interesting place to work. We have a pretty flat structure, with people working in multidisciplinary project teams to get things done. Everyone who works here has a voice and a stake in the business. We have unusual investors, who believe in growing our business in a balanced, sustainable way (they have yet to take a penny of profits out of the business).

### About The Role

We are agile/xp team building products in C# and JavaScript using ASP.NET MVC3/4, RESTful APIs in MVC and back-office systems. The successful candidate will be proficient in the Microsoft web stack, messaging techniques (MSMQ) and love building great web products.

You will be:

- Working with product managers to build websites and applications in C# and ASP.NET MVC.
- Unit testing and building code changes to existing products and infrastructure.
- Consuming third party APIs (e.g. Facebook, Twitter) to enrich the JustGiving platform.
- Working in cross functional agile teams with in-stream product managers, QAs and dedicated front-end developers.
- Rapidly shipping new functionality to production in a continuous delivery focused environment.
- Working with product managers to rapidly iterate on product ideas.
- A great communicator, communicating issues and resolving issues.
- Pairing with other developers to solve problems.

### About You

We're looking for senior developers who are truly passionate about software design, performance and best practices. You'll also have:

- 5 years of experience implementing web applications with .NET
- A modern Microsoft-stack developer, with appreciation of "alt.net" tools, package management and modern frameworks (e.g. Dynamics, Async, Simple.Data, NancyFx, nHibernate).
- An appreciation and understanding of agile, xp and test driven development.
- A generalist, just as comfortable building products as you are tuning caching implementations.
- Experienced in building "MVC style" web apps (e.g. ASP.NET MVC, Ruby on Rails, Monorail).
- Strong experience with ORMs (especially nHibernate).
- Solid experience of jQuery and JavaScript
- Exposure to REST Services

- Deep understanding of object orientation, SOLID and design patterns and DDD.
- Familiarity with HTML5/CSS, exposure to modern JavaScript techniques and SaSS/.less is an advantage.
- A keen awareness of scalability, caching and running systems “at web scale”.
- Excellent problem solving and analytical skills.
- Problem solver who communicates with everybody effectively to get a requirement implemented and ready for release.
- Innovator, always thinking of useful solutions for day to day problems.

In return for everything that you can bring, we pay competitive market rates and can offer you an exciting, challenging role in a growing technology-centric business that's part of something bigger, with plenty of opportunities to learn – and of course enjoy it at the same time.

Are you the one we are looking for? If this sounds like you, please send your CV to [it.recruit@justgiving.com](mailto:it.recruit@justgiving.com), together with a covering letter describing why you think you are the right person for us.

We embrace diversity in our applicant's backgrounds. The successful applicant will have eligibility to work in the UK. The role will require access to personal information and card data so candidates will be subject to criminal record checks.
