### 01 Change Log

Version	Notes
1.0.0 9th Feb 2011	Initial Release

### 02 Minimum Requirements

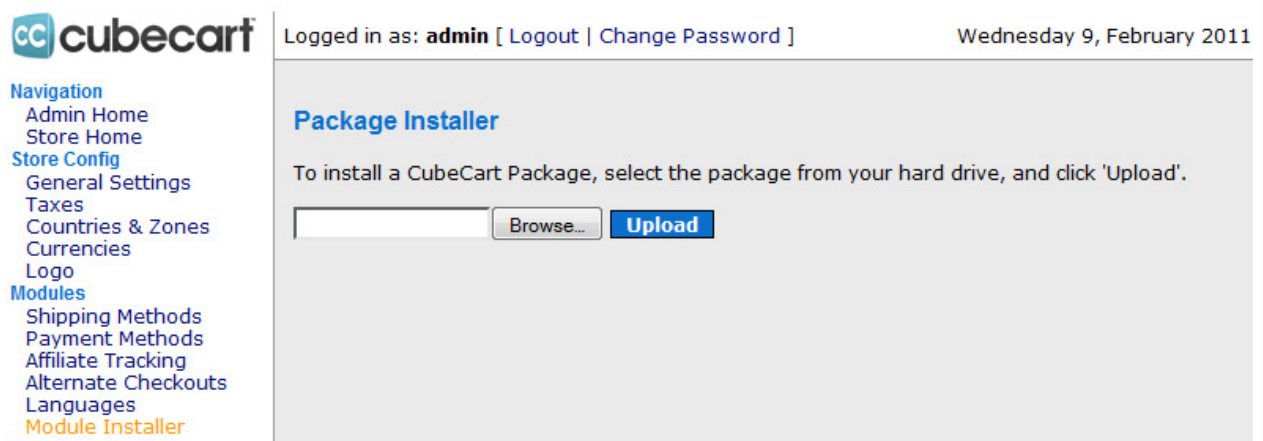

This module has been built and tested on the following configuration:

CubeCart 4.4.3  
PHP 5.3.2  
MySQL 5.1.41  
Apache 2.2.1.4  
OS: Linux (Ubuntu Server)

### 03 Installation Guide

This module is compatible with the CubeCart module installer.

In the CubeCart Administration screen, select the “Module Installer” link under the “Modules” heading:

The screenshot shows the CubeCart administration dashboard. On the left is a navigation menu with categories: Navigation (Admin Home, Store Home), Store Config (General Settings, Taxes, Countries & Zones, Currencies, Logo), Modules (Shipping Methods, Payment Methods, Affiliate Tracking, Alternate Checkouts, Languages, Module Installer), and Catalog. The 'Module Installer' link is highlighted in orange. The main content area is titled 'Package Installer' and contains the instruction: 'To install a CubeCart Package, select the package from your hard drive, and click 'Upload''. Below this is a text input field, a 'Browse...' button, and an 'Upload' button. At the top of the dashboard, it says 'Logged in as: admin [ Logout | Change Password ]' and the date 'Wednesday 9, February 2011'.

Browse to the zip file included in this package  
e.g: securetrading-stpp-payment-pages-1.0.0-cubecart-4.zip

Press the “Upload” button:

Logged in as: **admin** [ [Logout](#) | [Change Password](#) ]Wednesday 9, February

**Navigation**  
[Admin Home](#)  
[Store Home](#)  
**Store Config**  
[General Settings](#)  
[Taxes](#)  
[Countries & Zones](#)  
[Currencies](#)  
[Logo](#)

**Package Installer**  
  
To install a CubeCart Package, select the package from your hard drive, and click 'Upload'.

On the next screen, check the details and press the “Install” button:

Logged in as: **admin** [ [Logout](#) | [Change Password](#) ]Wednesday 9, February

**Navigation**  
[Admin Home](#)  
[Store Home](#)  
**Store Config**  
[General Settings](#)  
[Taxes](#)  
[Countries & Zones](#)  
[Currencies](#)  
[Logo](#)  
**Modules**  
[Shipping Methods](#)  
[Payment Methods](#)

You are about to install 'SecureTrading\_STPP\_PP', version 1.0.0.

**Description**  
Module to accept payments through the SecureTrading STPP Payment Pages gateway.  
  
**Author:** Ben Kennedy  
**Module Type:** Gateway

You should get a confirmation message confirming a successful installation. The module should now be listed under the “Modules->Payment Methods” menu:

Logged in as: **admin** [ [Logout](#) | [Change Password](#) ]

**Navigation**  
[Admin Home](#)  
[Store Home](#)  
**Store Config**  
[General Settings](#)

[Affiliate Tracking](#)  
[Alternate Checkouts](#)

**Gateway Modules**  

Module Name	Action	Status
	<a href="#">Configure</a>	<span style="color: red;">■</span>
Print Order Form	<a href="#">Configure</a>	<span style="color: green;">■</span>
	<a href="#">Configure</a>	<span style="color: red;">■</span>

## 04 Configuration Guide

By default, the SecureTrading module will not be enabled. Click the "Configure" link next to the SecureTrading logo to proceed to the module configuration screen:

Logged in as: **admin** [ [Logout](#) | [Change Password](#) ]

Wednesday 9, February 2011

### SecureTrading STPP Payment Pages

©2011 SecureTrading Ltd.  
Module Version: 1.0.0 [09/02/2011]  
Please read the included documentation before using this module.

#### Configuration Settings

##### Status:

Enable or disable the module here. Enabled ▾

##### Description:

How to display the payment method to your customers. SecureTrading [STPP-PP]

##### Site Reference:

The site reference sent to you when you opened your SecureTrading account. test\_jard2011  
[Example: mysite12345]

##### Merchant Email Address:

Email address to receive notifications. test\_jard2011@securetrading.com

##### Enable Security Hash Feature:

Enable this option to use the Security Hash feature. You will need to contact SecureTrading Technical Support (support@securetrading.com) to have your account updated to use the Security Hash. ☒

##### Security Hash Fields:

Select the fields, and order, to send with each transaction. Separate each field with a comma. Available fields are: 'currency', 'amount', 'sitereference' sitereference,currency,amount

##### Security Hash Password:

Enter your security hash password here. This password is selected when enabling the Security Hash feature on your account, and is *not* the same as your MyST login password. ••••••••

##### Default:

No ▾

##### Callback URL:

[http://192.168.1.31:8080/STPP\\_PP/cubecart-4.4.3/index.php?\\_g=rm&type=gateway&cmd=process&module=SecureTrading\\_STPP\\_PP](http://192.168.1.31:8080/STPP_PP/cubecart-4.4.3/index.php?_g=rm&type=gateway&cmd=process&module=SecureTrading_STPP_PP)

##### File Check:

This section validates the module's files. If any of these files are yellow, you *must* update the file's permissions before using the module. Missing files are coloured red, suggesting an incorrect installation.

[Edit Config](#)

Field	Description
<b>Status</b>	Use this option to turn the module on and off.
<b>Description</b>	How you would like the payment method to be presented to your customers. e.g, “Debit/Credit Card” or “SecureTrading”
<b>Site Reference</b>	Enter your securetrading Merchant Site reference here. REQUIRED.
<b>Merchant Email Address</b>	Enter the e-mail address to receive merchant notifications.
<b>Set Order Status</b>	Default order status of new orders.
<b>Enable Security Hash Feature</b>	Use the Security Hash feature. Recommended.
<b>Security Hash Fields</b>	Enter the field order you would like to use to generate this hash. The options are: “sitereference”, “mainamount”, “currencyiso3a”. If you are using the Security Hash feature, you will need to inform SecureTrading support of the fields (and their order) that you will be using, as well as a desired password. Separate fields with a comma, e.g: “sitereference,currencyiso3a,mainamount”.
<b>Security Hash Password</b>	The password used to generate your hash.
<b>Default</b>	Sets whether this payment method is the default option. Recommended: Yes.
<b>Callback URL</b>	This field is present for your information. You will need this information when setting up your notifications.
<b>File Check</b>	This field simply validates that all the required files have been installed correctly. If you used the module installer feature, then the permissions are automatically set and all file names should be green. If you manually installed the module, or any of the file names are red or yellow, you will need to ensure all files are in the correct directory and your web server has sufficient permissions to read them.

Click “Edit config” to save your changes.

## 05 MyST Notification Setup

In order for CubeCart to be updated with the transaction result, you will need to set up a Notification in MyST.

Log in to MyST, and go to the “Notifications” area. Click the “Add Filter” button and complete the fields as follows:

Field	Description
Description	A memorable name for your filter. “CubeCart” in this example.
Request Type	Select AUTH only.
Payment Type	Use Ctrl + Click to select all the cards that your merchant account can accept.
Error Code	Select 0 only, the customer will be asked to re-enter their details on the Payment page if there is a problem.

Save the filter, and click the “Add destination” button. Complete using the following table as a guide:

Field	Description
Description	The name for your notification. e.g. “CubeCart”
Notification Type	Select “url”
Destination	This is the full URL to the CubeCart callback script. Simply paste the URL found in the module configuration screen here.
Fields	Tick the following fields: <i>errorcode, transactionreference, authcode, orderreference, securityresponsesecuritycode, securityresponsepostcode, securityresponseaddress, enrolled, status.</i>
Custom Fields	Two additional field is required: “errormessage” and “customerid”

Once you have created your filter and destination, select them from the dropdowns underneath “Current Notifications” and click “Save”.

It is recommended that you read the MyST User Guide, available on the [SecureTrading Website](#).

## 06 MyST Redirect

If you would like the user to be redirected to your site after a successful transaction, you will need to contact SecureTrading Support to enable the functionality on your account. You will need to provide a URL for the system to redirect to, this should be:

[http://<yoursite.com>/optional-cubecart-folder/index.php?\\_g=co&\\_a=confirmed&s=2](http://<yoursite.com>/optional-cubecart-folder/index.php?_g=co&_a=confirmed&s=2)

## 07 Support
