

Cardiovascular Disease Prevention and Control: Interventions Engaging Community Health Workers

Summary Evidence Table - Studies with Least Suitable Study Design

Study designs include before-after studies without a comparison group

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Author(s): Adair et al. 2012</p> <p>Location: Minnesota</p> <p>Setting(s): inner-city primary care clinic</p> <p>Scale: Study took place at an inner-city primary care clinic staffed by residents and their teachers and included 3 care guides. A total of 470 patients were referred for study enrollment of which 334 agreed to participate.</p> <p>Design: Before-After w/o comparison</p> <p>Intervention duration: 12 months</p> <p>Quality of Execution: Good (1 limitation)</p> <p>Limitation(s): Interpretation of Results - Authors made mention of the possibility of selection bias in enrolling patients and potential Hawthorne effect</p>	<p>Inclusion: Diagnosed with hypertension OR diabetes OR heart failure</p> <p>Exclusion: <18 yrs. of age OR pregnant</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (median): 61.0 yrs. Sex: Male: 43.0% ; Female: 55.8% Race/ethnicity: White: 49.0% Black/AA: 43.0%; Other: 8.0% Education: < H.S.: 23.0%; H.S. grad: 33.0%; some college: 31.0%; college grad: 6.0%; post-grad: 7.0% Low income: NR Medicaid: 24.0% Medicare: 51.0% No health insurance: 7.0% Unemployed: NR</p> <p>Reported Risk Factors [Intervention</p>	<p>CHW Activities: Care guides provided one-on-one face-to-face or telephone counseling twice a month with clinic patients. Their main job was to assist both patents and clinicians on achieving treatment goals. Care guides provided coaching and problem solving to overcome treatment barriers including how to shop for less expensive drugs, cues for remembering to take medications, and how to access other community resources. Care guides provided formal quarterly reports to the primary care physicians updating them on patient progress.</p> <p>CHW Core Roles Met: Bridging/cultural mediation between community and healthcare system + providing culturally appropriate information and health education + ensuring that people get services they need + providing informal counseling and social support + building individual and community capacity</p> <p>CHW Models of Care Met: Member of care delivery team + screening and health education provider +</p>	<p>Blood Pressure Outcomes</p> <p>Proportion with BP at goal (%)</p> <p>Baseline (in persons w/o diabetes): Intervention (n=183): 54.0% 12 Months; BP < 140/90 mmHg: Intervention (n=183): 71.0% Absolute pct pt change = 17.0; p<0.001</p> <p>Proportion with BP at goal (%)</p> <p>Baseline (in persons w/ diabetes): Intervention (n=146): 45.0% 12 Months; BP < 130/80 mmHg: Intervention (n=146): 48.0% Absolute pct pt change = 3.0; p=0.597</p> <p>Cholesterol Outcomes</p> <p>Proportion with LDL at goal (%)</p> <p>Baseline (in persons w/ diabetes): Intervention (n=146): 58.0% 12 Months; TC < 100 mg/dL: Intervention (n=146): 68.0% Absolute pct pt change = 10.0; p=0.029</p> <p>Diabetes Outcomes</p> <p>Proportion with A1c at goal (%)</p> <p>Baseline: Intervention (n=146): 44.0% 12 Months; A1c < 7.0% Intervention (n=146): 45.0% Change in mean difference = 1.0; p=1.0</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Funding: Robina Foundation</p> <p>Applicability: For this study, mainly to Medicare recipients with high blood pressure and/or diabetes receiving supplemental care from care guides who assist in ensuring those participants achieve their prescribed treatment goals.</p>	<p>Participants]: High blood pressure: 88.9% Diabetes: 44.0% Heart failure: 13.6%</p>	<p>Outreach/enrollment/information agent</p> <p>CHW Characteristics: CHW matched to population by: Language + race/ethnicity (AA + Hispanic)</p> <p>Payment: paid \$16.17/hour + received benefit package</p> <p>Educational background: > H.S.: 100%</p> <p>Years of experience: no prior experience</p> <p>Supervisor: registered nurse</p> <p>CHW performance evaluation: Care guides were audited by nurse supervisor</p> <p>Recruitment: NR</p> <p>Training: Care guides received a two-week comprehensive training course delivered by clinic staff that included training in motivational interviewing</p> <p>Other provider(s): physician + nurse</p> <p>Other provider(s) activities: Care guides updated physician on patient progress. Physician provided patients with usual clinical care. Nurses supervised care guides and provided them with coaching and problem solving, reinforced basic standards of professional behavior, and audited their performance.</p>	<p>Additional Outcomes (see separate table): smoking</p> <p>Summary: In persons with high blood pressure only, a significant increase in the proportion of participants with BP at goal at 12 months was observed. In persons with diabetes, a significant increase in the proportion of participants with LDL at goal at 12 months was observed. Non-significant increases in the proportion of diabetes patients with BP and A1c at goal were observed. Furthermore, there was a significant increase in the proportion of participants reporting they no longer smoke.</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
		<p>Community Partners Involved: N/A</p>	
<p>Author(s): Balcazar et al. 2009</p> <p>Location: Texas + California + Arizona</p> <p>Setting: 4 community health centers</p> <p>Scale: 1) Centro San Vicente (CSV), El Paso, TX: 3 clinic sites throughout the region (>13,000 registered patients)</p> <p>2) Gateway Community Health Centers, Inc (CGHS), Laredo TX: 2 clinics (approximately 15,000 residents/year).</p> <p>3). North County Health Services (NCHS) in San Marcos, California: comprises of 9 stationary clinics and 1 mobile clinic (service area covers approximately 57,000 people many of whom are newly arrived immigrants)</p> <p>Design: Before-After w/o comparison</p> <p>Intervention duration: 12 months</p> <p>Quality of Execution: Fair (3 limitations)</p>	<p>Inclusion: not clearly specified, All family members were invited to participate; however, the mothers were frequently the participants</p> <p>Exclusion: NR</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): NR Sex: mostly female Race/ethnicity: Hispanic: 92.5% Education: NR Low income: 50% Health insurance: NR Unemployed: NR</p> <p>Reported Risk Factors [Intervention Participants]: CVD Risk factors not reported</p>	<p>CHW Activities: CHWs delivered Salud Para Su Corazon (Your Heart, Your Life) aimed to increase CVD knowledge and promote heart healthy practices at Clinic/healthcare facility via group education delivered several times per week, once per week, or every other week for a total intervention period of 2 to 3 months. Sessions lasted approximately 2 hours.</p> <p>CHW Core Roles Met: Bridging/cultural mediation between community and healthcare system + providing culturally appropriate information and health education + ensuring people get services they need + building individual and community capacity</p> <p>CHW Models of Care Met: Member of care delivery team + screening and health education provider + organizer</p> <p>CHW Characteristics: CHW matched to population by: Language +race/ethnicity (Latino/Hispanic)</p> <p>Payment: CHWs were paid at 3 sites, an volunteered at 1 site</p> <p>Educational background: NR</p> <p>Years of experience: Unclear; all were existing promotores</p>	<p>Blood Pressure Outcomes</p> <p>Change in SBP (mmHg)</p> <p>Baseline: mean (SD) Intervention (n=85): 129.0 (17.0)</p> <p>12 Months: Intervention (n=85): 127.0 (16.0) Change in mean difference = -2.0; p=0.25</p> <p>Change in DBP (mmHg)</p> <p>Baseline: Intervention (n=85): 77.0 (10.0)</p> <p>12 Months: Intervention (n=85): 82.0 (17.0) Change in mean difference = 5.0; p=0.54</p> <p>Cholesterol Outcomes</p> <p>Change in LDL (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=85): 108.0 (34.0)</p> <p>12 Months: Intervention (n=85): 86.0 (27.0) Change in mean difference = -22.0; p<0.001</p> <p>Change in HDL (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=85): 48.0 (12.0)</p> <p>12 Months: Intervention (n=85): 49.0 (12.0) Change in mean difference = 1.0; p=0.84</p> <p>Change in Triglyceride (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=85): 178.0 (77.0)</p> <p>12 Months: Intervention (n=85): 155.0 (70.0) Change in mean difference =-23.0; p=0.02</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Limitation(s): Description - demographics not reported on study sample</p> <p>Sampling - recruitment methods for the population and inclusion/exclusion criteria not reported</p> <p>Interpretation of results - intervention components may have differed slightly by intervention site and results are not stratified by study site + F/u <80%</p> <p>Funding: NIH, National Heart, Lung, and Blood Institute + HRSA</p> <p>Applicability: For this study, mainly to Hispanic/Latino women receiving the Salud Para Su Corazon curriculum via group sessions at the healthcare facility</p>		<p>Supervisor: NR</p> <p>CHW performance evaluation: NR</p> <p>Recruitment: NR</p> <p>Training: Didactic lecture + 6 to 18 hours of training to complete the Your Heart, Your Life curriculum lessons + Lead promotores who had been previously trained in the Your Heart, Your Life manual delivered the training activities; hypertension + hyperlipidemia + diabetes</p> <p>Other provider(s): Physician + Nurse + certified diabetes educator + medical support staff + administrators + board of directors</p> <p>Other provider(s) activities: medical staff developed a treatment plan that included laboratory assessment, medication, care plan and referral to promotores for education. Follow-up was provided by both medical staff and promotores as needed</p> <p>Community Partners Involved: Community health centers conducted media and community outreach events to enhance the work of the promotores at the community level and developed partnerships with various local health clinics, health departments, schools, and community-based organizations to support program activities</p>	<p>Diabetes Outcomes</p> <p>Change in A1c (%)</p> <p>Baseline: Mean (SD) Intervention (n=85): 8.0 (2.0)</p> <p>12 Months: Intervention (n=85): 8.0 (7.0)</p> <p>Change in mean difference = 0; p=0.96</p> <p>Change in BMI (kg/m²)</p> <p>Baseline: Mean (SD) Intervention (n=85): 33.0 (8.0)</p> <p>12 Months: Intervention (n=85): 32.0 (7.0)</p> <p>Change in mean difference = -1.0; p=0.5</p> <p>Change in BMI /Weight Outcomes</p> <p>Change in weight (lbs)</p> <p>Baseline: Mean (SD) Intervention (n=85): 182.0 (40.0)</p> <p>12 Months: Intervention (n=85): 179.0 (40.0)</p> <p>Change in mean difference = -3.0; p=0.62</p> <p>Additional Outcomes: N/A</p> <p>Summary: There were significant reductions in LDL and triglycerides. There were non-significant reductions in SBP, BMI and Weight. There was a favorable increase in HDL. Unfavorable results were seen for DBP and no change in A1c.</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Author(s): Balcazar et al. 2005</p> <p>Location: Chicago + Texas + California + New Mexico + Rhode Island</p> <p>Setting: home +community centers, church + school + non-academically affiliated primary care</p> <p>Scale: Study was delivered in collaboration with seven community-based organizations (CBOs) across the United States</p> <p>Design: Before-After w/o comparison</p> <p>Intervention duration: 6 months</p> <p>Quality of Execution: Fair (2 limitations)</p> <p>Limitation(s): Sampling - inclusion/exclusion criteria not reported</p> <p>Interpretation of Results - baseline demographics not reported</p> <p>Funding: Metropolitan Life Foundation</p> <p>Applicability: For this study, mainly to Hispanic</p>	<p>Inclusion: not clearly specified, all family members were invited to participate.</p> <p>Exclusion: NR</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): 30-51 yrs Sex: Male: 9.0%; Female: 91.0% Race/ethnicity: Hispanic: 100% Education: NR Low income: NR Health insurance: NR Unemployed: NR</p> <p>Reported Risk Factors [Intervention Participants]: High BP: 16.0% High cholesterol: 16.0% Diabetes: 14.0% Current Smoker(cigarettes): 9.0%</p>	<p>CHW Activities: Promotores delivered Salud Para Su Corazon (Your Heart, Your Life) curriculum aimed to increase CVD knowledge and promote heart healthy practices taught in community centers, churches, schools, clinic/healthcare facility + home visits. Additionally, promotores delivered telephone follow-up and group sessions at community centers meeting several times a week, once a week, for every other week for 2 hour sessions. CHW also provided appointment referrals and transportation to referral clinic appointments for CVD screening</p> <p>CHW Core Roles Met: Bridging/cultural mediation between community and healthcare system + providing culturally appropriate information and health education + ensuring people get services they need + providing direct services + building individual and community capacity</p> <p>CHW Models of Care Met: Screening & health education provider + outreach/enrollment/information agent + community organizer</p> <p>CHW Characteristics: CHW matched to population by: Language (Spanish) +race/ethnicity (Latino/Hispanic) + Location</p>	<p>No health outcomes were reported</p> <p>Additional Outcomes (see separate table): Physical Activity, Nutrition, Weight control practices</p> <p>Summary: There was an increase in the proportion of participants with weight under control. There was also a significant increase in heart healthy behaviors such as reduced salt and sodium consumption and reduced fat and cholesterol intake.</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>women in the 30-51 yr. age range, receiving education based on the Salud Para Su Corazon curriculum at various community-based locations.</p>		<p>Payment: NR</p> <p>Educational background: NR</p> <p>Years of experience: 78% of promotores previously worked as lay health educators with experience ranging from 6 months to 20 years</p> <p>Supervisor: NR</p> <p>CHW performance evaluation: NR</p> <p>Recruitment: promotores already employed with respective community-based organizations</p> <p>Training: Didactic lecture with a focus on hypertension, hyperlipidemia, diabetes + A series of well-defined and structured promotora training activities was conducted and supervised by the SPSC-NCLR team for all seven sites. The activities involved the development of participatory processes and capacity building to support the adequate delivery of the interventions</p> <p>Other provider(s): NR</p> <p>Other provider(s) activities: NR</p> <p>Community Partners Involved: Community based participatory research approach used; established partnerships with a variety of local organizations and programs, including clinics and health care providers, churches, schools, radio stations, health</p>	

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
		professional associations, restaurants, and pharmaceutical companies	
<p>Author(s): Bloom et al. 1987</p> <p>Location: California</p> <p>Setting(s): participant's home + outpatient clinic (not specified)</p> <p>Scale: Study included the use of 2 CHWs and was conducted within the participant's home and outpatient medical clinic. At total of 387 people with hypertension were invited to participate in the study of which 271 agreed.</p> <p>Design: Before-After w/o comparison</p> <p>Intervention duration: 24 months</p> <p>Quality of Execution: Fair (3 limitations)</p> <p>Limitation(s): Sampling - inclusion and exclusion criteria not specifically stated</p> <p>Data Analysis - analytic methods not reported</p> <p>Interpretation of Results - selection bias as some</p>	<p>Inclusion: diagnosed with hypertension</p> <p>Exclusion: NR</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): NR Sex: Male: 42.3%; Female: 55.8% Race/ethnicity: White: 33.0%; Black/AA: 67.0% Education: NR Low income: 100% Health insurance: NR Unemployed: NR</p> <p>Reported Risk Factors [Intervention Participants]: High blood pressure: 100%</p>	<p>CHW Activities: CHWs counseled participants either at the participant's home or in the nurse practitioner's office monthly. CHWs helped with medication adherence by removing barriers to compliance, took BP measurements, clarified misconceptions regarding use of folk remedies and assisted clients in using low-sodium diets. CHWs also provided assistance in arranging for transportation to medical appointments and making referrals to social agencies.</p> <p>CHW Core Roles Met: Bridging/cultural mediation between community and health care system + providing culturally appropriate information and health education + ensuring that people get services they need + providing informal counseling and social support + providing direct services and meeting basic needs + building individual and community capacity</p> <p>CHW Models of Care Met: Member of care delivery team + screening and health education provider + outreach/enrollment/information agent</p> <p>CHW Characteristics:</p>	<p>Blood Pressure Outcomes</p> <p>Proportion with BP at goal When patients were referred to the MD for 1 year, BP control increased by 5.4 pct pts. All participants were then assigned to either a nurse practitioner (NP) counseling component or a CHW counseling component. After 6 months, this cohort saw an additional increase in BP control by 8.2 pct pts. At this time, those patients who were still considered to be uncontrolled were assigned to the other counseling component. Six months later, BP control increased by an additional 6.3 pct pts, for an overall increase of 19.9 pct pts by then end of the 2-year program.</p> <p>Change in SBP (mmHg) There was no change in average SBP during the 1 year participants were referred to their MD, but there was a reduction in average SBP during the time patients received either NP counseling or CHW counseling for a mean difference of 7.73 mmHg after one year ($p < 0.001$); thus the change in magnitude of SBP was greater during the counseling approach than the medical approach.</p> <p>Change in DBP (mmHg) The average DBP decreased significantly after one year of being referred to the MD (mean reduction of 1.80 mmHg; $p = 0.02$) as well as during the counseling component (CHW or NP) with a mean reduction of 2.84 mmHg; $p = 0.001$.</p> <p>Additional Outcomes: N/A</p> <p>Summary: The proportion of participants with BP control increased after 1 year of physician care. BP control further increased when participants were assigned to either nurse practitioner or CHW</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>participants were randomly selected through a community survey while others chose to participate via advertisement during health fairs.</p> <p>Funding: NIH, National Heart, Lung, and Blood Institute</p> <p>Applicability: For this study, mainly to low-income persons with high blood pressure receiving care from a physician for 1 year and then receiving hypertension counseling from either a nurse practitioner or community health worker for another year.</p>		<p>CHW matched to population by: race/ethnicity + SES</p> <p>Payment: NR</p> <p>Educational background: H.S. Grad: 100%</p> <p>Years of experience: CHWs had prior experience, but number of years not reported</p> <p>Supervisor: physician</p> <p>CHW performance evaluation: NR</p> <p>Recruitment: NR</p> <p>Training: unclear; study states that CHWs were trained by project staff to work with hypertensive patients.</p> <p>Other provider(s): nurse practitioner (NP) + physician</p> <p>Other provider(s) activities: participants were referred to a physician for 1 year then received services from either the CHW OR the NP. Mid-way through the study period, if the participant's BP was still not controlled; they were reassigned to the other provider. The NP provided information and made recommendations to the physician for changes in medication. The NP also helped participants follow a low-sodium diet</p> <p>Community Partners Involved: N/A</p>	<p>counseling. Those assigned to the CHW component were equally likely to have their BP under control as those in the NP condition. Significant reductions in SBP were observed after participants received counseling either from the NP or CHW. The medical and counseling approaches were equally effective in reducing DBP.</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Author(s): Fedder et al. 2003</p> <p>Location: Maryland</p> <p>Setting(s): participant's home + University of Maryland Medical System</p> <p>Scale: Thirty-eight CHWs were actively involved in providing services to patients during the study period. Two hundred thirty-eight participants identified through hospital discharge rolls were eligible for this study. Of those, 117 participants had five or more CHW contacts and were included in analysis.</p> <p>Design: Before-After w/o comparison</p> <p>Intervention duration: 12 months</p> <p>Quality of Execution: Good (1 limitation)</p> <p>Limitation(s): Interpretation of results – self-selection bias, analysis conducted on participants who responded to an offer for free care.</p> <p>Funding: Maryland Health Services Cost Review Commission + UMAB</p>	<p>Inclusion: 18 yrs. of age or older + diagnosis of diabetes OR hypertension + enrolled in Medicaid program + African American</p> <p>Exclusion: unable to make own decisions + life threatening illness (e.g., end-stage condition) + could not be matched to Medicaid claims data b/c of missing or incorrect numbers</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): 57.4 yrs. Sex: Male: 22.0%; Female: 78.0% Race/ethnicity: Black/AA: 100% Education: NR Low income: 100% Medicaid recipient: 100% Unemployed: NR</p> <p>Reported Risk Factors [Intervention Participants]: High BP: 91.5% Diabetes: 72.6%</p>	<p>CHW Activities: CHWs were assigned to no more than 10 patients and contacted participants weekly alternating between telephone contacts and face-to-face sessions at patients home. CHWs linked patients with appropriate primary care and specialty physicians, monitored self-care behaviors for signs of complications, and assisted participants in sustaining Medicaid eligibility if appropriate, and providing social support to patients, their caregivers, and families</p> <p>CHW Core Roles Met: bridging/cultural mediation between community and healthcare system + ensuring people get services they need + providing informal counseling and support + providing direct services and meeting basic needs + building individual and community capacity</p> <p>CHW Models of Care Met: Navigator + screening and health education provider + outreach/enrollment/information agent</p> <p>CHW Characteristics: CHW matched to population by: race/ethnicity + Location + SES</p> <p>Payment: CHWs were volunteers and received following incentives: bus pass + \$45 to \$75 depending on patient caseload</p>	<p>Morbidity Outcomes</p> <p>Change in ER visits (all-cause)</p> <p>Baseline: Mean (SD) Intervention (n=117): 1.49 (2.2) 12 Months Intervention (n=117): 0.9 (1.8) Change in mean difference = -0.56; p<0.05</p> <p>Change in ER admissions</p> <p>Baseline: Mean (SD) Intervention (n=117): 0.64 (1.4) 12 Months Intervention (n=117): 0.3 (1.3) Change in mean difference = -0.32; p=0.02</p> <p>Change in hospital admissions</p> <p>Baseline: Mean (SD) Intervention (n=117): 0.95 (1.5) 12 Months Intervention (n=117): 0.7 (1.4) Change in mean difference = -0.29; p>0.05</p> <p>Additional Outcomes (see separate table): Medicaid reimbursement Length of hospital stay</p> <p>Summary: Significant reductions in ER visits and ER admissions were observed. ER visits decreased by 38% and ER admissions by 53%. Further, hospital admissions decreased by 30% (NS).</p>

Study Details	Population Characteristics	Intervention + Comparison Description	Health Outcomes and Summary
<p>Foundation Community Pharmacy Fund</p> <p>Applicability: For this study, mainly to low-income female, African-American Medicaid recipients with diabetes or hypertension, receiving one-on-one sessions with CHWs either in-person or via telephone for management of these conditions.</p>		<p>Educational background: <H.S.: 100%</p> <p>Years of experience: NR</p> <p>Supervisor: unclear, biweekly supervision meetings were held (not specified)</p> <p>CHW performance evaluation: NR</p> <p>Recruitment: CHWs were recruited from target neighborhood (method NR)</p> <p>Training: Received 60 hours of training at University of Baltimore specific to HTN, diabetes, and case management + American Heart Association certification in BP measurement</p> <p>Other provider(s): N/A</p> <p>Other provider(s) activities: N/A</p> <p>Community Partners Involved: N/A</p>	
<p>Author(s): Fernandes et al. 2012</p> <p>Location: Hawaii</p> <p>Setting: Federally Qualified Health Center-Kokua Kalihi Valley comprehensive family services (KKV)</p> <p>Scale: 11 CHWs delivered the group interventions at 1 FQHC. A total of 99</p>	<p>Inclusion: Filipino adults with CVD risk factors (such as hypertension, diabetes, high cholesterol, obesity, family history, smoking and sedentary lifestyle).</p> <p>Exclusion: NR</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): 68.5 yrs.</p>	<p>CHW Activities: CHWs taught Healthy Heart, Healthy Family curriculum to small groups of 8–12 people. Curriculum included eleven educational lessons aim to help participants build skills to make practical, lasting changes to help fight CVD and improve health. Sessions, each two hours in duration, were held weekly for 11 consecutive weeks</p> <p>CHW Core Roles Met: Bridging/cultural mediation</p>	<p>Blood Pressure Outcomes</p> <p>Proportion with BP at goal (%)</p> <p>Baseline: mean (SD) Intervention (n=92): 27.1%</p> <p>12 Months: Intervention (n=92): 28.7%</p> <p>Absolute pct pt change = 1.6 ; 95% CI: -10.6, 13.8</p> <p>Change in SBP (mmHg)</p> <p>Baseline: mean (SD) Intervention (n=92): 122.6 (NR)</p>

<p>Author(s): Zoellner et al. 2011</p> <p>Location: Mississippi</p> <p>Setting: Home + community center</p> <p>Scale: HUB City Steps was planned in the context of a community-wide wellness initiative, Get Healthy Hattiesburg (GHH), Hattiesburg is a midsized city in SE Mississippi (approx. 45,000 residents). Approximately 1060 residents exposed to study promotion & recruitment (345 screened for eligibility). Enrolled in the HUB City Steps intervention (n= 269). A total of 24 walking coaches (CHWs).</p> <p>Design: Before-After w/o comparison</p> <p>Intervention duration: 6 months</p> <p>Quality of Execution: Good (1 limitation)</p>	<p>Inclusion: ≥ 18 yrs. old + English-speaking + non-institutionalized + residing in the Hattiesburg area. Individuals were eligible for study participation regardless of BP status and medication regimen. Study directed toward AA.</p> <p>Exclusion: Screened individuals with ≥ BP 180/110 were directed to obtain immediate medical attention.</p> <p>Reported Baseline Demographics [Intervention Participants]: Age (mean): 44.3 yrs. Sex: Male: 14.9%; Female: 85.1% Race/ethnicity: Black/AA: 94.4%; White: 5.2%; American Indian or Alaskan Native: 0.4% Education: >H.S.: 5.5%; H.S. grad: 15.2%; some college: 22.7%; college grad: 28.3%; post graduate: 24.6%</p>	<p>CHW Activities: Walking coach provided one-on-one telephone and group sessions by contacting each group member weekly to encourage routine walking. Walking coach worked with each participant to set individual weekly walking goals; encouraged each group member to walk throughout each week; arranged group walking and health-related activities (minimum of two per month); monitored each group members walking and notified them of educational sessions. Served as a liaison between walking group members and project staff.</p> <p>CHW Core Roles Met: Providing informal counseling and social support + building individual and community capacity</p> <p>CHW Models of Care Met: Member of care delivery team +community organizer</p> <p>CHW Characteristics: CHW matched to population by: location + race/ethnicity (AA) Payment: Hourly (part-time): \$15.00/hr. for up to 15 hours for training and up to 8 hours per</p>	<p>Blood Pressure Outcomes</p> <p>Change in SBP (mmHg) Baseline: Mean (SD) Intervention (n=269): 126.0 (19.1) 6 Months: Intervention (n=190): 119.6 (15.8) Change in mean difference = -7.3; p=0.0002</p> <p>Change in DBP (mmHg) Baseline: Mean (SD) Intervention (n=269): 83.2 (12.3) 6 Months: Intervention (n=190): 78.6 (11.1) Change in mean difference = -4.2; p<0.0001</p> <p>Cholesterol Outcomes</p> <p>Change in total cholesterol (mg/dL) Baseline: Mean (SD) Intervention (n=269): 177.2 (39.1) 6 Months: Intervention (n=190): 178.7 (40.1) Change in mean difference =1.5 (p>0.05)</p> <p>Change in LDL (mg/dL) Baseline: Mean (SD) Intervention (n=269): 100.2 (35.4) 6 Months: Intervention (n=190): 103.4 (36.2) Change in mean difference =3.2; p>0.05</p> <p>Change in HDL (mg/dL)</p>

<p>Limitation(s): Interpretation of Results - f/u < 80% (f/u=71%)</p> <p>Funding: National Institute on Minority Health and Health Disparities (NIH)</p> <p>Applicability: For this study, mainly to female, African-Americans who tended to be obese with some presenting with high BP, receiving one-on-one telephone and group sessions from the walking coach (CHW) with additional care and services from Registered dietitian, psychology grad students, fitness instructors, and professional health educators for management of hypertension.</p>	<p>Low income: (<\$20,000): 28.3%</p> <p>Health Insurance: NR</p> <p>Unemployed: NR</p> <p>Reported Risk Factors [Intervention Participants]:</p> <p>High BP: 42.0%</p> <p>Smoking: 8.6%</p> <p>BMI: 32.7 kg/m²</p> <p>Alcohol/substance abuse: NR</p>	<p>week during the intervention phase</p> <p>Educational background: NR</p> <p>Years of experience: NR</p> <p>Supervisor: Intervention coordinator (Master's level African American woman)</p> <p>CHW performance evaluation: Coaches (CHWs) maintained participant contact logs, submitted biweekly time sheets to the community coordinator. Coaches were provided with biweekly progress reports on their group members.</p> <p>Recruitment: Interpersonal contact-community (word-of-mouth) + media ad through flyers</p> <p>Training: 16 hours of training including: content on program goals, intervention design, protocols, and procedures, walking coach responsibilities and compensation, group leadership and motivation, CPR and first aid, participant eligibility and recruitment strategies.</p> <p>Other provider(s): Registered dietitian + psychology grad students + fitness instructors + professional health educators</p> <p>Other provider(s) activities: Motivational counseling was provided by doctoral level psychology students and registered dietitians. Nutrition education sessions were led by</p>	<p>Baseline: Mean (SD) Intervention (n=269): 51.9 (15.0)</p> <p>6 Months: Intervention (n=190): 49.8 (15.0) Change in mean difference = -2.1; p>0.05</p> <p>Change in triglycerides (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=269): 130.9 (79.8)</p> <p>6 Months: Intervention (n=190): 132.6 (81.3) Change in mean difference = 1.7; p>0.05</p> <p>Diabetes Outcomes</p> <p>Change in non-fasting glucose (mg/dL)</p> <p>Baseline: Mean (SD) Intervention (n=269): 104.5 (37.4)</p> <p>6 Months: Intervention (n=190): 103.6 (43.5) Change in mean difference = -0.9; p>0.05</p> <p>Additional Outcomes (see separate table): physical activity, nutrition</p> <p>Summary: There were significant reductions in both systolic and diastolic BP. All of the cholesterol outcomes were unfavorable with increases in mean LDL, total cholesterol, and triglycerides and a decrease in mean HDL among the participants. No change was shown for non-fasting glucose. There were improvements in physical activity (walking test) while 4 of the 5 nutrition outcomes were unfavorable with only reductions in sugar intake showing positive results among the participants.</p>

		<p>professional health educators or registered dietitians (90 minute monthly sessions) and assisted by 2 fitness instructors covering PA and the dash diet.</p> <p>Community Partners Involved: University of Southern Mississippi + local city and county government + public and private health and medical clinics and agencies + organizations with an educational mission + private non-profit community organizations</p>	

Abbreviations:

- BMI, body mass index
- CI, confidence interval
- DBP, diastolic blood pressure
- kg/m², kilograms per meters squared
- mg/dl, milligrams per deciliter
- mg/dL, milligrams per deciliter
- mmHg, millimeters of mercury
- NR, not reported
- SBP, systolic blood pressure
- SD, standard deviation
