## Data Release Information Sheet

### ***Data Summary***

Dataset name: Global Burden of Disease Study 2017 (GBD 2017) Health-related Sustainable Development Goals (SDG) Indicators 1990-2030

Date of release: November 8, 2018

#### Summary:

The Global Burden of Disease Study 2017 (GBD 2017), coordinated by the Institute for Health Metrics and Evaluation (IHME), estimated the burden of diseases, injuries, and risk factors from 1990 to 2017.

The United Nations established, in September 2015, the Sustainable Development Goals (SDGs), which specify 17 universal goals, 169 targets, and 232 indicators leading up to 2030. Drawing from GBD 2017, this dataset provides estimates on progress for 41 health-related SDG indicators for 195 countries and territories from 1990 to 2017, and projections, based on past trends, for 2018 to 2030. Estimates are also included for the health-related SDG index, a summary measure of overall performance across the health-related SDGs.

The results were published in *The Lancet* in November 2018 in "Measuring progress and attainment to 2030 of the health-related Sustainable Development Goals in 195 countries and territories: an analysis from the Global Burden of Disease Study 2017."

## **Data Revision Information**

Due to an error found in the smoking indicator, a new SDG unscaled data file with new values for smoking was generated on February 6, 2019. This problem only effected the unscaled data.
