

Coverage in children not adjusted for population size

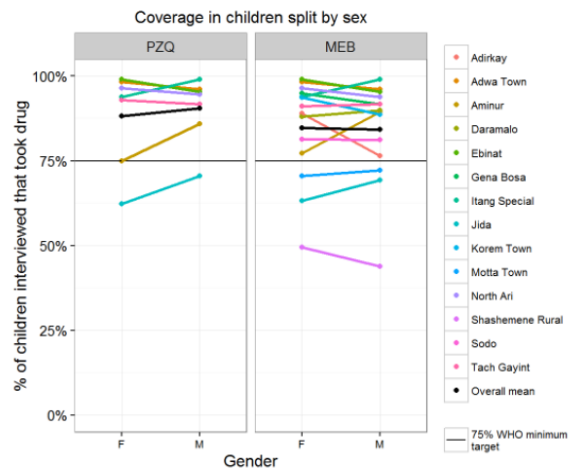

Coverage in children adjusted for population size

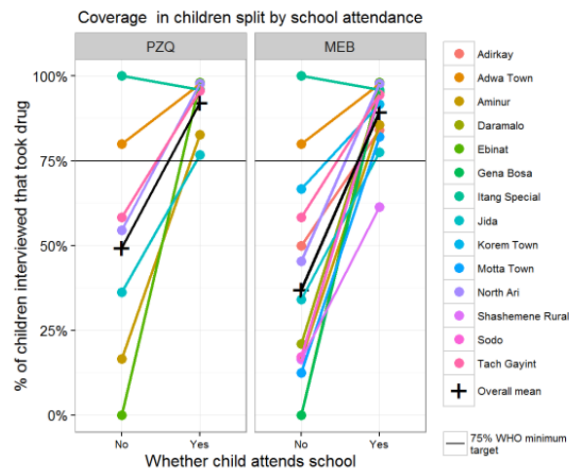

Commentary

- Data was removed from four districts Arero, Dewa, Leghare and Mahokomo as the questions on which drugs were taken did not give consistent results
- Seven districts were not targeted for PZQ and their data was removed - Adirkay, Daramalo, Gena Bosa, Korem Town, Motta Town, Shashemene Rural & Sodo.
- Adjustment for population size only accounted for the number of people sampled per kebele, and not the proportion of kebeles sampled in each district or the proportion of people sampled in each household
- Only three kebeles were survey in Aminur, leading to very wide confidence intervals
- Five districts had lower confidence intervals above 75% for PZQ
- Eight districts had lower confidence intervals above 75% for MEB

Coverage in children split by sex

Coverage in children split by school attendance

Commentary on school attendance and gender

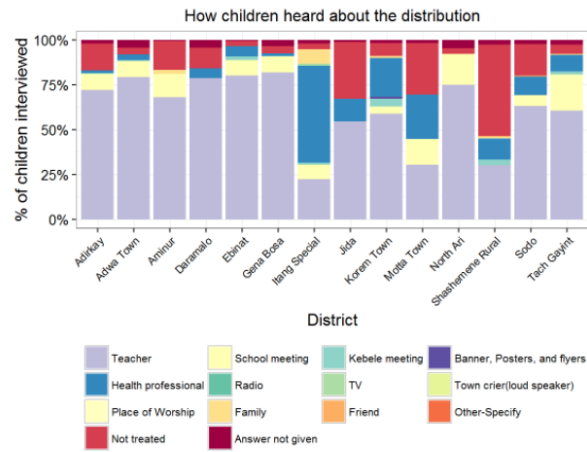

Coverage was very similar in both genders in all districts.

- There was no significant difference in coverage of PZQ between sexes in any district
- District Aminur was the only district where coverage of MEB differed between the sexes ($F = 77\%$, $M = 89\%$)

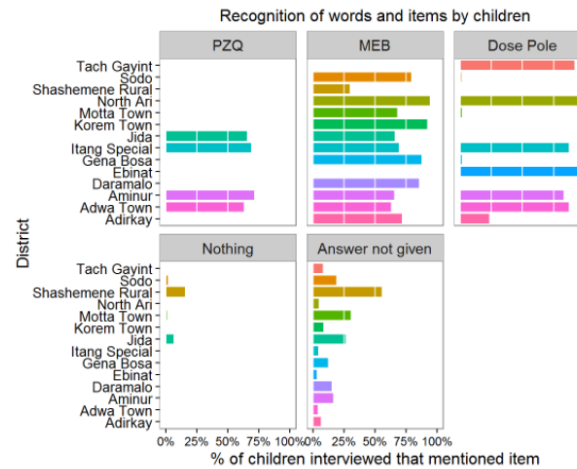

The number of children not attending school was:

- Adirkay: 6
- Adwa Town: 5
- Aminur: 6
- Daramalo: 19
- Ebinat: 2
- Gena Bosa: 5
- Itang Special: 9
- Jida: 47
- Korem Town: 3
- Motta Town: 16
- North Ari: 11
- Shashemene Rural: 61
- Sodo: 29
- Tach Gayint: 12

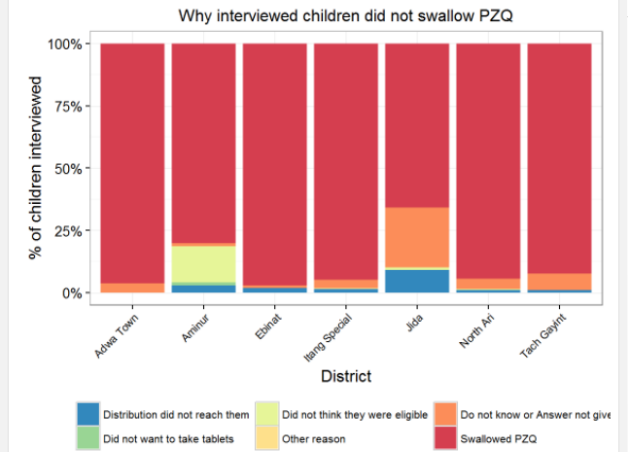

How children heard about the distribution

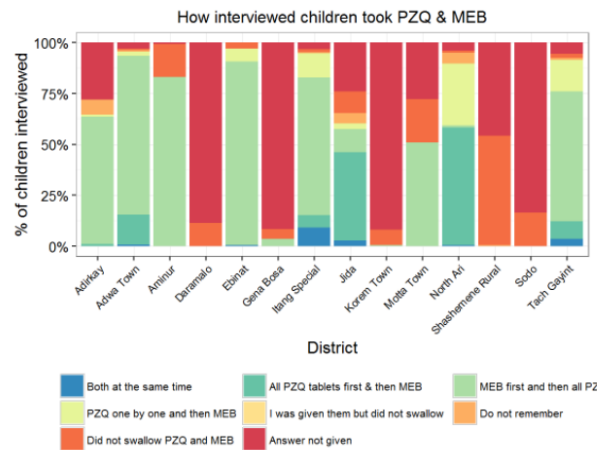

Recognition of words and items by children

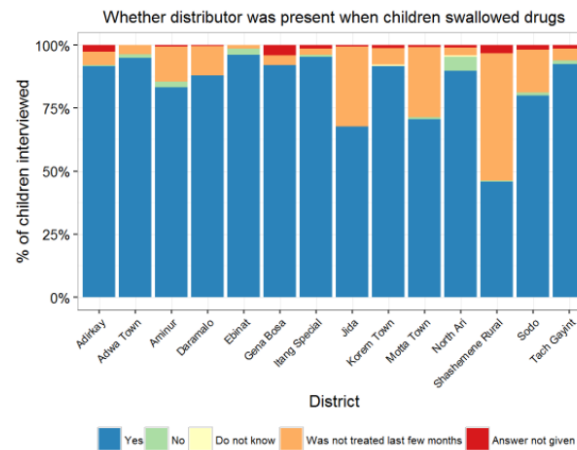

Why interviewed children did not swallow PZQ

How interviewed children took PZQ & MEB

Whether distributor was present when children swallowed drugs

Commentary on additional information

- Children who did know about the drug distribution mainly heard through teachers and health professionals
- Recognition of words and items varied by district
- Children who did not swallow PZQ mainly did so because the distribution did not reach them
- Very few children reported taking PZQ and MEB at the same time
