We believe that the future of business documents is knowing who will respond to anything you write before you even publish it. Textio's augmented writing platform has already transformed the way that thousands of companies write and hire, and we're looking for a creative and driven full stack engineer to join our Seattle team.

As a full stack engineer on the Application Engineering team you'll collaborate with industry-leading design and product thinkers every single day to help create groundbreaking user experiences. We regularly solve hard problems and we create features for our users that the world hasn't seen before. The Application Engineering team is primarily focused on developing user experiences, so frontend skills are crucial.

In this role, you will design and implement features of all sizes, contribute to key architectural decisions, and collaborate to improve and grow the whole team. You will partner closely with our product team to understand our customers, then collaborate across teams with frontend, back end, ML, and NLP engineers to build what they need.
