Acquia Media Manager

Create Rich Media Web Experiences with Plug & Play Media Management Service

Acquia Media Manager makes it simple to upload and manage rich media assets, including images, video & audio, across one or more Drupal sites. With Media Manager, organizations can manage brand assets more effectively, assist with digital rights compliance, and deliver across multiple web channels.

Media in Drupal Made Easy

Acquia's Kaleidoscope service centralizes all your media assets in one media repository, and makes them available not only to all your Drupal sites, but to other applications.

- **Integrates directly into content creation.** Content creators can find, upload, and use images directly within their Drupal content creation workflow.

- **Media conversion and processing.** Media Manager automates media processing after upload — resizing images into all pre-defined sizes used across your site.

- **Metadata, tagging, and search.** Take advantage of metadata and content tagging to make it easier for visitors and search engines to discover relevant rich media content on your site. Use standardized vocabularies or informal, user-generated tags.

- **Media security.** Leverage Drupal's powerful user roles system to control access to media assets during content authoring. Centrally track and manage usage rights for all media.

- **Scales to millions of assets.** Media Manager provides high performance access and delivery of million of assets.

Media Manager also includes:

- **Open APIs:** REST APIs enable you to integrate your Drupal site with existing media asset libraries and enterprise data systems.

- **High performance, HA file system:** Assets are managed and delivered from a fully redundant, highly available file system built on Amazon.

- **Media module support:** Works seamlessly with the Drupal Media module to upload images and browse integrated media libraries.

THE ULTIMATE MEDIA MANAGEMENT SERVICE FOR DRUPAL

- Site owners can attract new visitors and increase time spent on site
- Developers can quickly integrate rich media assets into content contribution workflow
- Site administrators manage rich media usage across multiple delivery channels
