INTERNATIONAL BUREAU RELEASES UPDATED LIST OF INCUMBENT EARTH STATIONS IN THE 3.7-4.2 GHz BAND IN THE CONTIGUOUS UNITED STATES

IB Docket No. 20-205
GN Docket No. 20-305

With this Public Notice, the International Bureau (the Bureau) releases an updated list of those Fixed Satellite Service (FSS) earth stations in the 3.7-4.2 GHz band (C-band) within the contiguous United States that the Bureau has found satisfy the criteria to be classified as incumbent earth stations for purposes of the C-band transition.¹ This updated list reflects changes since the most recent version of the list of incumbent earth stations released on June 22, 2021.² The Bureau also is including a changelog to assist in the identification of changes made in the incumbent earth station list since the previous list.³

This updated list takes into account, among other things, filings made in the International Bureau Filing System (IBFS) by earth station operators to update IBFS to remove inactive antennas, including those filed in response to the Bureau's *July 23 Public Notice* identifying earth station antennas that are reportedly no longer operational. Surrendered calls signs and inactive individual antennas closed in IBFS have been removed from the incumbent earth station list.⁴ The updated list also reflects a variety of changes to earth station registrations, including address or coordinate corrections, registration assignments, and other ministerial updates since the *June 22 Incumbent Earth Station PN*. Finally, the Bureau has not included on the updated list any earth stations for which it has dismissed applications as not meeting the criteria for incumbent status since release of the *June 22 Incumbent Earth Station PN*.⁵

¹ See 47 CFR § 27.1411(b)(3). The C-band transition is not occurring outside the contiguous United States, so no U.S. licensed or registered earth stations in those locations are included in the updated list. Those stations may seek reimbursement of costs directly related to the transition if they satisfy the criteria for incumbent earth station status. Those earth stations, however, are not eligible to elect lump sum payments. See *Expanding Flexible Use of the 3.7 to 4.2 GHz Band*, Report and Order and Order of Proposed Modification, 35 FCC Red 2343, 2428 (2020).

² See *International Bureau Releases List of Incumbent Earth Stations in the 3.7-4.2 GHz Band in the Contiguous United States*, Public Notice, DA 21-731 (IB June 22, 2021) (*June 22 Incumbent Earth Station List PN*).

³ In the event of discrepancies between the machine-generated changelog and the updated incumbent list, the updated incumbent earth station list is determinative.

⁴ The October 21, 2021, deadline set out in the *July 23 Public Notice* for responsive filings has not passed, so the Bureau has not involuntarily terminated any antennas on the *June 22 Incumbent List* that have not yet responded to the *July 23 Public Notice*.

⁵ As discussed in the *June 22 Incumbent Earth Station List PN*, the list does not include recently granted registrations of the additional, previously unregistered antennas for which the Bureau's *October 23, 2020 Order* granted waivers for interference protection only (and not reimbursement of transition costs). See *Incumbent Earth Stations in the 3.7-4.2 GHz Band in the Contiguous United States*, Order, IB Docket No. 20-205, GN Docket No.

(continued...)

As a reminder, all incumbent earth stations that continue to operate in the C-band during the transition or in the 4.0-4.2 GHz band afterwards must maintain a valid, up-to-date registration in IBFS. For instance, incumbent earth station operators continue to be subject to the requirement under Commission rules of filing timely renewal applications when their authorizations are due to expire.⁶ In addition, when incumbent earth station operators assign earth station antennas in transactions not requiring prior Commission approval, they are required under Commission rules to notify the Commission within 30 days of consummation of the assignment.⁷ Finally, incumbent earth station operators who terminate operations in the 3.7-4.2 GHz band at one or more earth station antennas are required pursuant to the Commission's rules to notify the Commission when those earth station antennas are no longer operational.⁸

For ease of identification, the list of earth stations includes the following information from the IBFS database: (1) Licensee/Registrant/Applicant name; (2) Earth Station Callsign; (3) Site ID; (4) Antenna ID; (5) number of antennas/dishes associated with that Antenna ID; (6) site address; (7) GPS coordinates of the antenna; and (8) File Number(s) of current authorization and/or pending application.⁹ The list also identifies those earth station antennas for which there is an accepted lump sum election and whether the earth station operator intends to migrate operations to the upper 200 megahertz of the band by the end of the transition or to discontinue use of the C-band.¹⁰

ATTACHMENT

-FCC-

20-305, 35 FCC Rcd 11896 (IB 2020) (*October 23 Order*). The registrations of these non-incumbent earth stations appear in IBFS with the letter "A" at the end of the call sign. *June 22 Incumbent Earth Station List PN* at 2.

⁶ 47 CFR § 25.121(e).

⁷ 47 CFR § 25.119(f). Timely notification of such assignments is particularly important for incumbent C-band earth stations to avoid possible delay or denial of interference protection, cost reimbursement, or lump sum payments to which incumbents are entitled.

⁸ 47 CFR § 25.115(b)(8).

⁹ Certain C-band certifications were timely filed in association with File Numbers that have since been superseded by later filings; in the list, those earth stations can be identified by the subsequent File Number. The status of an earth station antenna under the *3.7 GHz Report and Order* pertains only to the reception of satellite transmissions on 3.7-4.2 GHz by fixed earth stations and transportable (temporary fixed) earth stations.

¹⁰ The list includes a machine-generated changelog that identifies differences in the lump sum election information between records on this list and the *June 22 Incumbent Earth Station List*. To the extent there are any discrepancies between the changelog and the attached updated list regarding whether an earth station antenna has elected lump sum, the updated incumbent earth station list is determinative.
