

How to *green* your canal boat!

Engine

A poorly maintained engine consumes more fuel and has greater emissions; ensure yours is serviced regularly.

Deck

Secure loose items such as bottles and cans to prevent them blowing overboard.

Galley

Use starch based rubbish bags - they break down in months rather than years!

Mooring

Choose your site carefully, especially when animals and birds may be feeding, breeding or with young.

Wash

Keep a safe, reasonable distance from the bank to avoid erosion and disturbance.

Sinks

Change to products free from chlorine, bleach and phosphates - they can be harmful to aquatic life.

Hull

When cleaning the hull, dispose of any plant and animal materials in a bin to prevent the spread of alien species.
