

SOC 2 at Cloudflare

What Cloudflare products are not in-scope for SOC 2?

Introduction and scope

Security compliance certifications are reports created by independent, third-party auditors that validate and document a company's commitment to security. These external auditors conduct a rigorous review of a company's technical environment, evaluating whether there are thorough controls—or safeguards—in place to protect the security, confidentiality, and availability of information stored and processed in that technical environment.

SOC 2 is a security certification established by the American Institute of CPAs. It consists of a technical audit and a requirement to outline and follow comprehensive information security policies and procedures. Cloudflare obtained our SOC 2 validation in 2019, and we include the report as part of our compliance package for current and potential customers under NDA. The more general, public version of the SOC 2 report is the SOC 3. It can be downloaded from our website here. In addition, a detailed overview of our security compliance journey can be found here.

Part of Cloudflare's approach to SOC 2 compliance involves transparency about which user controls remain among our customers' prescribed responsibilities. This document outlines that group of controls. It applies to the Cloudflare Global Cloud Platform through which Cloudflare provides security, reliability and performance products to Enterprise customers, and excludes other products provided by Cloudflare. The description does not encompass every aspect of all the products provided or procedures followed by Cloudflare. Rather, the description enables current user entities and future user entities to understand how controls in place for the Global Cloud Platform are critical to Cloudflare's business and the overall control environment.

Frequently asked questions about Cloudflare and SOC 2

What accounts are in-scope for Cloudflare's SOC 2 report?

All Cloudflare customers are now in-scope for Cloudflare's SOC 2 report

How do customers get a copy of the SOC 2 Report?
